- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

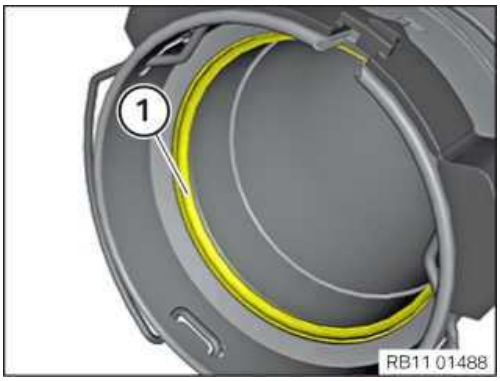
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



101 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

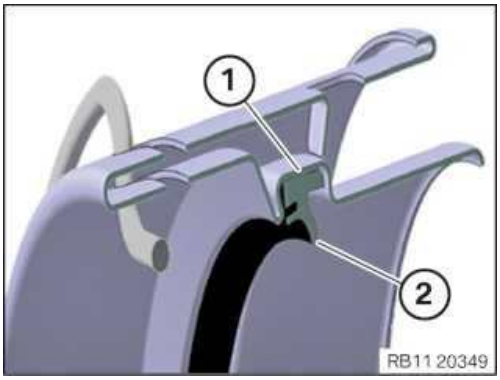
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

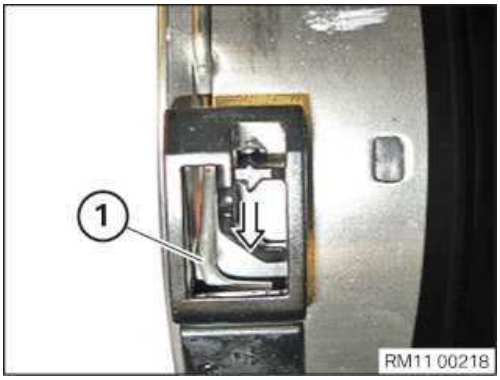


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

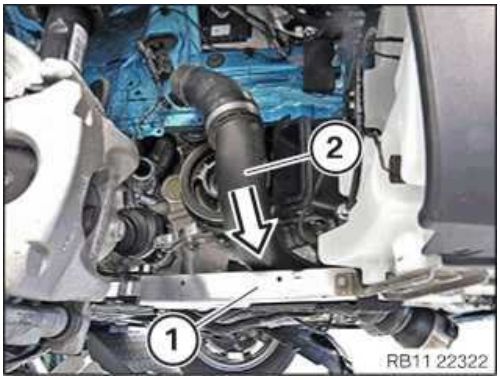
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



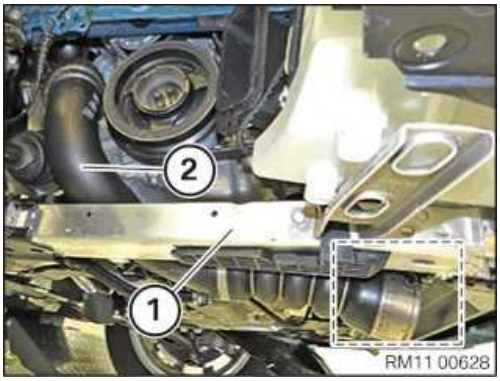
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



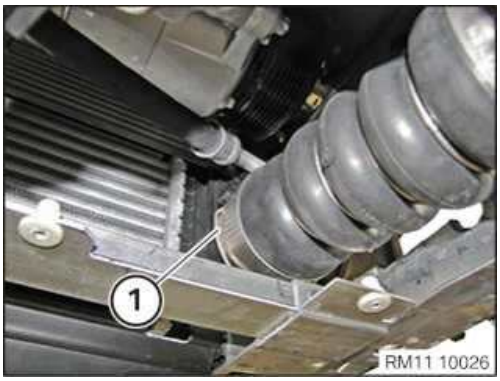
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

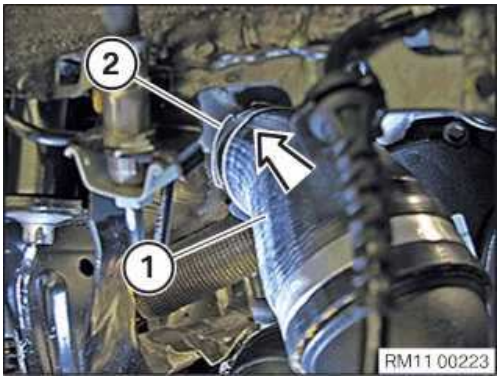


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

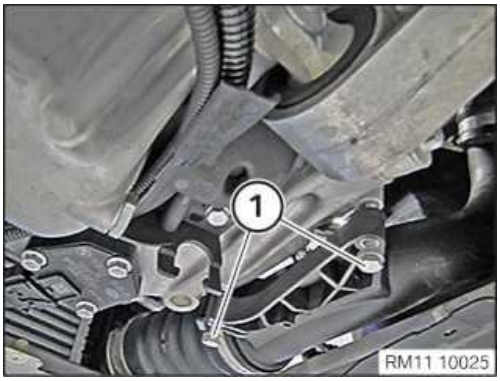


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

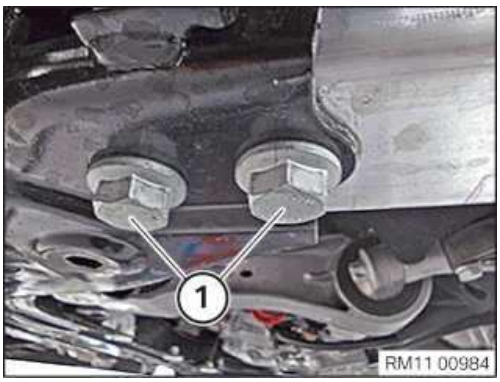
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



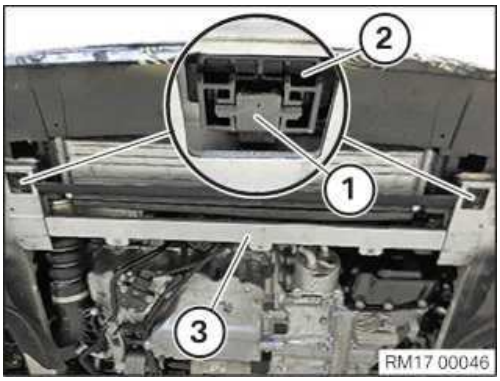
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

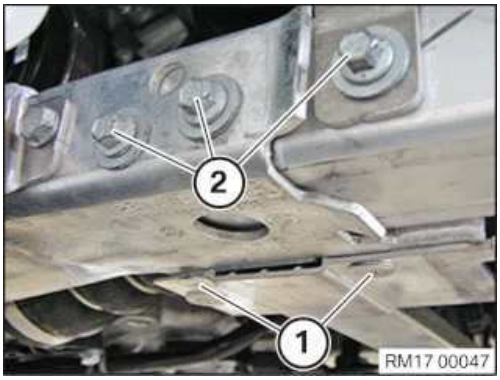
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.

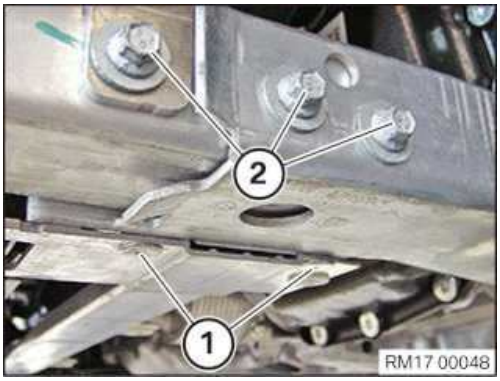


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

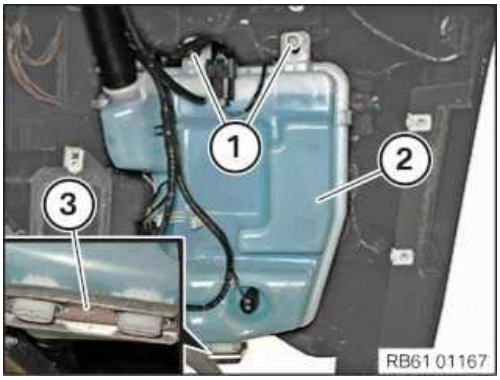
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



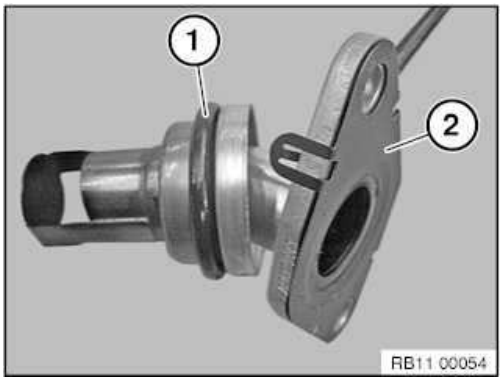
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

102 – Install the washer fluid reservoir in the fixture

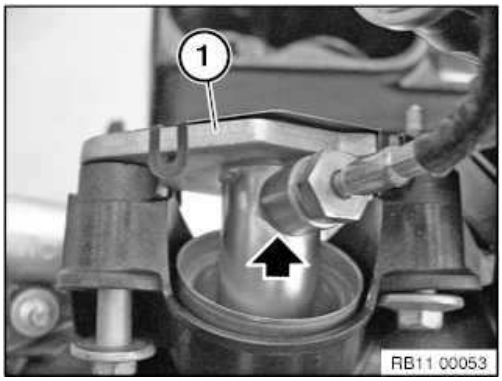


- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

103 – Installing the intake plenum

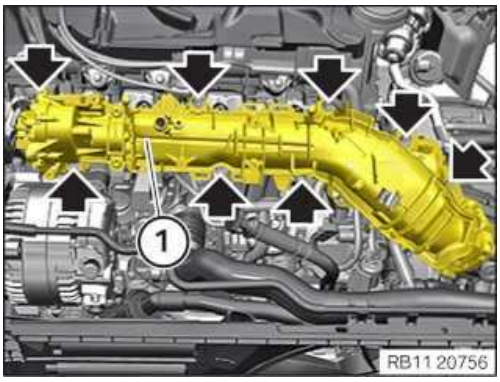


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

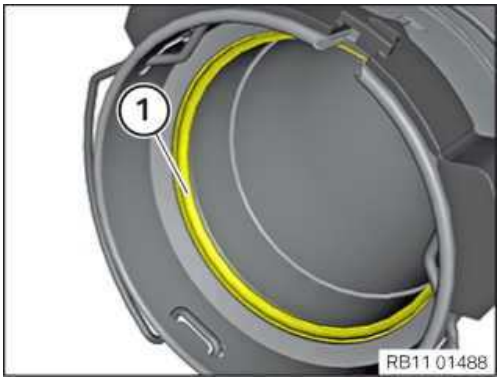
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

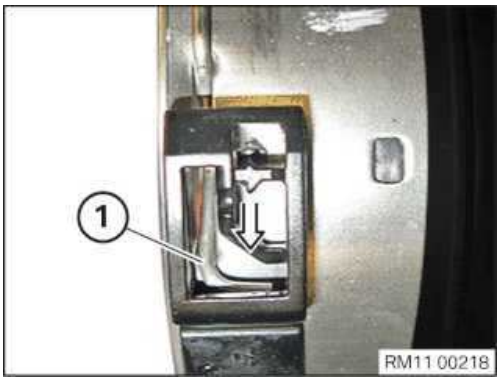
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



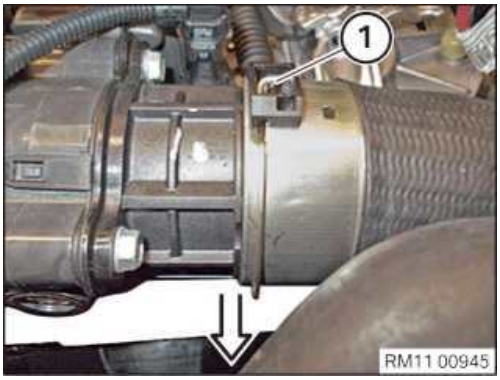
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

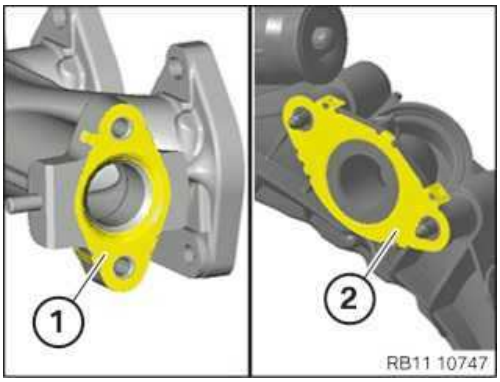
  Parts: Sealing ring

cardiagn.com

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



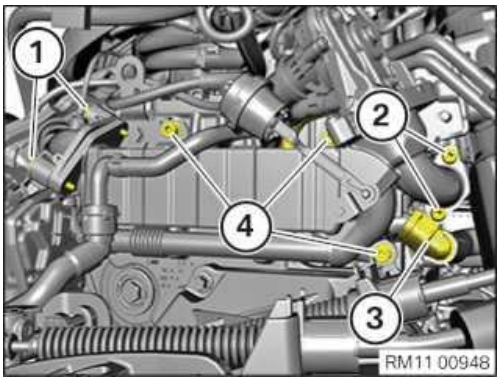
104 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

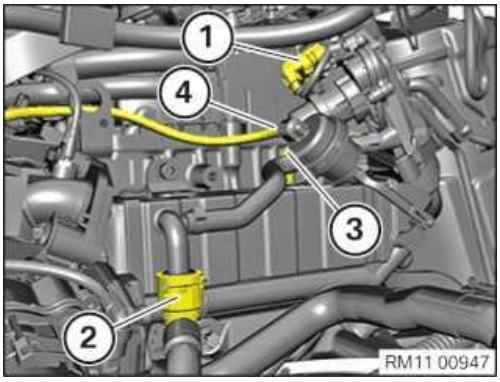
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

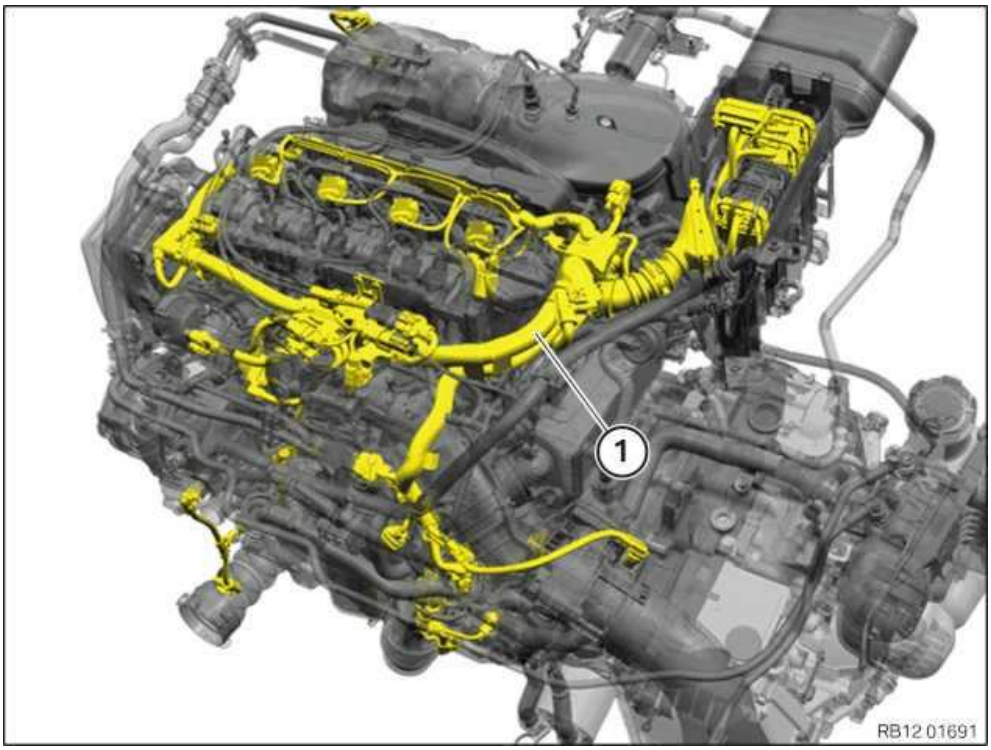
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

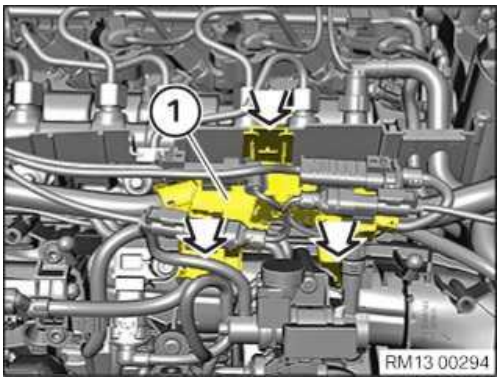
Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

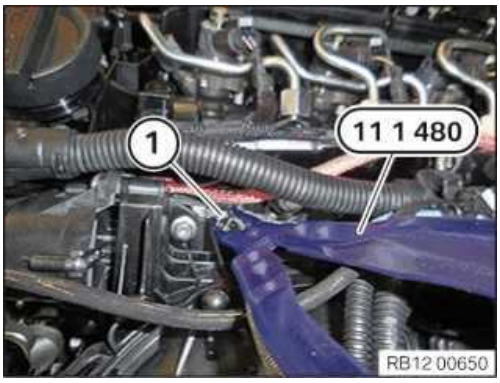
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

105 – Fastening the wiring harness section for the intake plenum



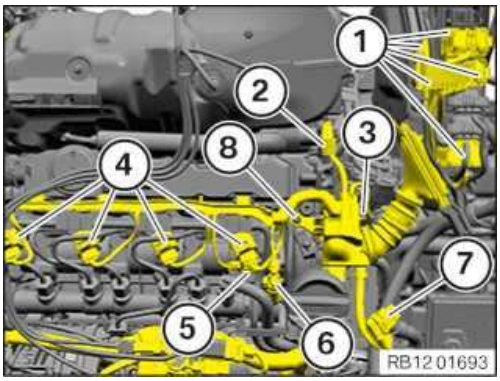
cardiagn.com

Overview: Wiring harness section for the engine



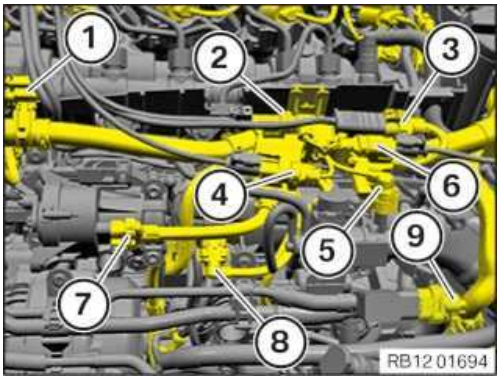
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

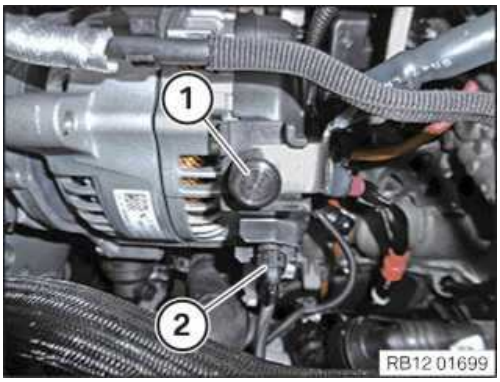


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

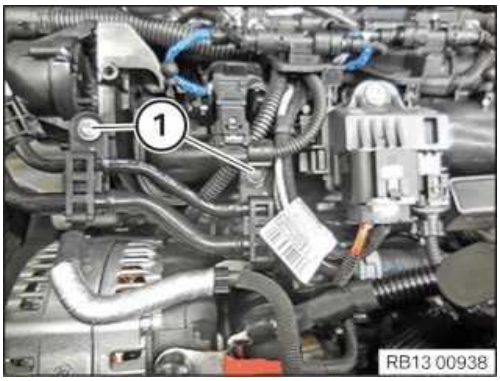


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

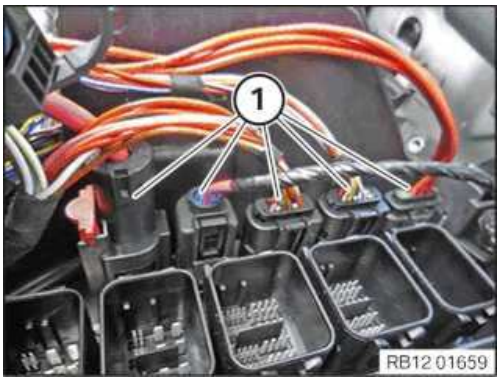


- Connect and lock the connector (2).

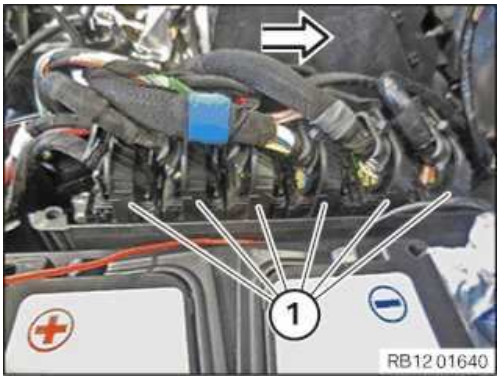
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

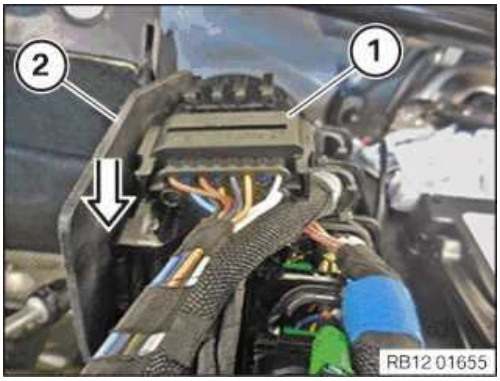


- Position the fuel line.
- Tighten the screws (1).

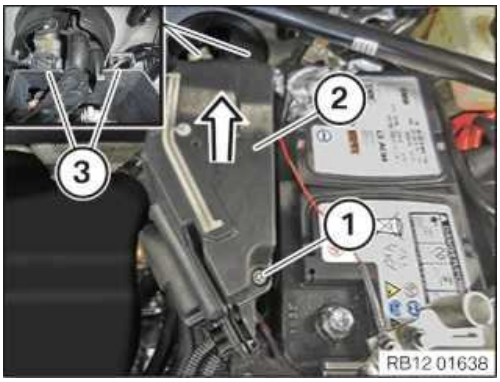


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

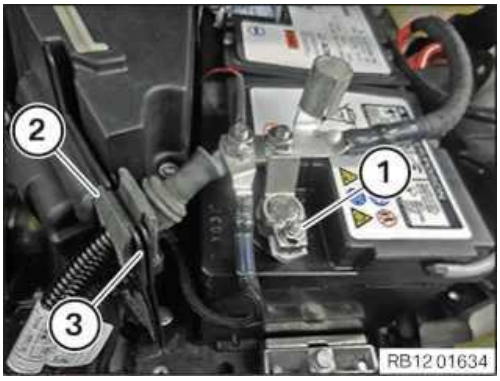


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

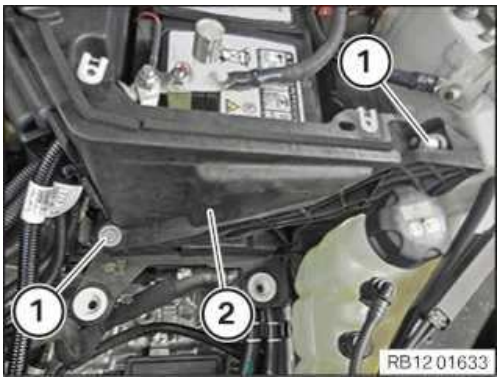


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

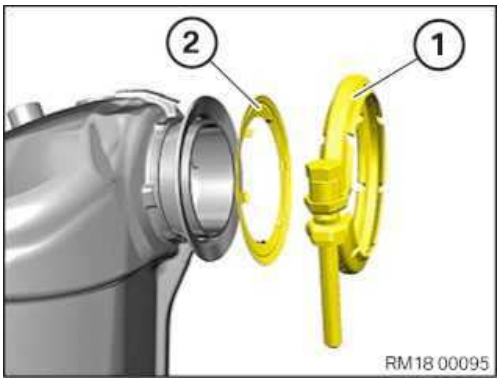
NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



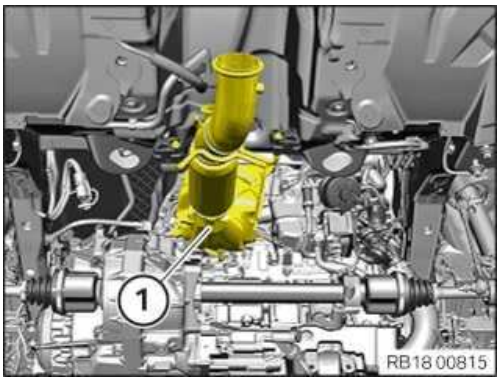
106 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

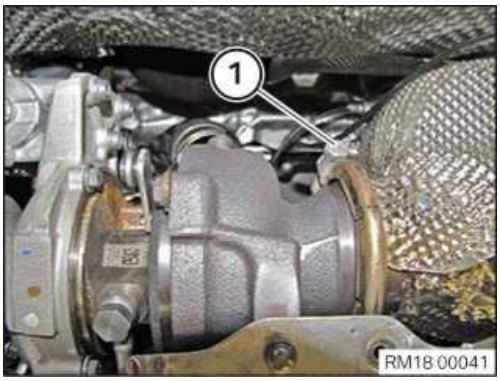
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

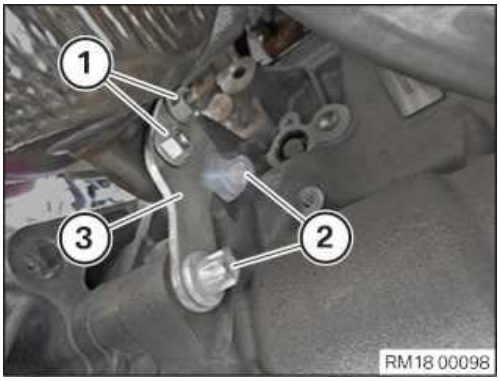
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

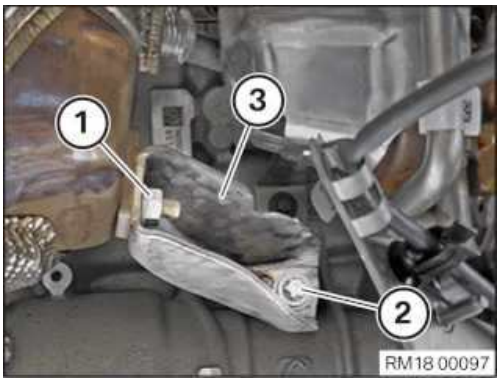


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



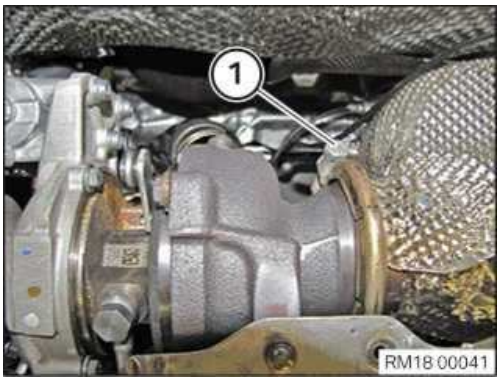
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



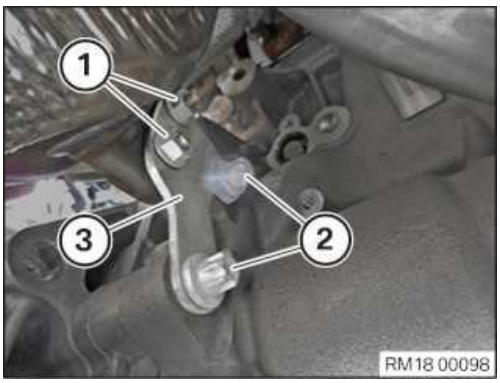
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



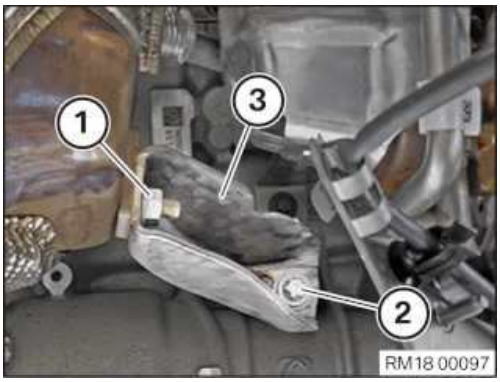
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

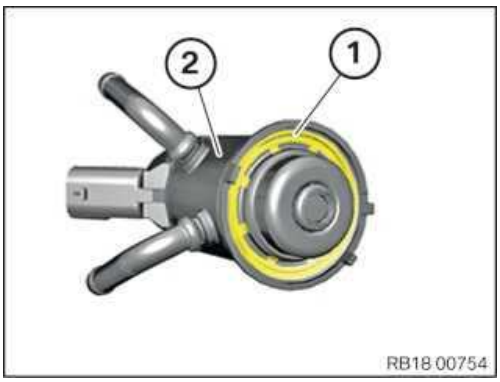
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

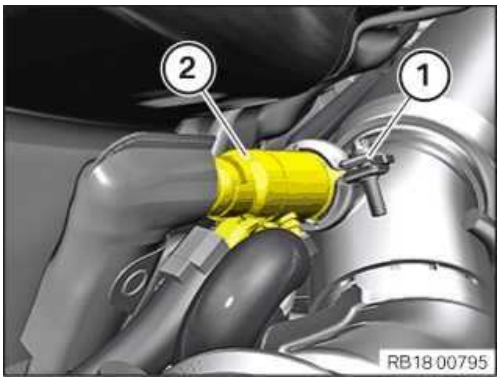


Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

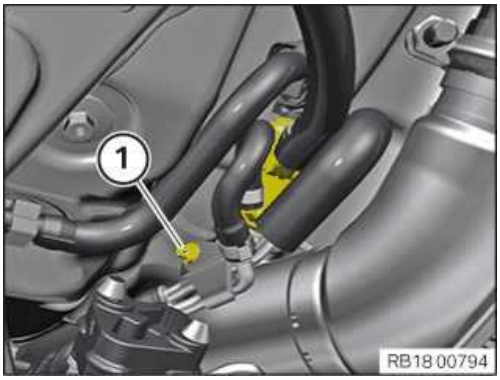


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

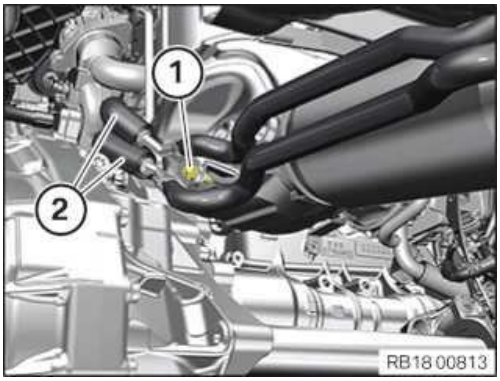
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

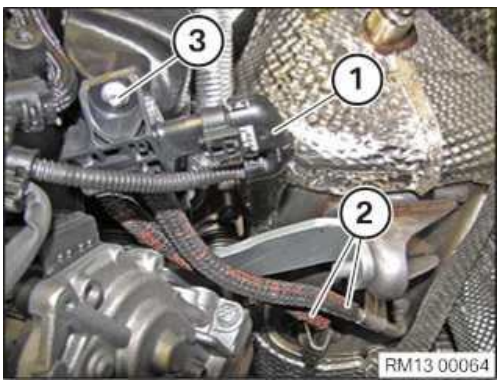


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

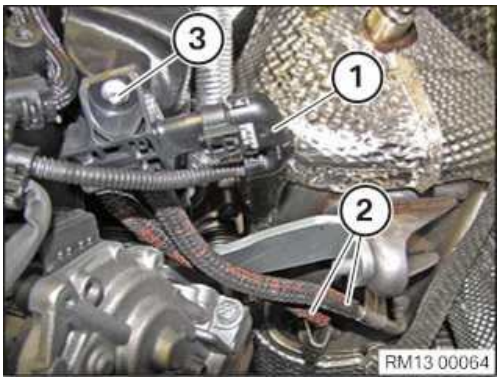
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

108 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

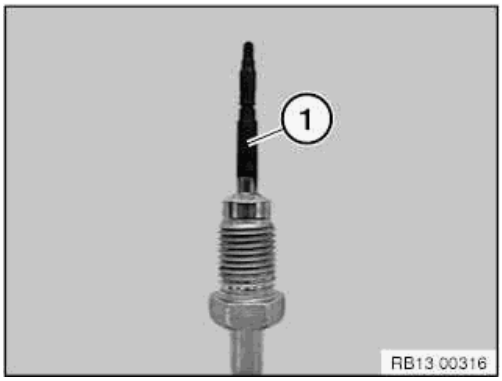
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

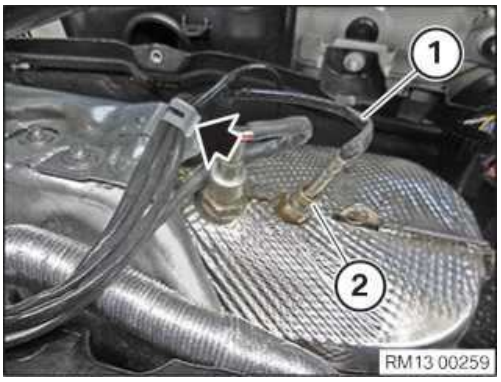


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

109 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

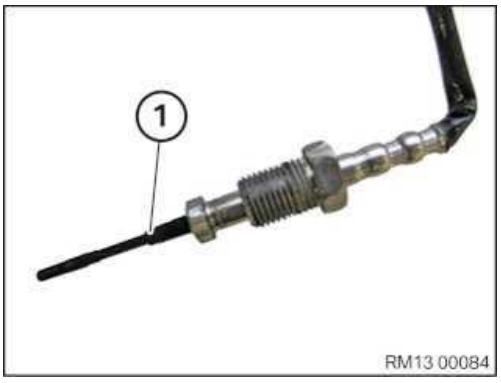
- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

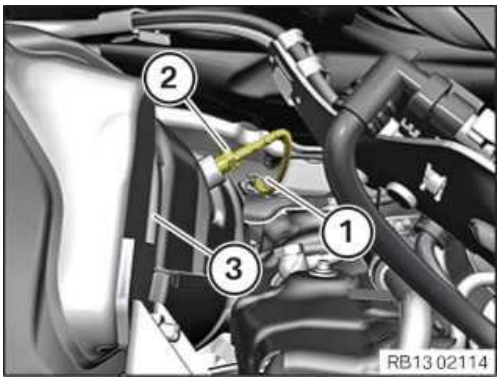
  The connector (1) must engage audibly.



110 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.

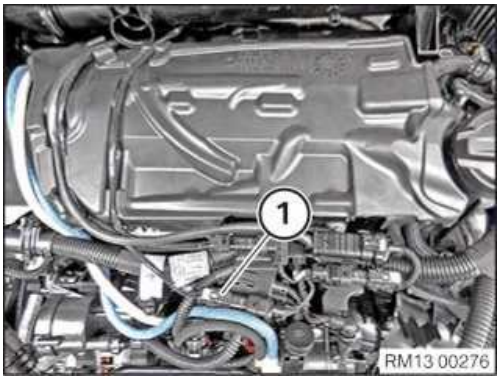


Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

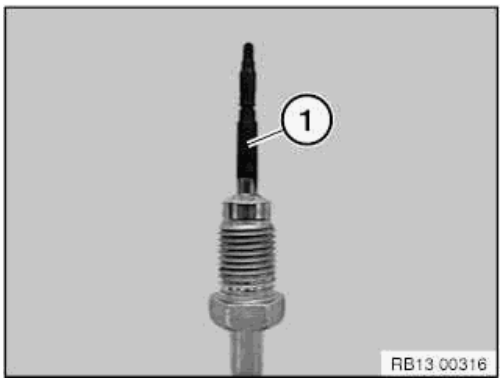
cardiagn.com



- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

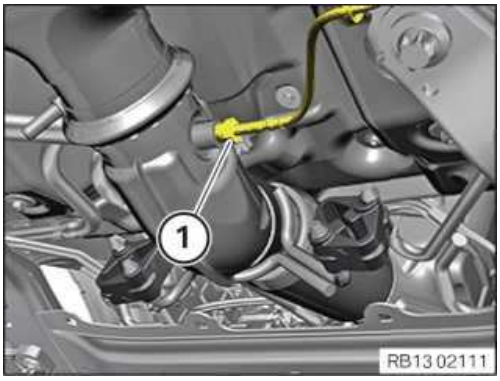


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

111 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

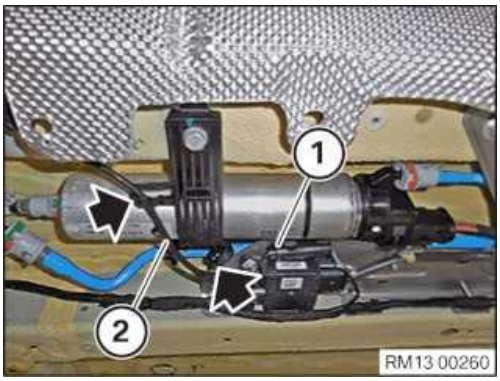
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

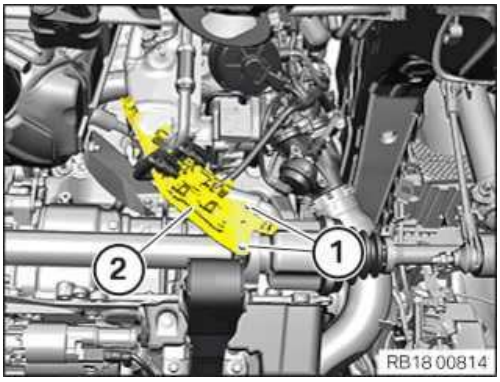
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

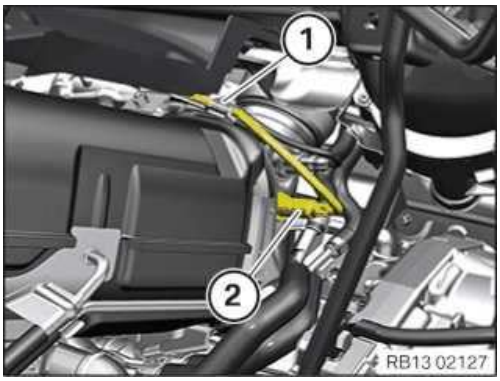


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

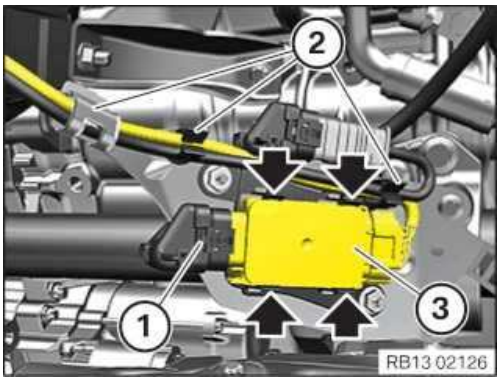
112 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



113 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

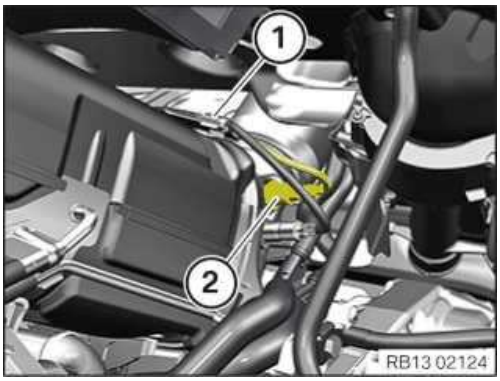
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

114 – Install the monitoring sensor

TECHNICAL INFORMATION



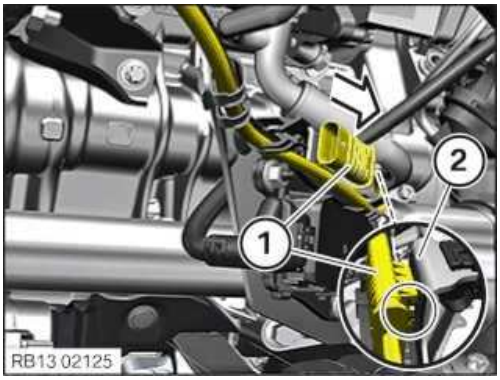
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

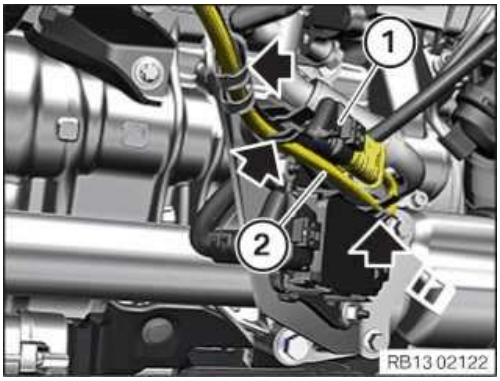
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

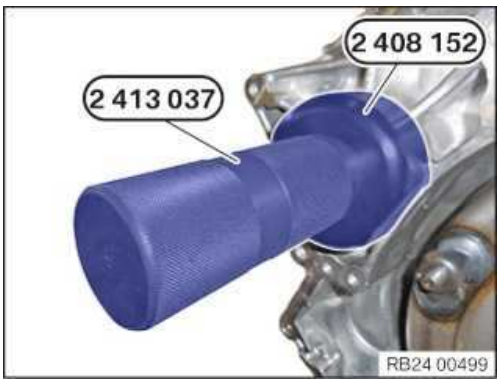
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

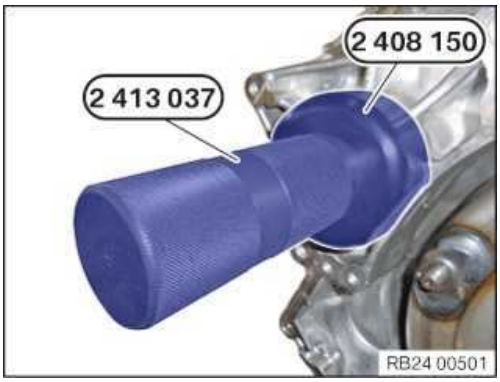
115 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

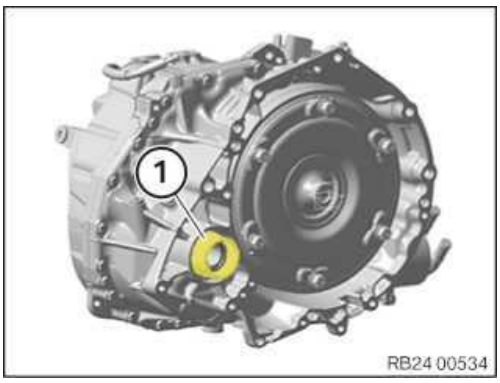
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



cardiagn.com



- Insert special tool **2 411 739** into the inner radial shaft seal.

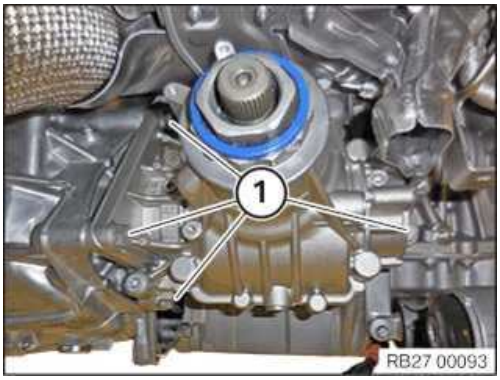


- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.



cardiagn.com

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

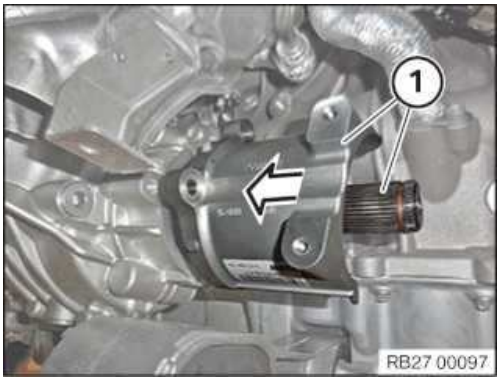
Technically suitable transfer box and electrical transmission oils	

Main group 27

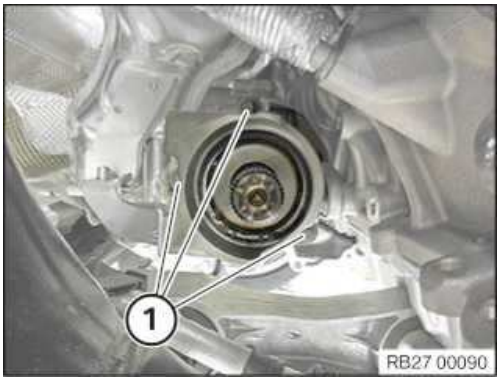
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



116 – Install the intermediate shaft with the support tube



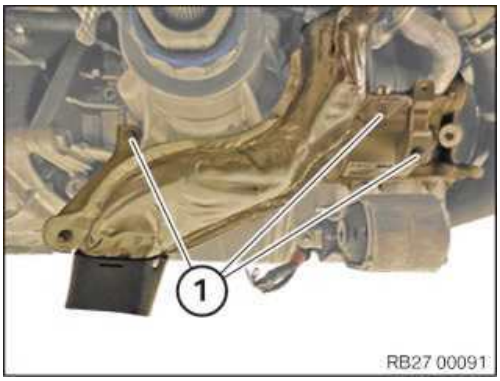
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

117 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

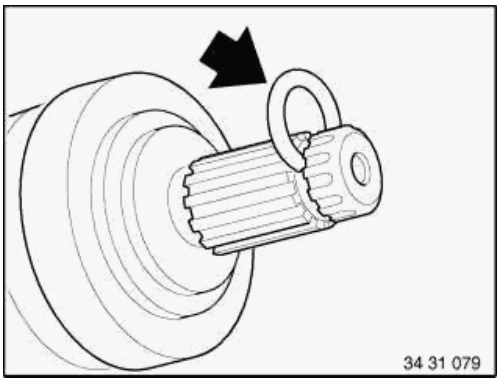
118 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

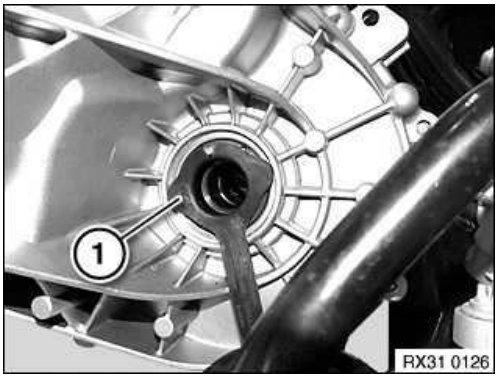
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

119 – Partially installing the left output shaft



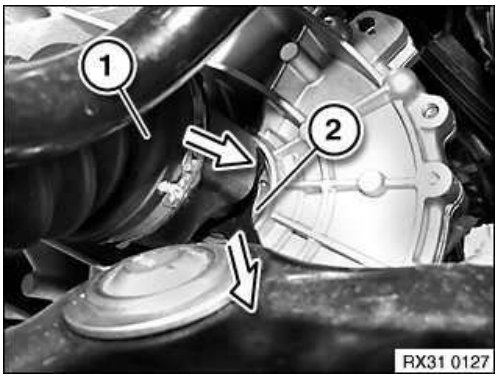
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

120 – Install propeller shaft.

CAUTION

Component with heavy weight.

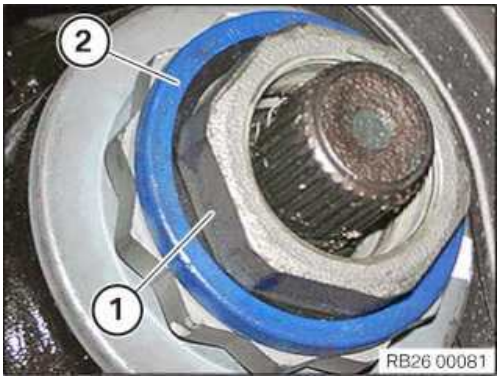
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

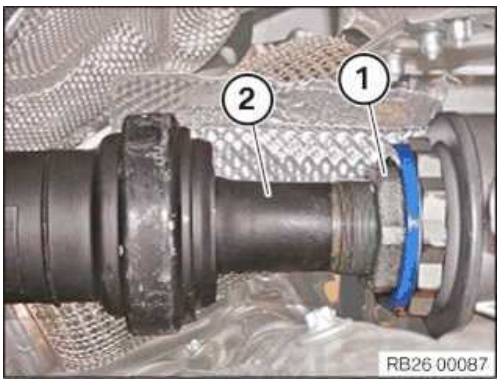
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

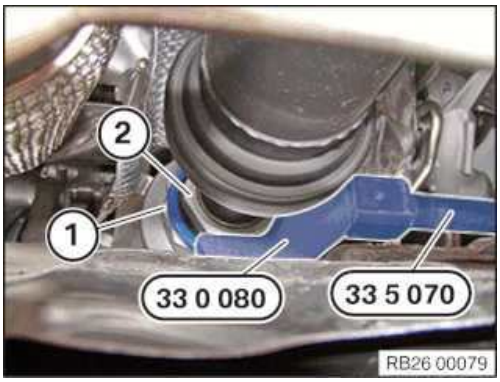
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



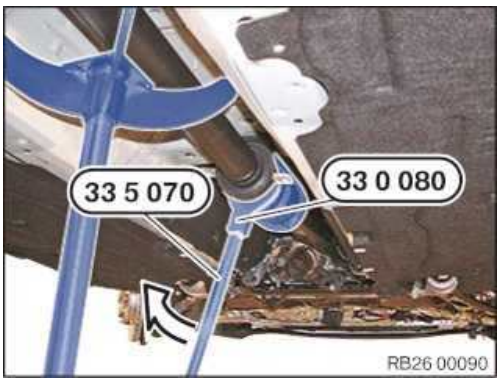
- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



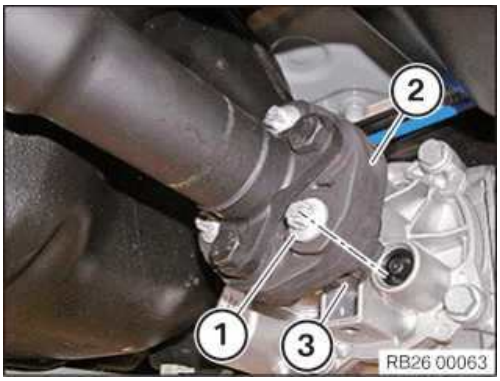
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

cardiagn.com

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

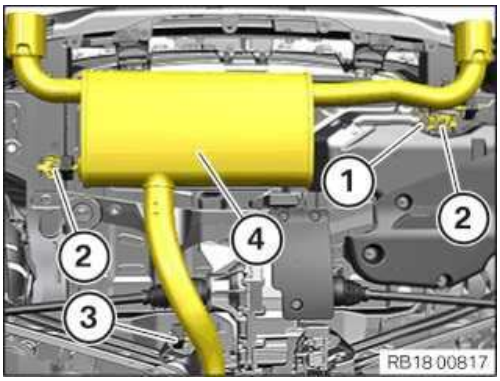
123 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

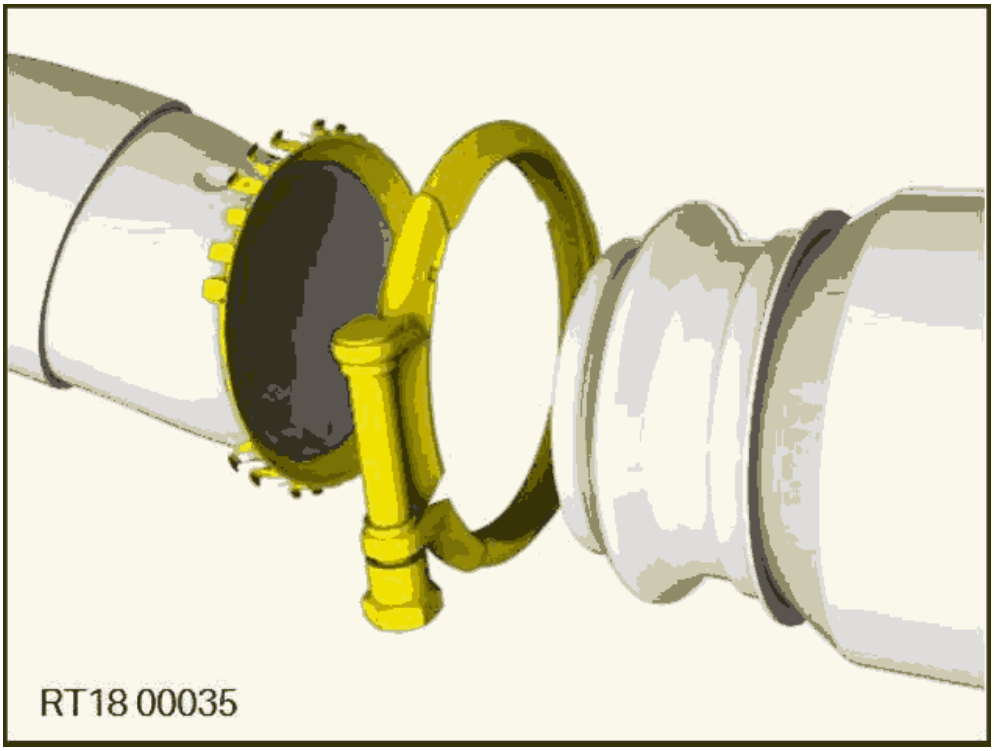
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

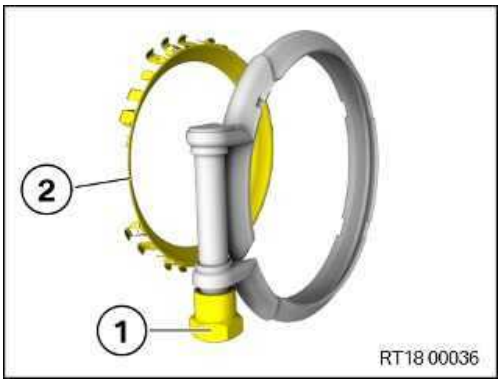
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



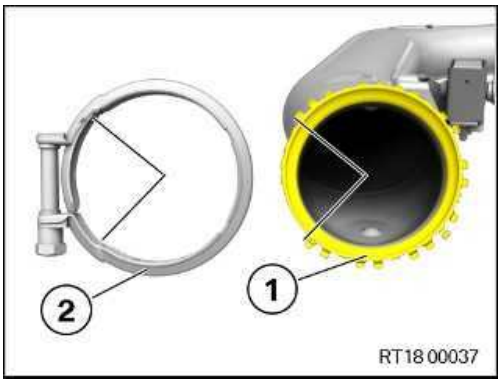
Exhaust bracket on body



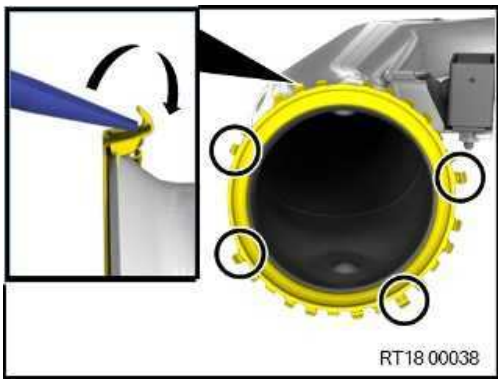
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▶ **Install the V-clip**

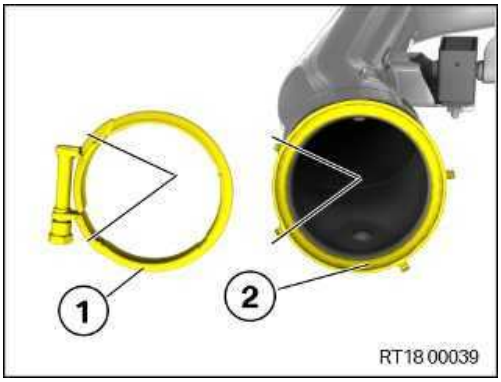


V-band clamp



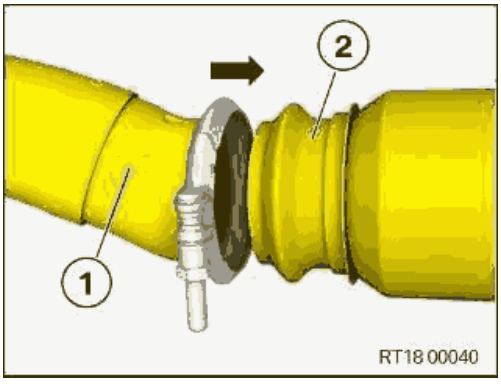
- Unscrew the nut (1) and remove the sealing ring (2).

cardiagn.com



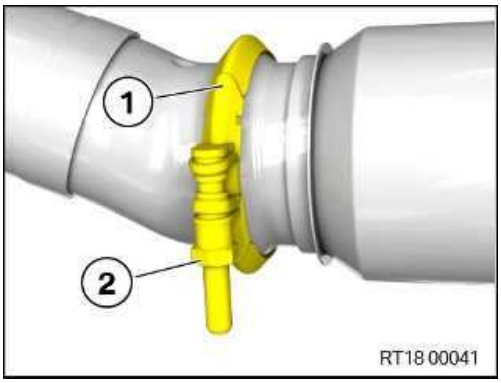
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



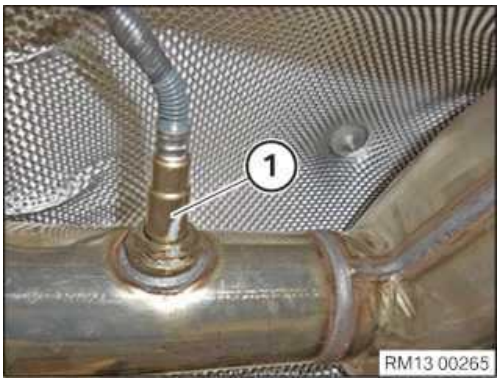
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

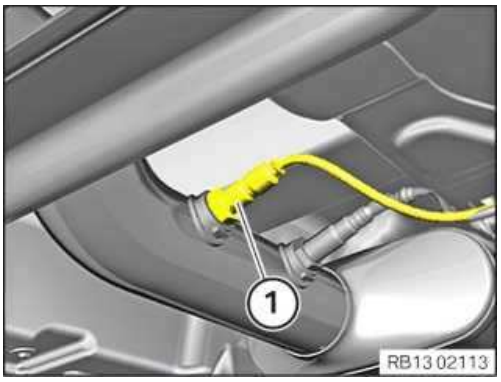
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



cardiagn.com

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter



V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

124 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

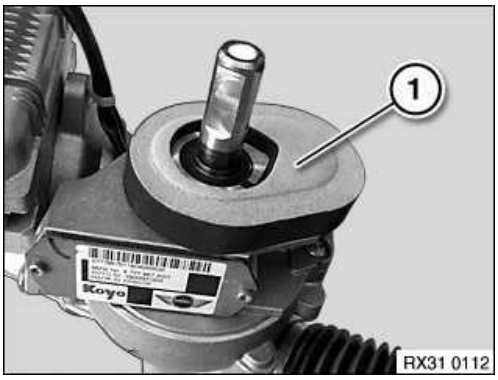
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

125 – Install the connecting support on the tunnel in front and back

cardiagn.com

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

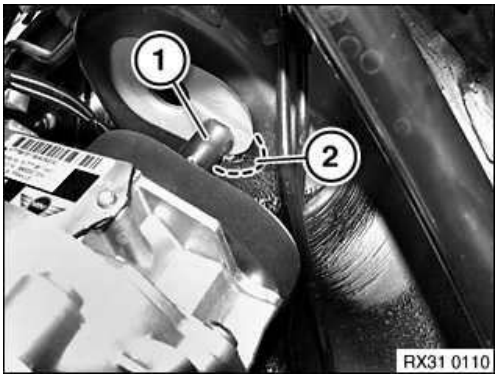
Front connection carrier to body



M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

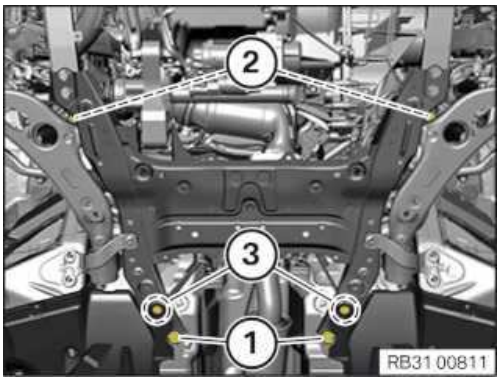


M8x18		Tightening torque	28 Nm

126 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

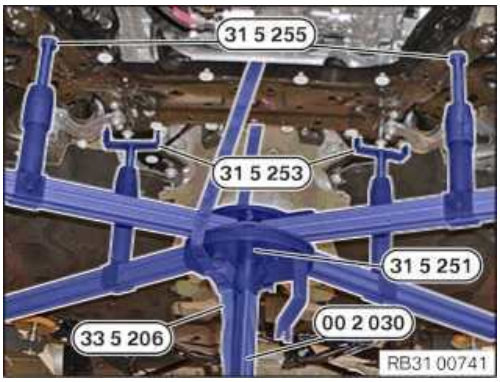
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

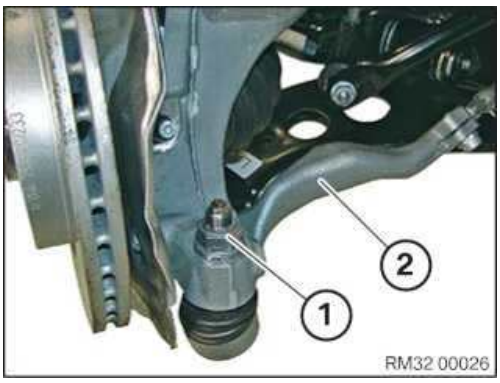
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



- If necessary, tighten the screws in the areas (3).

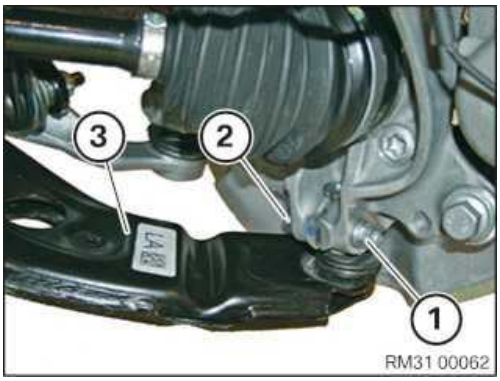
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE

Perform the operations on the left and right side.



- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

127 – Install the mounted parts on the front axle support

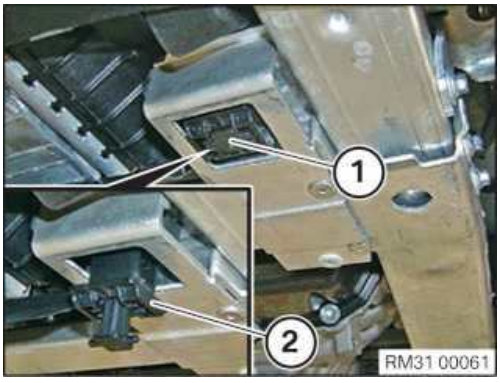
NOTICE

Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

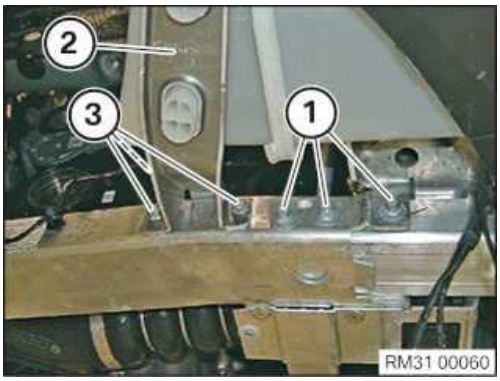


M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

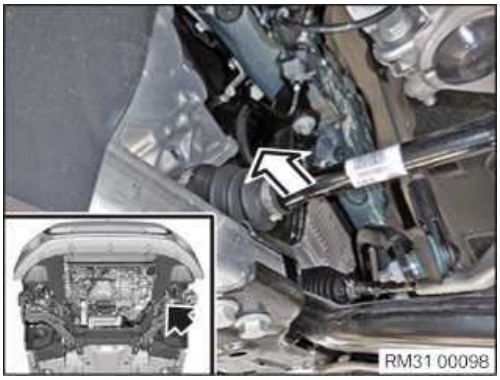
cardiagn.com

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



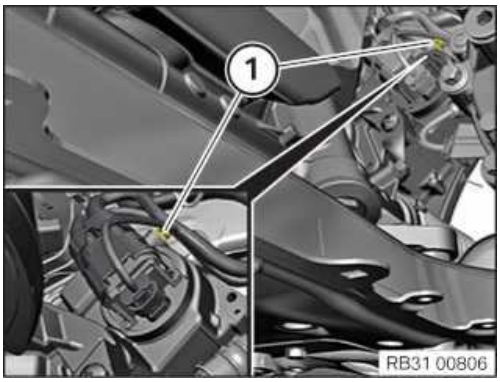
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

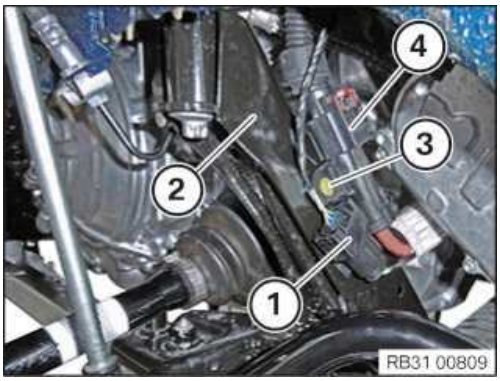
		Tightening torque	11,8 Nm

128 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

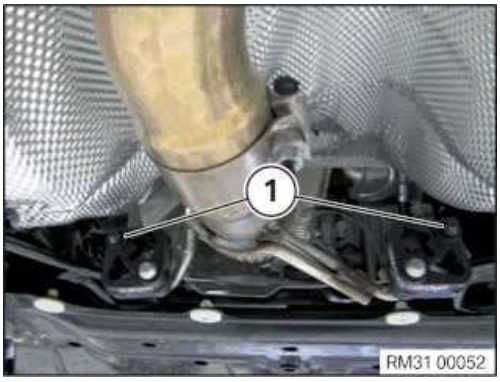


- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



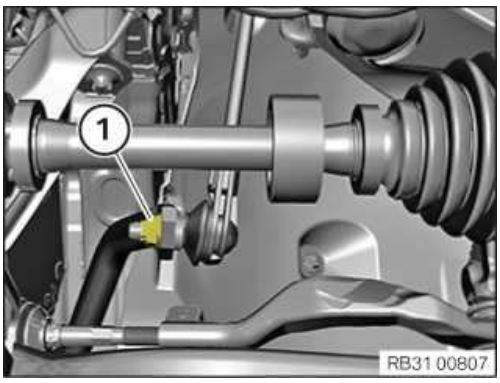
- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

129 – Securing rubber mount on front axle support



- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

130 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

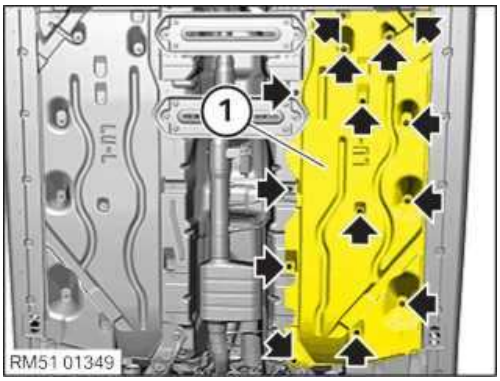
- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



131 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

132 – Installing underbody panelling , right

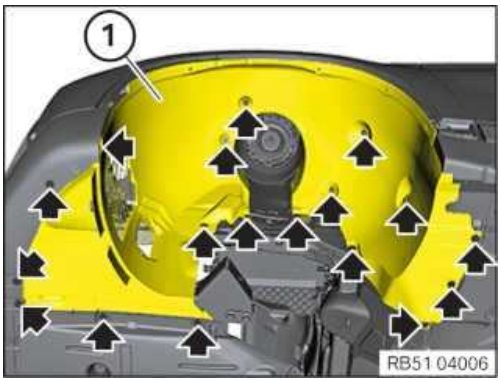
cardiagn.com

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Plastic nut		Tightening torque	2,6 Nm

133 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

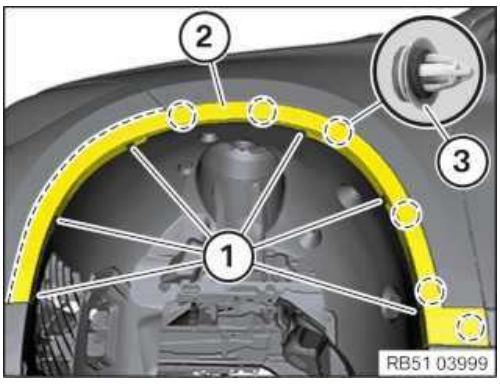
Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

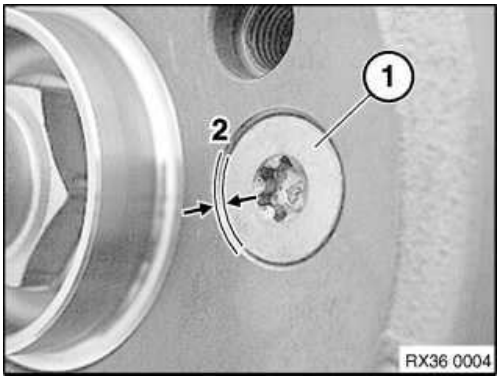
cardiagn.com

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

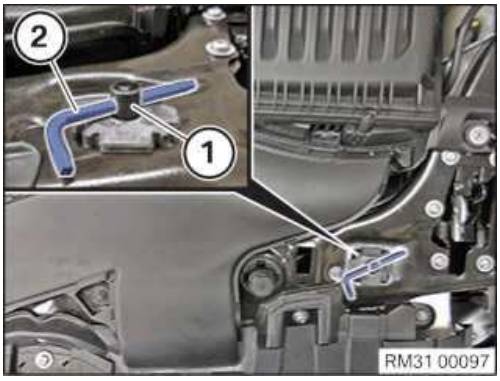
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



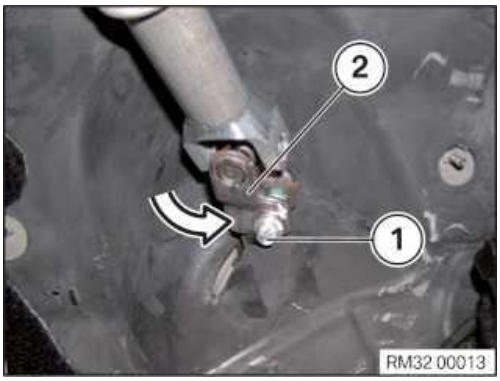
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

135 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

136 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

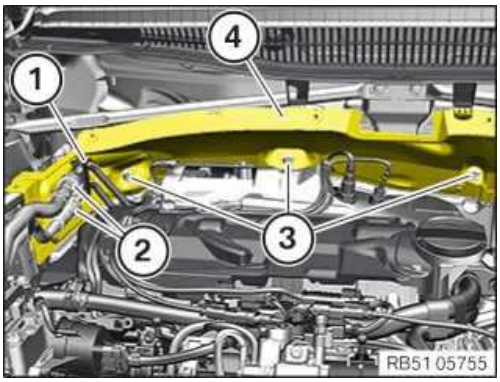
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

137 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

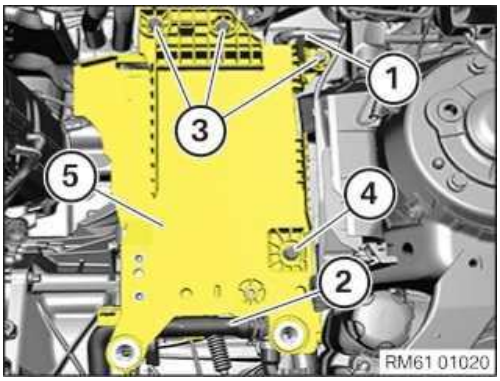
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

138 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

139 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

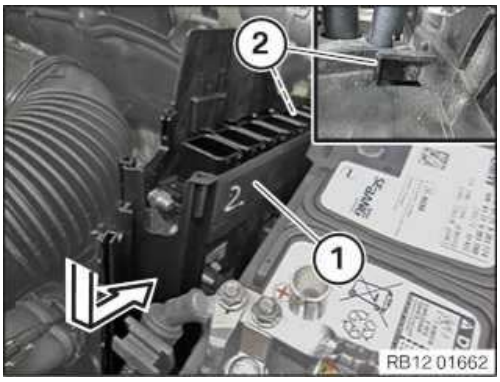
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

140 – Install electronics box

Prerequisite



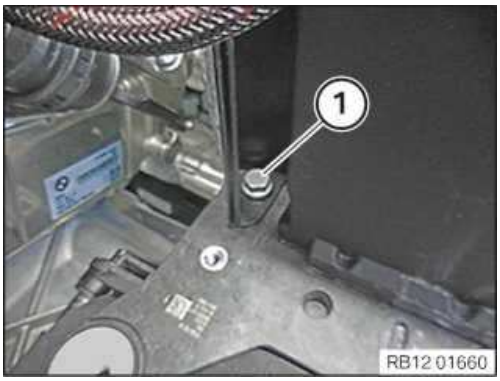
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

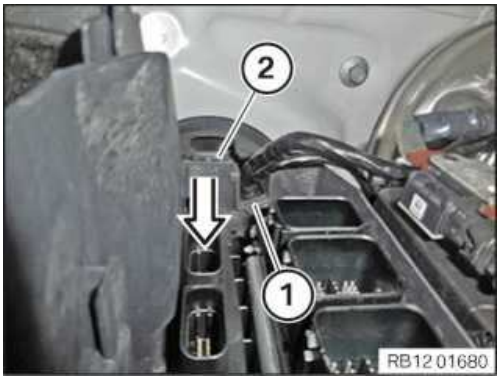
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

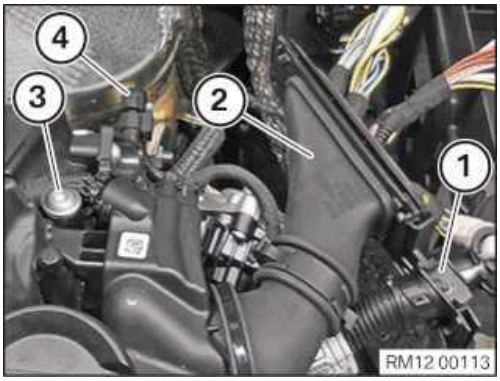


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

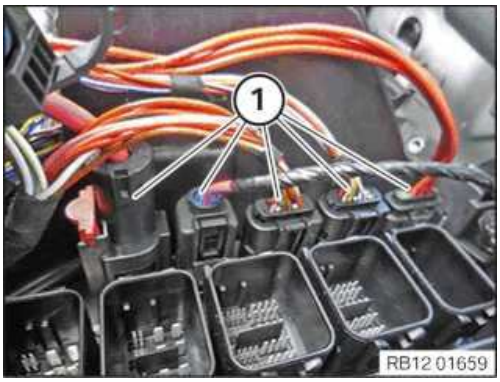


- Tighten down screw (1).

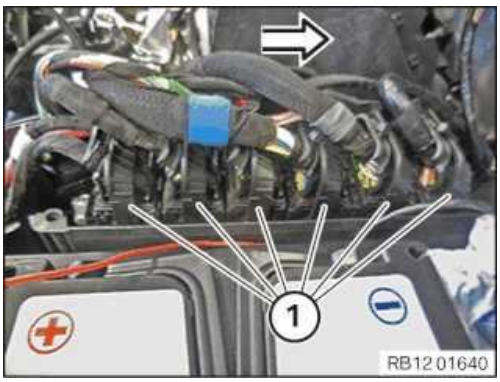
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



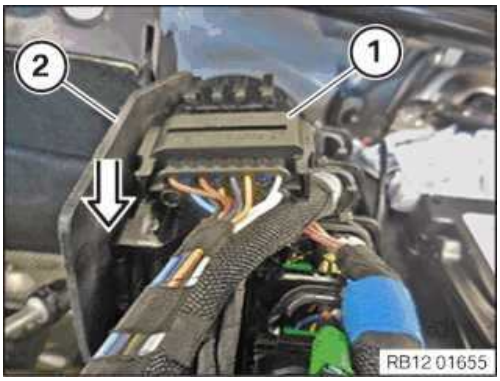
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



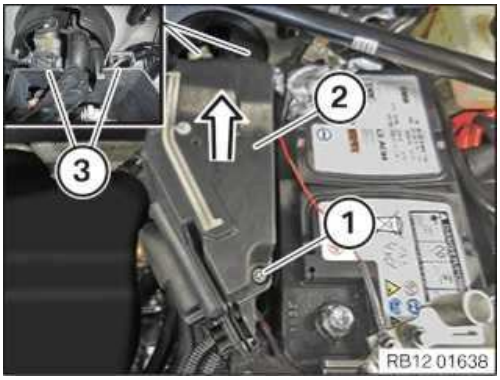
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

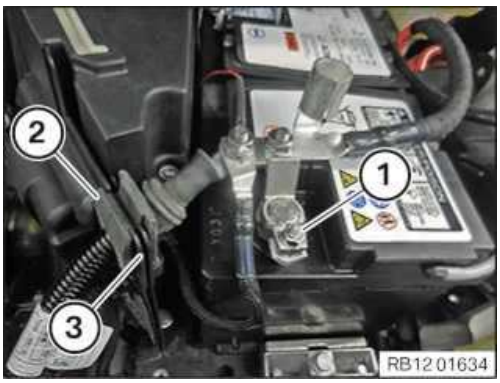


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

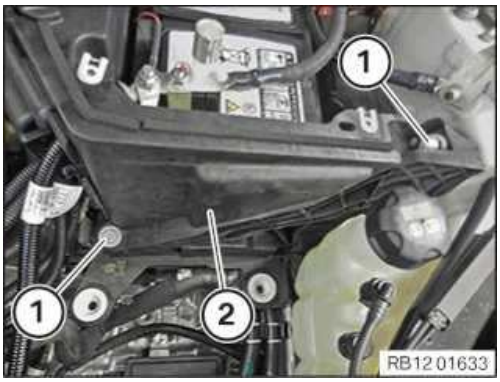
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

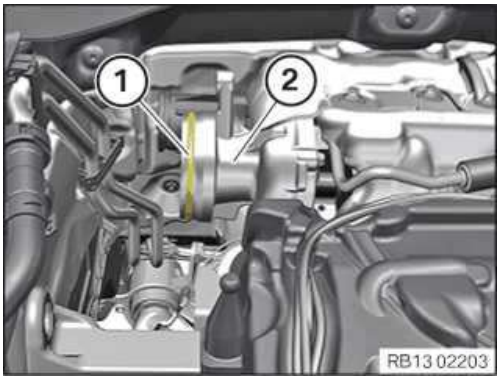


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

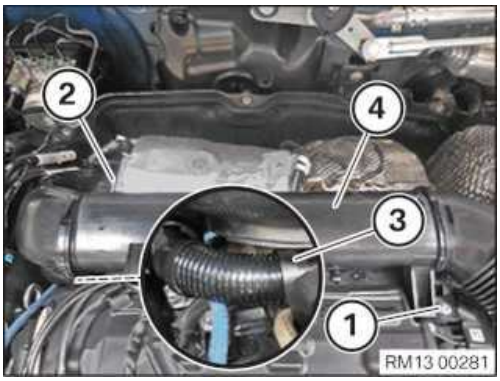
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

141 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

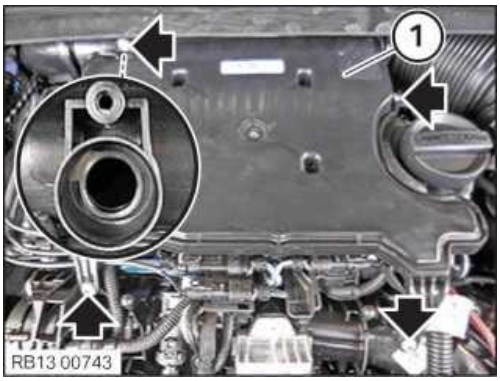
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

142 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

143 – Install acoustic cover

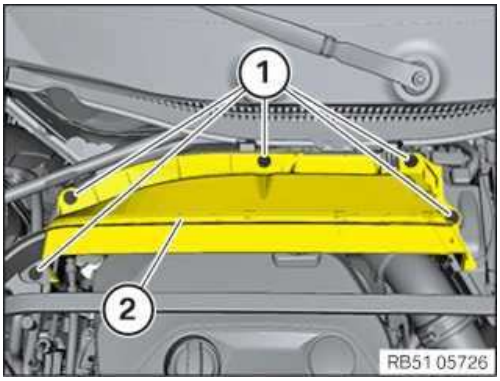
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

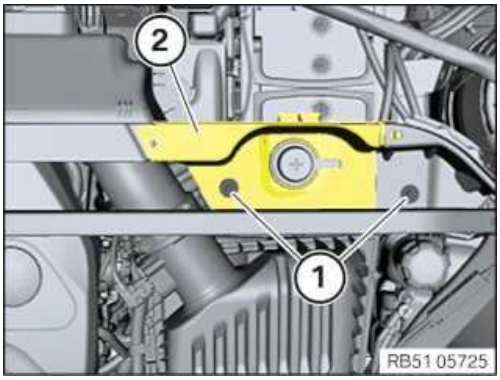
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

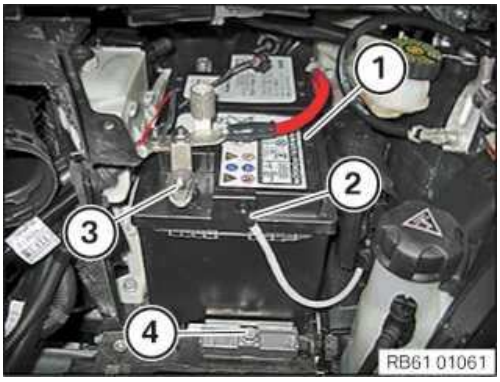


144 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

145 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

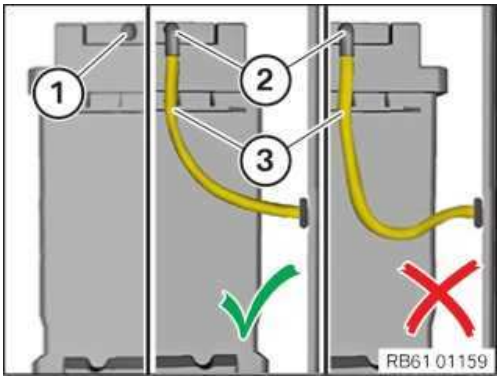
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▶ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

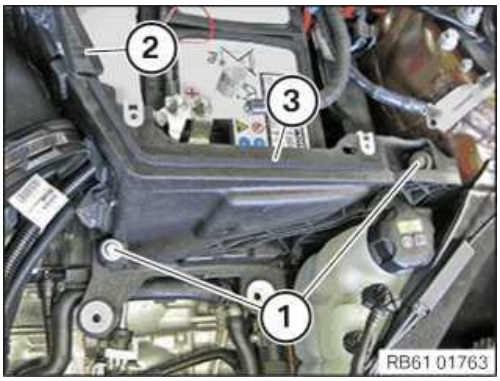
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

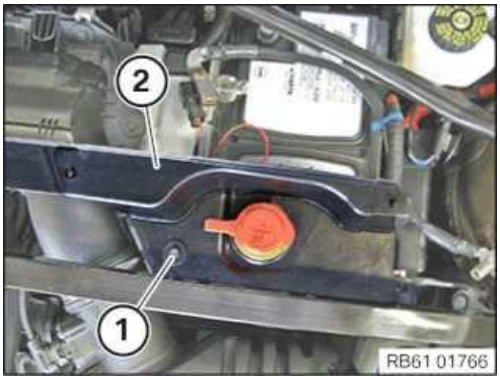
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

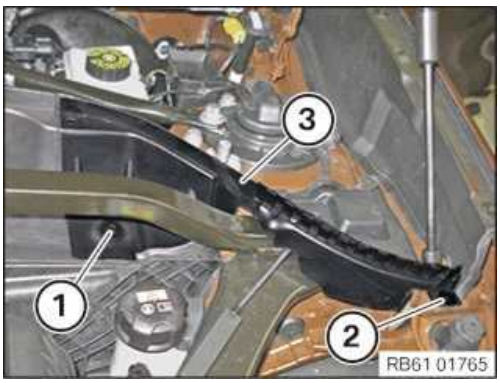


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



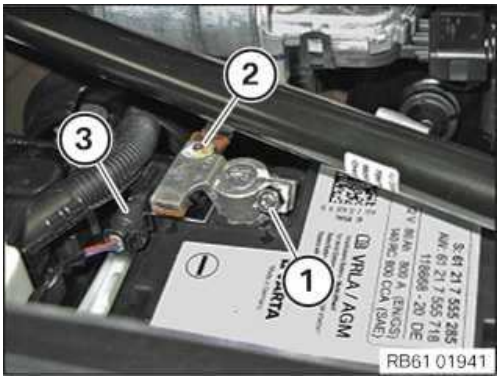
M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



Battery cover

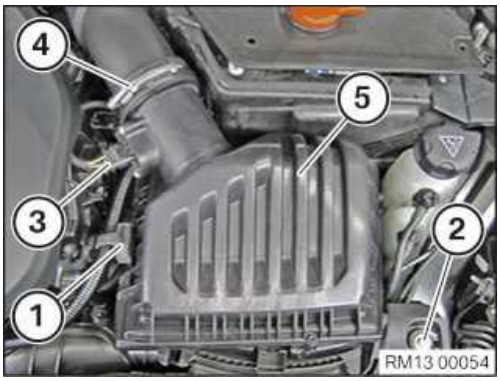
M8		2,8 Nm

146 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

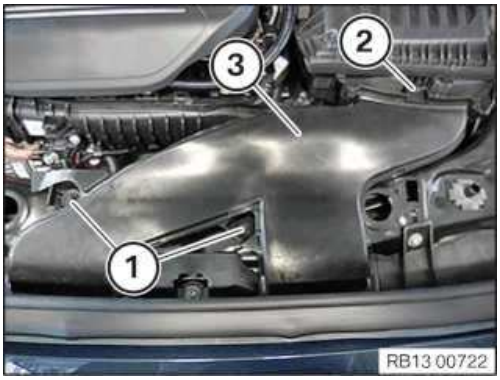
147 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

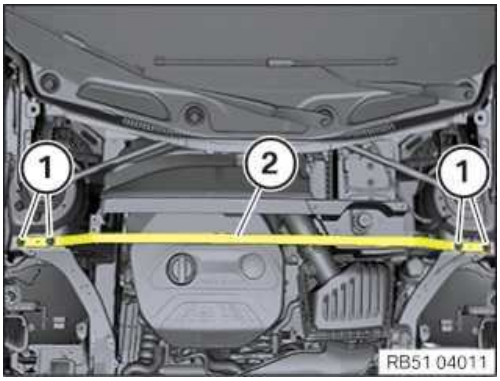
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

148 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



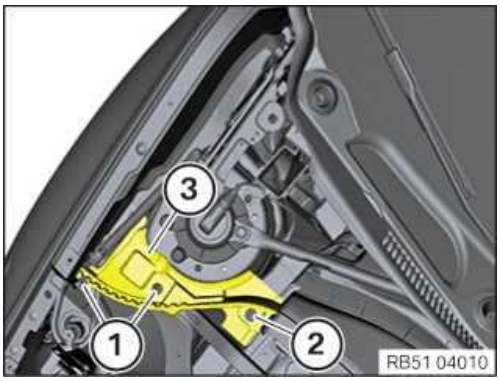
Intake neck to cross connection

M6		Tightening torque	8 Nm

149 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

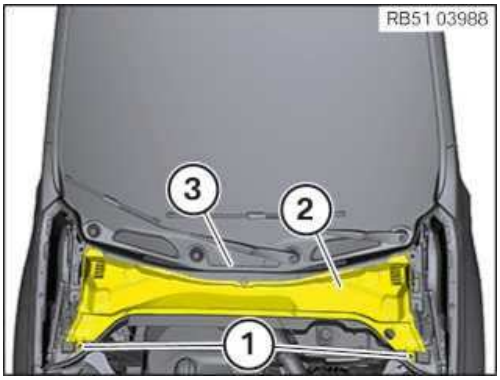
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



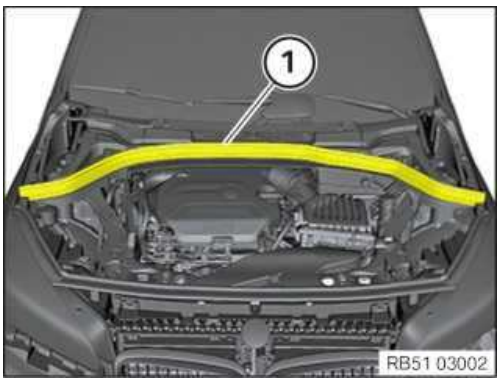
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

150 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

151 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

152 – Fill and bleed the coolant circuit

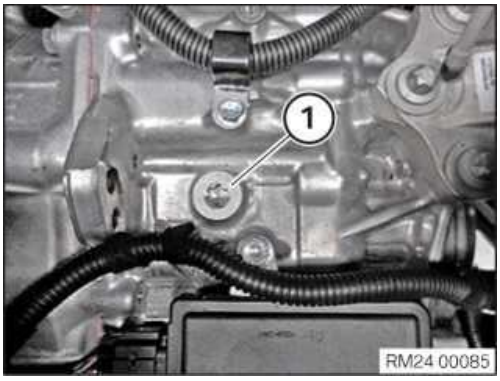
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

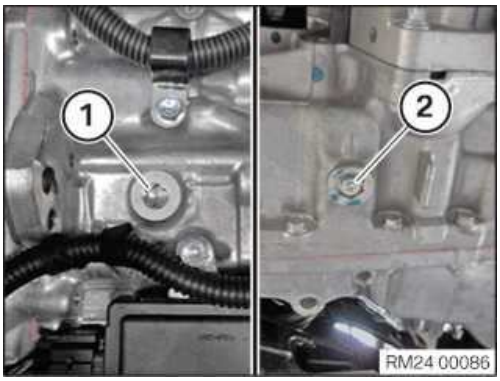
153 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.

cardiagn.com

- Renew sealing rings.

  Parts: Sealing ring

- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

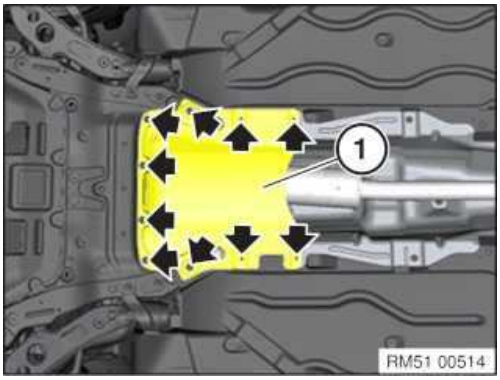
Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring

- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .



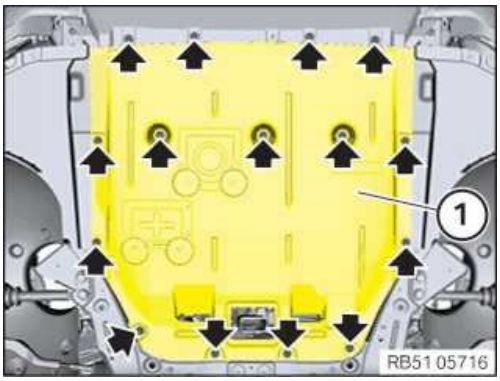
Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

154 – If installed: Installing underbody protection at rear

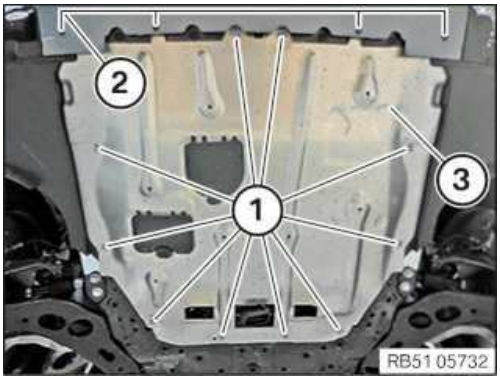


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

155 – Installing the front underbody protection



cardiagn.com

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system — Used in step 106

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 106

Torx bolt BM6x16		Tightening torque	8 Nm

Differential pressure sensor to holder — Used in step 106 107

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 106 107

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor — Used in step 108

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 109 110

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 111

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 112

Hexagon screw M6x16		Tightening torque	8 Nm

cardiagn.com

Nitrogen oxide sensor before SCR catalytic converter

Used in step 113

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 114

Sensor		Tightening torque	50 Nm

Transfer box to transmission

Used in step 115

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 115

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 115

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 116

M8x35		Tightening torque	19 Nm

Starter motor to transmission

Used in step 117

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 117

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box

Used in step 120

		Tightening torque	80 Nm

Flexible disc to rear axle final drive

Used in step 120

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body

Used in step 120

M8		Tightening torque	19 Nm

Heat shield to body

Used in step 121 122

Bolts/nut		Tightening torque	3 Nm

Bracket to body

Used in step 121

M8		Tightening torque	21 Nm

Exhaust system to body

Used in step 123

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body

Used in step 123

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter

Used in step 123

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 123

Sensor		Tightening torque	50 Nm

cardiagn.com

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 123

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 124

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 125

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 125

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 126

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 126

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 127

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 127

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 127

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 127

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 128

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 130

M10	Renew nut.	Tightening torque	56 Nm

Underbody panelling, side

Used in step 132

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 132

Plastic nut		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 133

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 133

Screw		Tightening torque	2,5 Nm

cardiagn.com

Wheel arch cover to body

Used in step 133

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 134

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 134

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 134

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 136

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 136

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 137

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 138

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 139

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 140

M8X16		Tightening torque	15 Nm

Clean air pipe to cylinder head cover

Used in step 141

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 141 147

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 142

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead

Used in step 144

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 144

Screw		Tightening torque	2,6 Nm

cardiagn.com

Battery terminal rail to battery tray — Used in step 145

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal — Used in step 145 146

NutM6			5 Nm

Trailing link — Used in step 145

M8		Tightening torque	19 Nm

Battery cover — Used in step 145

M8			2,8 Nm

Intake silencer housing to lock bridge — Used in step 147

M6X30		Tightening torque	8 Nm

Intake neck to cross connection — Used in step 148

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome — Used in step 149

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body — Used in step 149

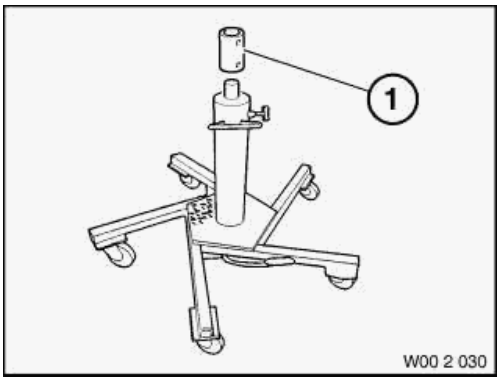
Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing — Used in step 153

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug — Used in step 153

M6	Renew the sealing ring.		8 Nm



Underbody protection front — Used in step 155

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

0 490 133 (00 2 030) Device

Common

Used in step 32 73 83 126

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

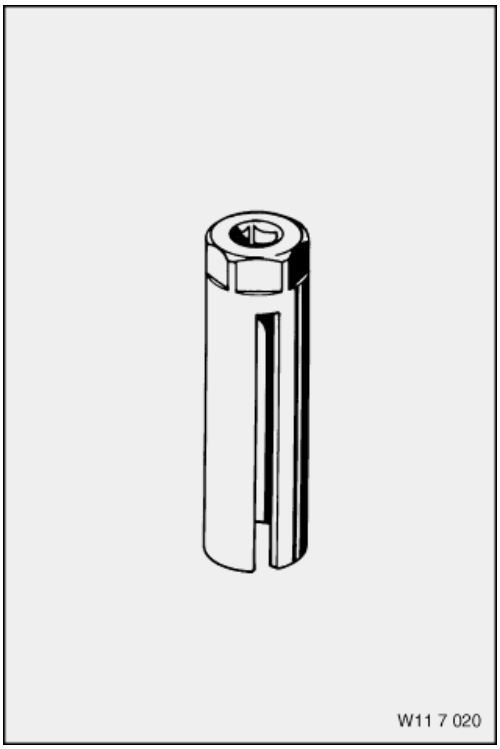
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common

Used in step 38 120

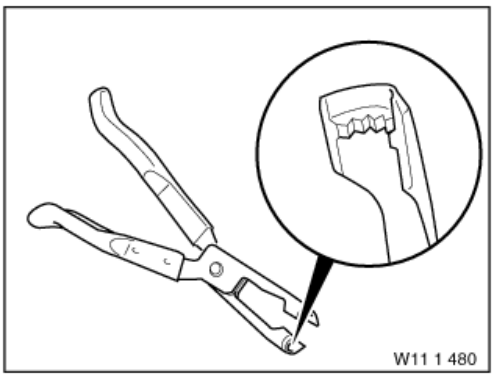


Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

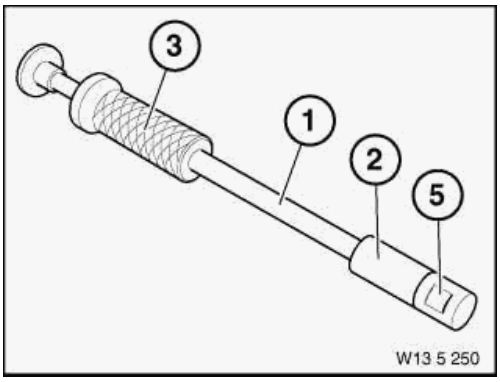


0 491 074 (11 7 020) Socket wrench insert

Common Used in step 44 45 114

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 490 796 (11 1 480) Pliers



Common Used in step 53 72 75

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common

Used in step 63

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

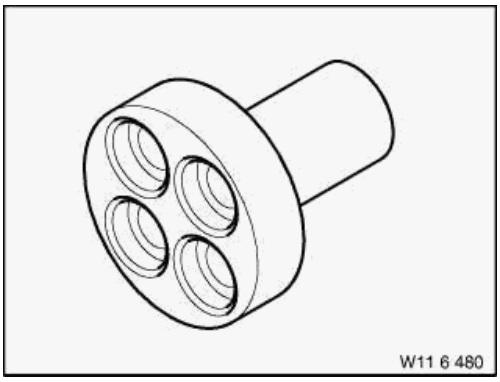
0 493 339 (13 5 252) Bush

Common

Used in step 63

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight



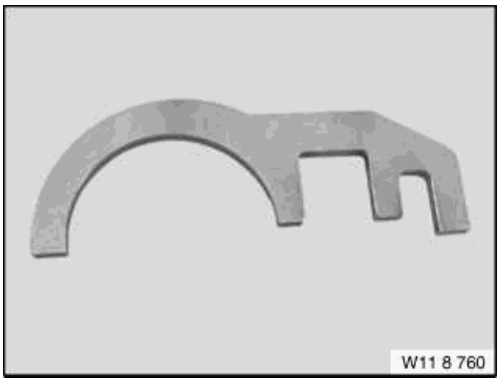
Common

Used in step 63

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 380 (11 6 480) Connector



Common	Used in step 65 92
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 65 92
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 65 92
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common Used in step 70 71 74 76

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

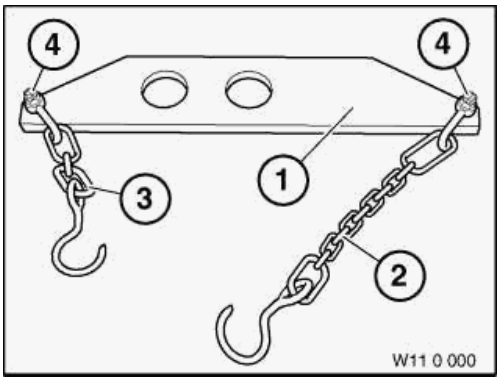
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 357 071 Panel

Common Used in step 73 83

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

2 459 012 Holder



Common Used in step 73 83

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

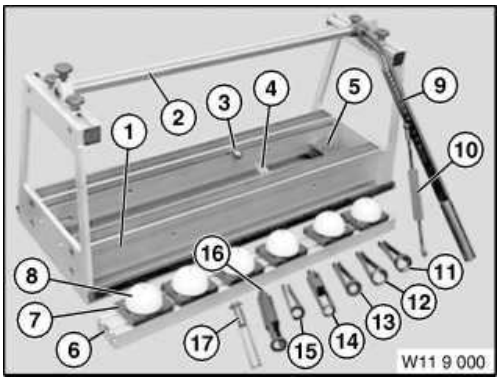
cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 73 83

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

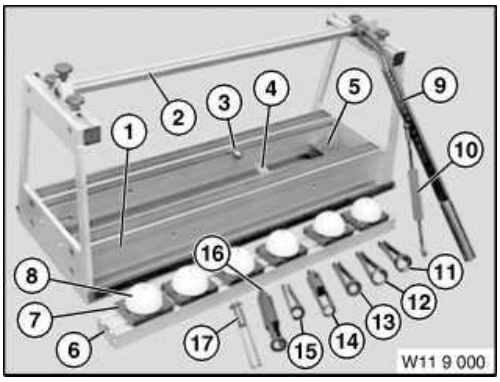
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 73 74 76 77 79

cardiagn.com

Common



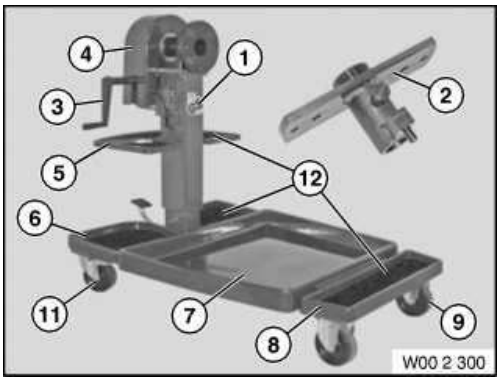
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

0 494 366 (11 9 001) Device



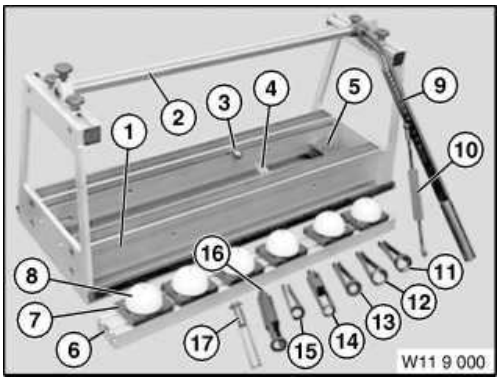
Common		Used in step 74 79
Usage		
Included in the tool or work	0 494 362	
Storage location		
Replaced by		
In connection with		
SI-Number		

0 495 187 (00 2 300) Assembly stand

Used in step 74 79

cardiagn.com

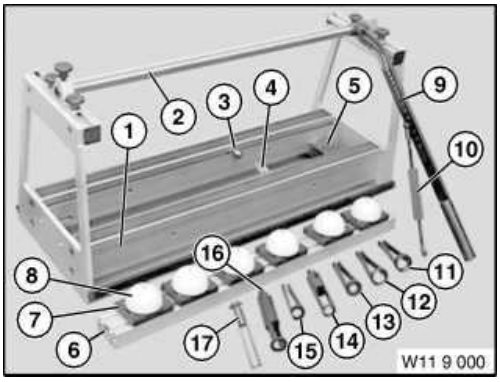
Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

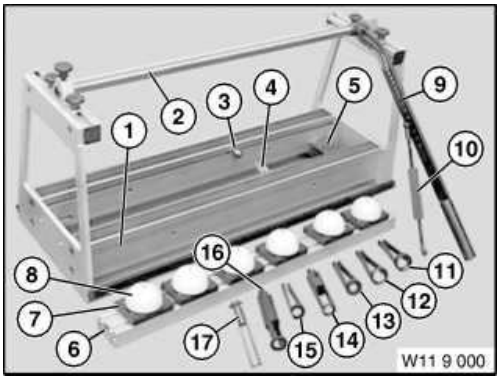


cardiagn.com

0 494 371 (11 9 006) Insert

Common	Used in step 74 76 77 79
Usage	(Aluminium strip)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 372 (11 9 007) Shaped part



Common	Used in step 74 77
Usage	(Shaped part)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 373 (11 9 008) Shaped part

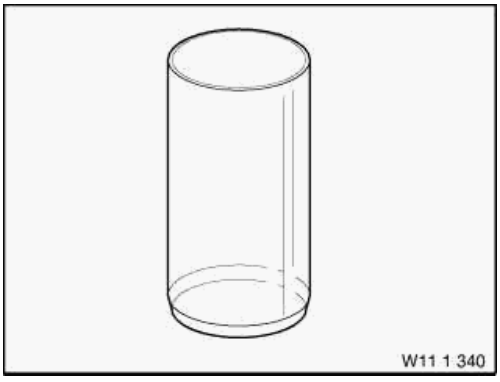
Common	Used in step 74 76 77
Usage	(Shaped part) Shaped part made of plastic
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 370 (11 9 005) Quick fastener

Common	Used in step 74 76 77 79
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

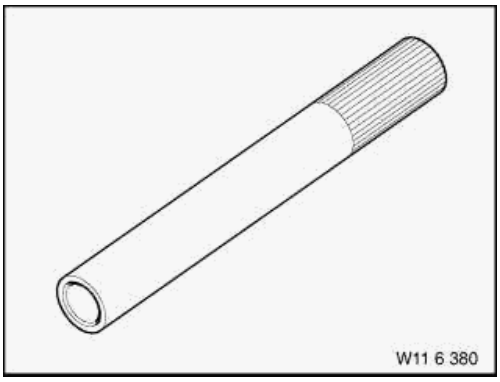
0 494 374 (11 9 009) Lever



Common	Used in step 74 79
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

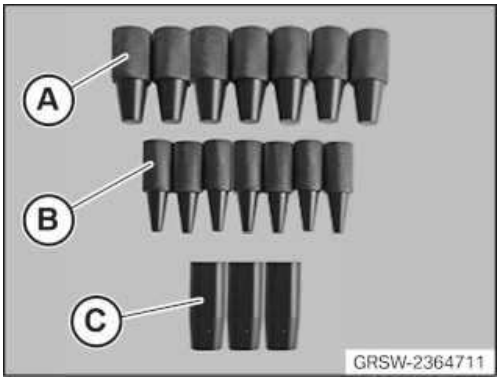
0 496 143 (11 8 840) Basket

Common	Used in step 74 79
Usage	(Valve spring cage) For removing and fitting the valves.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 05 07 (353)



0 490 746 (11 1 380) Holding sleeve

Common	Used in step 78
Usage	(Assembly sleeve) For fitting the valve stem seal, diameter 7 mm
Included in the tool or work	
Storage location	individual
Replaced by	
In connection with	
SI-Number	



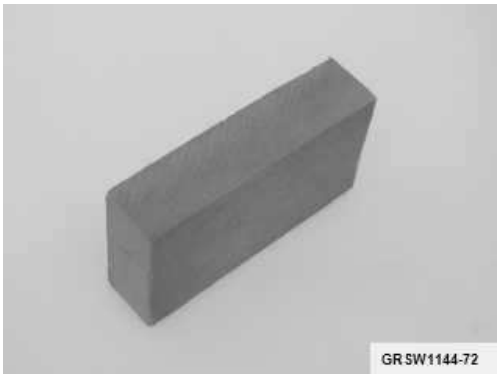
cardiagn.com

0 493 249 (11 6 380) Bush

Common	Used in step 78
Usage	For fitting valve stem seal
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 364 711 Plug

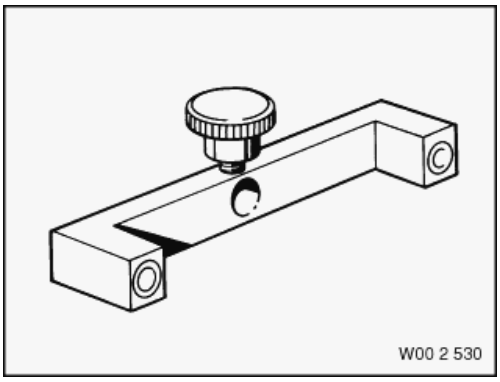
Common	Used in step 80
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)



0 495 103 (11 4 471) Scraper

Common	Used in step 80
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

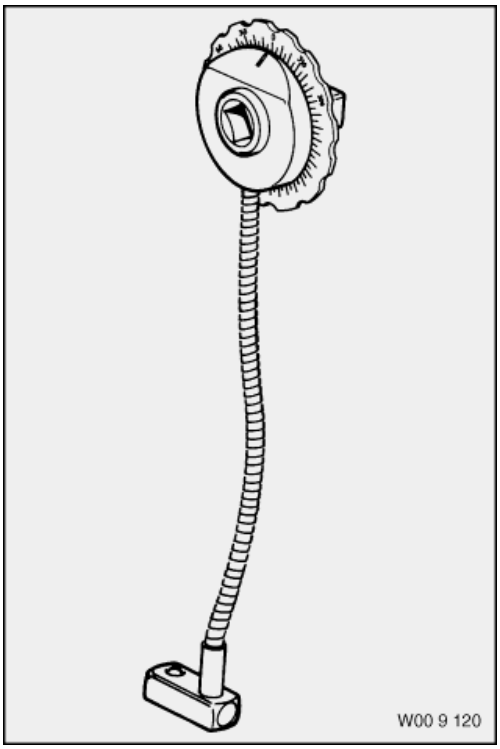


0 495 104 (11 4 472) Extractor

Common Used in step 80

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 490 185 (00 2 530) Bridge

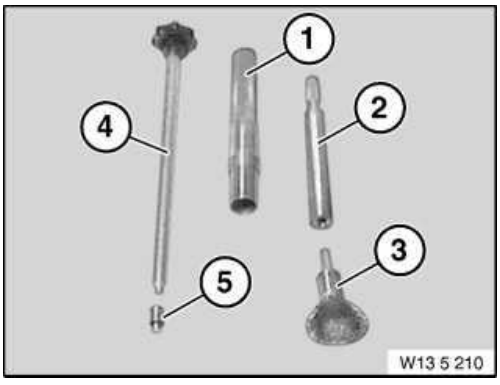


Common Used in step 81

Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

0 490 504 (00 9 120) Torque angle measuring dial

Used in step 83 120

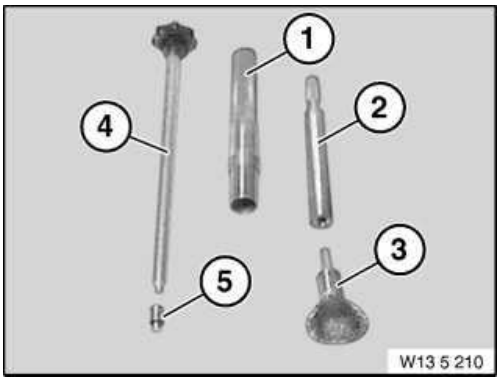


cardiagn.com

Common

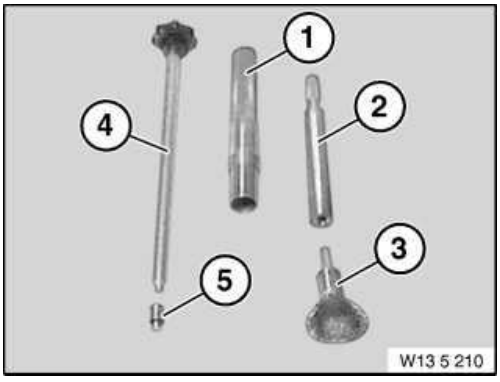
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

0 493 763 (13 5 215) Plug



Common Used in step 94

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

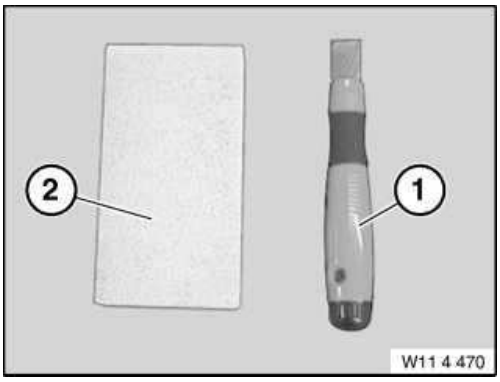


cardiagn.com

0 493 762 (13 5 214) Rod

Common	Used in step 94
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 758 (13 5 210) Tool



Common	Used in step 94
Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

cardiagn.com

0 495 102 (11 4 470) Tool

Common Used in step 98

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

2 409 025 Puller

Common Used in step 115

Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by

Exhaust-gas recirculation cooler seal on intake plenum	104

cardiagn.com

11 34 055 Replace all valve springs

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

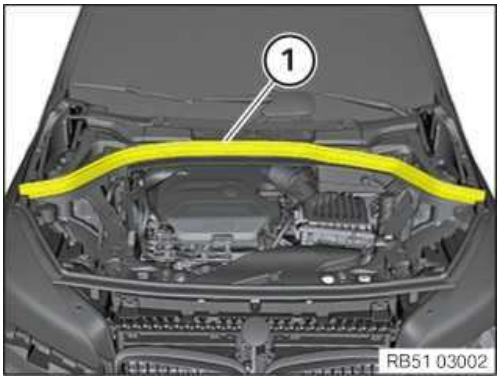
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

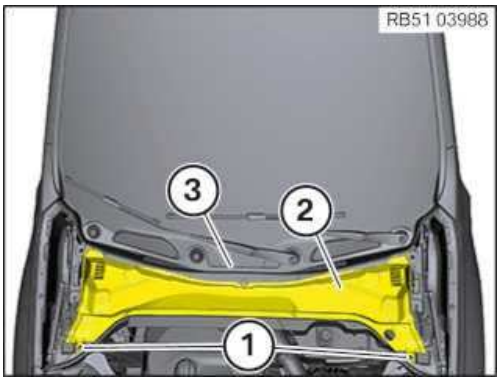


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

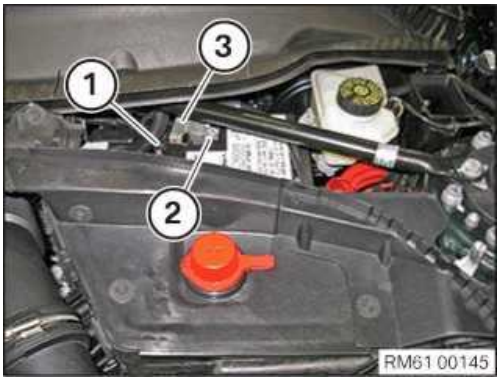
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

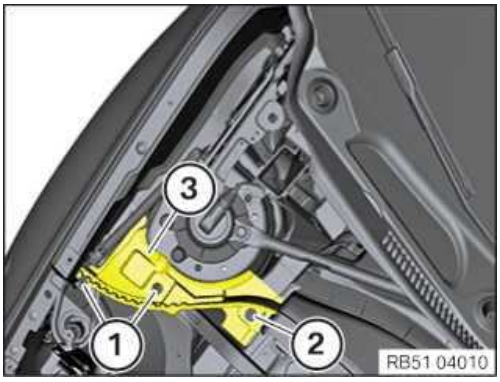


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

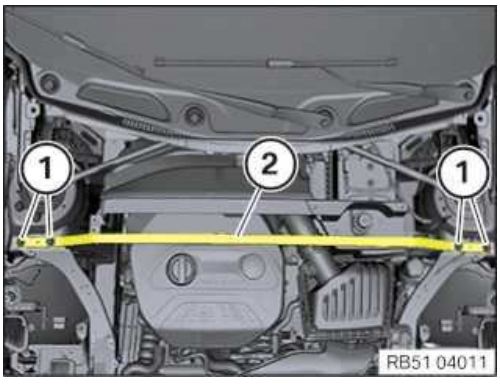
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

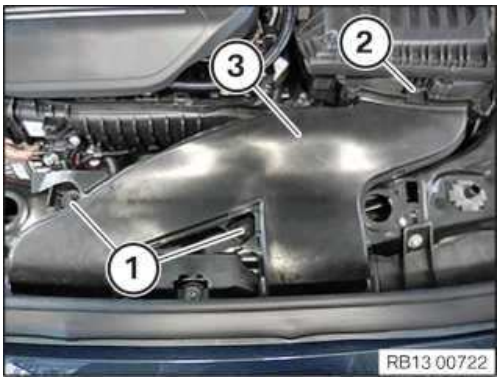
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

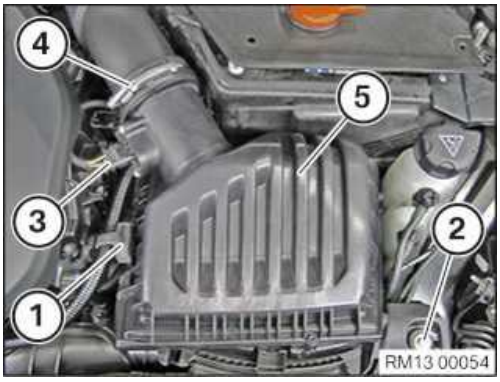
NOTICE

Description is for right component only. The procedure on the left side is identical.



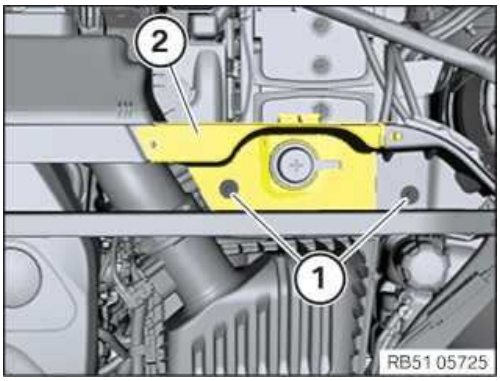
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



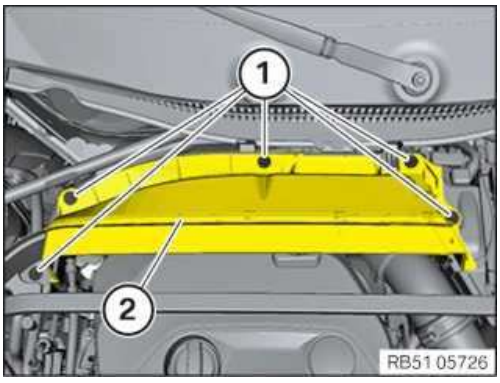
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



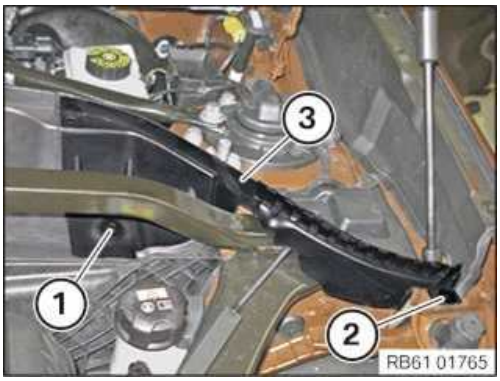
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

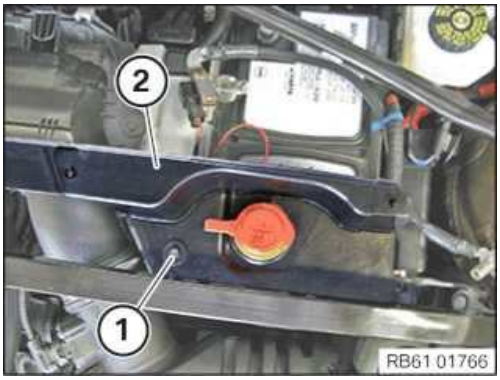
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



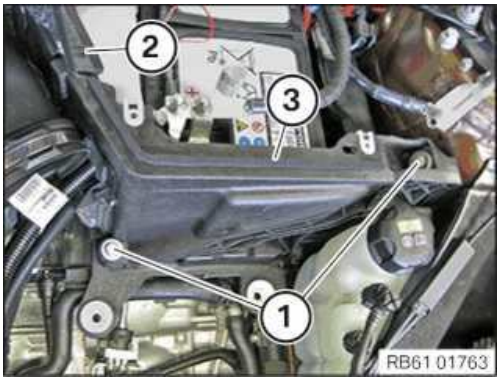
WARNING

Working on 12 V vehicle electrical system.

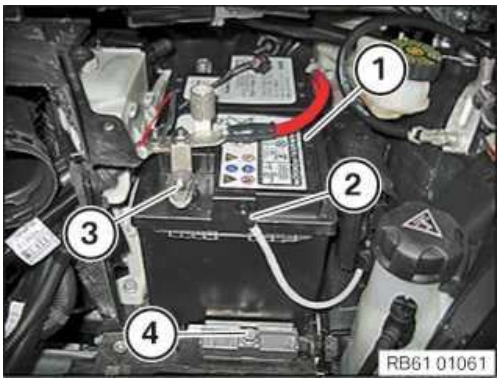


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

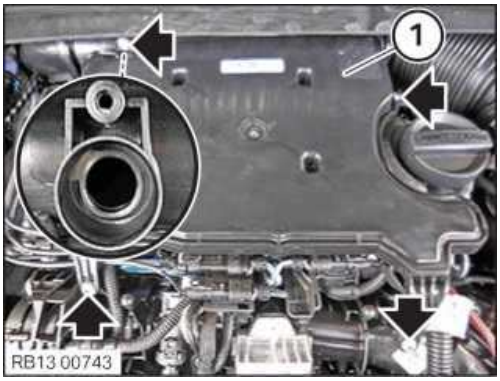
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



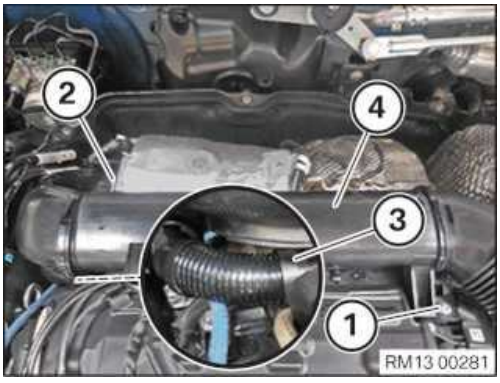
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

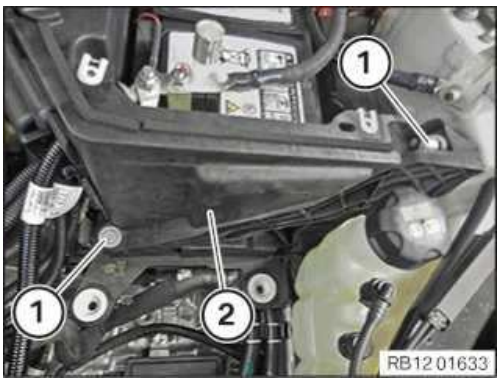
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

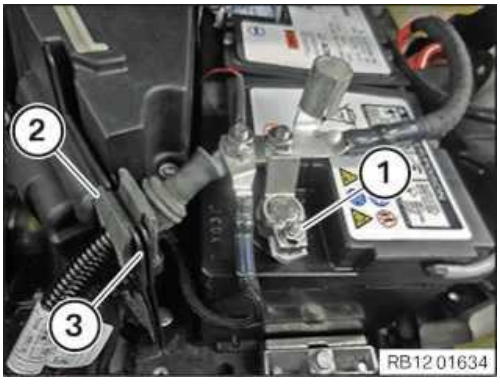
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

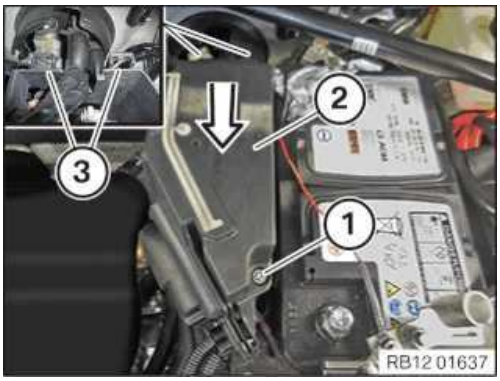
Follow instructions for removing and installing control units.



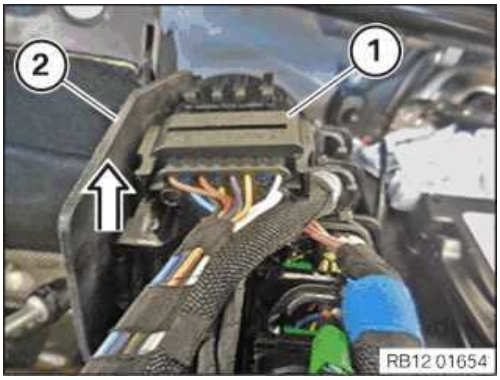
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

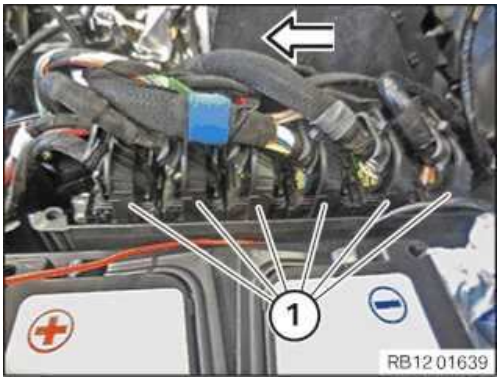
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



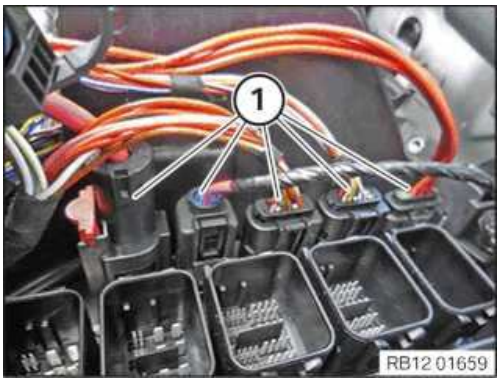
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



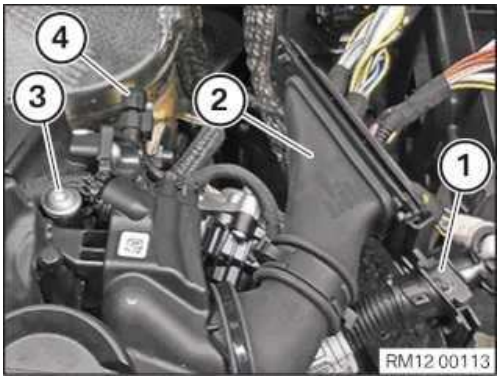
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

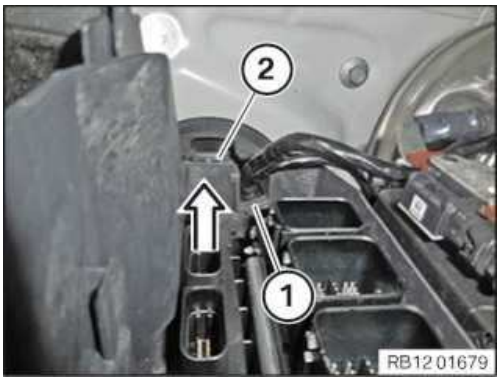


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

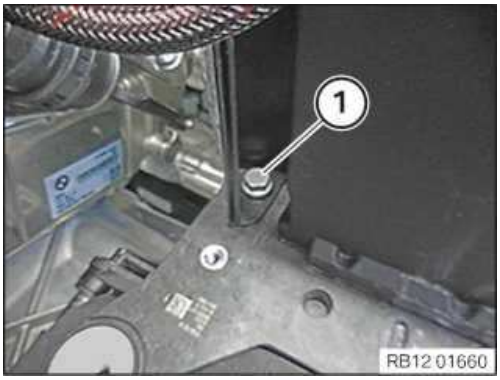


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

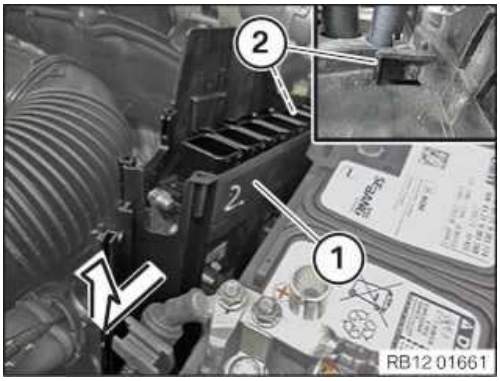
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

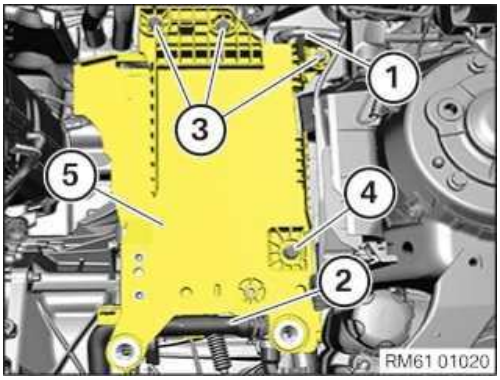


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

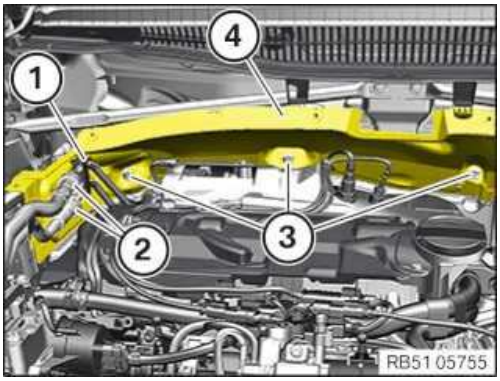


cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



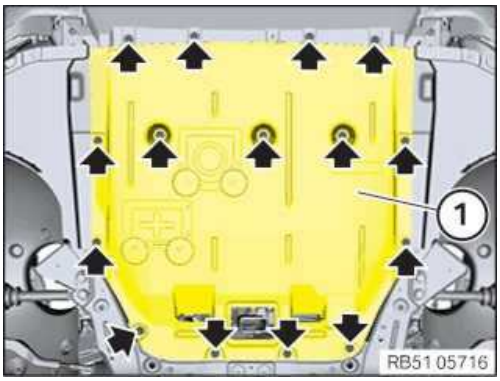
- Loosen screw (1).



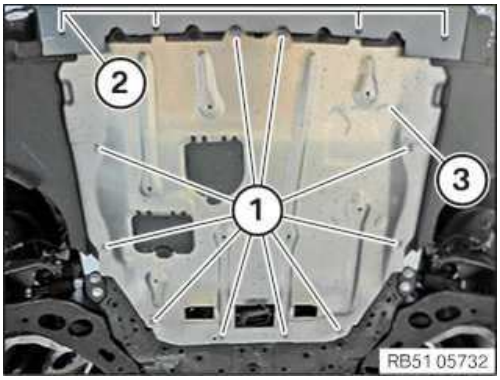
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



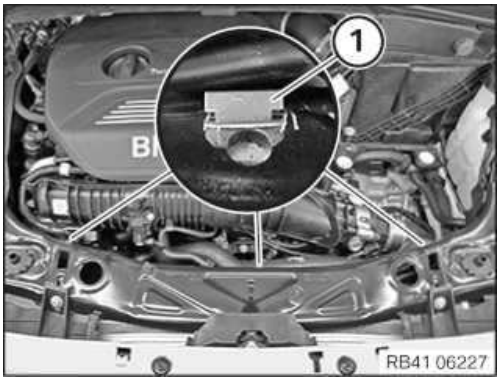
14 – Remove the rear bulkhead upper part



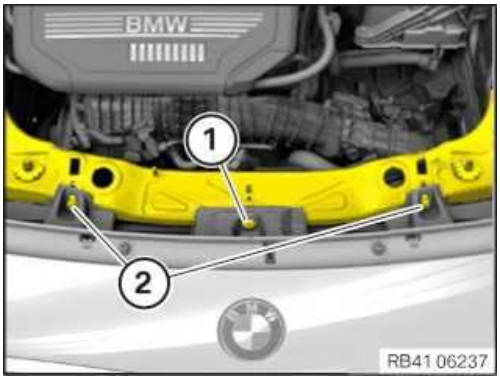
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

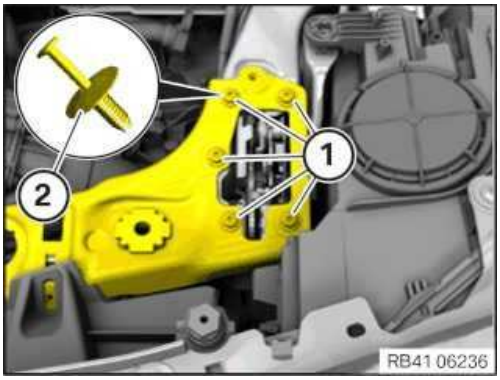
cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

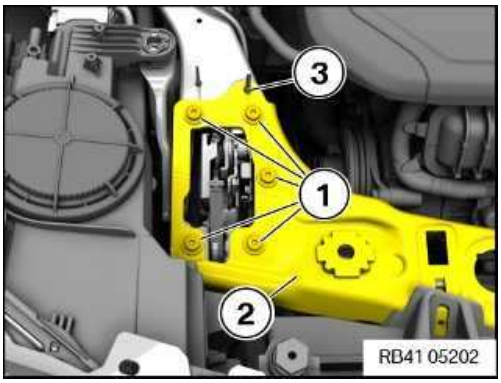


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



16 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

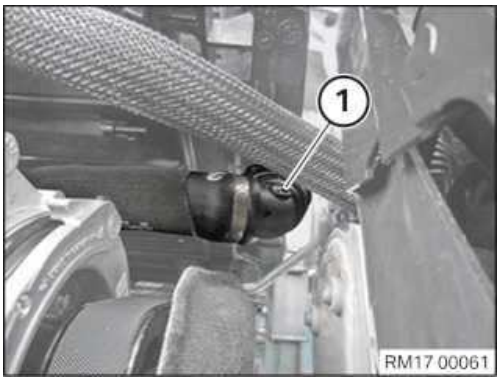
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

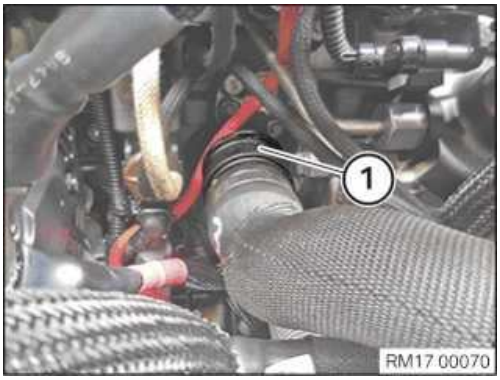
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

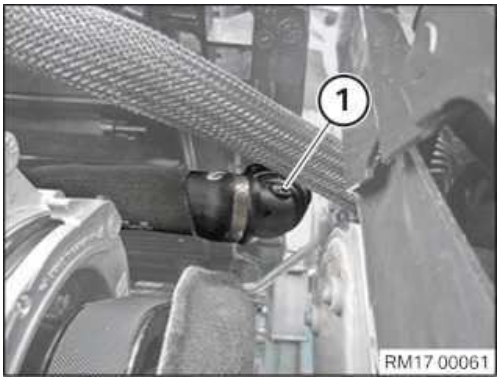
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



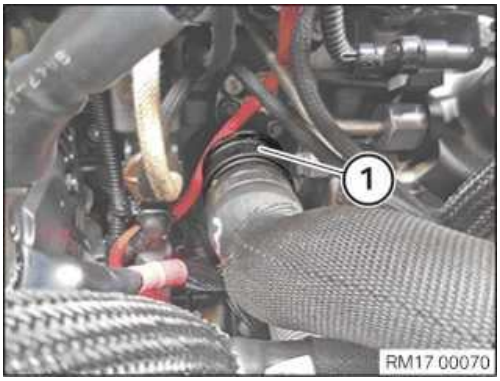
- Loosen sealing cap (1).

cardiagn.com

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

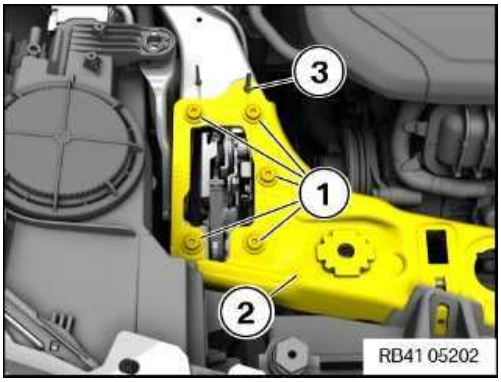


18 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

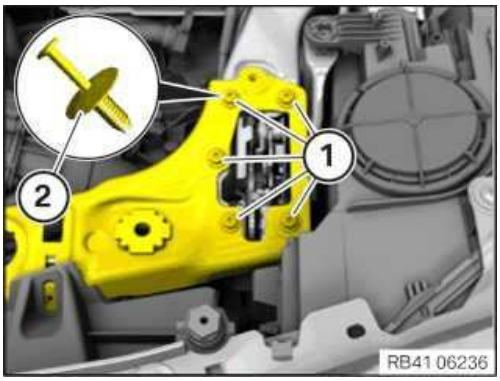
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

19 – Install front cross connection

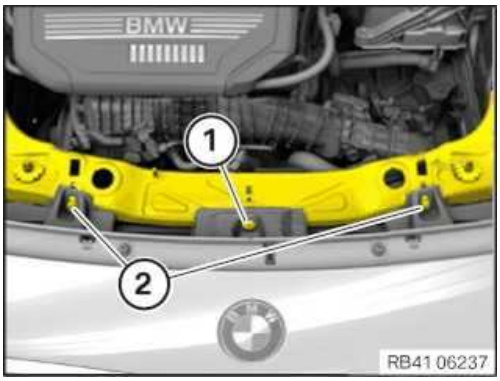
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

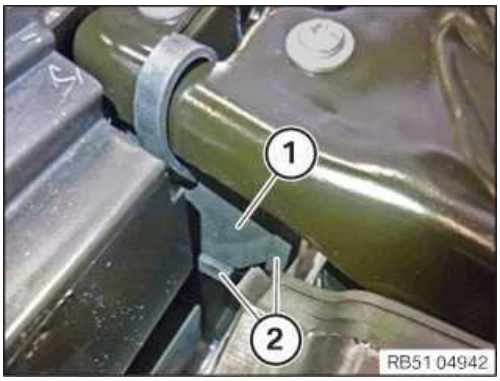
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

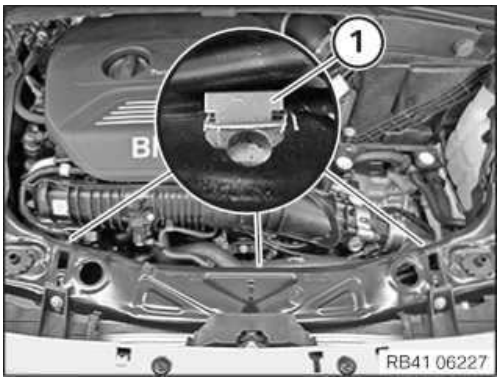
- Tighten down screws (2).



Air duct to upper connection

M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



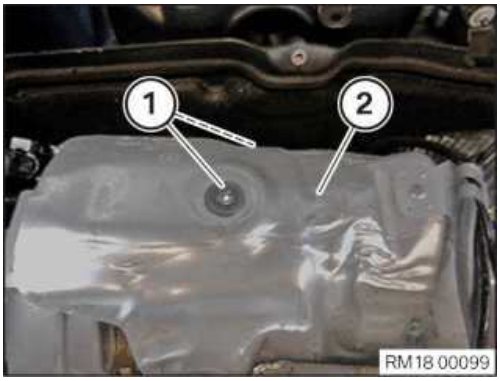
Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

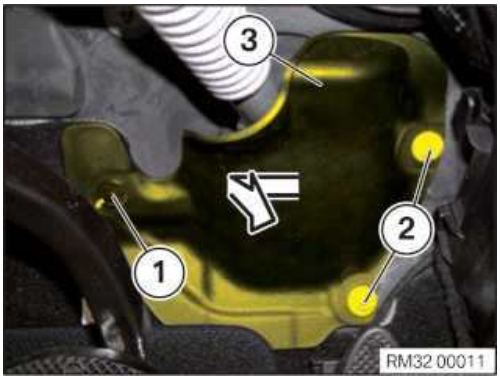
- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.



20 – Removing heat shield from top exhaust turbocharger

WARNING

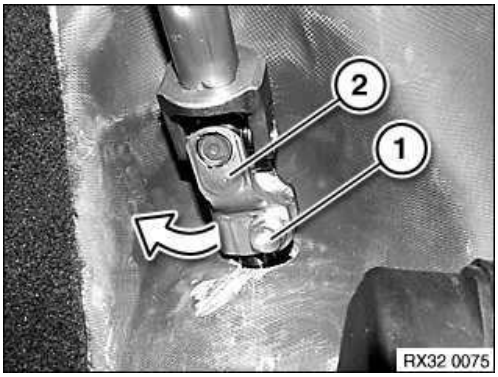
Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



21 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

22 – Securing radiator on left and right

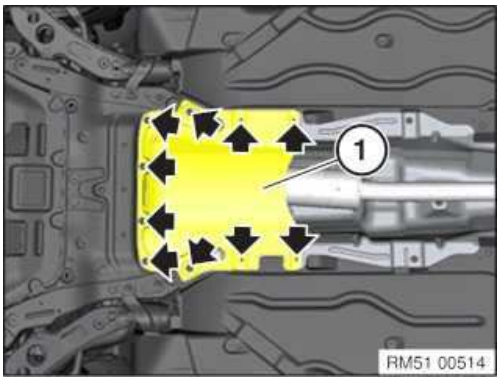
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

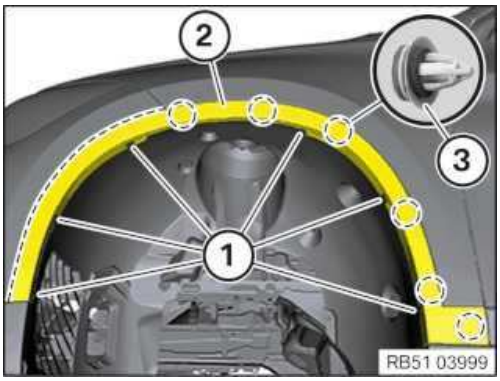
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

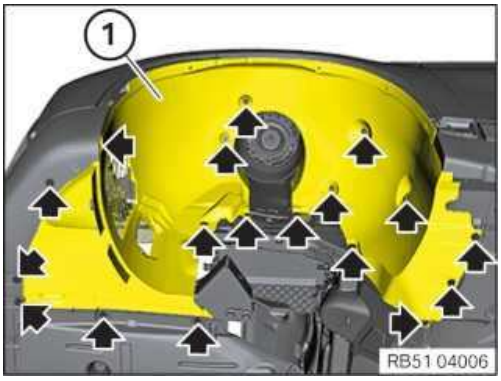
cardiagn.com



▶ **Remove the front wheel arch trim**

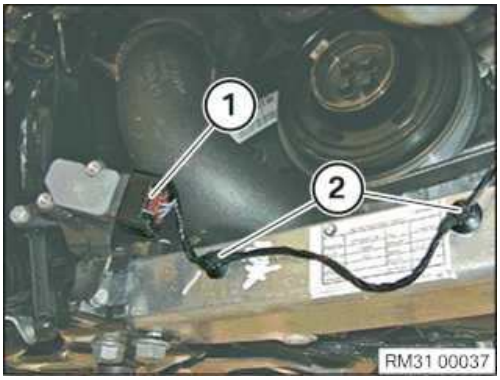
NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.



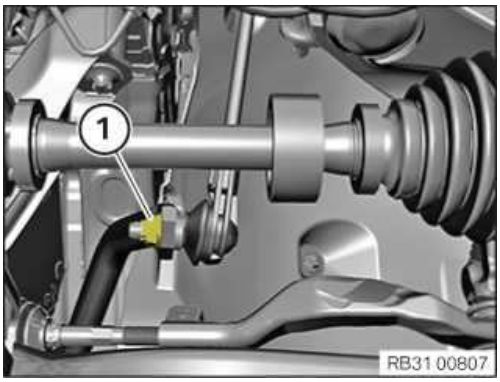
- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.



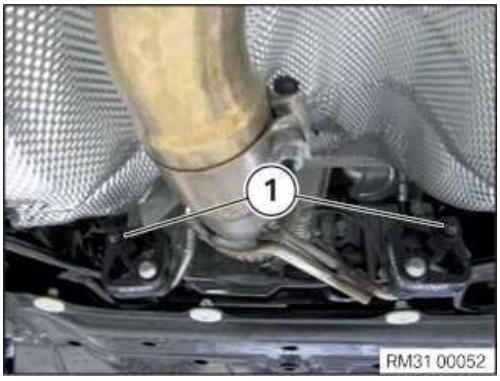
28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

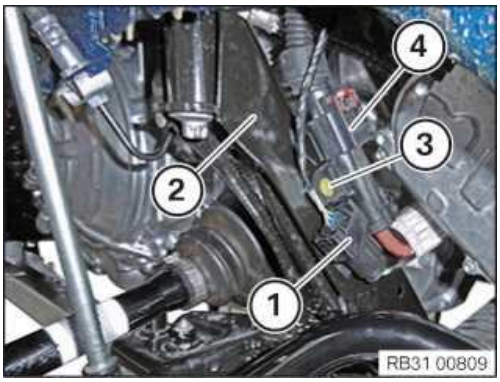
cardiagn.com



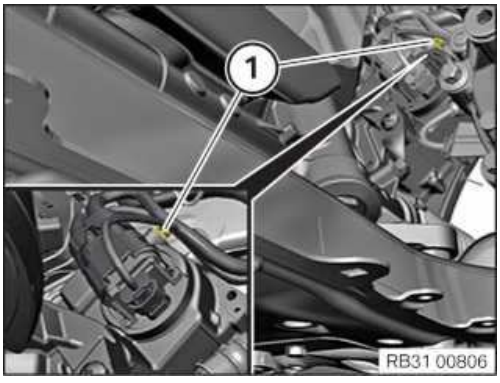
- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



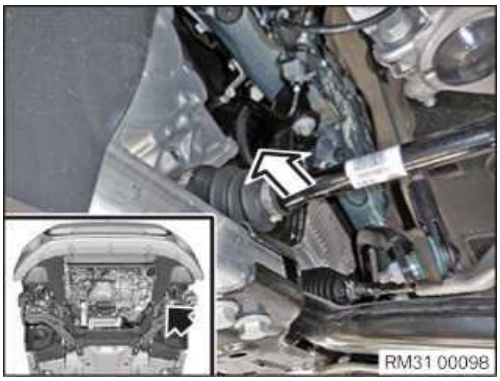
29 – Detaching rubber mount from front axle support



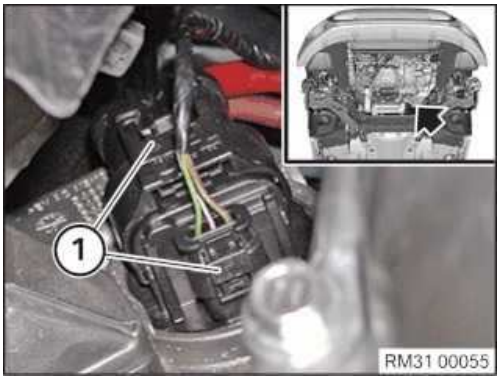
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

30 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**

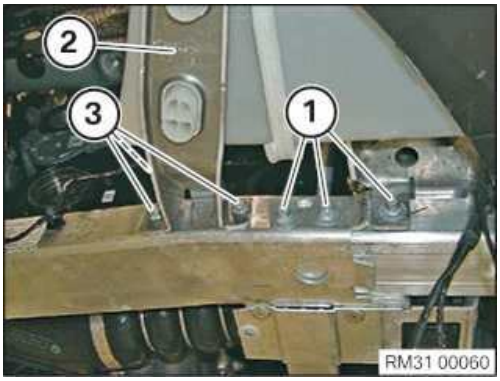


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

cardiagn.com

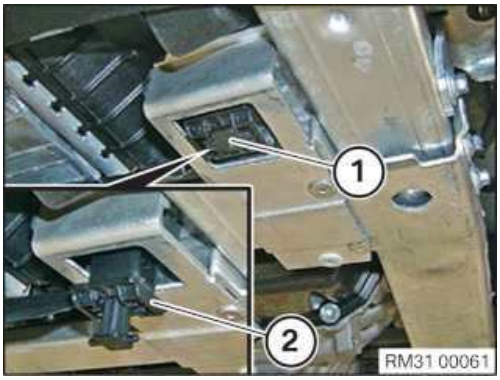


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

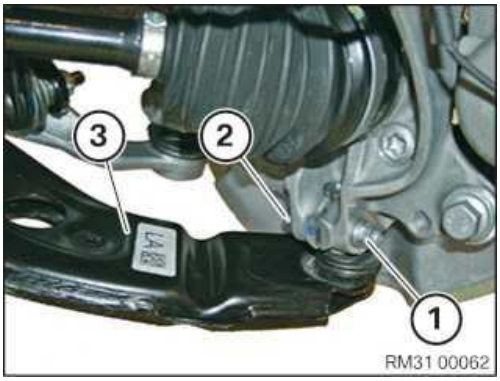
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

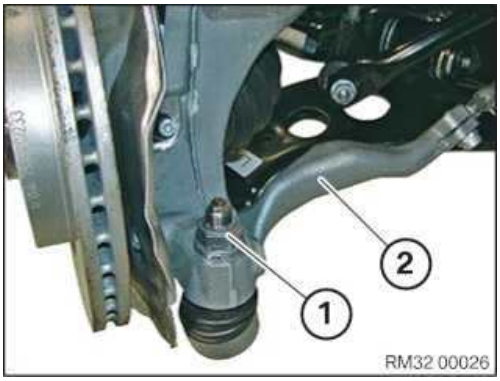
cardiagn.com



NOTICE

Perform the operations on the left and right side.

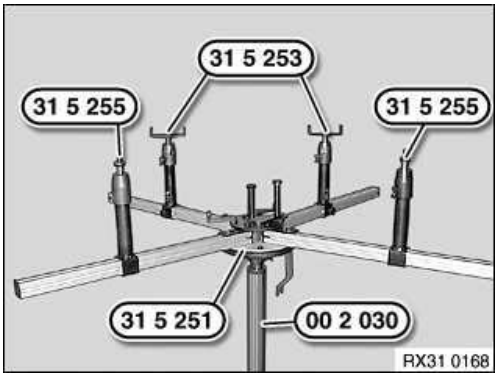
- Loosen screws (1).



32 – Detaching and removing front axle completely

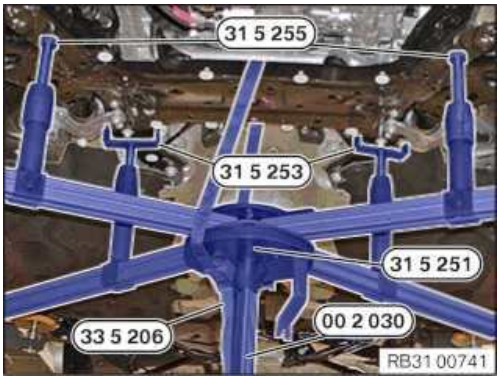
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

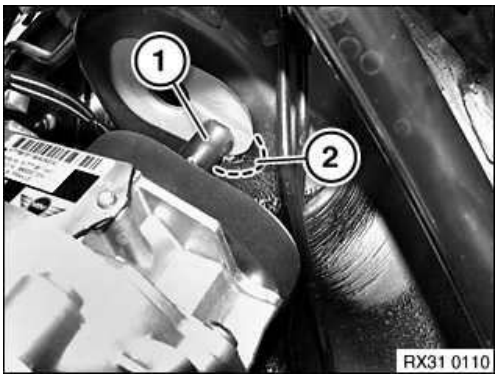


Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

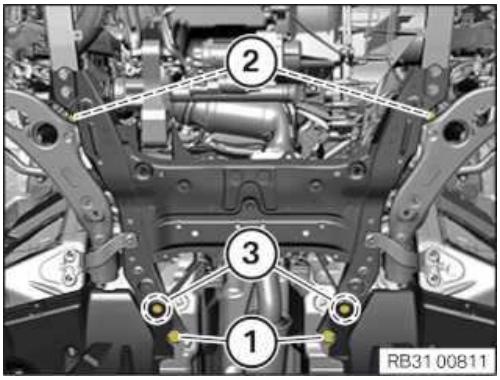


- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

cardiagn.com

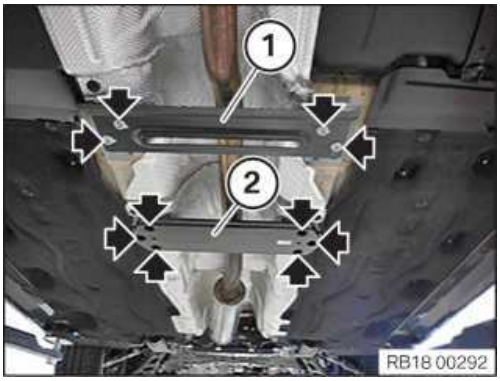


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



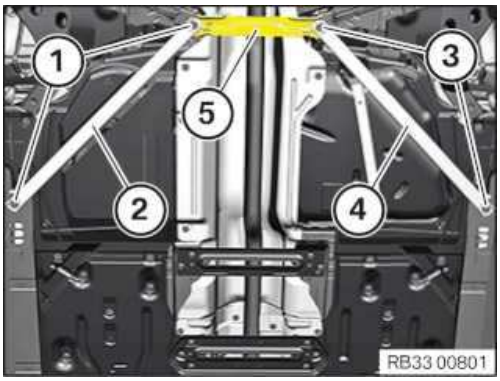
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

cardiagn.com

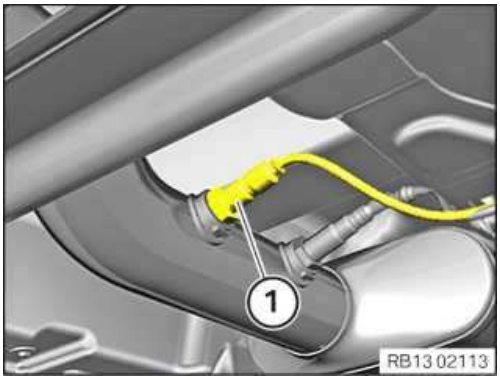
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

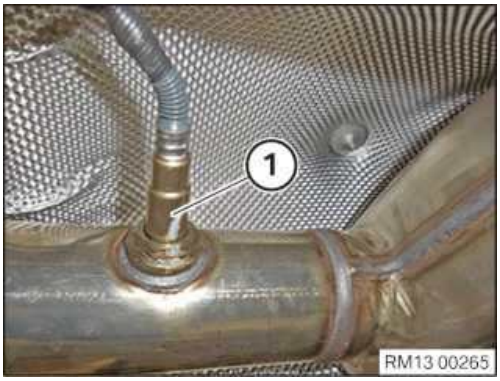
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

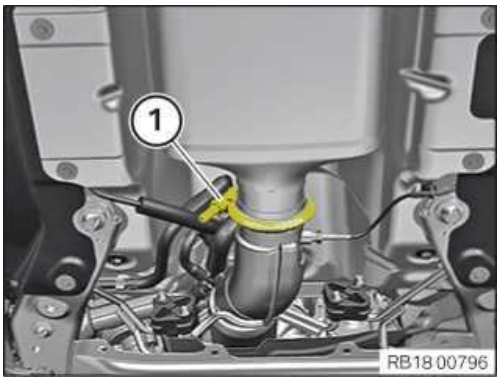
CAUTION



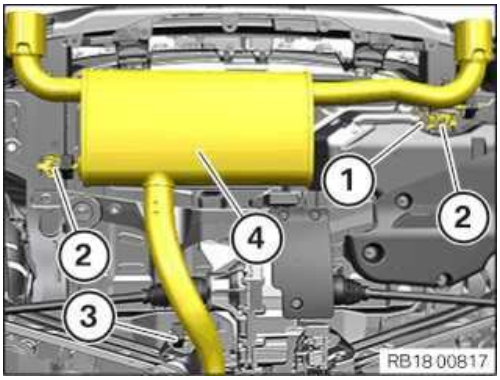
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

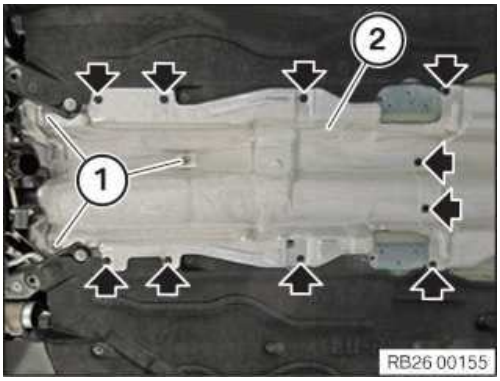


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

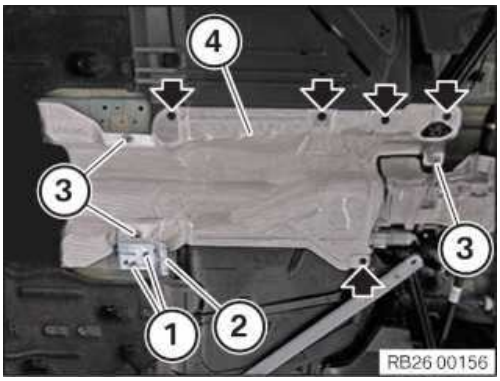


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

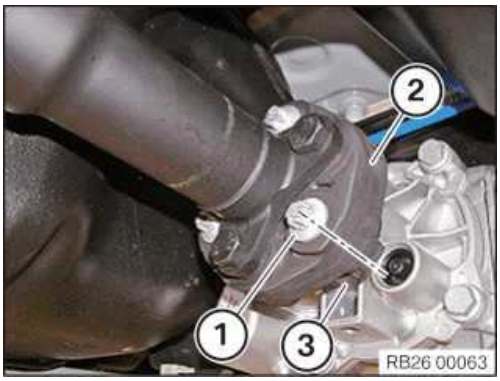
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

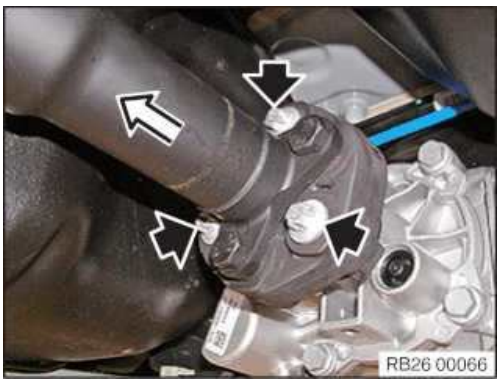
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

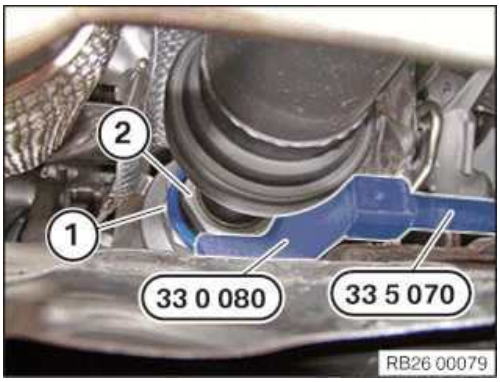
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

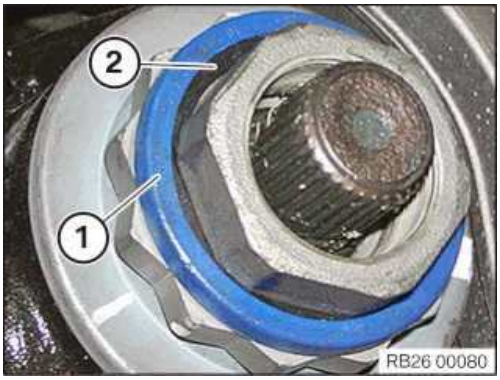
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

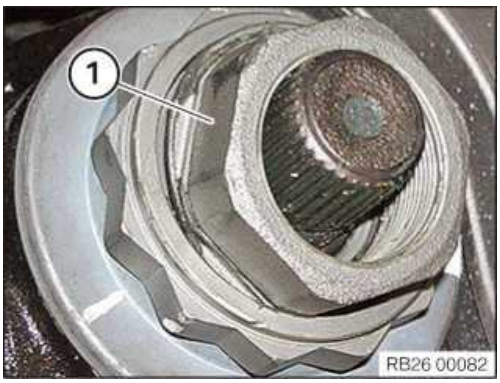
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

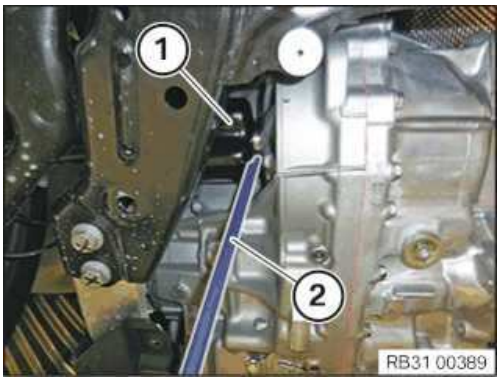
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

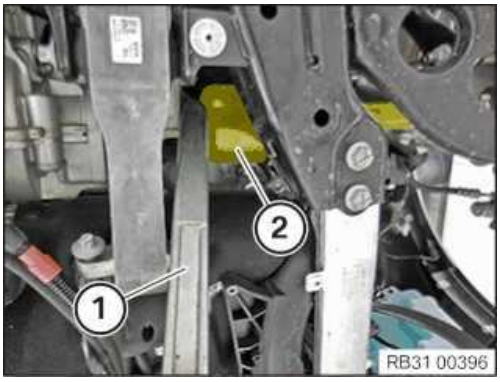
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



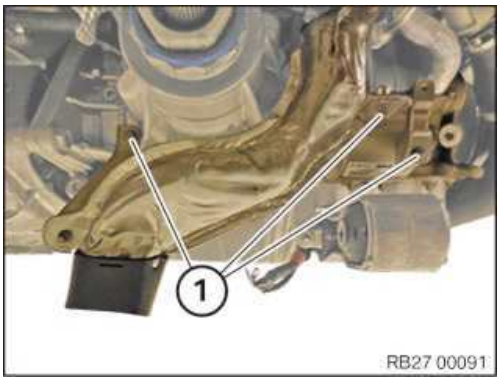
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



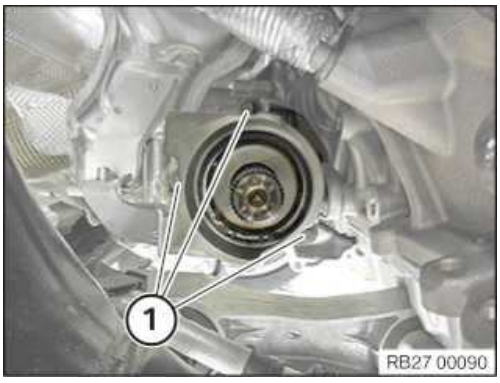
40 – Partially removing the left output shaft

cardiagn.com

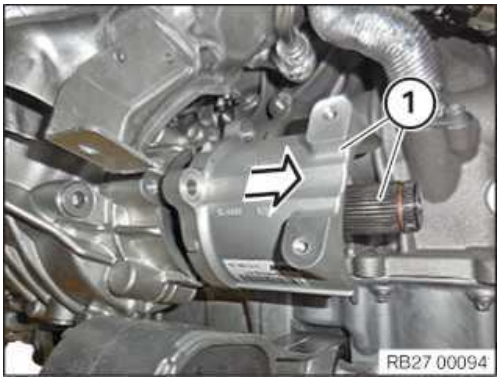


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

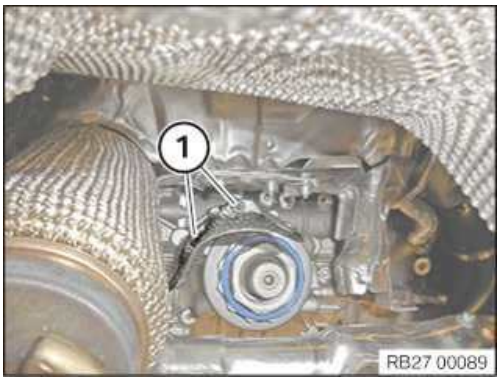


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

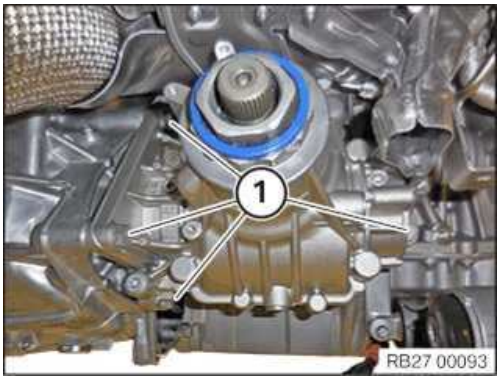


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

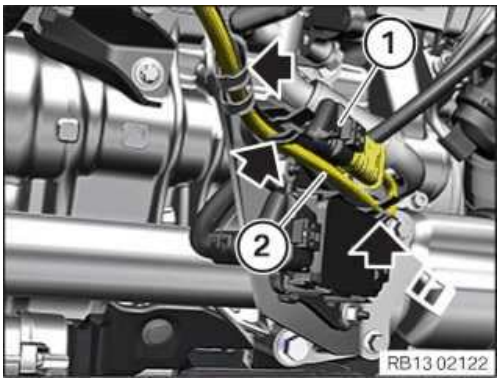
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

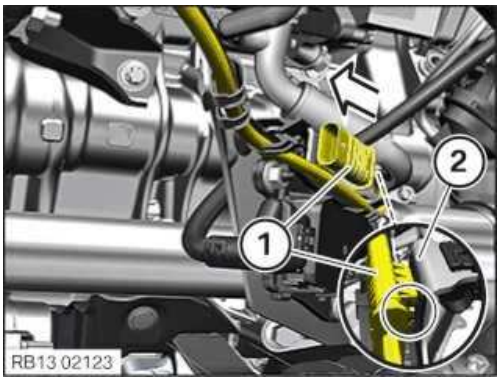
Risk of burning!



- Perform all work only on components that have cooled down.

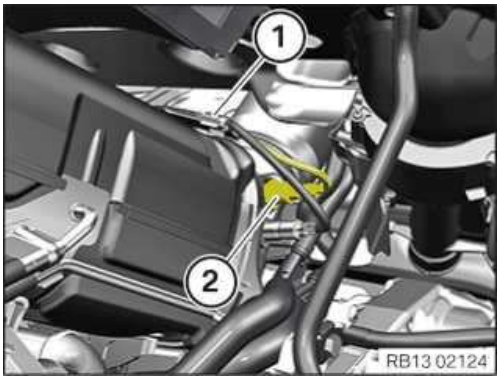
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

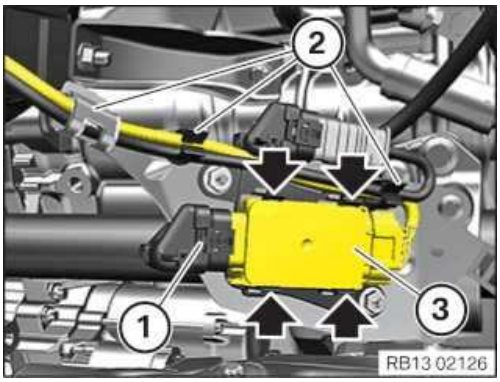
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

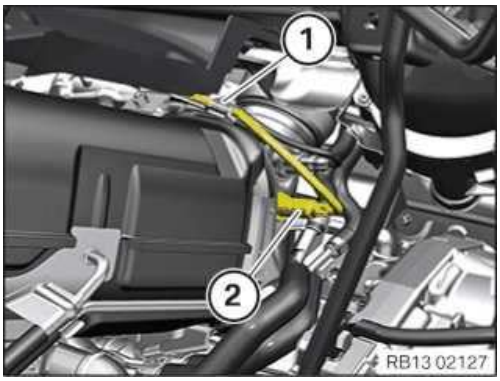
Risk of burning!



- Perform all work only on components that have cooled down.

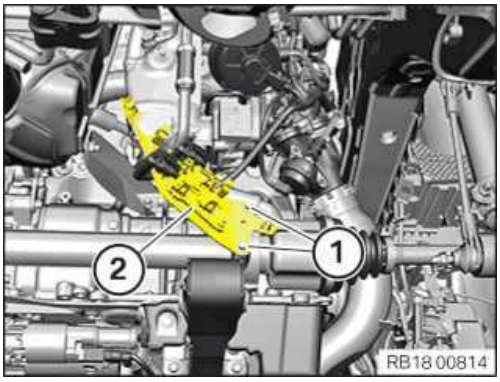
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

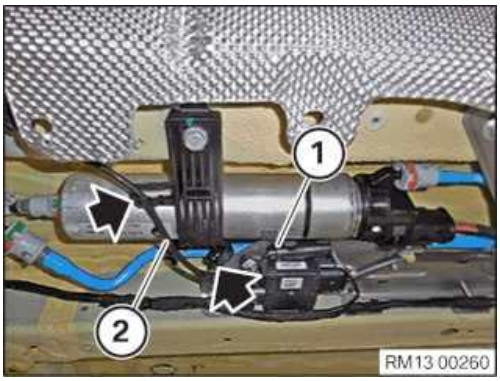
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

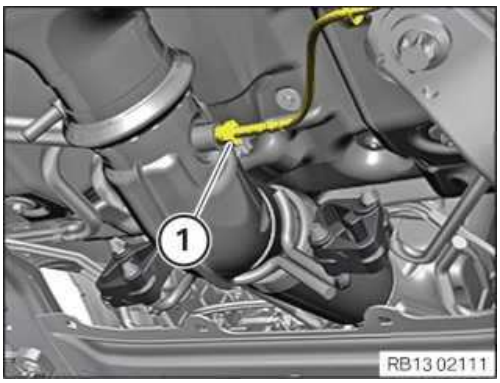


RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

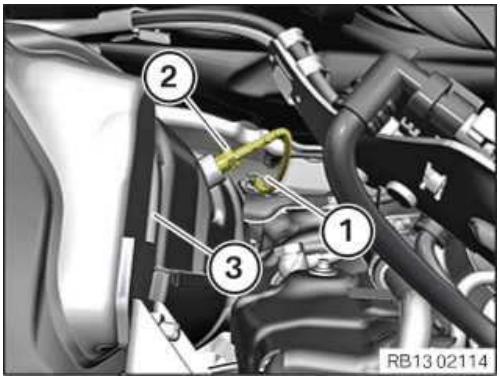
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

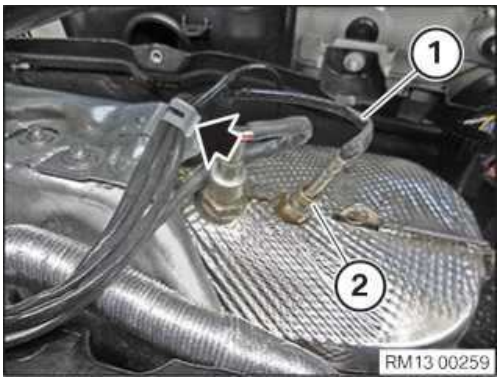
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

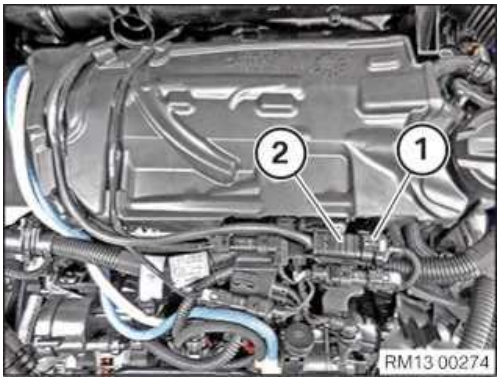
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

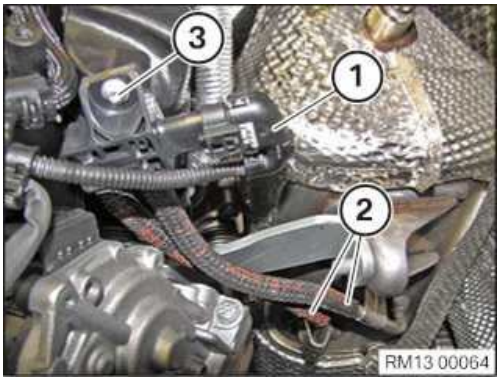
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

cardiagn.com



51 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

52 – Removing the diesel particulate filter

WARNING

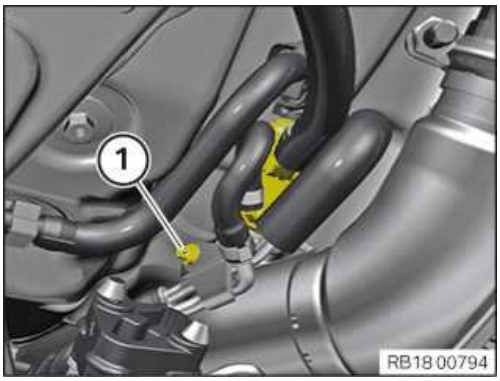
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

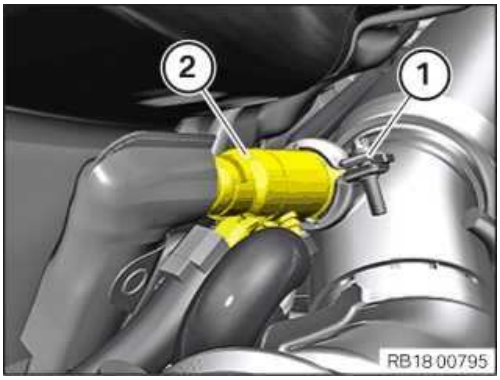
CAUTION

Heavy component.

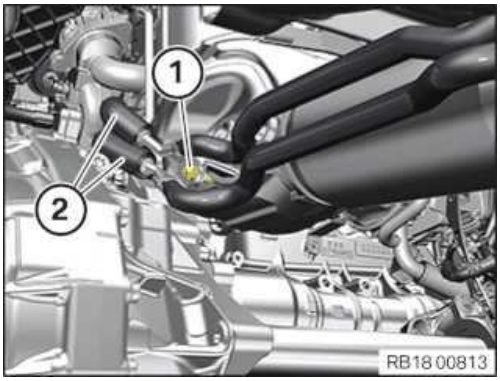


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



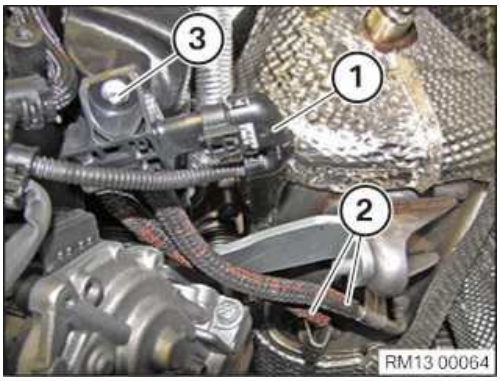
cardiagn.com

- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▶ **Remove differential pressure sensor**

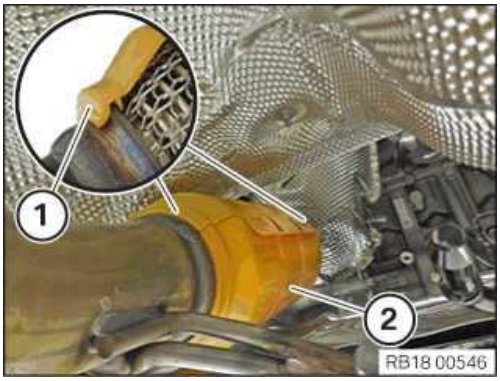


RISK OF DAMAGE

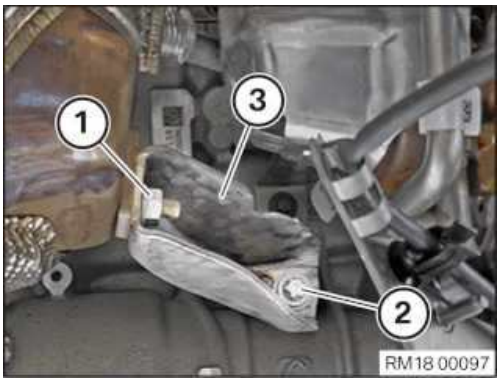
Electrostatic discharge.

Damage to or destruction of electrical components.

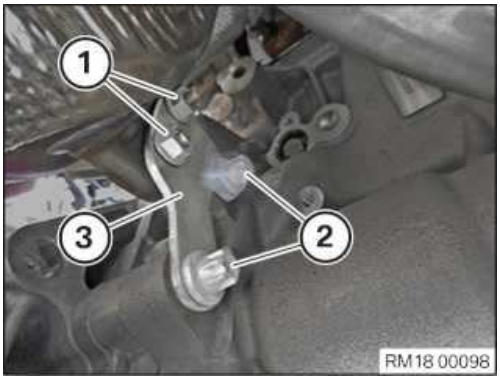
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

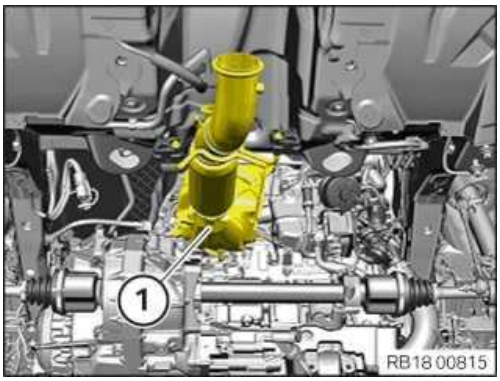


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



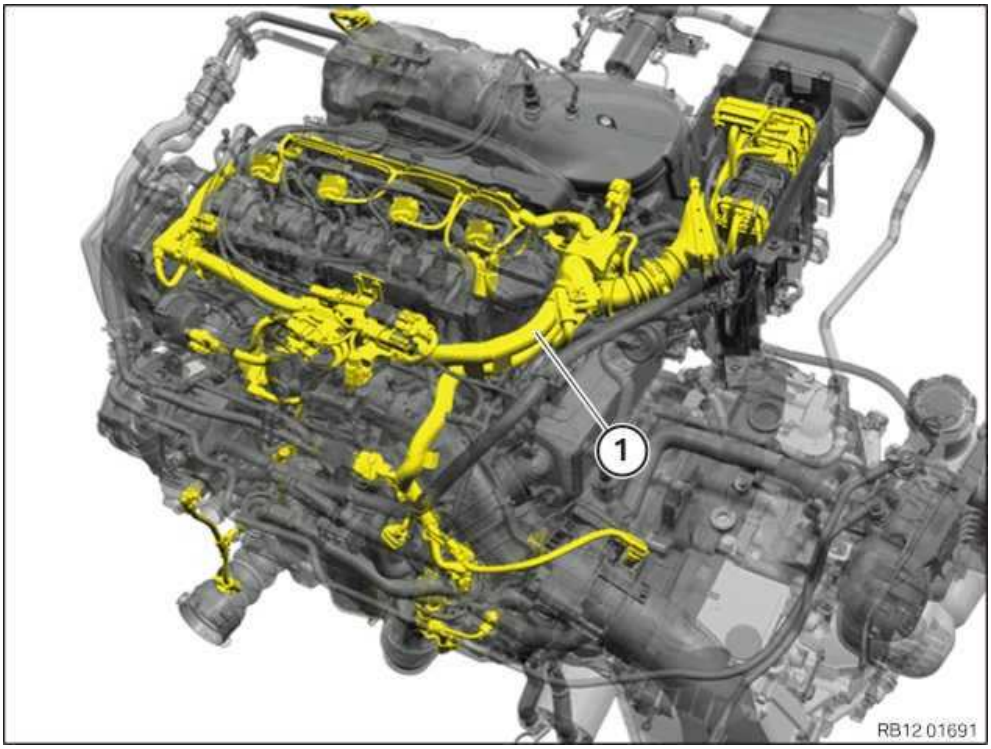
- Loosen nuts (1).

- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

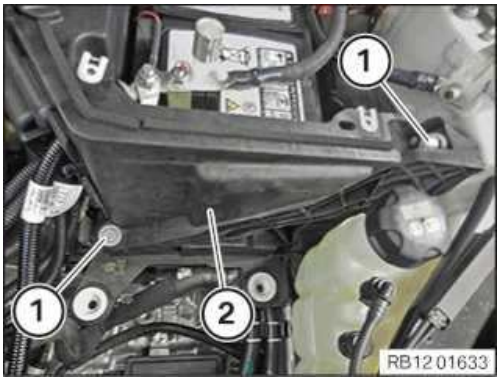


- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

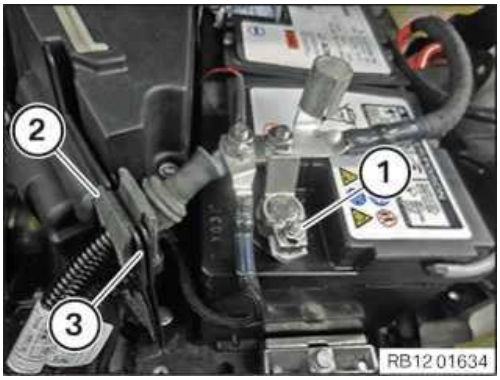


cardiagn.com



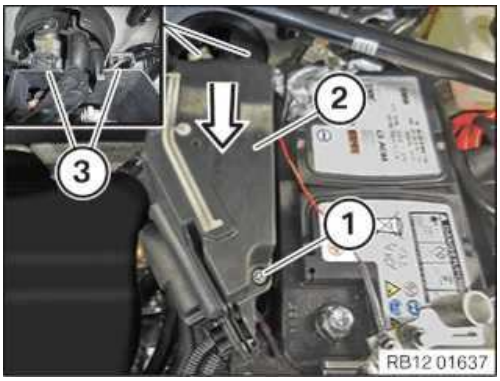
- Feed out diesel particulate filter (1) toward the bottom and remove.

53 – Releasing the wiring harness section for the intake plenum

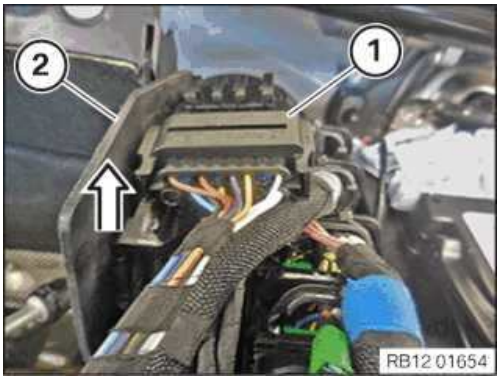


Overview: Wiring harness section for the engine

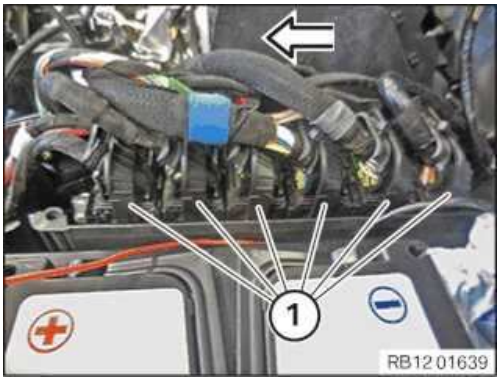
1 Wiring harness section for the engine



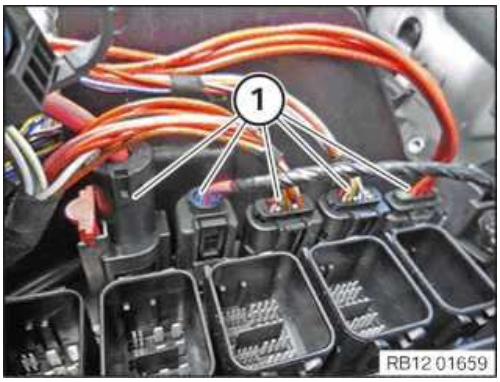
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



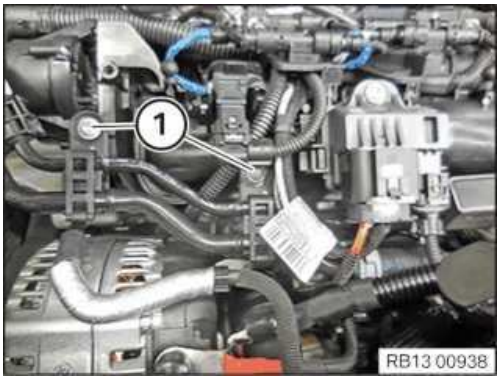
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

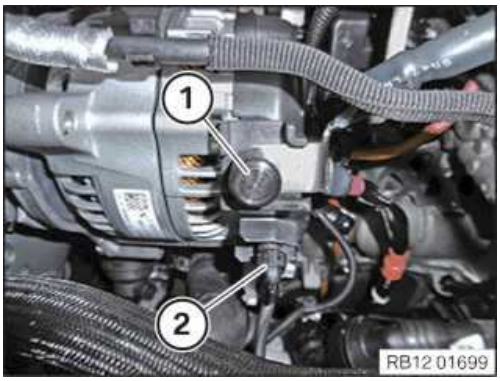


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

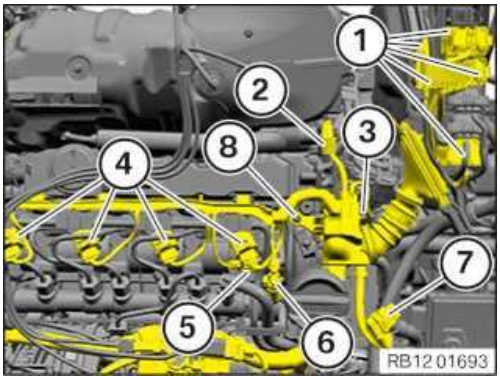


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

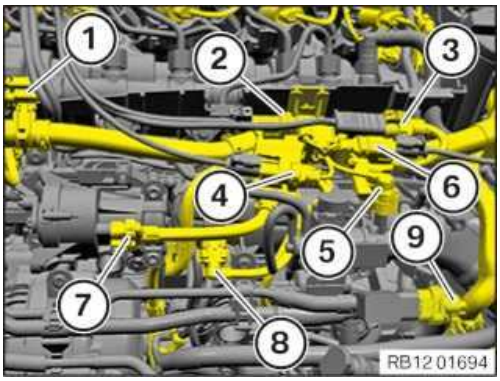
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



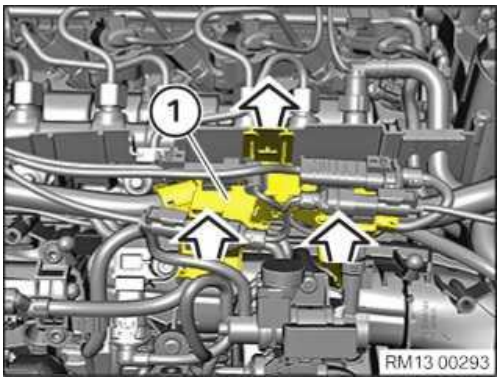
- Loosen screws (1).



cardiagn.com

- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



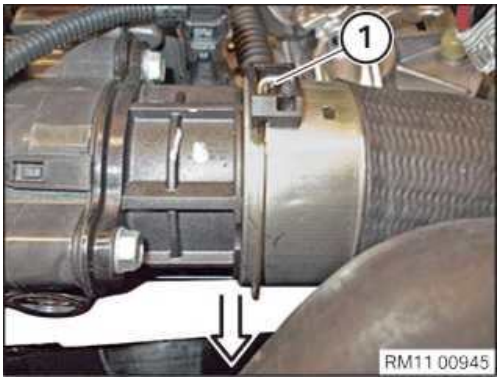
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

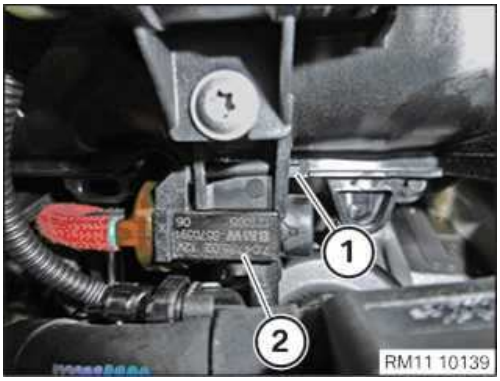
cardiagn.com

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.



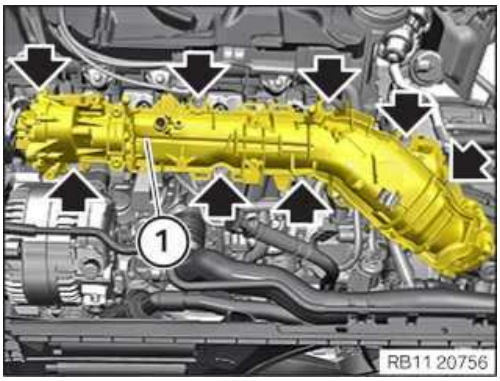
54 – Removing the intake plenum

TECHNICAL INFORMATION

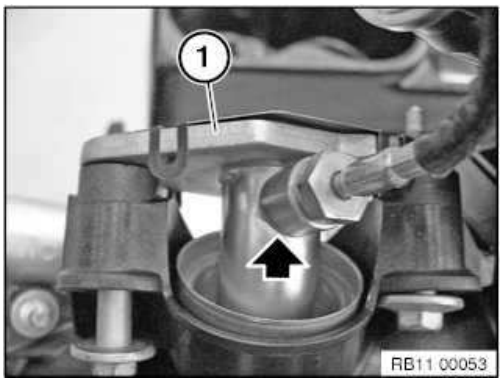


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

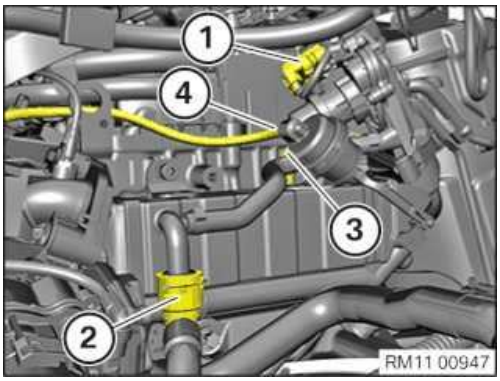


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

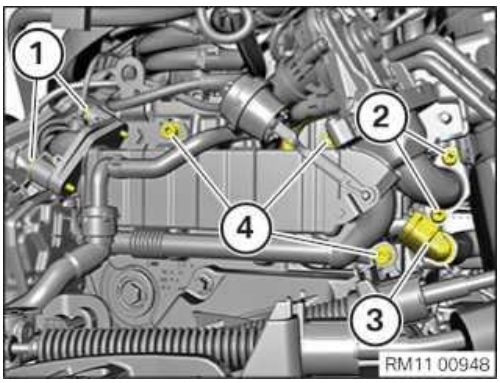


55 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

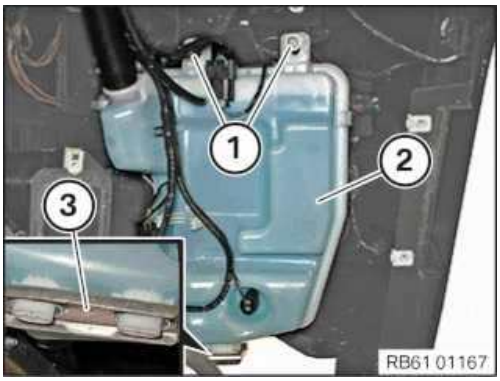
Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

56 – Remove the washer fluid reservoir from the fixture

cardiagn.com

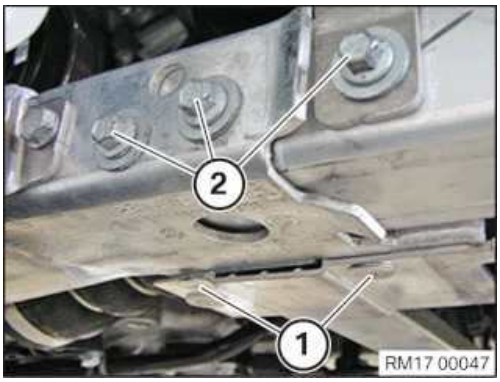
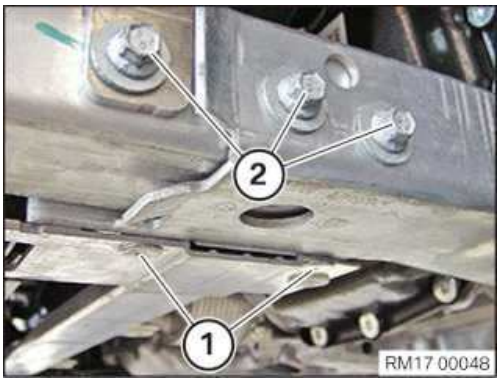
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



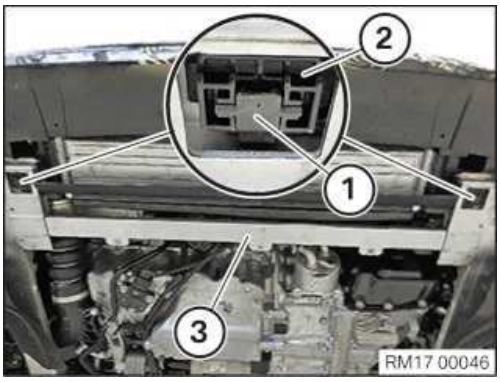
57 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

WARNING



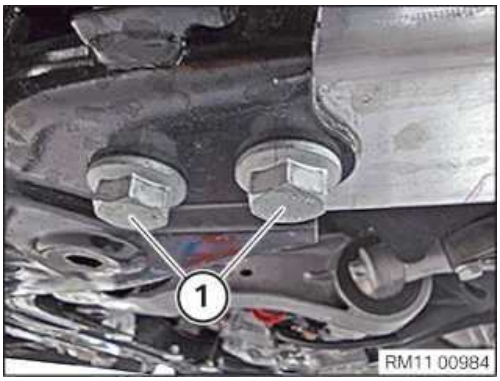
Hot surfaces.

Risk of burning!

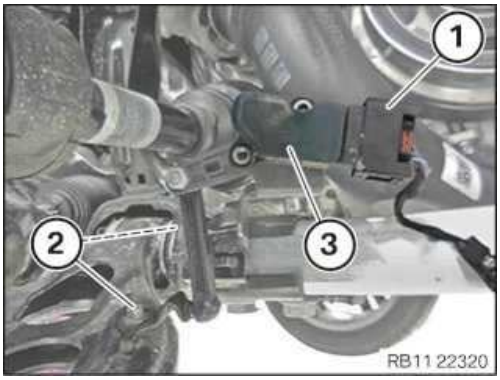


- Perform all work only on components that have cooled down.

- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.



- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.



- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

cardiagn.com

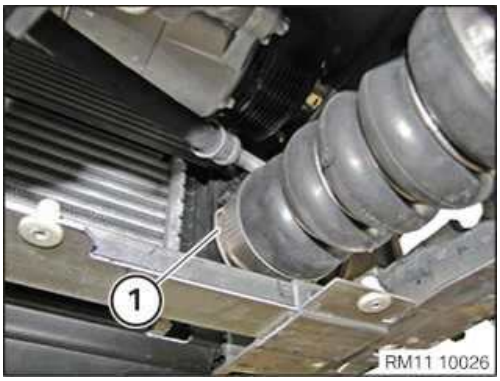
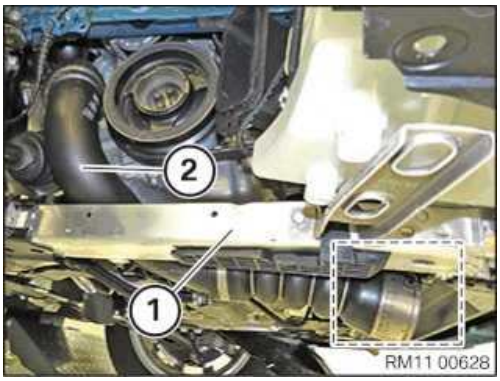
- Release the screws (1) on the right front axle support.

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

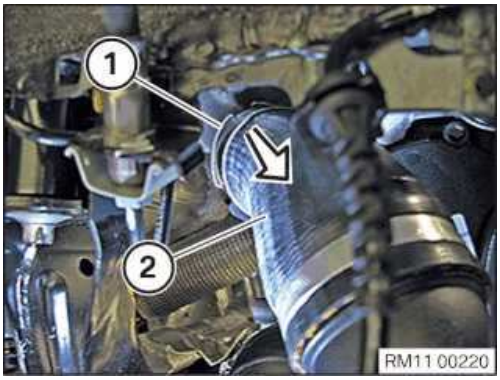


- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

cardiagn.com

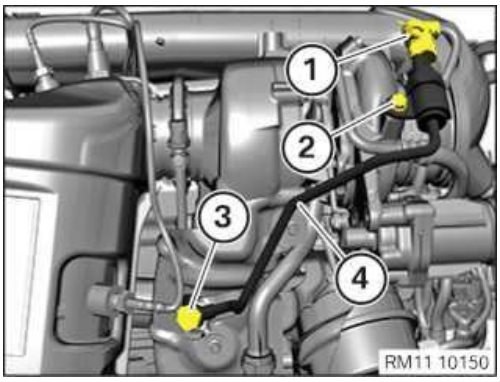
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

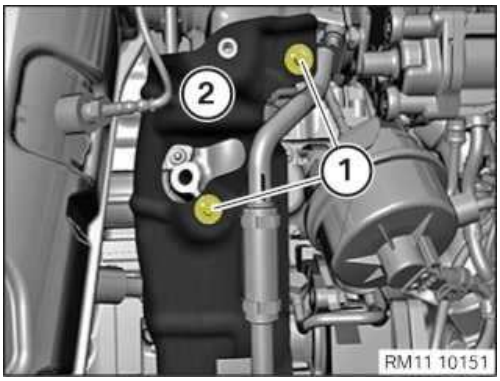
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



58 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

cardiagn.com

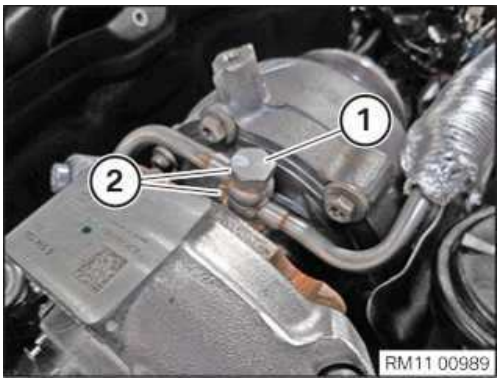
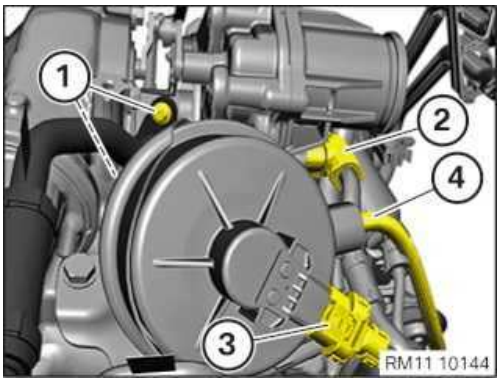
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



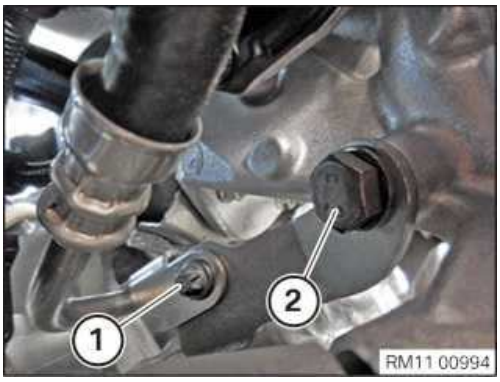
59 – Removing the low-pressure stage turbocharger

WARNING



Hot surfaces.

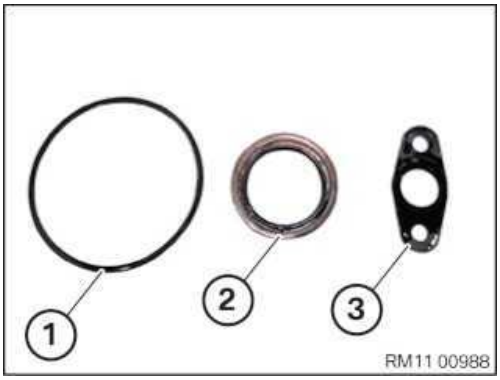
Risk of burning!



- Perform all work only on components that have cooled down.

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

cardiagn.com

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

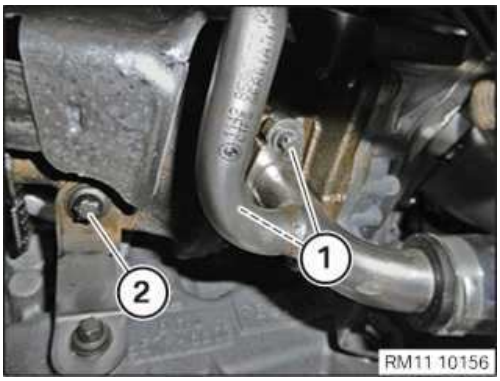
60 – Removing the high-pressure stage exhaust turbocharger

WARNING

Hot surfaces.

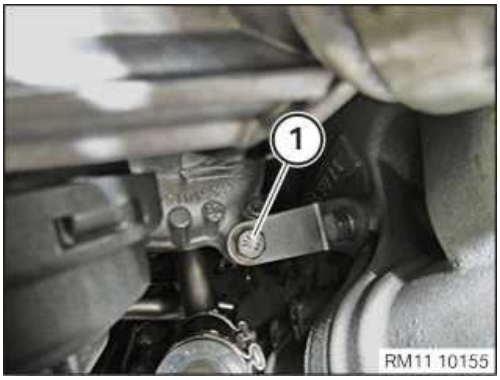
Risk of burning!

- Perform all work only on components that have cooled down.



CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

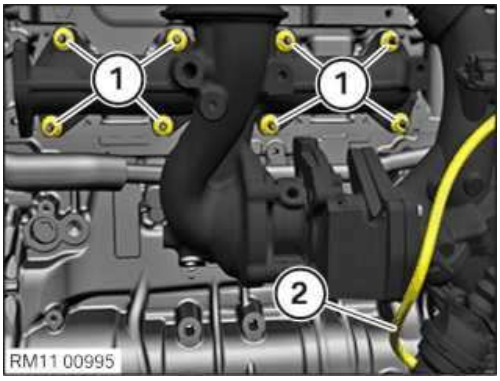
- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

61 – Removing high pressure lines between rail and injectors

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

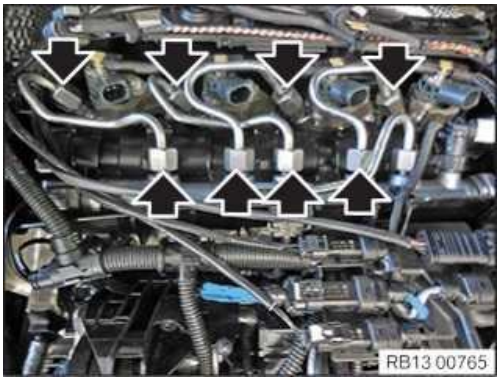
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

62 – Remove leakage oil lines

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

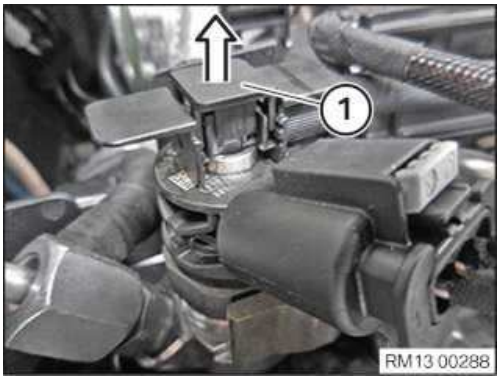
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Unlock the connectors (arrows) and disconnect.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

63 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

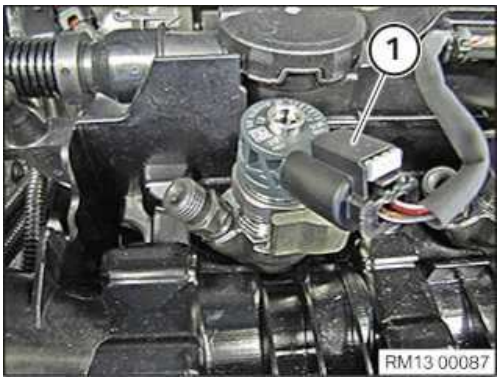
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

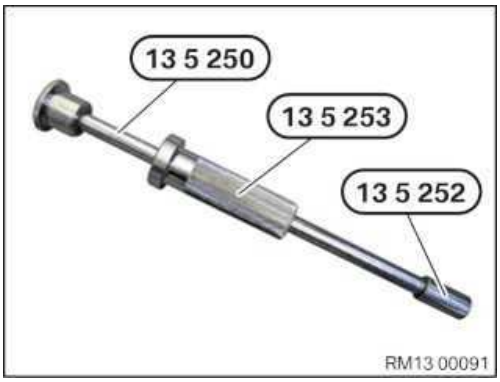
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

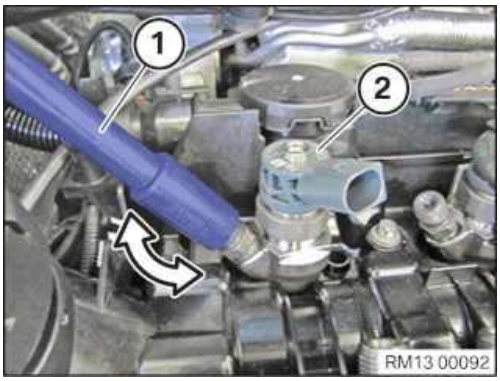
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

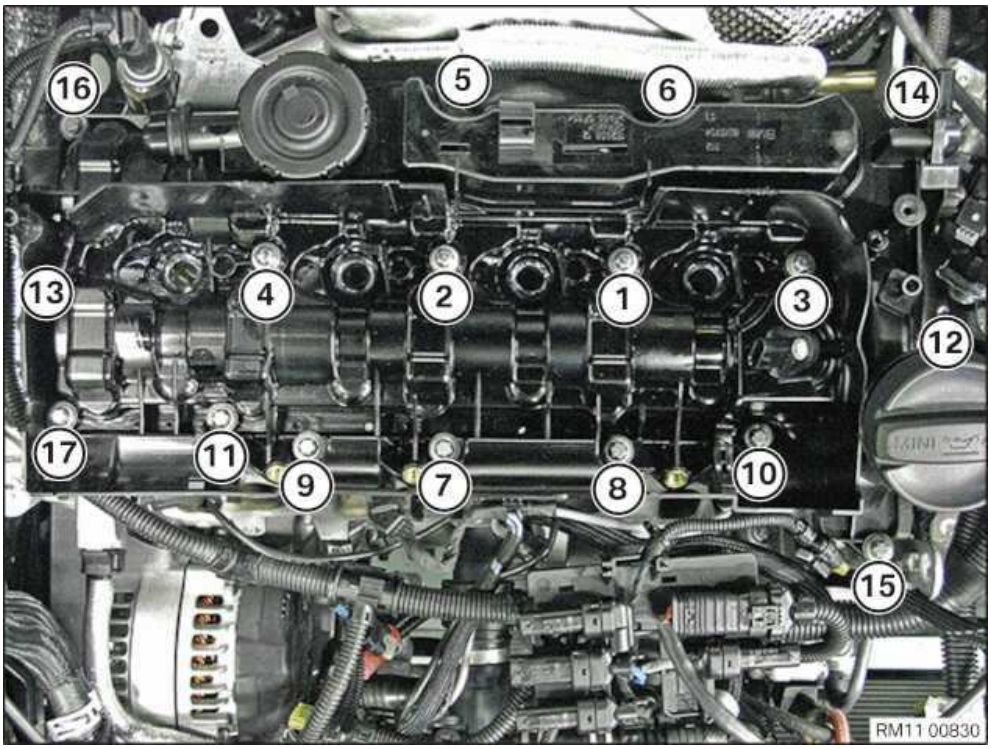
- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

64 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

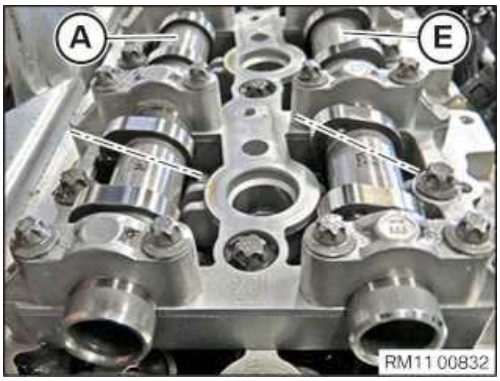
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

65 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

66 – Remove chain tensioner piston

cardiagn.com

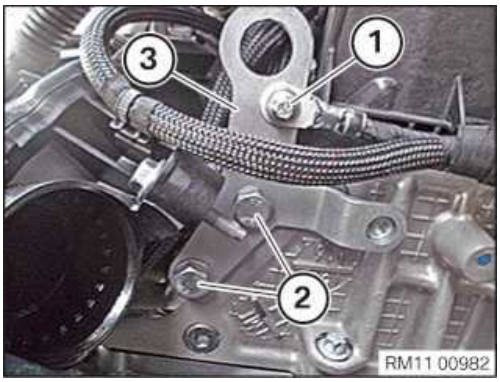
WARNING

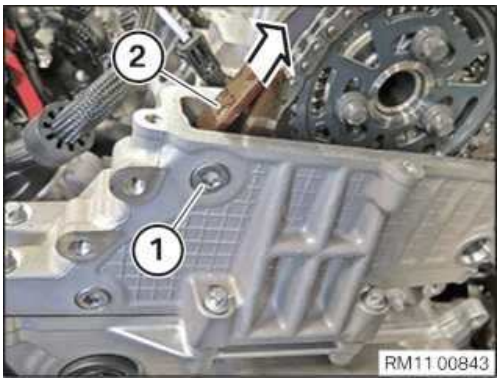
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



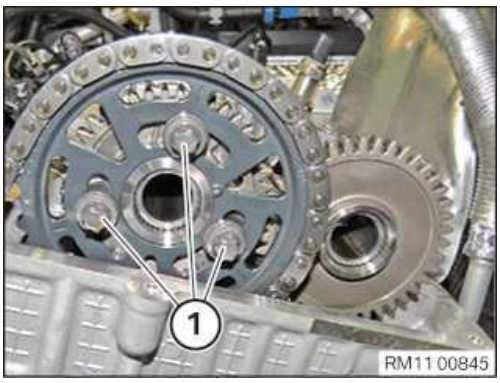
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

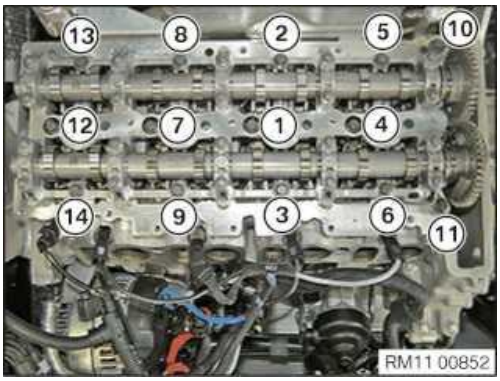
- Remove the chain tensioner piston (1).

67 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



68 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

69 – Removing the camshaft support

cardiagn.com

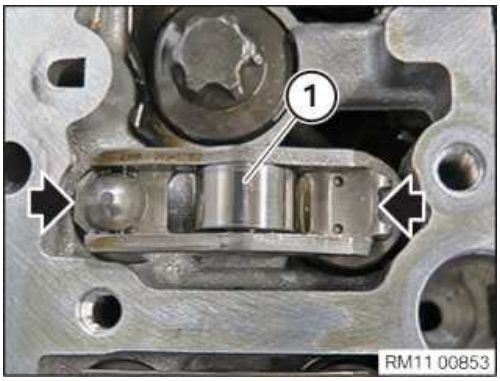
- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.



70 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

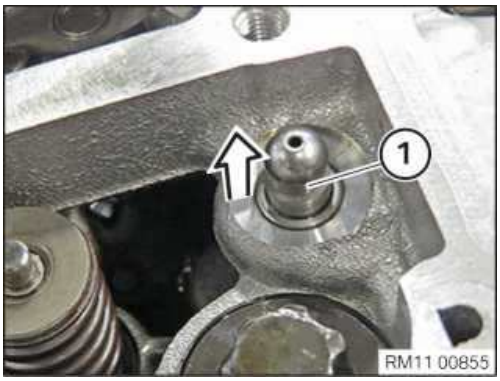
Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

71 – Removing the hydraulic valve clearance compensating element



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

72 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

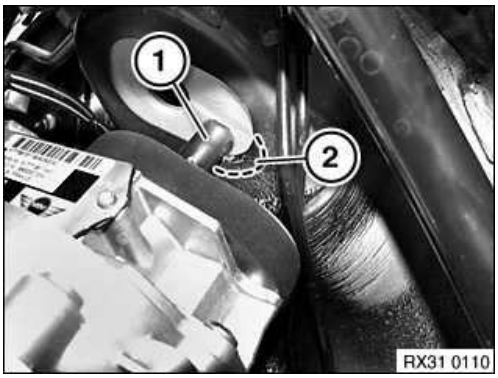
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

73 – Remove cylinder head.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

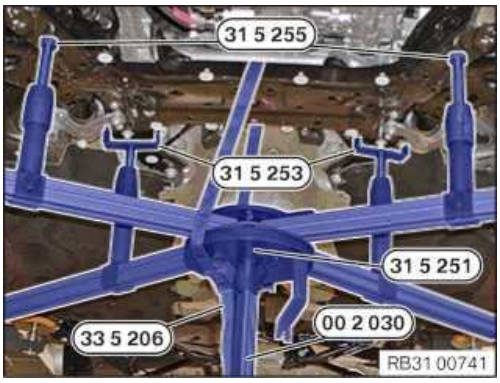
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

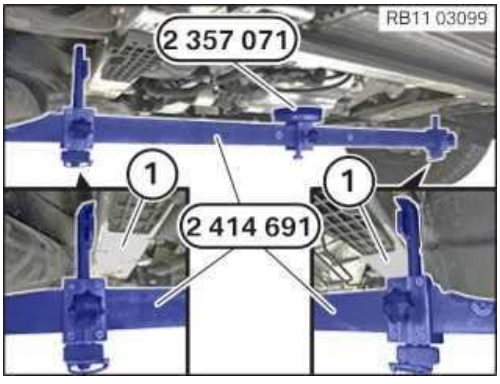
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

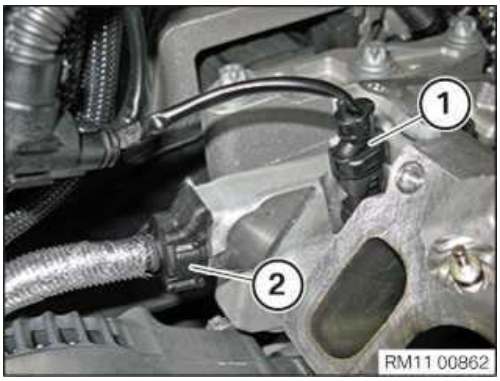
M12 screw	Renew screw.	Tightening torque	108 Nm



- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.

cardiagn.com

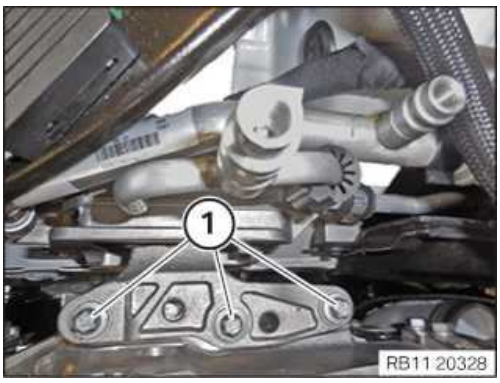
TECHNICAL INFORMATION

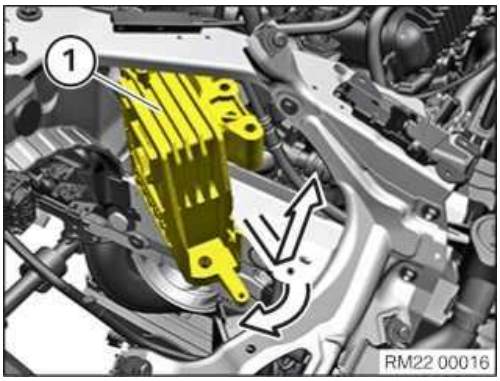
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

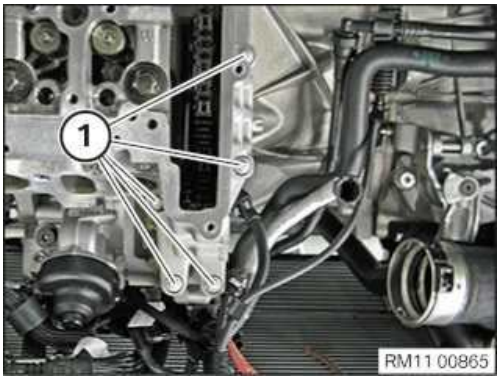


- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.

- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).



- Loosen screw (1).



- Loosen screws (1).

cardiagn.com

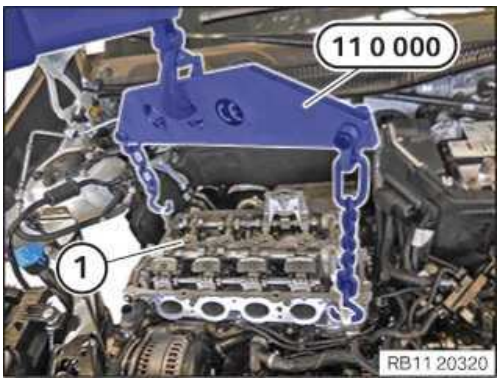
- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

cardiagn.com

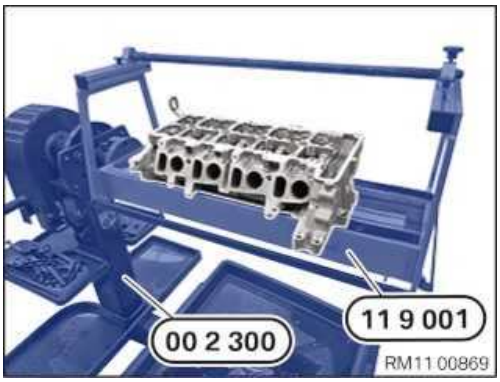
- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

MAIN WORK



74 – Remove all valve springs

RISK OF DAMAGE

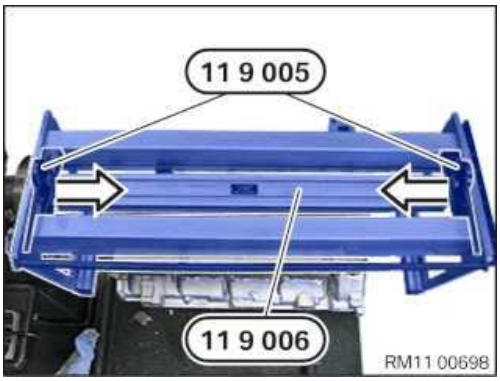
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Mount and screw the cylinder head onto the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- Position special tool **0 494 373 (11 9 008)** as illustrated.

cardiagn.com

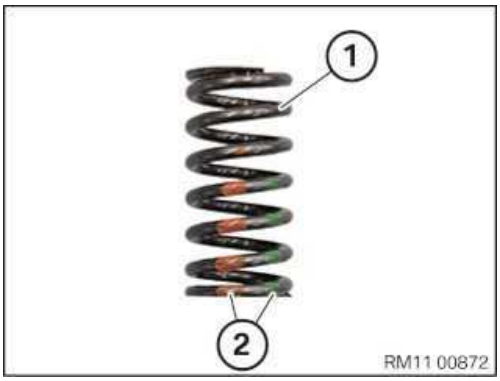
- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) from the valve (2) using a magnet.
- Guide the valve spring and spring cup out and remove.
- Set down valve spring, spring cup and valve shims (2) in the special tool **0 495 105 (11 4 480)** in an orderly manner.

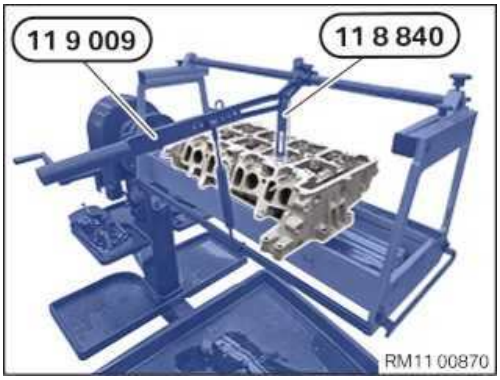
75 – Install all valve springs



RISK OF DAMAGE

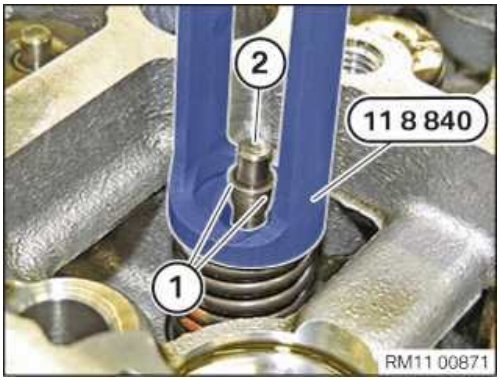
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



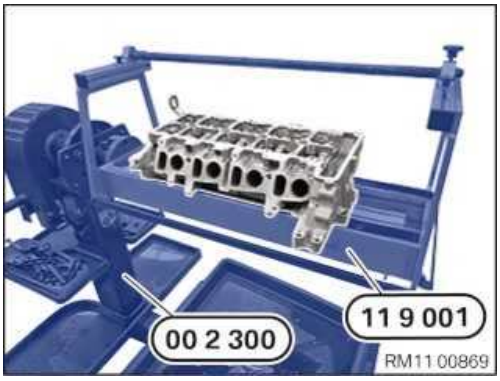
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



- The valve spring (1) is marked with a colour code (2).

  The mounting orientation of the valve spring (1) can be freely chosen.



- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

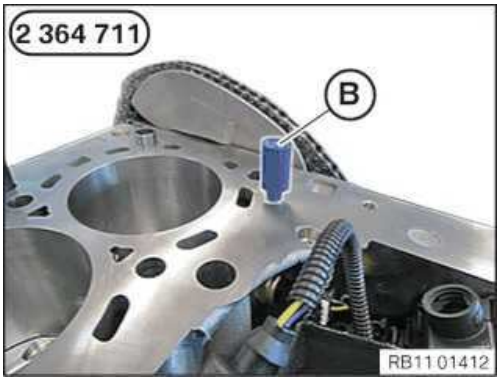
- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Insert the valve shims (1) at the valve (2) with the magnet and install.
- Relieve load on valve spring.
- Make sure that the valve shims (1) are installed correctly.

- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Guide the special tool **0 494 371 (11 9 006)** out and remove.

- Unscrew and remove the cylinder head from the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

POSTPROCESSES

76 – Cleaning the sealing surface



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

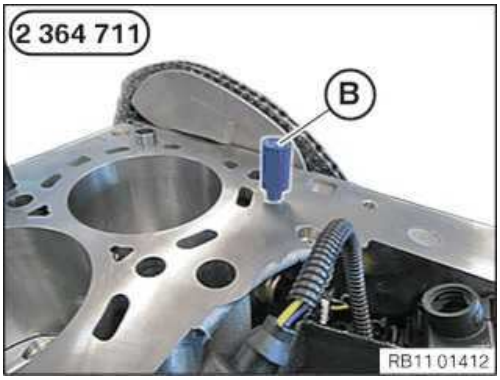
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

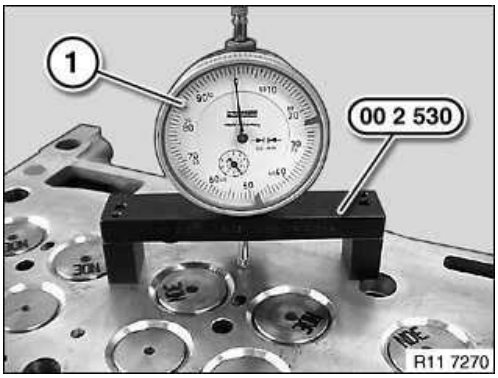


RISK OF DAMAGE

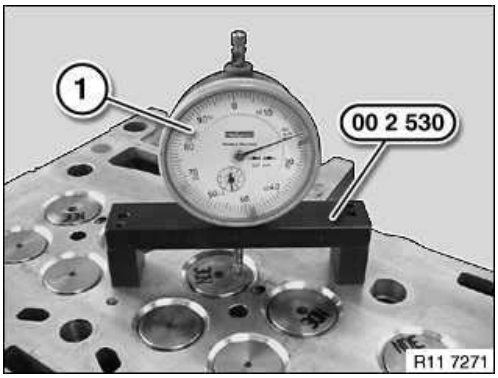
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

77 – Checking the valve underprotrusion

cardiagn.com

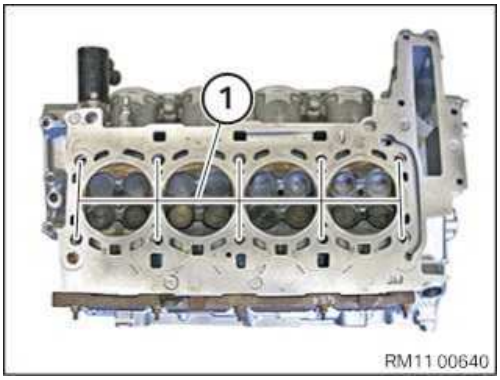
- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm



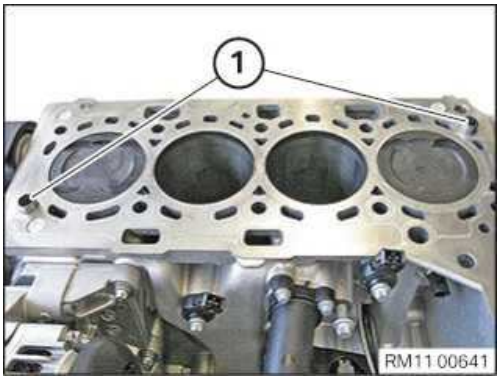
Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

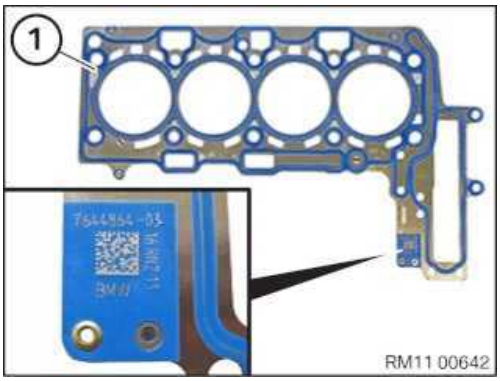
78 – Renewing the cylinder head gasket



RISK OF DAMAGE

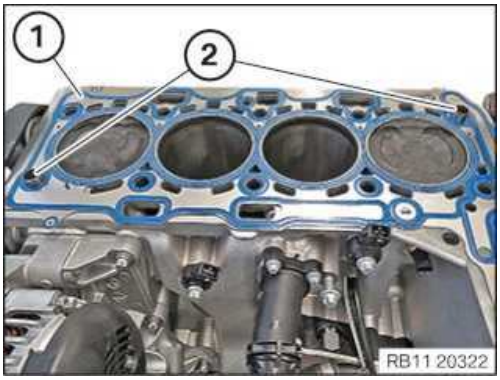
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.

cardiagn.com

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

79 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

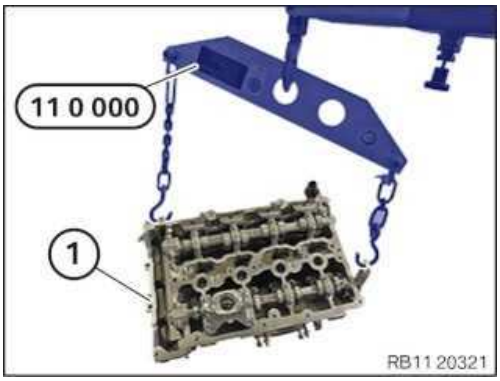
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

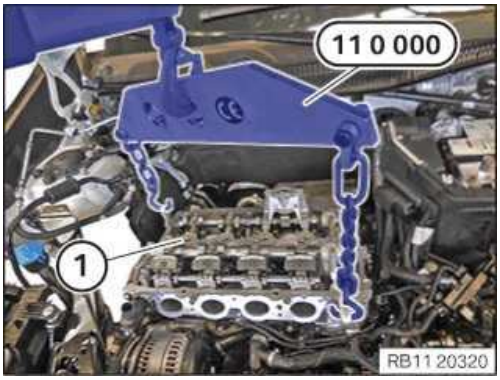
Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).



TECHNICAL INFORMATION

Do not remove bolt coating.



TECHNICAL INFORMATION

When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

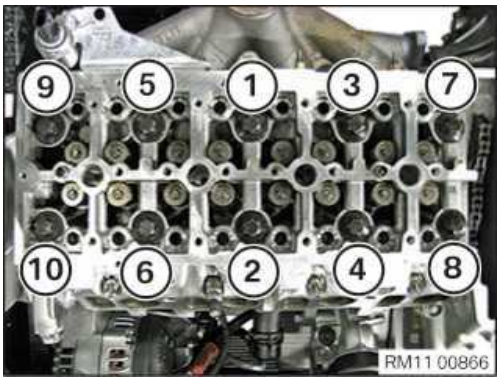
cardiagn.com

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

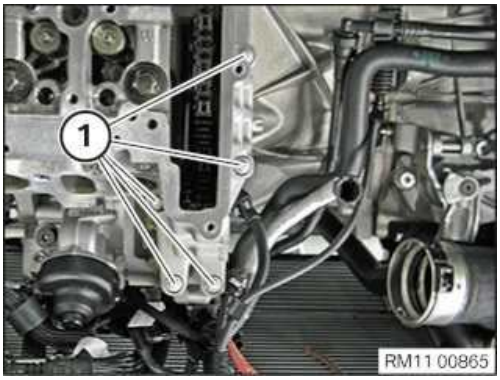
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

cardiagn.com

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

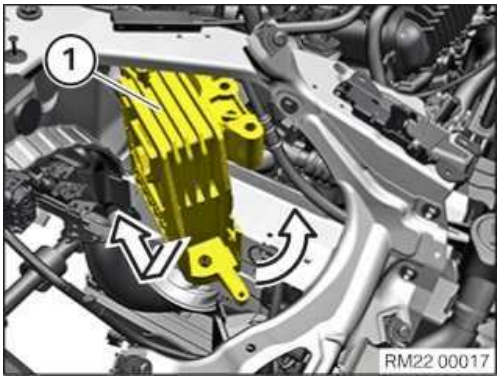


TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase



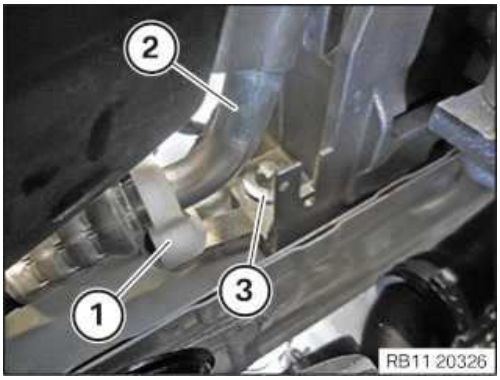
M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Thread in engine mount (1) in direction of arrow then install.

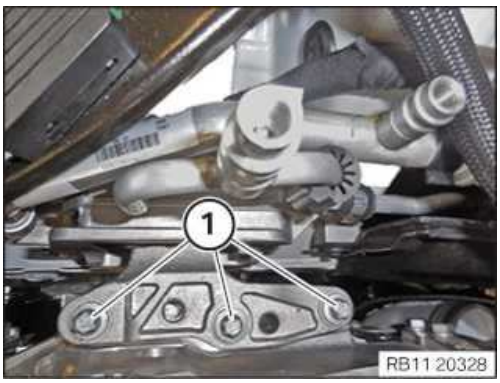


cardiagn.com

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

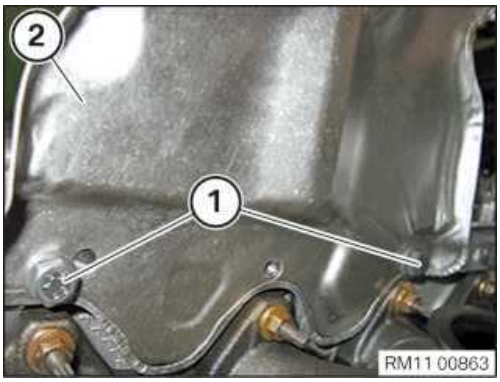


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

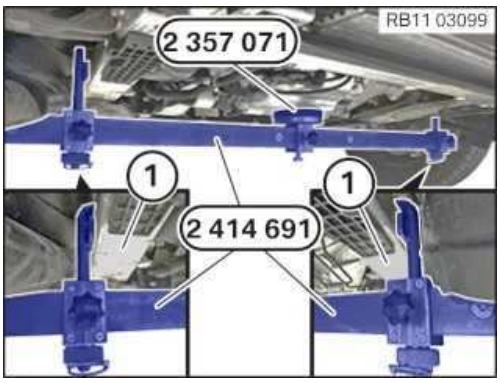
- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.



- Renew screws (1).

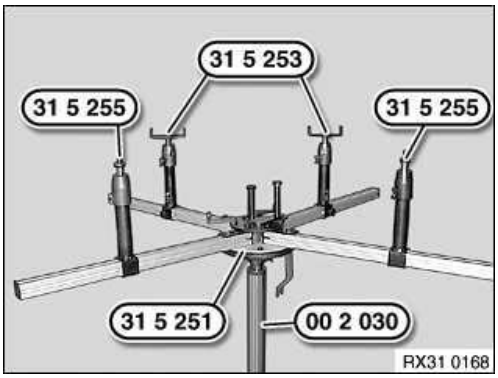
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head



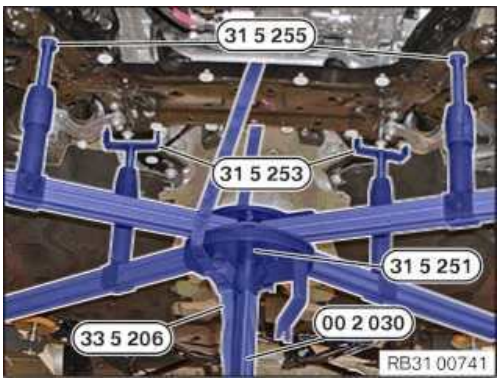
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

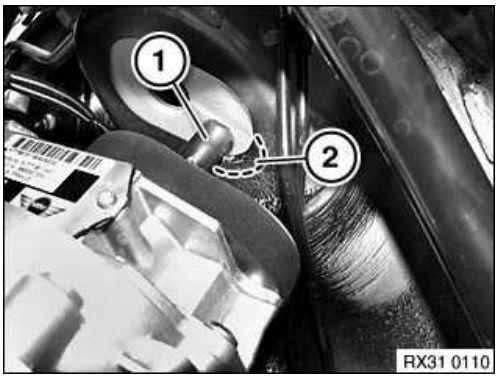
M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

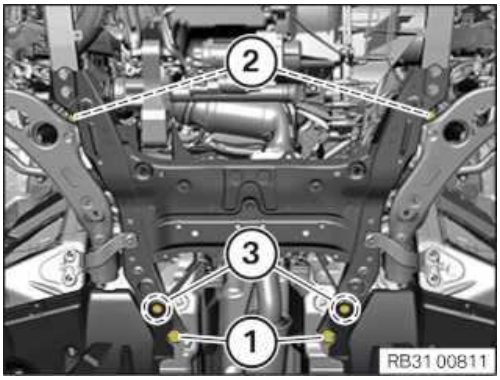


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

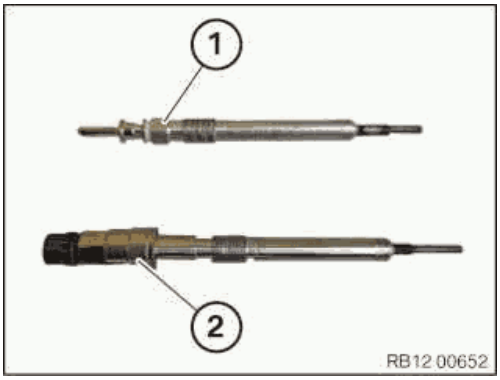
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.



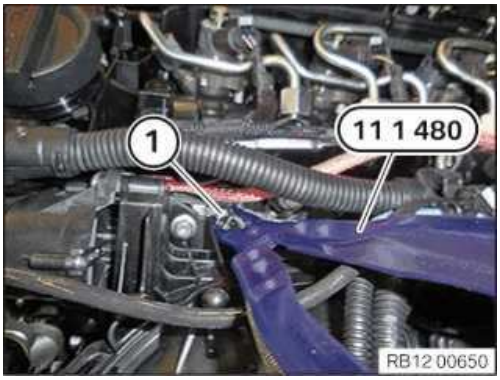
- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

80 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

81 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

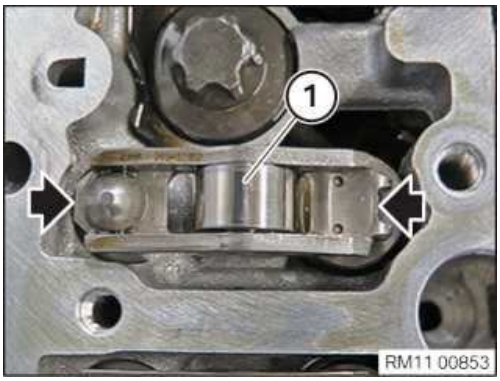
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

82 – Install the roller cam followers



RISK OF DAMAGE

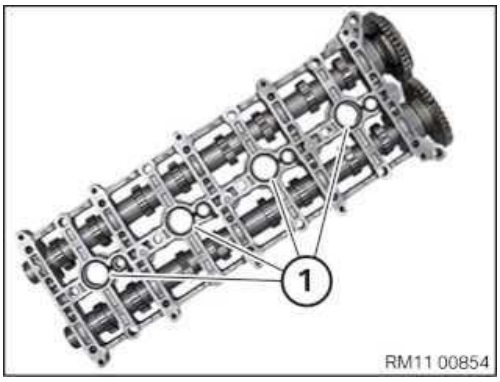
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

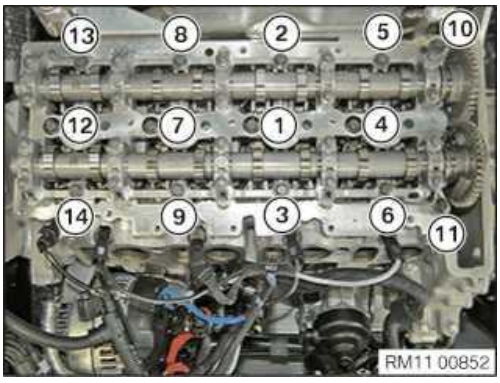
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

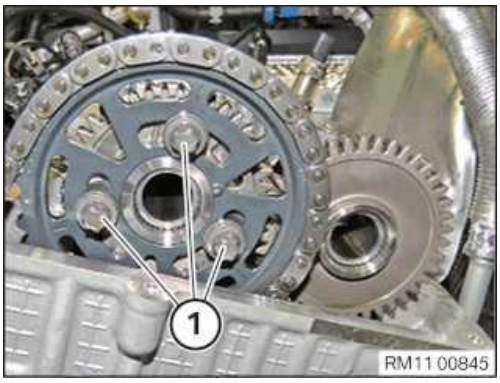


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

83 – Installing the camshaft support

- Renew gaskets (1).

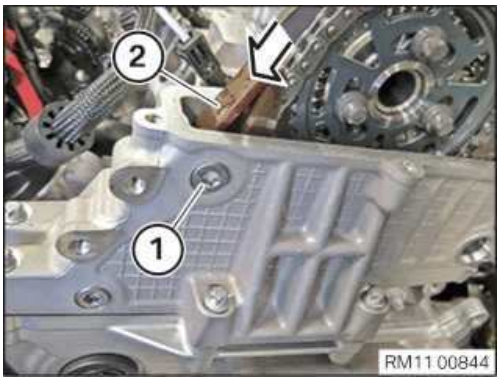
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

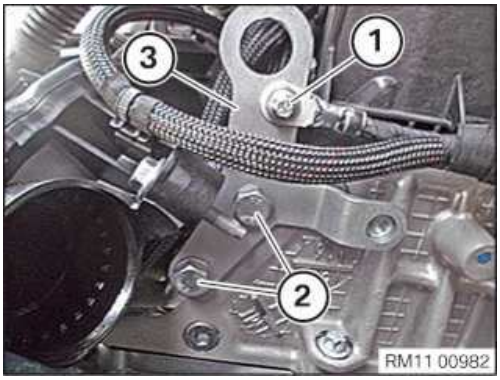


84 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

85 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

86 – Installing the chain tensioner piston

WARNING

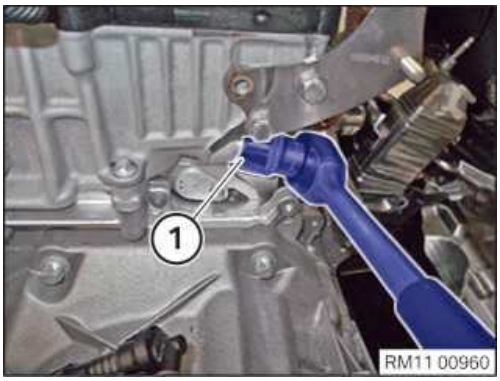
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

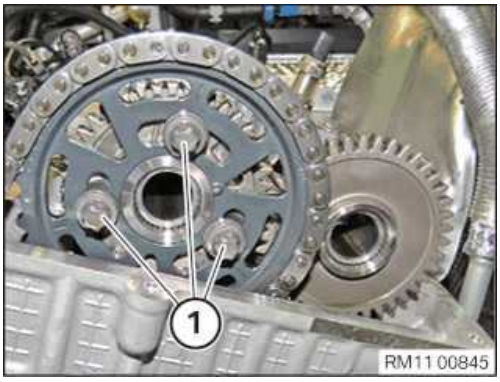


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

87 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

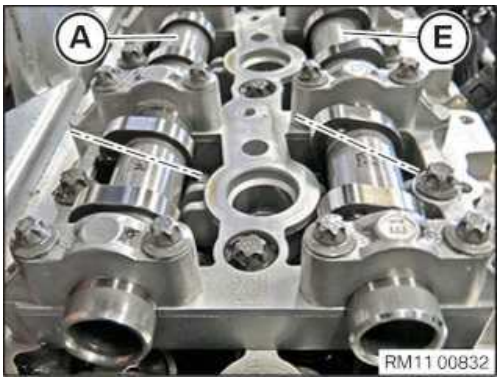
M7x17.			17 Nm

88 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

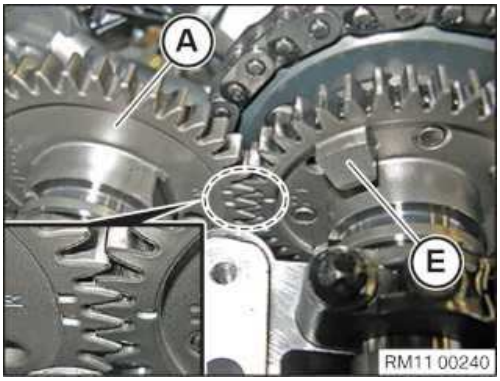


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

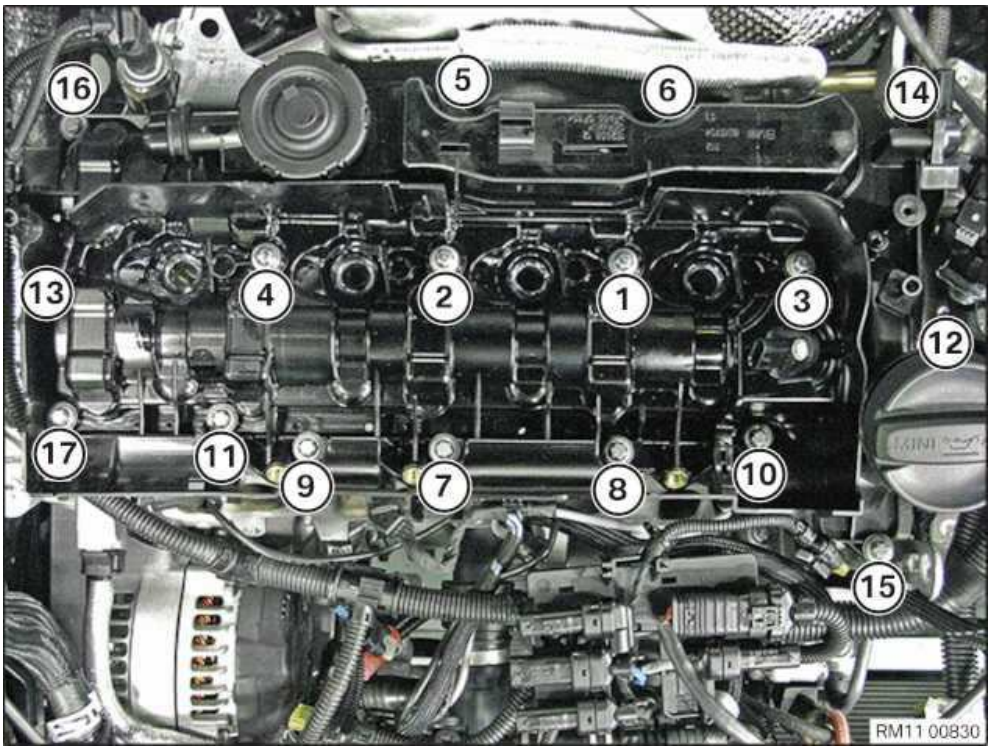
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

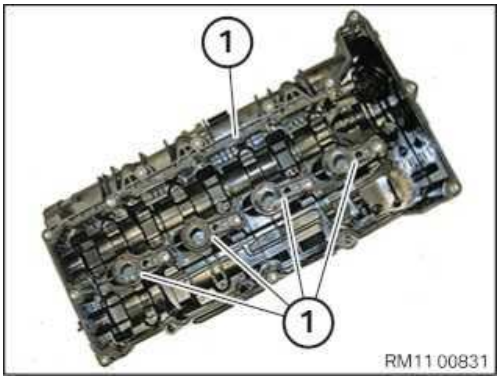
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



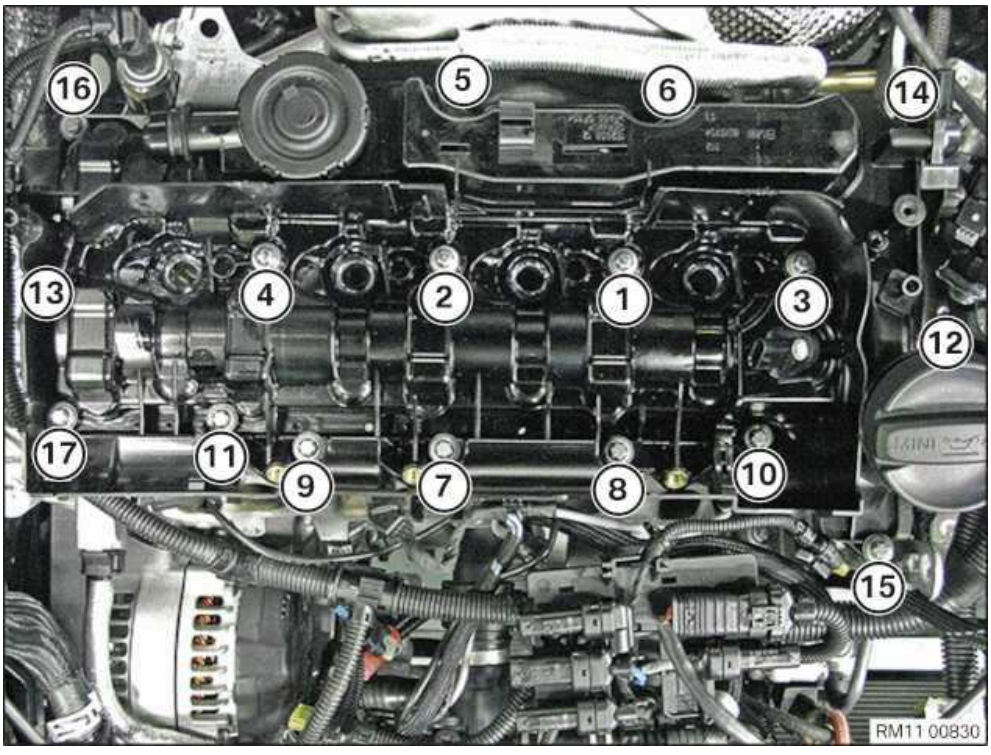
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



89 – Installing cylinder head cover

cardiagn.com

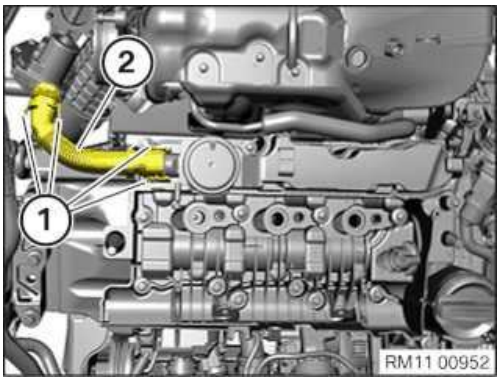
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

90 – Installing injectors of injection system

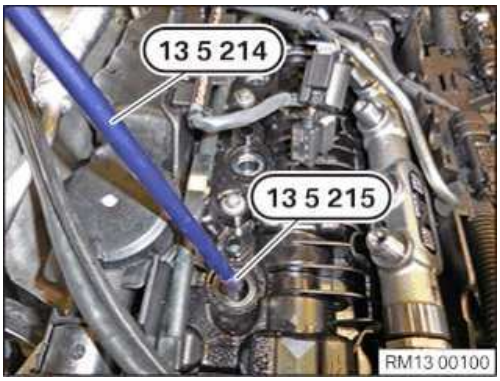
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

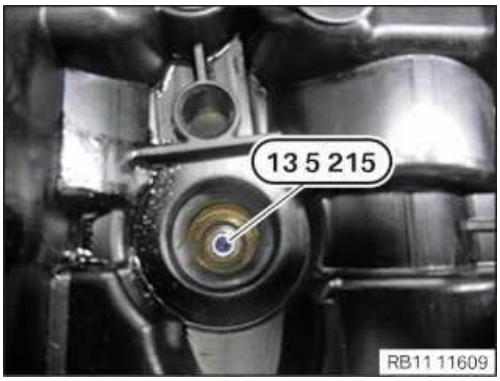
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

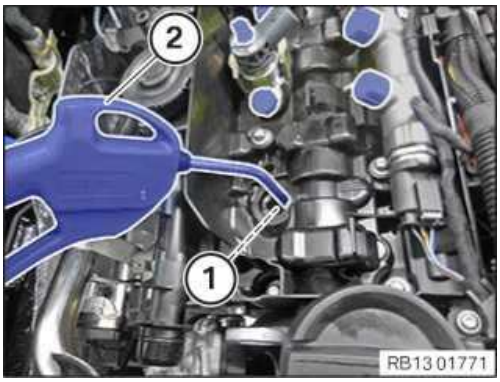


Contamination can result in malfunctions, operating failure or leaks.

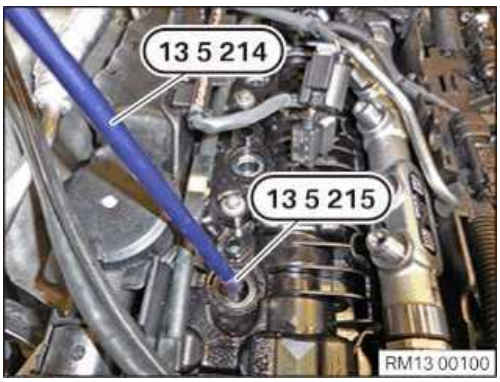
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



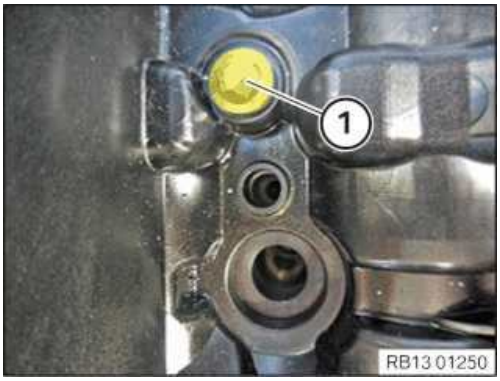
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

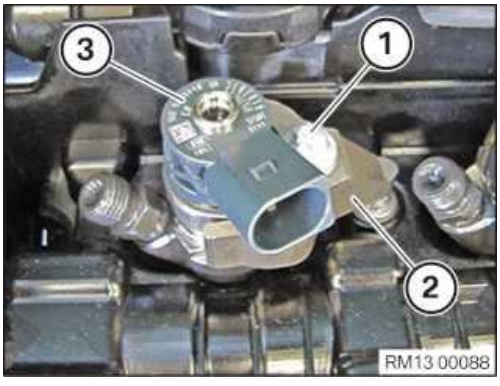
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

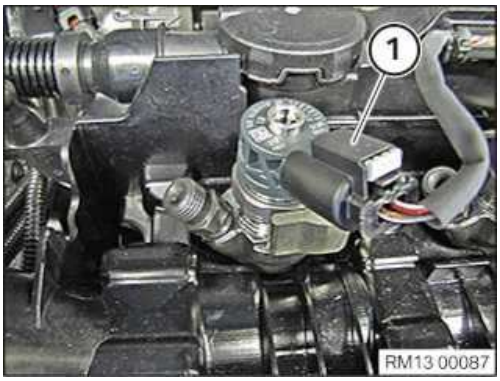


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

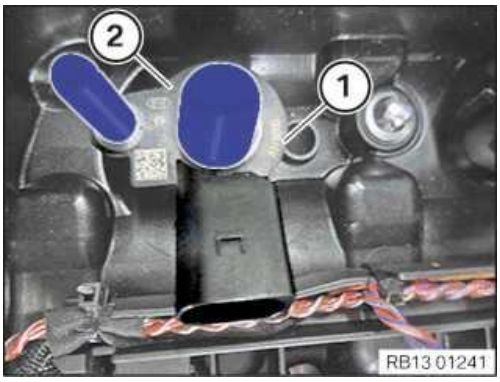
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



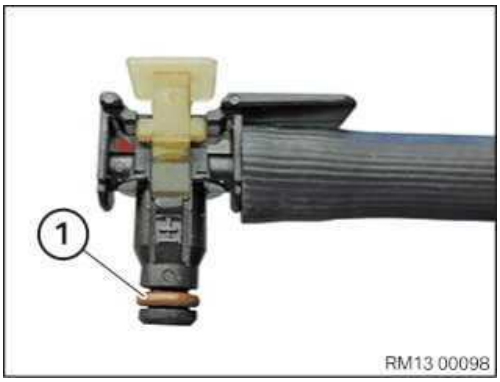
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

91 – Connect the leakage oil line on the injector

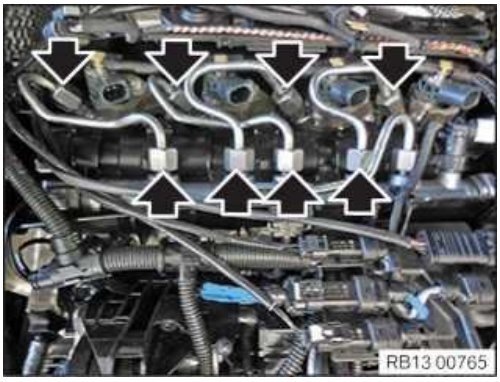
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



92 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

93 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

cardiagn.com

94 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

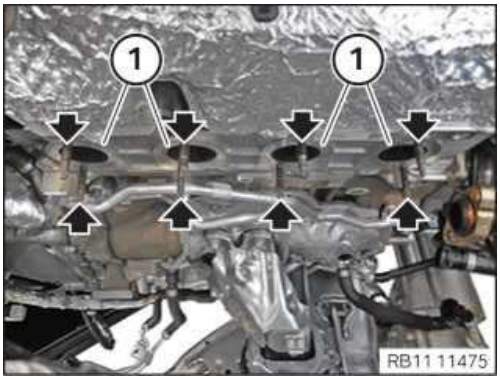
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



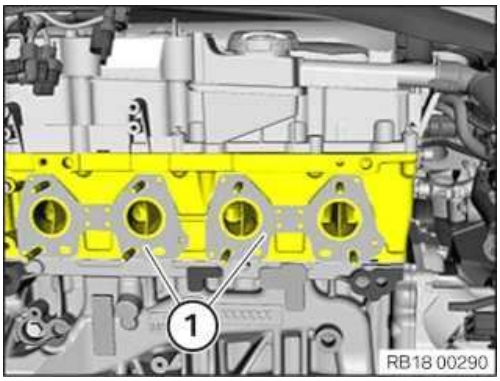
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

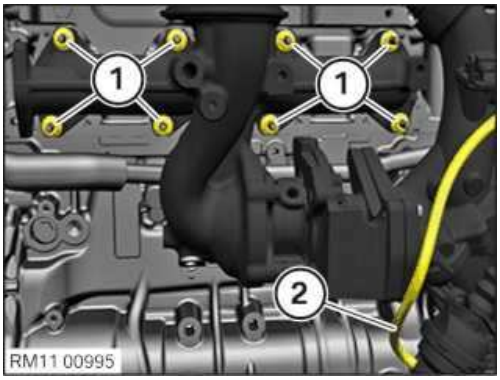
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

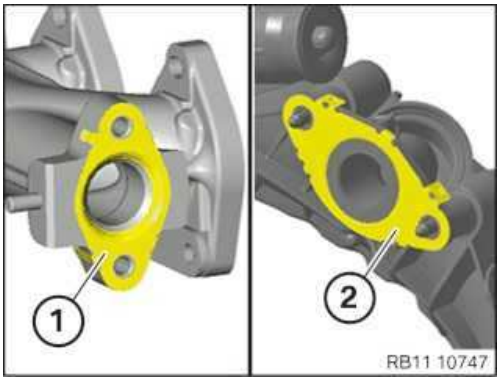
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

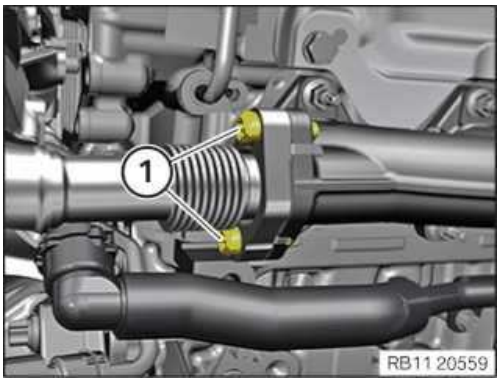


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

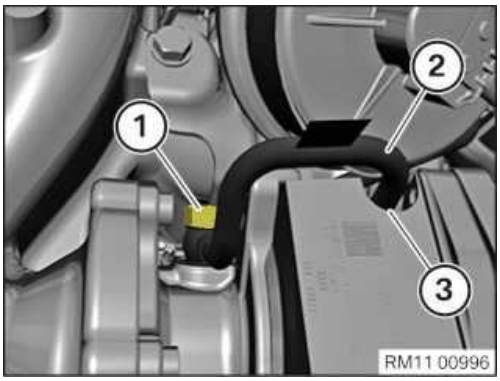
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

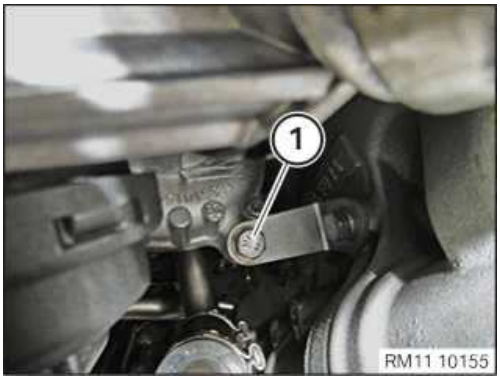
  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

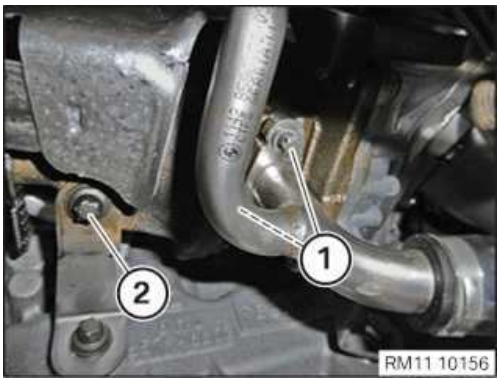


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

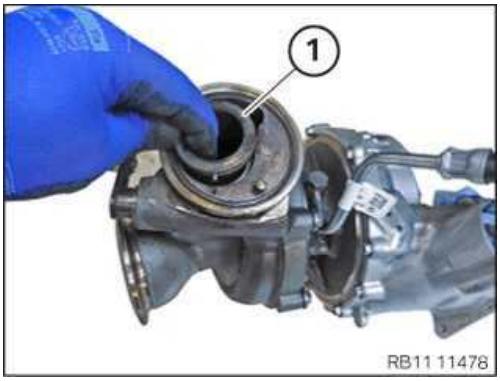
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

95 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

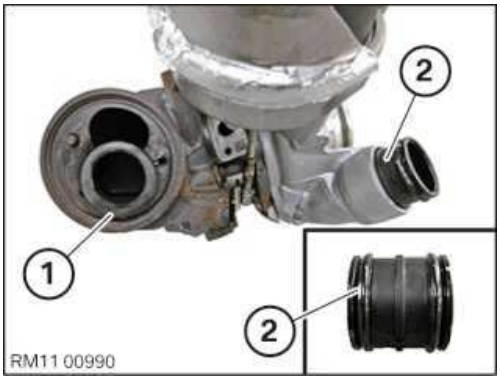
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

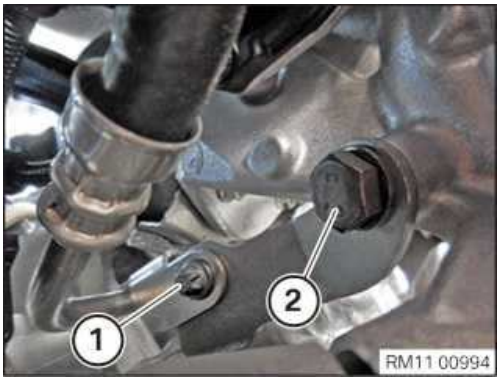
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

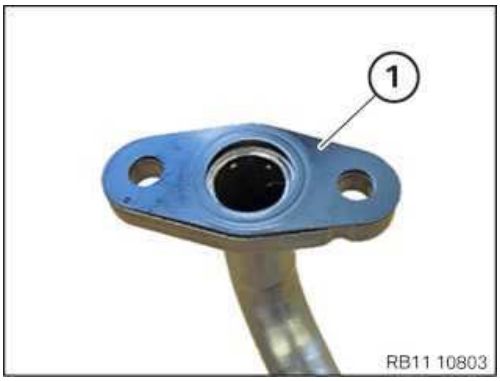
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

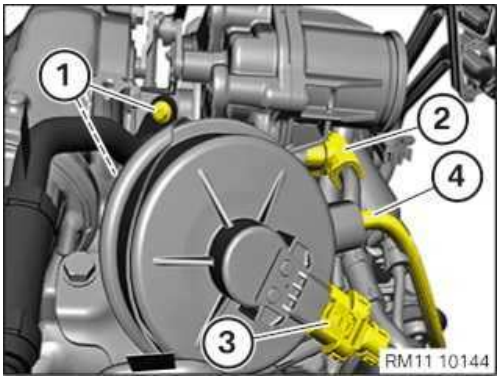
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

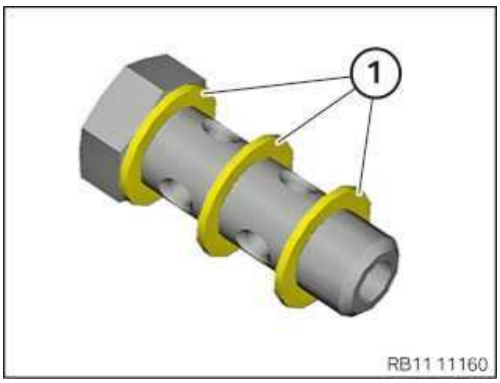


M8x16		Tightening torque	22 Nm

cardiagn.com

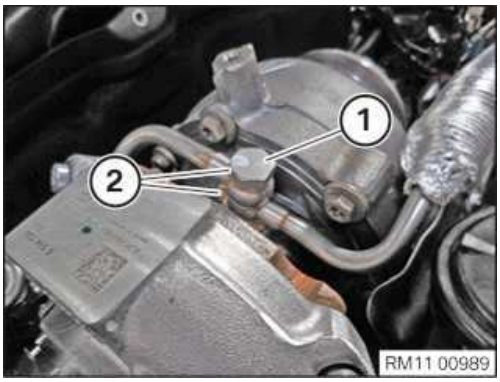
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

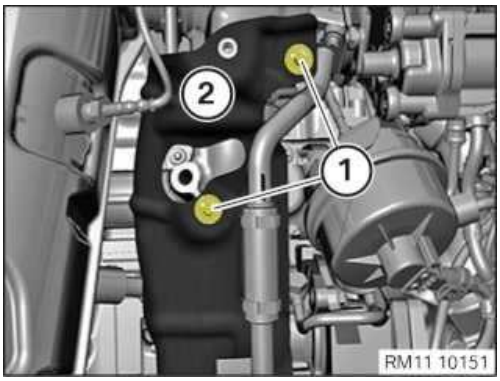
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

96 – Installing heat shield on exhaust turbocharger at bottom

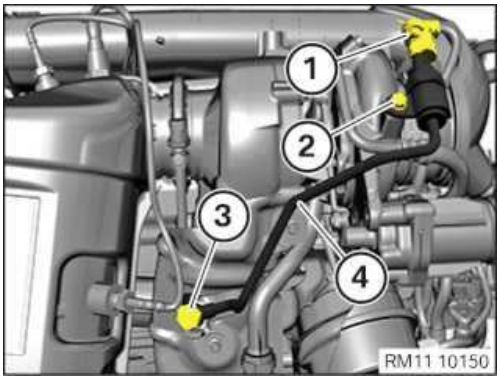


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

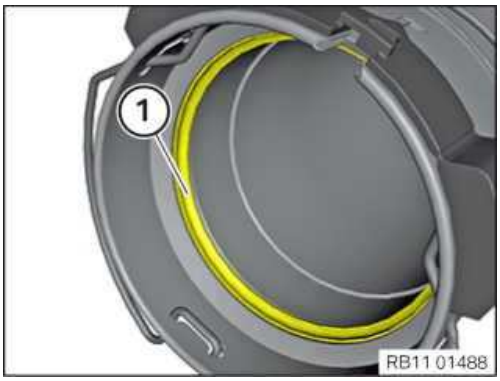
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



97 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

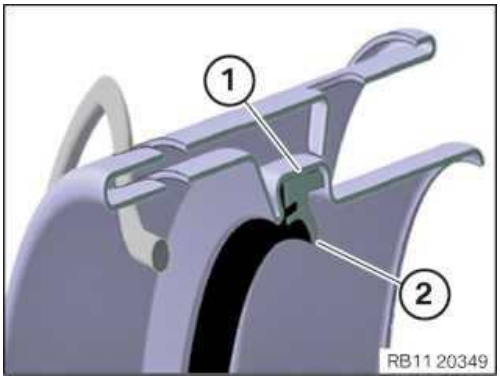
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

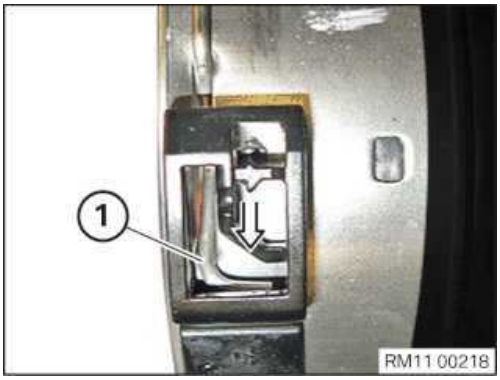


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

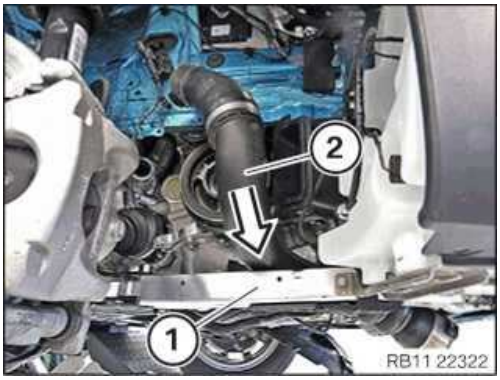
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



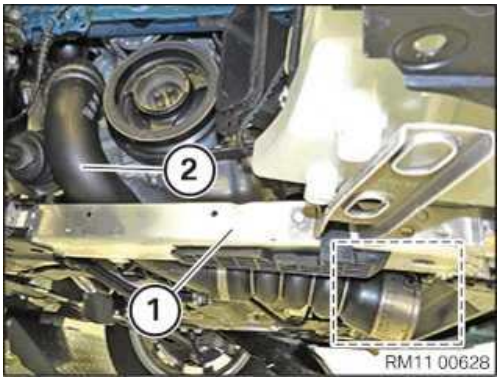
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



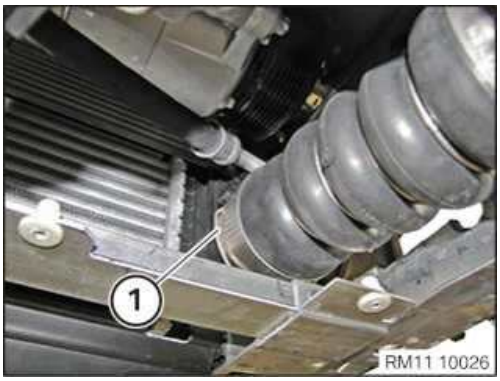
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

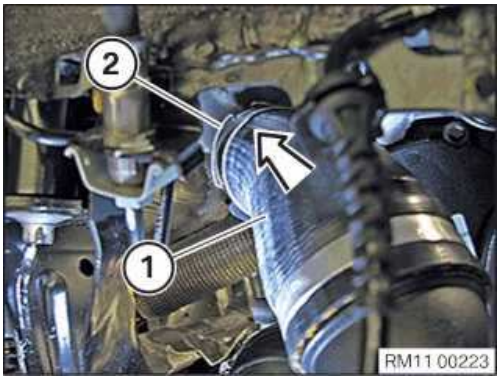


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

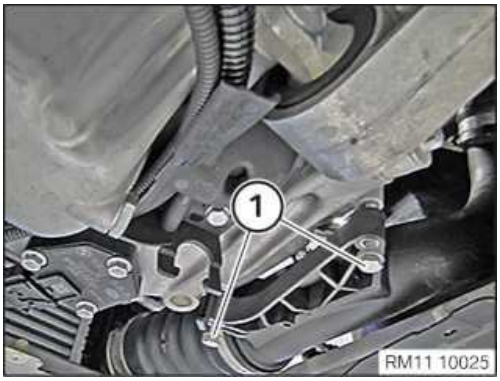


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

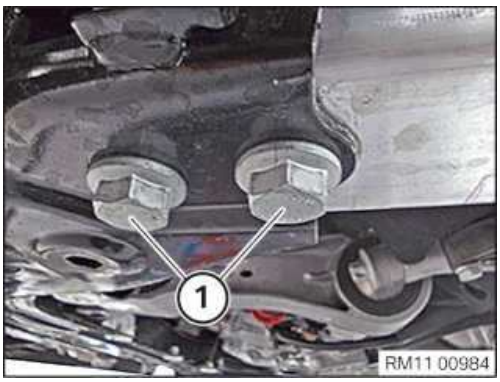
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



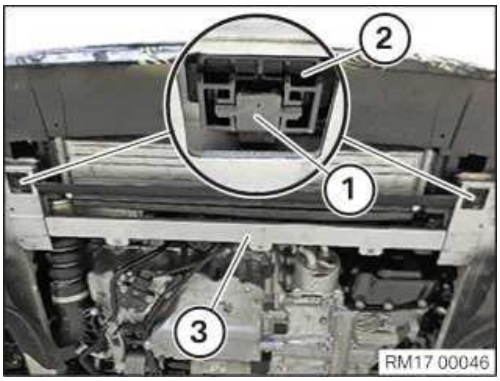
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

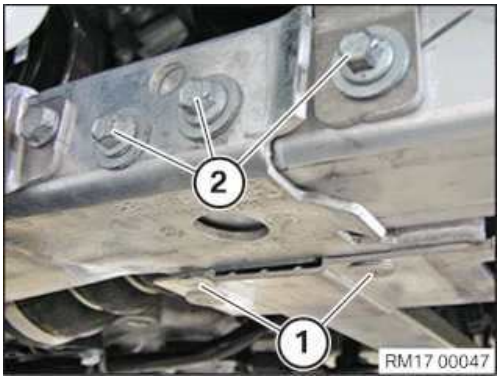
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.

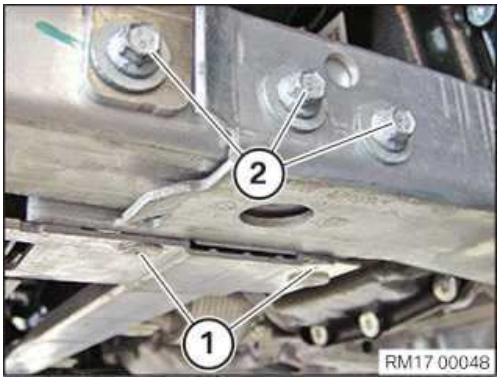


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

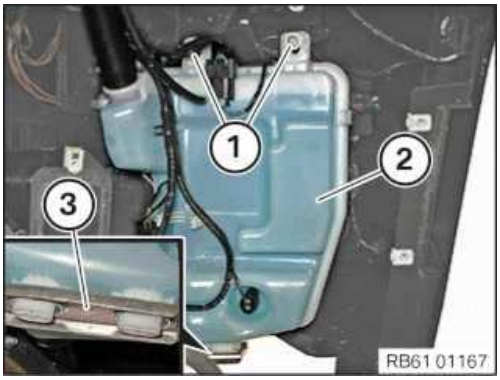
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



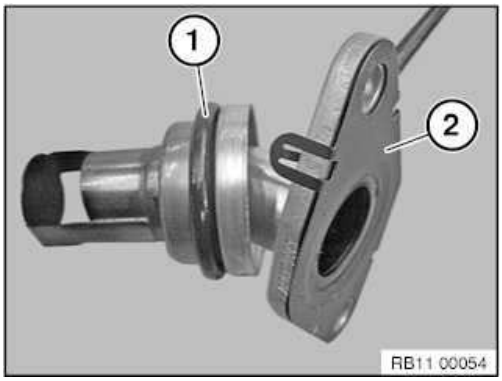
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

98 – Install the washer fluid reservoir in the fixture

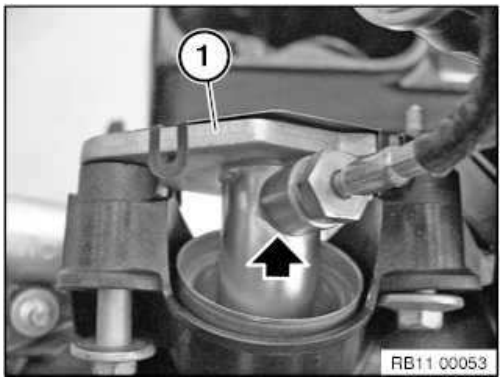


- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

99 – Installing the intake plenum

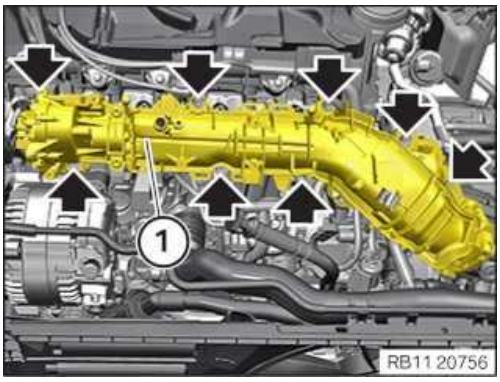


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

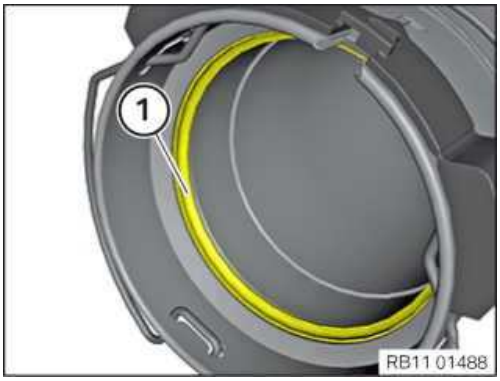
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

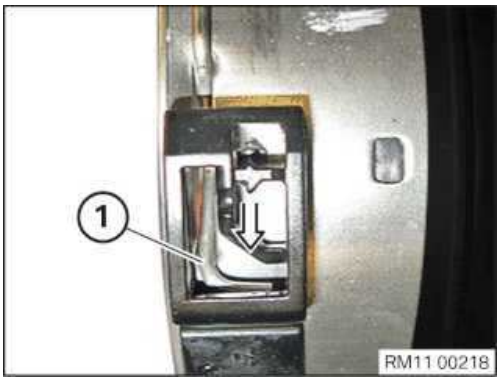
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



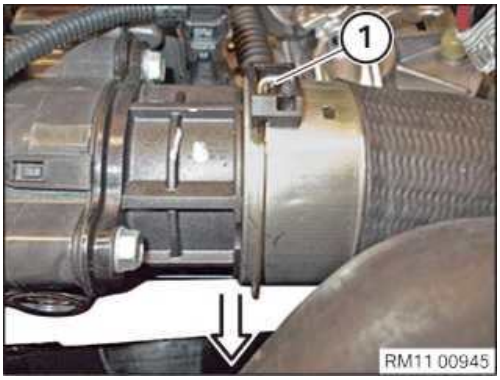
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

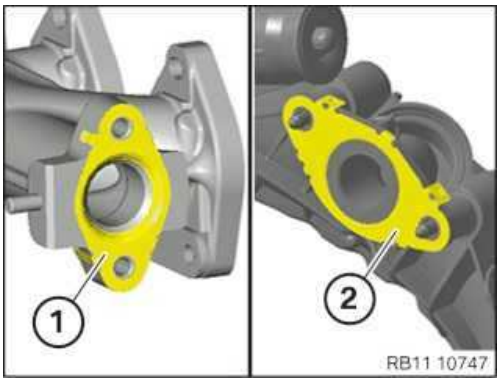
  Parts: Sealing ring

cardiagn.com

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



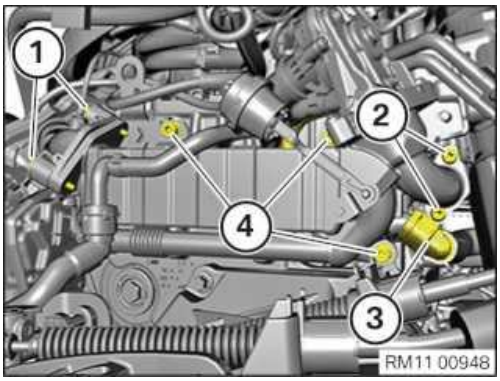
100 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

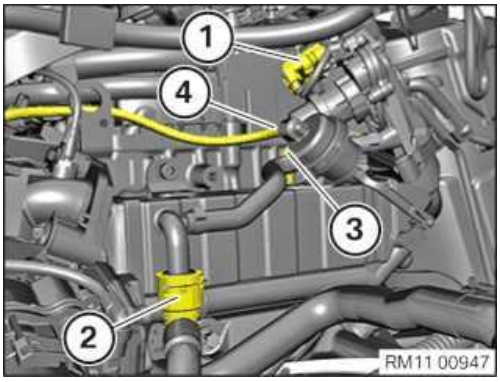
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

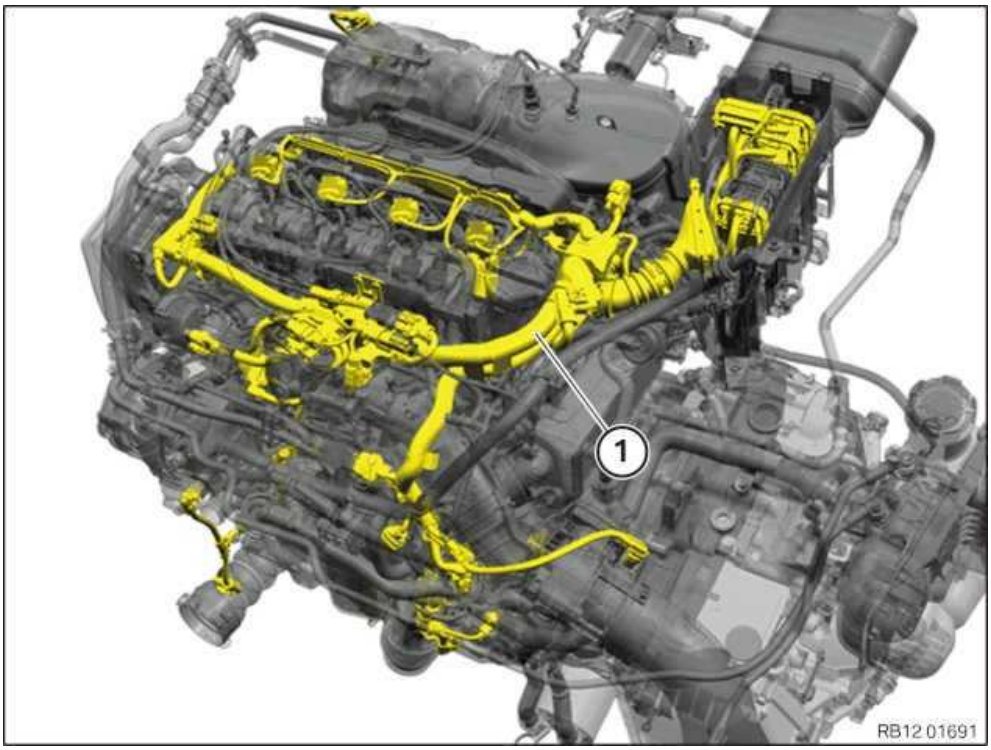
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

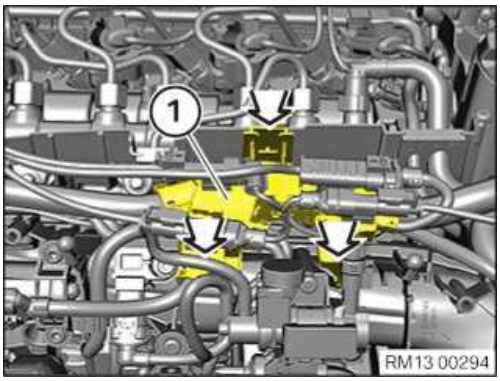
Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

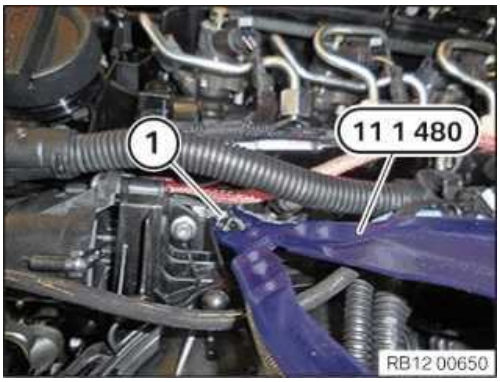
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

101 – Fastening the wiring harness section for the intake plenum



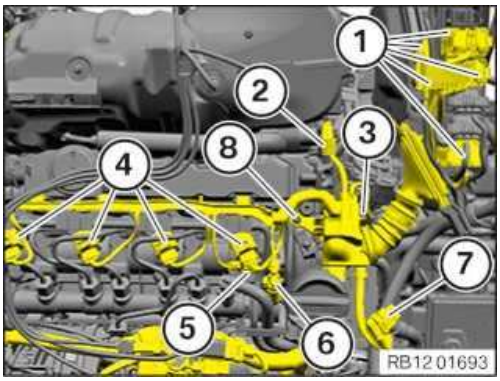
cardiagn.com

Overview: Wiring harness section for the engine



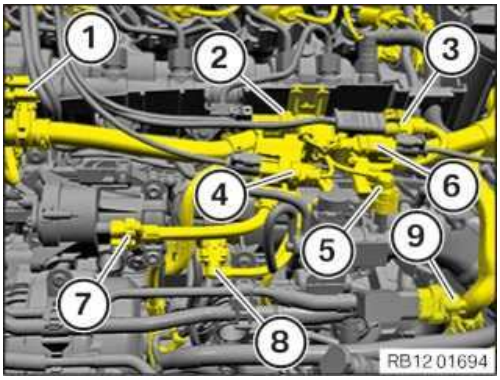
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

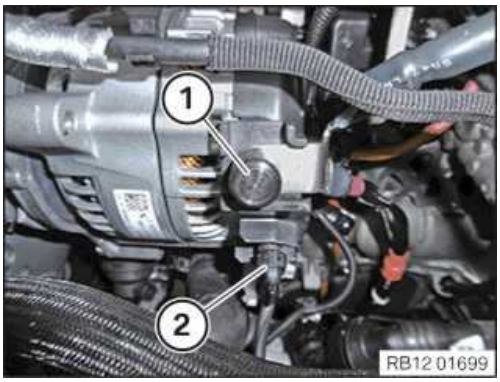


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

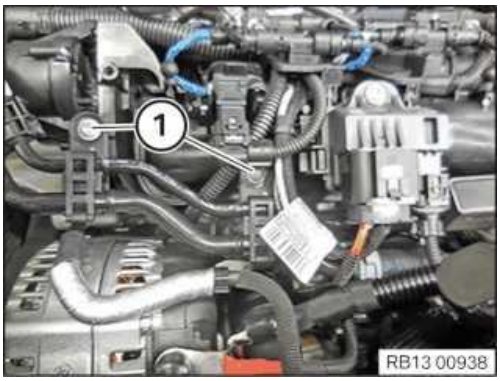


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

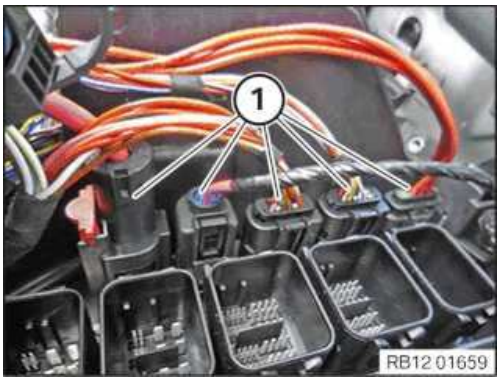


- Connect and lock the connector (2).

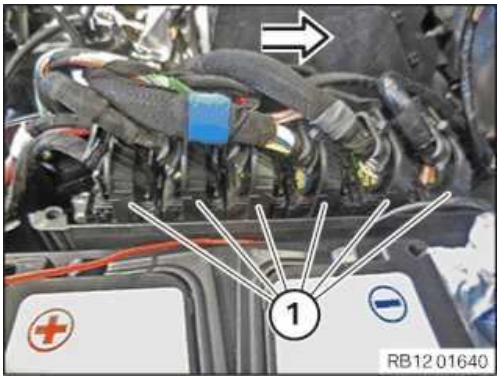
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

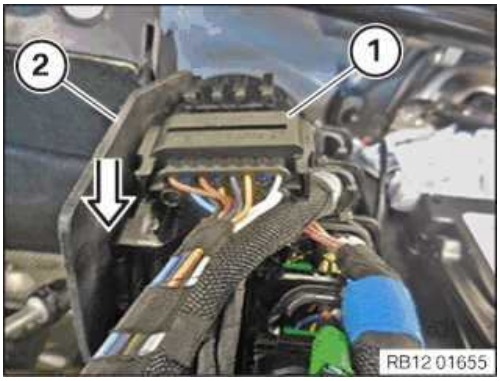


- Position the fuel line.
- Tighten the screws (1).

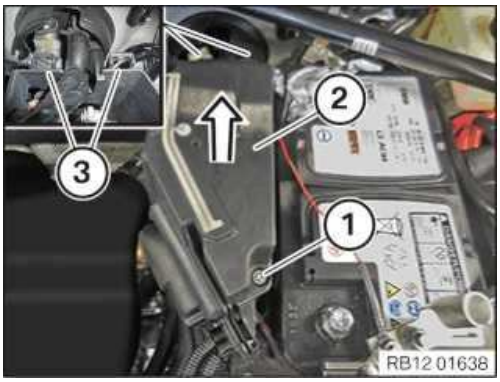


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

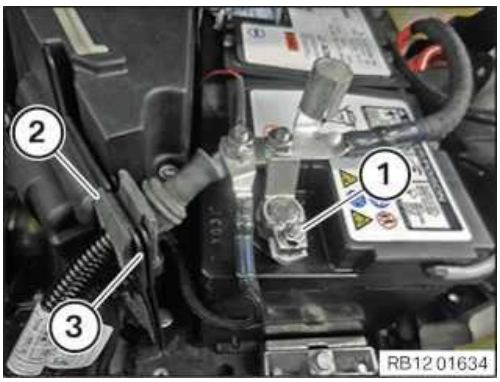


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

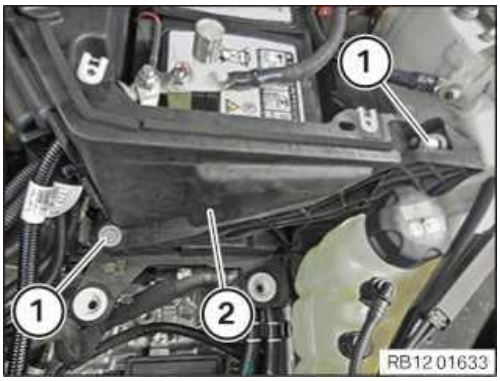


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

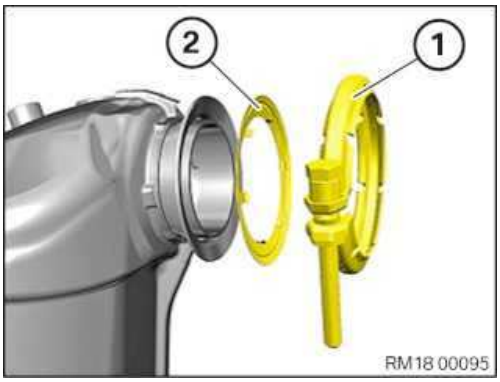
NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



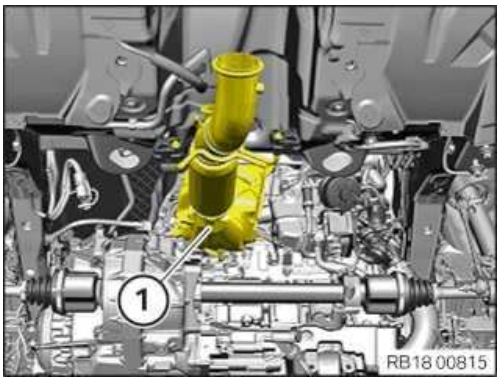
102 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

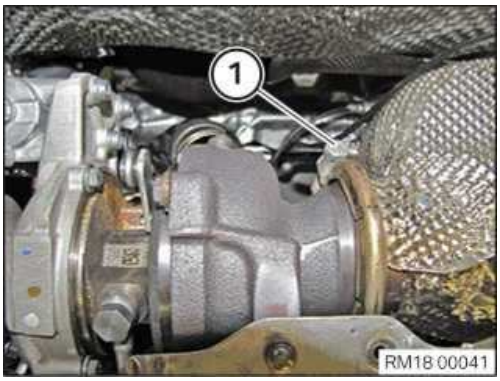
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

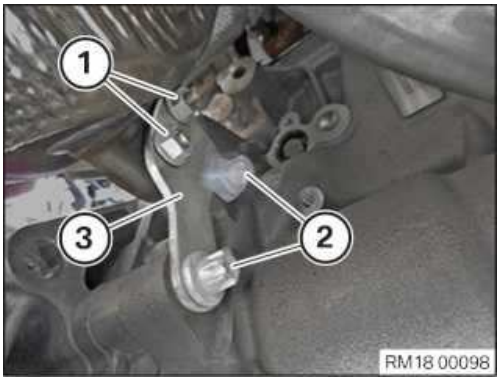
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

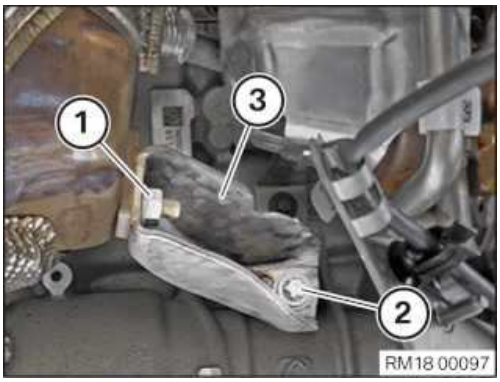


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



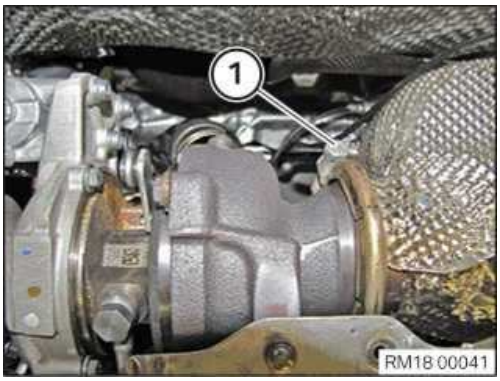
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



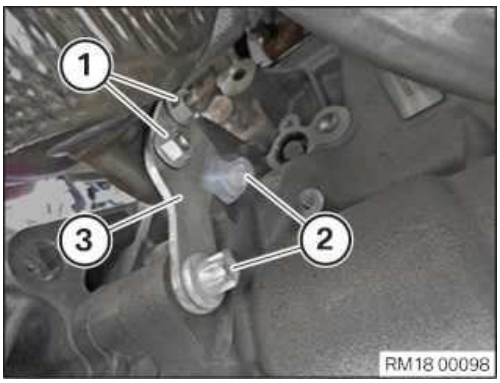
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



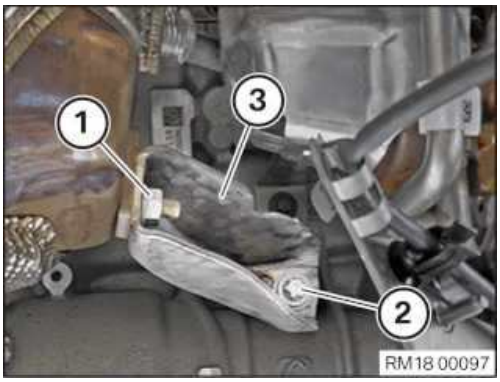
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

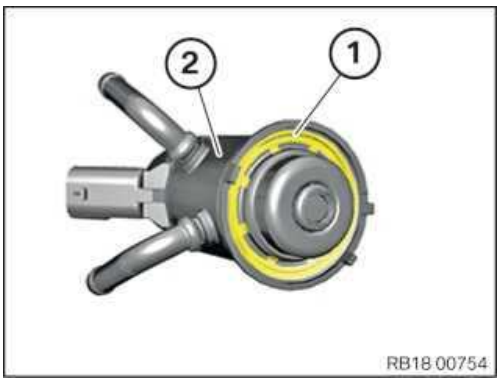
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

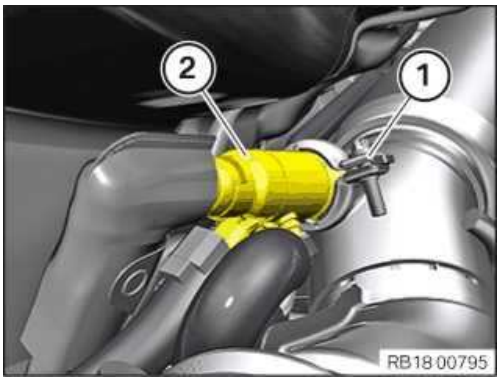


Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

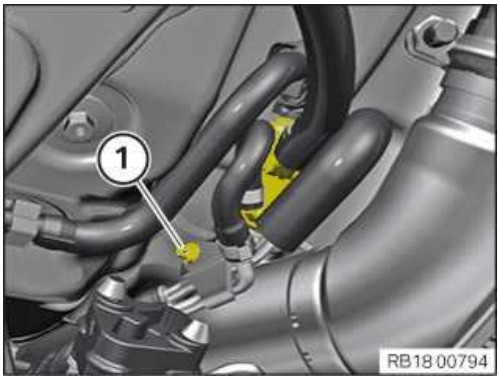


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

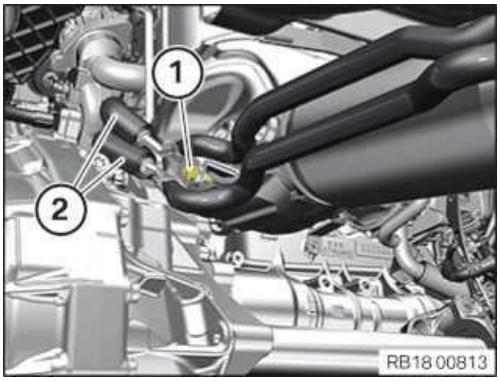
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

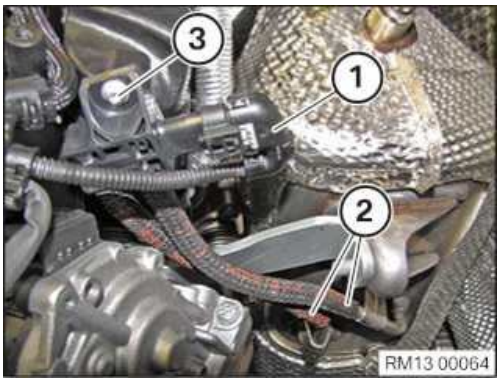


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

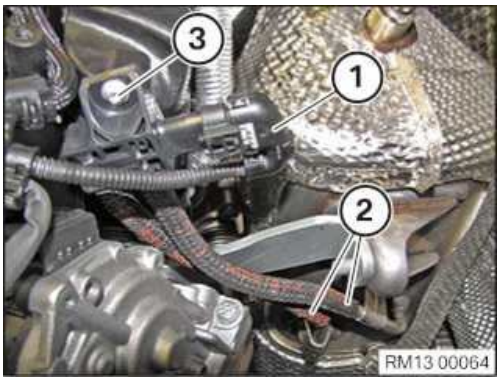
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

104 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

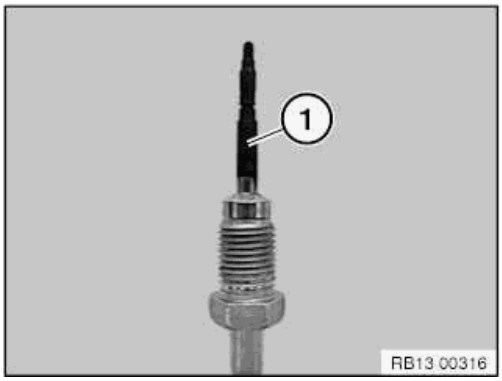
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

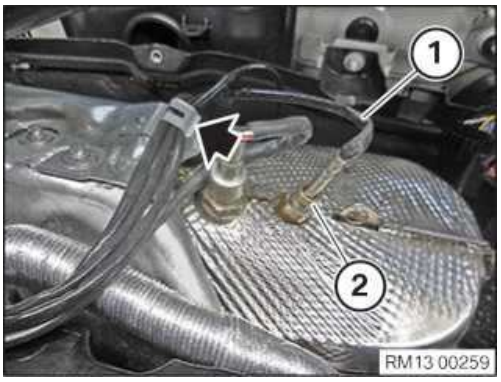


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

105 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

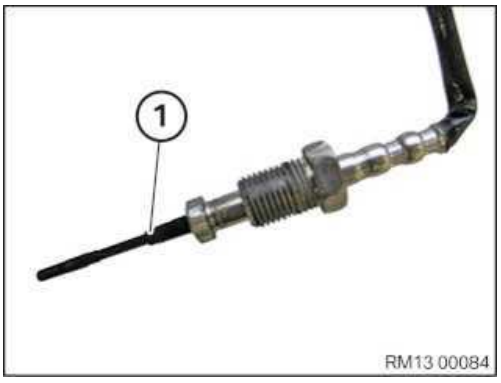
- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

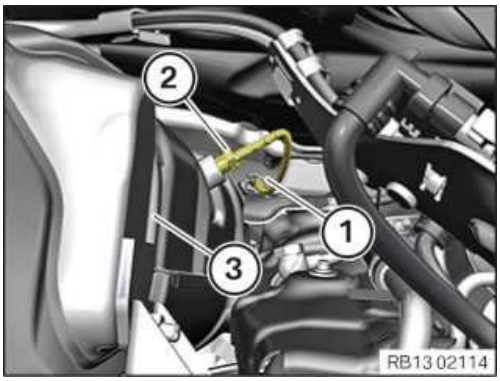
  The connector (1) must engage audibly.



106 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.

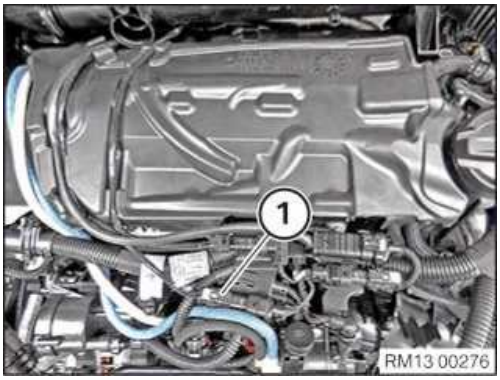


Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

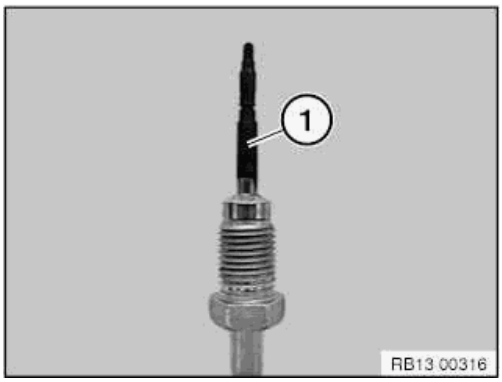
cardiagn.com



- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

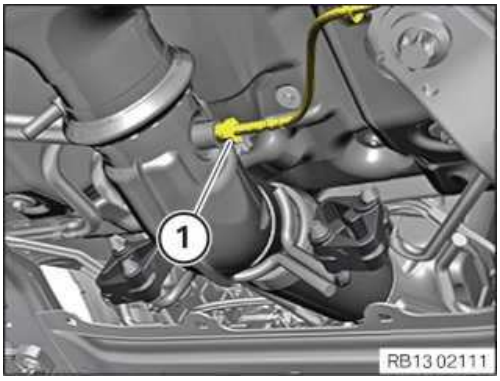


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

107 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

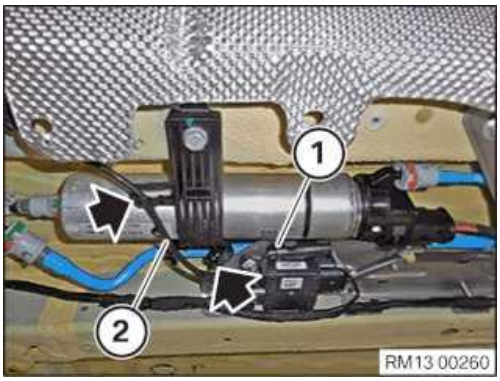
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

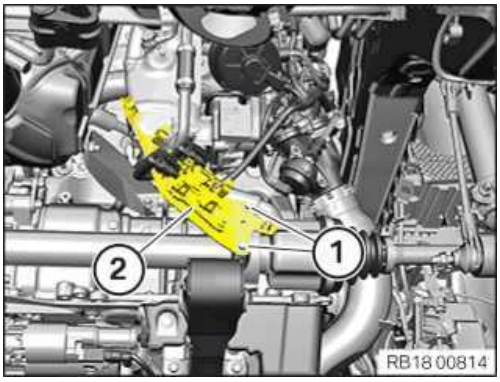
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

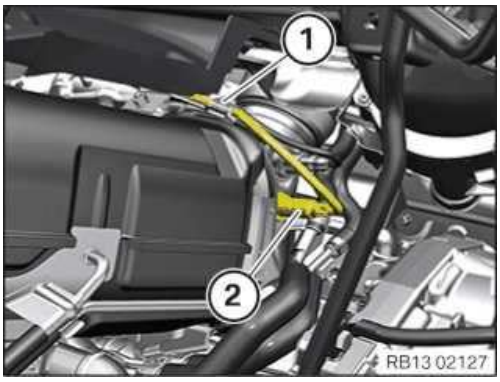


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

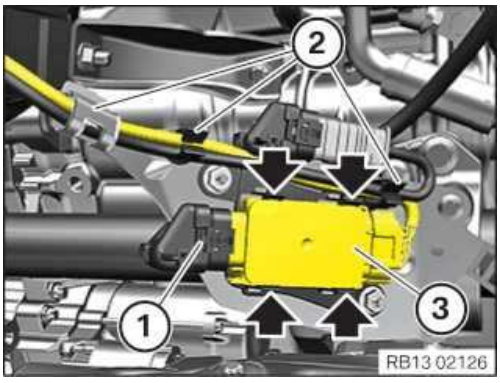
108 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



109 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

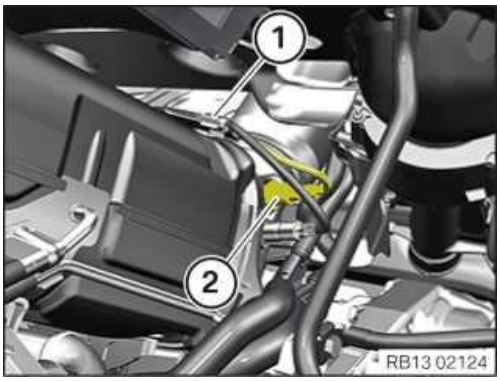
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

110 – Install the monitoring sensor

TECHNICAL INFORMATION



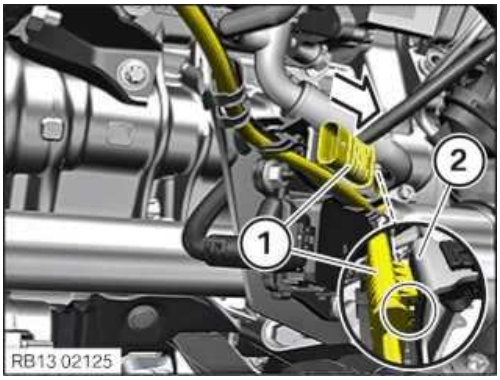
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

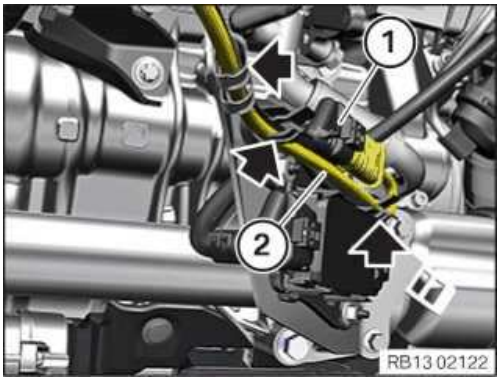
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

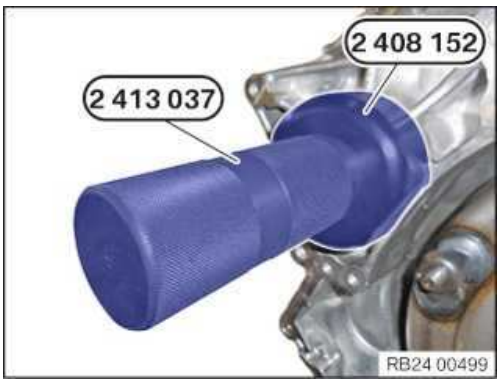
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

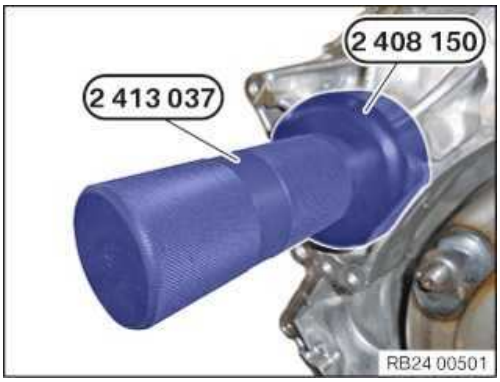
111 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

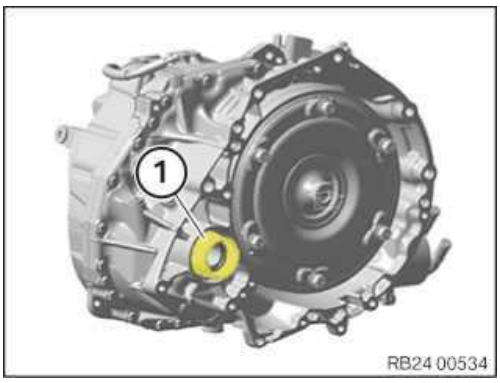
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



cardiagn.com



- Insert special tool **2 411 739** into the inner radial shaft seal.

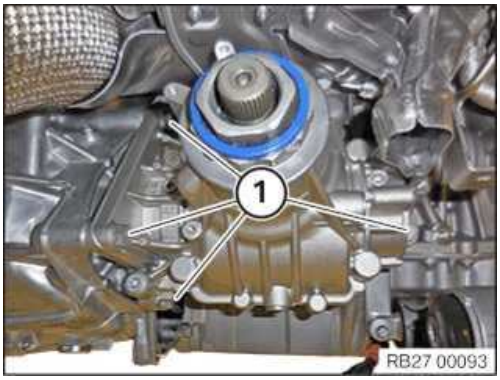


- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.



cardiagn.com

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

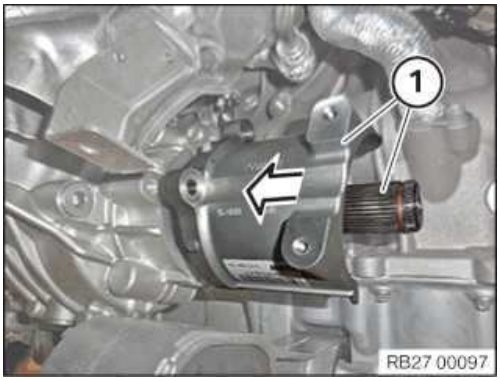
Technically suitable transfer box and electrical transmission oils	

Main group 27

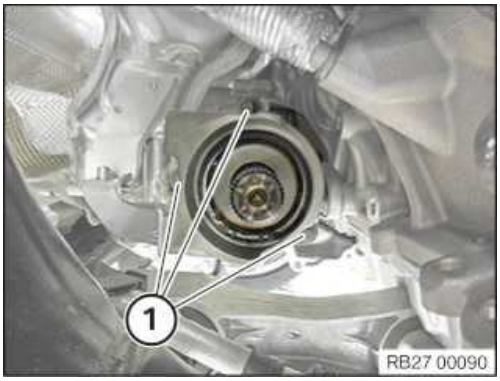
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



112 – Install the intermediate shaft with the support tube



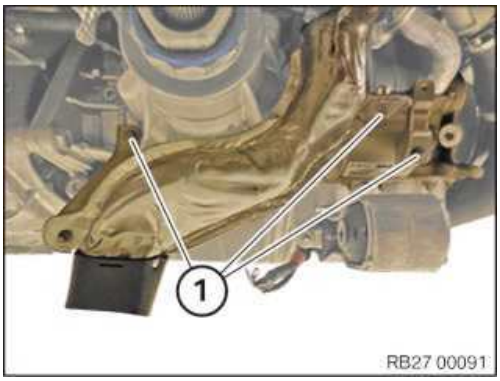
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

113 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

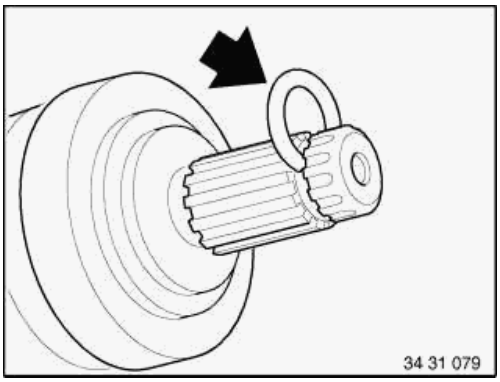
114 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

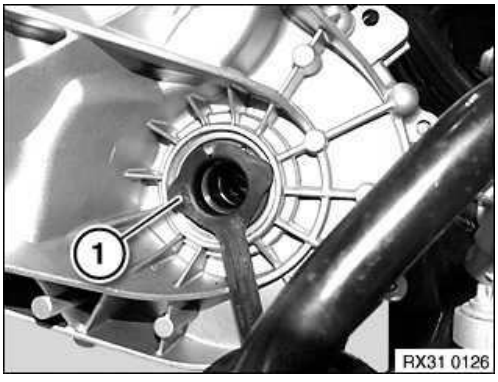
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

115 – Partially installing the left output shaft



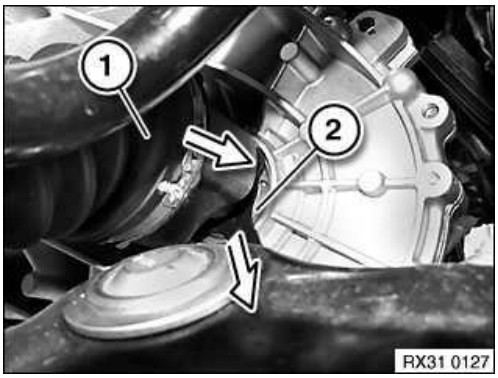
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

116 – Install propeller shaft.

CAUTION

Component with heavy weight.

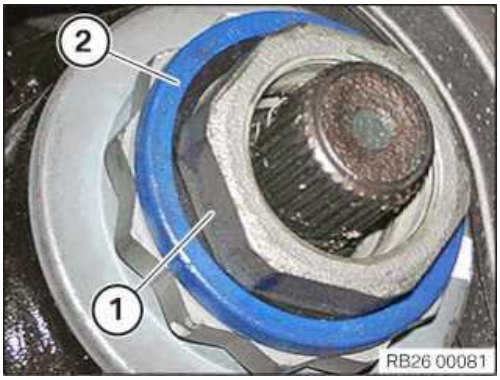
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

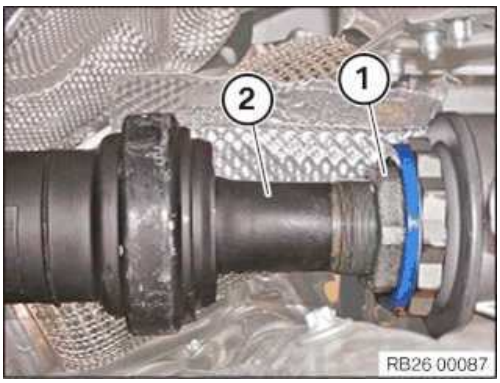
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

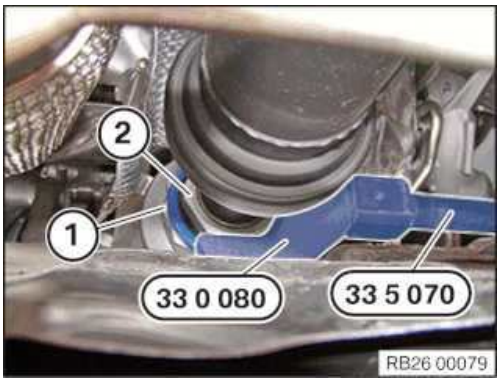
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



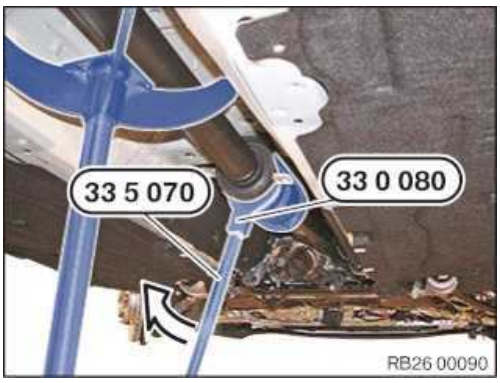
- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



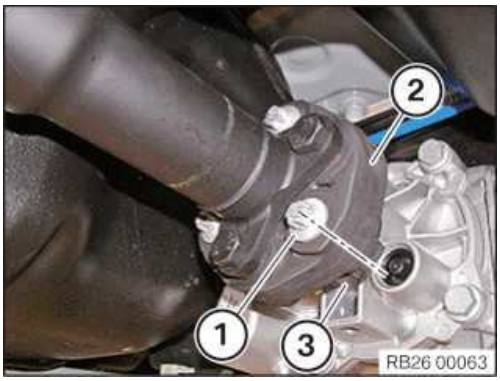
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

cardiagn.com

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

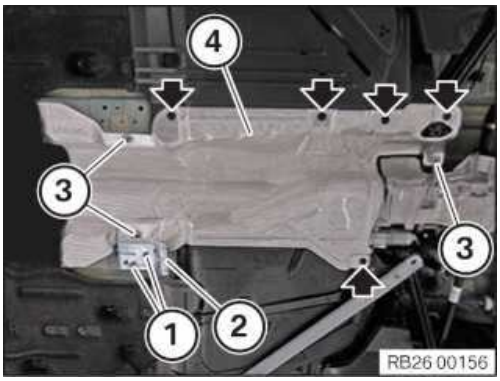
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

cardiagn.com

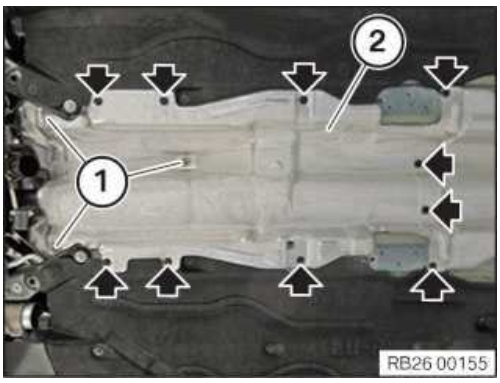
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

118 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

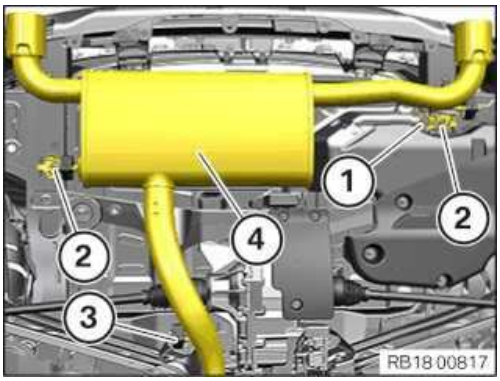
119 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

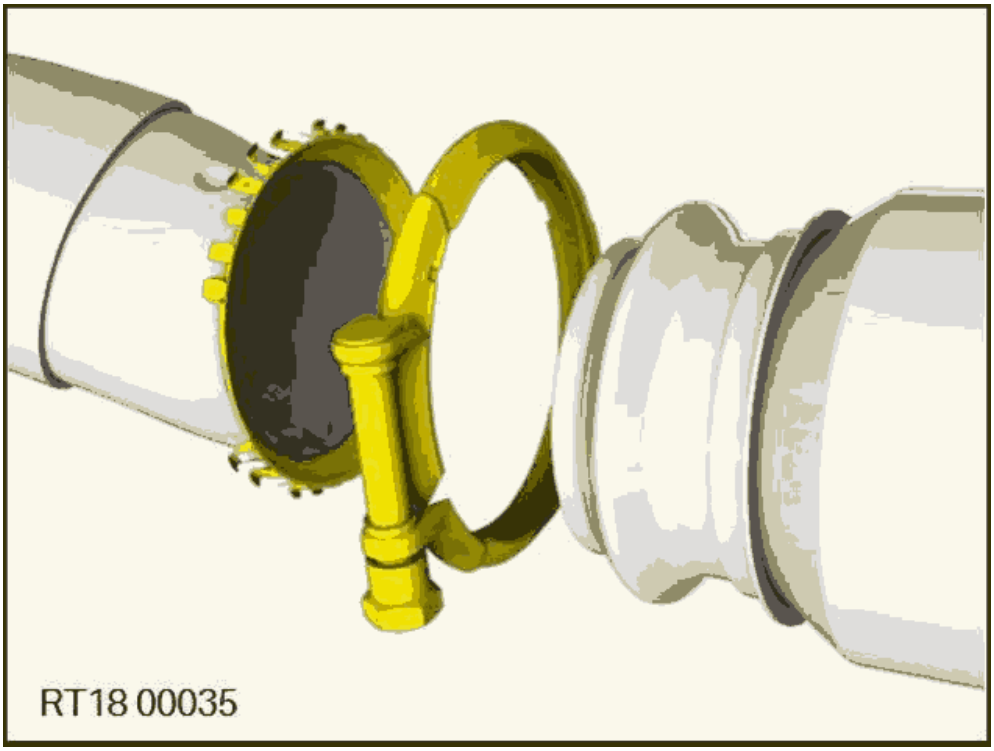
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

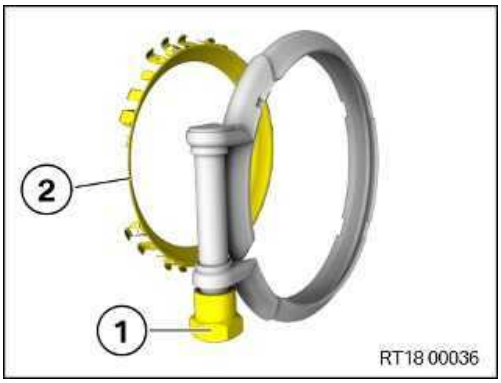
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



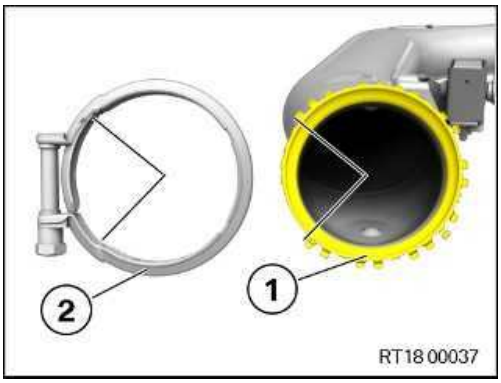
Exhaust bracket on body



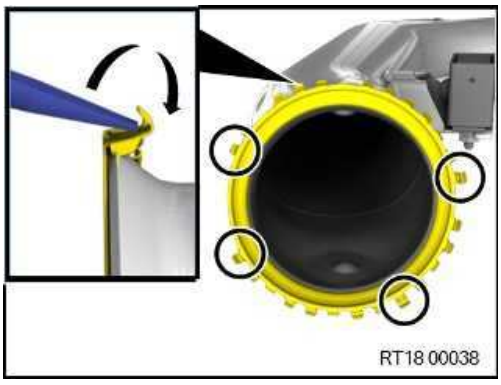
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▶ **Install the V-clip**

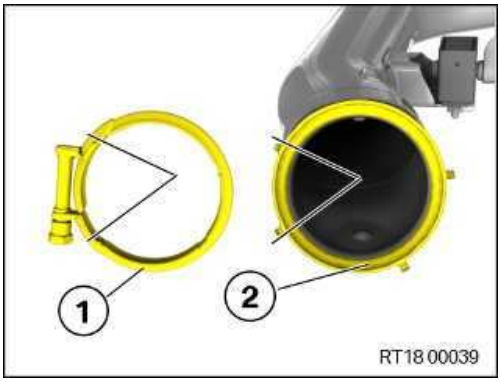


V-band clamp



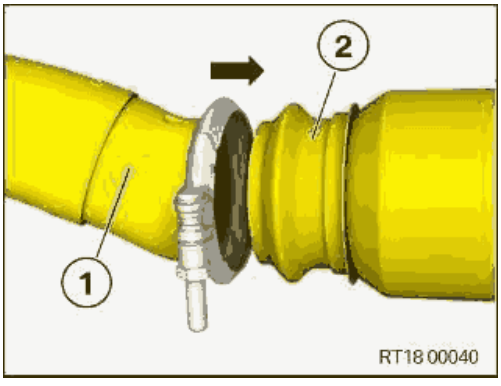
- Unscrew the nut (1) and remove the sealing ring (2).

cardiagn.com



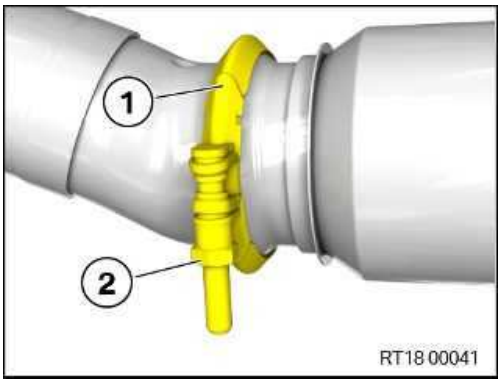
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



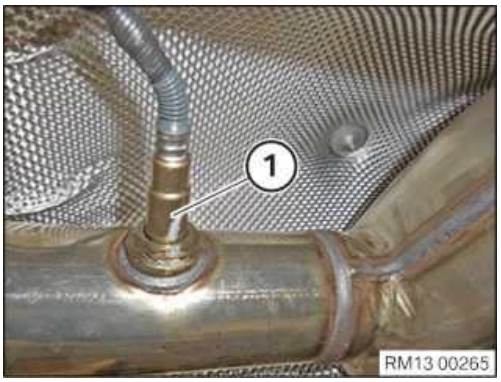
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

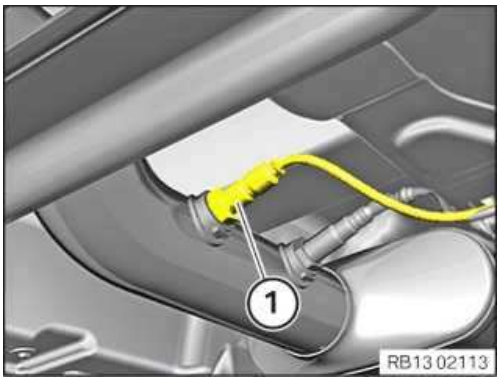
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



cardiagn.com

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

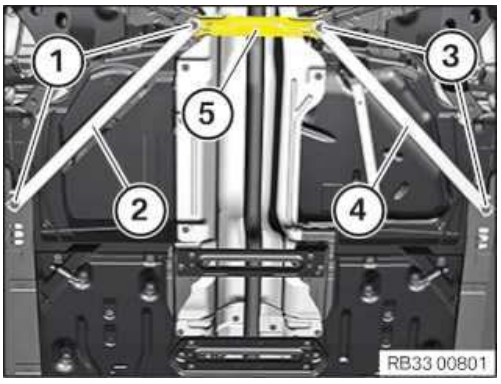


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

120 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

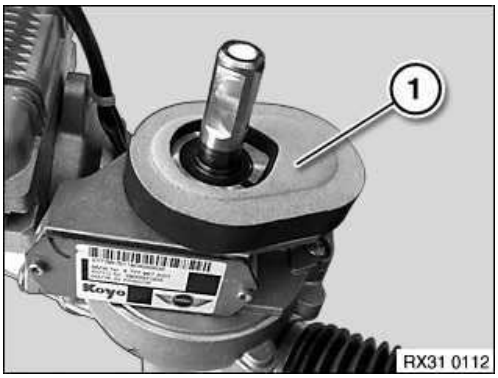
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

121 – Install the connecting support on the tunnel in front and back

cardiagn.com

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

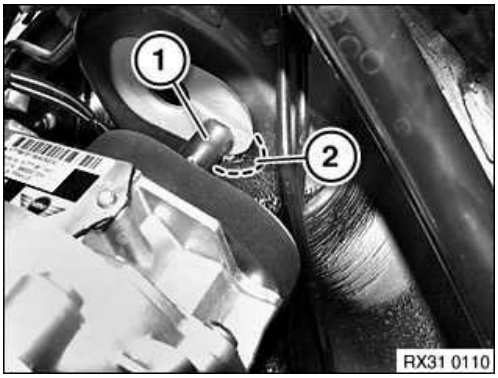
Front connection carrier to body



M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

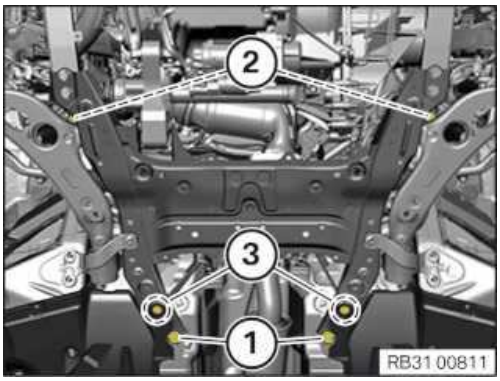


M8x18		Tightening torque	28 Nm

122 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

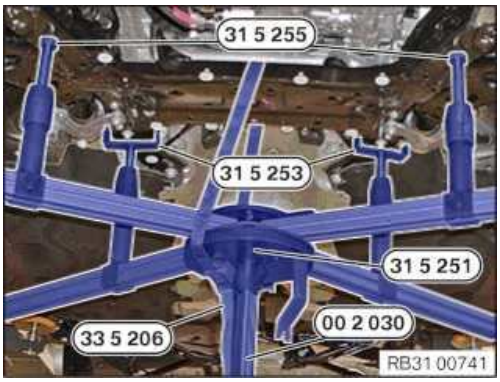
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

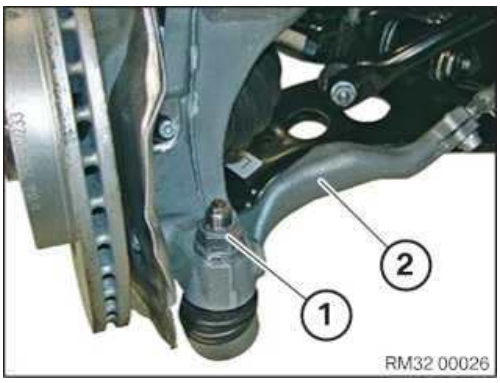
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



- If necessary, tighten the screws in the areas (3).

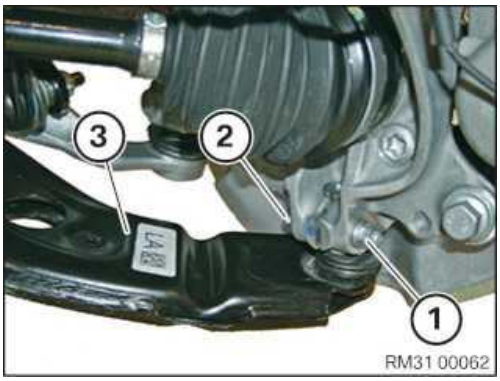
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE

Perform the operations on the left and right side.



- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

123 – Install the mounted parts on the front axle support

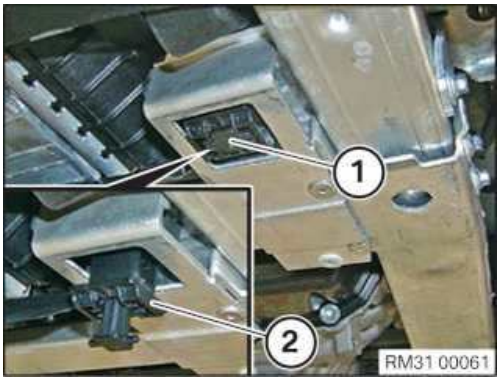
NOTICE

Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

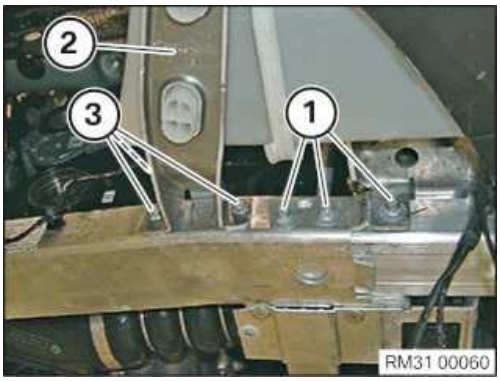


M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

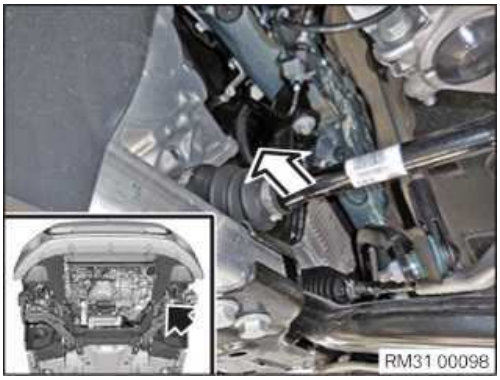
cardiagn.com

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



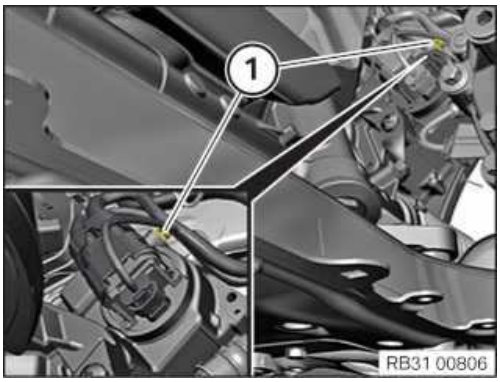
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

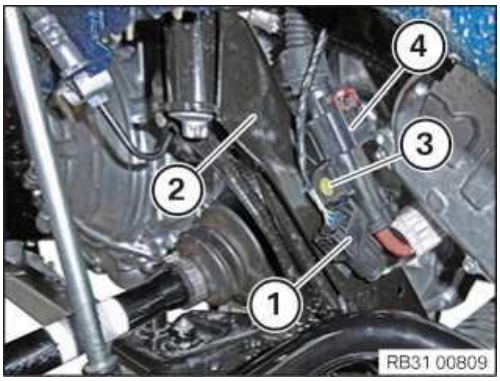
		Tightening torque	11,8 Nm

124 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

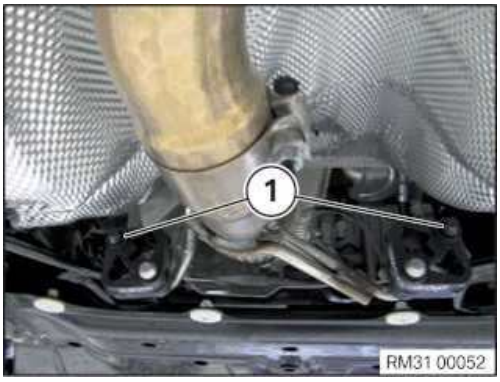


- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

125 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

126 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

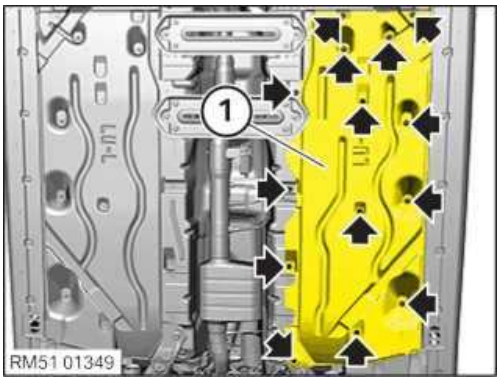
- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



127 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

128 – Installing underbody panelling , right

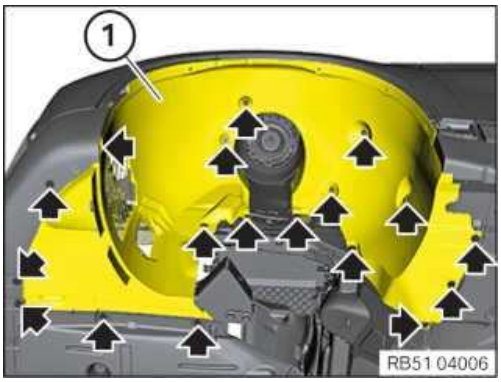
cardiagn.com

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Plastic nut		Tightening torque	2,6 Nm

129 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

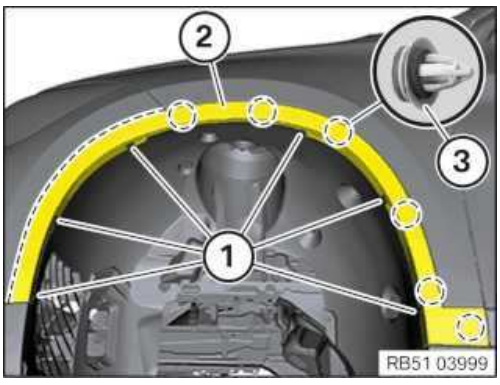
Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

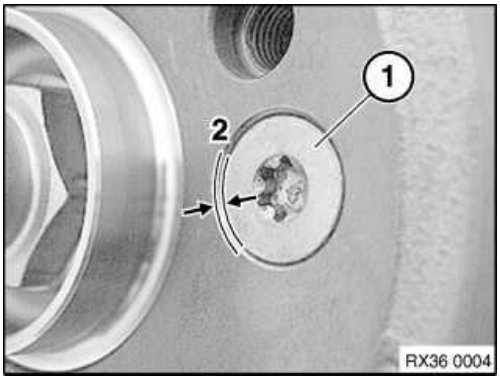
cardiagn.com

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

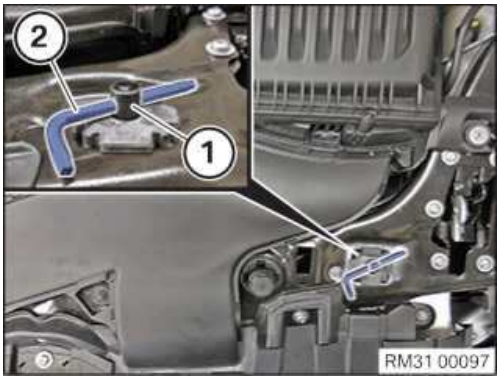
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



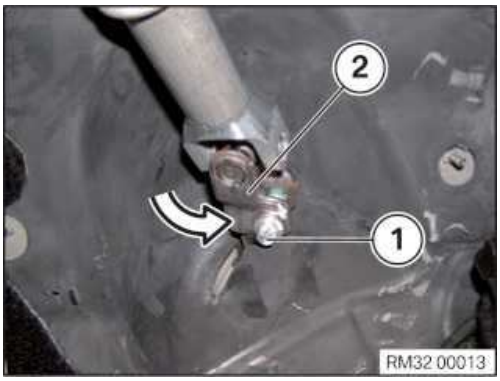
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

131 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

132 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

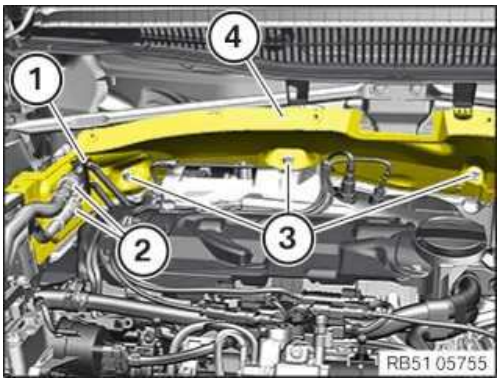
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

133 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

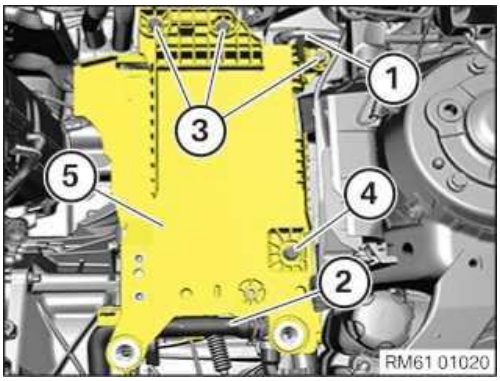
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

134 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

135 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

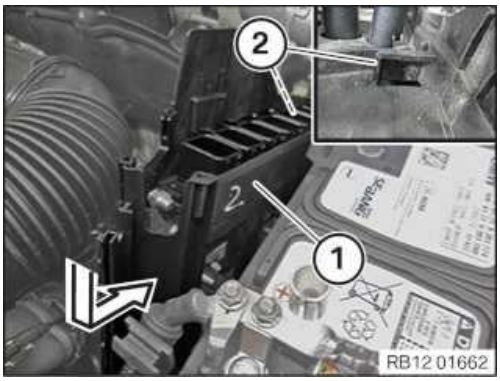
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

136 – Install electronics box

Prerequisite



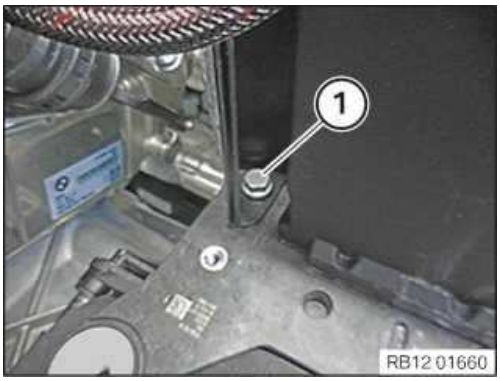
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

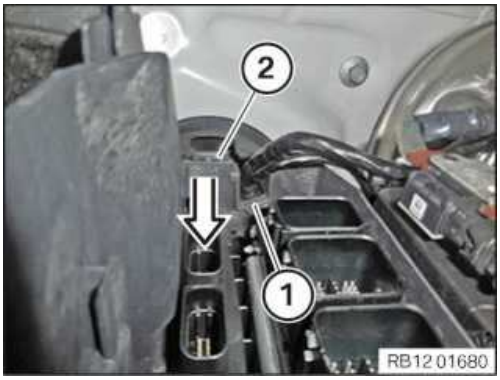
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

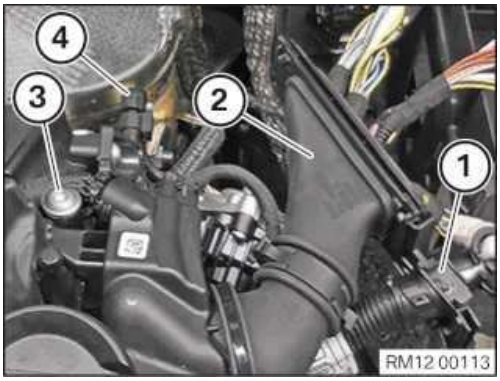


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

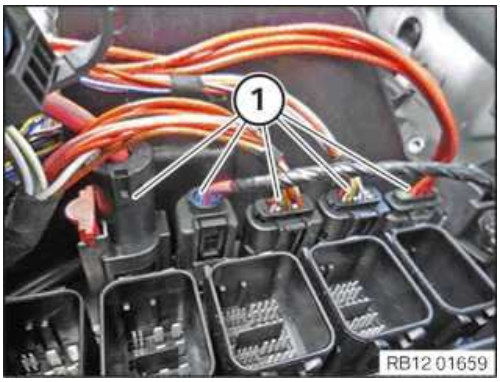


- Tighten down screw (1).

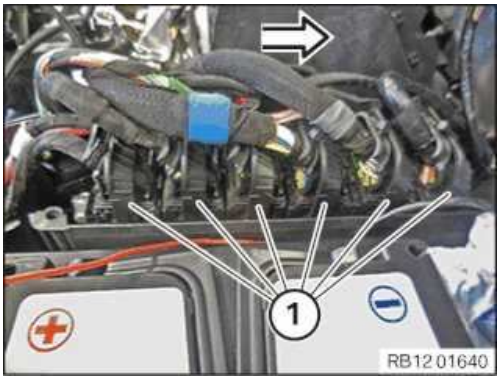
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



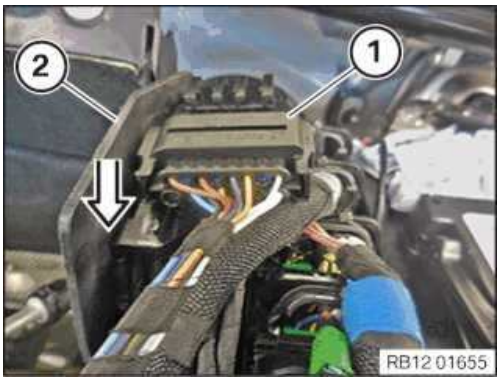
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



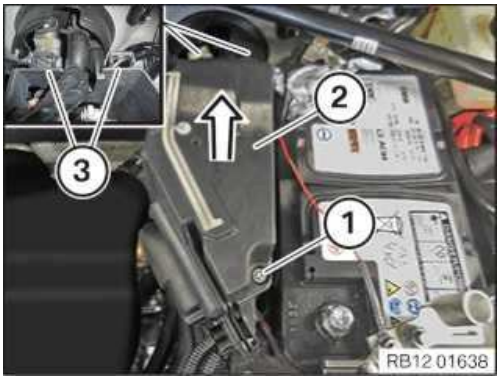
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

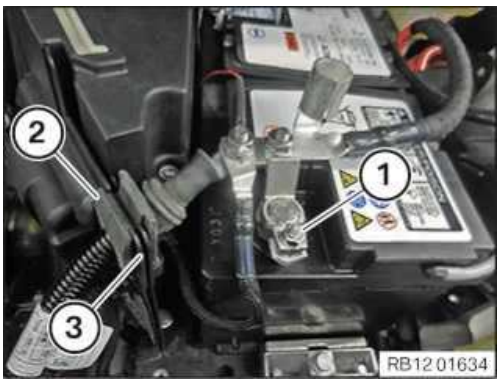


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

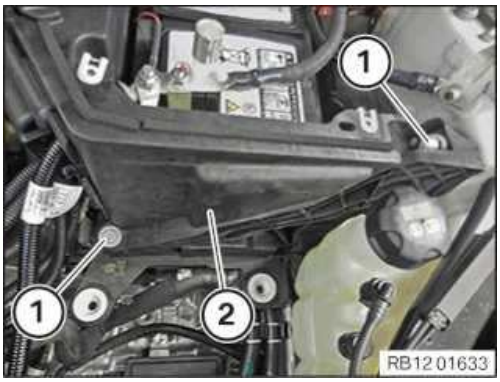
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

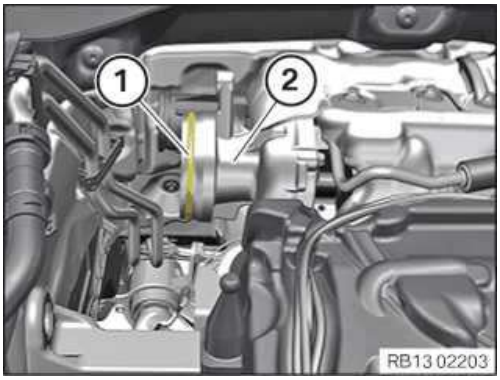


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

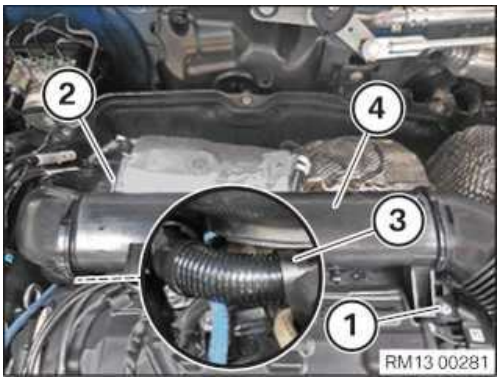
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

137 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

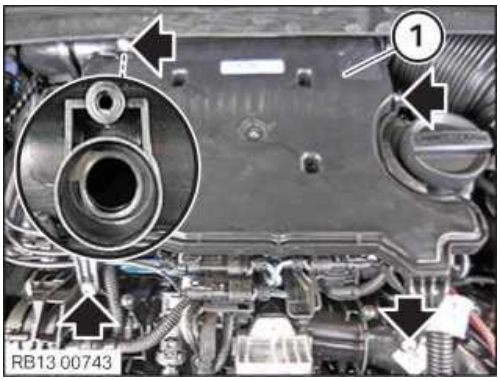
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

138 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

139 – Install acoustic cover

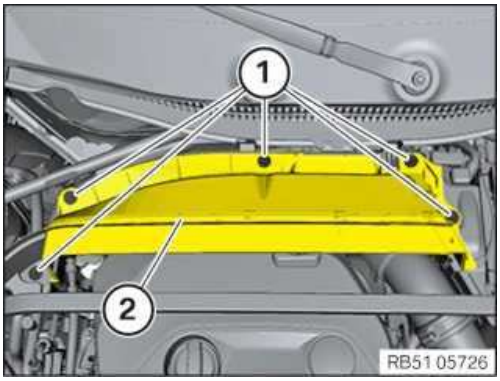
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

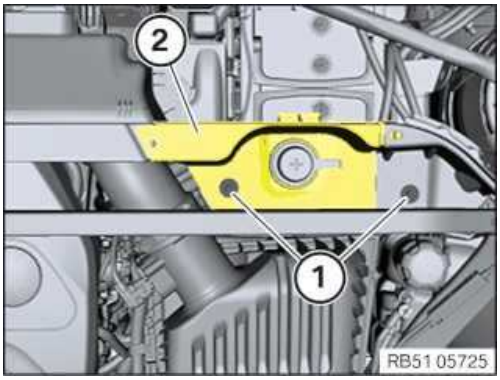
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

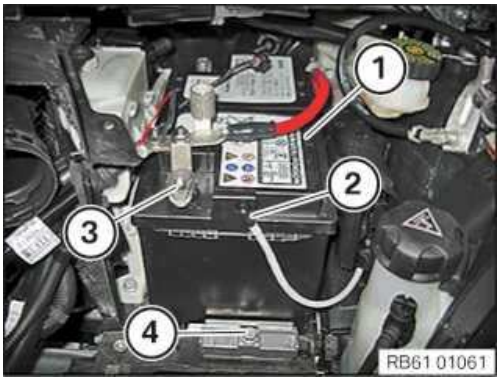


140 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

141 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

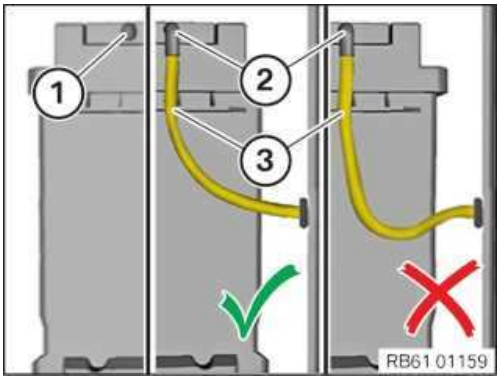
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▶ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

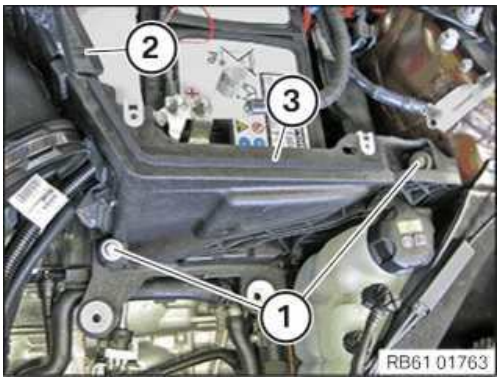
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

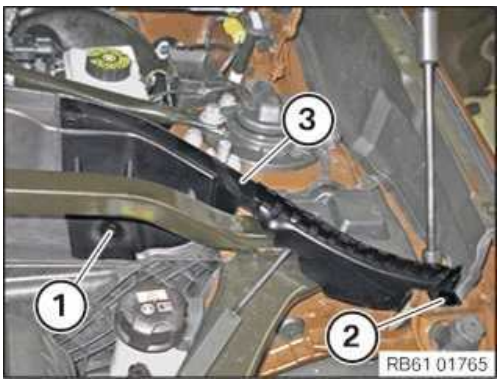
- Tighten down screw (2).

Battery cover



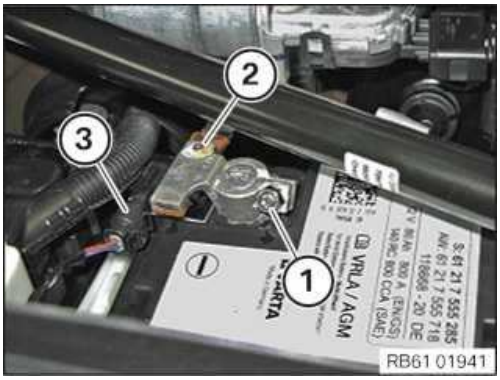
M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



Battery cover

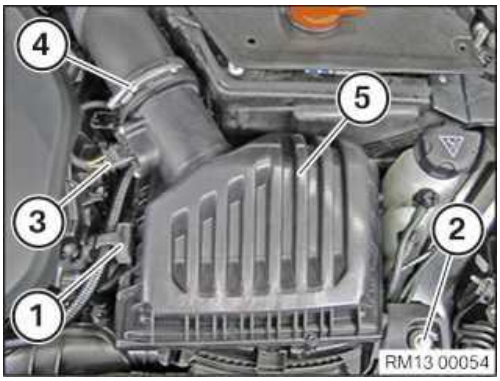
M8		2,8 Nm

142 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

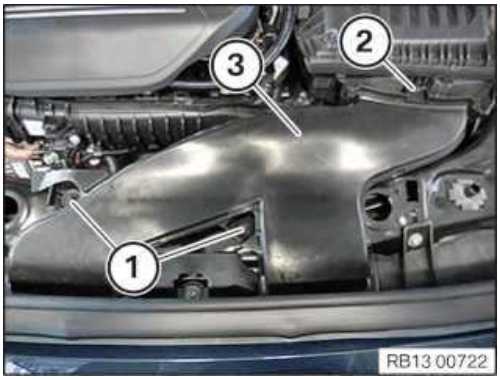
143 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

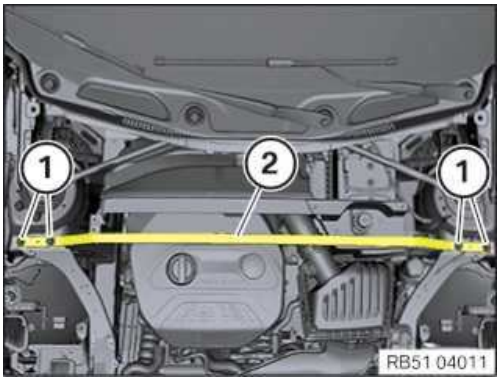
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

144 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



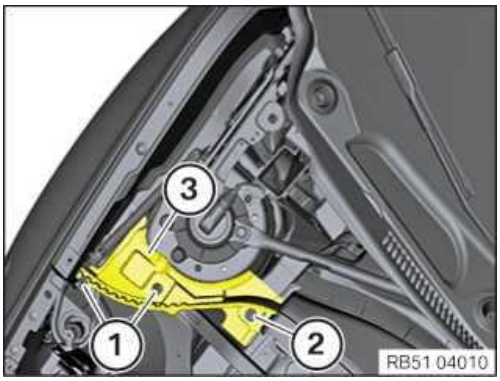
Intake neck to cross connection

M6		Tightening torque	8 Nm

145 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

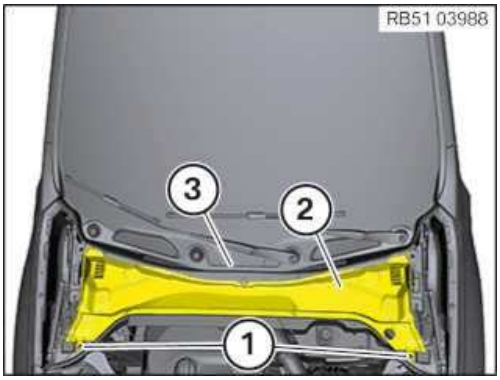
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



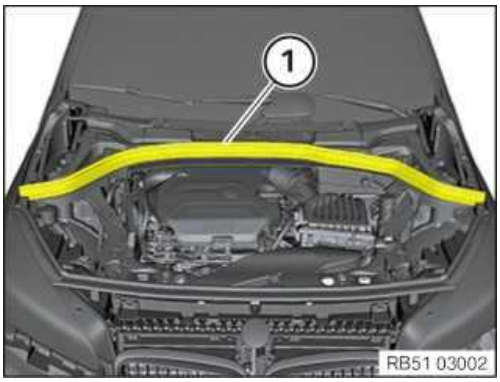
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

146 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

147 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

148 – Fill and bleed the coolant circuit

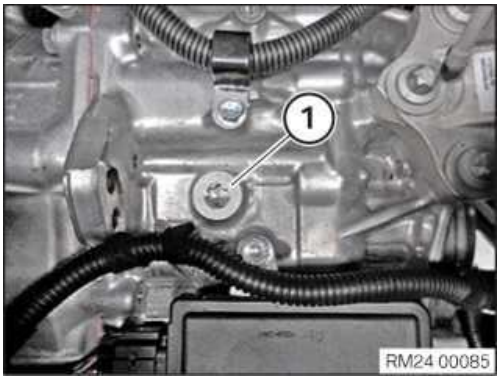
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

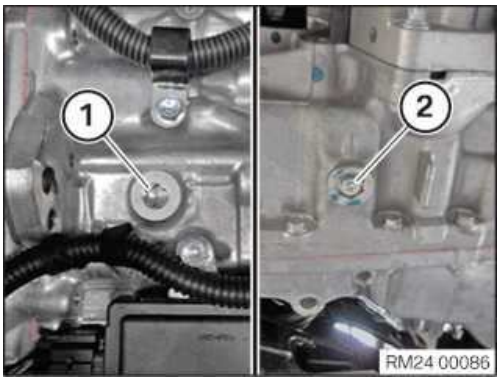
149 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.

cardiagn.com

- Renew sealing rings.

  Parts: Sealing ring

- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring

- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

150 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

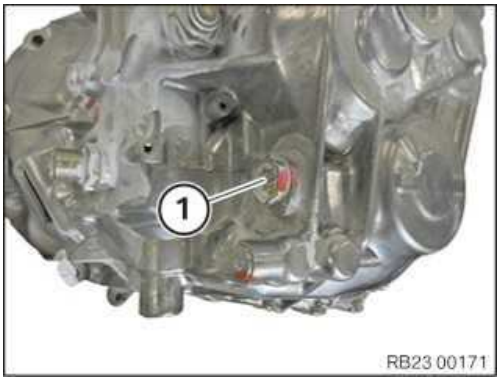
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION



Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

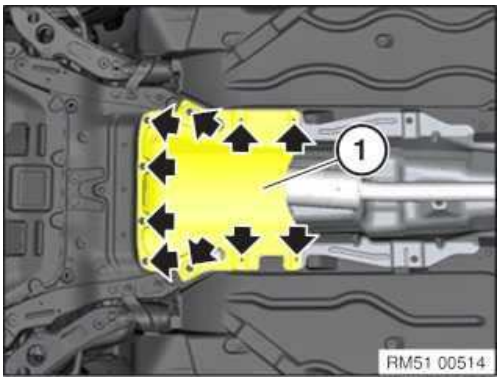
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection — Used in step 19

M6x20 screw		Tightening torque	11,8 Nm

Bracing strut to upper connection — Used in step 19

M8x20 screw		Tightening torque	28 Nm

Rear end of front axle support to body — Used in step 73 122

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 73 122

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 73 122 151

Screw		Tightening torque	3 Nm

Special tool to cylinder head — Used in step 73

M8		Tightening torque	21,5 Nm

Cylinder head to crankcase — Used in step 79

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover — Used in step 79

M8x40		Tightening torque	19 Nm

Right engine mount to side member — Used in step 79

M12		Tightening torque	100 Nm

cardiagn.com

Right engine mount to cylinder head

Used in step 79

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Heat shield to cylinder head

Used in step 79

M8X16		Tightening torque	10 Nm

Glow elements to cylinder head

Used in step 80

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 83

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head

Used in step 85

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 85

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 85 96

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 86

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 87

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 89

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 90

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 90

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

High pressure lines between injector and rail

Used in step 92

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 94 100

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger

Used in step 94 95

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 94

M8x16		Tightening torque	22 Nm

cardiagn.com

Exhaust turbocharger to exhaust manifold

Used in step 95

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket

Used in step 95

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 95

M8x16		Tightening torque	22 Nm

Heat shield for exhaust turbocharger

Used in step 96

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 96

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Charge air duct to oil sump

Used in step 97

M6		Tightening torque	8 Nm

Ride height sensor holder to front axle support

Used in step 97

M6		Tightening torque	8 Nm

Adapter, front axle support to front axle support

Used in step 97

		Tightening torque	100 Nm

Cross connection to front axle support

Used in step 97

M6		Tightening torque	12 Nm

Washer fluid reservoir to body

Used in step 98

M6x20		Tightening torque	8 Nm

Intake plenum to cylinder head

Used in step 99

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 100

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 100

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 100

M8x20		Tightening torque	19 Nm

Wiring harness to cylinder head cover

Used in step 101 136

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 101

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 101

TS6x20		Tightening torque	5 Nm

cardiagn.com

Cover to electronics box — Used in step 101 136

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 101 136

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 101 136

M8		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 102

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 102

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 102

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 102

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system — Used in step 102

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 102

Torx bolt BM6x16		Tightening torque	8 Nm

Differential pressure sensor to holder — Used in step 102 103

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 102 103

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor — Used in step 104

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 105 106

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 107

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 108

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter — Used in step 109

Sensor		Tightening torque	50 Nm

Monitoring sensor — Used in step 110

Sensor		Tightening torque	50 Nm

cardiagn.com

Transfer box to transmission — Used in step 111

M10		Tightening torque	56 Nm

Heat shield to transfer box — Used in step 111

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG) — Used in step 111

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box — Used in step 112

M8x35		Tightening torque	19 Nm

Starter motor to transmission — Used in step 113

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 113

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box — Used in step 116

		Tightening torque	80 Nm

Flexible disc to rear axle final drive — Used in step 116

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body — Used in step 116

M8		Tightening torque	19 Nm

Heat shield to body — Used in step 117 118

Bolts/nut		Tightening torque	3 Nm

Bracket to body — Used in step 117

M8		Tightening torque	21 Nm

Exhaust system to body — Used in step 119

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 119

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 119

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system — Used in step 119

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter — Used in step 119

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting — Used in step 120

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

cardiagn.com

Front connection carrier to body — Used in step 121

M10x18		Tightening torque	56 Nm

Rear connection carrier to body — Used in step 121

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing — Used in step 122

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 122

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body — Used in step 123

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support — Used in step 123

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 123

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 123

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 124

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 126

M10	Renew nut.	Tightening torque	56 Nm

Underbody panelling, side — Used in step 128

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side — Used in step 128

Plastic nut		Tightening torque	2,6 Nm

Wheel arch cover to body — Used in step 129

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body — Used in step 129

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 129

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub — Used in step 130

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

Brake disc to front wheel hub

Used in step 130

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 130

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 132

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 132

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 133

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 134

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 135

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 136

M8X16		Tightening torque	15 Nm

Clean air pipe to cylinder head cover

Used in step 137

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 137 143

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 138

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead

Used in step 140

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 140

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray

Used in step 141

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 141 142

NutM6			5 Nm

cardiagn.com

Trailing link — Used in step 141

M8		Tightening torque	19 Nm

Battery cover — Used in step 141

M8			2,8 Nm

Intake silencer housing to lock bridge — Used in step 143

M6X30		Tightening torque	8 Nm

Intake neck to cross connection — Used in step 144

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome — Used in step 145

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body — Used in step 145

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing — Used in step 149

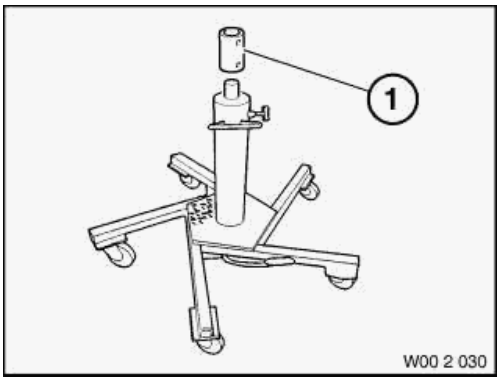
M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug — Used in step 149

M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug — Used in step 150

Hexagon socket		Tightening torque	43 Nm



Underbody protection front — Used in step 152

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Overview of Special Tools

cardagn.com

0 490 133 (00 2 030) Device

Common

Used in step 32 73 79 122

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

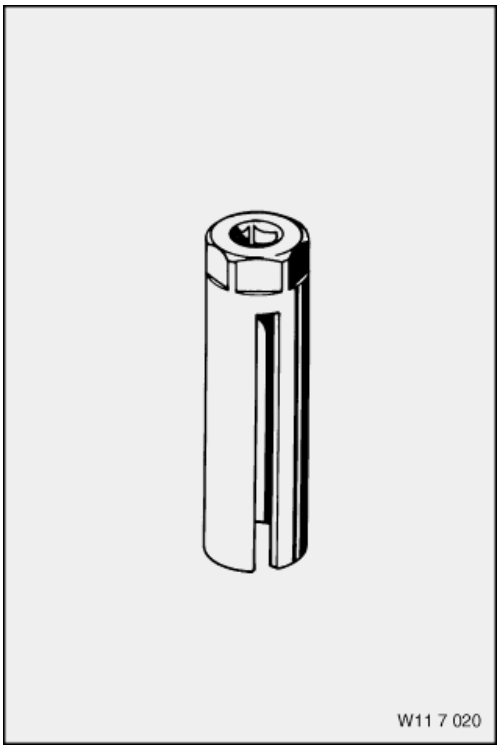
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

Common

Used in step 38 116

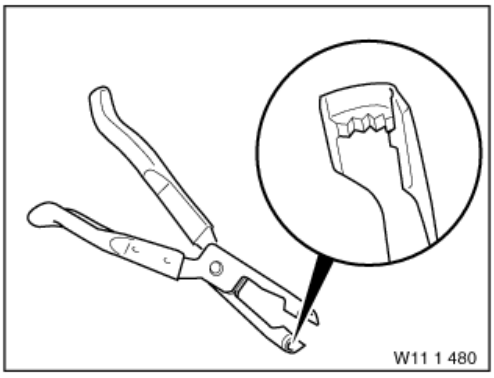


Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

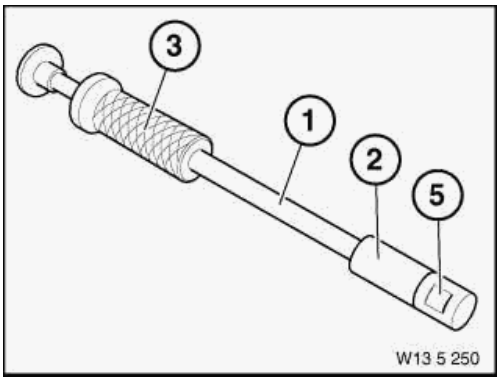


0 491 074 (11 7 020) Socket wrench insert

Common Used in step 44 45 110

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 490 796 (11 1 480) Pliers



Common Used in step 53 72

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

0 493 321 (13 5 250) Puller

Common Used in step 63

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

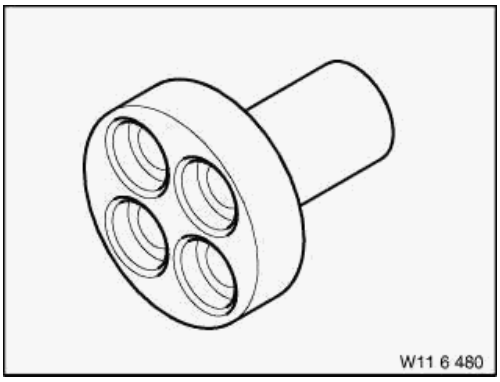
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common Used in step 63

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

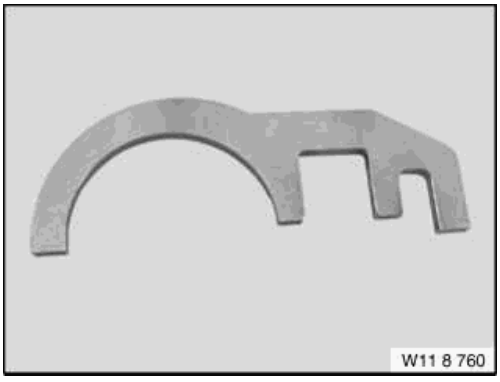


Common Used in step 63

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 380 (11 6 480) Connector



Common	Used in step 65 88
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 65 88
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 65 88
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common Used in step 70 71 74

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

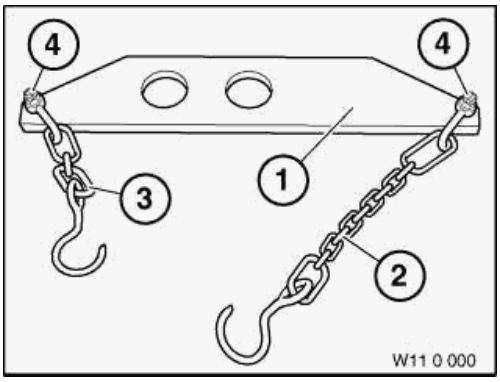
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 357 071 Panel

Common Used in step 73 79

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

2 459 012 Holder



Common Used in step 73 79

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

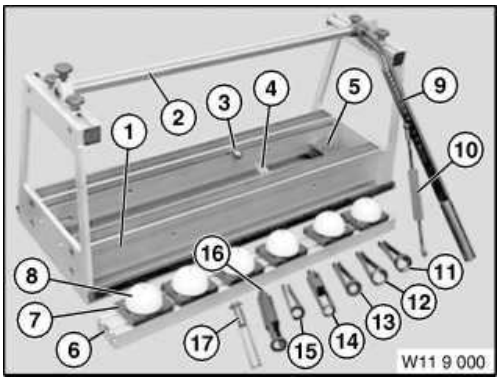
cardiagn.com

0 490 561 (11 0 000) Lifting gear

Common

Used in step 73 79

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)



Consisting of

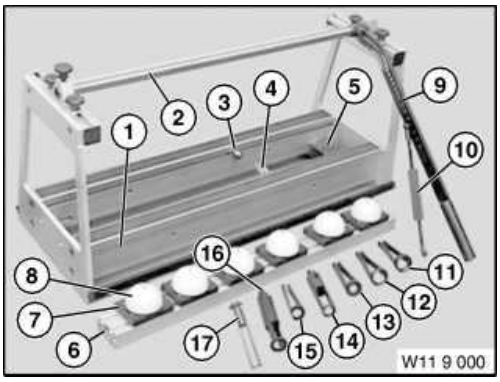
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 73 74 75

cardiagn.com

Common



Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40

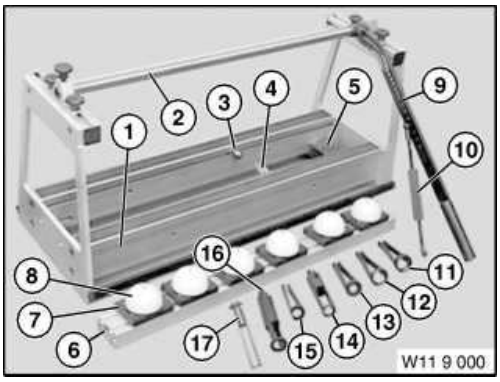
0 495 187 (00 2 300) Assembly stand

Used in step 74 75

cardiagn.com

Common



Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.

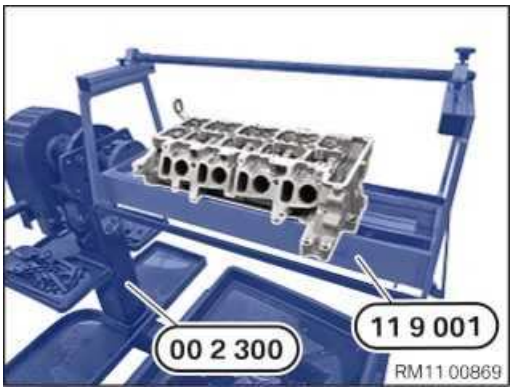
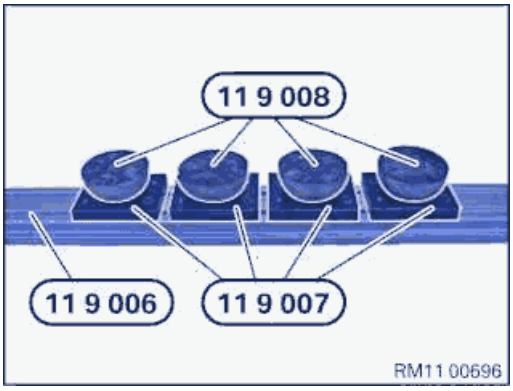
11 34 055 Replacing all valve springs (B47)



Special tools required:

- 11 9 001
- 00 2 300
- 11 9 006
- 11 9 007
- 11 9 008
- 11 9 005
- 11 9 000
- 11 9 009
- 11 8 840
- 11 9 010
- 11 4 480

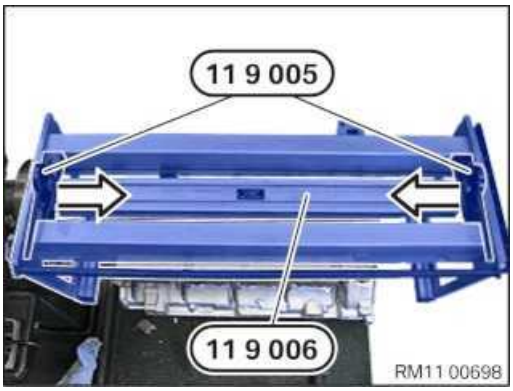
Necessary preliminary tasks:



- Remove all hydraulic valve clearance compensating elements
- Remove all glow elements
- Remove cylinder head.
- Remove coolant temperature sensor
- Removing the exhaust gas manifold

Removal:

Mount and bolt cylinder head on special tools 11 9 001 and 00 2 300 .

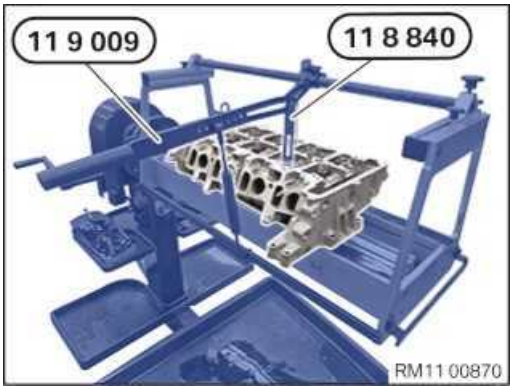


cardiagn.com

Prepare special tools 11 9 006 , 11 9 007 and 11 9 008 as pictured.

Note:
Special tools 11 9 008 must be positioned accordingly in the next operation.

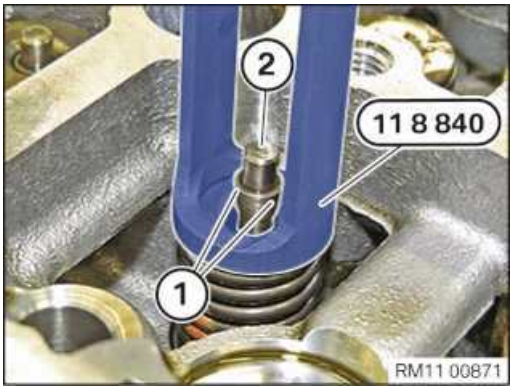
Turn special tool 11 9 006 over and insert as pictured.



Lock special tool 11 9 005 in direction of arrow.

Lock special tool 11 9 005 in direction of arrow.

Rotate cylinder head, using special tool 11 9 000 , 180° into installation position.

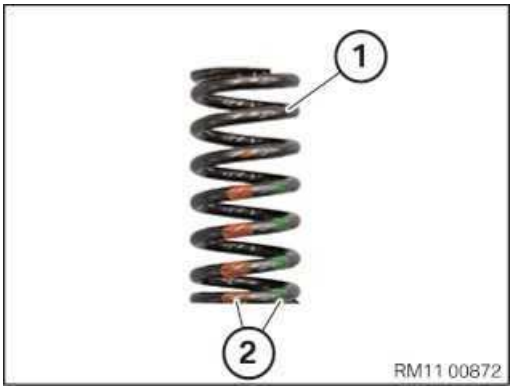


cardiagn.com

Align special tool 11 9 009 in direction of valve axis. Select corresponding groove with special tool 11 8 840 .

Press down valve spring on upper spring cup with special tools 11 9 009 and 11 8 840 .

Valve spring can be held in pressed-down position with special tool 11 9 010 .



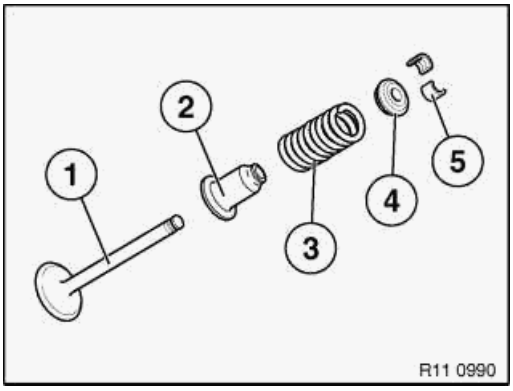
Keep valve spring pressed down with special tool 11 8 840 .

Use a magnet to remove valve keys (1) from valve (2).

Relieve load on valve spring. Remove valve spring and spring cup.

Set down valve spring, spring cup and valve keys in special tool 11 4 480 in an orderly manner.

Installation:

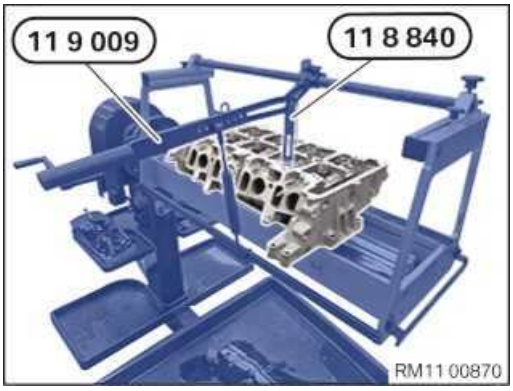


Colour code on valve spring (1).

Possible colour combinations (2):

- Yellow - orange
- Green - orange
- Blue - orange

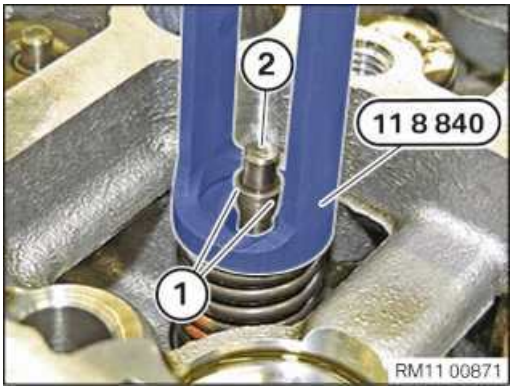
The installation position of the valve spring can be freely selected.



If necessary, replace valve stem seals.

Installation sequence:

1. Valve
2. Valve stem seal
3. Valve spring
4. Top spring cup
5. Valve keys



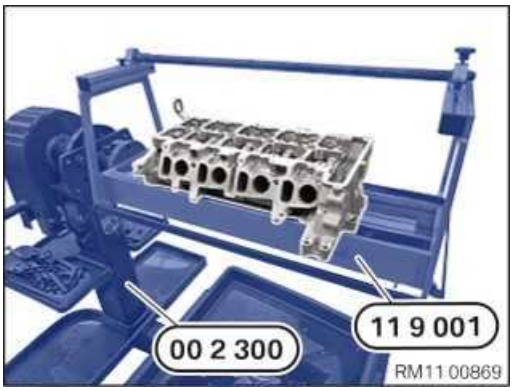
cardiagn.com

Align special tool 11 9 009 in direction of valve axis. Select corresponding groove with special tool 11 8 840 .

Press down valve spring on upper spring cup with special tools 11 9 009 and 11 8 840 .

Valve spring can be held in pressed-down position with special tool 11 9 010 .

Keep valve spring pressed down with special tool 11 8 840 .



Use a magnet to install valve keys (1) on valve (2).

Relieve load on valve spring.

Unlock special tool 11 9 005 .

Remove special tool 11 9 006 .

Unscrew and remove cylinder head from special tools 11 9 001 and 00 2 300 .

cardiagn.com

Required follow-up work:

- Mounting the exhaust manifold
- Install coolant temperature sensor
- Installing the cylinder head
- Install all glow elements
- Install all hydraulic valve clearance compensating elements
- Assemble engine

cardiagn.com

11 34 190 Replacing all valve stem seals

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

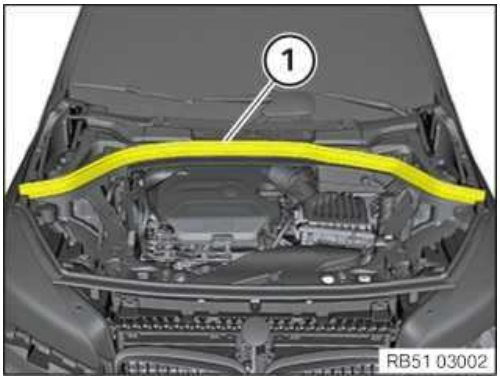
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

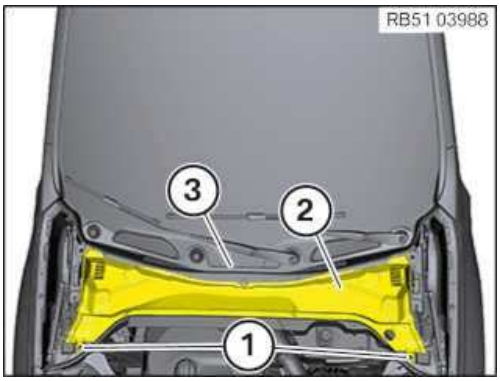


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

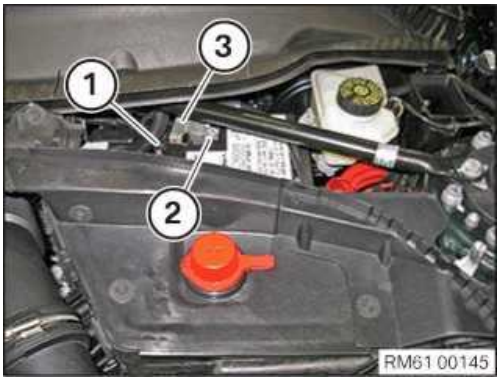
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

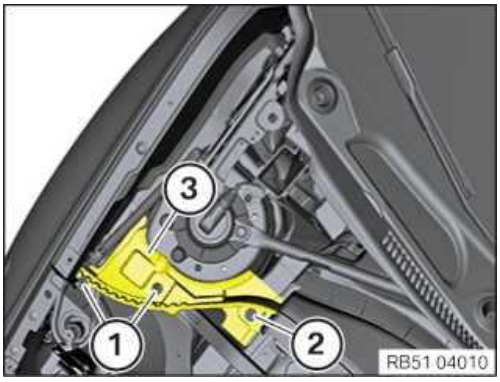


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

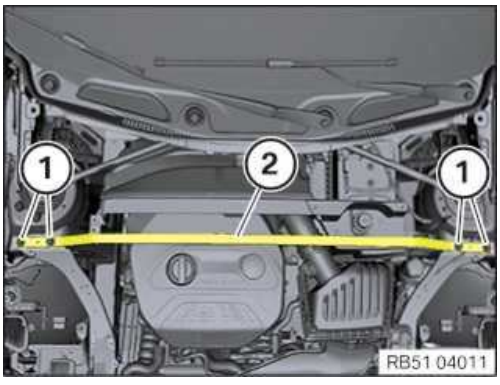
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

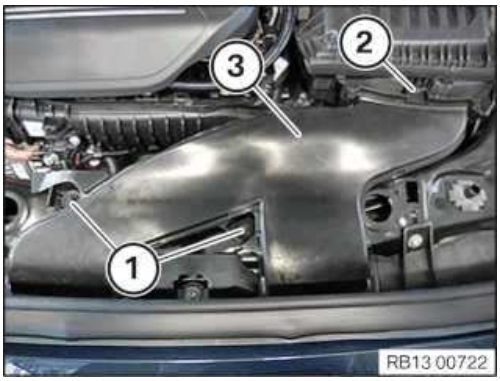
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

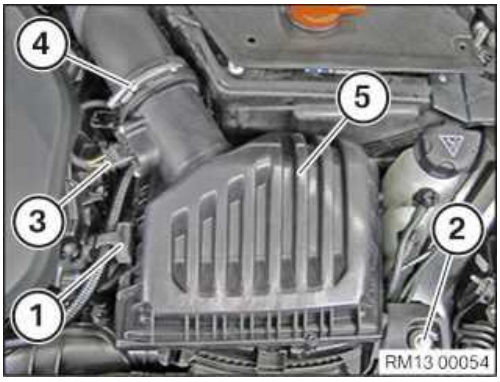
NOTICE

Description is for right component only. The procedure on the left side is identical.



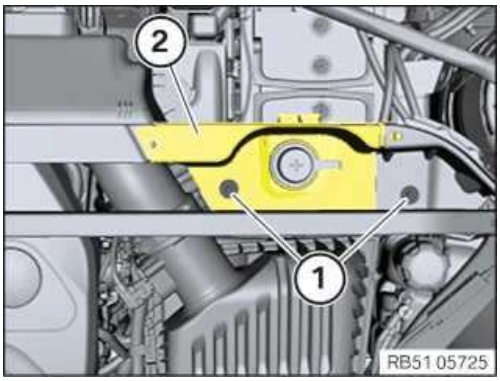
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



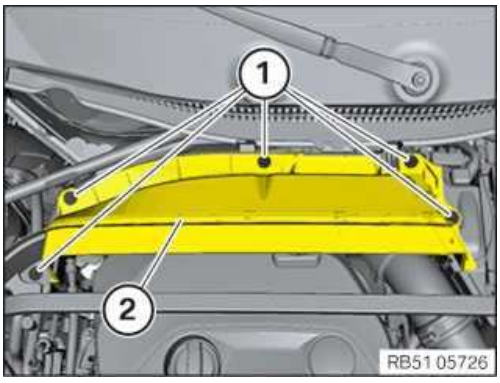
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



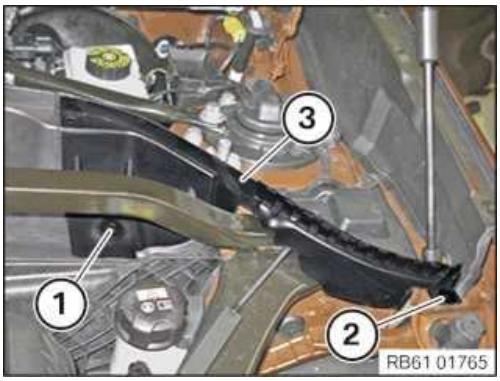
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

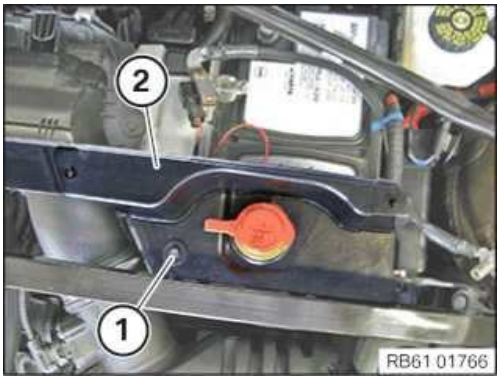
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



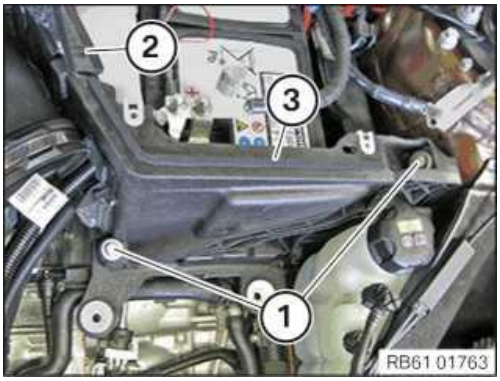
WARNING

Working on 12 V vehicle electrical system.

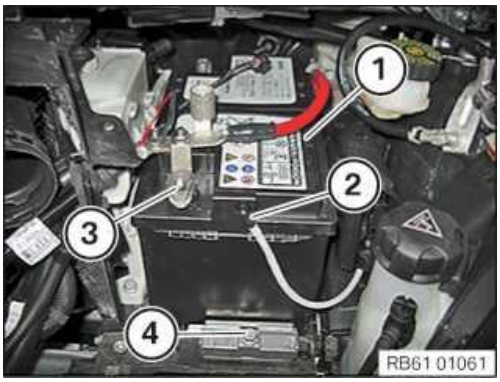


Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



cardiagn.com



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

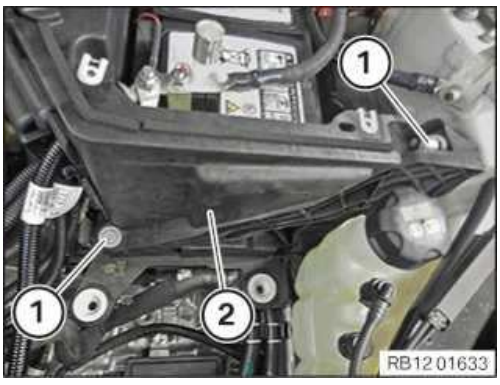
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

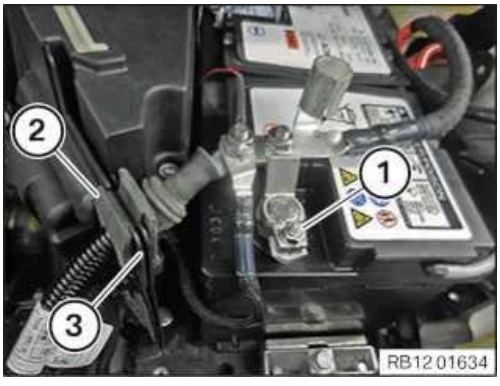
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



TECHNICAL INFORMATION

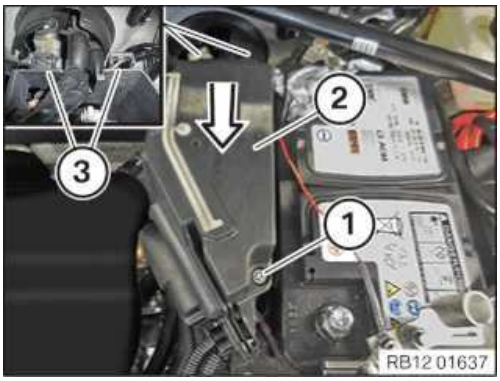
Follow instructions for removing and installing control units.



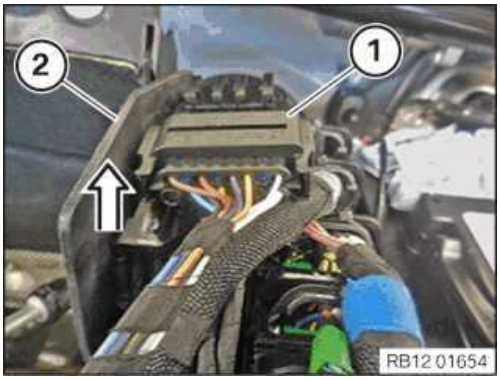
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

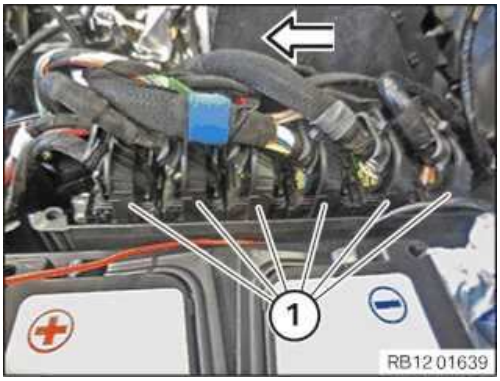
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



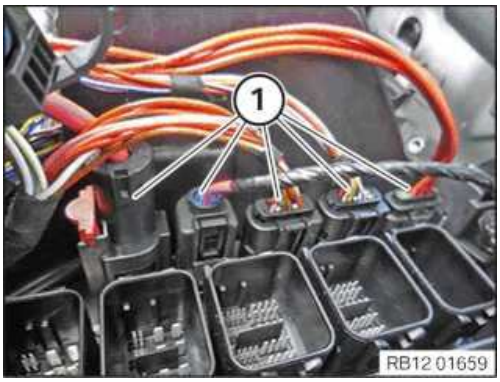
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



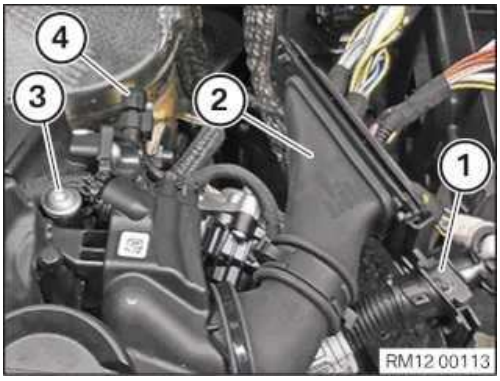
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

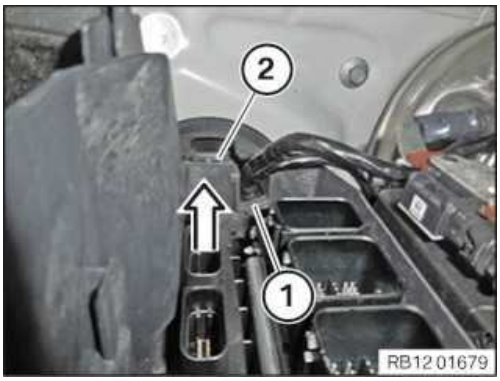


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

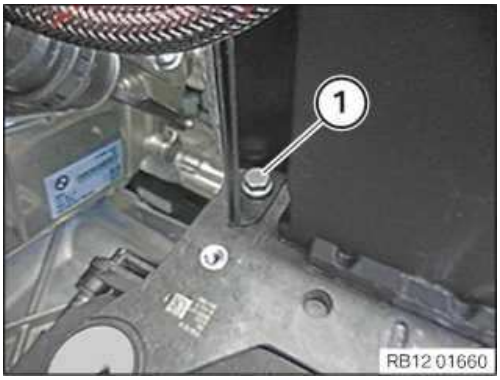


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

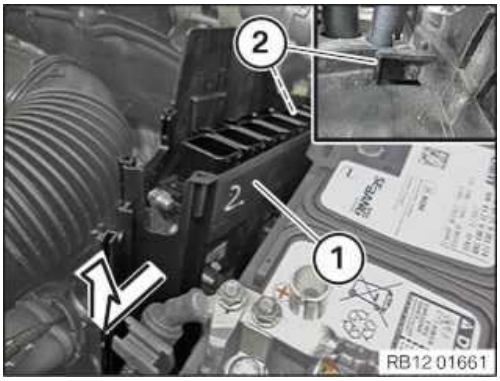
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

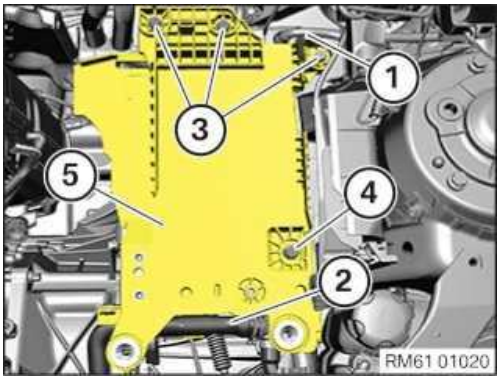


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



cardiagn.com

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

10 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

11 – Removing the acoustic cover

WARNING

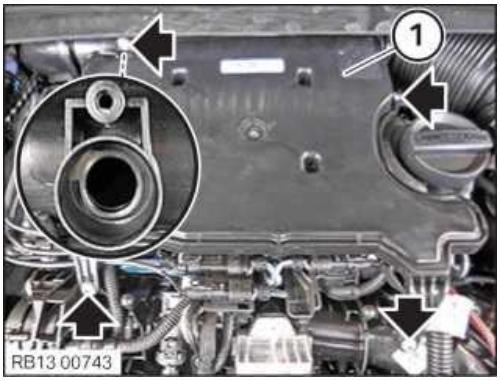
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE



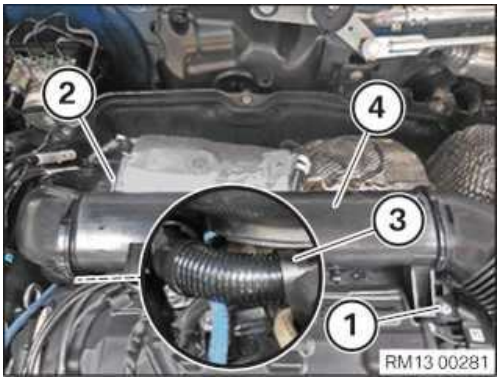
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

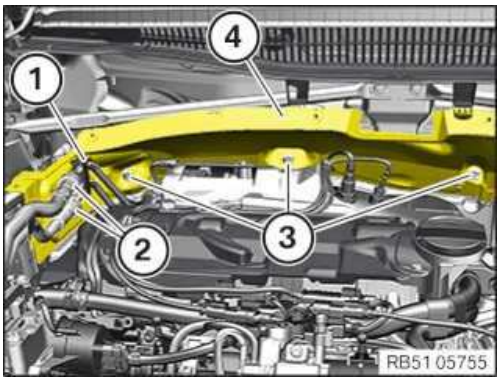
- Unclip the acoustic cover from the marked areas towards the top.

12 – Remove resonator



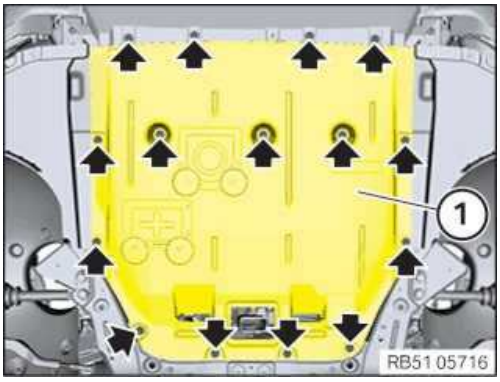
- Remove screws (arrows).
- Guide out and remove the resonator (1).

13 – Removing clean air pipe



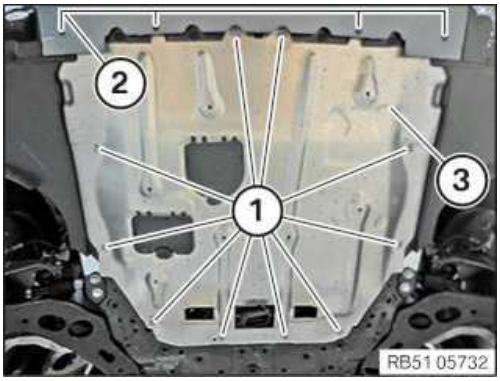
- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



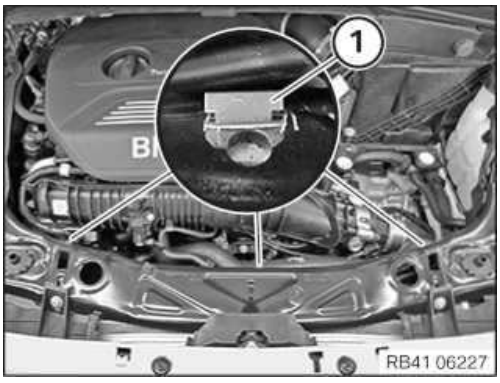
14 – Remove the rear bulkhead upper part

cardiagn.com

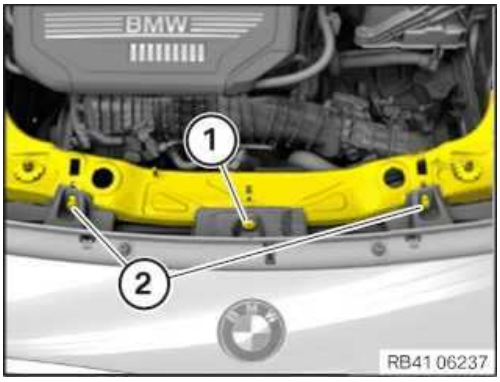


- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

15 – Removing the front underbody protection

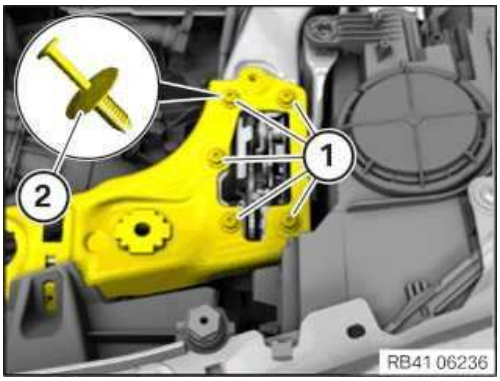


- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

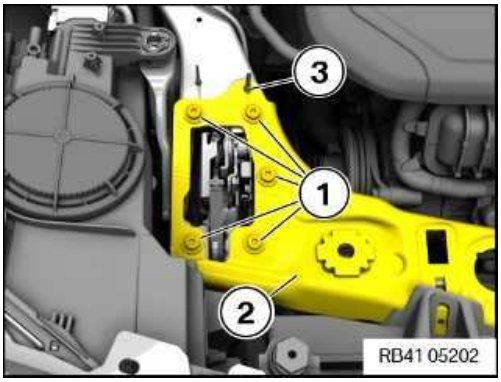


- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

16 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.



- Loosen screw (1).
- Loosen screws (2).

cardiagn.com

- Loosen screws (1).
- Lever out expanding rivet (2).

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

17 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

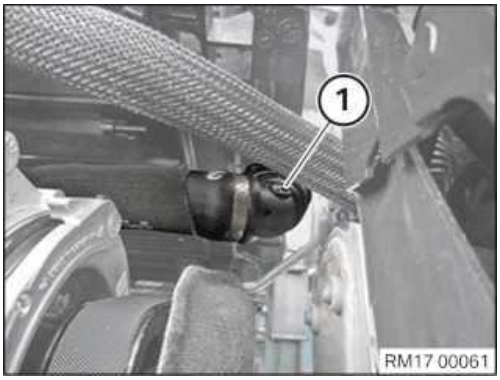
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

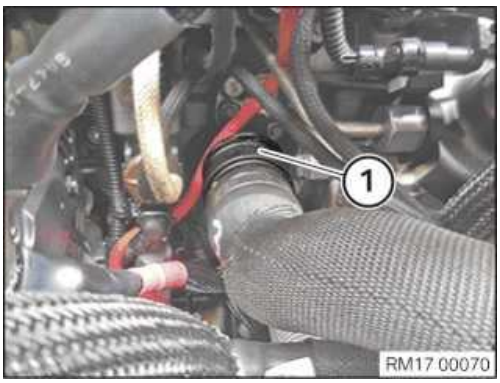
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

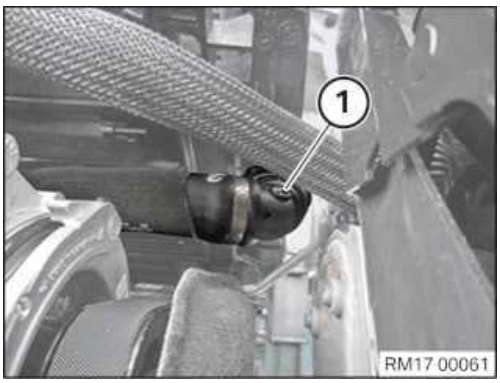
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

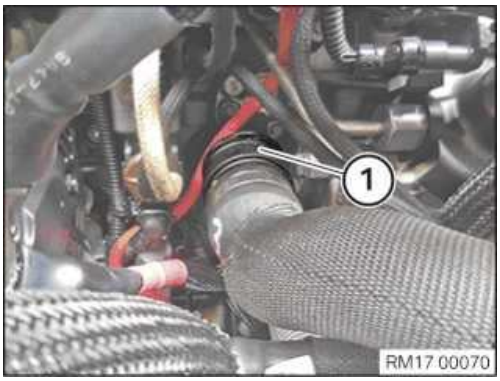
- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

18 – Connect the coolant line

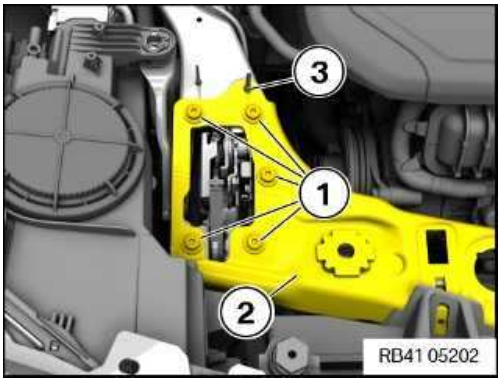


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

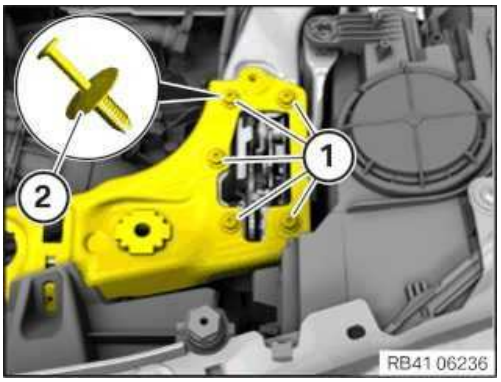
- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com



- Connect the coolant line (1) to the connecting branch and lock audibly.

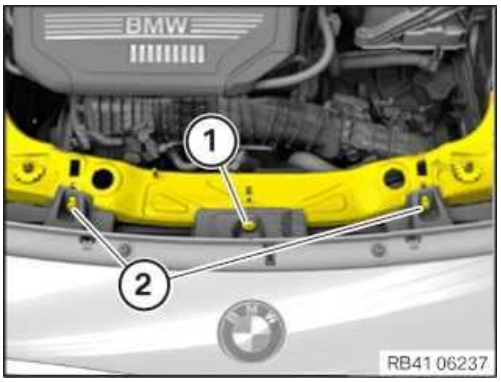
19 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

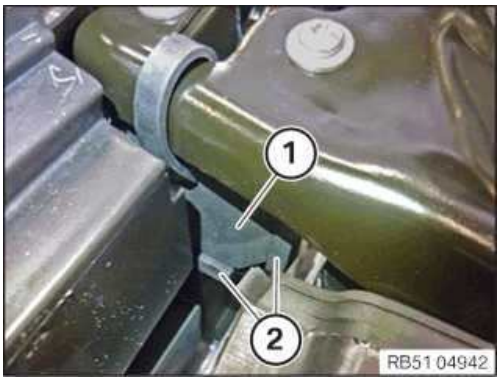
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

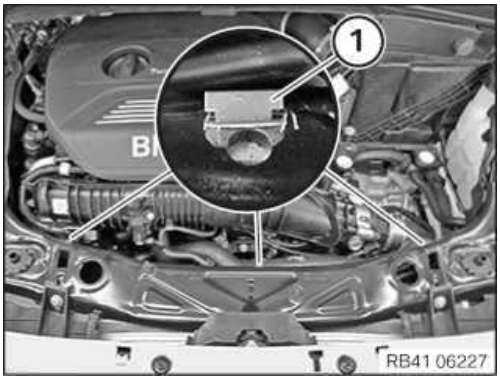
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com

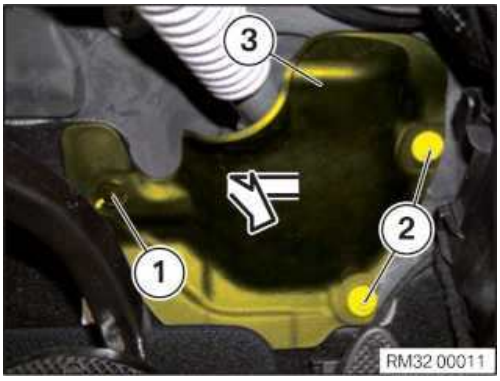
- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

20 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

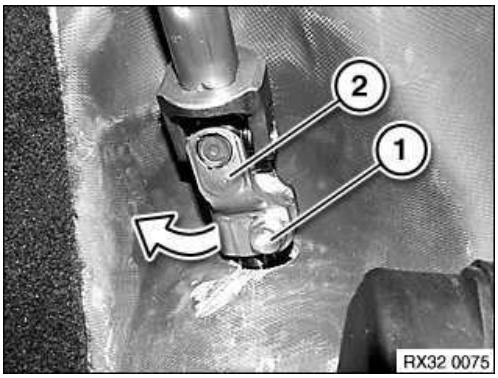


Risk of burning!

- Perform all work only on components that have cooled down.

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

21 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

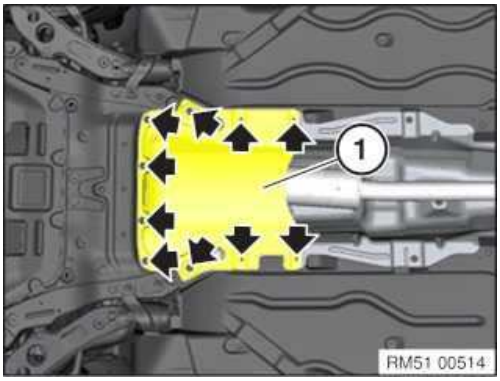
22 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

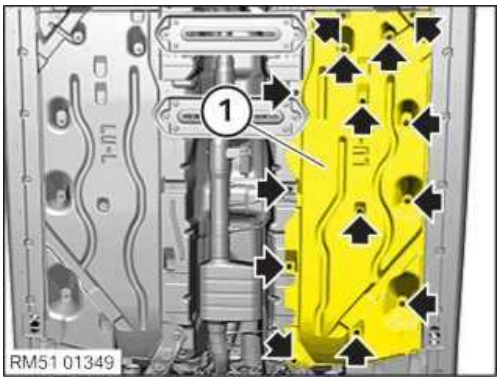
23 – Removing both front wheels



▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.



24 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

25 – Removing right underbody panelling

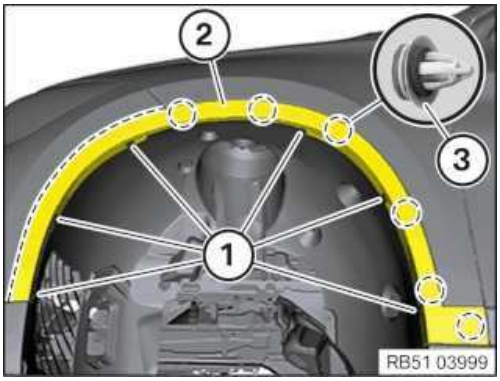
cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

26 – Removing front left and right wheel arch cover

NOTICE

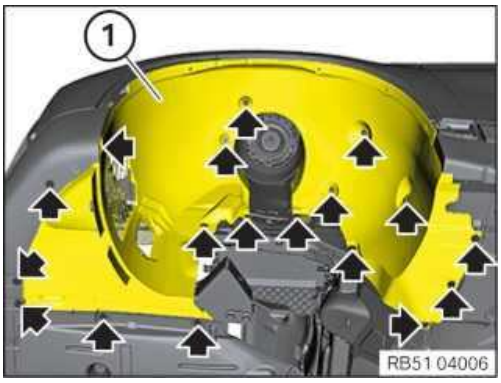
Perform the operations on the left and right side.



▶ **Remove the front wheel arch trim**

NOTICE

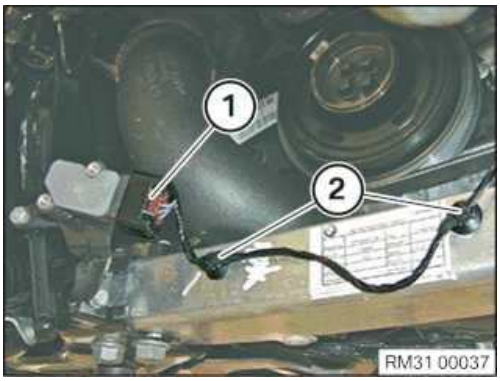
To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

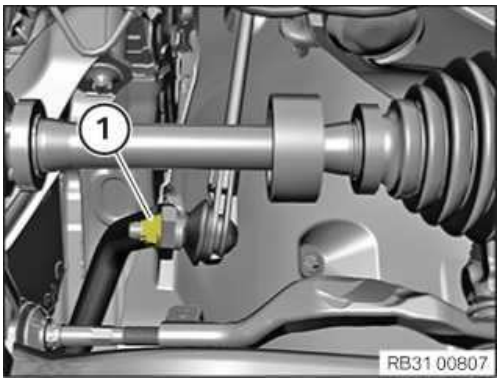


▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

27 – With right installation: Detaching ride height sensor cable

cardiagn.com



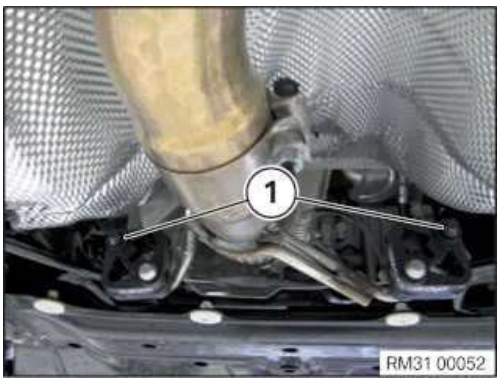
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

28 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

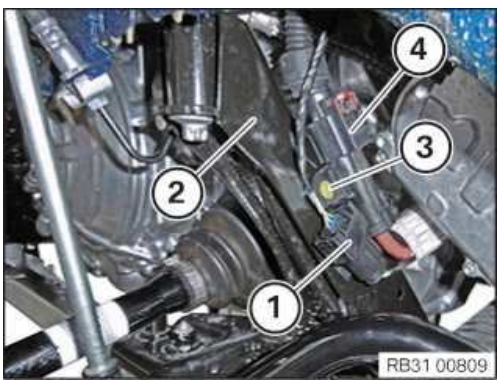
▶ Detach the anti-roll bar from the anti-roll bar link



- Unfasten nut (1).

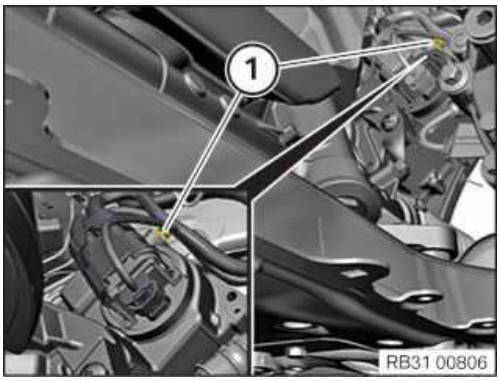
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .



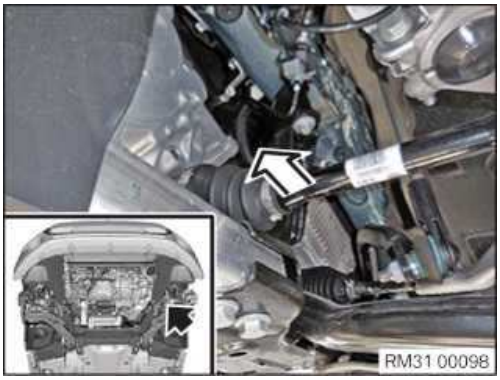
29 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.



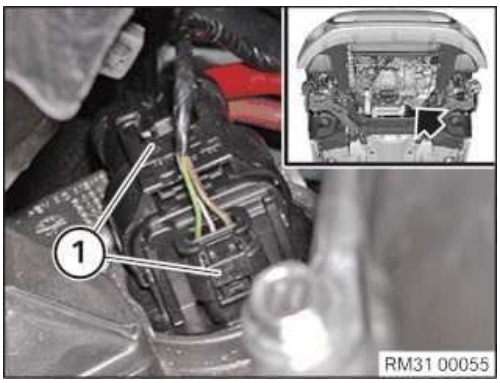
30 – Disconnecting plug connections from steering gear

▶ If installed: Detach connectors from the front axle carrier

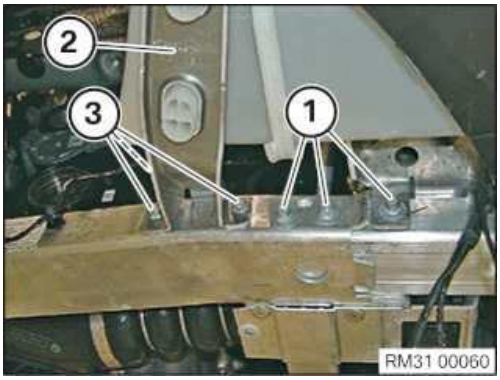


- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

cardiagn.com



- Disconnect wiring harness (1) from steering gear.

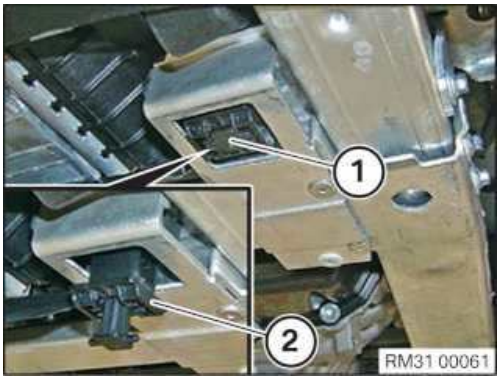


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

31 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

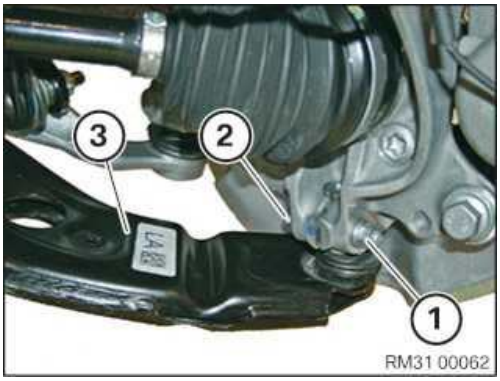
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

cardiagn.com

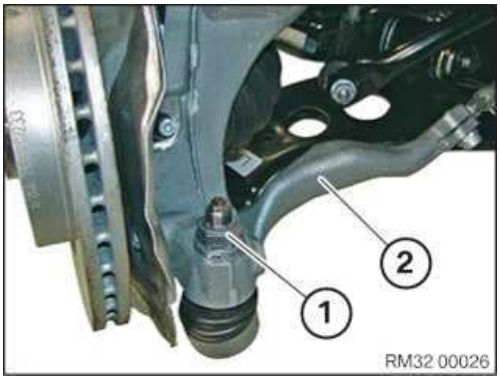
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

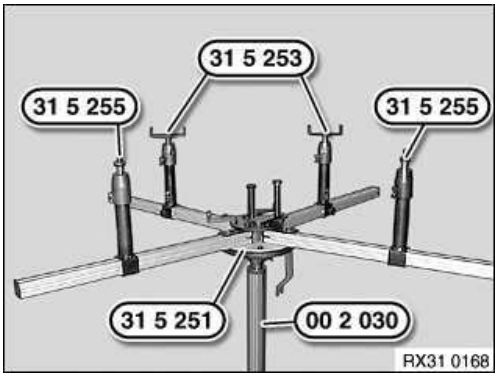
- Loosen screws (1).



32 – Detaching and removing front axle completely

NOTICE

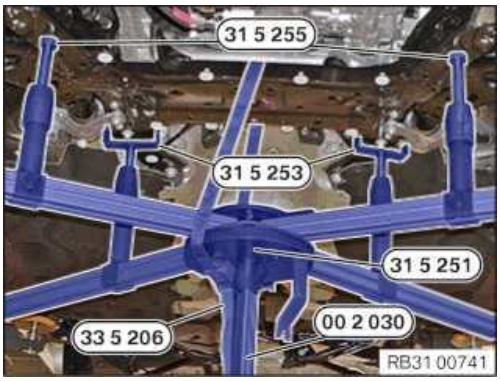
Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

NOTICE

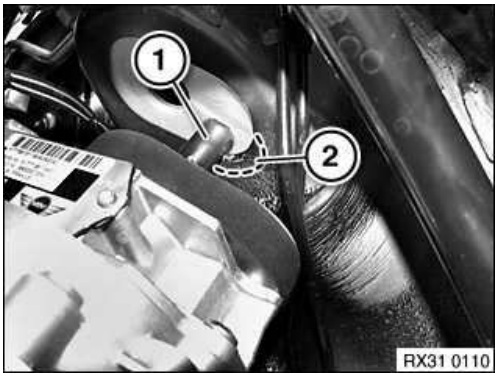
Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

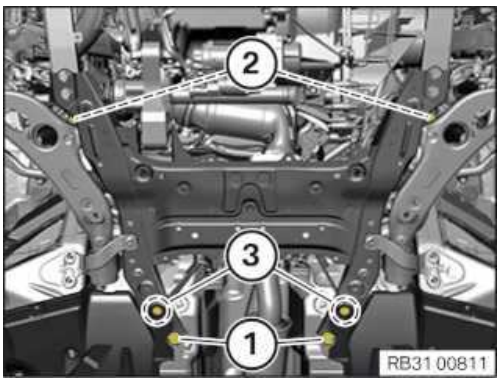


cardiagn.com

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .

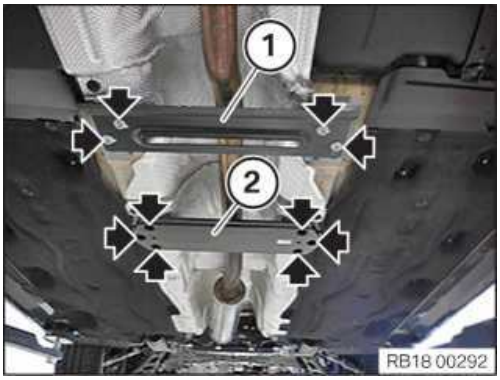


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



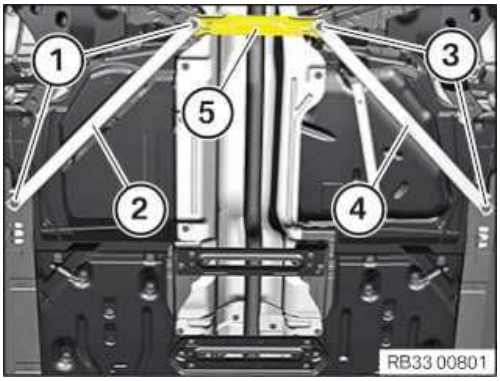
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

33 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

34 – Remove the cross strut with the torsion strut

cardiagn.com

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

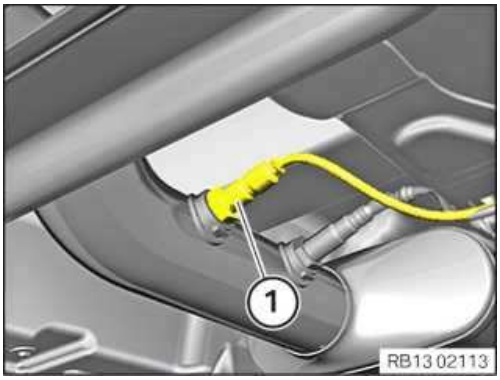
- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

35 – Remove exhaust system

WARNING

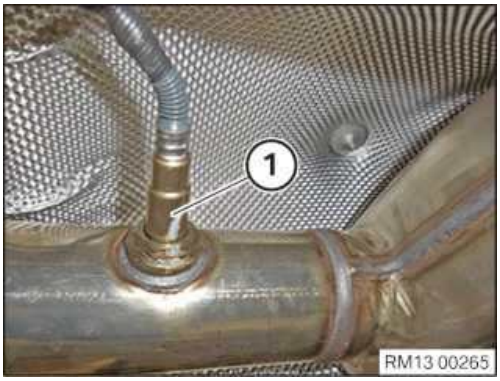
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

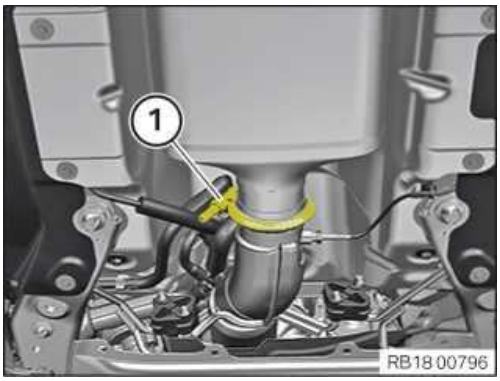
CAUTION



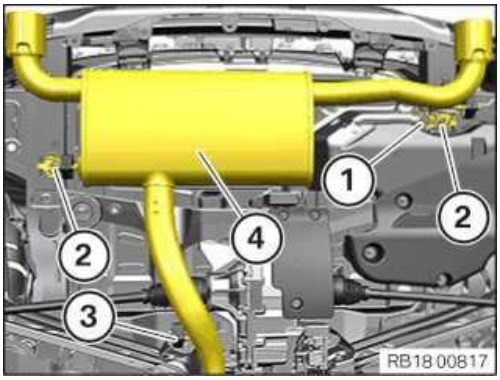
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

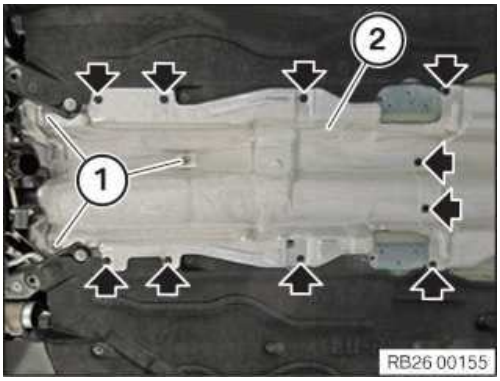


- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

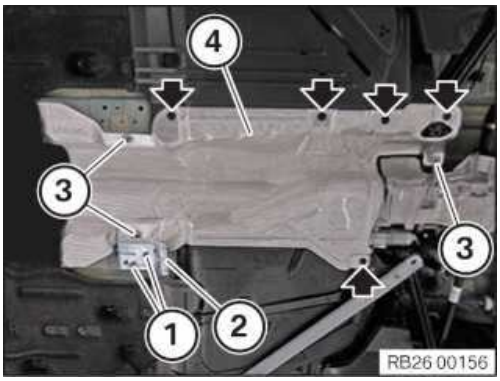


- Release the diesel particulate sensor (1), guide it out and set it aside.

cardiagn.com



- Loosen V-band clamp (1).



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

36 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

37 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

38 – Remove propeller shaft

cardiagn.com

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

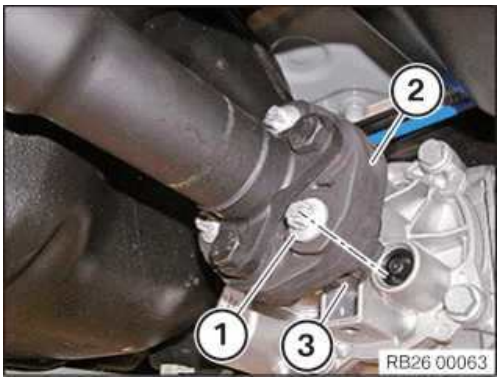
RISK OF DAMAGE

Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

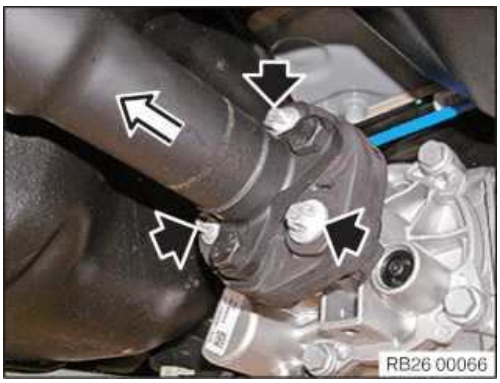
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



- Always support the propeller shaft (1) with a conventional jack.

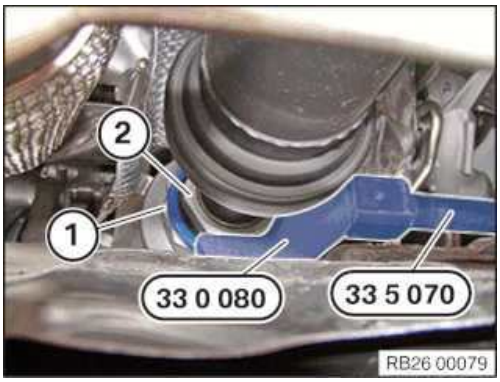
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

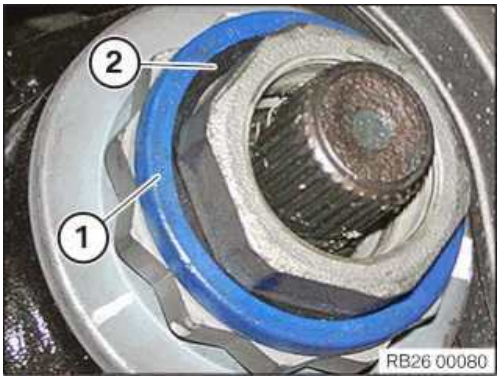
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

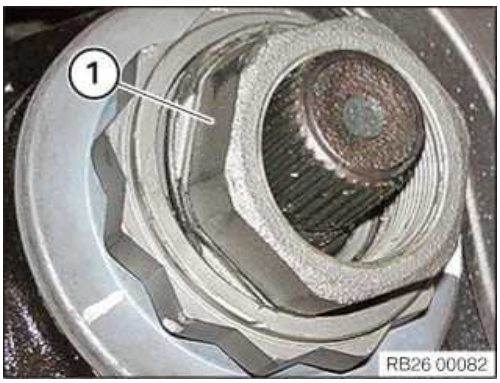
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

39 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

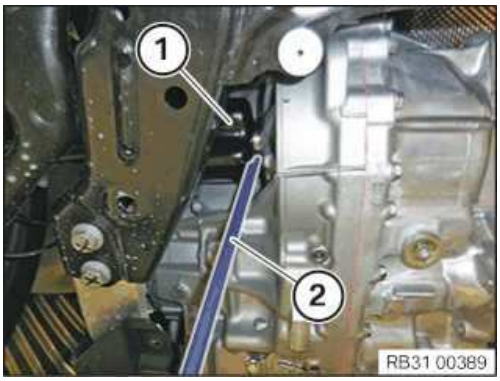
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

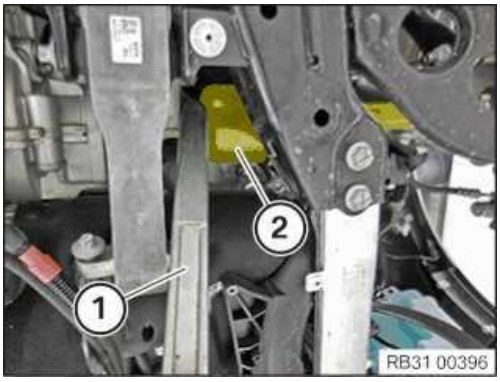
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



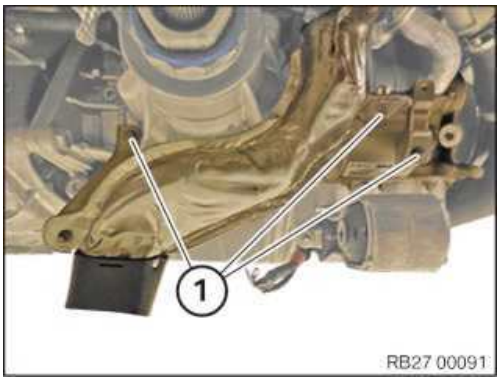
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



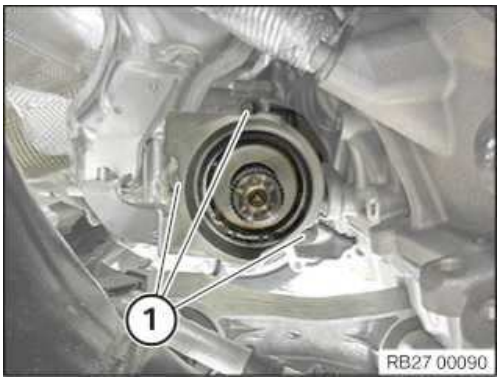
40 – Partially removing the left output shaft

cardiagn.com

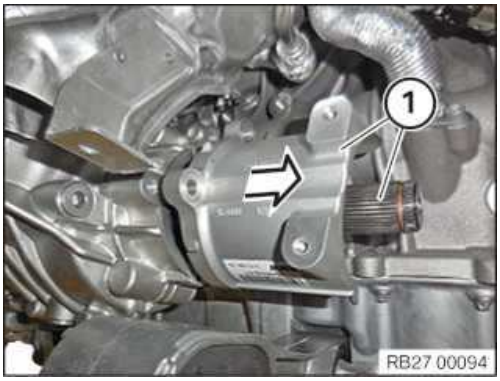


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

41 – Partially removing right output shaft

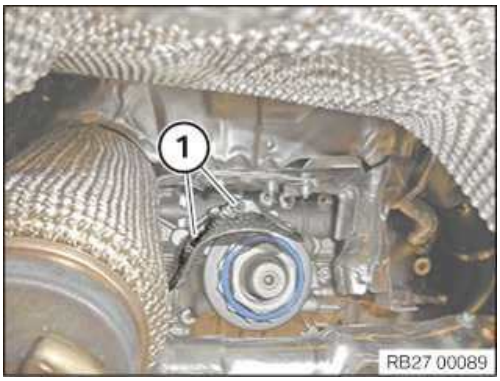


- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

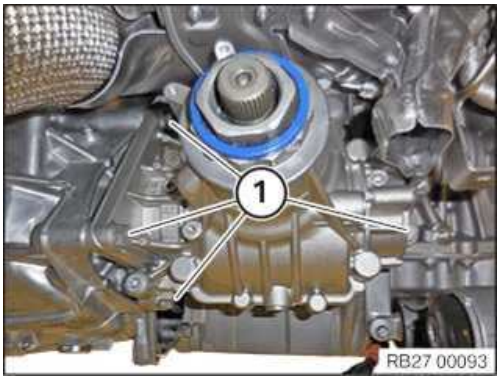


42 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

43 – Remove transfer box (VTG)

cardiagn.com

- Loosen screws (1).
- Remove heat shield.

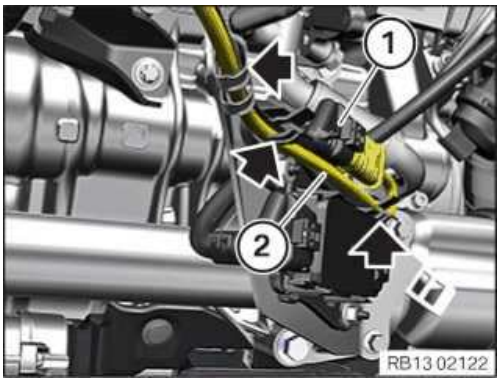
- Loosen screws (1).
- Remove the transfer box (VTG).

44 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

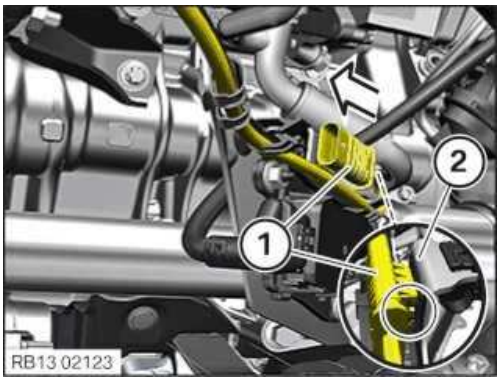
Risk of burning!



- Perform all work only on components that have cooled down.

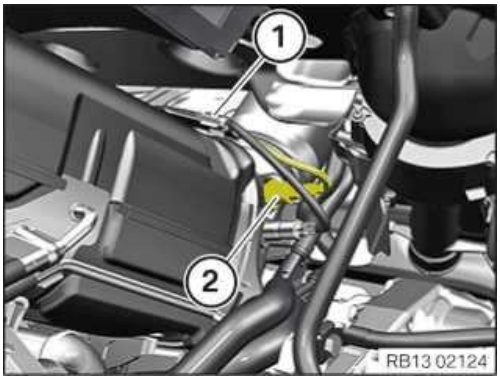
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

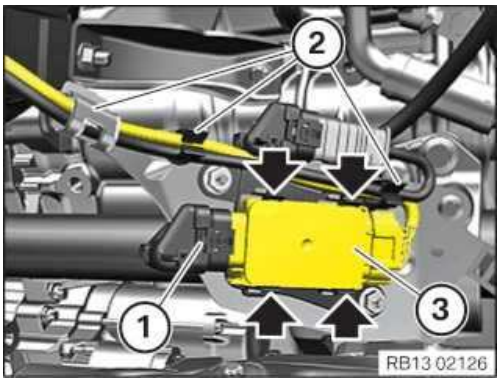
- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

45 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

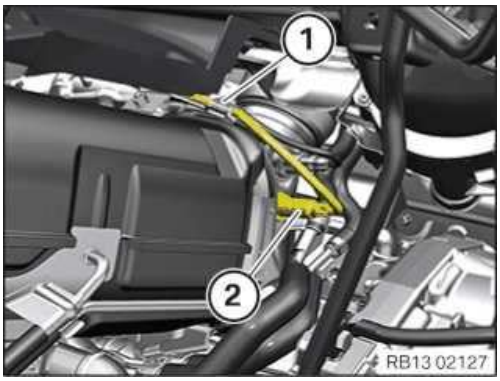
Risk of burning!



- Perform all work only on components that have cooled down.

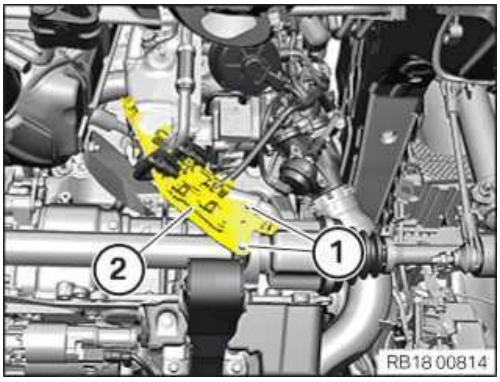
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

cardiagn.com

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

46 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

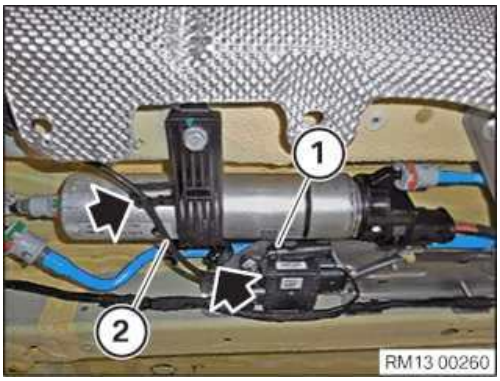
47 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

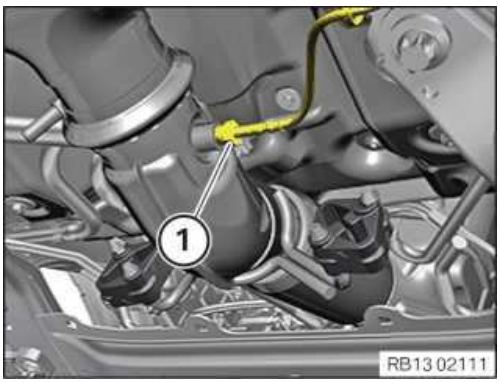


RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

48 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

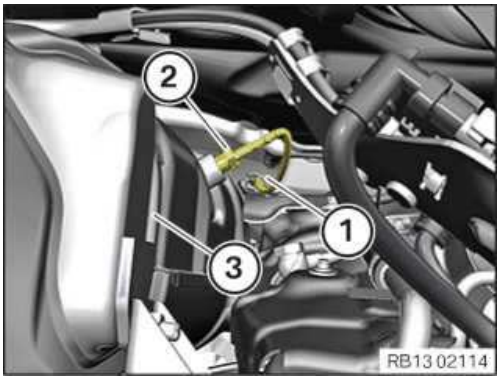
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

49 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

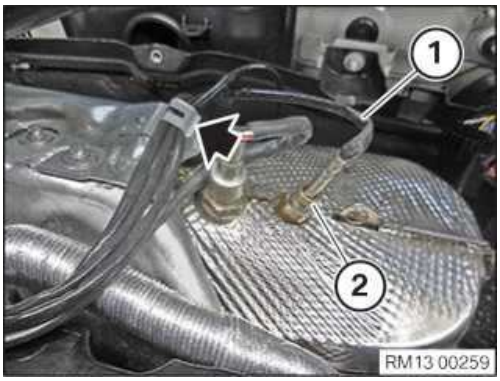
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

cardiagn.com

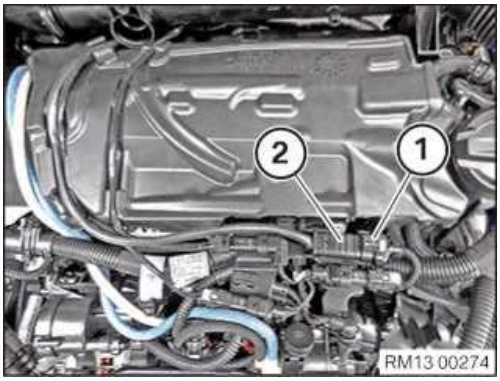
- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

50 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

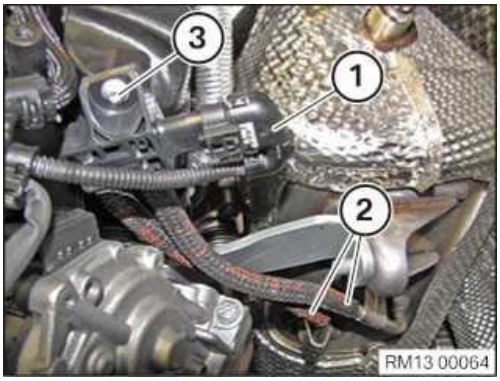
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

cardiagn.com



51 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

52 – Removing the diesel particulate filter

WARNING

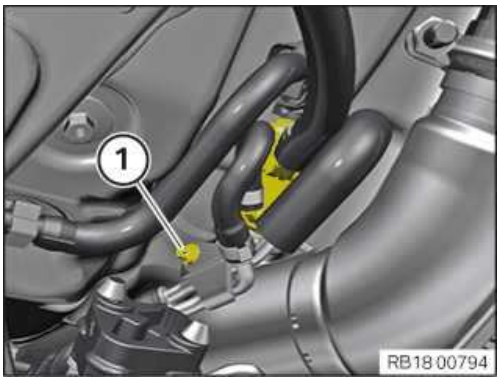
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

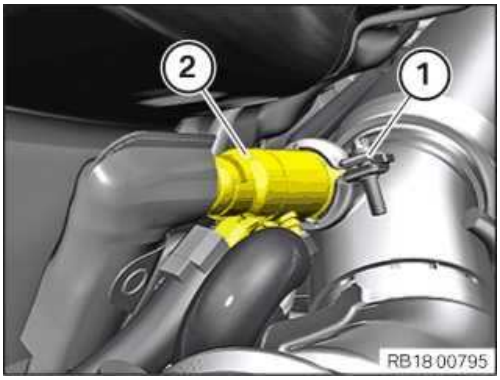
CAUTION

Heavy component.

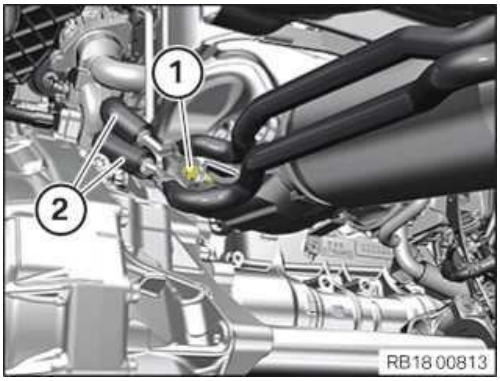


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



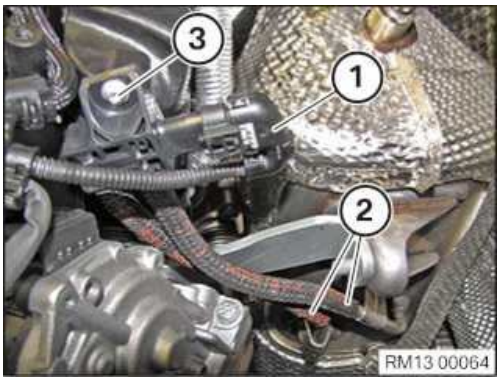
cardiagn.com

- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▶ **Remove differential pressure sensor**

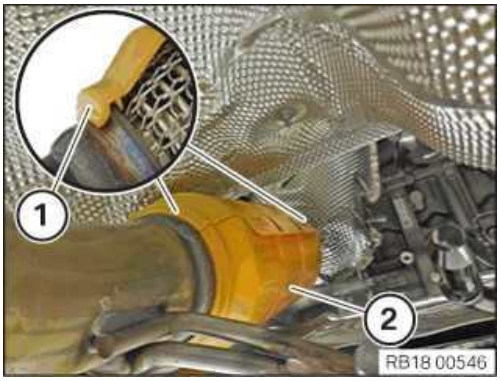


RISK OF DAMAGE

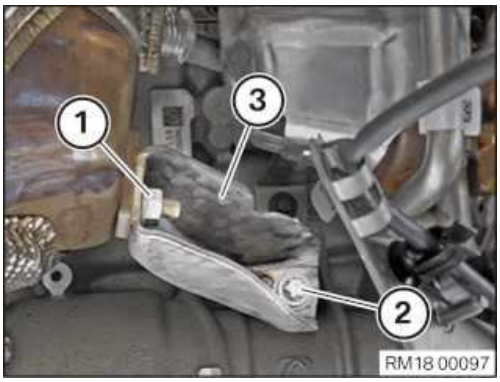
Electrostatic discharge.

Damage to or destruction of electrical components.

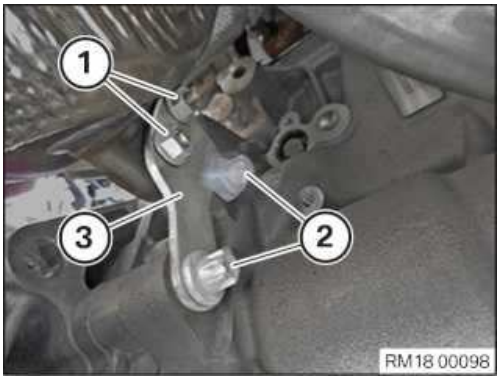
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

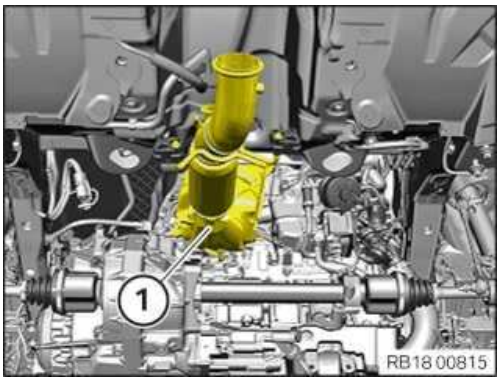


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



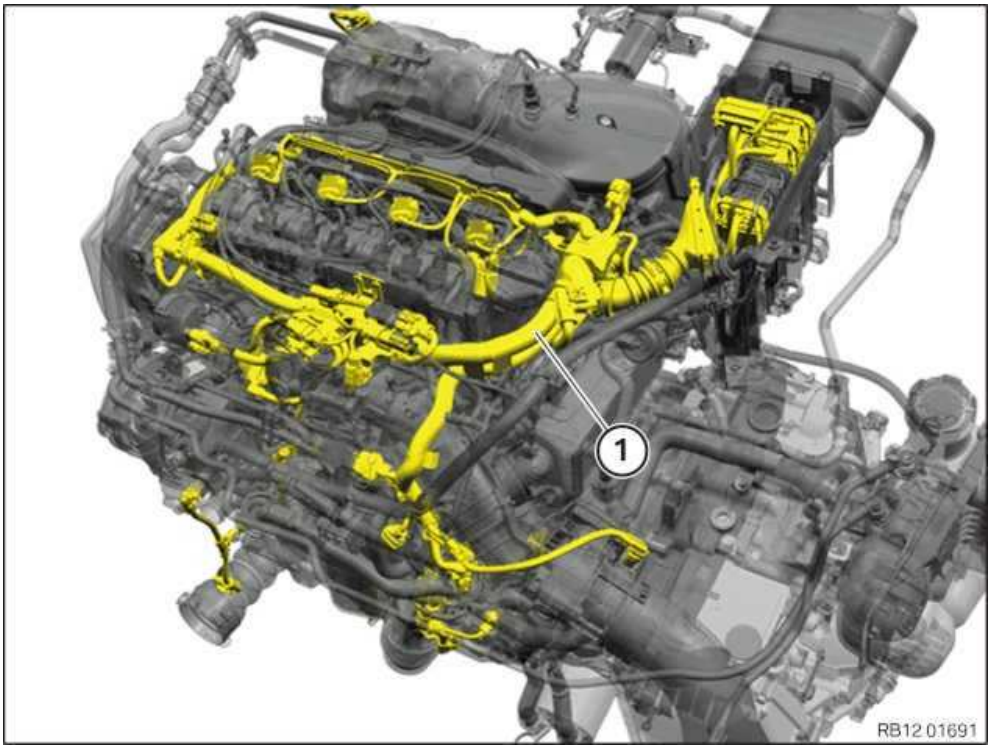
- Loosen nuts (1).

- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.

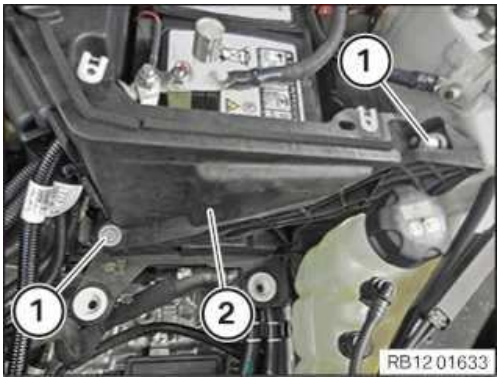


- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

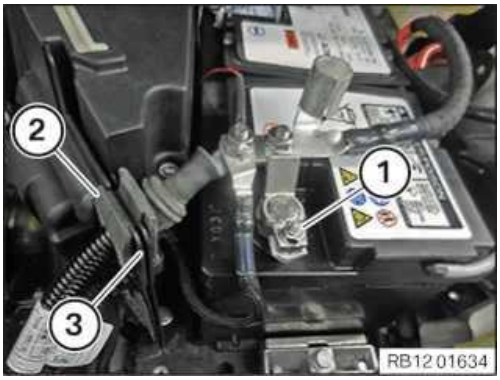


cardiagn.com



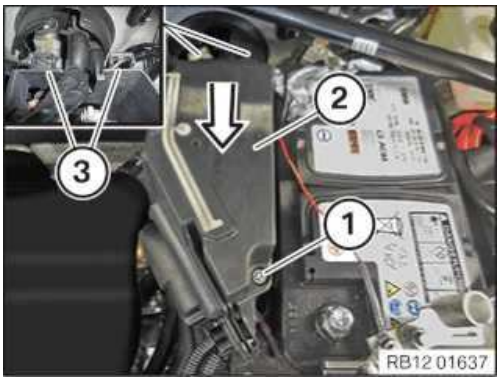
- Feed out diesel particulate filter (1) toward the bottom and remove.

53 – Releasing the wiring harness section for the intake plenum

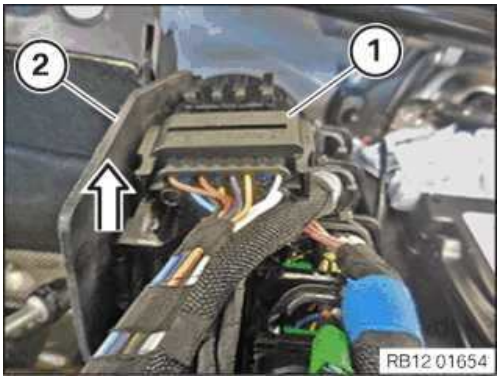


Overview: Wiring harness section for the engine

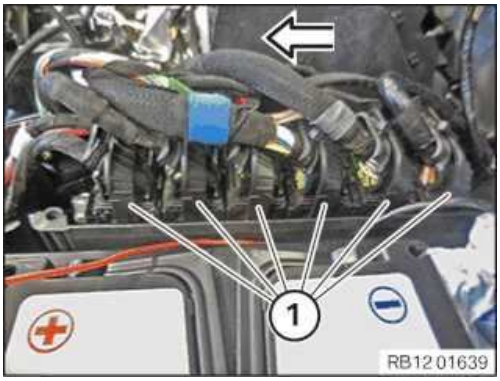
1 Wiring harness section for the engine



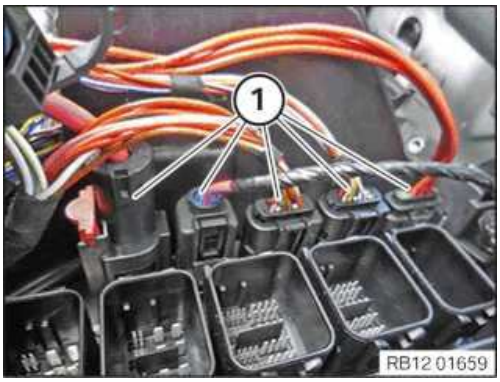
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



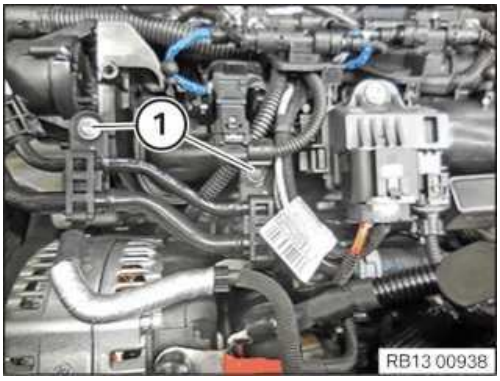
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



cardiagn.com

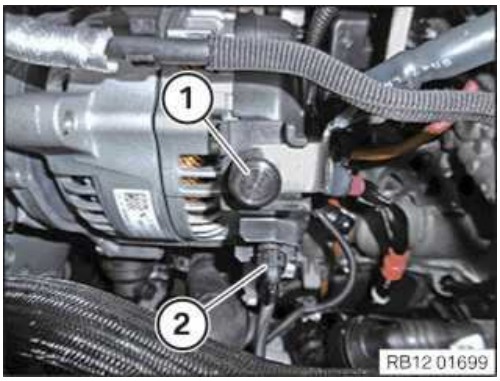


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

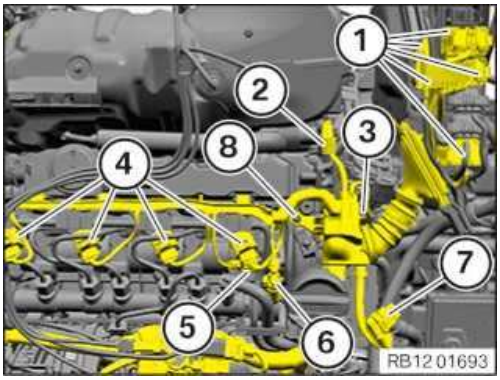


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

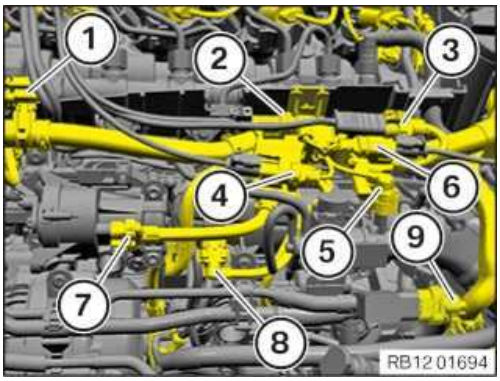
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).



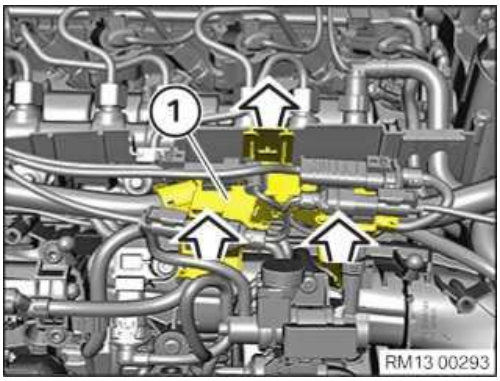
- Loosen screws (1).



cardiagn.com

- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



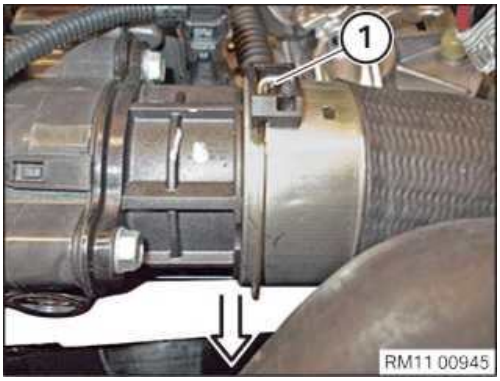
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

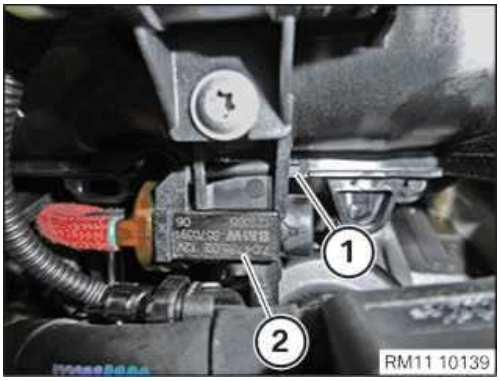
cardiagn.com

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.



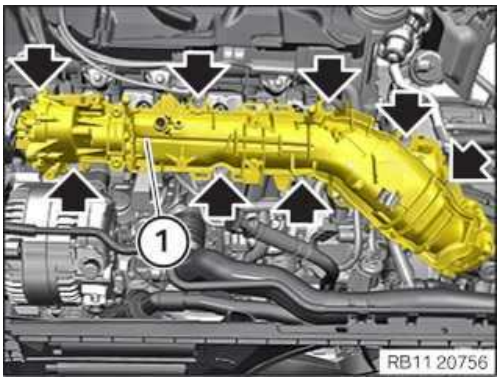
54 – Removing the intake plenum

TECHNICAL INFORMATION

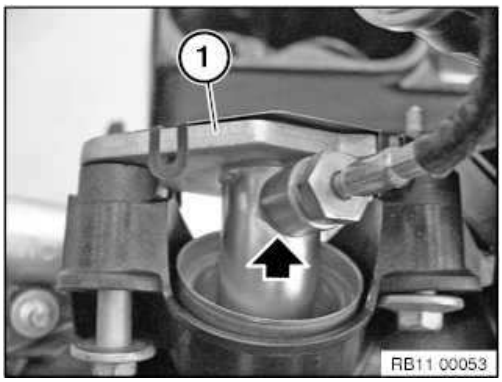


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

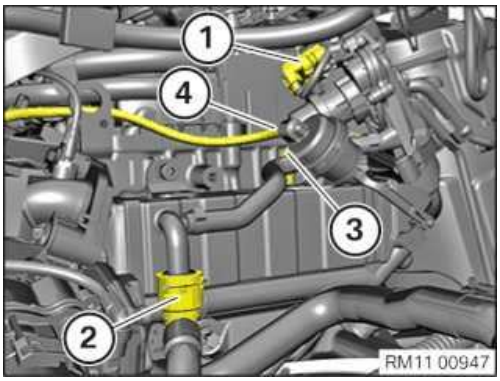


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

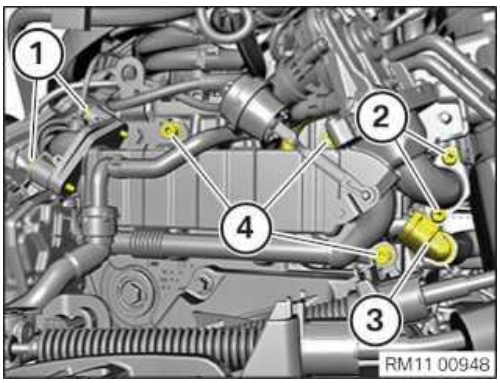


55 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

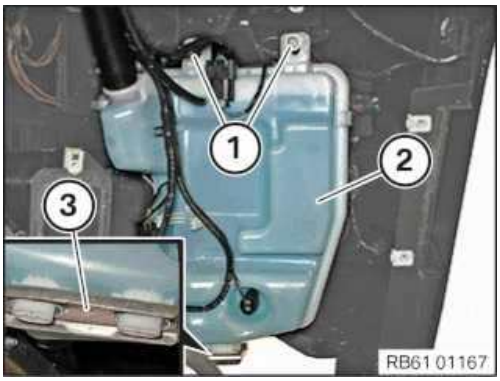
Risk of burning!



- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

56 – Remove the washer fluid reservoir from the fixture

cardiagn.com

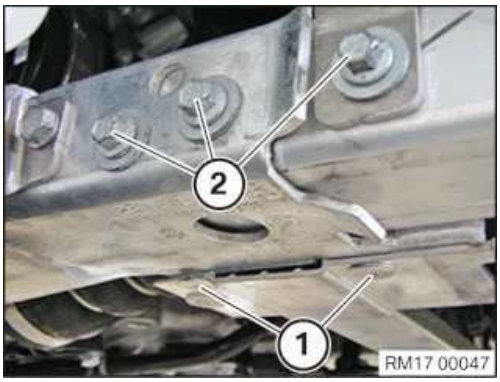
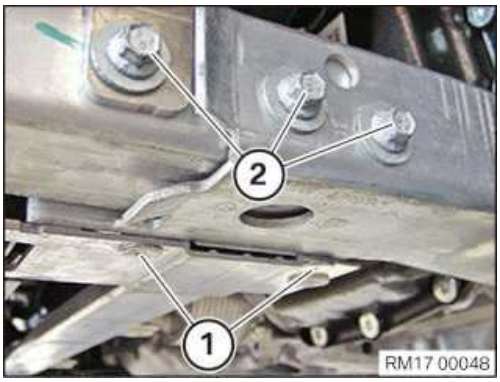
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



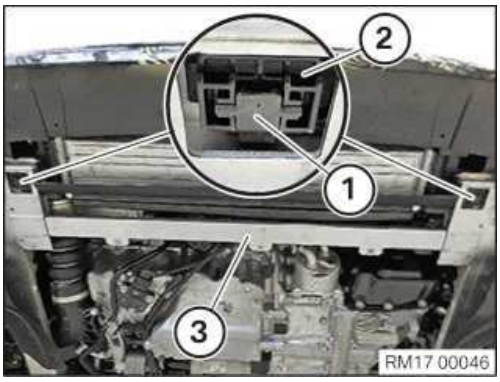
57 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

WARNING



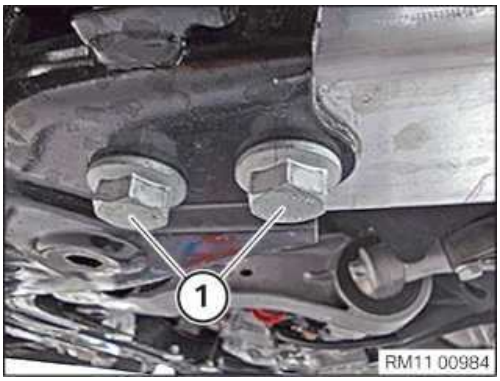
Hot surfaces.

Risk of burning!

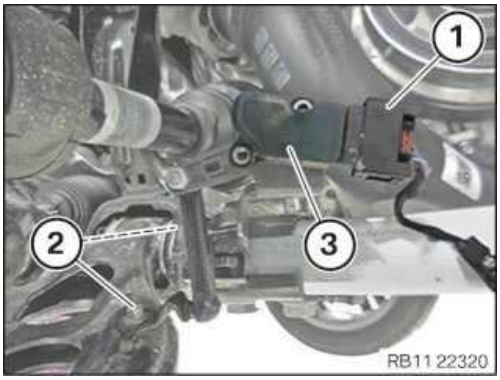


- Perform all work only on components that have cooled down.

- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.



- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.



- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

cardiagn.com

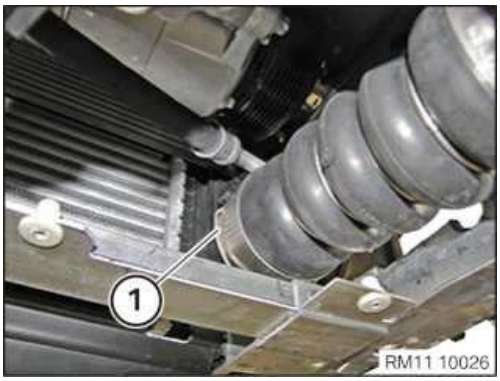
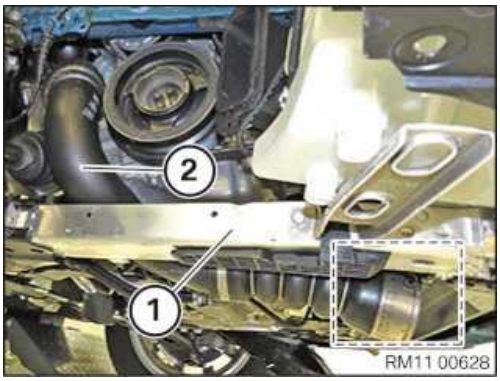
- Release the screws (1) on the right front axle support.

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

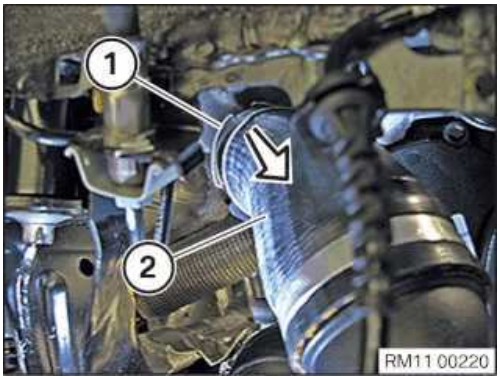


- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

cardiagn.com

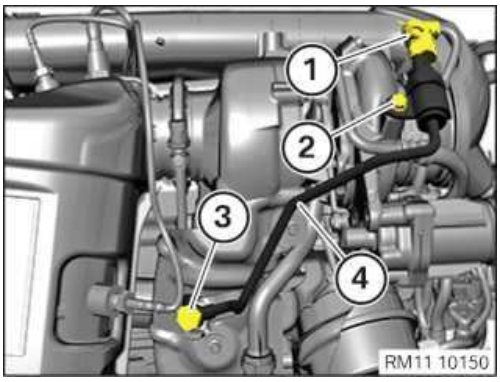
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

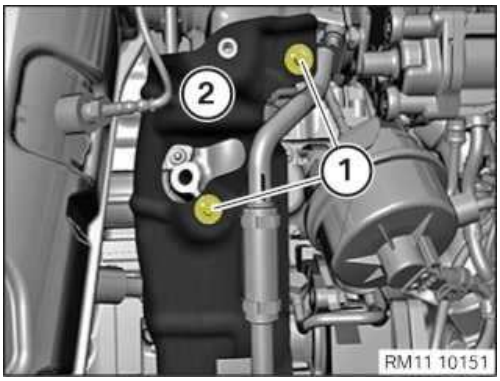
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



58 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

cardiagn.com

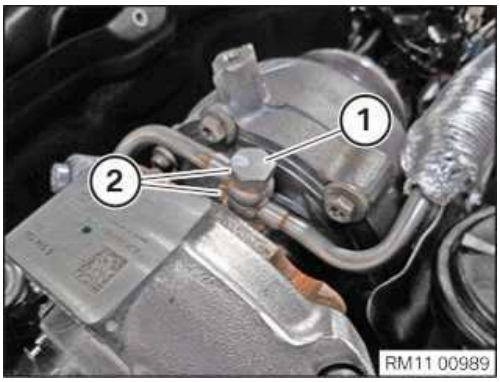
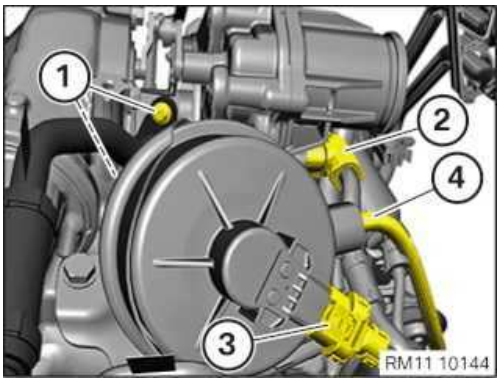
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



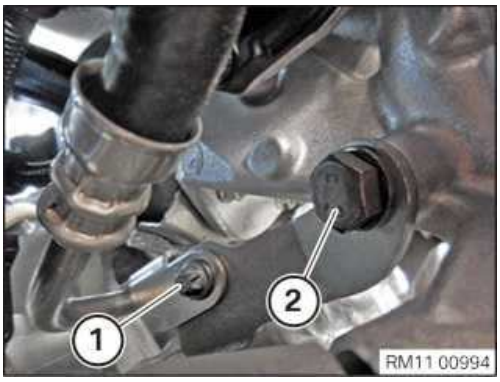
59 – Removing the low-pressure stage turbocharger

WARNING



Hot surfaces.

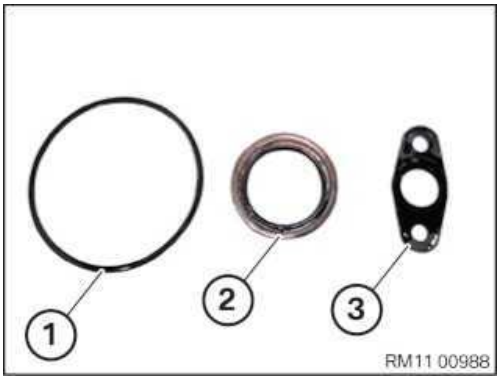
Risk of burning!



- Perform all work only on components that have cooled down.

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

cardiagn.com

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

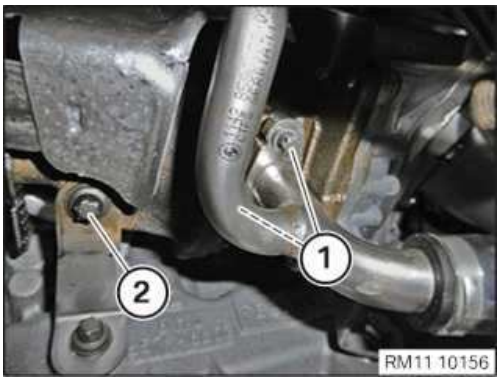
60 – Removing the high-pressure stage exhaust turbocharger

WARNING

Hot surfaces.

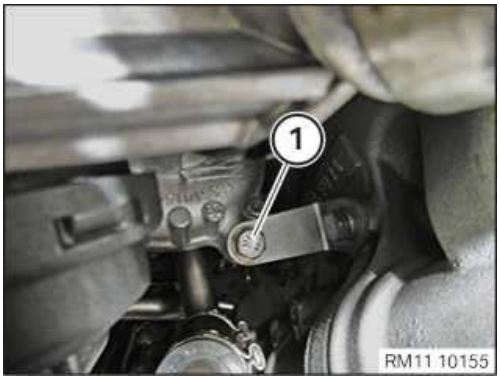
Risk of burning!

- Perform all work only on components that have cooled down.



CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

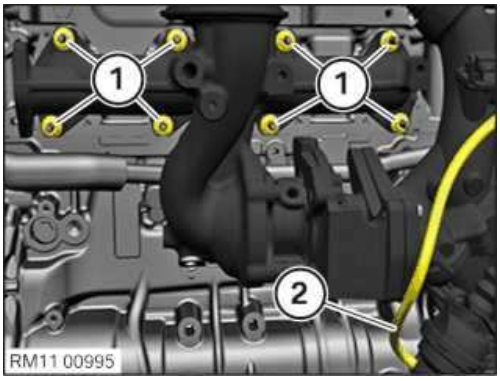
- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.

- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

61 – Removing high pressure lines between rail and injectors

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

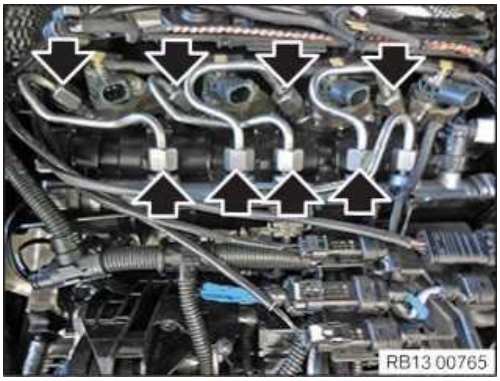
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.



TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the high pressure lines (arrows) with the special tool .
- Catch and dispose of escaping fuel.
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool .

62 – Remove leakage oil lines

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

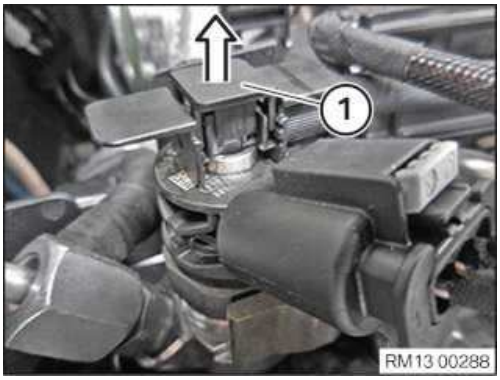
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Unlock the connectors (arrows) and disconnect.

- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

- Unlock and loosen fuel line (1) and set it aside.
- Guide the leakage oil line (2) out of the rubber grommet (3) and set it aside.

- Release lock (1) in direction of arrow.
- Feed out leakage oil line (2) and remove.

63 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

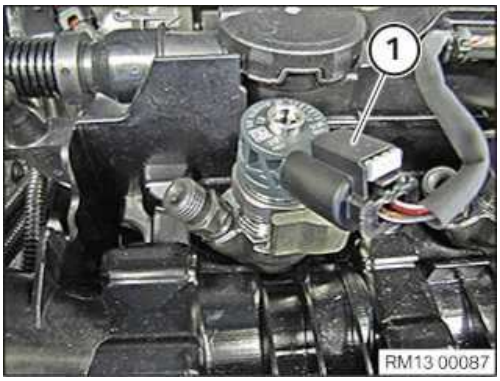
Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

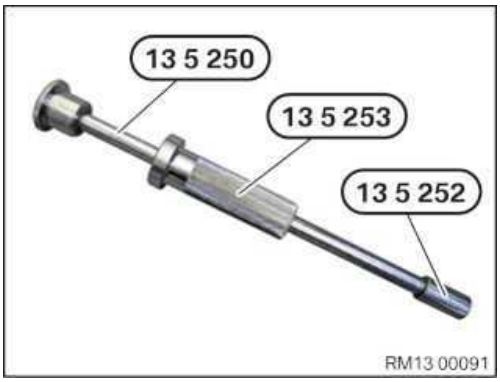
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

- Unlock and disconnect connector (1).

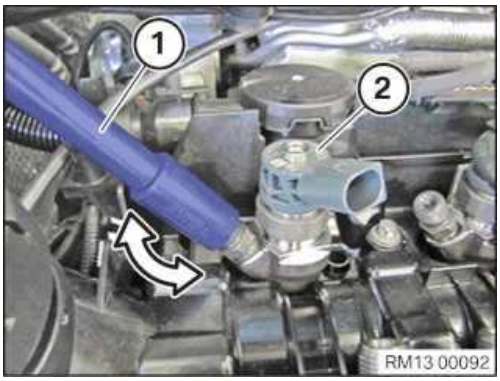
- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.



▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com

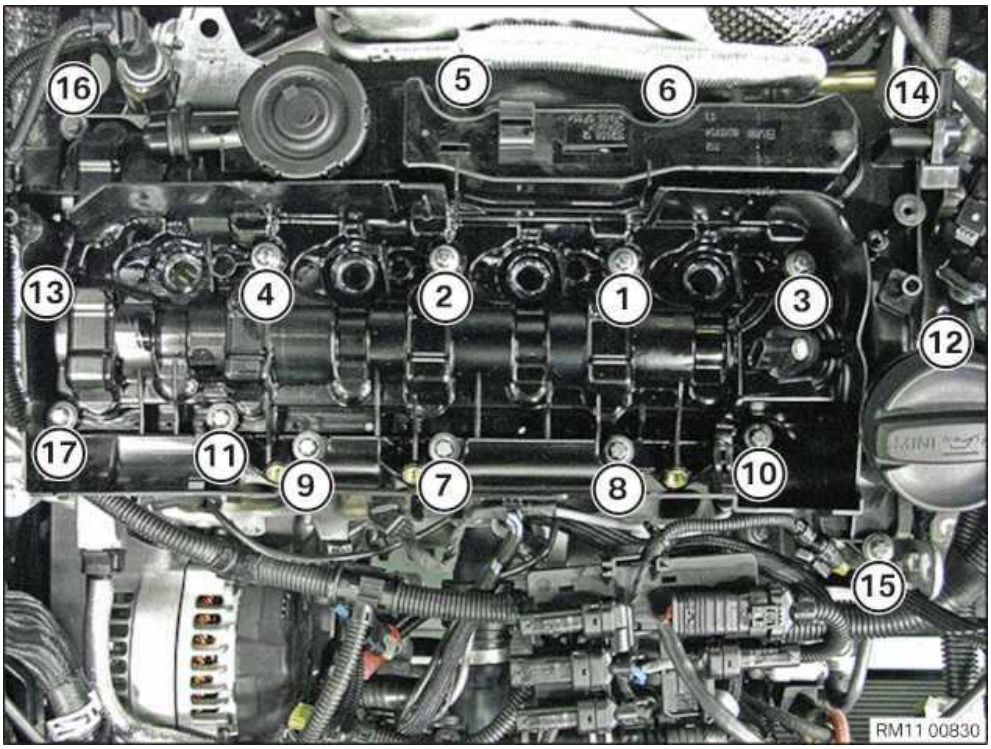
- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

64 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

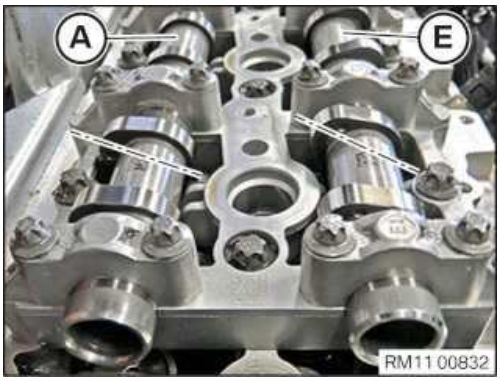
- Loosen screws in the order (17) to (1).
- Remove cylinder head cover by lifting it out.

65 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.



The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

66 – Remove chain tensioner piston

cardiagn.com

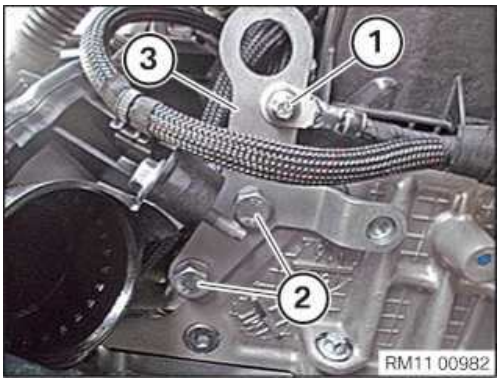
WARNING

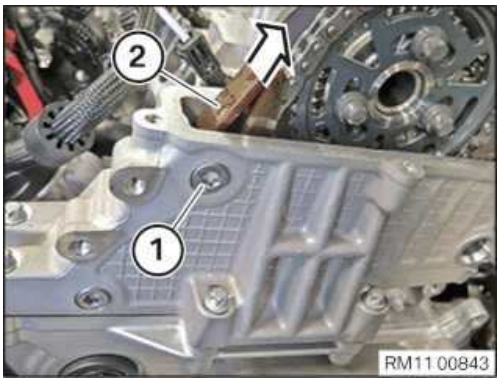
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



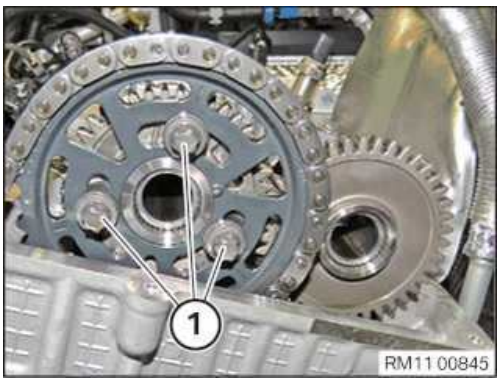
TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

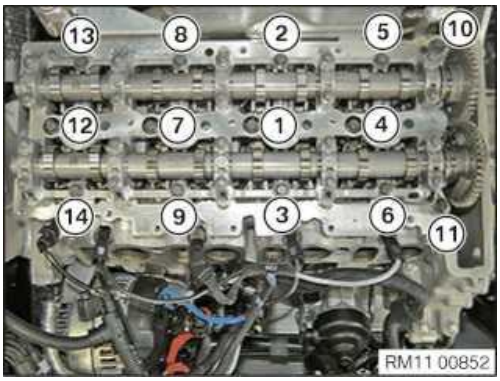
- Remove the chain tensioner piston (1).

67 – Remove the timing chain guide rail



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.



68 – Removing the camshaft sprocket on the intake camshaft

- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

69 – Removing the camshaft support

cardiagn.com

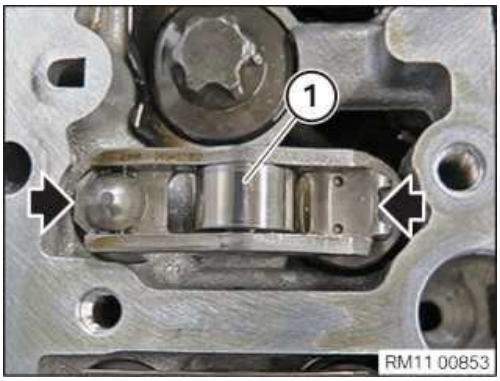
- Evenly loosen all screws in a sequence from (14) to (1).
- Loosen and remove all screws in a sequence from (14) to (1).

  Both camshafts can be removed with the camshaft carrier.
- Remove the camshaft support including camshafts towards the top.



70 – Remove roller cam followers

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

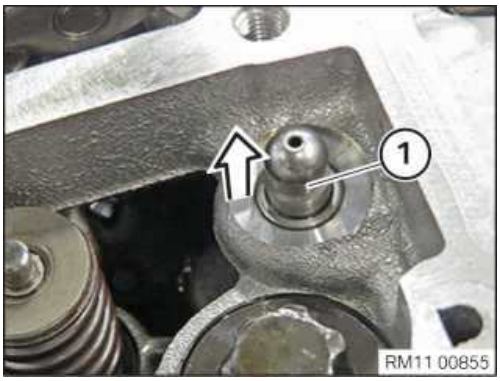
Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

- Remove the roller cam follower (1) and place it onto the special tool **0 495 105 (11 4 480)**.
- Repeat the process for all roller cam followers.

71 – Removing the hydraulic valve clearance compensating element



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

72 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

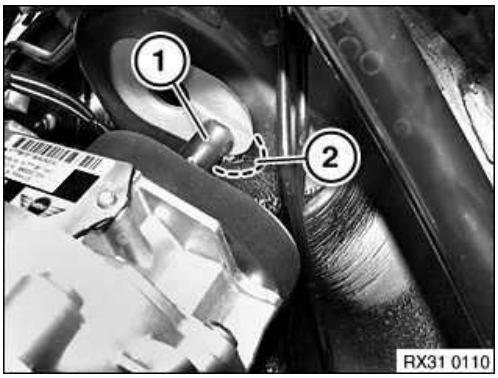
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool or conventional tools.
- Feed out preheating elements and remove.

73 – Remove cylinder head.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

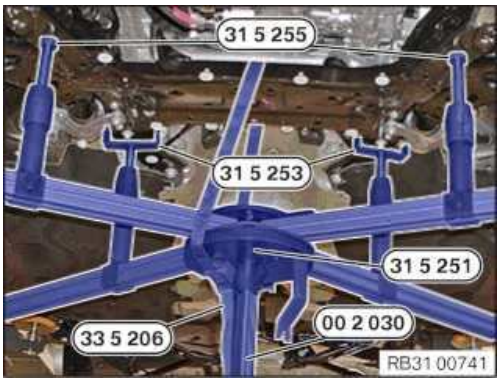
- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

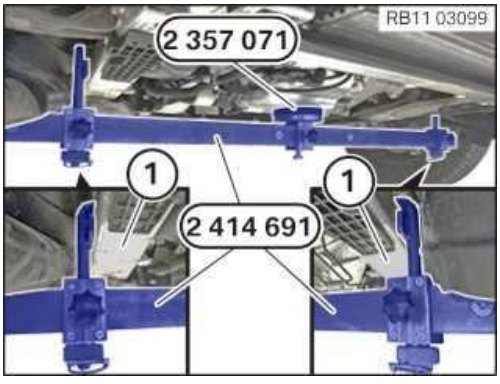
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

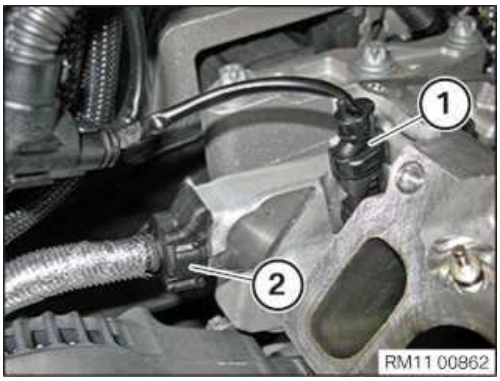
M12 screw	Renew screw.	Tightening torque	108 Nm



- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool from special tool .
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool and set it aside.

- Prepare special tool together with the special tool **2 357 071**.
- Attach special tool to front axle support and align special tool **2 357 071** correctly under the oil sump and then tighten.
- Turn special tool at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools and **2 357 071**.

cardiagn.com

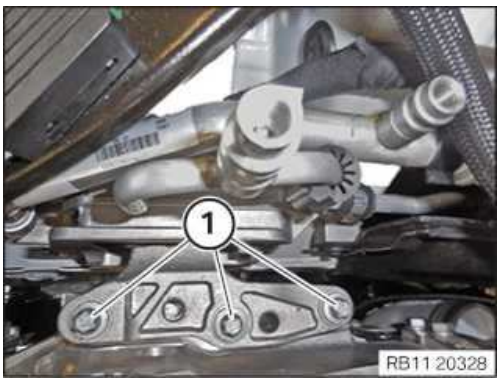
TECHNICAL INFORMATION

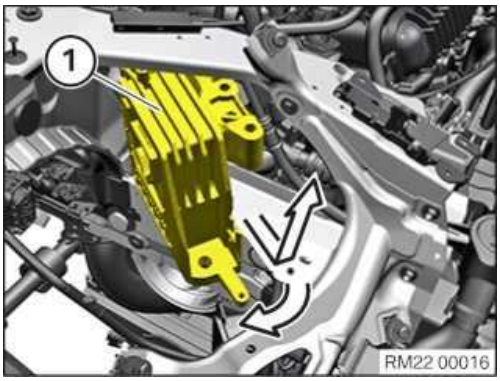
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the connector (1) from the coolant temperature sensor.
- Unlock and loosen coolant line (2).

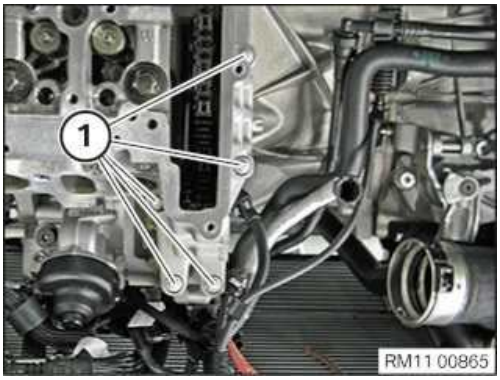


- Loosen screws (1).
- Feed out the heat shield (2) and set it aside.

- Unlock and loosen holder (1).
- Feed out the refrigerant line (2) and put to one side.
- Loosen screw (3).



- Loosen screw (1).



- Loosen screws (1).

cardiagn.com

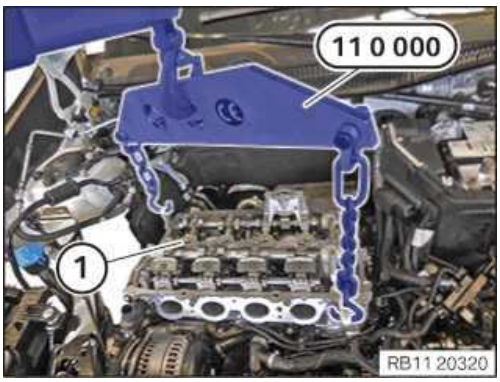
- Turn engine mount (1) in direction of arrow and remove upwards.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (10) to (1).
- Remove cylinder head bolts (1) to (10) with washers.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

cardiagn.com

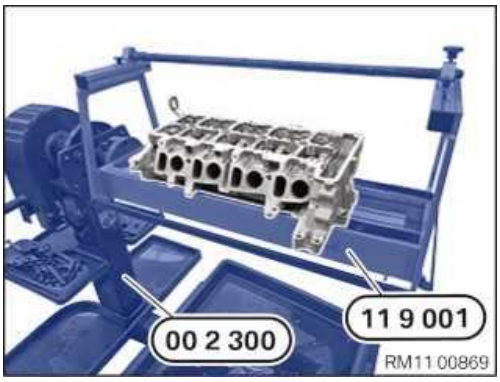
- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.



74 – Remove all valve springs

RISK OF DAMAGE

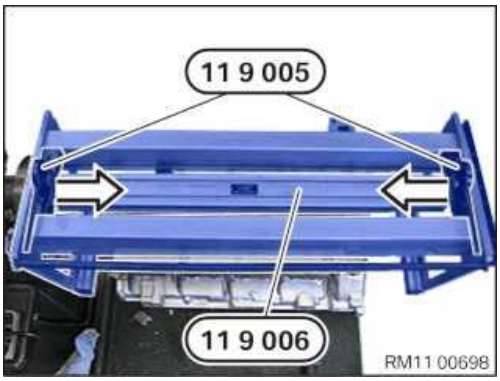
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Mount and screw the cylinder head onto the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

- Position special tool **0 494 373 (11 9 008)** as illustrated.

cardiagn.com

- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

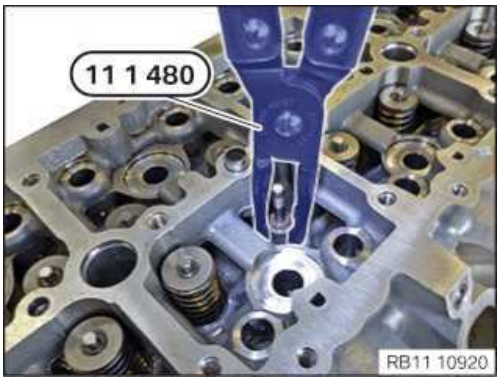
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) from the valve (2) using a magnet.
- Guide the valve spring and spring cup out and remove.
- Set down valve spring, spring cup and valve shims (2) in the special tool **0 495 105 (11 4 480)** in an orderly manner.

MAIN WORK

75 – Remove valve stem seals



RISK OF DAMAGE

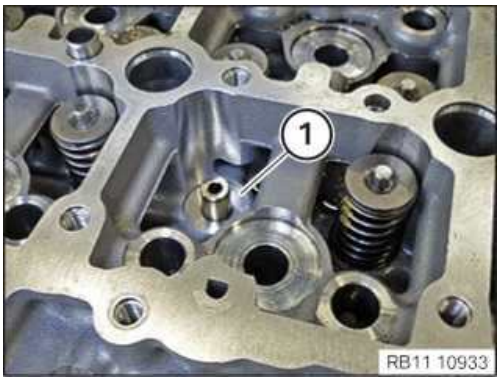
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com

- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)**.



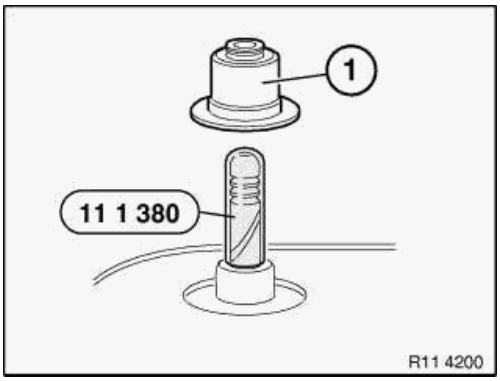
76 – Installing valve stem seals

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

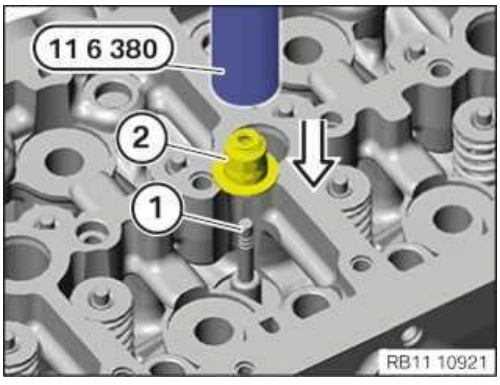
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

- Clean the contact surfaces (1).

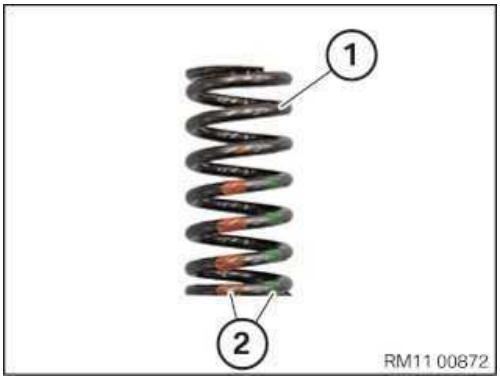
- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

  Parts: Valve stem seal

- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.

POSTPROCESSES

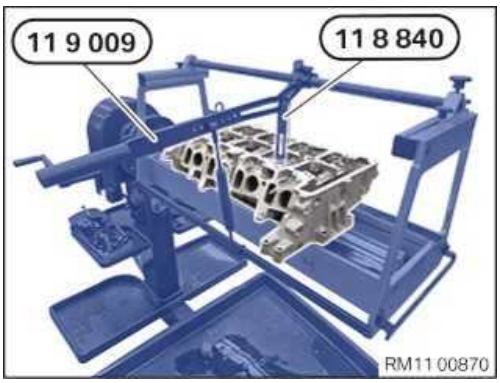
cardiagn.com



77 – Install all valve springs

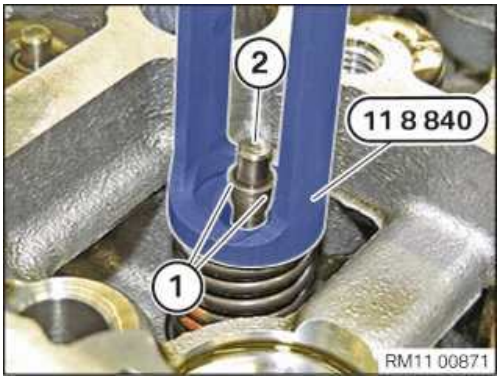
RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

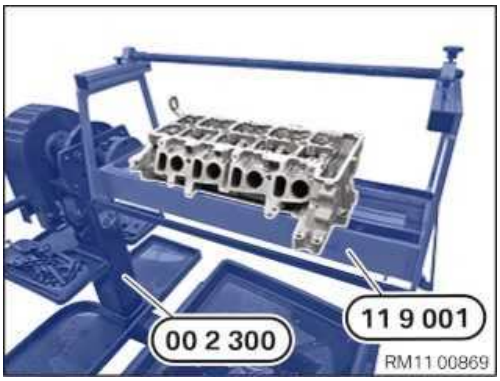
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- The valve spring (1) is marked with a colour code (2).

  The mounting orientation of the valve spring (1) can be freely chosen.

- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.
- Position the special tool **0 496 143 (11 8 840)** according to the nut.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.
- The **hooks** from the set of special tools **0 494 362 (11 9 000)** can be used to **hold** the valve spring down.

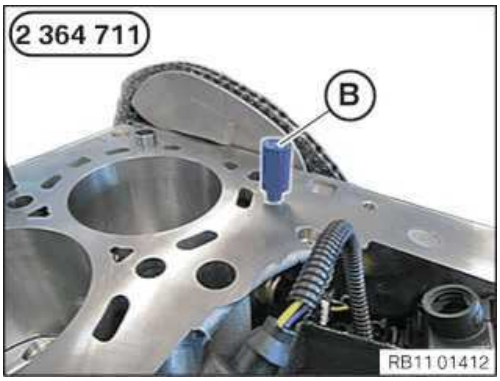


- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Insert the valve shims (1) at the valve (2) with the magnet and install.
- Relieve load on valve spring.
- Make sure that the valve shims (1) are installed correctly.

- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Guide the special tool **0 494 371 (11 9 006)** out and remove.

cardiagn.com

- Unscrew and remove the cylinder head from the special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.



78 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

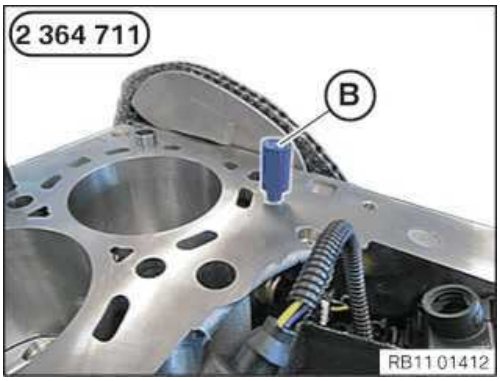
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

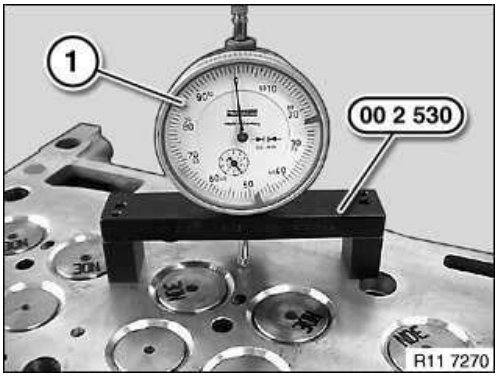
RISK OF DAMAGE



Damage to the surface.

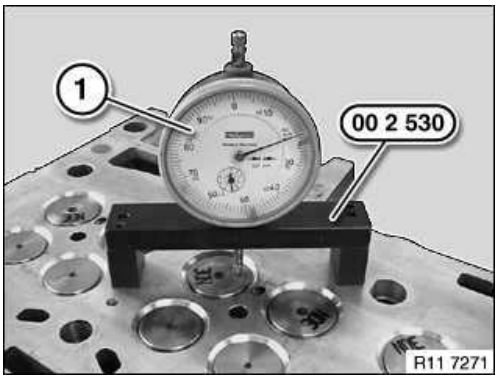
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com



- Remove special tool (B).

79 – Checking the valve underprotrusion

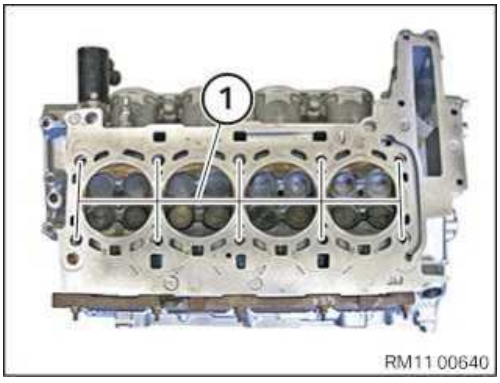
- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm



Result

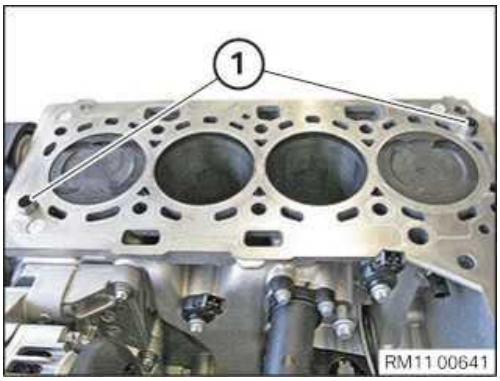
» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

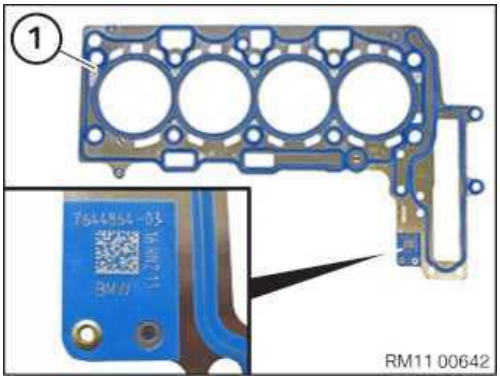
80 – Renewing the cylinder head gasket

RISK OF DAMAGE



Damage to the surface.

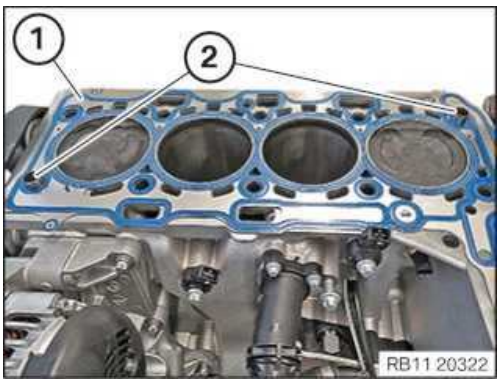
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.



- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.

- Identify the cylinder head gasket (1) using the part number.

Note: If the cylinder head is reworked, an additional thicker gasket 0.3 mm is available for service personnel.

- Guide in the cylinder head gasket (1) and install.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

81 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

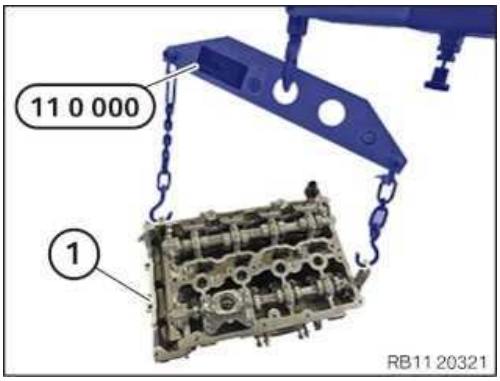
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

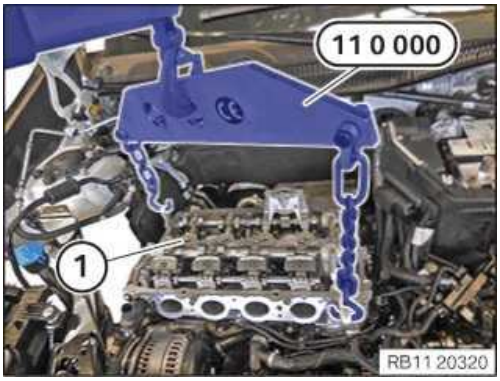
Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).



TECHNICAL INFORMATION

Do not remove bolt coating.



cardiagn.com

TECHNICAL INFORMATION

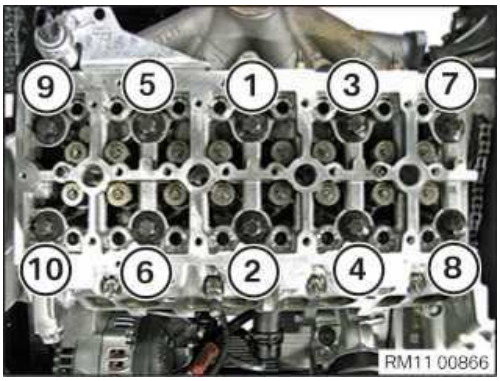
When replacing the cylinder head: The complete valve control and the Valvetronic servomotor are already pre-assembled for new cylinder heads.

- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.



- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

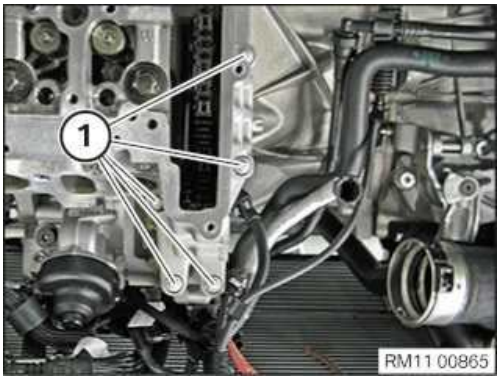
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

cardiagn.com

- Renew the cylinder head bolts (1).

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  No coolant, water or engine oil must be present in threaded holes of engine block.

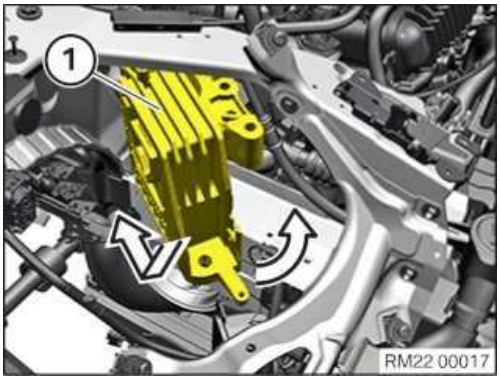


TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in cylinder head bolts in sequence (1) to (10).
- Tighten cylinder head bolts using special tools **0 490 504 (00 9 120)** and in sequence (1) to (10).

Cylinder head to crankcase



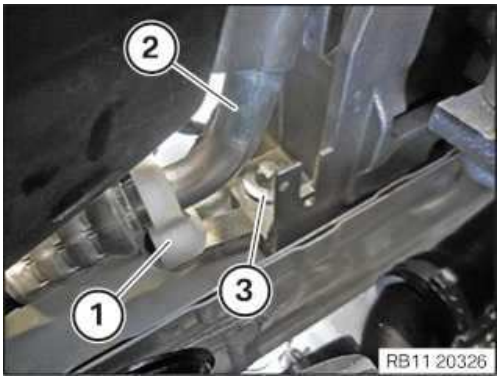
M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Thread in engine mount (1) in direction of arrow then install.

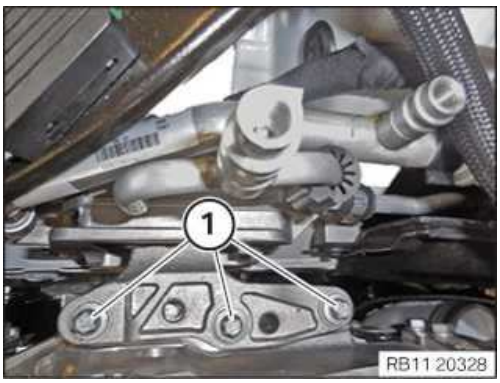


cardiagn.com

- Tighten down screw (1).

Right engine mount to side member

M12		Tightening torque	100 Nm

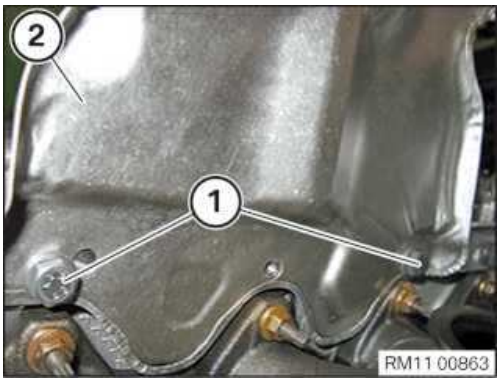


- Tighten down screw (3).

Right engine mount to side member

M12		Tightening torque	100 Nm

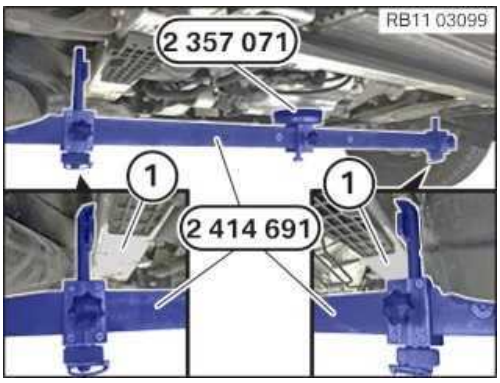
- Feed in and install the refrigerant line (2).
- Lock holder (1).
- Make sure the bracket (1) engages audibly.



- Renew screws (1).

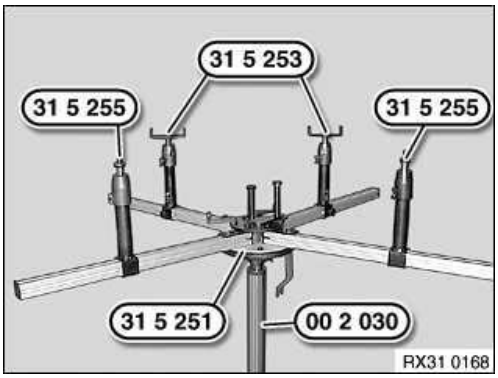
  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head



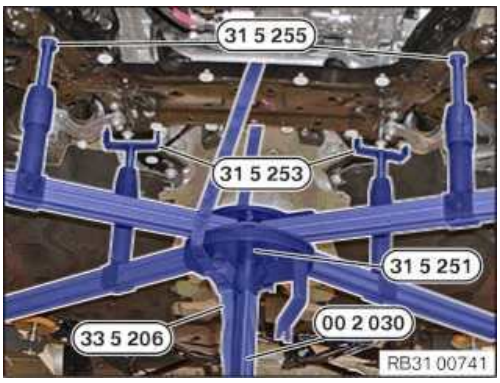
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Feed in and install the heat shield (2).
- Tighten the screws (1).



Heat shield to cylinder head

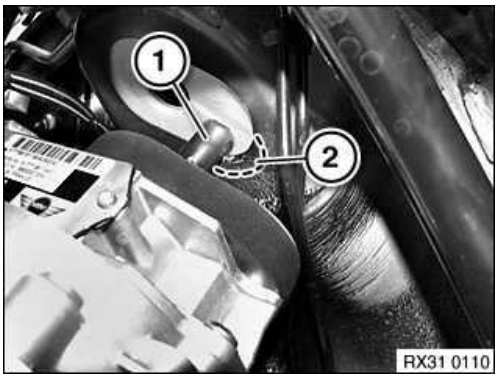
M8X16		Tightening torque	10 Nm



- Disassemble special tool using special tool **2 357 071**.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

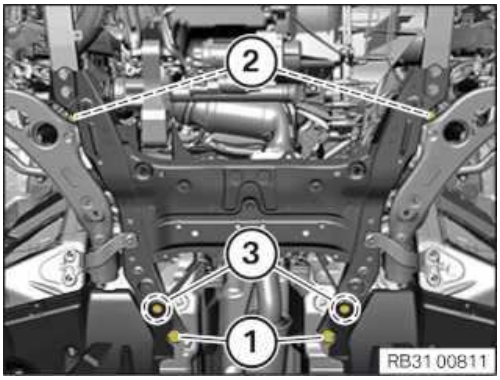


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

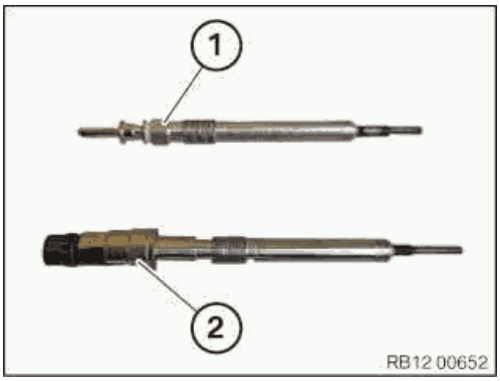
Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.



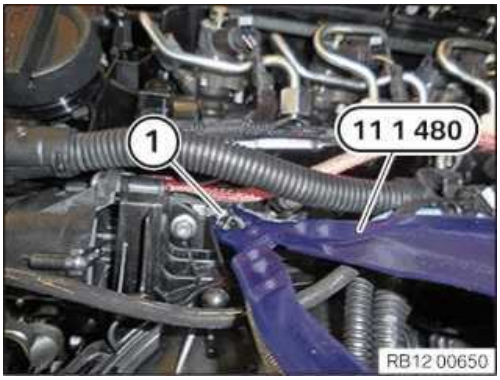
- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

82 – Install glow elements

- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.



cardiagn.com

- Tighten the glow element with the special tool or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

83 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

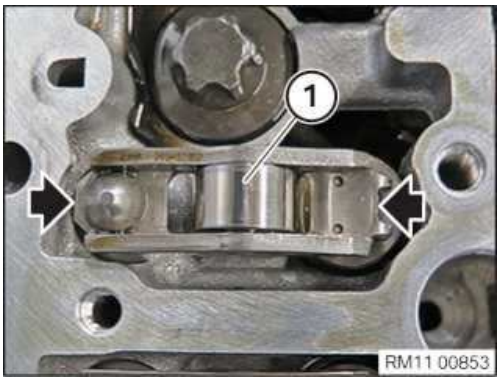
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

84 – Install the roller cam followers



RISK OF DAMAGE

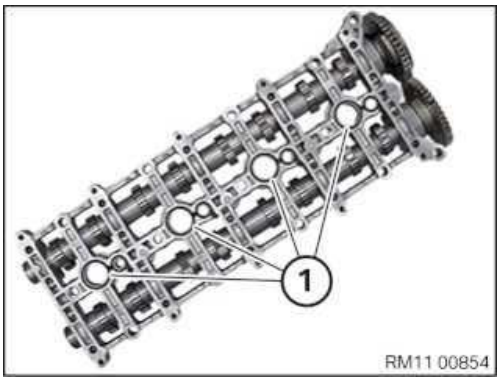
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

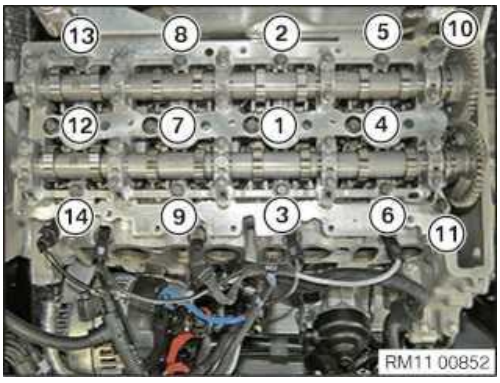
RISK OF DAMAGE



Damage to the engine.

If the classification of the roller cam followers is ignored, this can lead to engine damage.

- Observe the classification of the roller cam followers.
- Always reuse used roller cam followers at the same position.

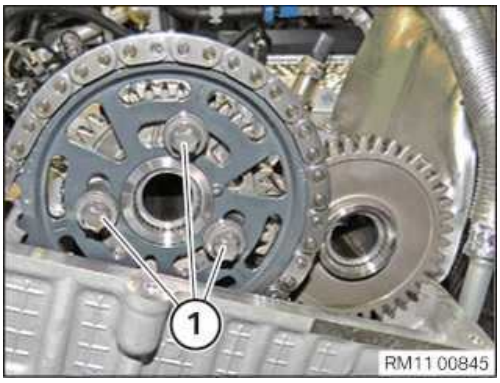


- Install the roller cam follower (1).
- Repeat the process for all roller cam followers.

85 – Installing the camshaft support

- Renew gaskets (1).

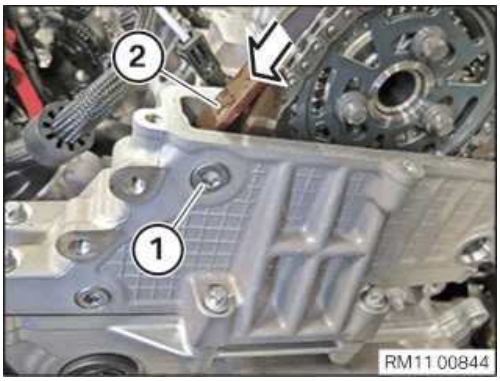
  Parts: gaskets



- Position the camshaft support including the camshafts.
- Tighten the screws in a sequence from (1) to (14) in several steps.

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

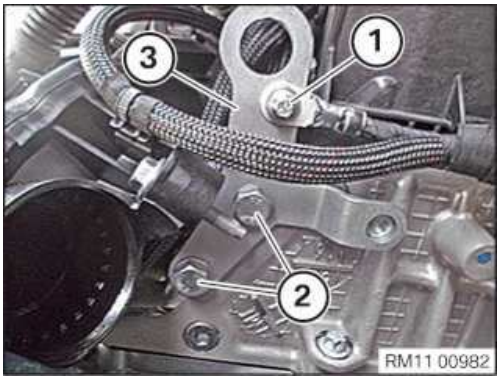


86 – Installing the camshaft sprocket on the intake camshaft

- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

87 – Install the timing chain guide rail

cardiagn.com



- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

88 – Installing the chain tensioner piston

WARNING

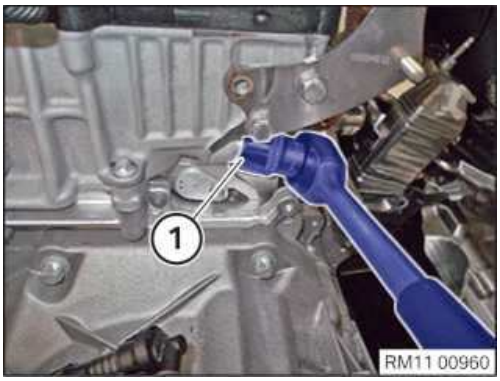
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

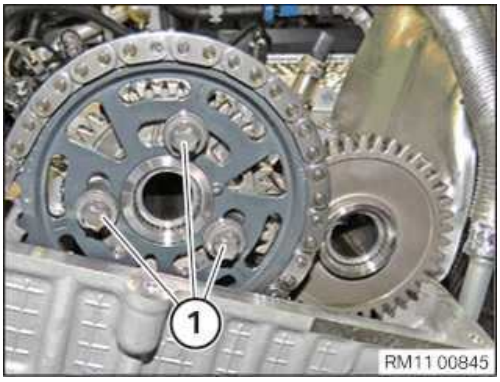


TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

89 – Tightening the camshaft sprocket on the intake camshaft

- Tighten the screws (1).

Camshaft sprocket to camshaft

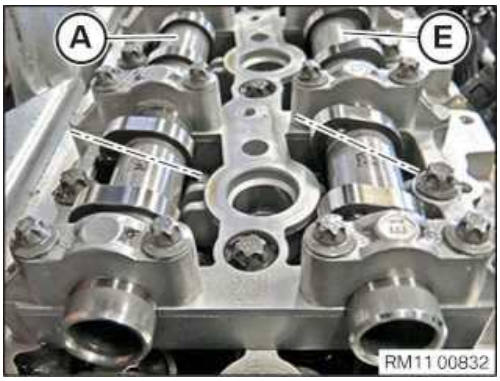
M7x17.			17 Nm

90 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

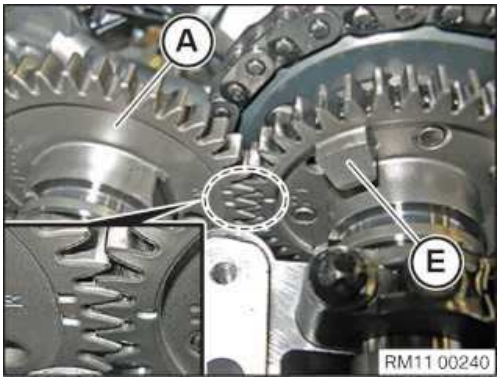


The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



cardiagn.com

- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

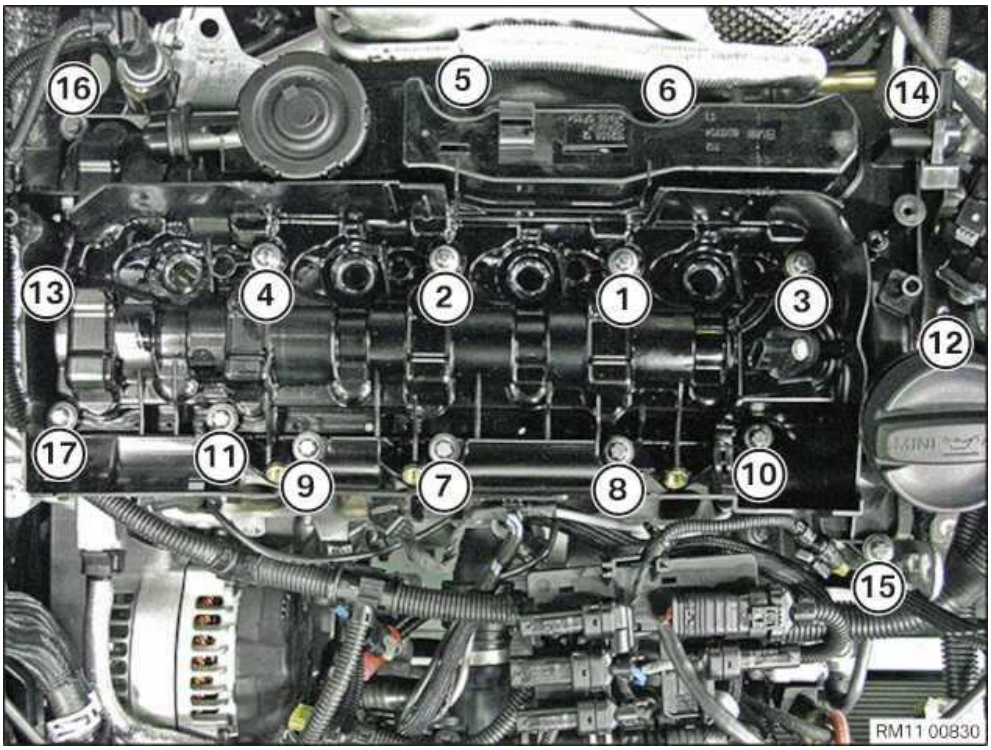
- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

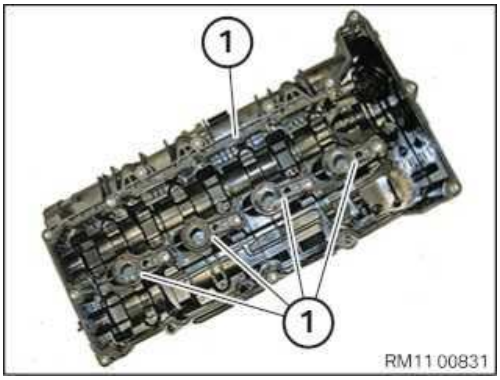
If the check finds that the timings are incorrect, the timings must be adjusted.

For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.



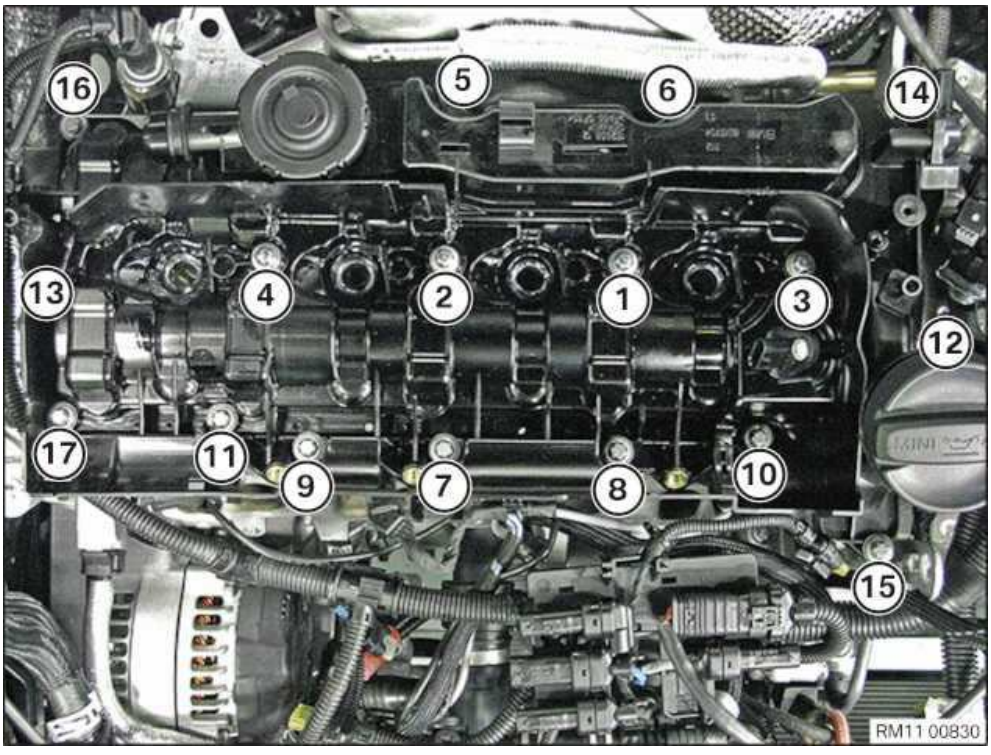
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).



91 – Installing cylinder head cover

cardiagn.com

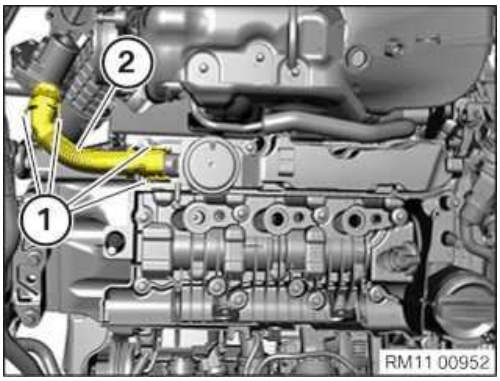
Overview: Screw connection of the cylinder head cover



1 to 16 screws of the cylinder head cover.

- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (17).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr

-

cardiagn.com

- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

92 – Installing injectors of injection system

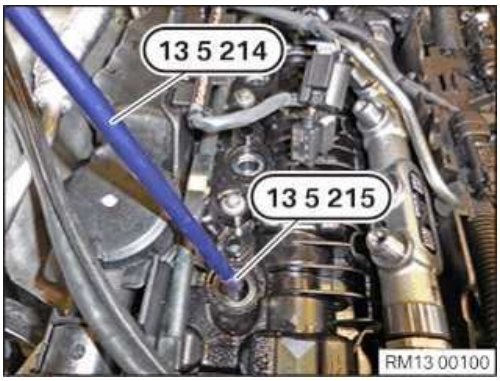
▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

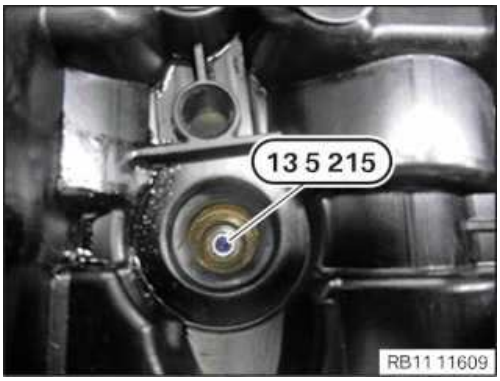
- Collect dirt particles, e.g. when blowing out, use cloth to do so.



- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

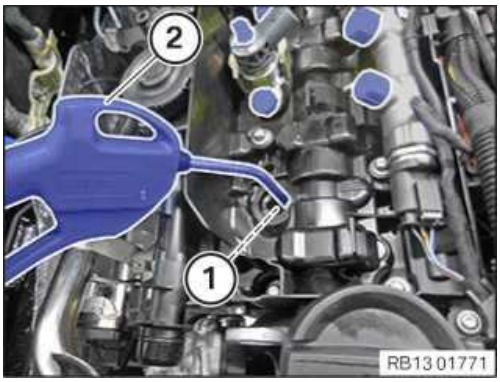


Contamination can result in malfunctions, operating failure or leaks.

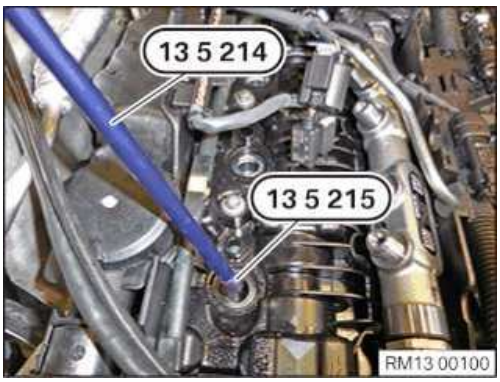
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

cardiagn.com



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.



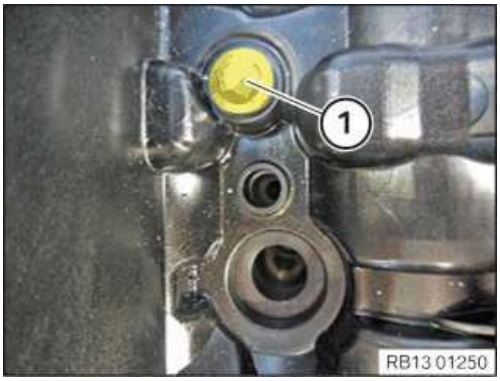
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

- Blow out injector shaft (1) with air gun (2).

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**



cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

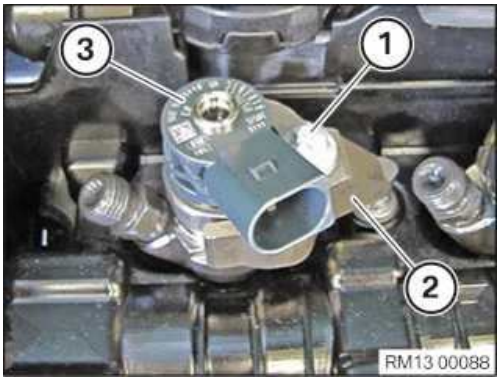
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

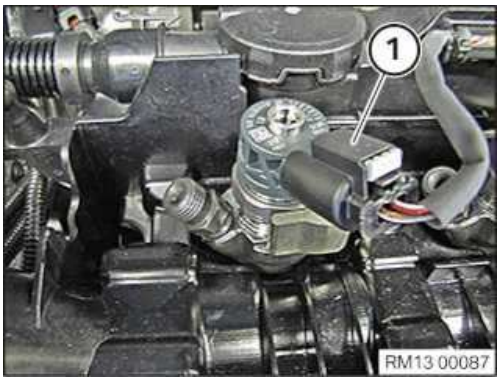


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

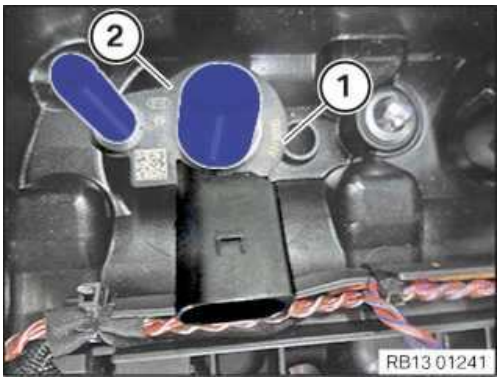
Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



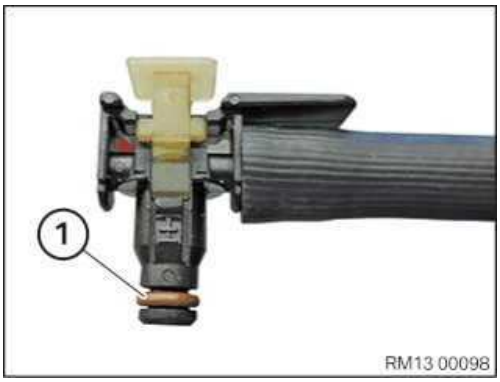
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

93 – Connect the leakage oil line on the injector

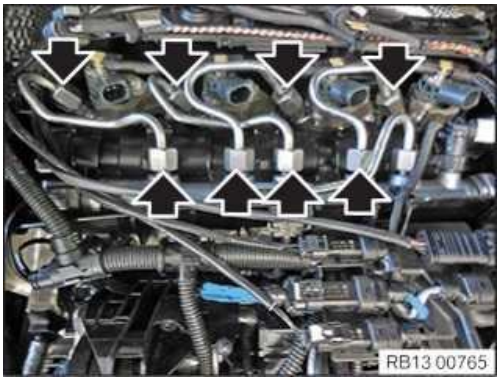
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.



94 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Remove special tool .
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool .

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

95 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

cardiagn.com

96 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

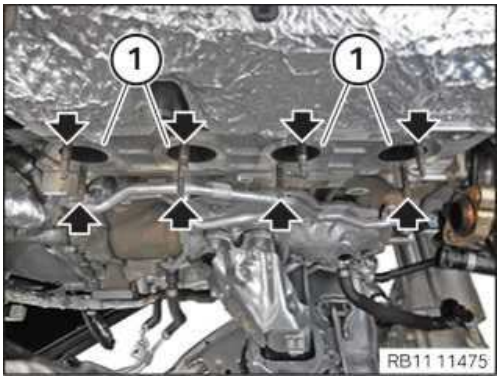
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



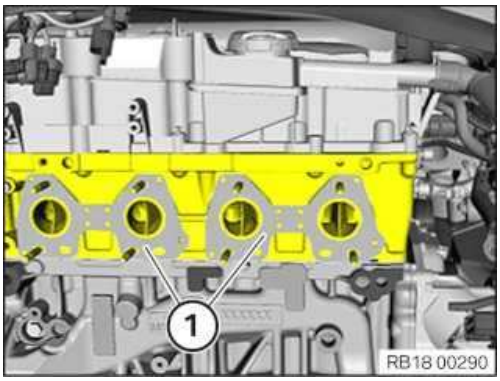
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

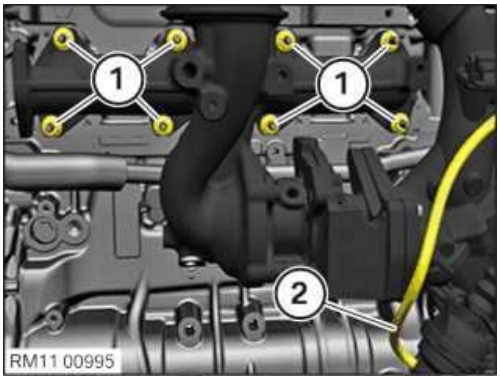
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

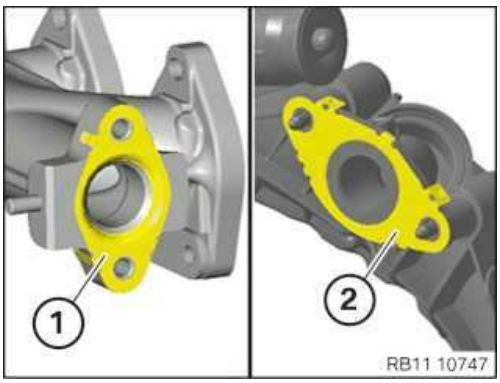
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

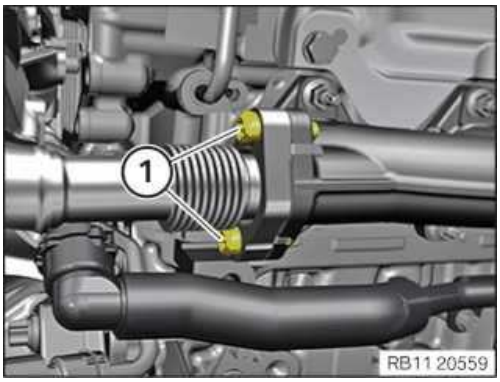


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

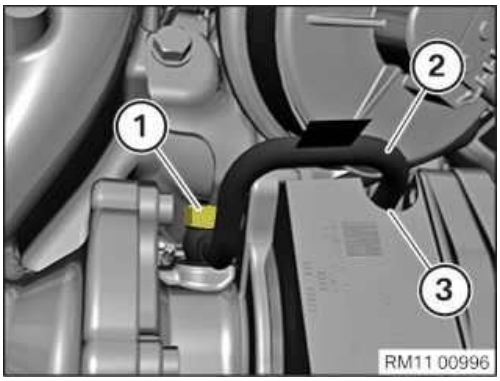
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

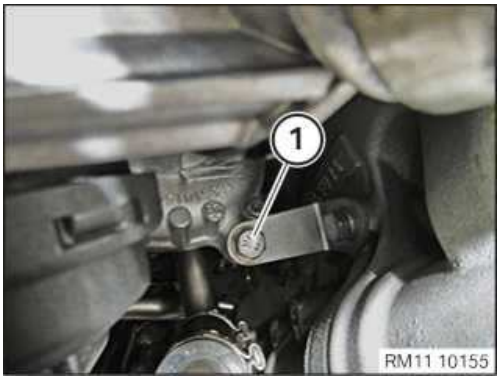
  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

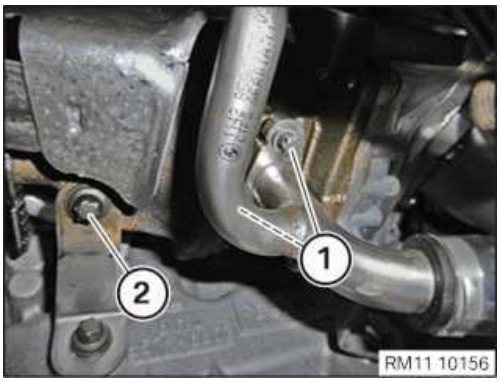


- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

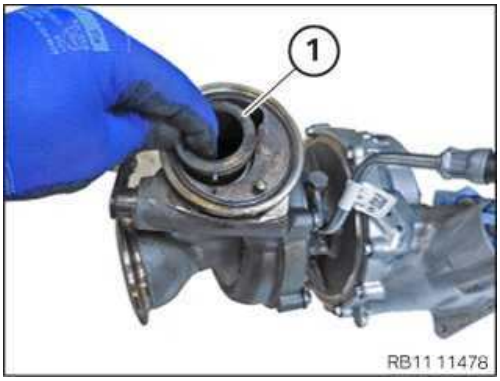
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

97 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

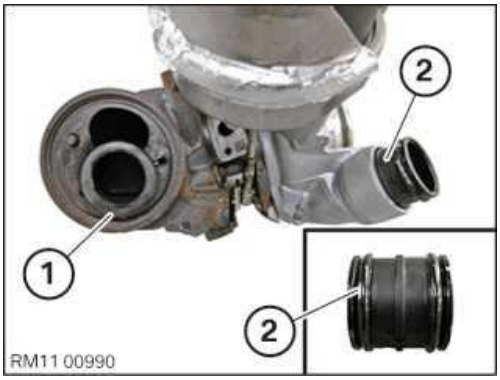
Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

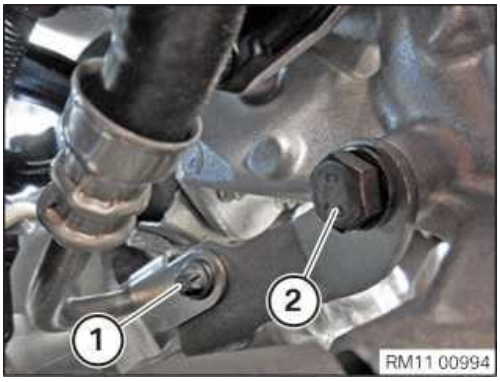
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

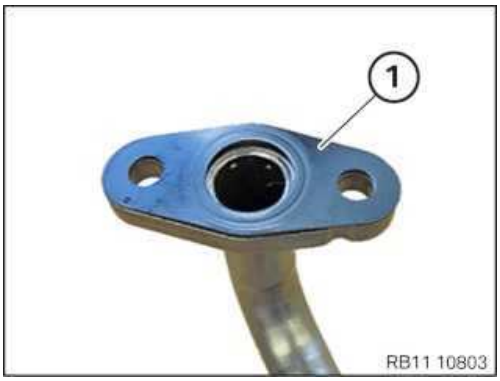
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

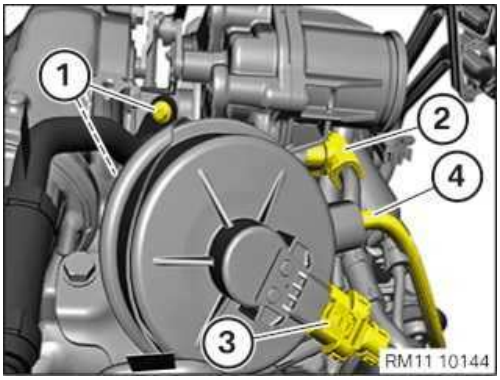
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

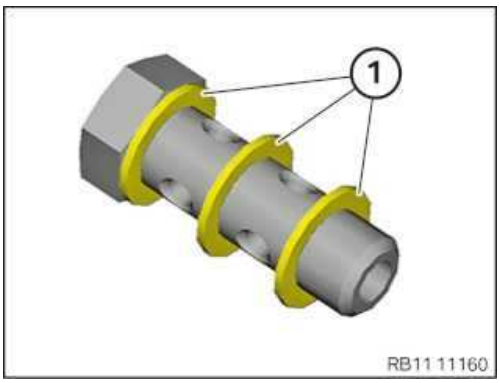


M8x16		Tightening torque	22 Nm

cardiagn.com

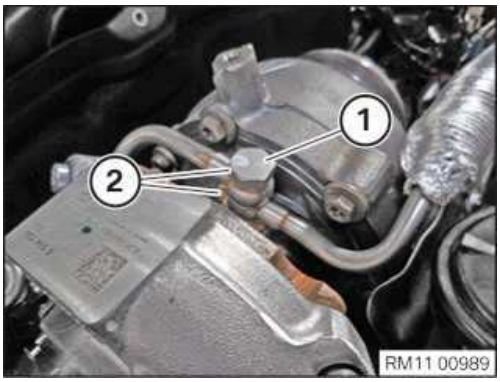
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

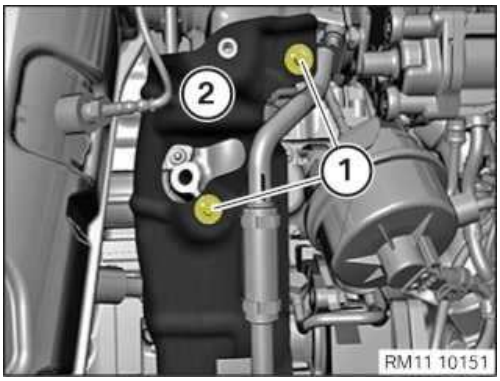
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

98 – Installing heat shield on exhaust turbocharger at bottom

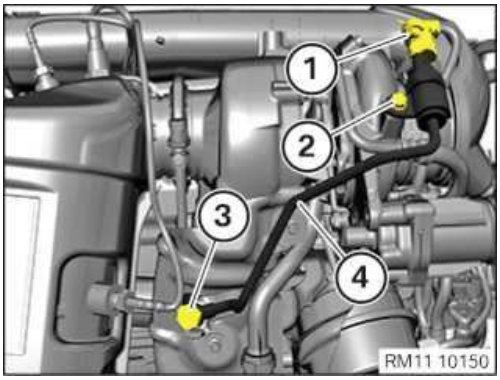


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

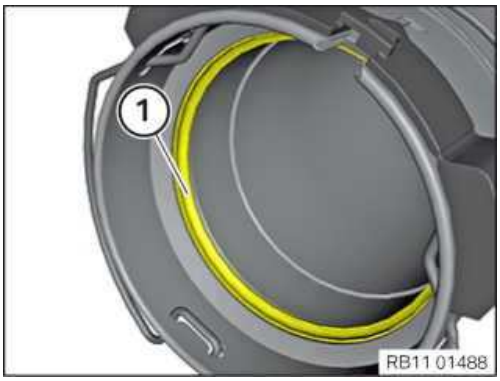
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



99 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

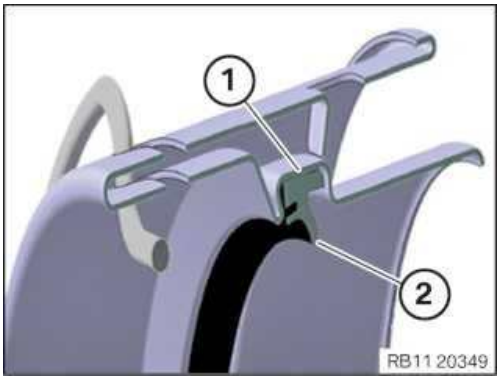
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

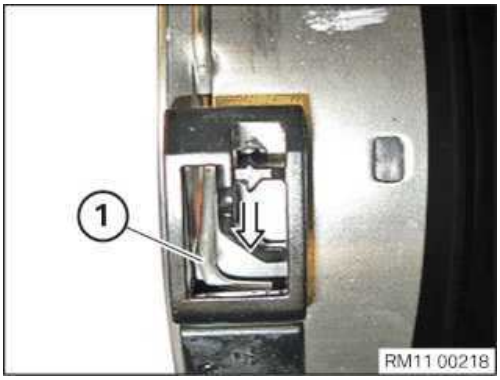


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

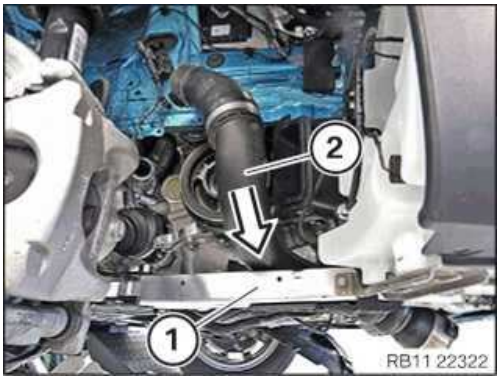
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



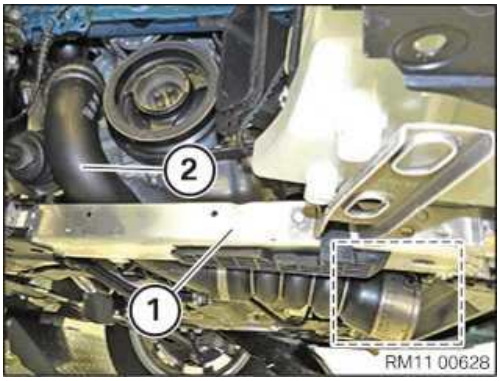
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



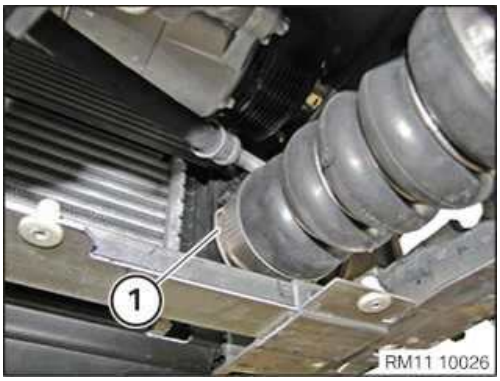
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

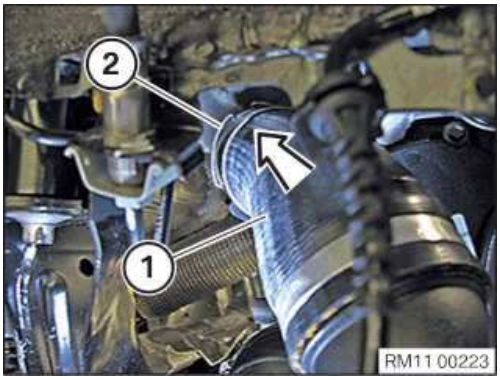


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

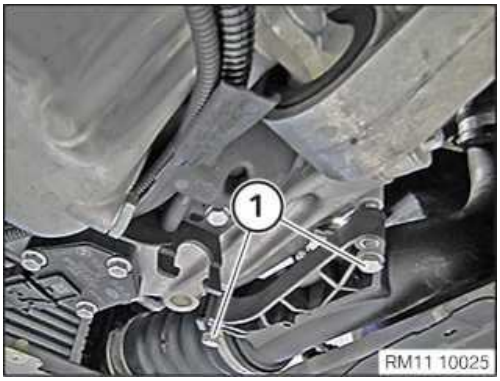


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

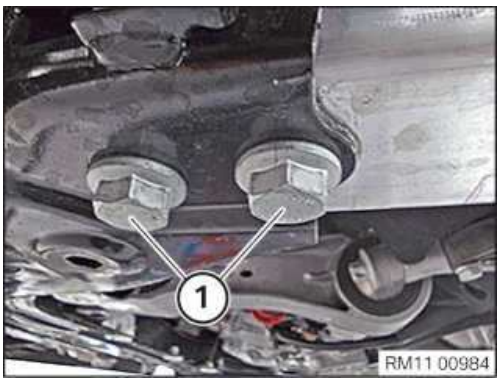
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



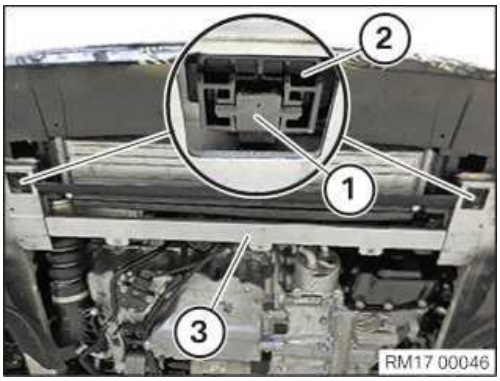
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

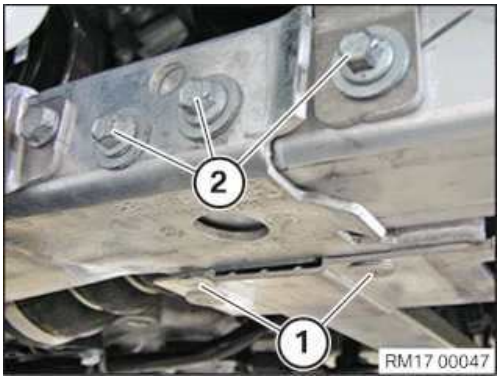
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.

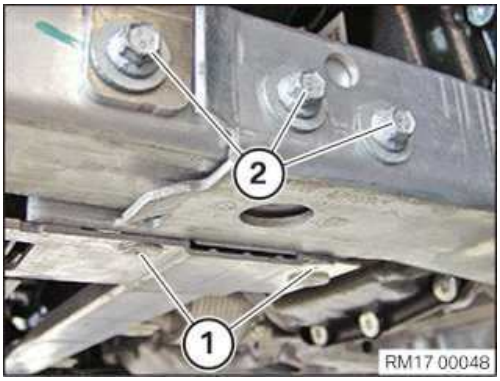


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

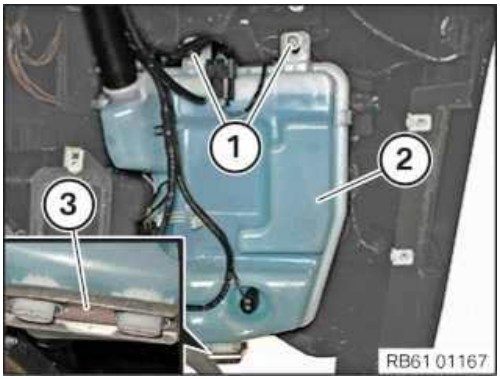
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



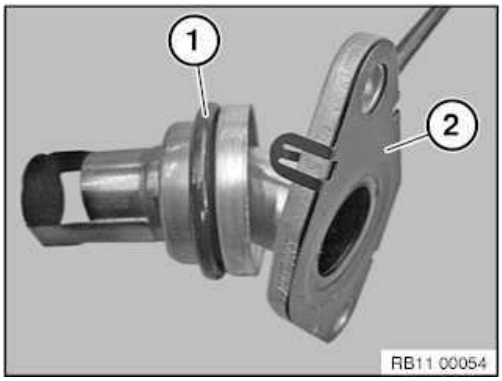
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

100 – Install the washer fluid reservoir in the fixture

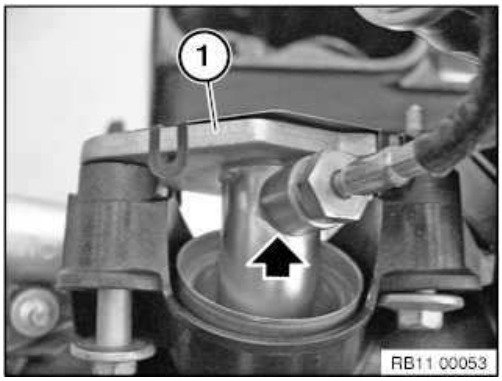


- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

101 – Installing the intake plenum

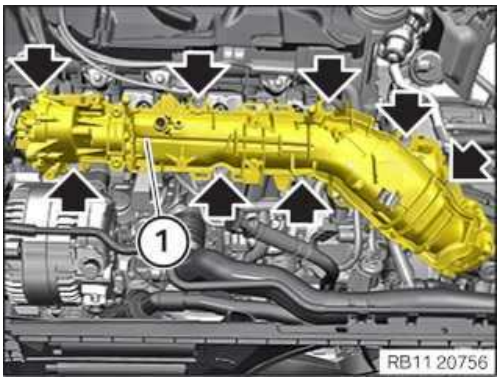


- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

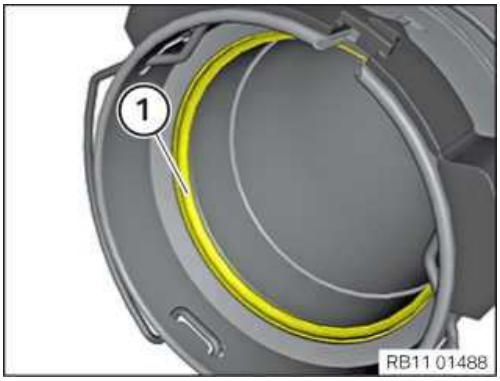
cardiagn.com



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

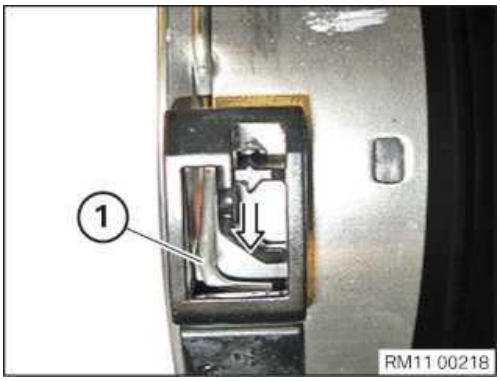
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



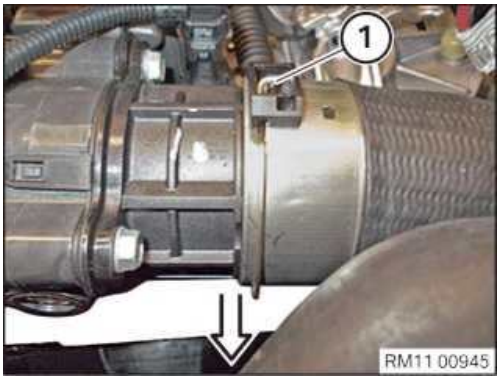
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

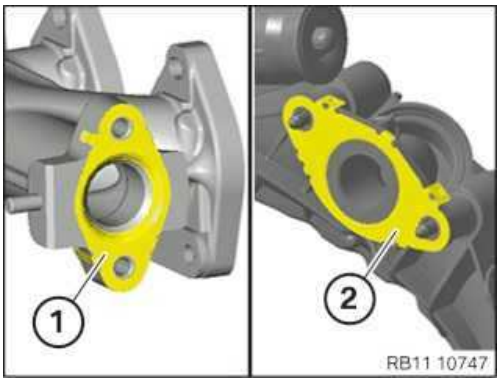
  Parts: Sealing ring

cardiagn.com

- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



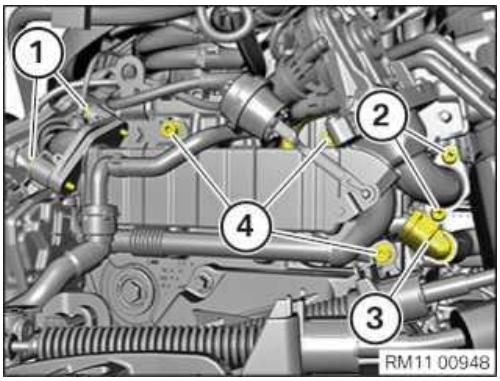
102 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

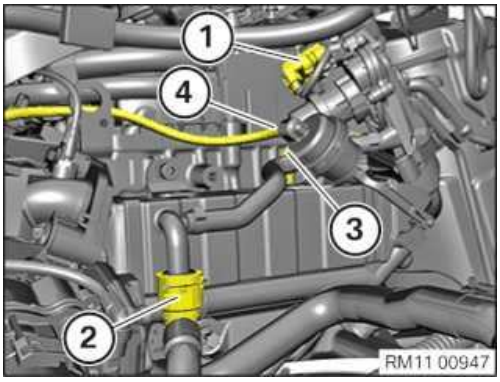
Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold



M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

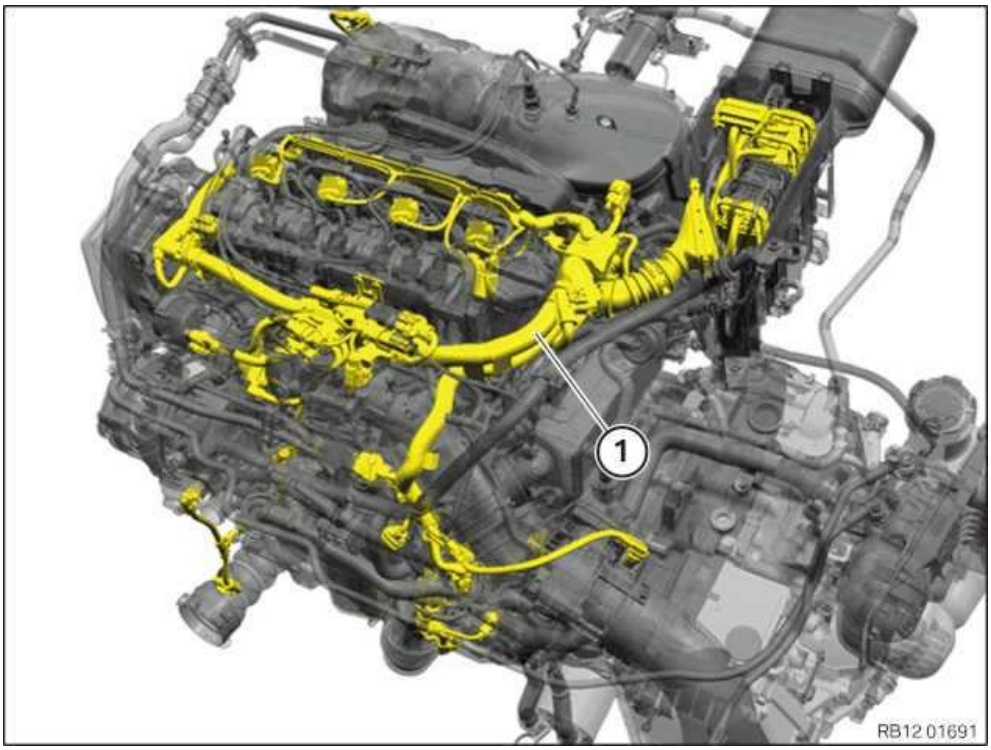
  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

TECHNICAL INFORMATION

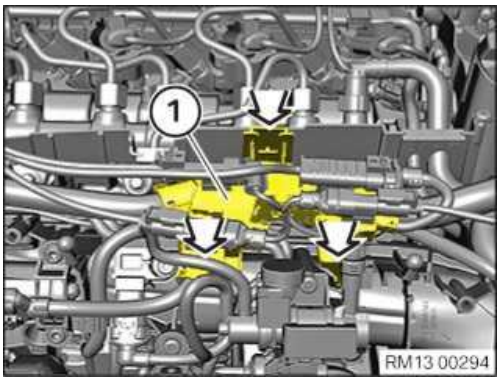
Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

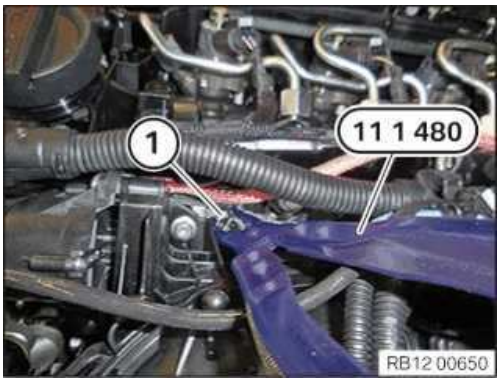
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

103 – Fastening the wiring harness section for the intake plenum



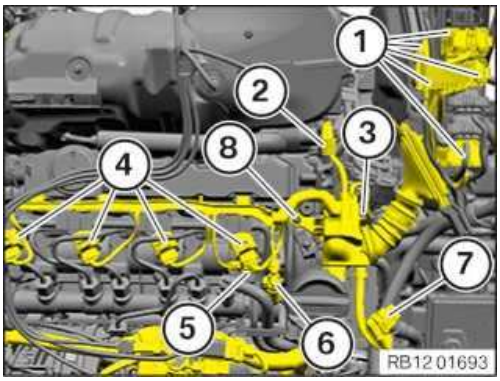
cardiagn.com

Overview: Wiring harness section for the engine



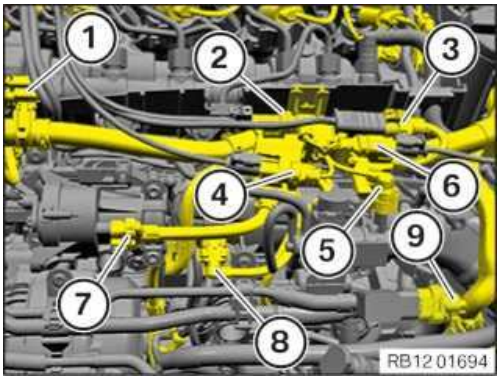
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

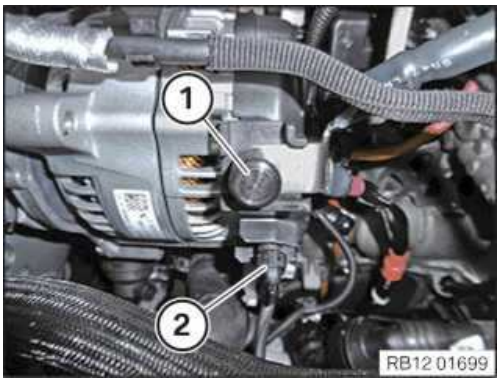


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

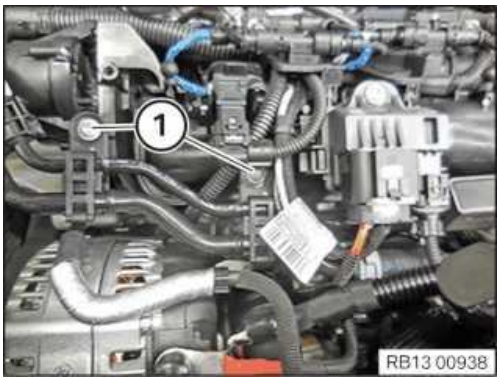


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

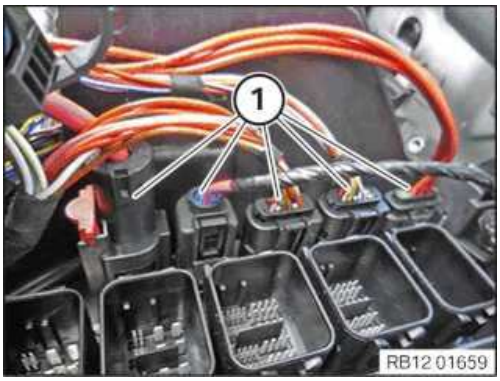


- Connect and lock the connector (2).

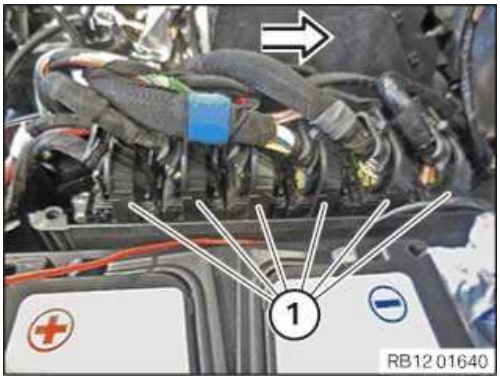
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

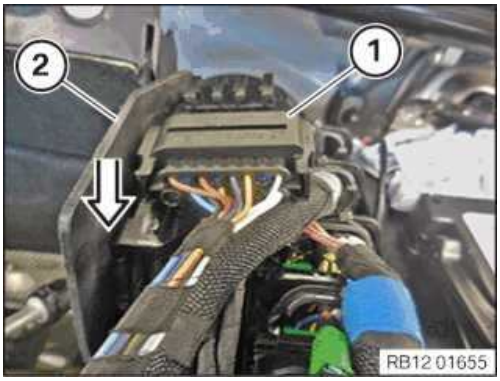


- Position the fuel line.
- Tighten the screws (1).

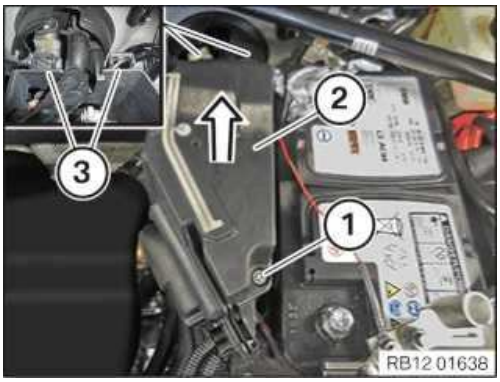


Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

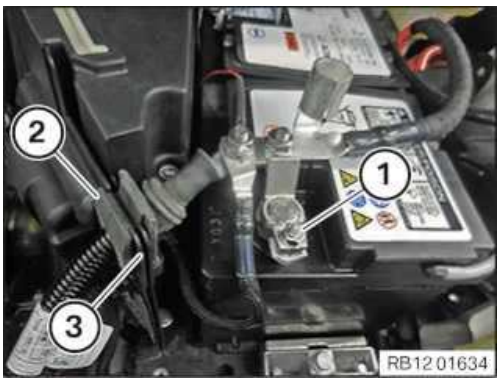


cardiagn.com



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

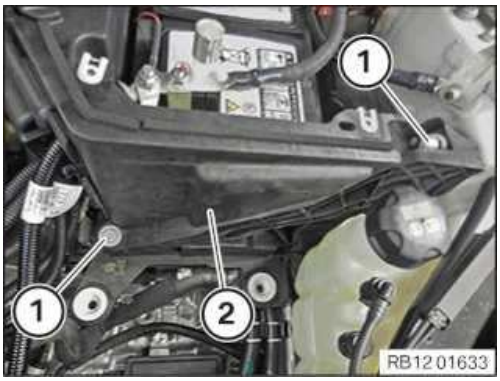


- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

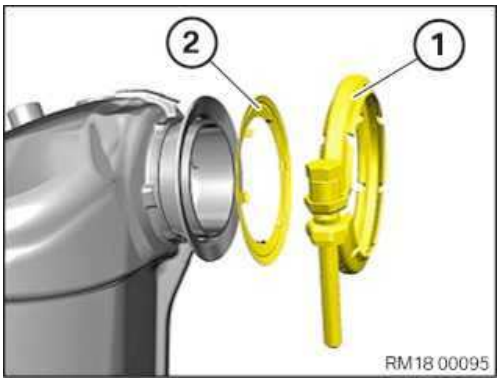
NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



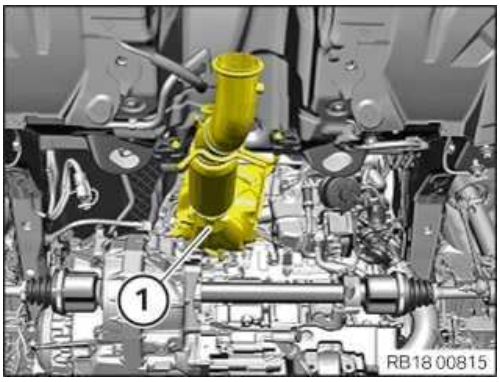
104 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

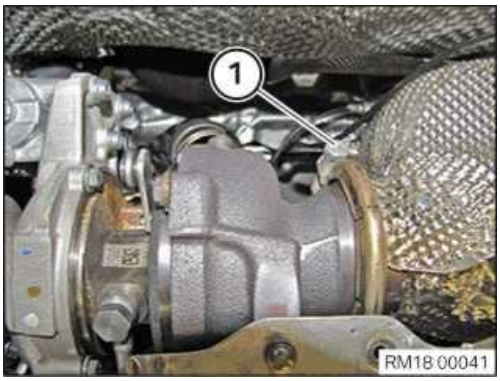
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

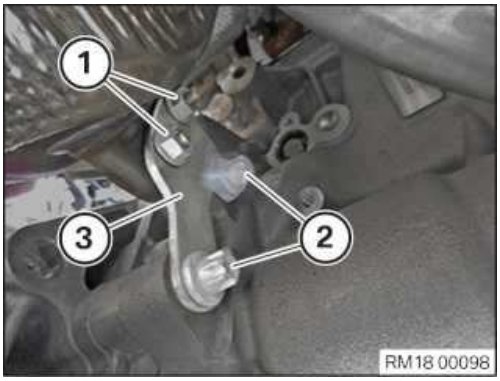
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

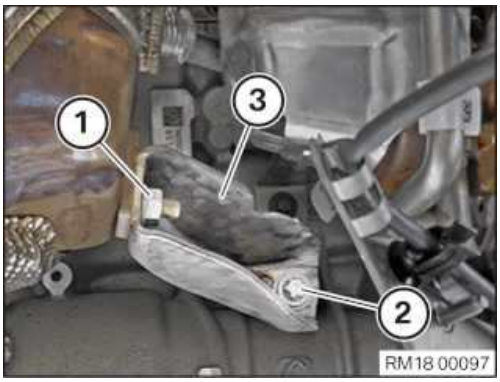


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



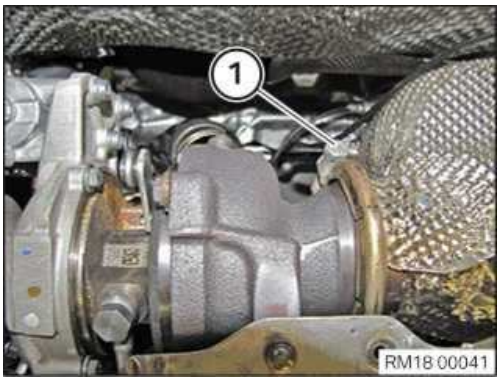
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



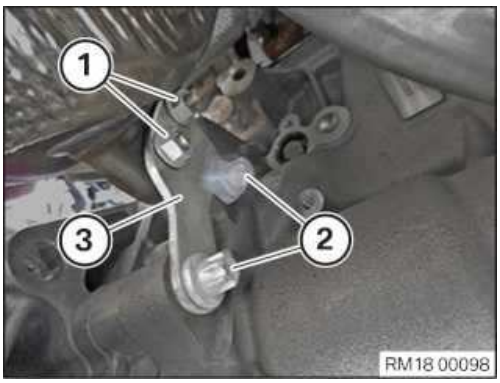
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



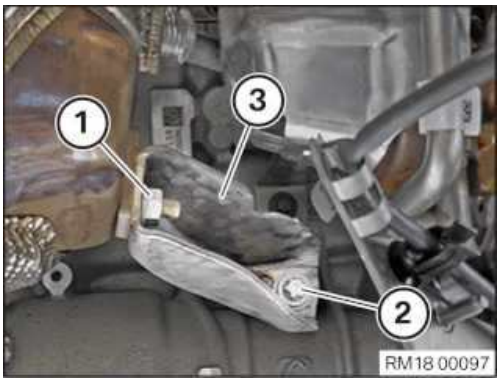
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

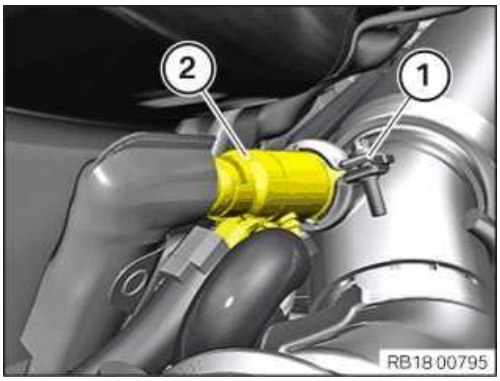
Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

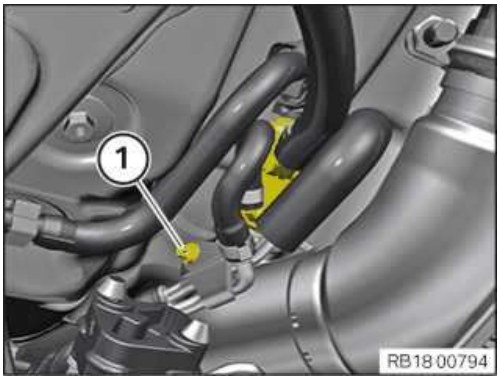


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

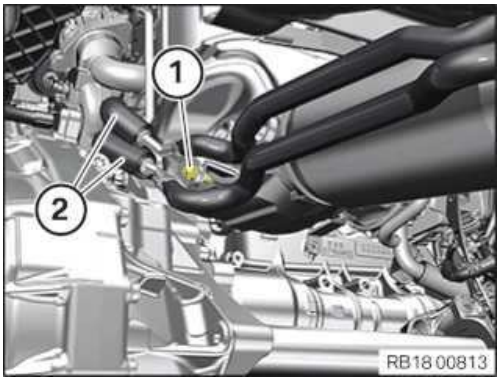
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

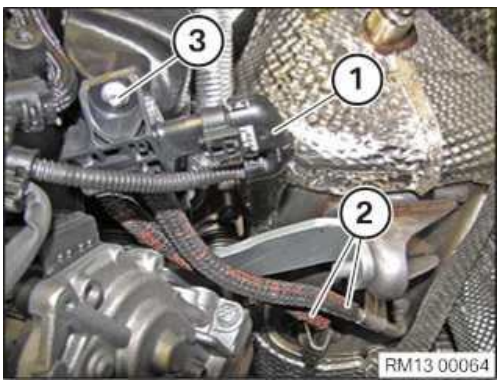


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

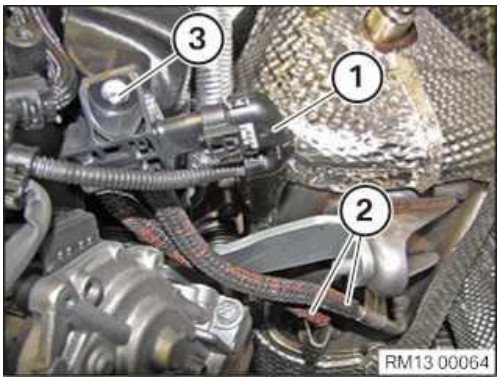
- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.



Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

106 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

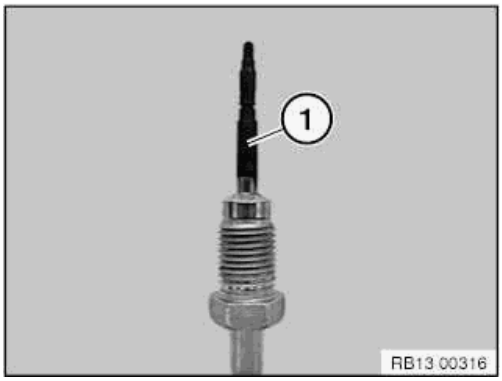
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

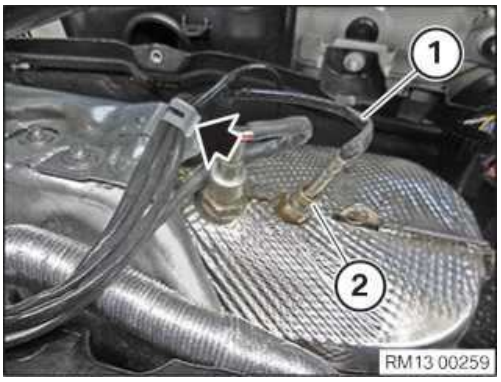


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

107 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

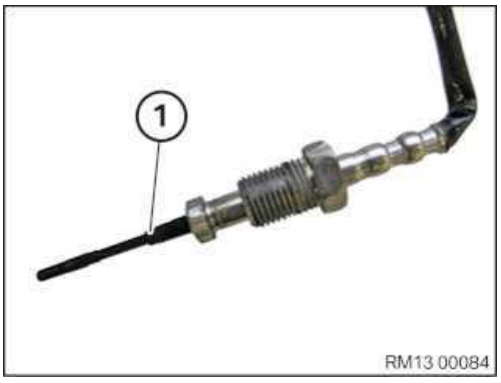
- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

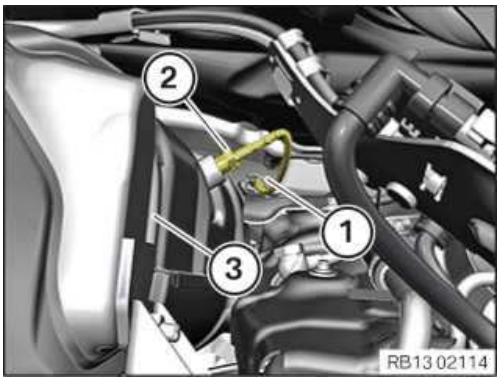
  The connector (1) must engage audibly.



108 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.

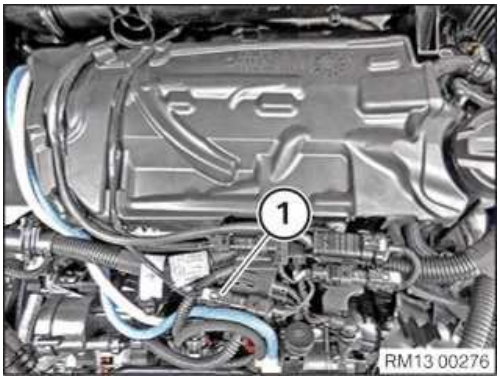


Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

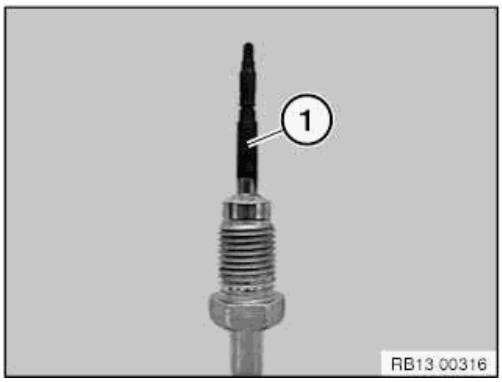
cardiagn.com



- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

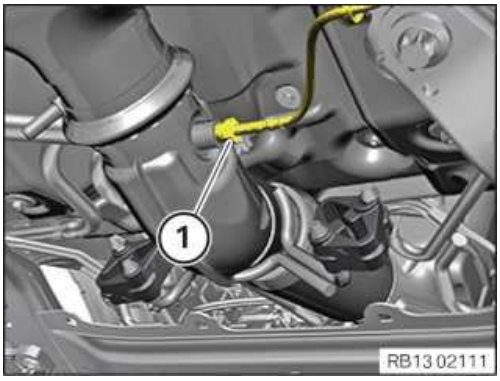


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

109 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

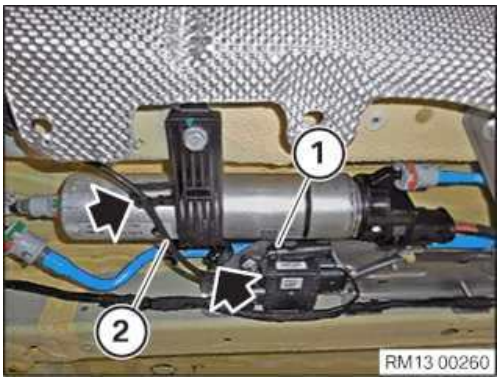
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

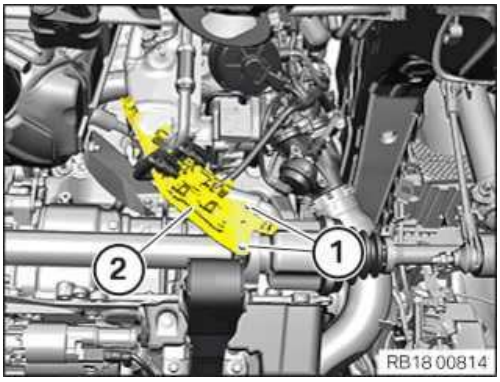
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

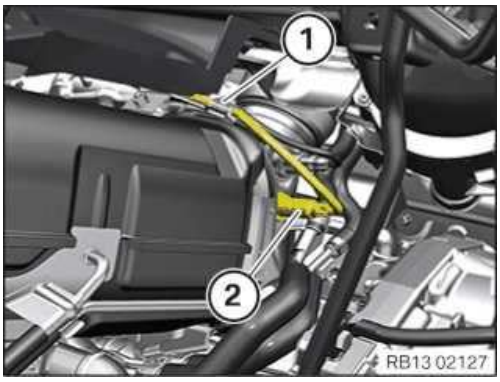


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

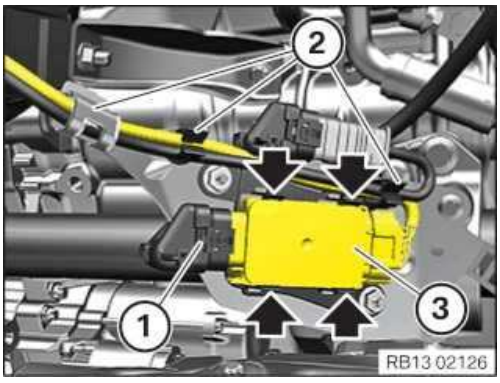
110 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



111 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

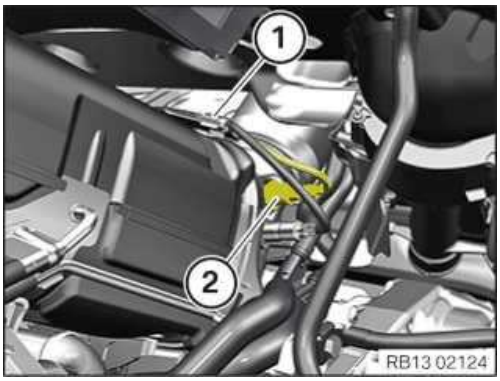
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

112 – Install the monitoring sensor

TECHNICAL INFORMATION



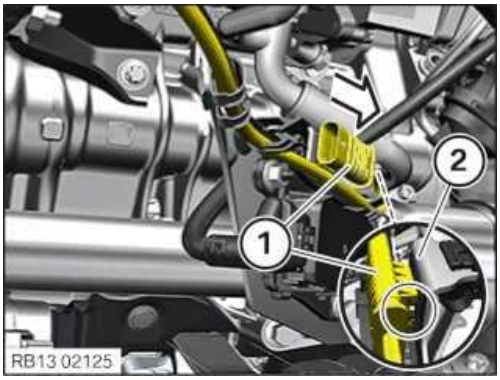
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

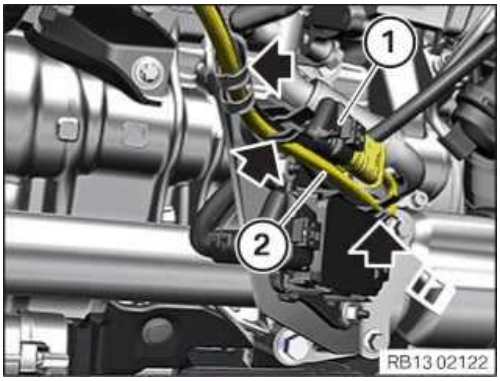
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)** .

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

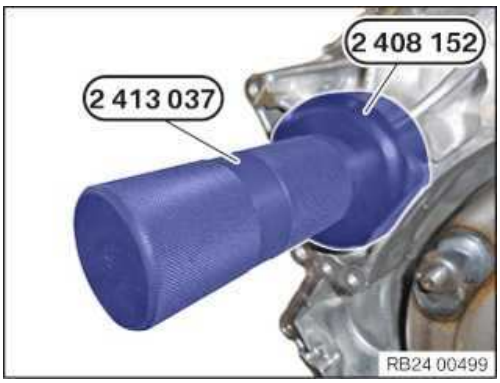
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

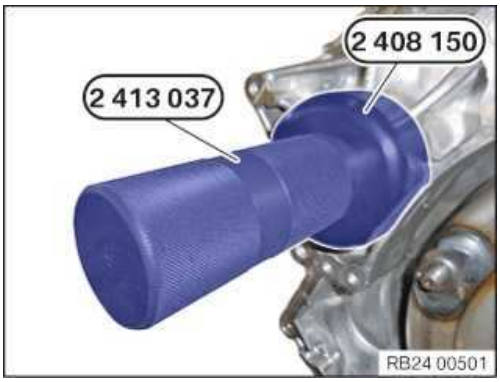
113 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

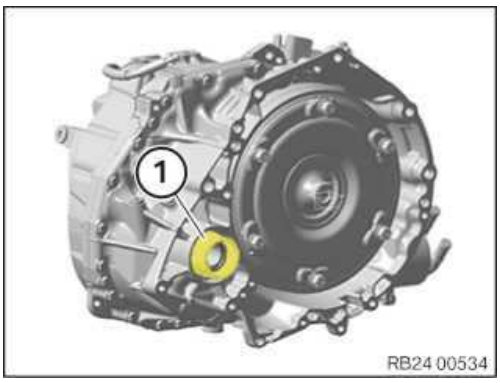
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



cardiagn.com



- Insert special tool **2 411 739** into the inner radial shaft seal.

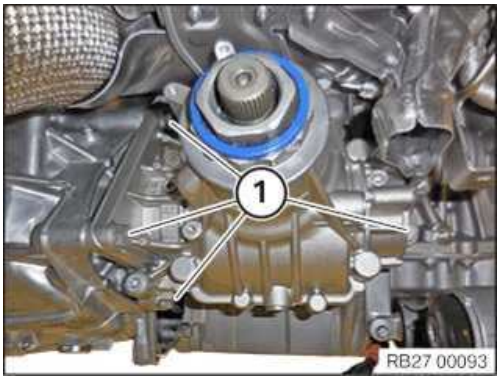


- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.



cardiagn.com

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

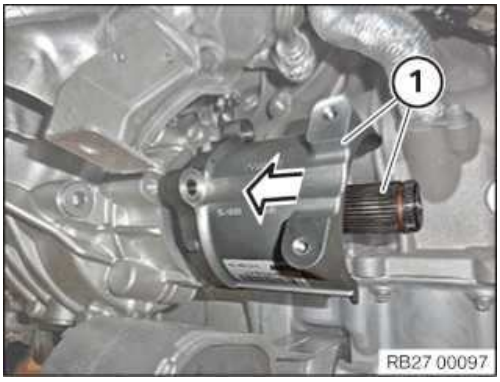
Technically suitable transfer box and electrical transmission oils	

Main group 27

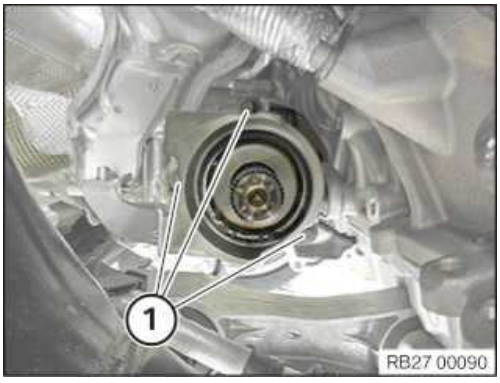
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



114 – Install the intermediate shaft with the support tube



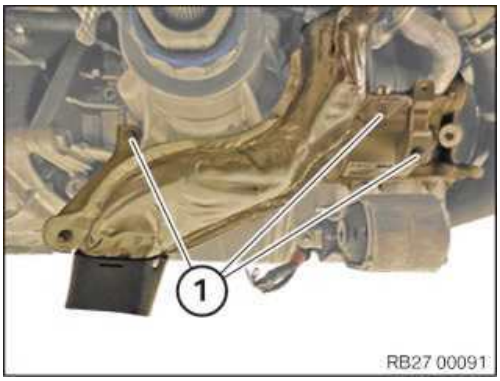
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

115 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

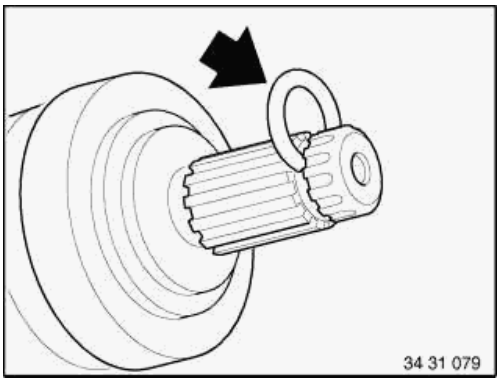
116 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

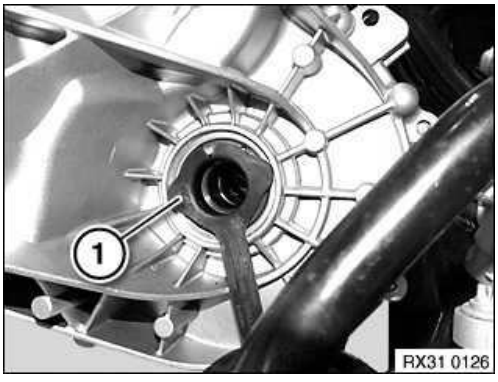
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

117 – Partially installing the left output shaft



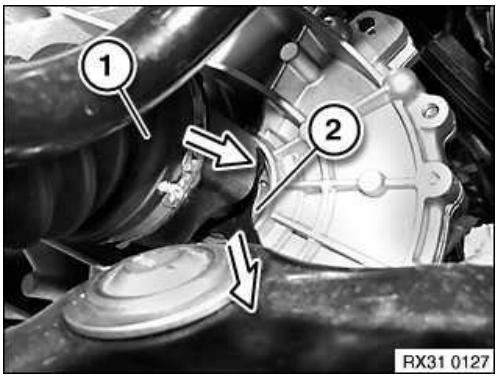
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

118 – Install propeller shaft.

CAUTION

Component with heavy weight.

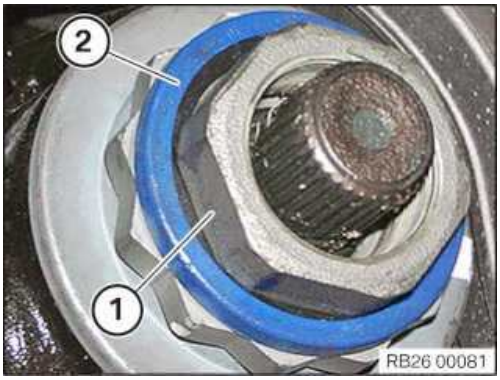
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

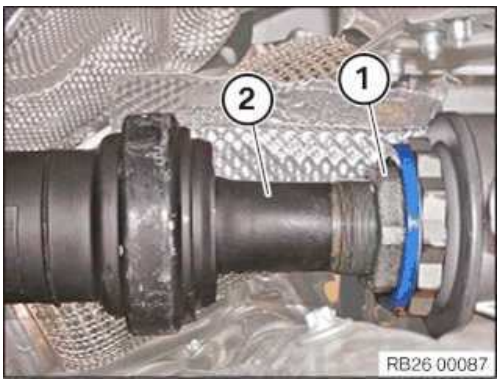
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

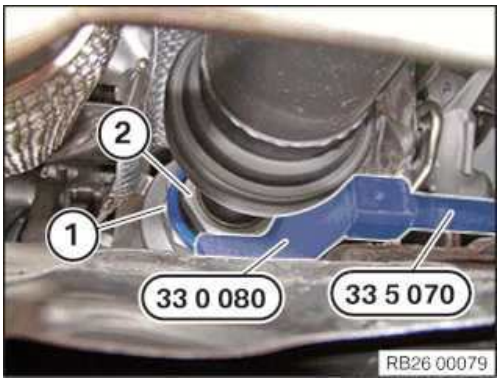
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



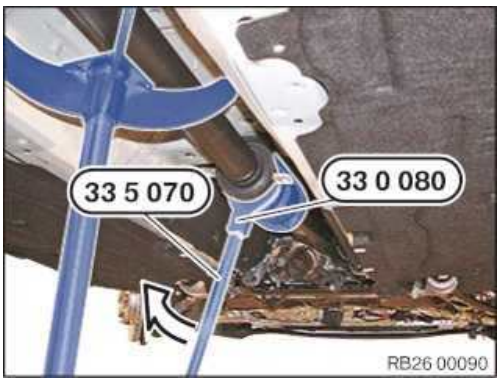
- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.



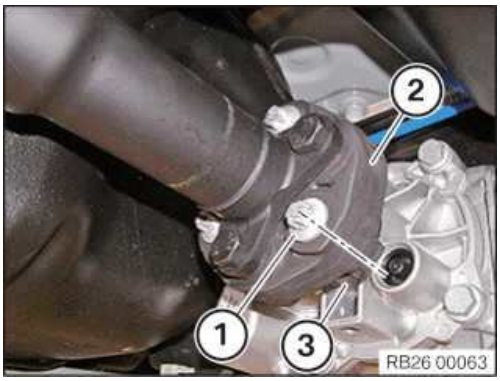
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

cardiagn.com

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

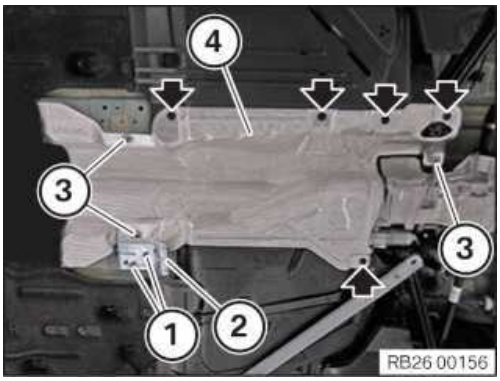
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

119 – Installing the rear heat shield

cardiagn.com

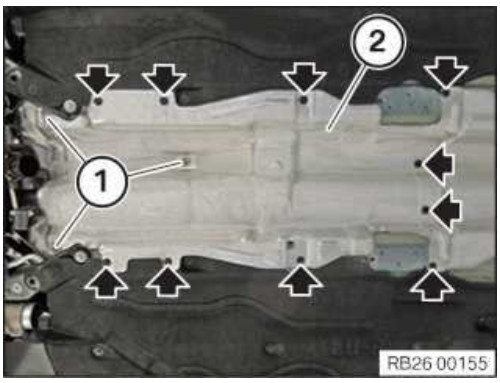
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

120 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

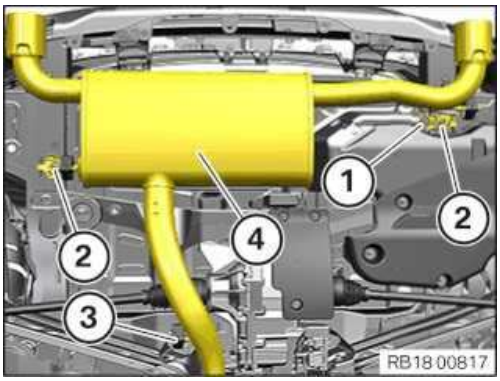
121 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

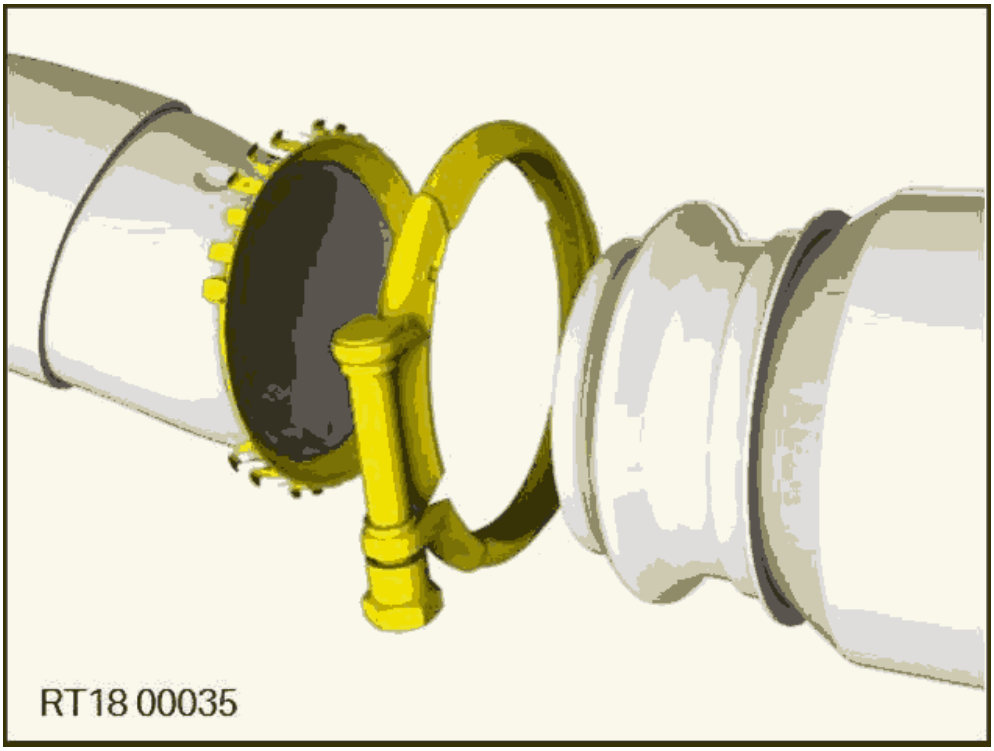
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

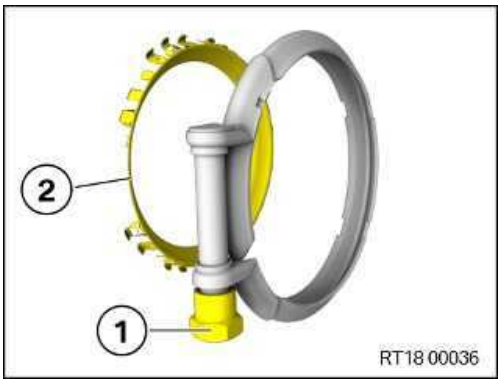
Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



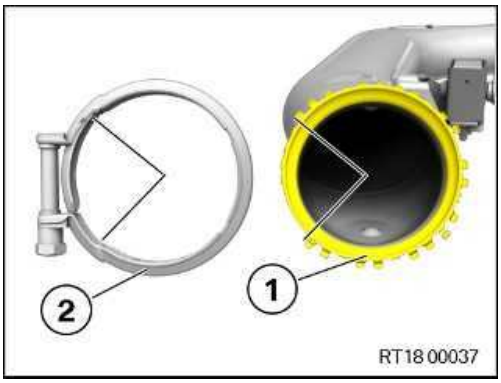
Exhaust bracket on body



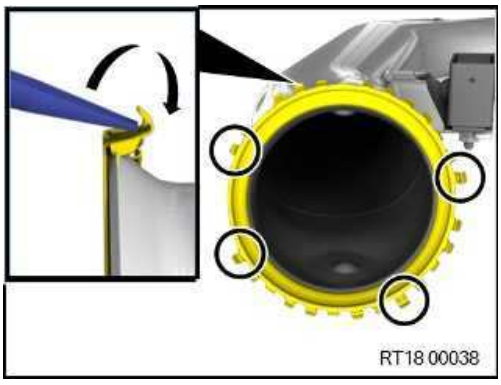
Hexagon screw M8x30		Tightening torque	19 Nm

- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▶ **Install the V-clip**

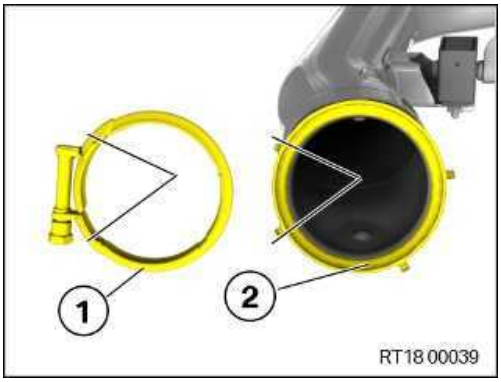


V-band clamp



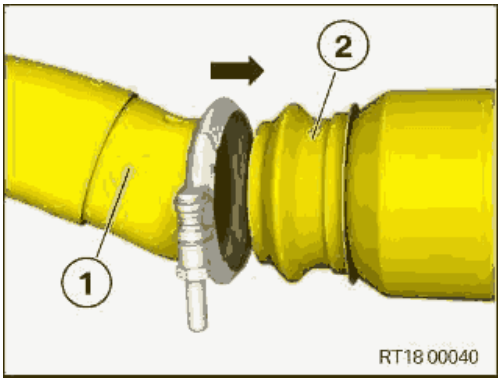
- Unscrew the nut (1) and remove the sealing ring (2).

cardiagn.com



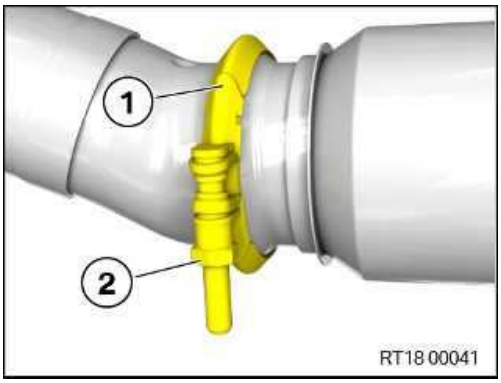
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



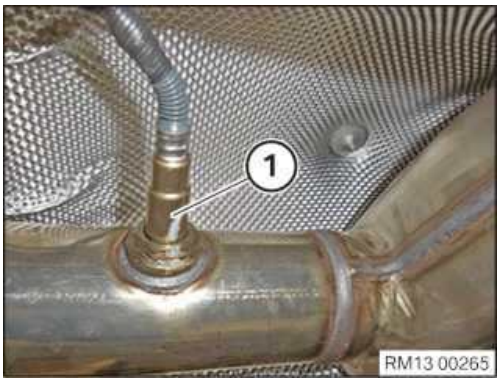
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

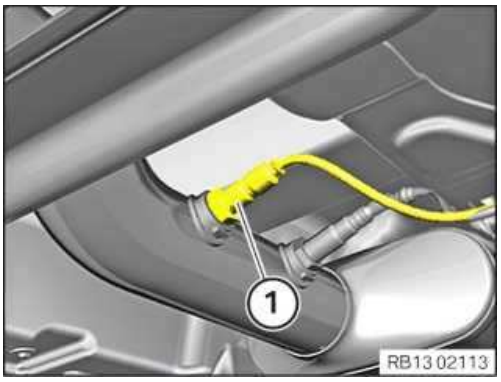
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



cardiagn.com

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

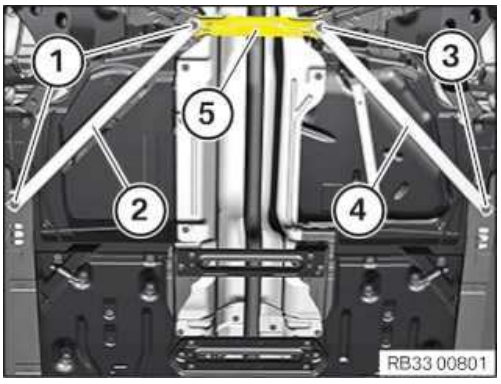


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

122 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

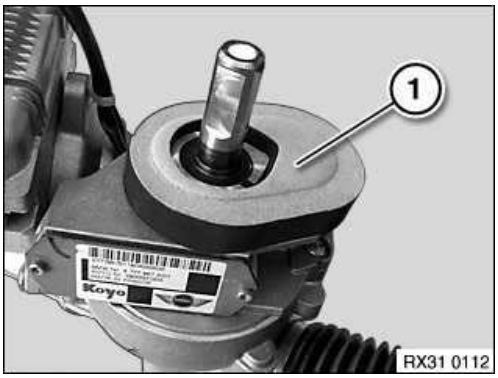
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

123 – Install the connecting support on the tunnel in front and back

cardiagn.com

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

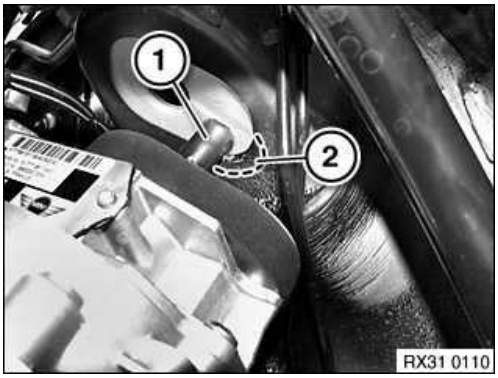
Front connection carrier to body



M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

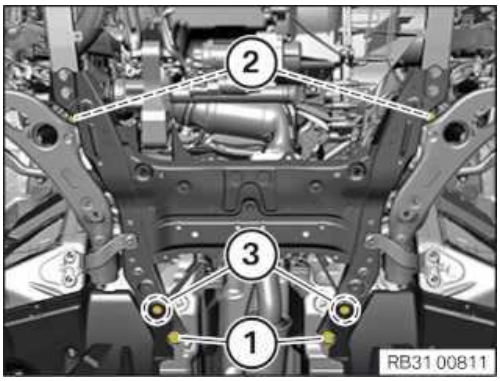


M8x18		Tightening torque	28 Nm

124 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

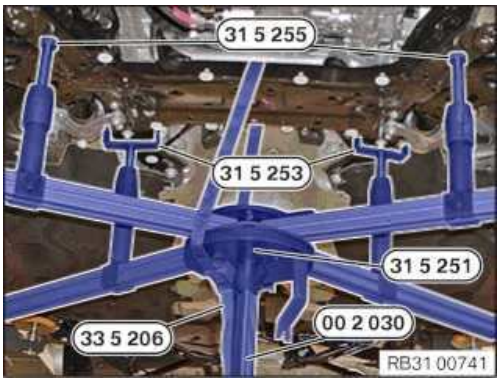
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

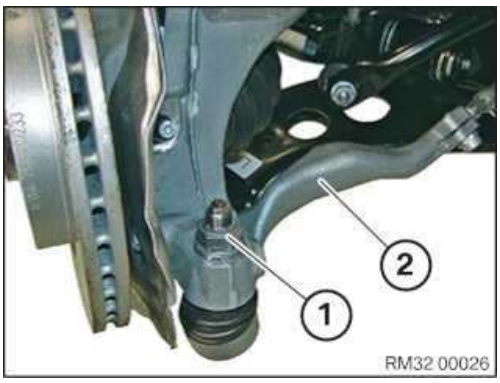
M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm



- If necessary, tighten the screws in the areas (3).

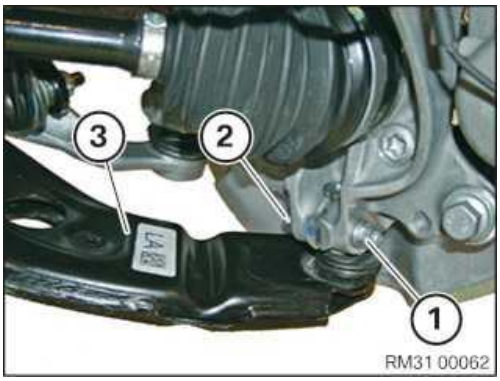
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE

Perform the operations on the left and right side.



- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

125 – Install the mounted parts on the front axle support

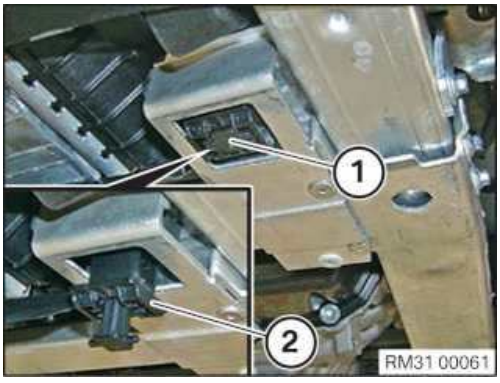
NOTICE

Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

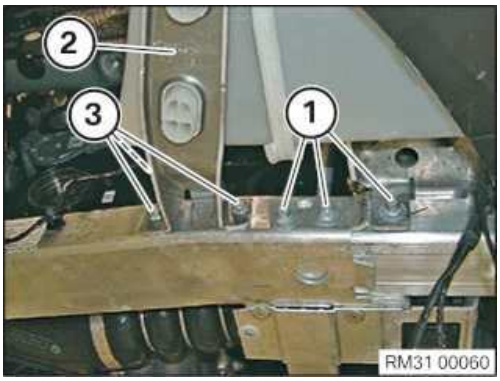


M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

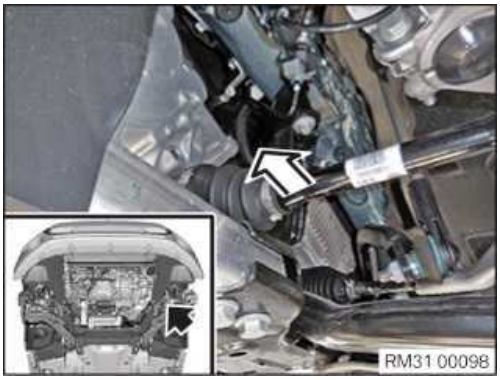
cardiagn.com

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



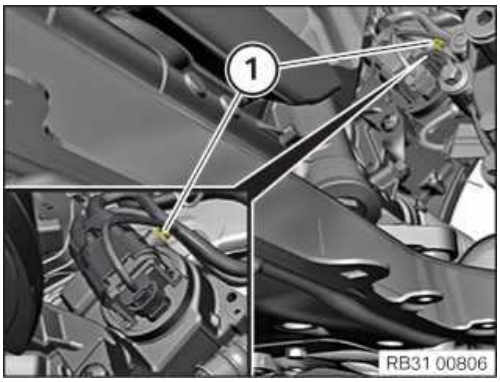
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

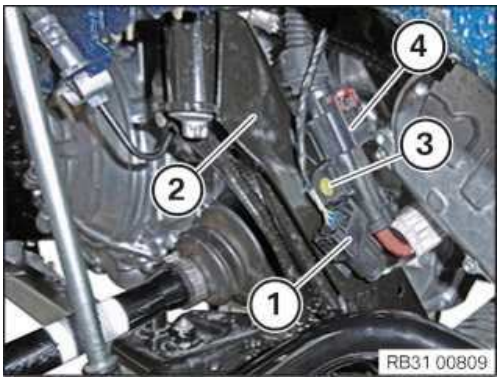
		Tightening torque	11,8 Nm

126 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

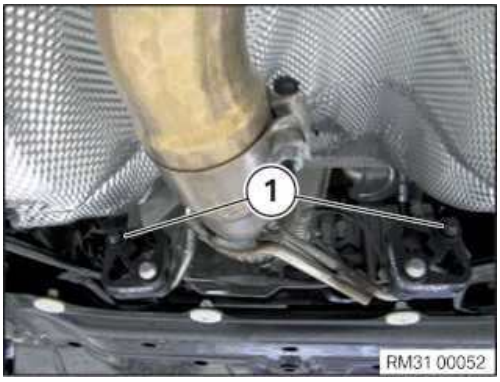


- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

127 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

128 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

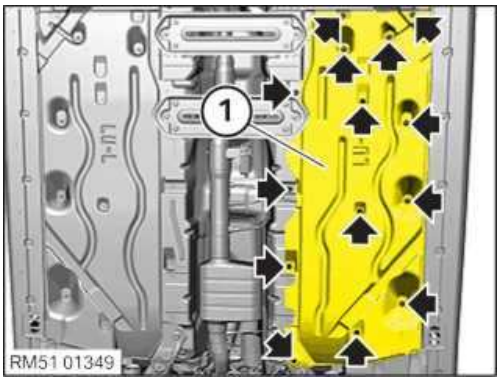
- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm



129 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

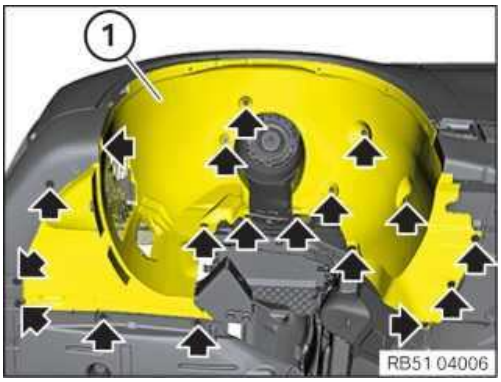
130 – Installing underbody panelling , right

cardiagn.com

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm



Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

131 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

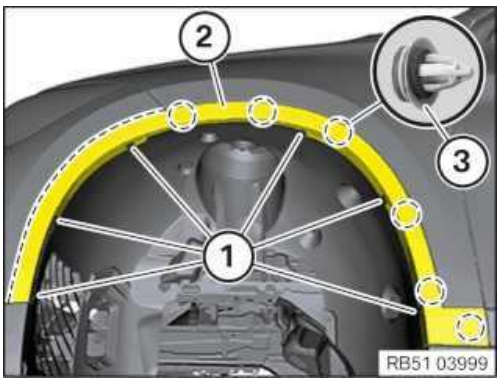
Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

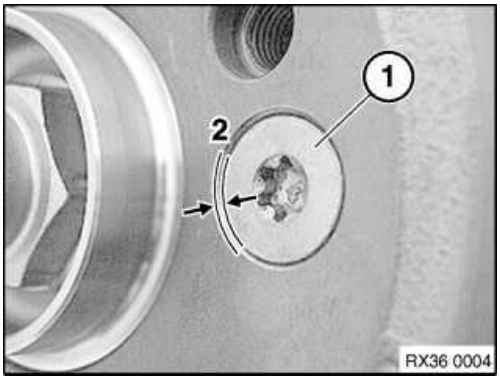
cardiagn.com

▶ Mounting the wheel

▷ Clean the contact surfaces between the brake disc and the wheel rim

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

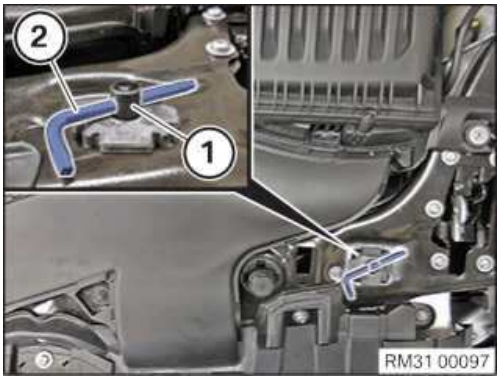
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



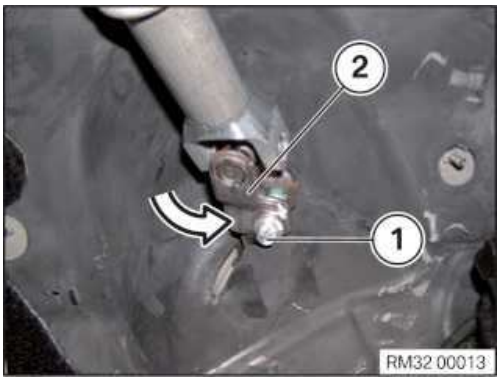
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

133 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

134 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

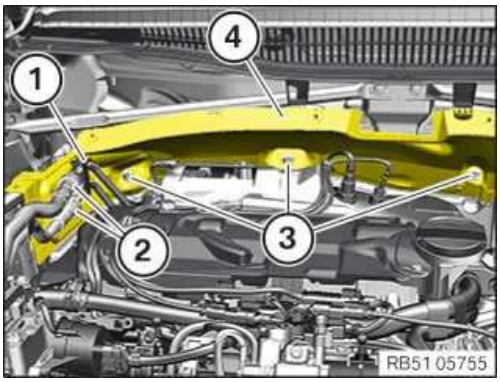
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

135 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

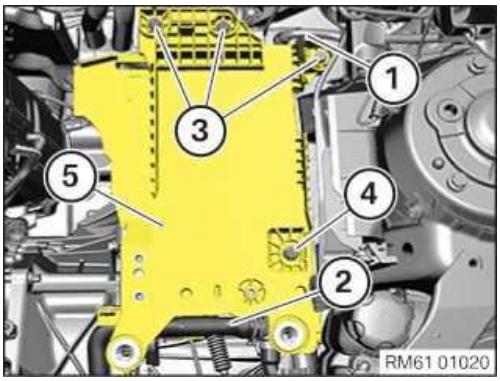
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

136 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

137 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

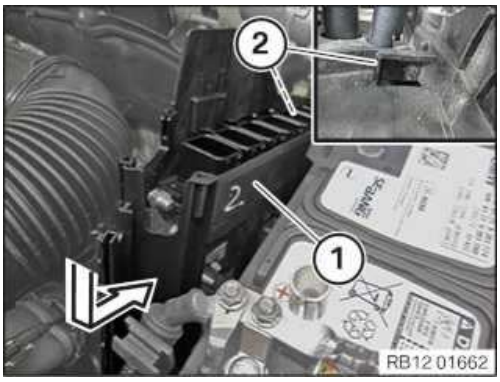
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

138 – Install electronics box

Prerequisite



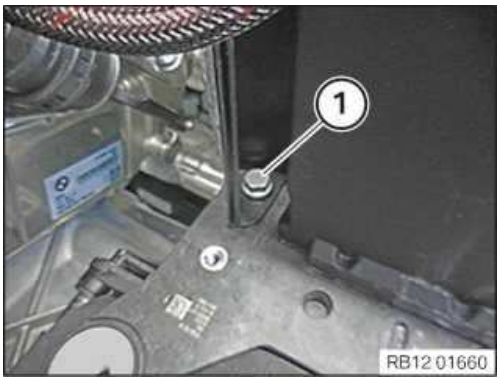
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

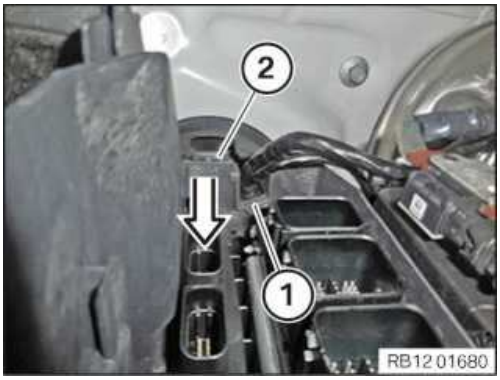
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

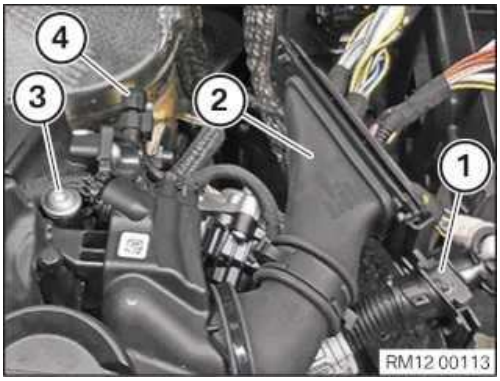


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

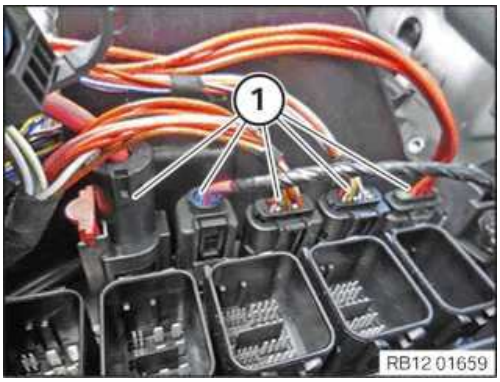


- Tighten down screw (1).

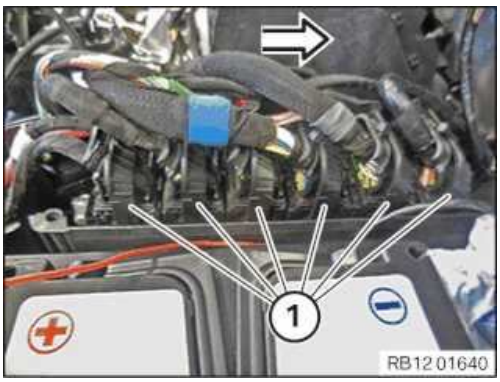
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



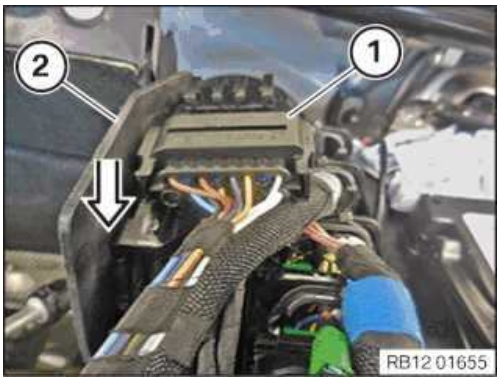
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



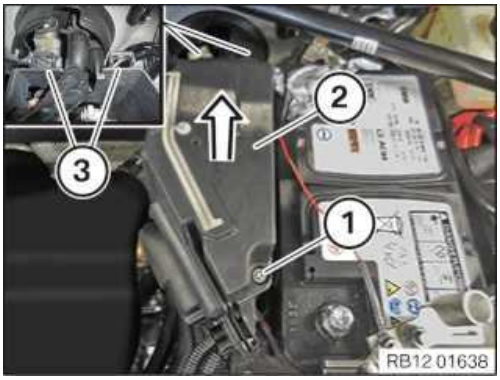
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

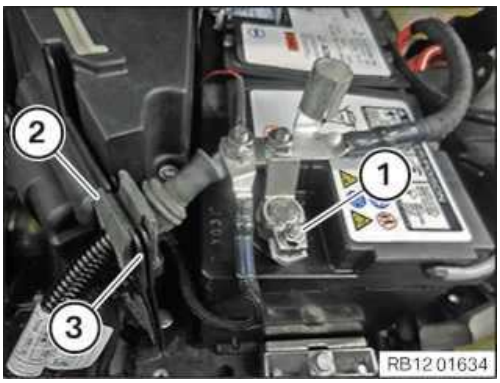


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

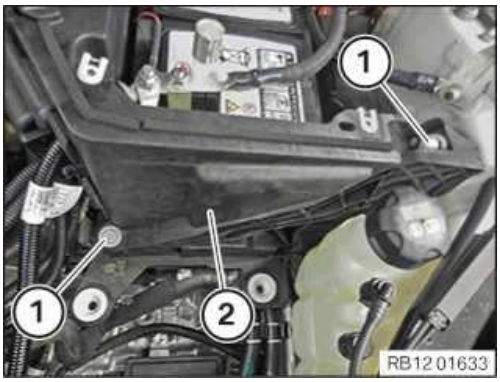
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

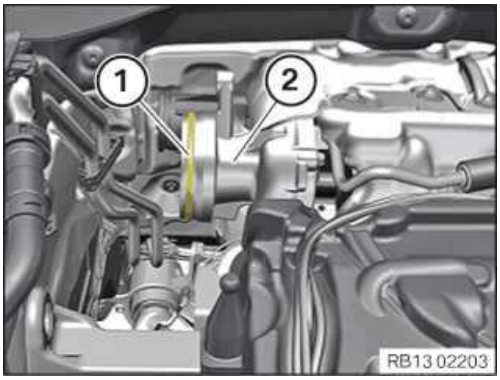


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

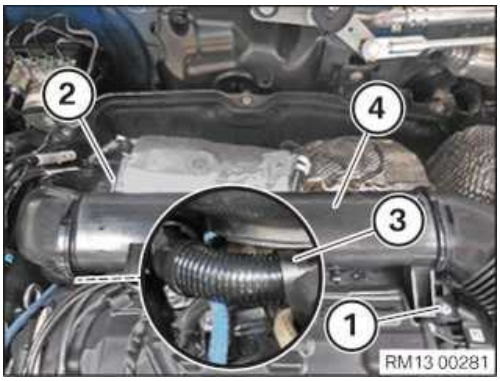
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

139 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

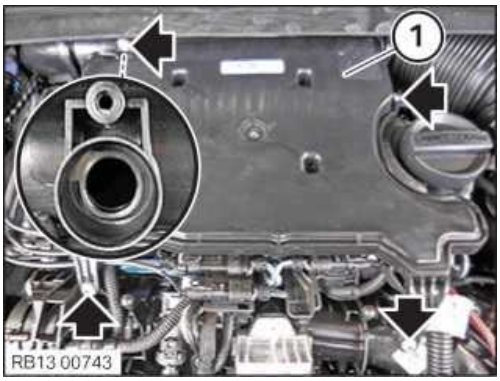
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

140 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

141 – Install acoustic cover

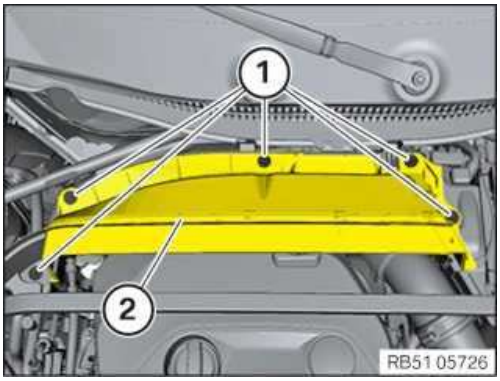
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

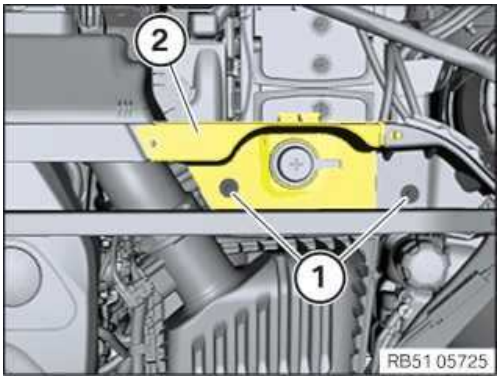
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

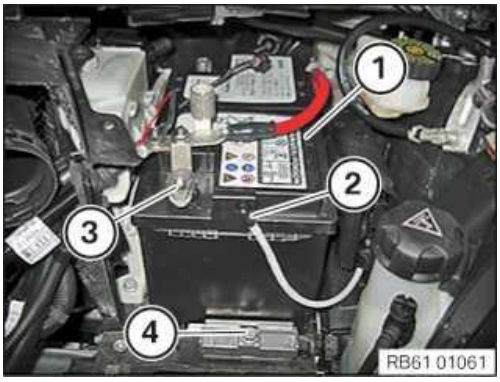


142 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

143 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

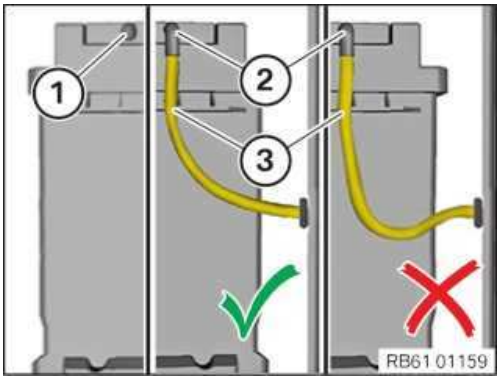
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

cardiagn.com

▶ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

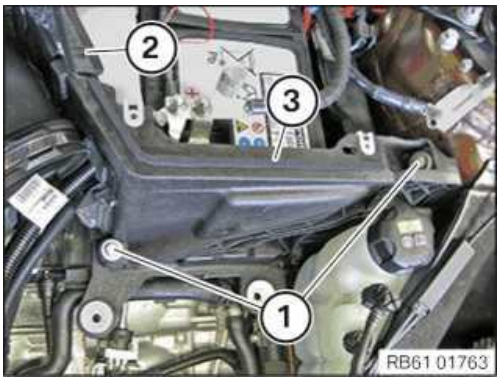
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check

- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).



Result

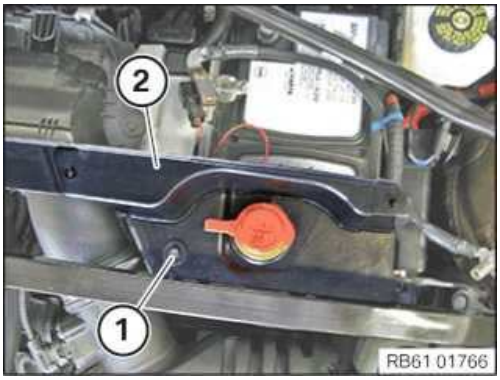
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

- Insert tension strut (3) and tighten with screws (1).

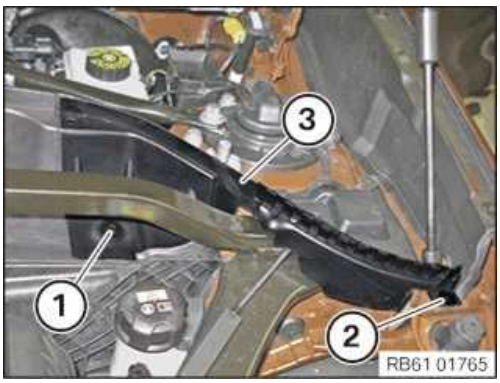


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



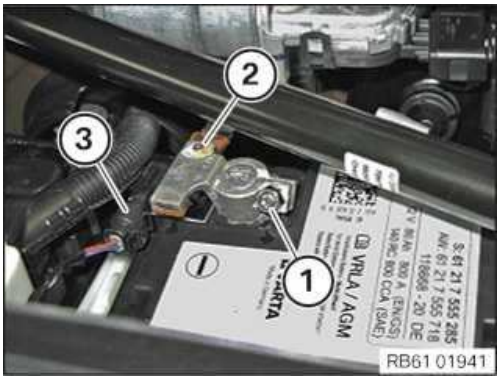
M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



Battery cover

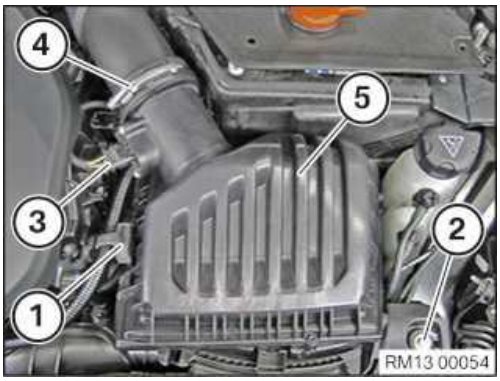
M8		2,8 Nm

144 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).



Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

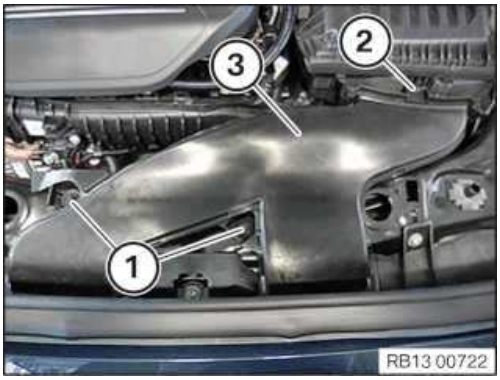
145 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

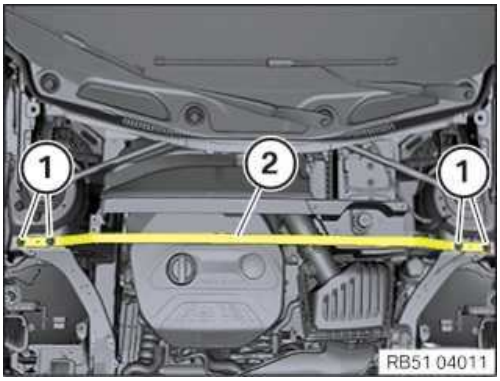
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

146 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



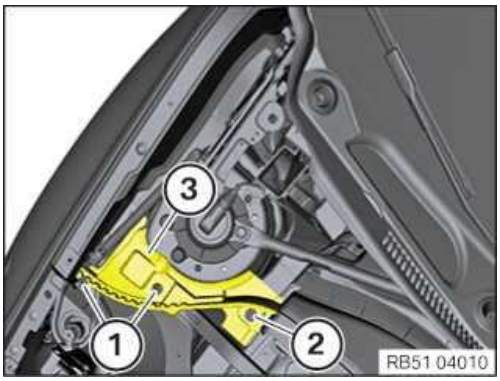
Intake neck to cross connection

M6		Tightening torque	8 Nm

147 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

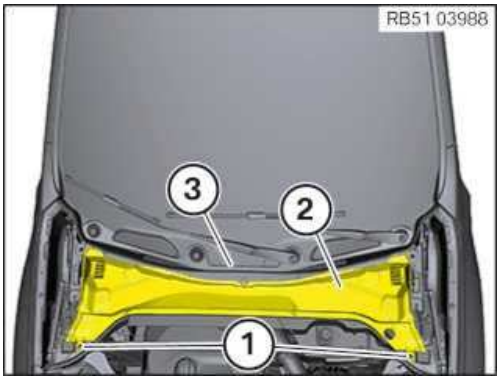
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



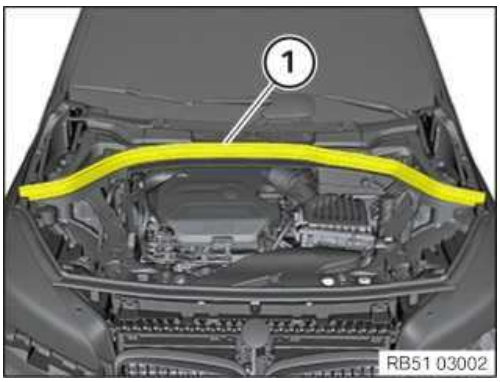
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

148 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

149 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

150 – Fill and bleed the coolant circuit

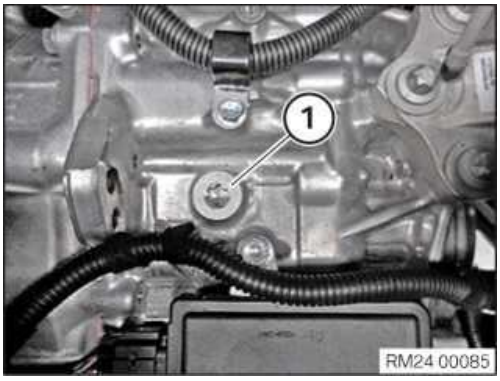
▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

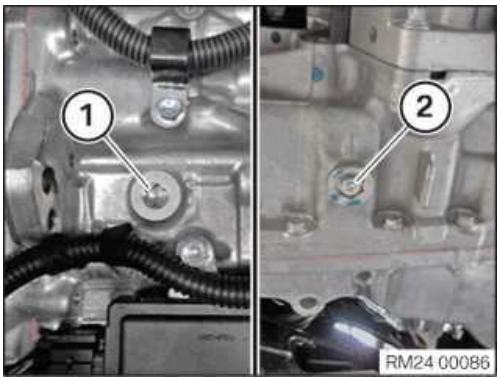
151 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.

cardiagn.com

- Renew sealing rings.

  Parts: Sealing ring

- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring

- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

152 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

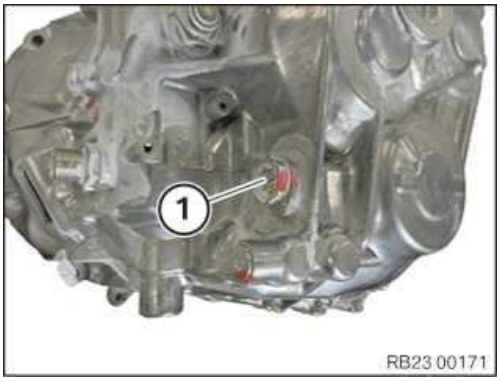
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION



Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

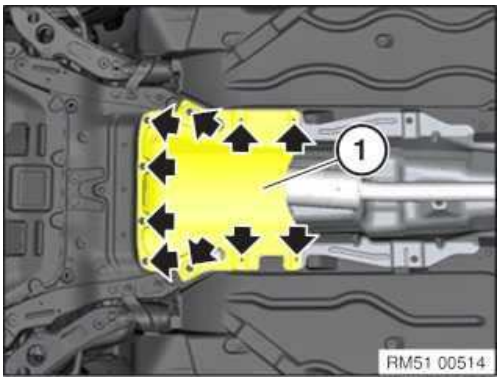
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



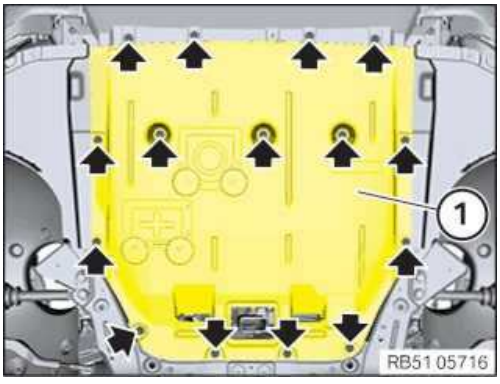
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

153 – If installed: Installing underbody protection at rear

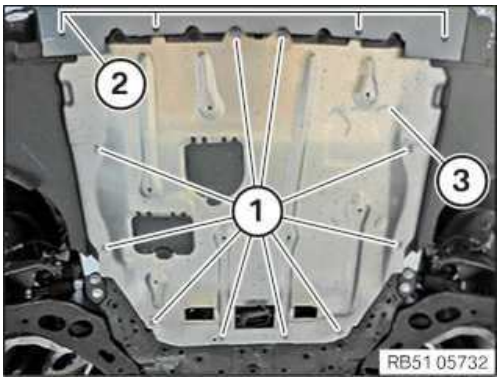


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

154 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Additional Information

Overview of Tightening Torques

Cross connection to carrier support — Used in step 19

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator — Used in step 19

Bolt to rubber mount		Tightening torque	8 Nm

Air duct to upper connection — Used in step 19

M6x20 screw		Tightening torque	11,8 Nm

Bracing strut to upper connection — Used in step 19

M8x20 screw		Tightening torque	28 Nm

Rear end of front axle support to body — Used in step 73 124

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 73 124

M12 screw	Renew screw.	Tightening torque	108 Nm

Overview of Special Tools

cardagn.com

0 490 133 (00 2 030) Device

Common

Used in step 32 73 81 124

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

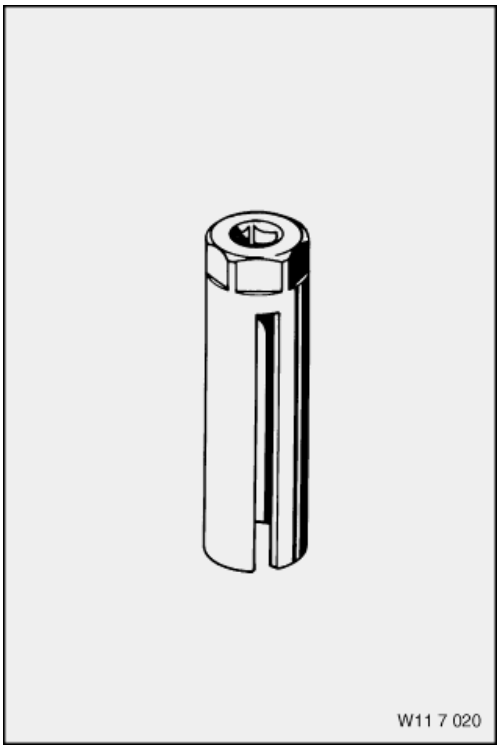
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

Common

Used in step 38 118



Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with

0 495 105 (11 4 480) oddments tray

Common Used in step 70 71 74

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

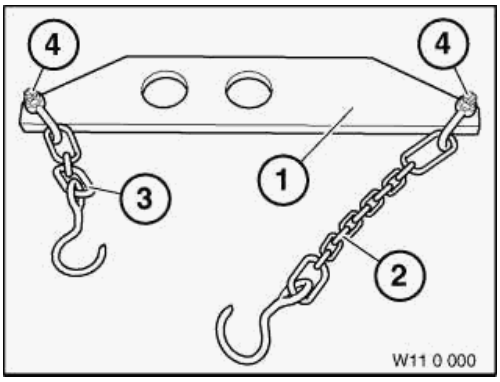
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 357 071 Panel

Common Used in step 73 81

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

2 459 012 Holder



Common Used in step 73 81

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

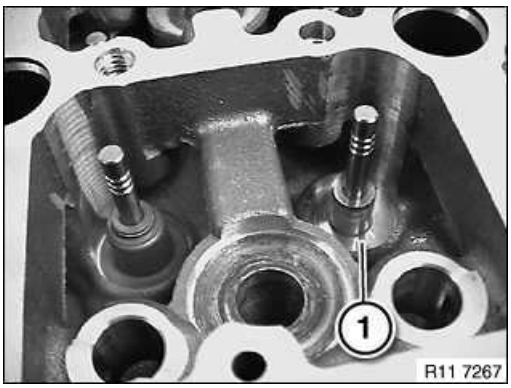
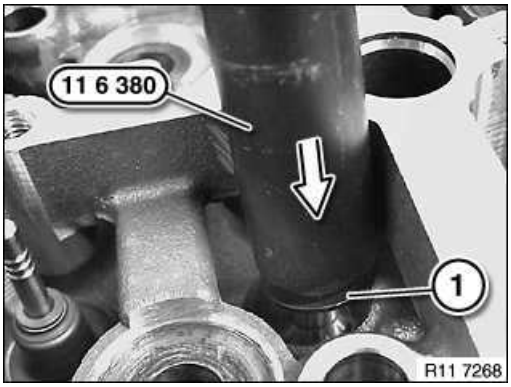
- Remove valve springs



Removal:

Tap open valve stem seal (1) with special tool 11 1 480 or with a size 13 or 14 hexagon bit.



Remove valve stem seal (1) with turning and pulling motions.

Installation:

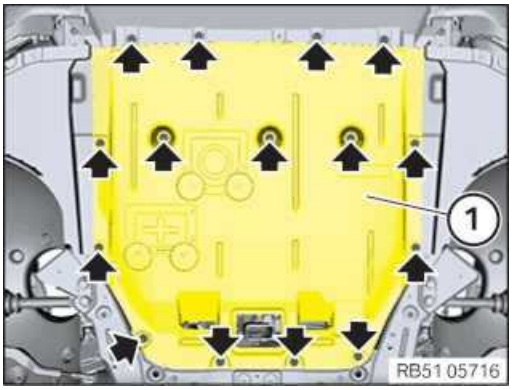
Installation note:
The contact surface (1) must be clean.

cardiagn.com

Installation note:
Before installing the valve stem seals, the **assembly sleeve must** be fitted on the valve stem! **Risk of damage** to the sealing lip!

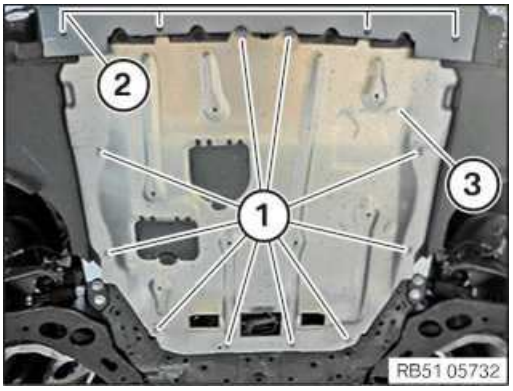
Press on valve stem seal (1) to stop using special tool 11 6 380 in direction of arrow.

Required follow-up work:



- Install valve springs
- Assemble engine

cardiagn.com



11 40 000 Checking engine oil pressure

PRELIMINARY WORK

1 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

MAIN WORK

2 – Checking the oil pressure

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

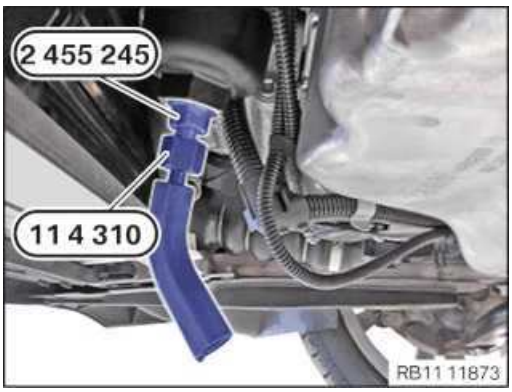
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

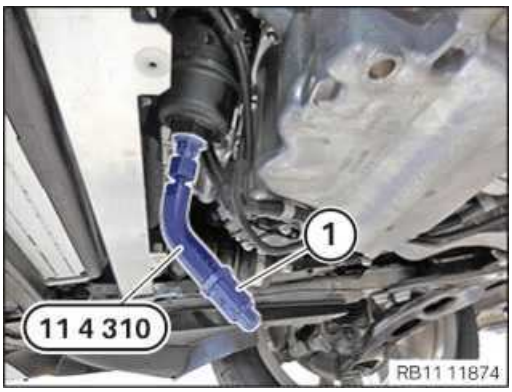
cardiagn.com

- Renew oil drain plug (1) with the sealing ring (2).

  Parts: Oil drain plug, sealing ring



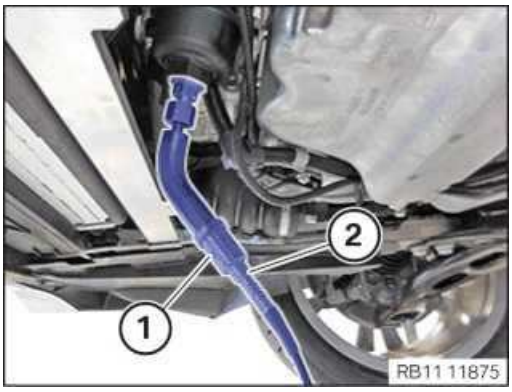
- Apply a thin coating of oil on the sealing rings on the special tool .



- Thread in the special tool at the oil filter cover (1) and install.
- Tighten the special tool on the oil filter cover (1).

Special tool to oil filter cover

Special tool		Tightening torque	6 Nm

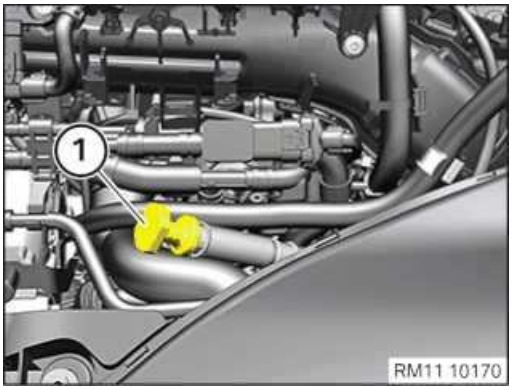


- Connect special tool **0 496 623 (11 4 310)** to special tool .

- Slightly grease gasket on the pressure sensor (1) **(part number: 81 31 2 357 801 and 81 38 0 431 592)**.
- Manually tighten the pressure sensor (1) **(part number: 81 31 2 357 801 and 81 38 0 431 592)** in the special tool **0 496 623 (11 4 310)**.

cardiagn.com

- Connect and lock the connecting cable (2) on the pressure sensor (1).
- Connecting cable (2) and pressure sensor (1)**(part number: 81 31 2 357 801 or 81 38 0 431 592)** with the Integrated Measurement Interface Box (IMIB) (81 38 2 295 937).



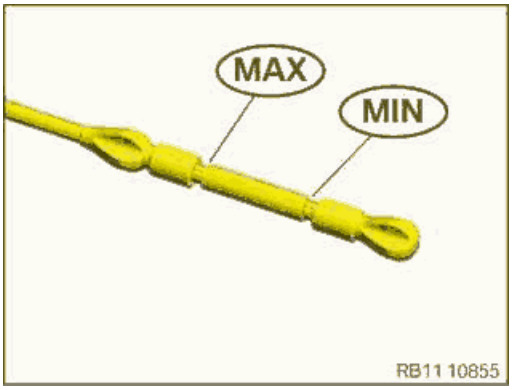
▶ **Check engine oil level**

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▷ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

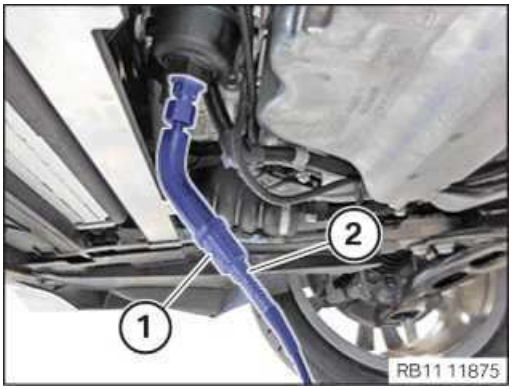
TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

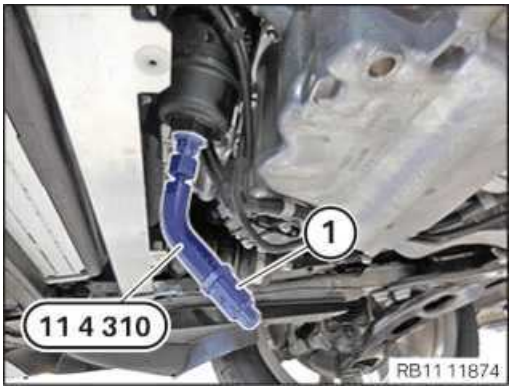
TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

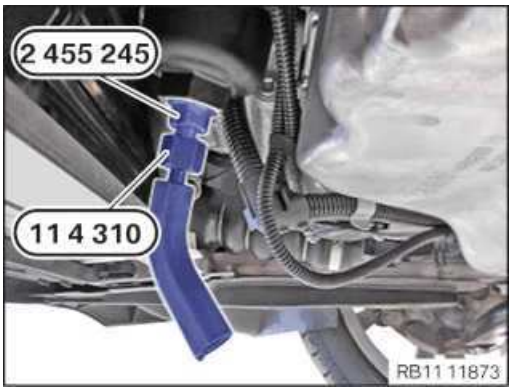


- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

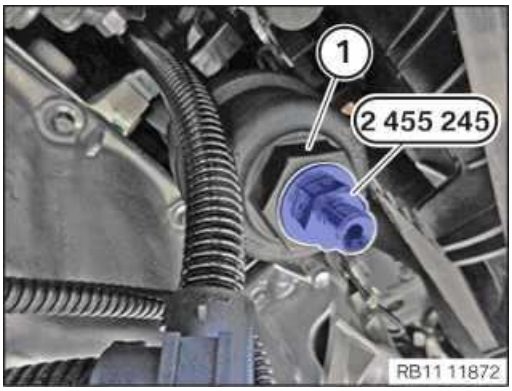
◁



cardiagn.com



- Check oil pressure.
- Observe diagnosis instructions.

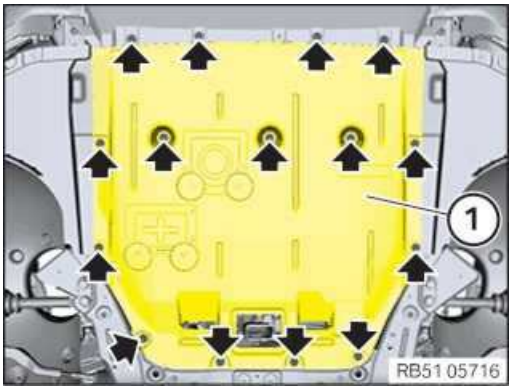


- Unlock and disconnect the connecting cable (2) from the pressure sensor (1).

- Thread out the pressure sensor (1) from the special tool **0 496 623 (11 4 310)** and remove.

- Thread out the special tool **0 496 623 (11 4 310)** from the special tool and remove.

- Thread out the special tool from the oil filter cover (1) and remove.

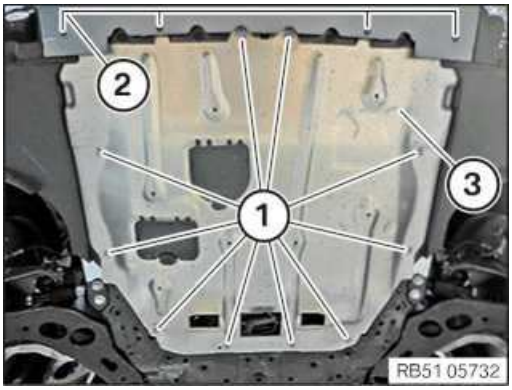


- Feed in and install new oil drain plug (1).
- Tighten new oil drain plug (1) on the oil filter cover (2).

Oil drain plug to oil filter cover

	Renewoil drain plug.	Tightening torque	6 Nm

cardiagn.com



3 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

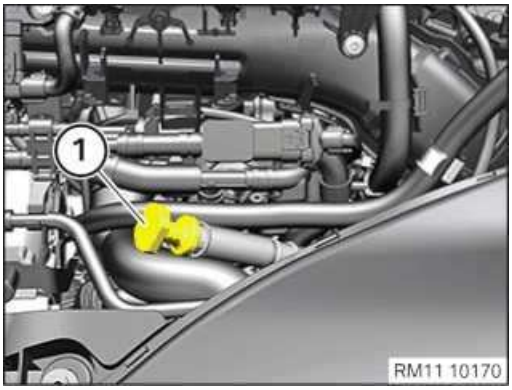
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



4 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

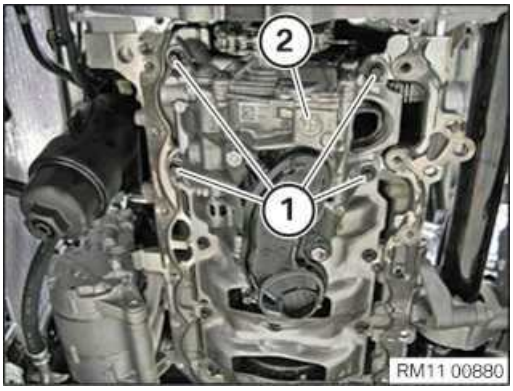
Overview Technical Data

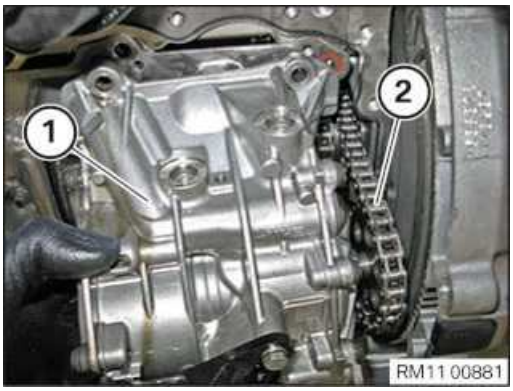
cardiagn.com

11 41 000 Removing and installing or replacing oil/vacuum pump (B47)



Important!

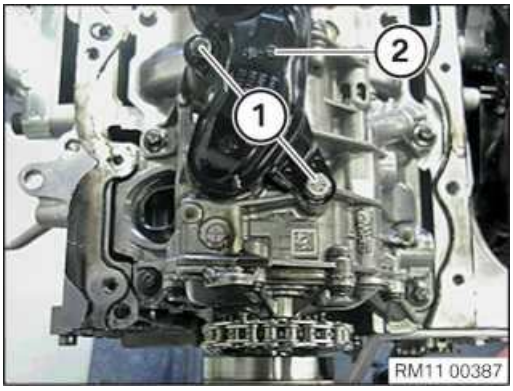
It is possible to remove and install the oil/vacuum pump **without** removing the gearbox.



Necessary preliminary tasks:

- Remove oil sump

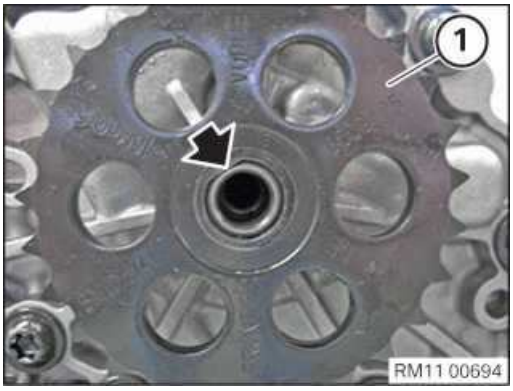
REMOVAL:



Release screws (1) of oil/vacuum pump (2).

Remove oil/vacuum pump (1) and feed out of drive chain (2).

cardiagn.com



Replacement:

Release screws (1). Remount intake pipe (2).

Tighten down screws (1).

Tightening torque: 11 41 1AZ.

Replacement: Important!

Pay attention to mounting flats on oil pump (see arrow).

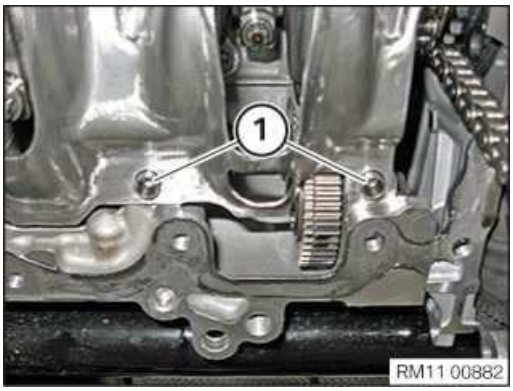
Labelling "Front" on the camshaft sprocket (1) needs to be visible.

Replacement:

Important!

Screw (1) has left-hand thread.

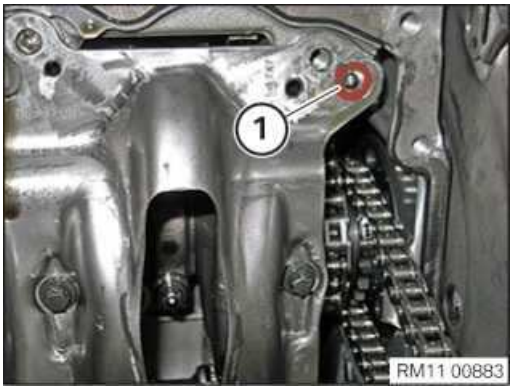
"Front" needs to be legible on the camshaft sprocket.



Hold down camshaft sprocket (2) with a suitable tool. Release screw (1). Remount camshaft sprocket.

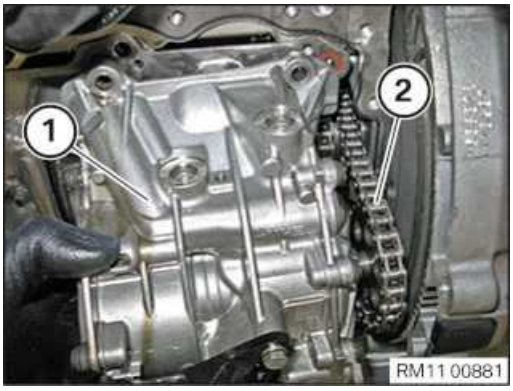
Parts: Replace screw (1).

Mount camshaft sprocket (2) and hold down with a suitable tool. Tighten screw (1).

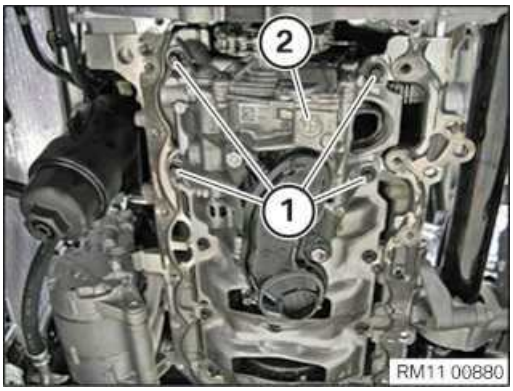


Tightening torque: 11 41 5AZ.

INSTALLATION:



Check centring bushes (1) for damage, replace if necessary.



cardiagn.com

Note:
Sealing ring (1) must not be damaged or missing.

Feed oil/vacuum pump (1) into drive chain (2).

Tighten down screws (1) of oil/vacuum pump (2).
Tightening torque: 11 41 2AZ.

Required follow-up work:

- Install oil sump
- Check engine for tightness

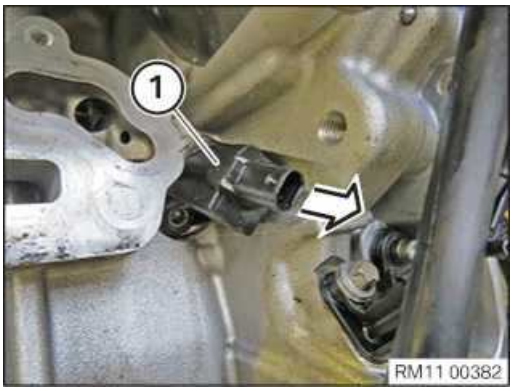
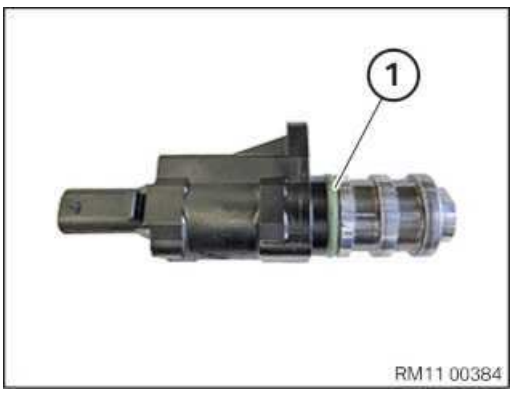
11 41 115 Removing and installing/replacing hydraulic valve (B47)



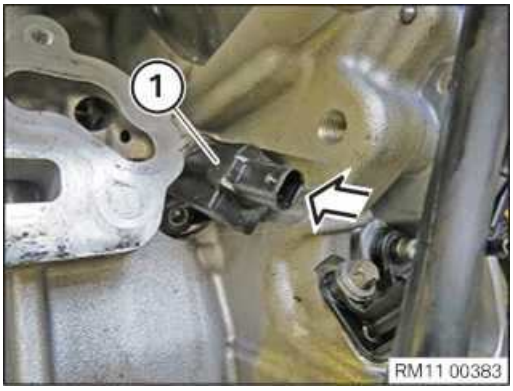
Necessary preliminary tasks:

- Remove full-flow oil filter.

Removal:

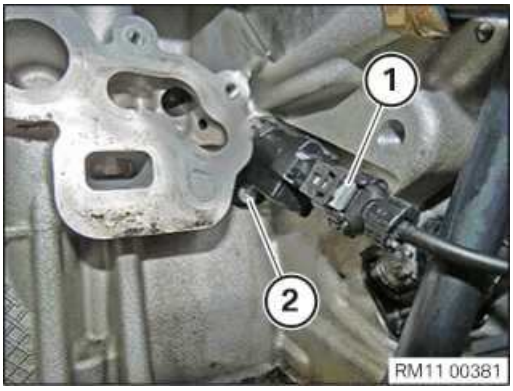


Unlock and disconnect the connector (1).
Release screw (2).



Remove hydraulic valve (1) in direction of arrow.

Installation:



Parts: Replace O-ring (1).
Oil O-ring (1).

cardiagn.com

Install hydraulic valve (1) in direction of arrow.

Tighten screw (2).
Tightening torque: 11 00 2AZ.
Connect the plug (1).

Required follow-up work:

- Install full-flow oil filter
- Assemble engine

cardiagn.com

11 41 115 Removing and installing/replacing hydraulic valve for oil-pressure control

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

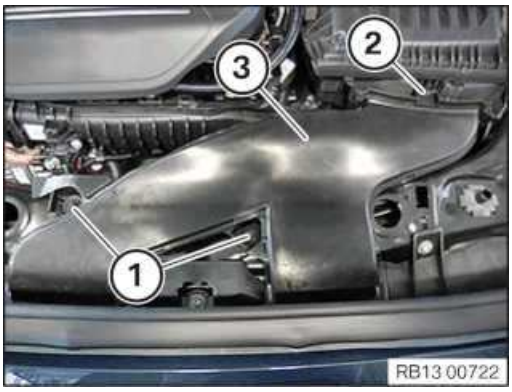
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

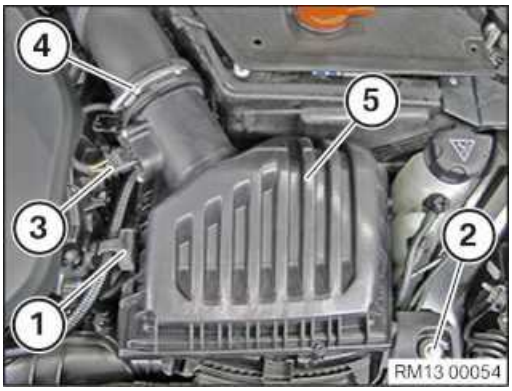
RISK OF DAMAGE



Damage to the acoustic cover.

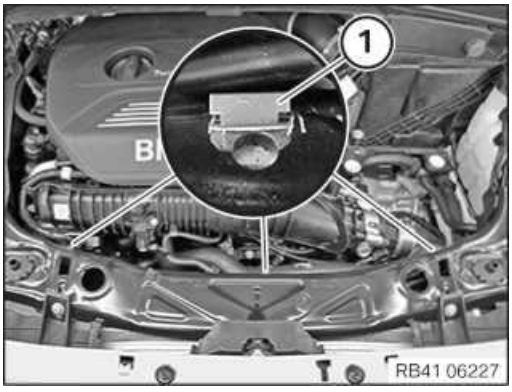
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



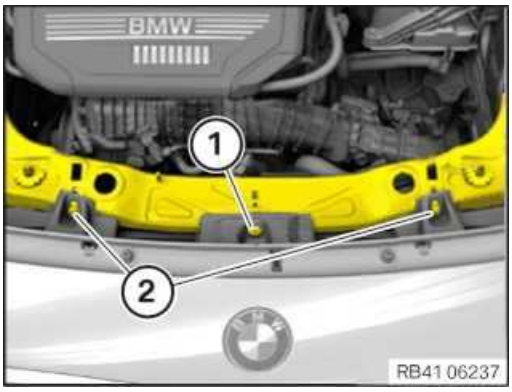
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing



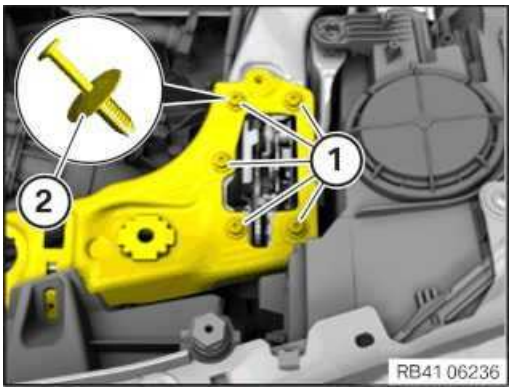
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

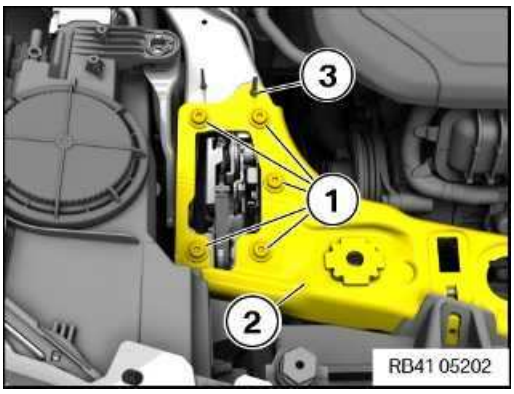


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

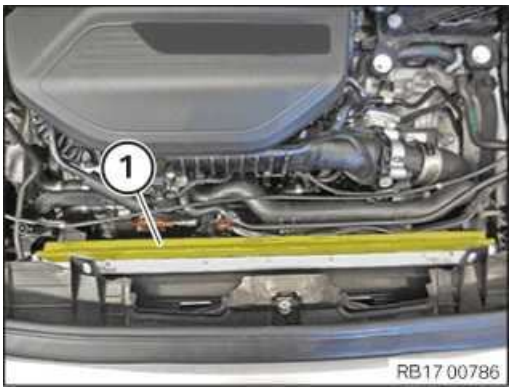


cardiagn.com

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

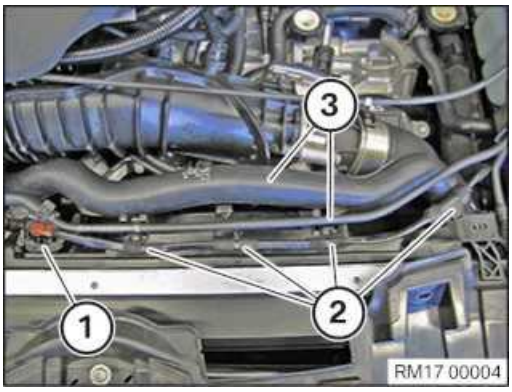
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

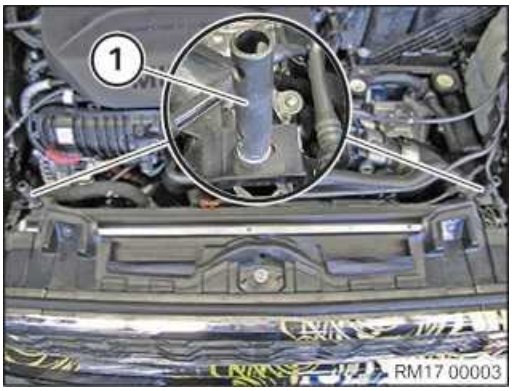
WARNING

Hot surfaces.

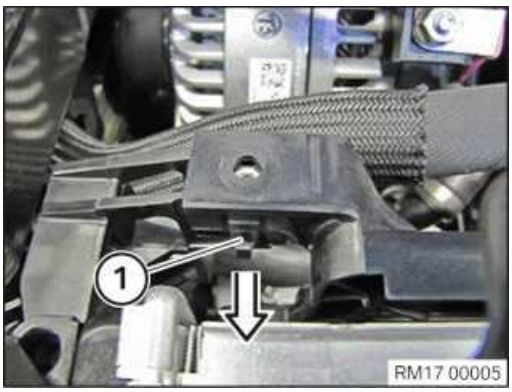


Risk of burning!

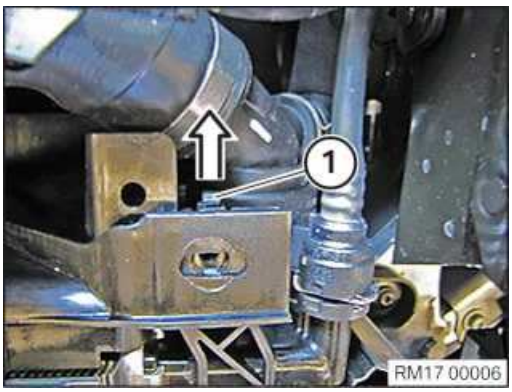
- Perform all work only on components that have cooled down.



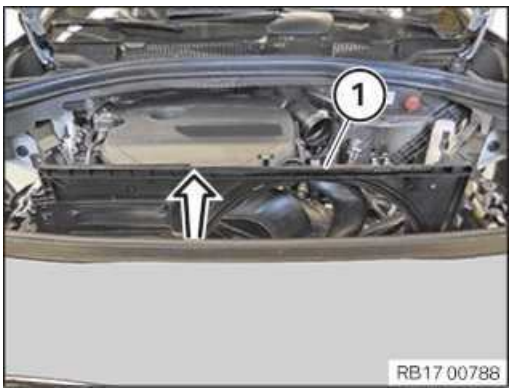
- Feed out and remove the sealing (1) from the radiator.



cardiagn.com

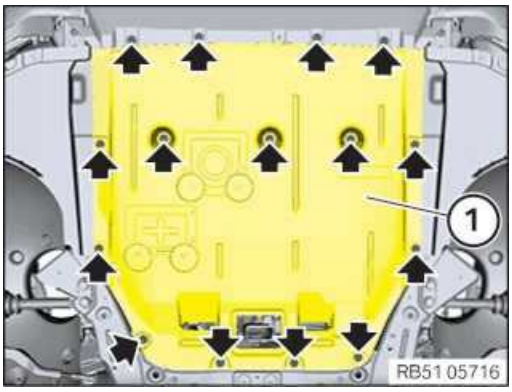


- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

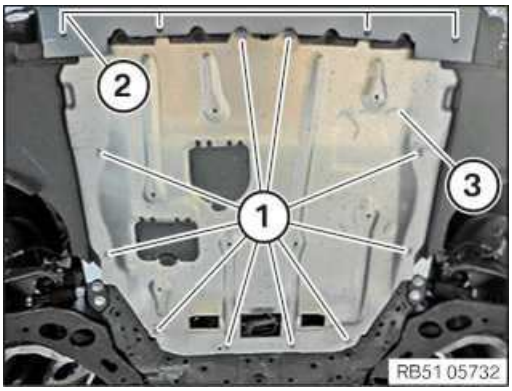


- Loosen screws (1).

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

cardiagn.com

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

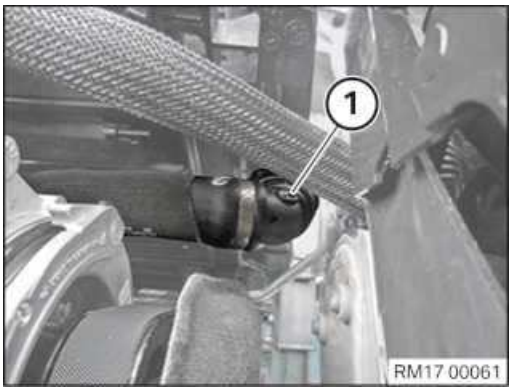
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

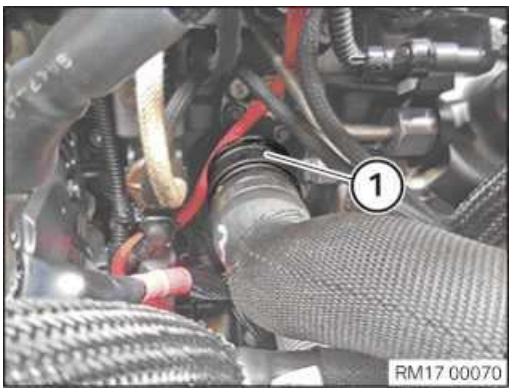
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

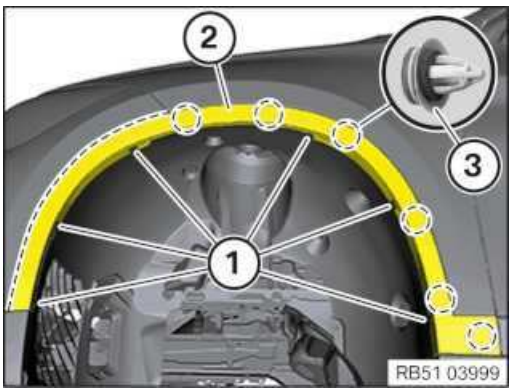
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

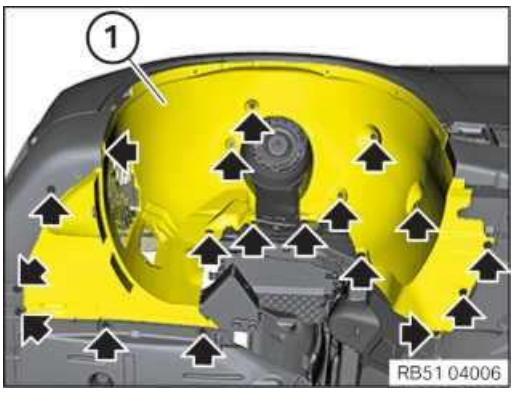
cardiagn.com

10 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

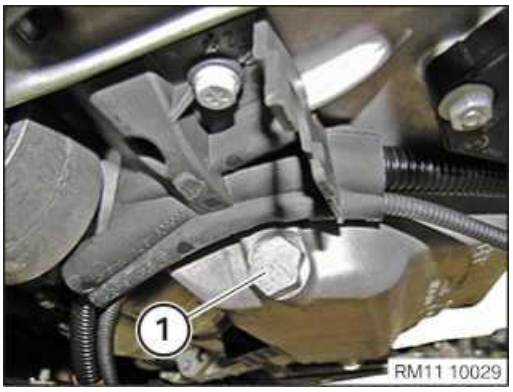
Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the oil filler cap

- Open oil filler cap (1).

12 – Releasing the oil drain plug



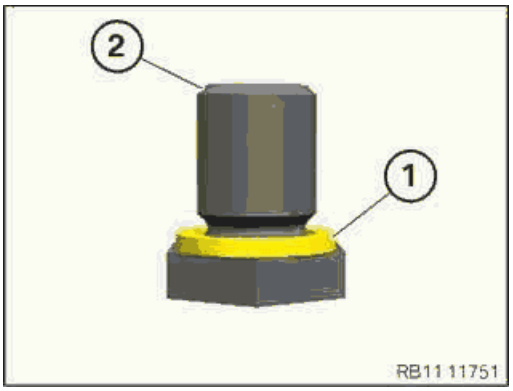
cardiagn.com

WARNING

Hot fluids.

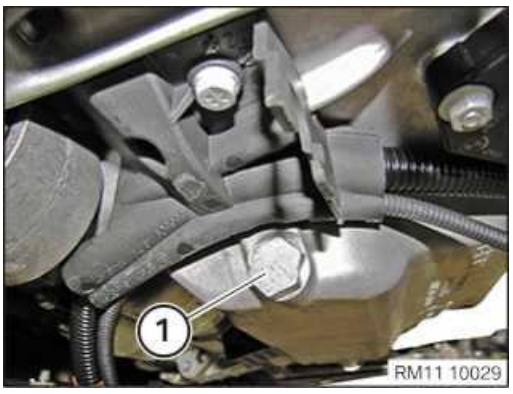
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.



- Release oil drain plug (1).
- Drain engine oil.

13 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.

- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

14 – Undoing the oil drain plug on the oil filter cover

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

15 – Tightening the oil drain plug on the oil filter cover

- Renew oil drain plug (1) with the sealing ring (2).

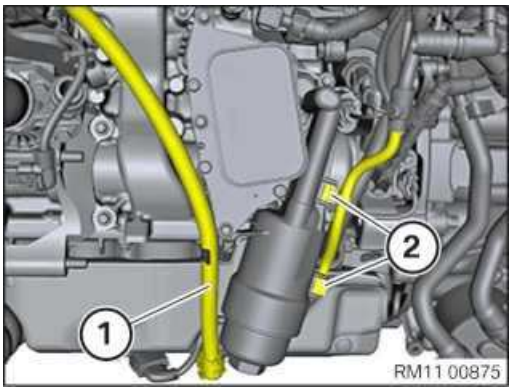
  Parts: Oil drain plug, sealing ring

- Feed in and install the oil drain plug (1).
- Tighten the oil drain plug (1) on the oil filter cover (2).

Oil drain plug to oil filter cover

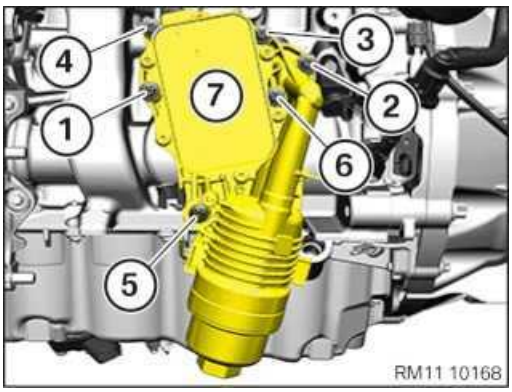
	Renewoil drain plug.	Tightening torque	6 Nm

16 – Remove full-flow oil filter



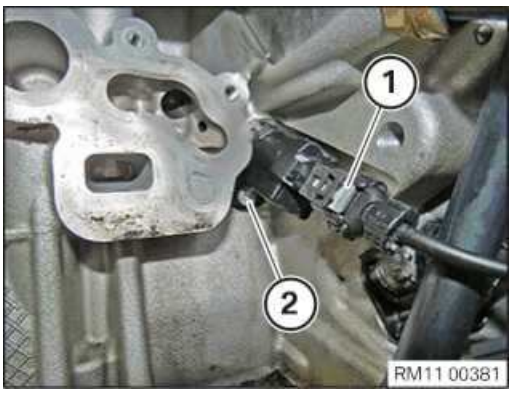
TECHNICAL INFORMATION

Make sure that there are no particles or impurities in the medium openings. Coolant or foreign substances in the oil can cause engine damage such as damage to the connecting rod bearing.



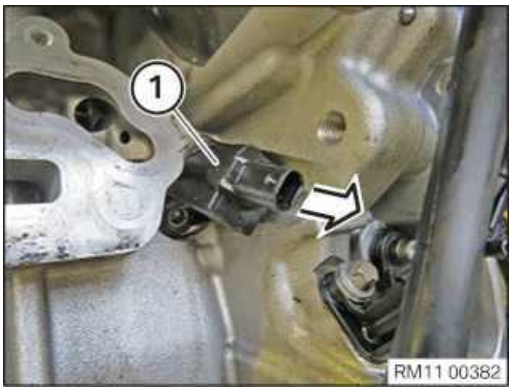
cardiagn.com

- Unlock coolant lines (1).
- Pull off coolant lines (1) and place to one side.
- Catch and dispose of escaping coolant.



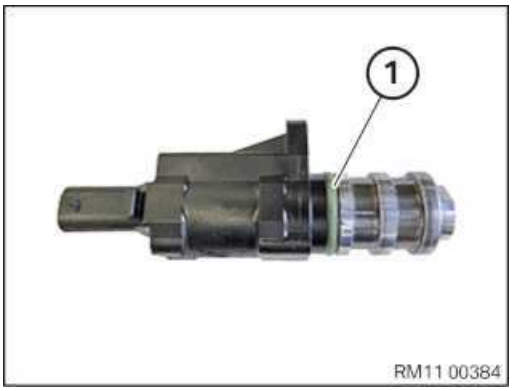
- Release positive battery cable (1) on full-flow oil filter from the clamp.
- Release the engine wiring harness (2) from the full-flow oil filter.

- Loosen screws in the order (6) to (1).
- Guide out the full-flow oil filter (7) upwards and remove.



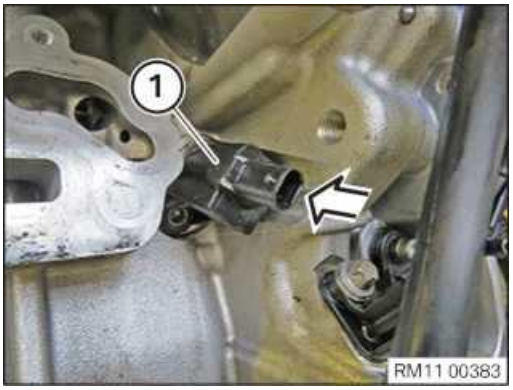
MAIN WORK

17 – Removing the hydraulic valve for the oil pressure control



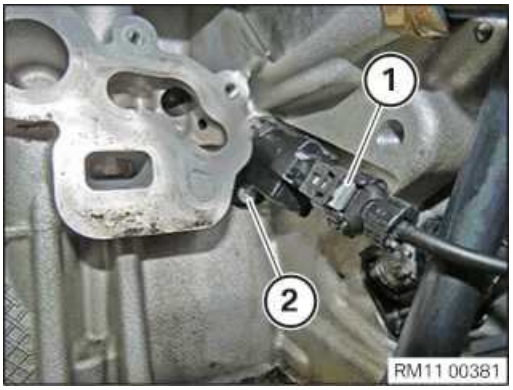
- Unlock and disconnect connector (1).
- Loosen screw (2).

cardiagn.com



- Remove the hydraulic valve (1) in the direction of the arrow.

18 – Installing the hydraulic valve for the oil pressure control



- Renew O-ring (1).

  Parts: O-ring
- Oil O-ring (1).

- Install the hydraulic valve (1) in the direction of the arrow.

- Tighten down screw (2).

Hydraulic valve to crankcase

M6 x 18		Tightening torque	8 Nm

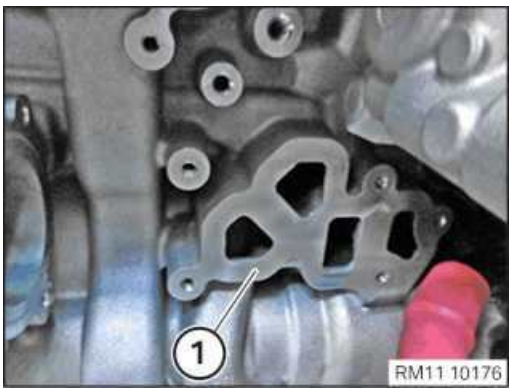
- Connect connectors (1) and lock.

POSTPROCESSES

19 – Install full-flow oil filter

cardiagn.com

RISK OF DAMAGE



Damage to the surface.

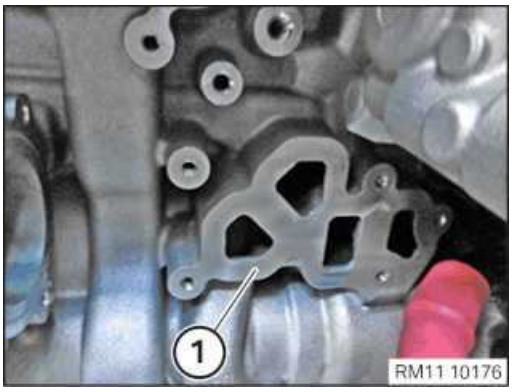
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean any sealing residue on the sealing surface of the crankcase (1) with special tool **0 495 102 (11 4 470)**.

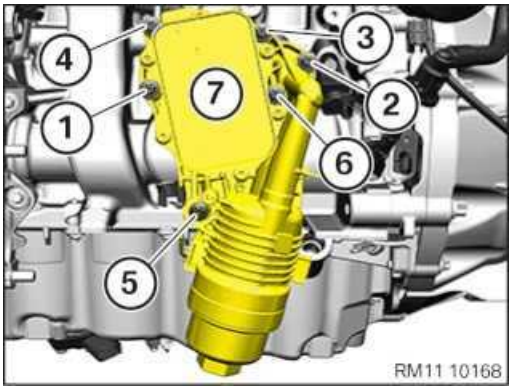


- Remove seals (1) using a suitable tool.
- Clean the sealing residue from the full-flow oil filter.
- Renew gaskets (1).

  Parts: Sealing kit
- Install seal (1).

- Crank the engine twice with the special tool **0 493 380 (11 6 480)** in the direction of rotation.

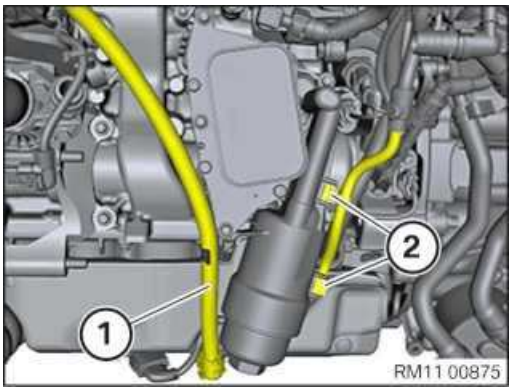
cardiagn.com



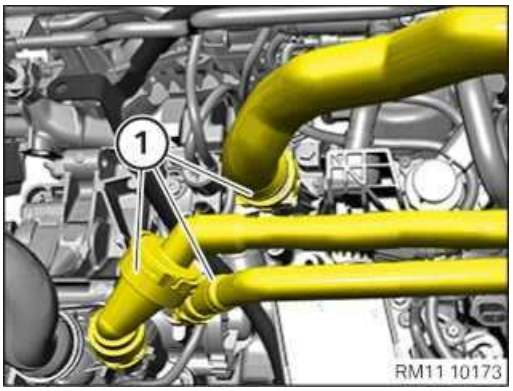
- Have a cleaning cloth ready.
- Catch any engine oil leaking from the oil duct of the crankcase (1) and dispose of this.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean sealing surface (1).



- Feed in and install the full-flow oil filter (7).
- Make sure seals are correctly seated.
- Tighten screws in the order (1) to (6).

Full-flow oil filter to crankcase

Screw M6	Observe tightening sequence.	Jointing torque	8 Nm
		Tighten down	8 Nm

- Secure the positive battery cable (1) on the full-flow oil filter in the clamp.
- Secure engine wiring harness (2) on full-flow oil filter.

- Connect and lock the coolant lines (1).

  The locks of the coolant lines (1) must audibly engage.

20 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

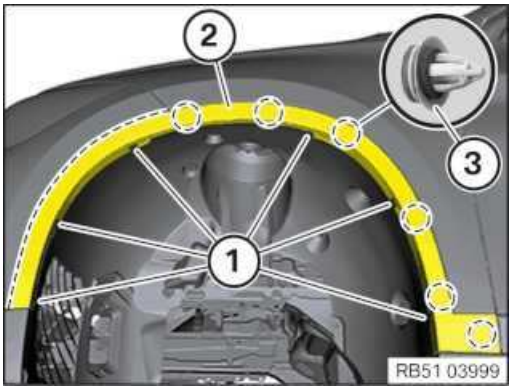
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

21 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

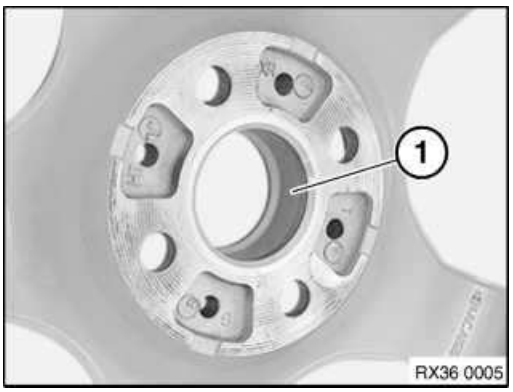
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

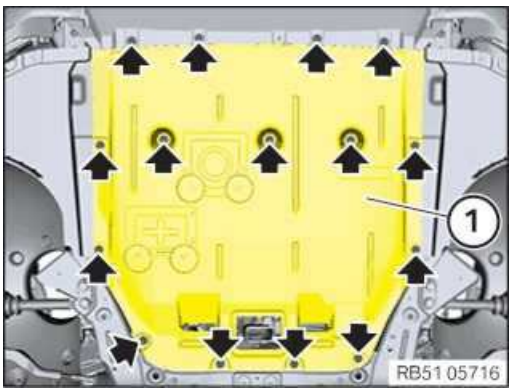
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



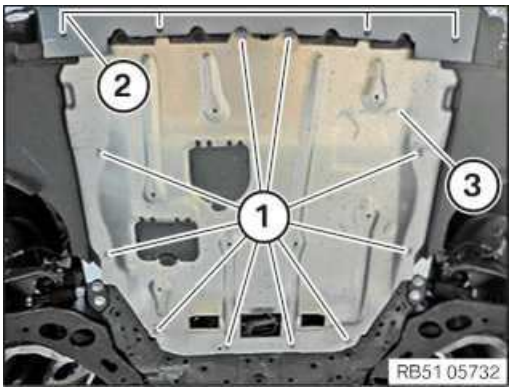
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

22 – Installing the front underbody protection



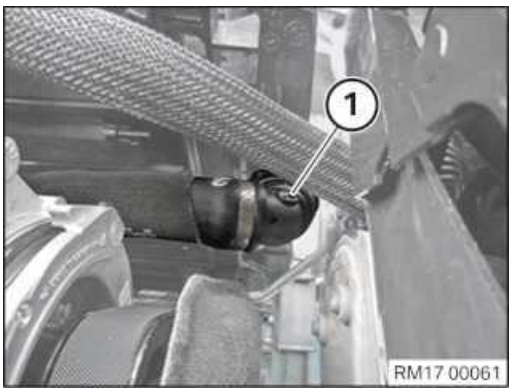
- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

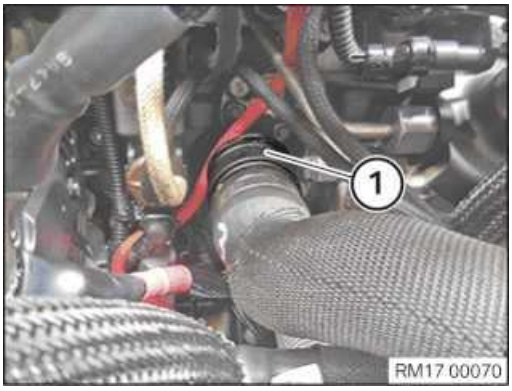
cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

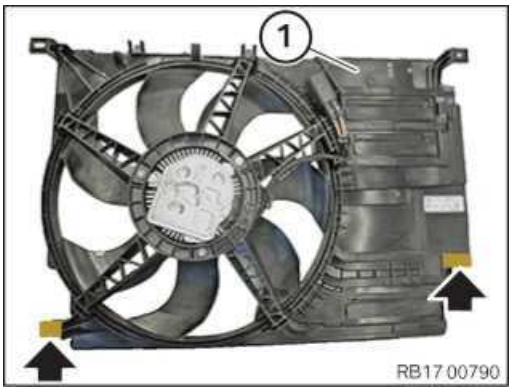


23 – Connect the coolant line

TECHNICAL INFORMATION

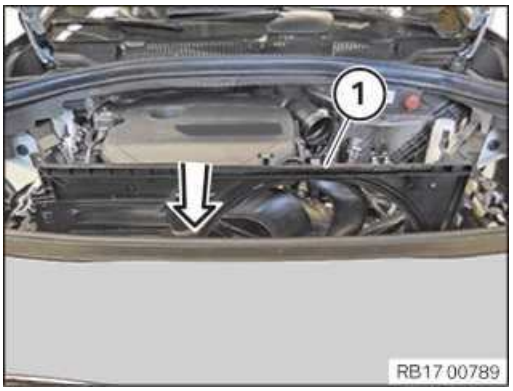
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

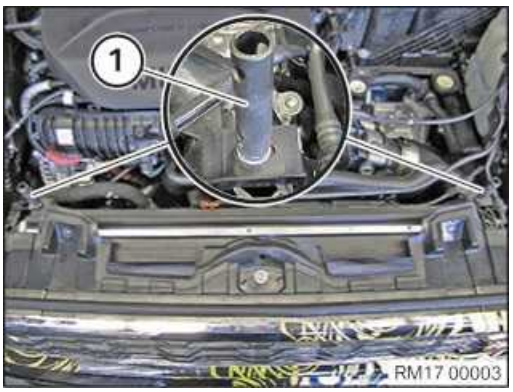
24 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

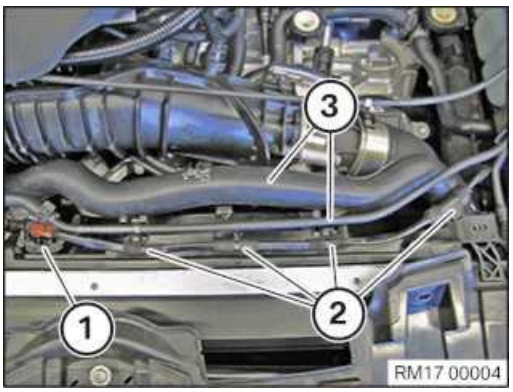
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

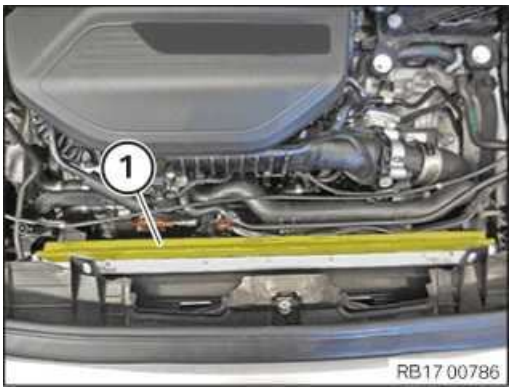
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

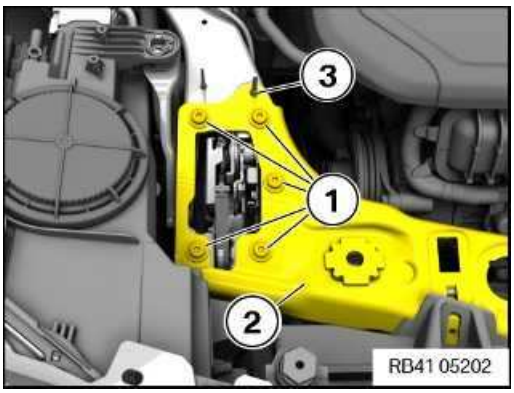


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

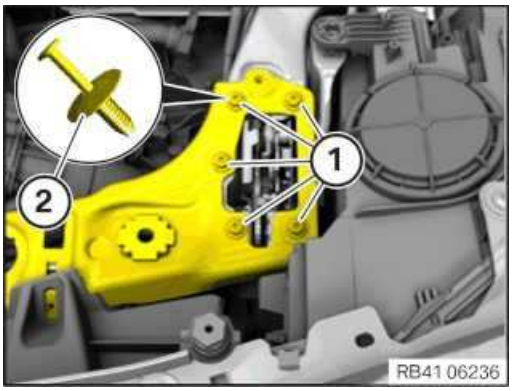
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

25 – Install front cross connection

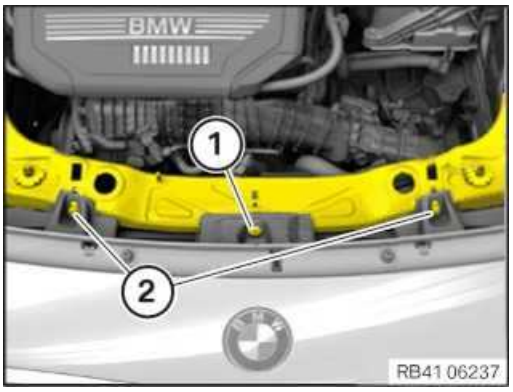


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

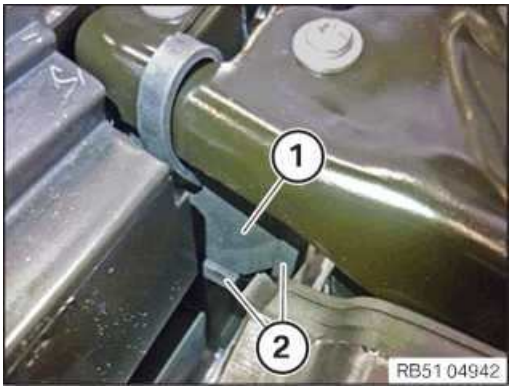
cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

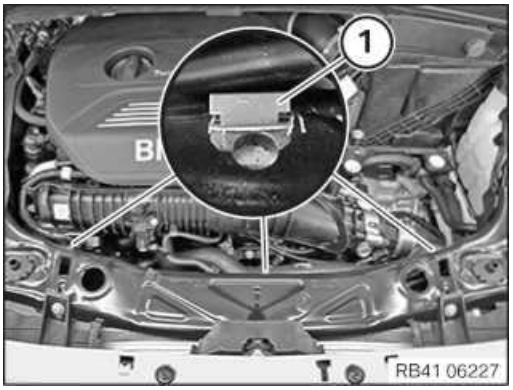
Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).



Air duct to upper connection

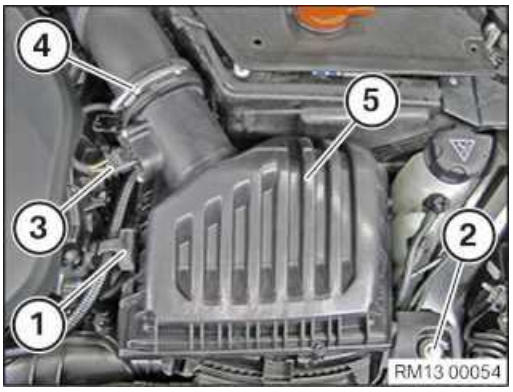
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

26 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

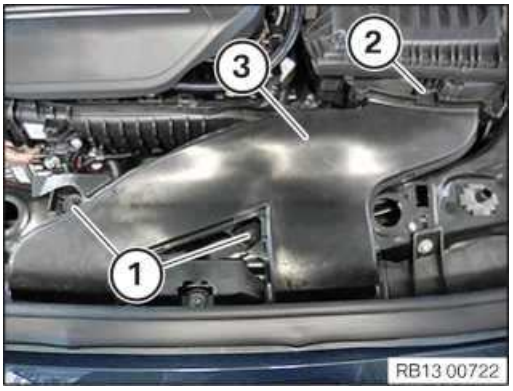
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

27 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

28 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

29 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB47TÜ1

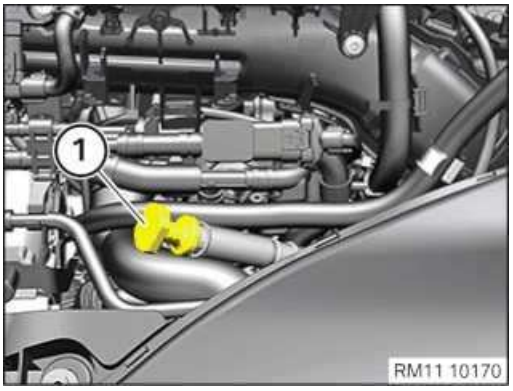
Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

30 – Installing the oil filler cap

- Close oil filler cap (1).

31 – Check engine oil level



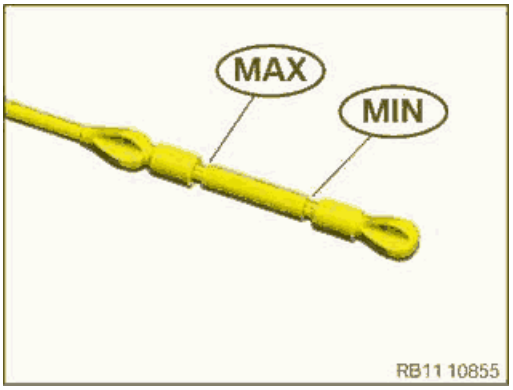
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

32 – Disconnecting all battery earth leads

- See additional information.

33 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Additional Information

Overview of Tightening Torques

Oil drain plug on oil sump

Used in step 13

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

Oil drain plug to oil filter cover

Used in step 15

	Renewoil drain plug.	Tightening torque	6 Nm

Hydraulic valve to crankcase

Used in step 18

M6 x 18		Tightening torque	8 Nm

Full-flow oil filter to crankcase

Used in step 19

Screw M6	Observe tightening sequence.	Jointing torque	8 Nm
		Tighten down	8 Nm

Wheel arch cover to body

Used in step 20

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 20

Plastic nut		Tightening torque	3 Nm

Brake disc to front wheel hub

Used in step 21

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 21

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Underbody protection front

Used in step 22

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Fan cowl on radiator

Used in step 24

M6X12		Tightening torque	6 Nm

Cross connection to carrier support

Used in step 25

Screws M6x20		Tightening torque	11,8 Nm

Screw connection for rubber mount of coolant radiator to coolant radiator

Used in step 25

Bolt to rubber mount		Tightening torque	8 Nm

cardiagn.com

Air duct to upper connection — Used in step 25

M6x20 screw		Tightening torque	11,8 Nm

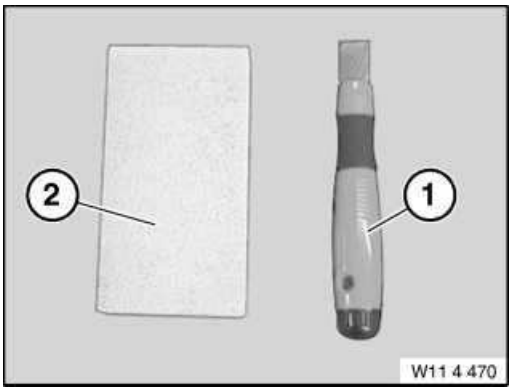
Bracing strut to upper connection — Used in step 25

M8x20 screw		Tightening torque	28 Nm

Intake silencer housing to lock bridge — Used in step 26

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 26



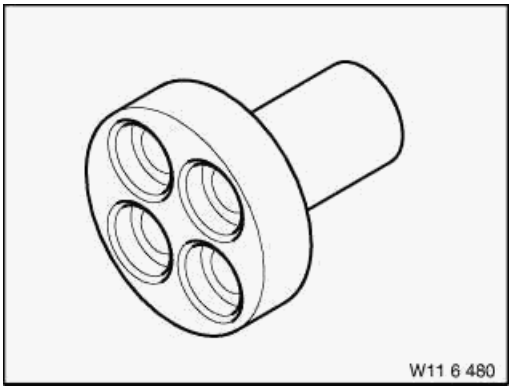
Clamp		Tightening torque	3 Nm

Intake neck to cross connection — Used in step 27

M6		Tightening torque	8 Nm

Overview of Special Tools

0 495 102 (11 4 470) Tool



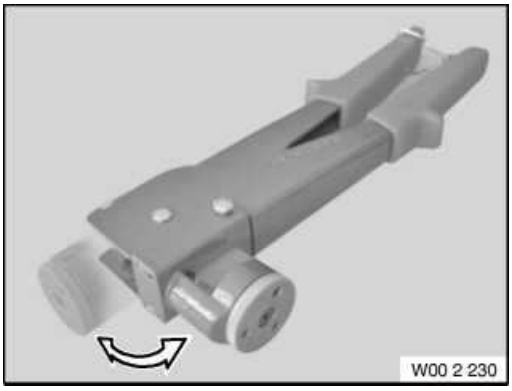
Common — Used in step 19

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 493 380 (11 6 480) Connector



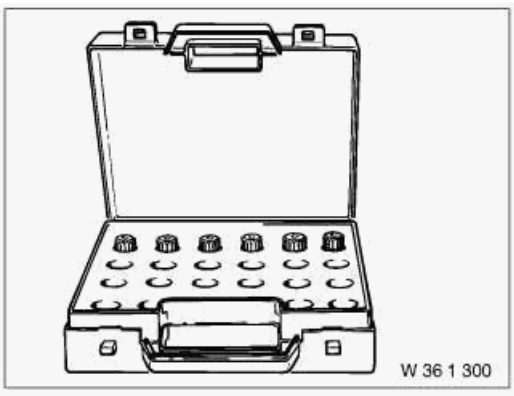
Common — Used in step 19

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

0 496 521 (00 2 230) Pliers

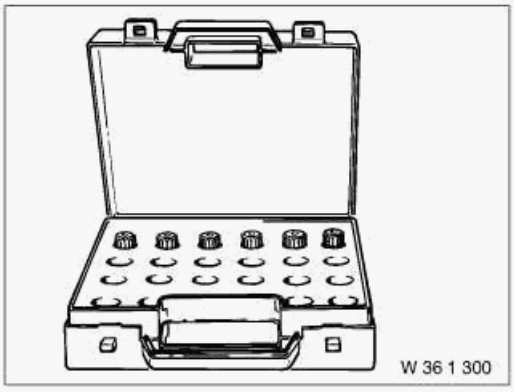
Common	Used in step 20
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



2 344 011 Tool

Common	Used in step 21
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 9
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 224 (36 1 326) Wheel stud

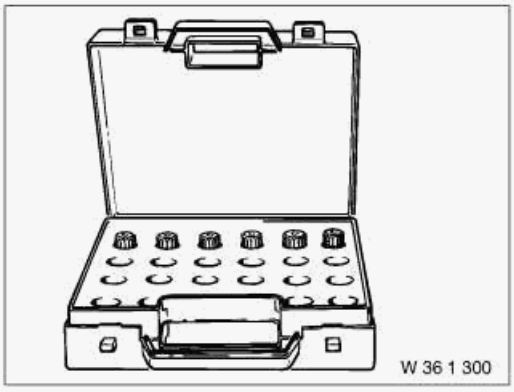
Common	Used in step 9
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 9
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 9
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 227 (36 1 329) Wheel stud

Common	Used in step 9
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 228 (36 1 331) Wheel stud

Common	Used in step 9
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 229 (36 1 332) Wheel stud

Common	Used in step 9
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 230 (36 1 333) Wheel stud

Common	Used in step 9
Usage	(Code 40) With centring bore available separately (see EPC) under 36 13 6 762 344
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number

cardiagn.com

11 42 240 Attaching and detaching/sealing or replacing the oil return line for the high pressure exhaust turbocharger

PRELIMINARY WORK

1 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

2 – Removing the acoustic cover

WARNING

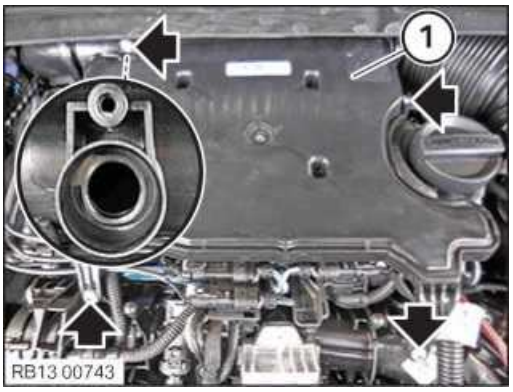
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



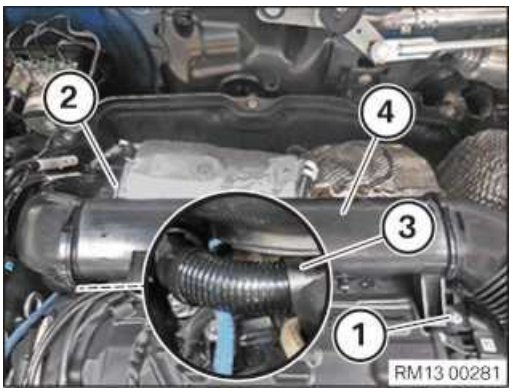
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove resonator

cardiagn.com

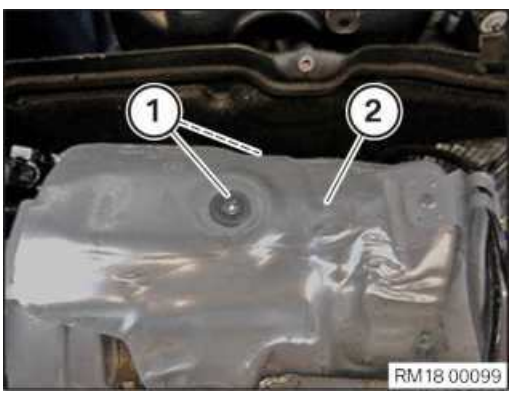


- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



5 – Removing heat shield from top exhaust turbocharger

WARNING

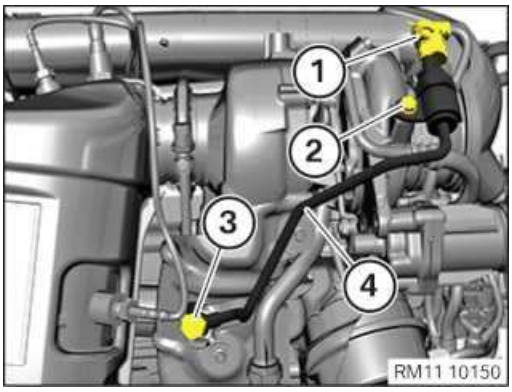
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

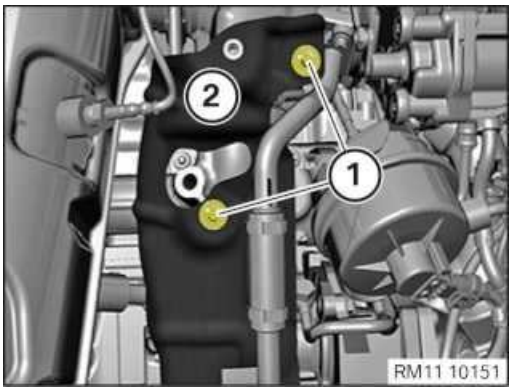
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

6 – Remove the heat shield from the exhaust turbocharger at the bottom



cardiagn.com

WARNING



Hot surfaces.

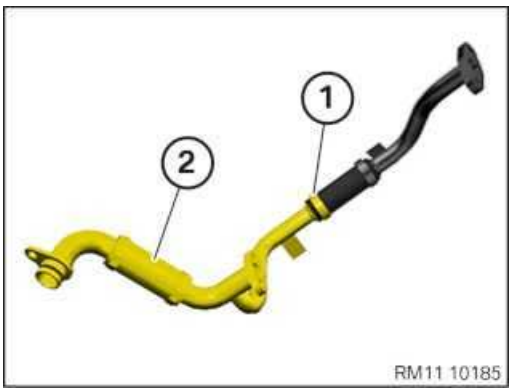
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

cardiagn.com



7 – Remove the oil return line for the high-pressure stage exhaust turbocharger

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

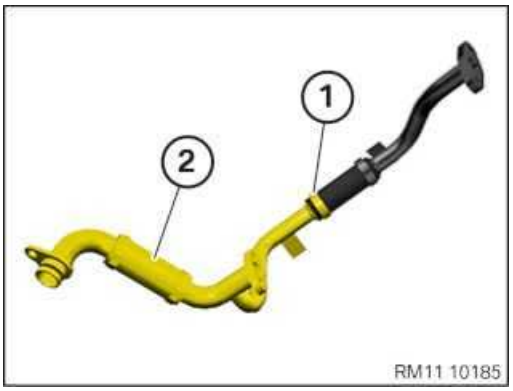
- Detach the clamp (1).

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Guide out and remove the oil return line (2).

  The oil return line (2) must be reinstalled in the same mounting orientation, set marks where required.



8 – Install the oil return line for the high-pressure stage exhaust turbocharger

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew the clamp (1).

  Parts: Clamp

- Insert and install the clamp (1).

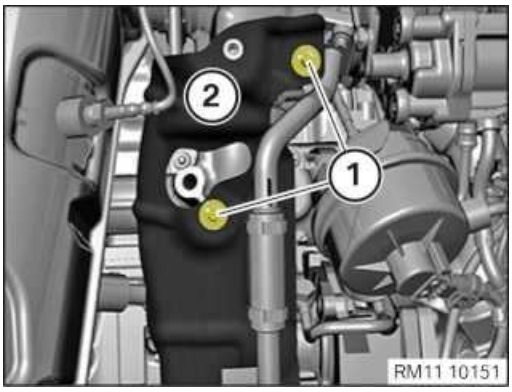
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

- Thread in the oil return line (2) in the correct mounting orientation and install. Observe any marks that may exist.
- Position and secure the clamp (1).

POSTPROCESSES

9 – Installing heat shield on exhaust turbocharger at bottom

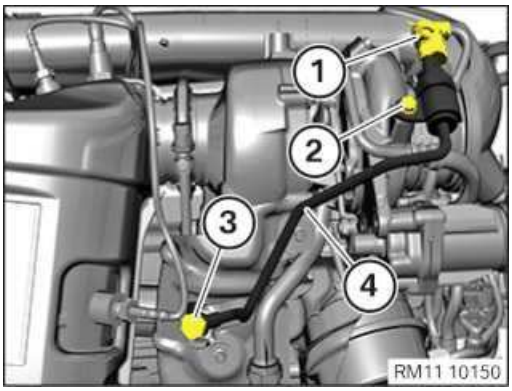


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).

Standard screw connection M6

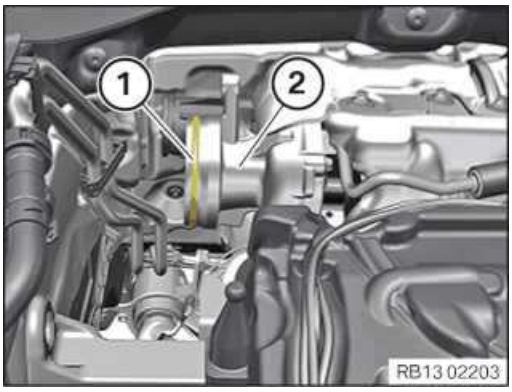
M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

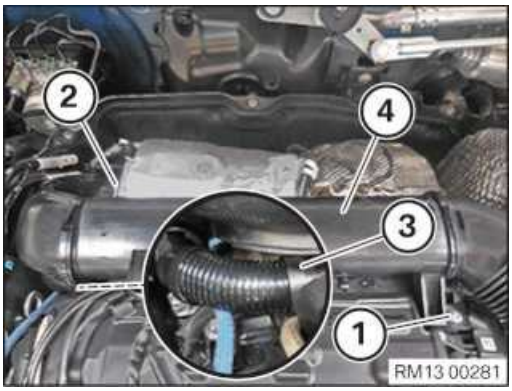
10 – Install the heat shield on the exhaust turbocharger

- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.



Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

11 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

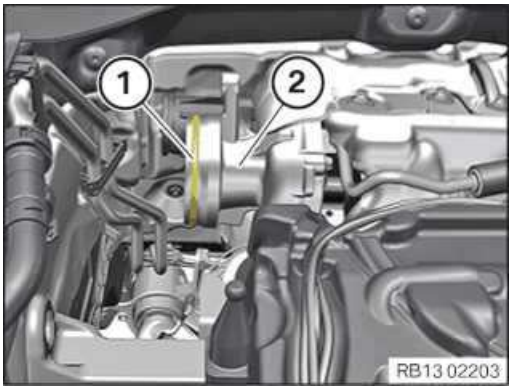
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

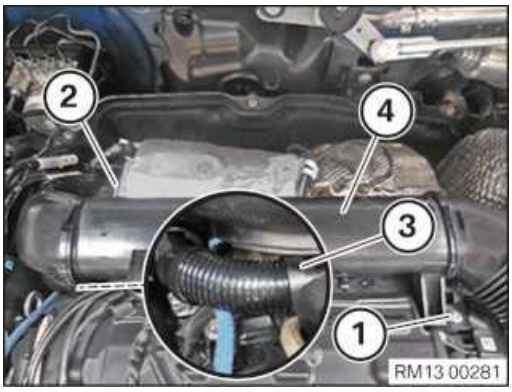
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

12 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

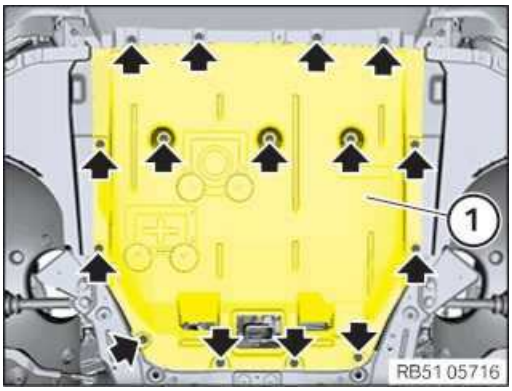
13 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

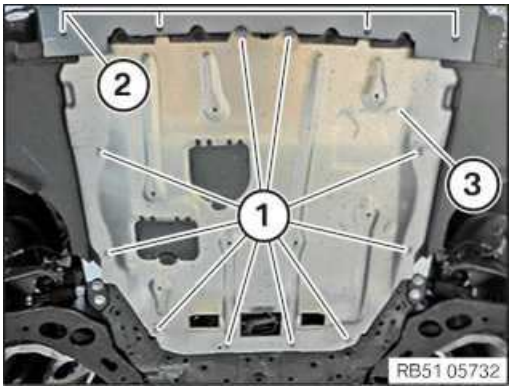
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.



14 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

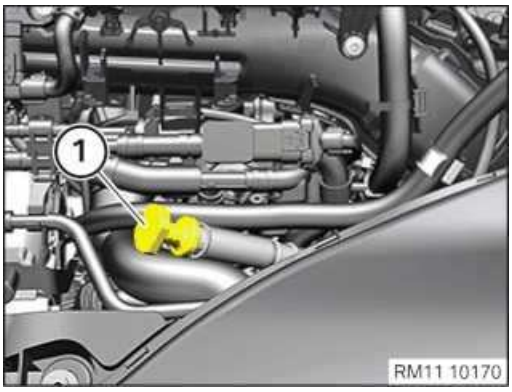
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

15 – Check engine oil level



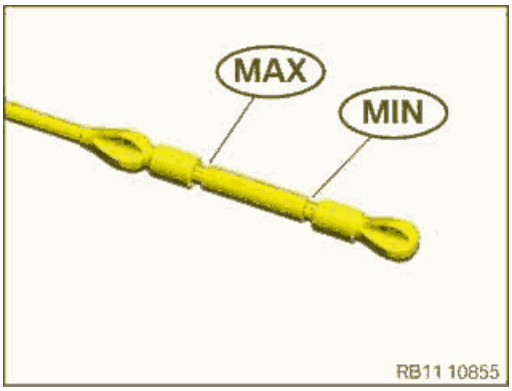
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

cardiagn.com



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

Parts

Parts required

Designation	Used in step

cardiagn.com

11 42 020 Removing and installing/replacing full-flow oil filter (B47)

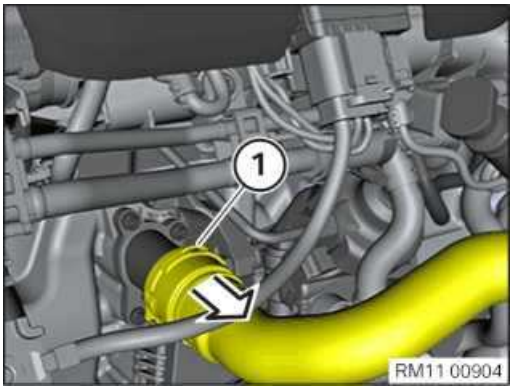
Special tools required:

- 11 4 470
- 11 6 480

Risk of scalding!

Only perform this repair work after the engine has cooled down.

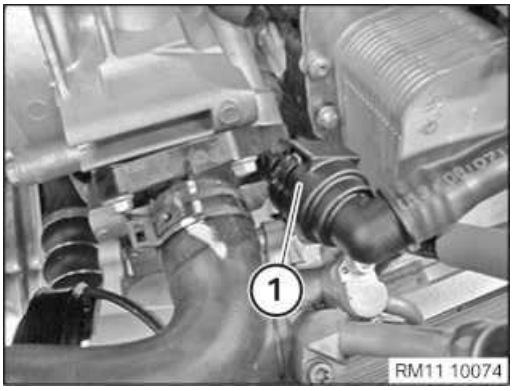
Recycling:



Catch and dispose of drained coolant.

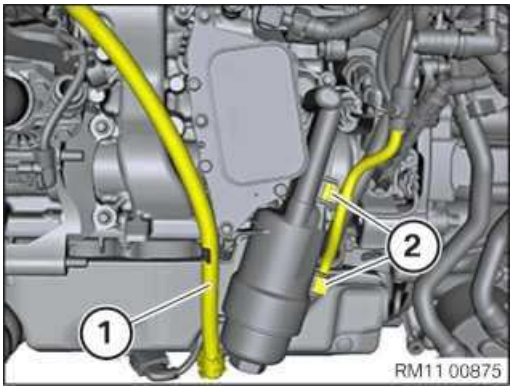
Observe country-specific waste disposal regulations.

Necessary preliminary tasks:



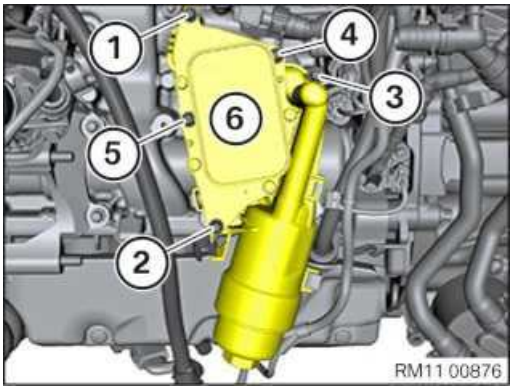
- Disconnect negative battery cable.
- Remove underbody protection
- Remove fan cowl.
- Drain coolant.

Removal:



Unlock and detach coolant hose (1).

cardiagn.com



Unlock and detach coolant hose (1).

Unclip positive wire (1) from full-flow oil filter.
Unclip engine wiring harness (23) from full-flow oil filter.

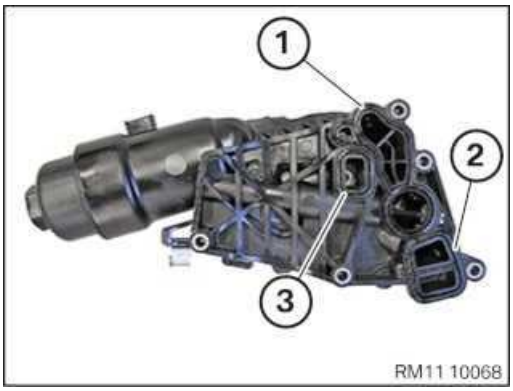
Open screw plug (1).
Drain oil.

Release screws in the sequence 5 - 1.
Remove full-flow oil filter (6).

Installation:

cardiagn.com

Attention!



Remove gasket residues from crankcase and full-flow oil filter with special tool 11 4 470 .

Do not use any metal-cutting tools (e.g. emery cloth).

Make sure that there are no particles or impurities in the medium openings.

Coolant or foreign particles in the oil can cause engine damage e.g. damages in the connecting rod bearing.

Crank engine with special tool 11 6 480 until engine oil in the full-flow oil filter area flows out of the oil duct.

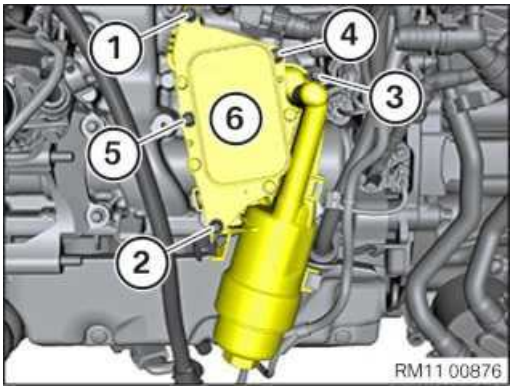
Installation note:
All sealing surfaces and gaskets must be cleaned and free of oil.

Parts: Replace gaskets (1 - 3).

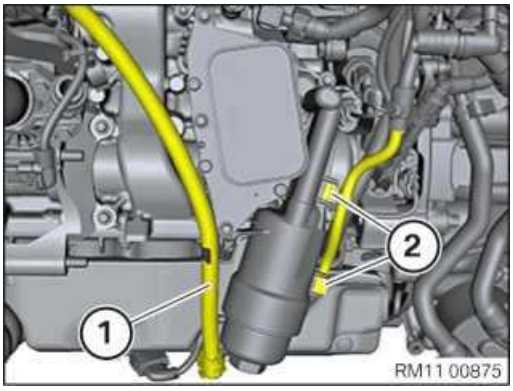
Replacement:

Remount oil-to-water heat exchanger.

Check that gaskets (1 - 3) are correctly seated.

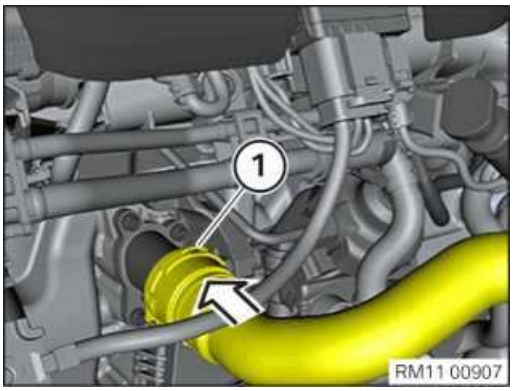


Parts: Replace screw (2) with O-ring (1).

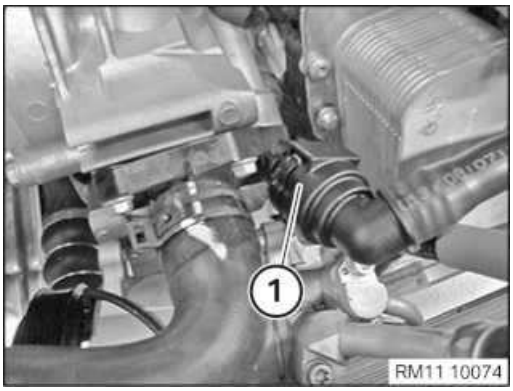


Install and tighten screw (1).

Tightening torque: 11 42 6AZ.



cardiagn.com



Position full-flow oil filter (6).
Tighten screws in the **sequence 1 - 5**.
Tightening torque: 11 42 9AZ.

Clip engine wiring harness (2) into full-flow oil filter.
Clip positive wire (1) into full-flow oil filter.

Connect coolant hose (1).
Lock must snap audibly into place.

Connect coolant hose (1).
Lock must snap audibly into place.

cardiagn.com

Required follow-up work:

- Install underbody protection
- Add coolant
- Install fan cowl
- Connect battery earth lead

Note:
Start engine and run at idle until oil pressure indicator light goes out.

Switch off engine.

1.Check exhaust emission system oil filter cover for tightness.

Assemble engine.

Checking oil level:

- Park vehicle on a horizontal surface
- Using the oil dipstick, check the engine oil level after five minutes on the engine at operating temperature
- Top up engine oil if necessary

cardiagn.com

11 42 020 Removing and installing/replacing full-flow oil filter completely

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

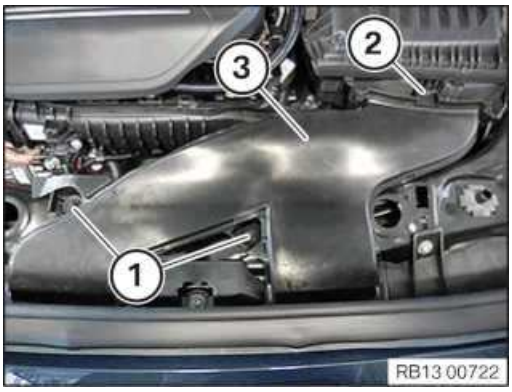
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

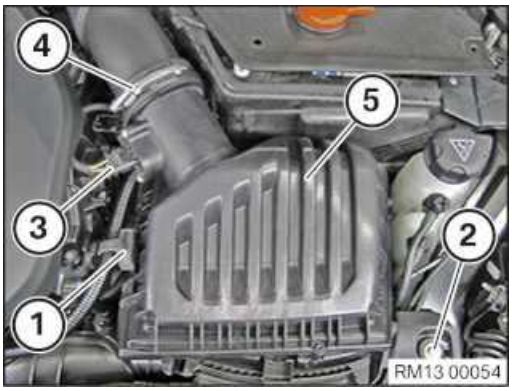
RISK OF DAMAGE



Damage to the acoustic cover.

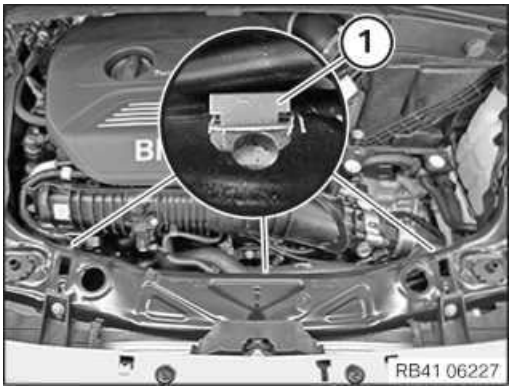
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



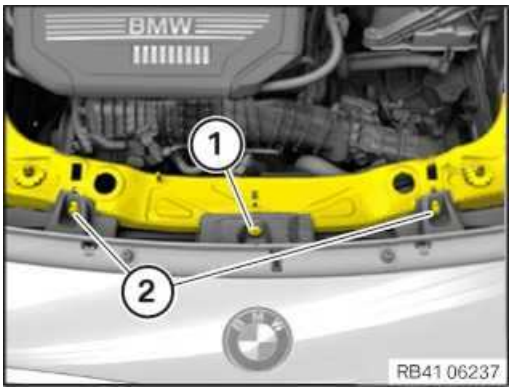
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing



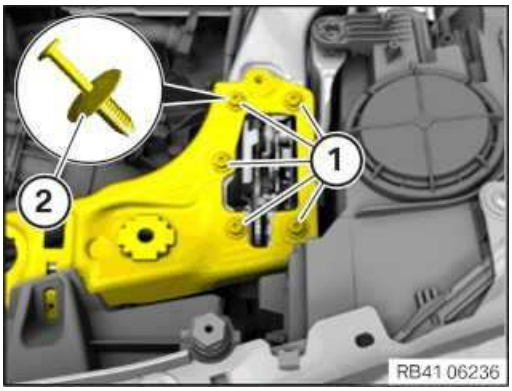
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

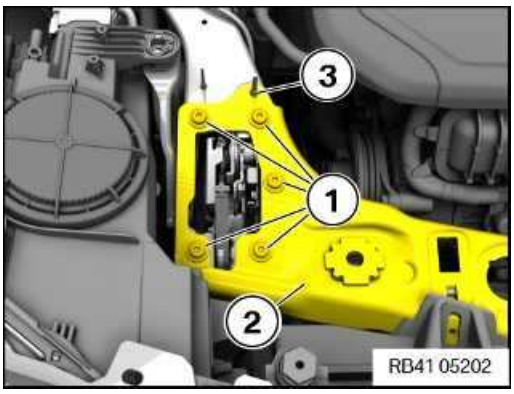


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

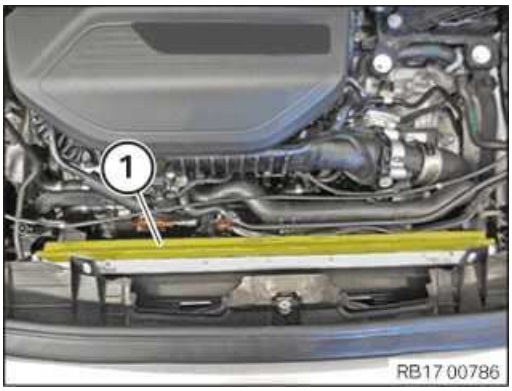


cardiagn.com

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

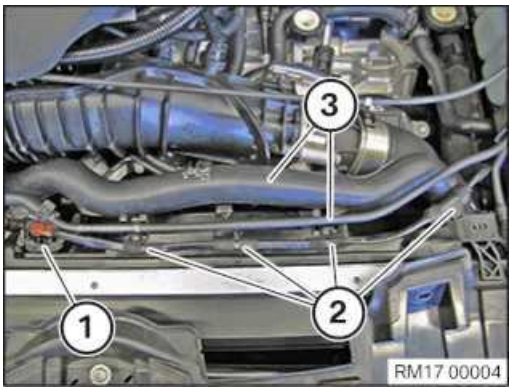
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

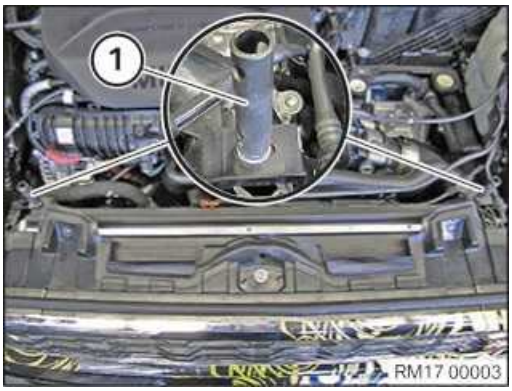
WARNING

Hot surfaces.

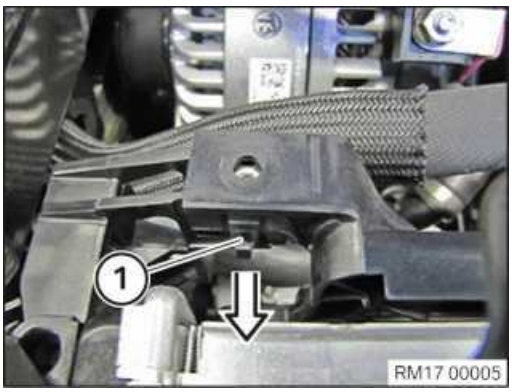


Risk of burning!

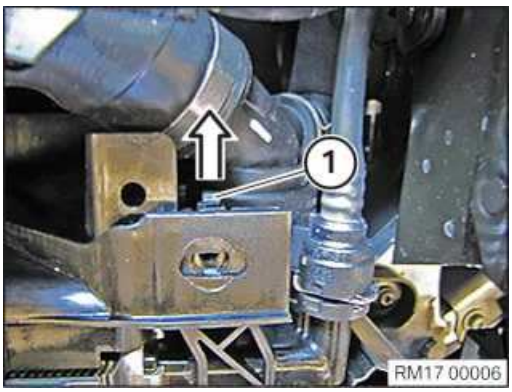
- Perform all work only on components that have cooled down.



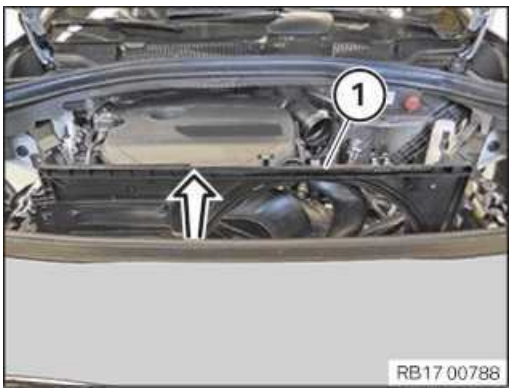
- Feed out and remove the sealing (1) from the radiator.



cardiagn.com

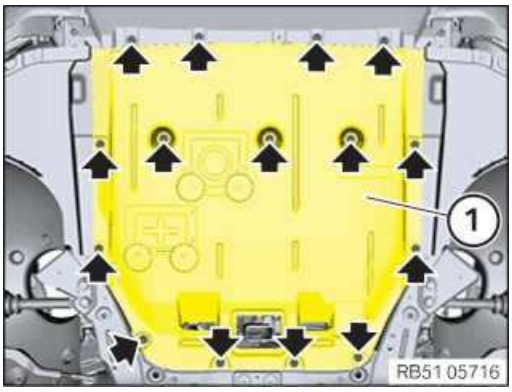


- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

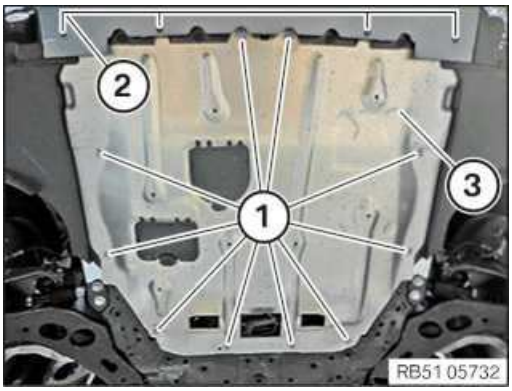


- Loosen screws (1).

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

cardiagn.com

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

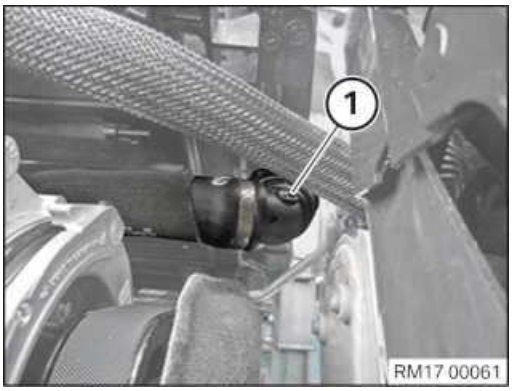
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

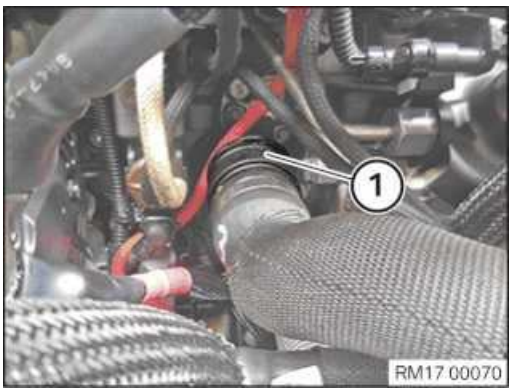
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

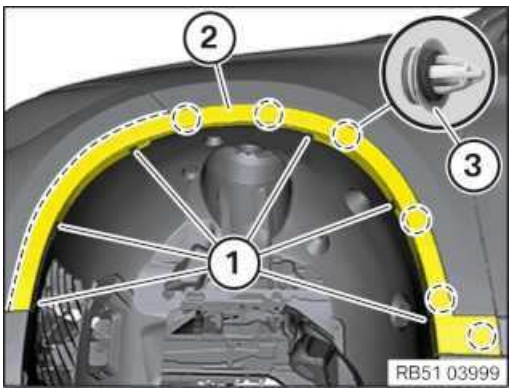
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

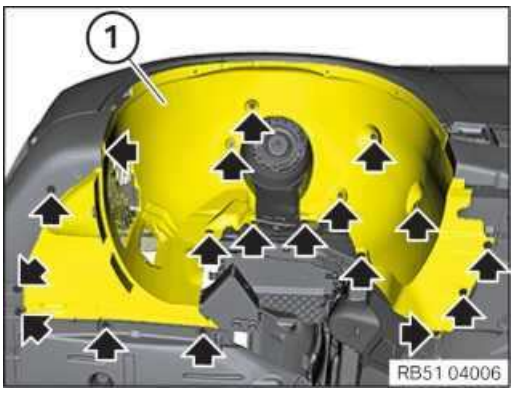
cardiagn.com

10 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

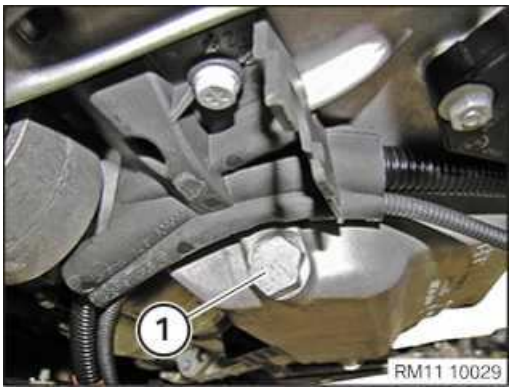
Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the oil filler cap

- Open oil filler cap (1).

12 – Releasing the oil drain plug



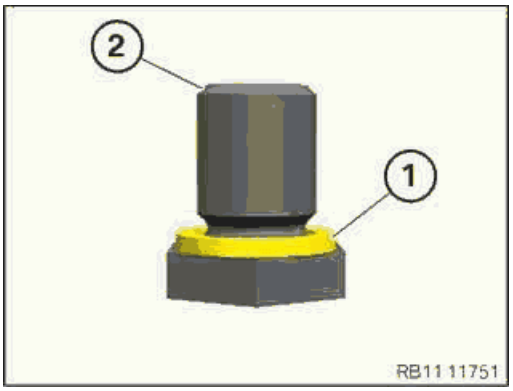
cardiagn.com

WARNING

Hot fluids.

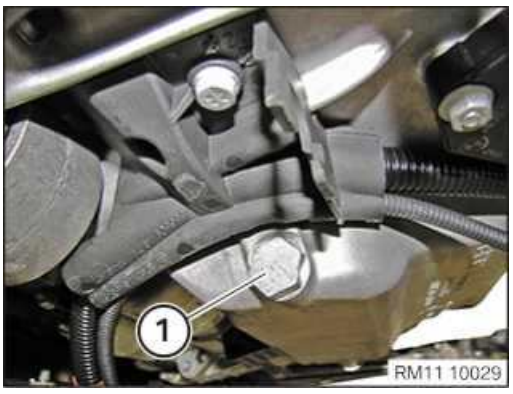
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.



- Release oil drain plug (1).
- Drain engine oil.

13 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.

- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

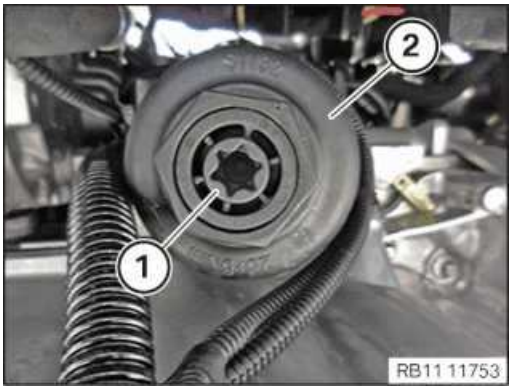
Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

14 – Undoing the oil drain plug on the oil filter cover

WARNING

Hot fluids.



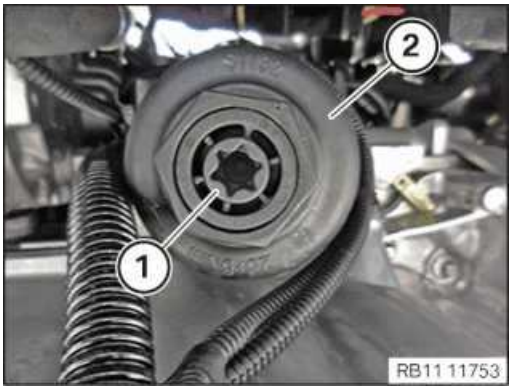
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

15 – Tightening the oil drain plug on the oil filter cover

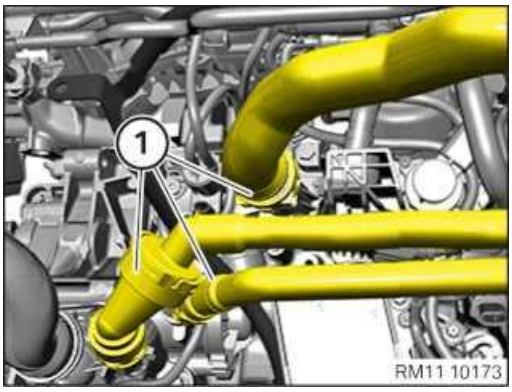
- Renew oil drain plug (1) with the sealing ring (2).

  Parts: Oil drain plug, sealing ring

- Feed in and install the oil drain plug (1).
- Tighten the oil drain plug (1) on the oil filter cover (2).

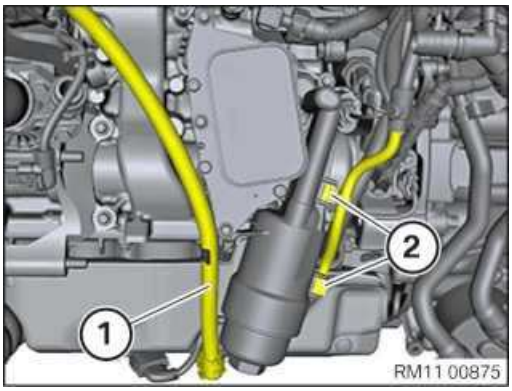
Oil drain plug to oil filter cover

	Renewoil drain plug.	Tightening torque	6 Nm



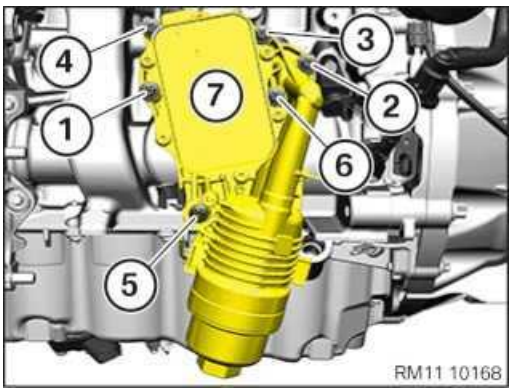
MAIN WORK

16 – Remove full-flow oil filter



TECHNICAL INFORMATION

Make sure that there are no particles or impurities in the medium openings. Coolant or foreign substances in the oil can cause engine damage such as damage to the connecting rod bearing.



cardiagn.com

- Unlock coolant lines (1).
- Pull off coolant lines (1) and place to one side.
- Catch and dispose of escaping coolant.

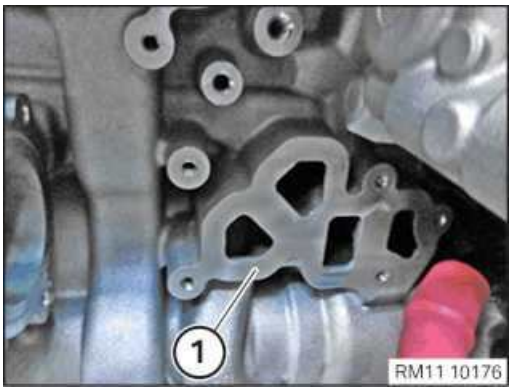
- Release positive battery cable (1) on full-flow oil filter from the clamp.
- Release the engine wiring harness (2) from the full-flow oil filter.

- Loosen screws in the order (6) to (1).
- Guide out the full-flow oil filter (7) upwards and remove.

17 – Install full-flow oil filter

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

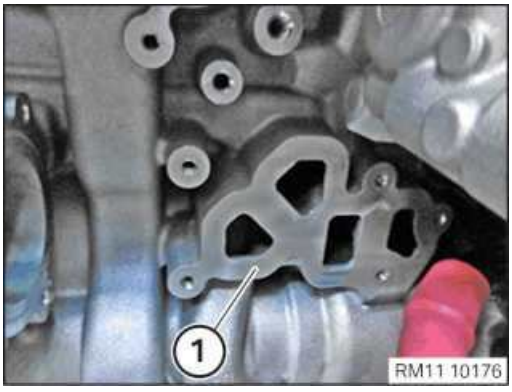
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

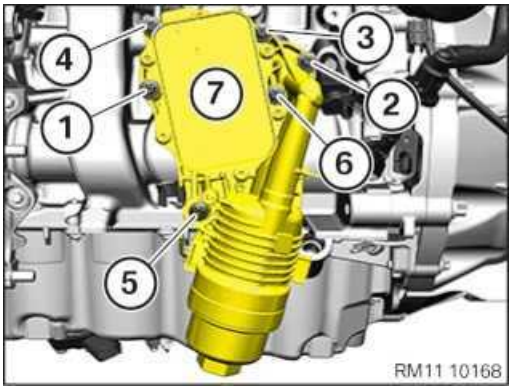
- Clean any sealing residue on the sealing surface of the crankcase (1) with special tool **0 495 102 (11 4 470)**.



- Remove seals (1) using a suitable tool.
- Clean the sealing residue from the full-flow oil filter.
- Renew gaskets (1).

  Parts: Sealing kit
- Install seal (1).

- Crank the engine twice with the special tool **0 493 380 (11 6 480)** in the direction of rotation.

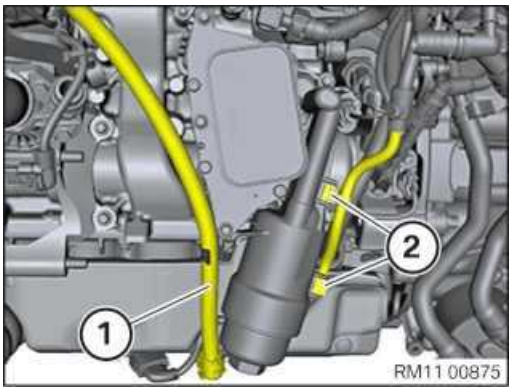


- Have a cleaning cloth ready.
- Catch any engine oil leaking from the oil duct of the crankcase (1) and dispose of this.

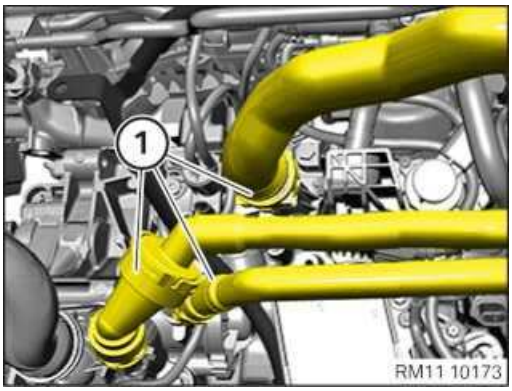
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean sealing surface (1).



- Feed in and install the full-flow oil filter (7).
- Make sure seals are correctly seated.
- Tighten screws in the order (1) to (6).



Full-flow oil filter to crankcase

Screw M6	Observe tightening sequence.	Jointing torque	8 Nm
		Tighten down	8 Nm

cardiagn.com

- Secure the positive battery cable (1) on the full-flow oil filter in the clamp.
- Secure engine wiring harness (2) on full-flow oil filter.

- Connect and lock the coolant lines (1).

  The locks of the coolant lines (1) must audibly engage.

POSTPROCESSES

18 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

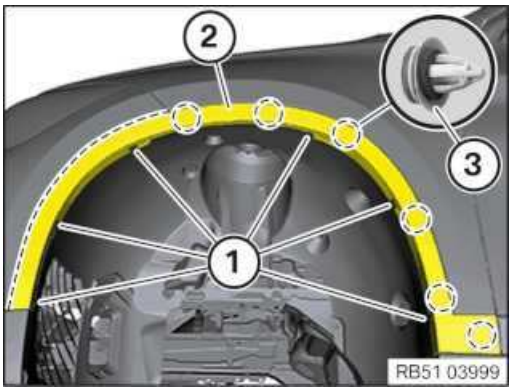
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

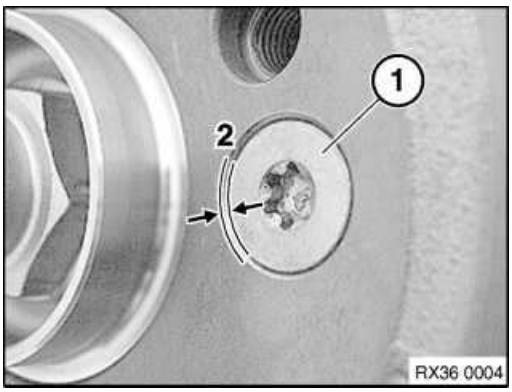
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

19 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

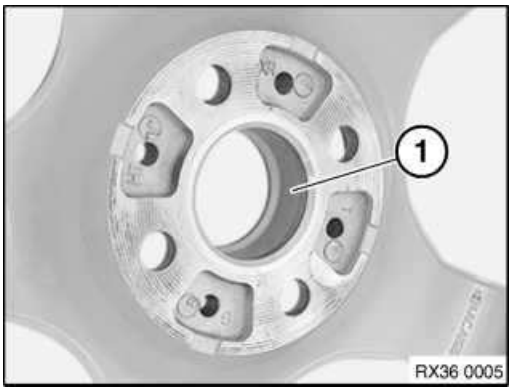


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

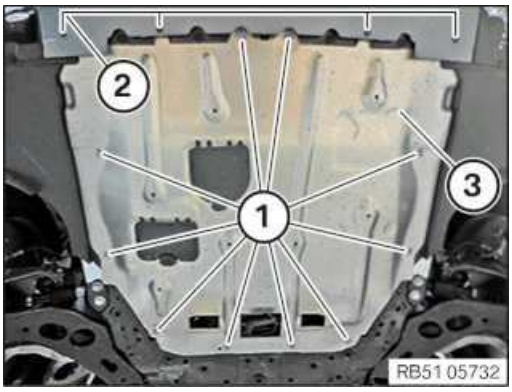
  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

20 – Installing the front underbody protection



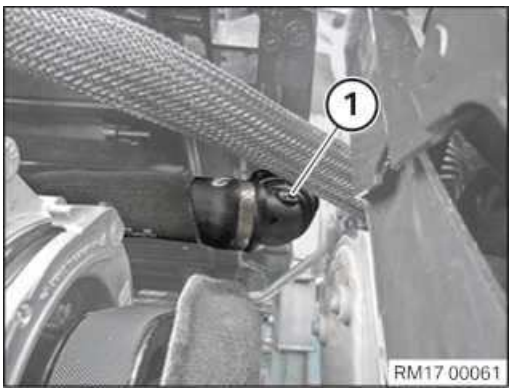
- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

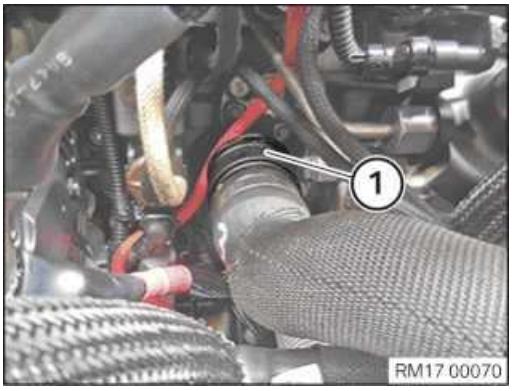
cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

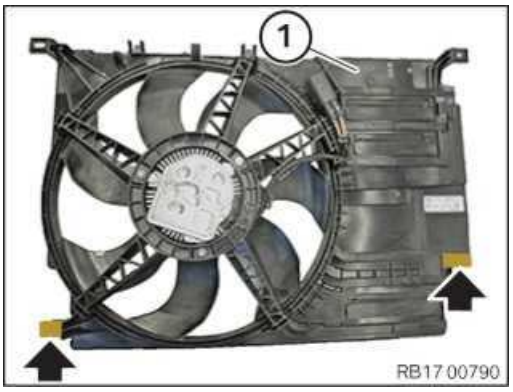


21 – Connect the coolant line

TECHNICAL INFORMATION

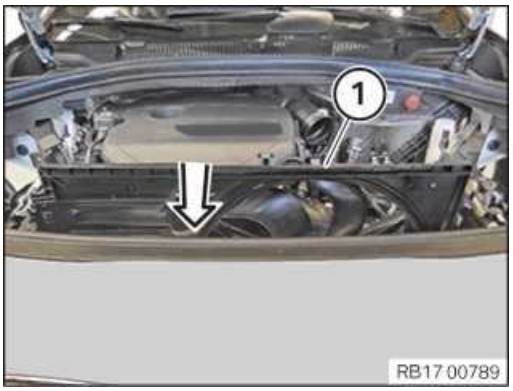
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

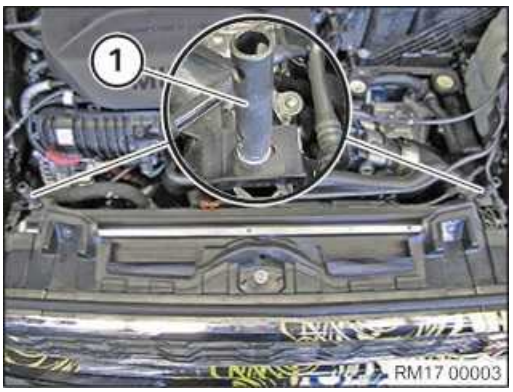
22 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

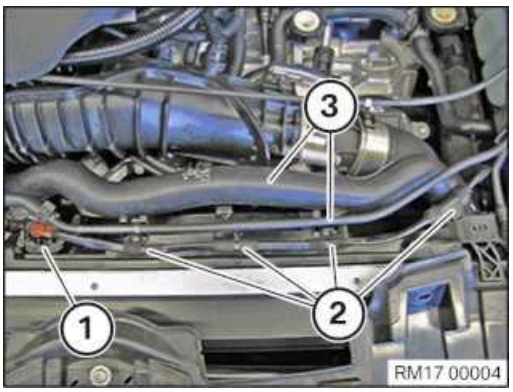
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

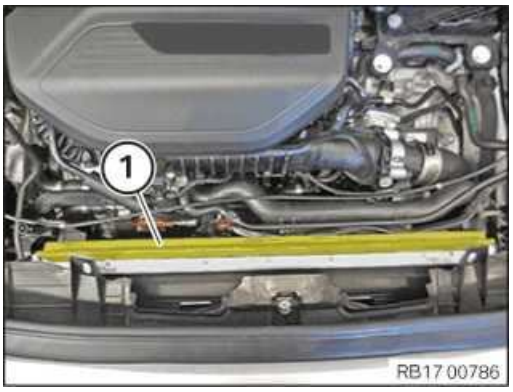
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

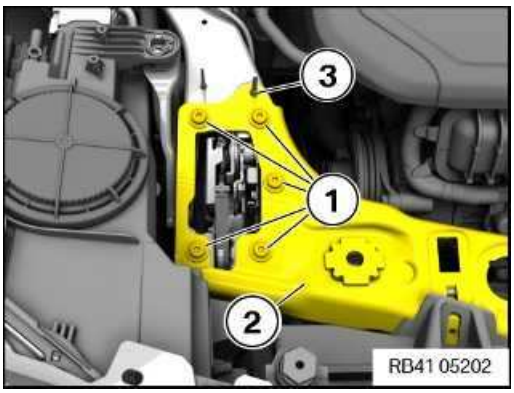


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

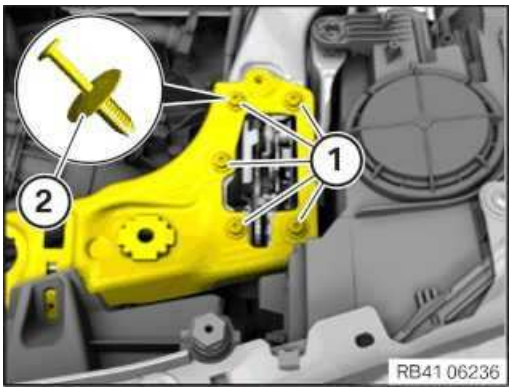
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

23 – Install front cross connection

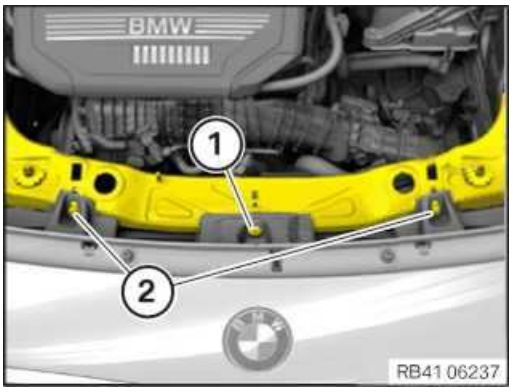


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

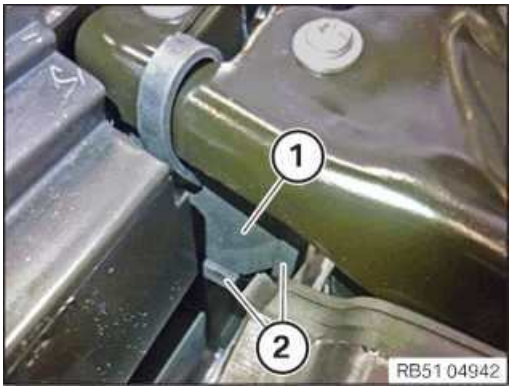
cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

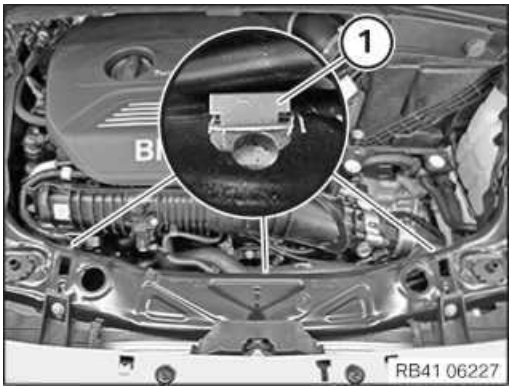
Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).



Air duct to upper connection

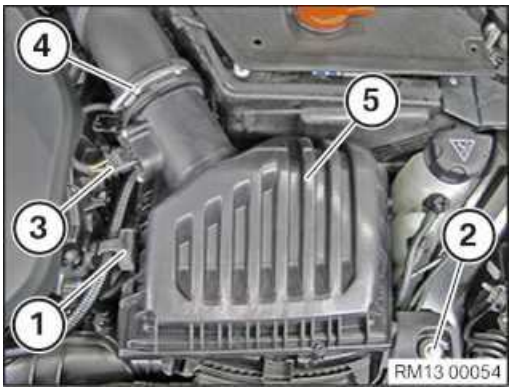
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

24 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

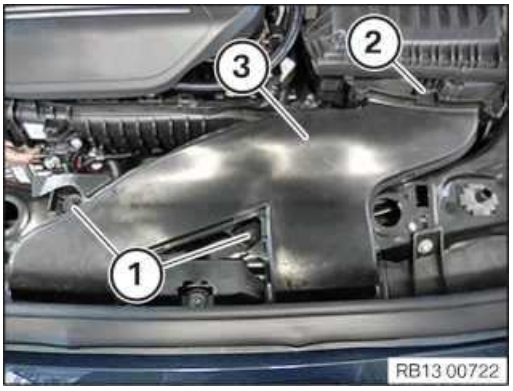
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

25 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

26 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

27 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB47TÜ1

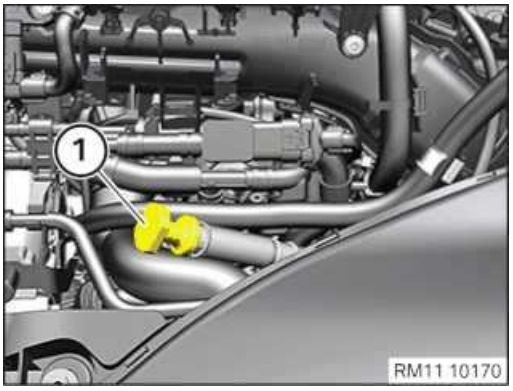
Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

28 – Installing the oil filler cap

- Close oil filler cap (1).

29 – Check engine oil level



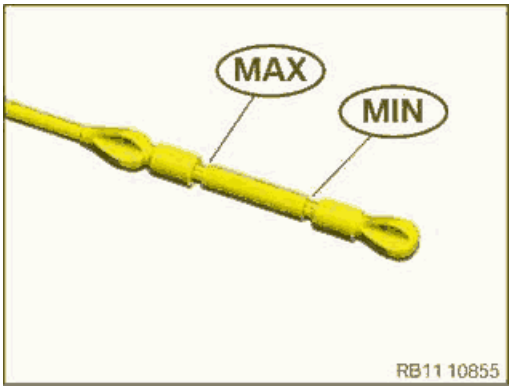
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

30 – Disconnecting all battery earth leads

- See additional information.

31 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

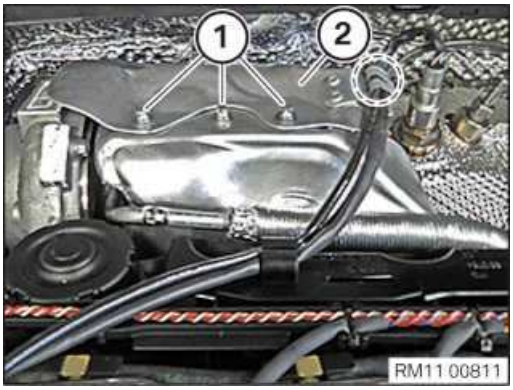
Operating materials	Used in step
2.0 Grease for wheel centring	19
3.0 Technically appropriate engine oils for BMW Group engines	27

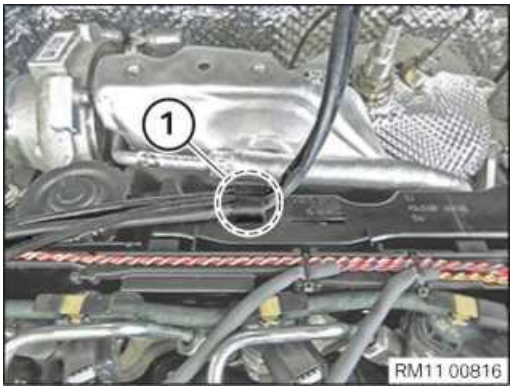
cardiagn.com

11 42 200 Removing and installing/replacing oil feed line (B47AO0)



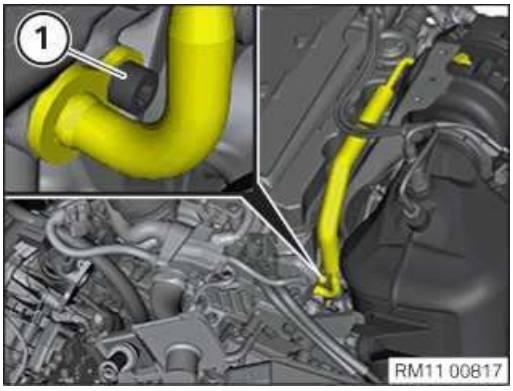
Necessary preliminary work:

- Remove clean air pipe.
- Remove exhaust-gas recirculation cooler

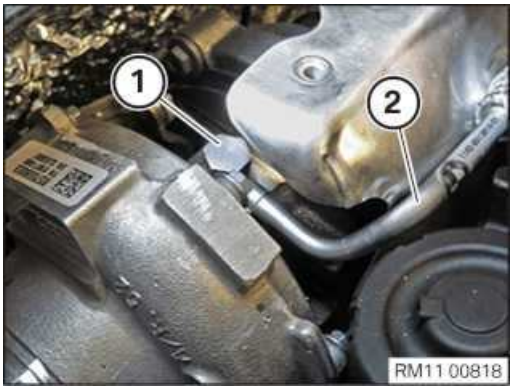


Removal:

Loosen screws (1) on heat shield.



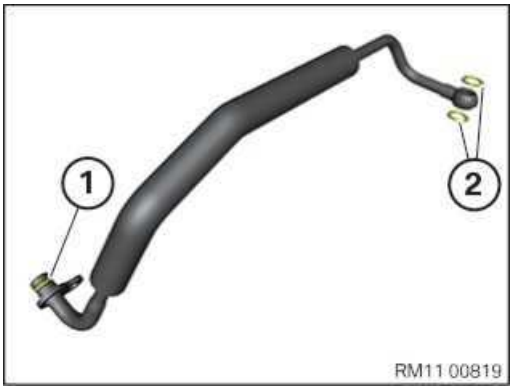
Release screws (1).
Detach cable in marked area.
Remove heat shield (2) towards top.



Detach all cables in marked area.

cardiagn.com

Release screw (1).

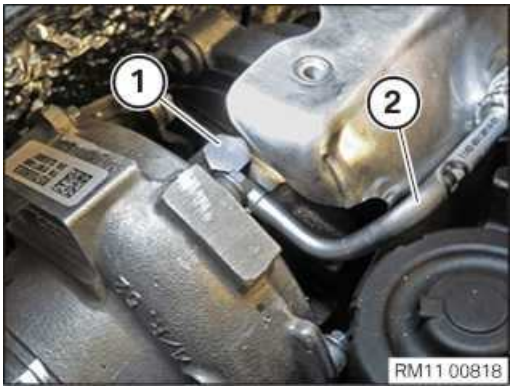


Pull off oil feed line from cylinder head.

Unfasten banjo bolt (2).

Remove oil feed line.

Installation:

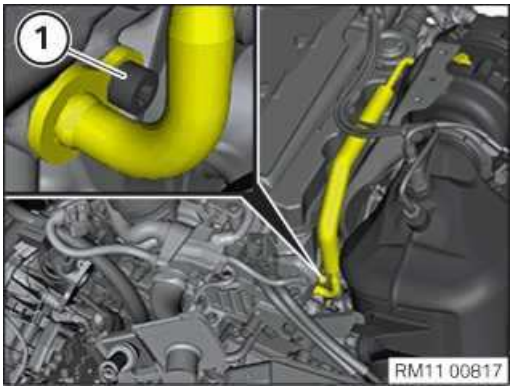


Replace sealing rings (2).

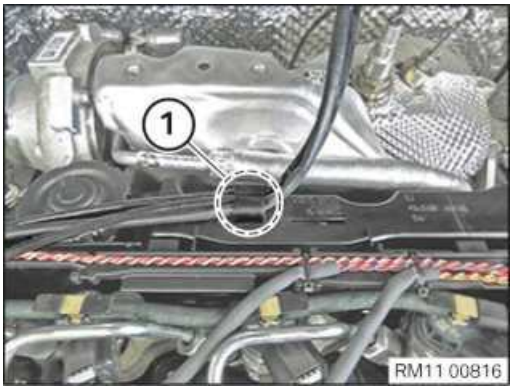
Parts: Sealing ring

Check sealing ring (1) for damage, renew oil feed line if necessary.

Parts: Oil feed line

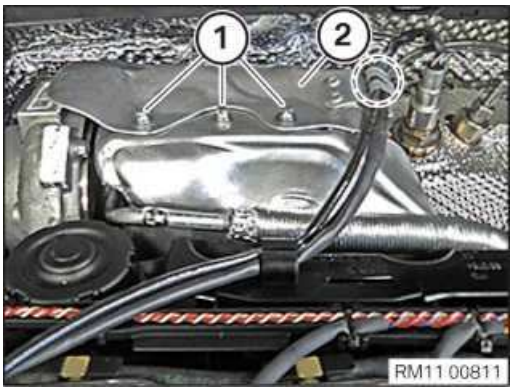


Position oil feed line (2).



Tighten banjo bolt (1).

Tightening torque 11 42 8AZ.



cardiagn.com

Position oil feed line in cylinder head.
Tighten screw (1).
Tightening torques 11 42 2AZ.

Attach all cables in the marked area (1).

Install heat shield (2).
Tighten down screws (1).
Attach oxygen sensor cable in the marked area.

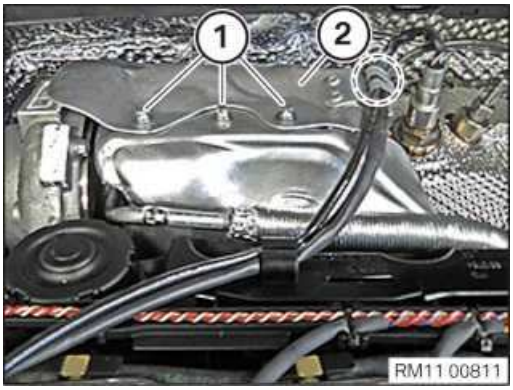
Tighten down screws (1).

Required follow-up work:

- Install exhaust-gas recirculation cooler.
- Install clean air pipe.

cardiagn.com

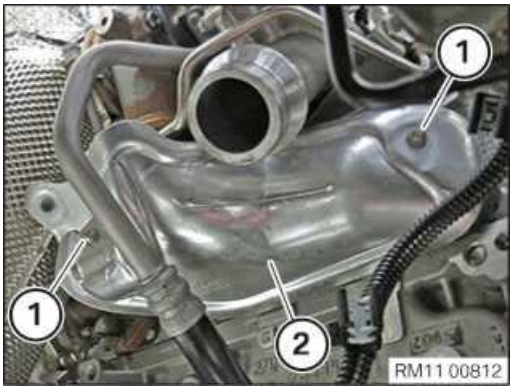
11 42 210 Removing and installing/replacing oil return line (B47AO0)



Necessary preliminary work:

- Remove right charge-air duct
- Remove clean air pipe

Removal:



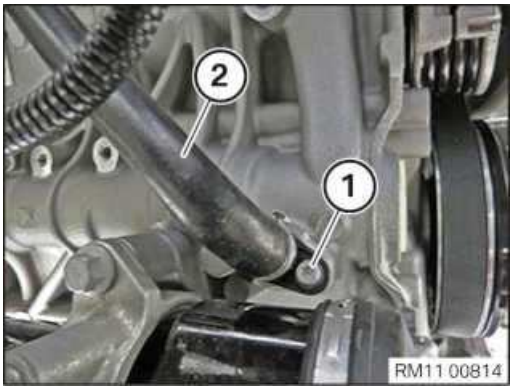
Release screws (1).

Detach cable for oxygen sensors at marked area.

Release screws (1).

Remove heat shield (2) towards top.

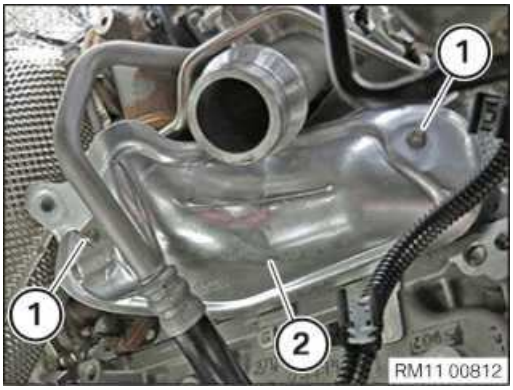
Note:
Heat shield (2) can only be completely removed after dismantling of oil return line.



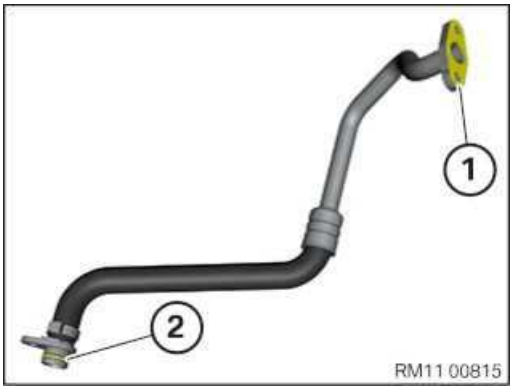
Release screws (1).

Lay heat shield (2) to one side.

cardiagn.com

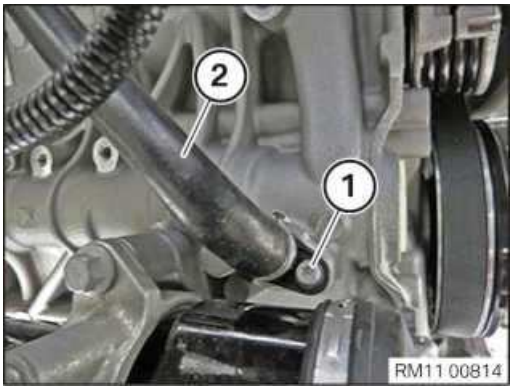


Release screws (1).



Release screw (1).
Remove oil return line (2).

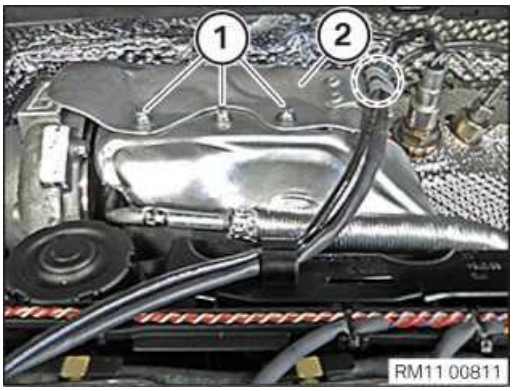
Installation:



Install heat shield (2).
Tighten screws (1).

Parts: Renew seal (1).
Parts: Replace O-ring (2).

cardiagn.com



Position oil return line (2).
Tighten screw (1).
Tightening torque 11 42 3AZ.

Note:
Make sure gasket is correctly seated.

Position oil return line on exhaust turbocharger.
Tighten screws (1).
Tightening torque 11 42 4AZ.

Install heat shield (2)
Tighten screws (1).
Attach oxygen sensor cable (3) in marked area.

Tighten screws (1).

Required follow-up work:

- Install front underbody protection
- Install clean air pipe

cardiagn.com

11 42 230 Removing and installing/sealing or replacing oil feed line for high-pressure exhaust turbocharger

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

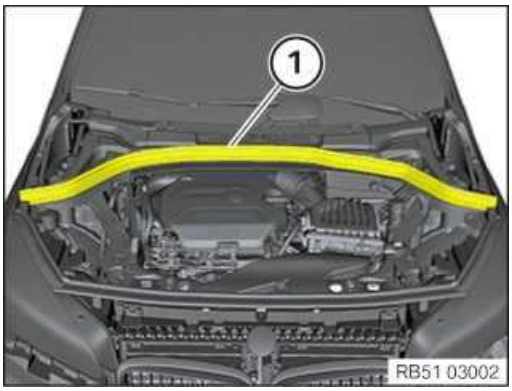
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

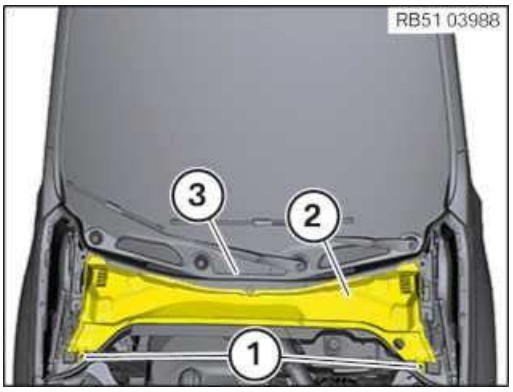


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

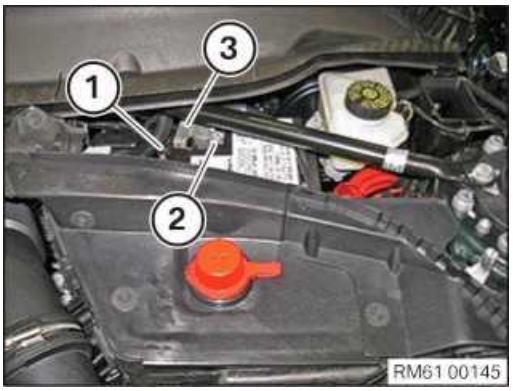
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

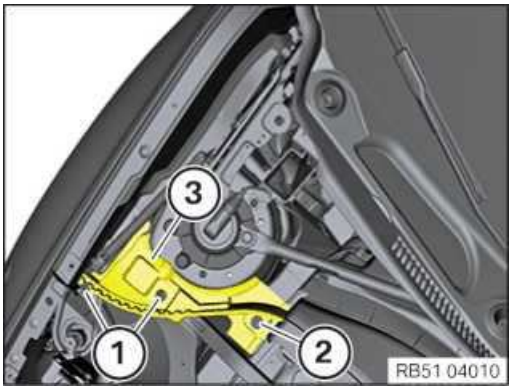


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

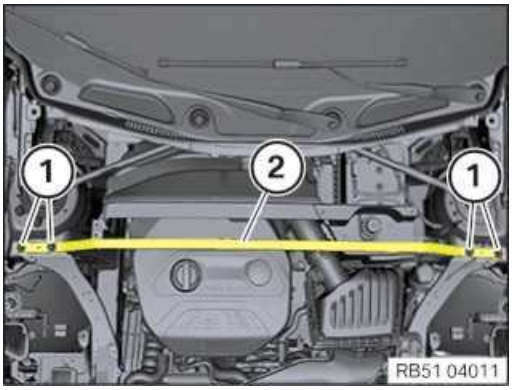
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

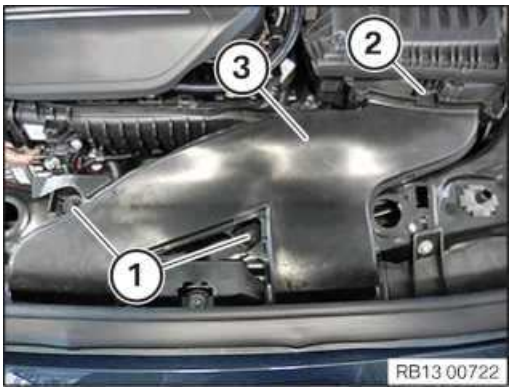
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

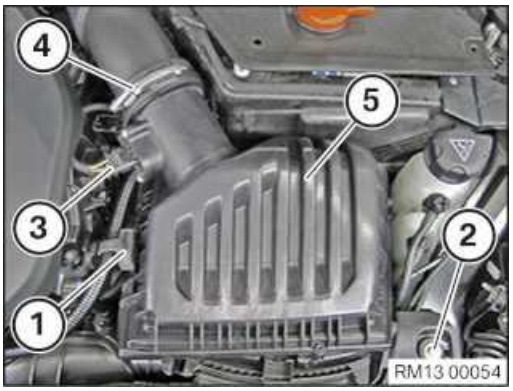
NOTICE

Description is for right component only. The procedure on the left side is identical.



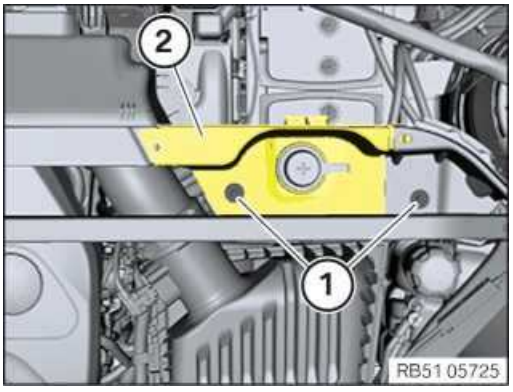
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



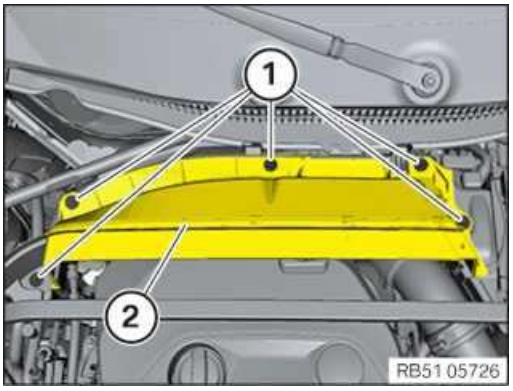
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



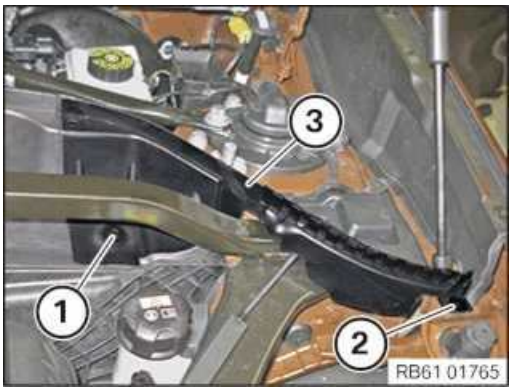
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

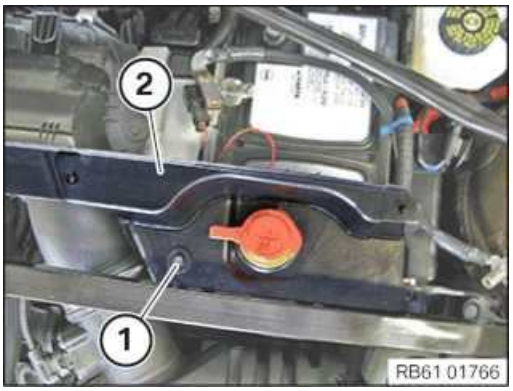
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



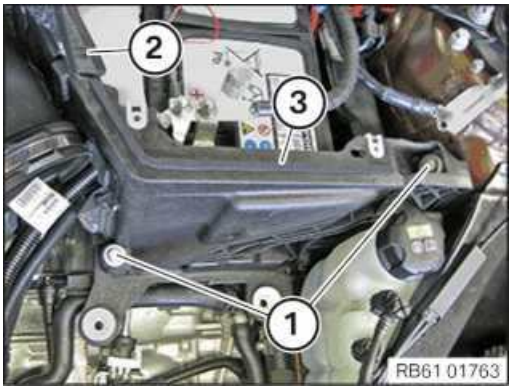
cardiagn.com

WARNING

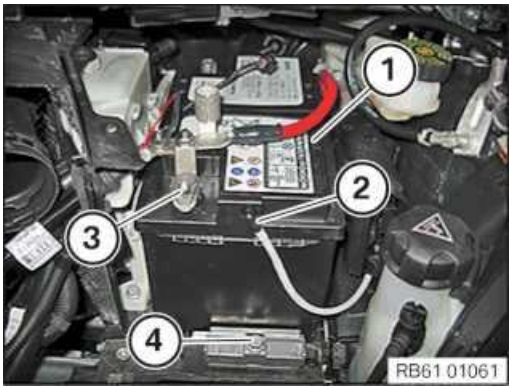


Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

cardiagn.com

9 – Removing the acoustic cover

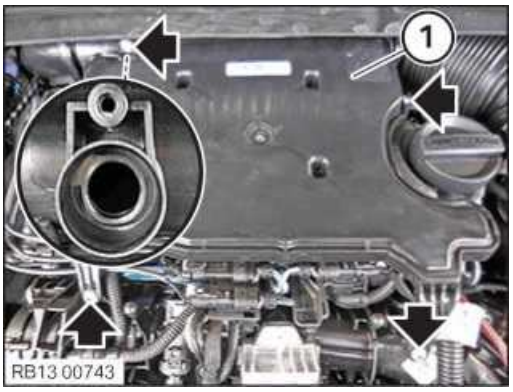
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



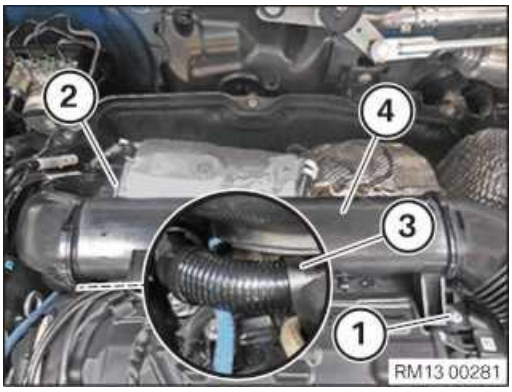
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

cardiagn.com

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

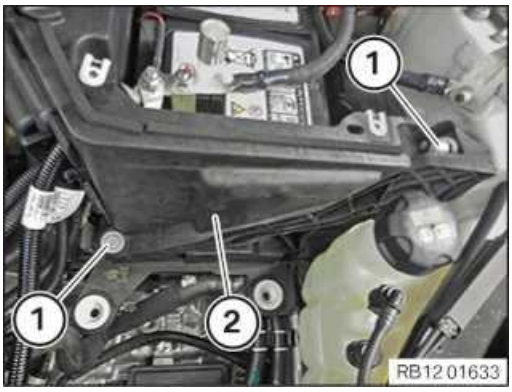
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

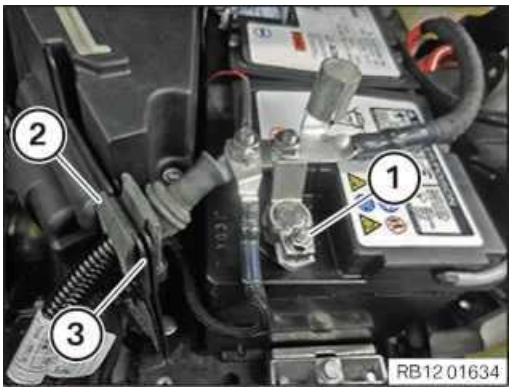
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



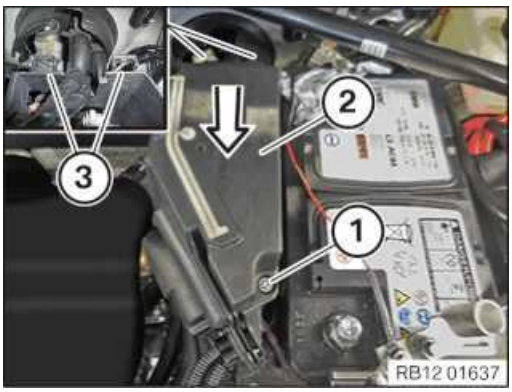
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

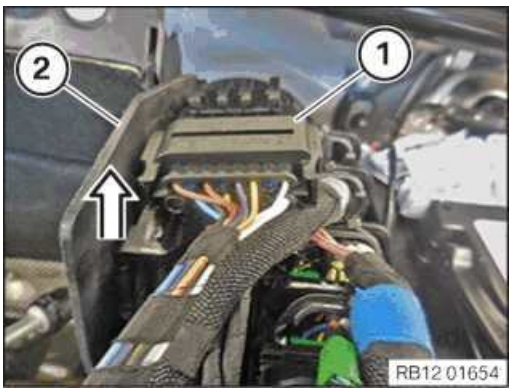


TECHNICAL INFORMATION

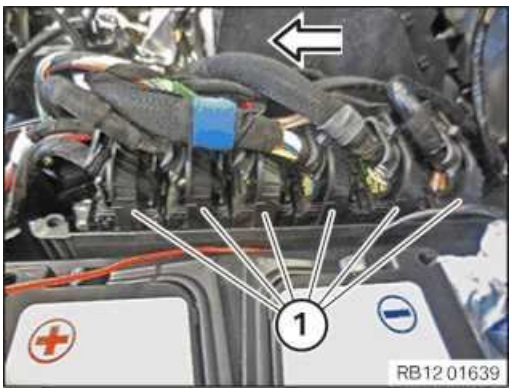
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



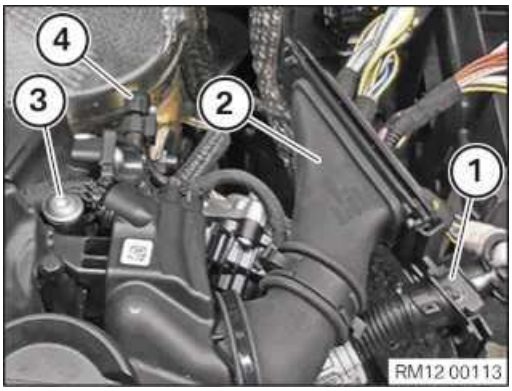
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



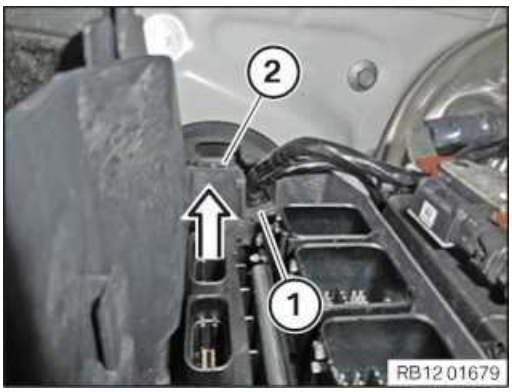
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

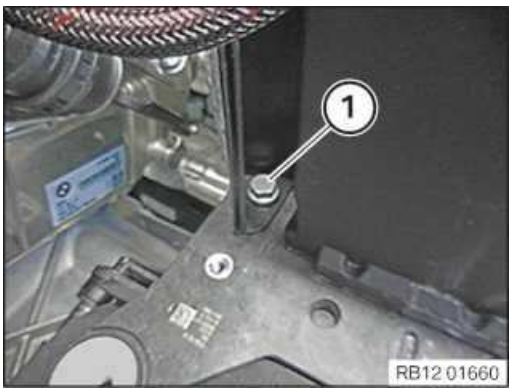
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



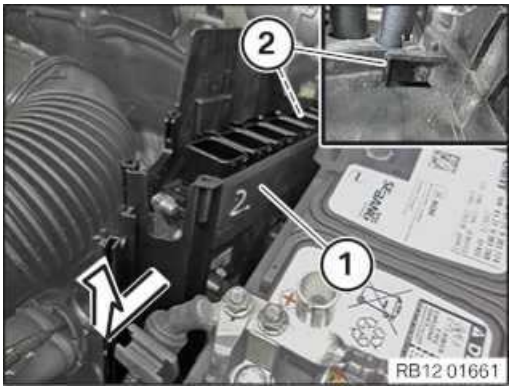
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com

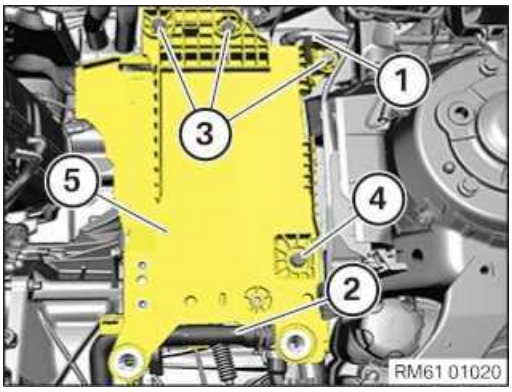


- Unlock and loosen connector (1).



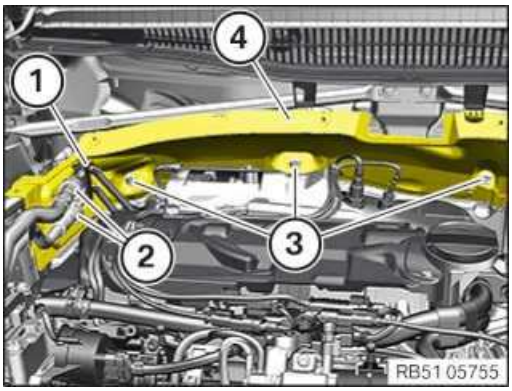
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



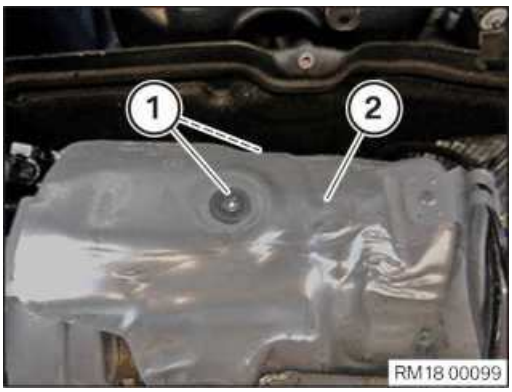
13 – Remove battery holder

cardiagn.com

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

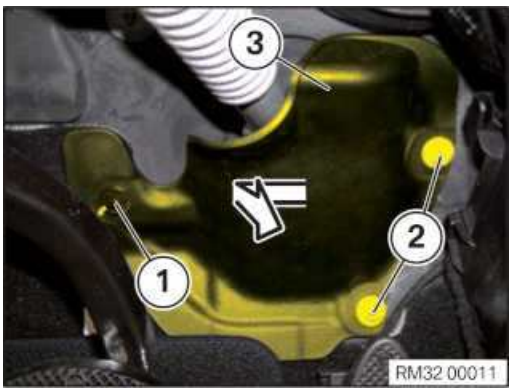
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.



15 – Removing heat shield from top exhaust turbocharger

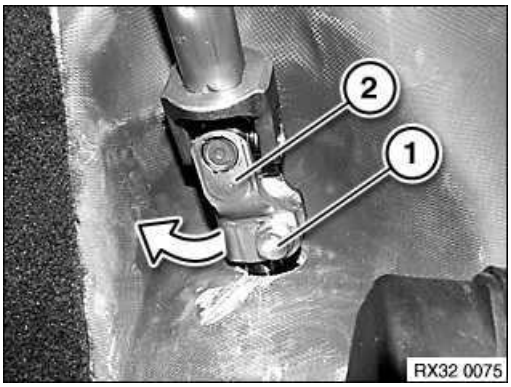
WARNING

Hot surfaces.



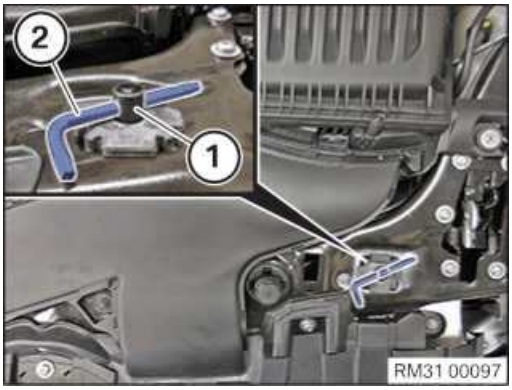
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.
  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

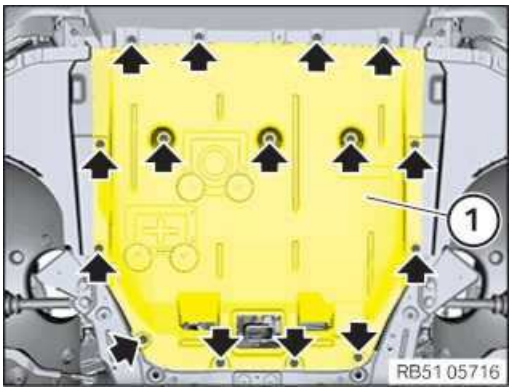
17 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

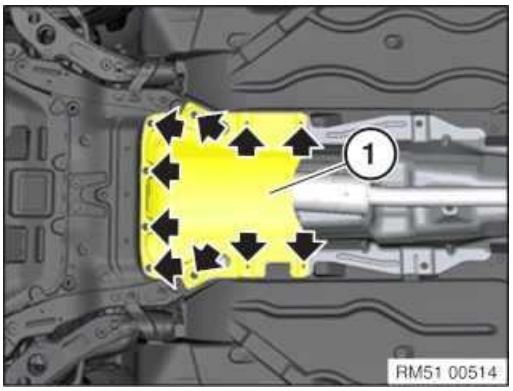


▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

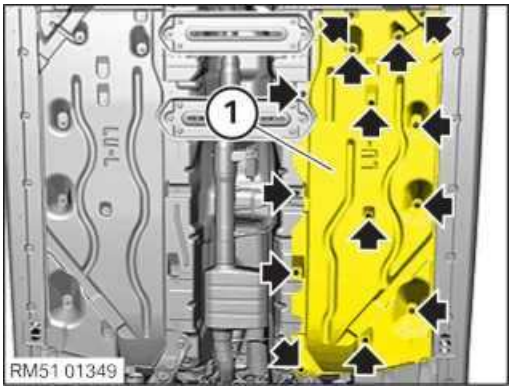
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com



- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

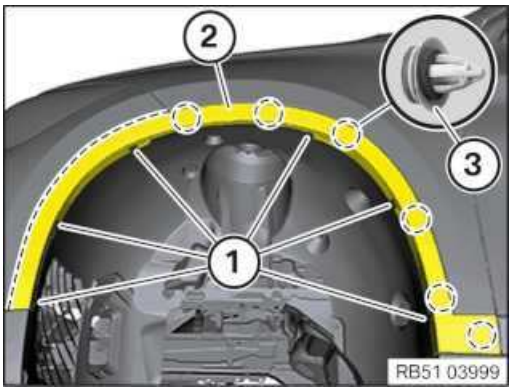
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

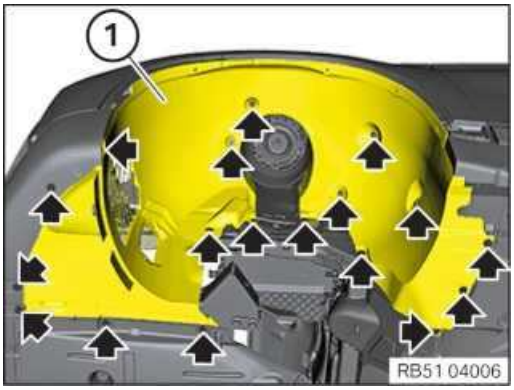
▸ **Remove the front wheel arch trim**



NOTICE

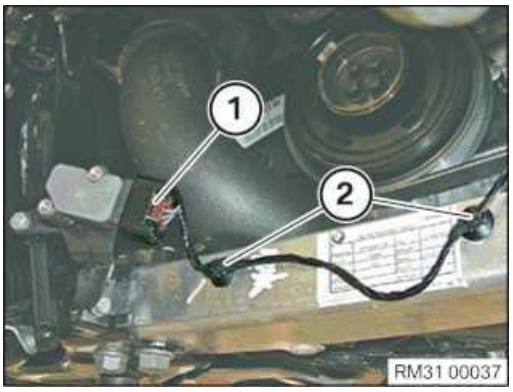
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

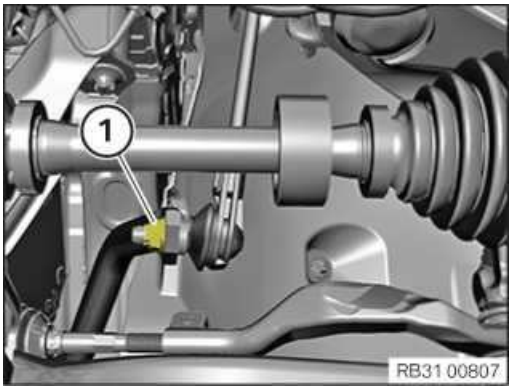


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



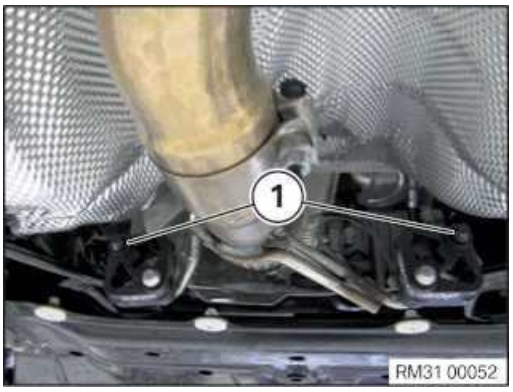
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

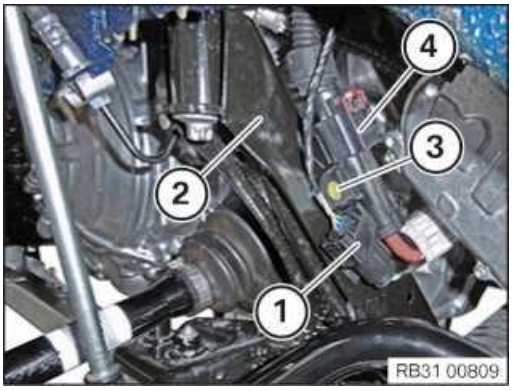


- Unfasten nut (1).

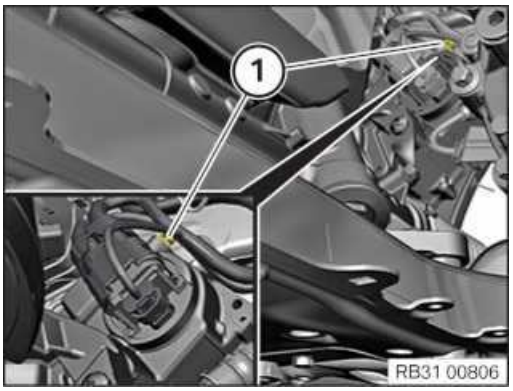
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

cardiagn.com

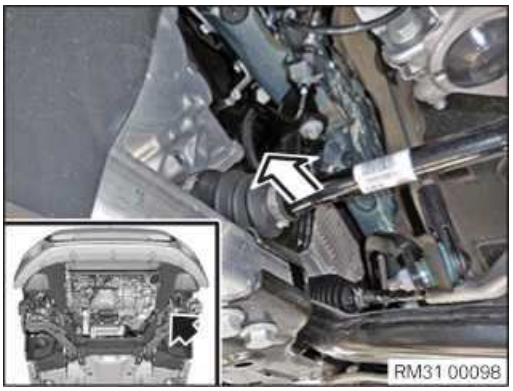


25 – Detaching rubber mount from front axle support



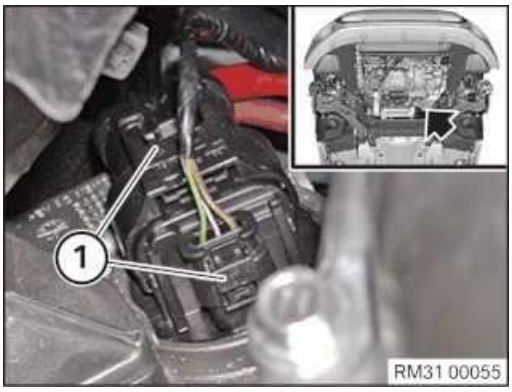
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▸ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

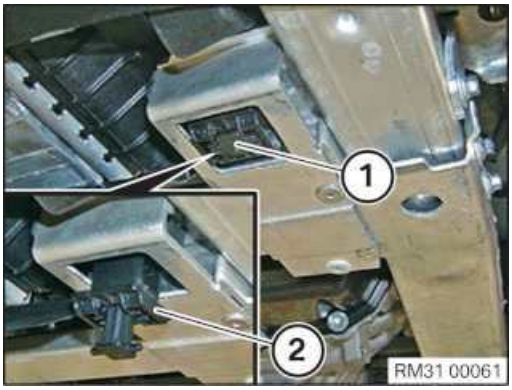
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

cardiagn.com

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

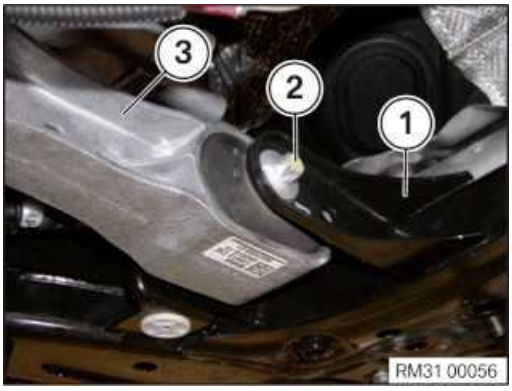
27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



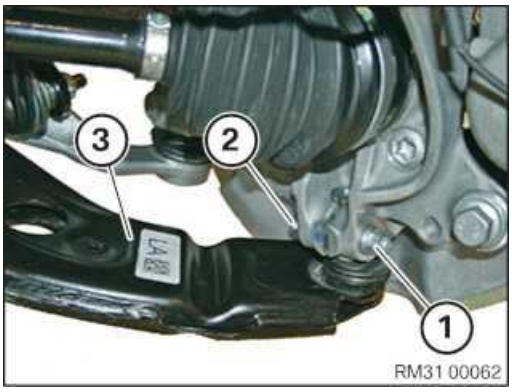
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

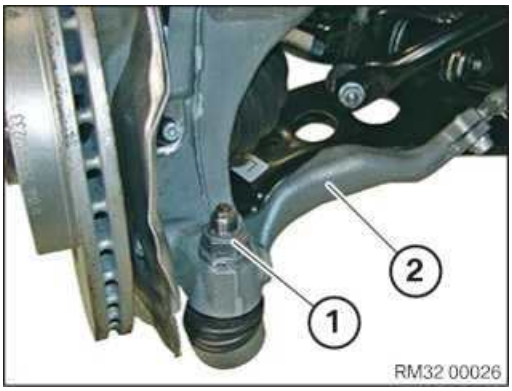


NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

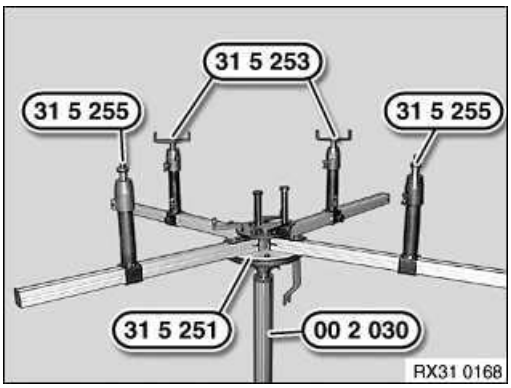
28 – Detaching and removing front axle completely



cardiagn.com

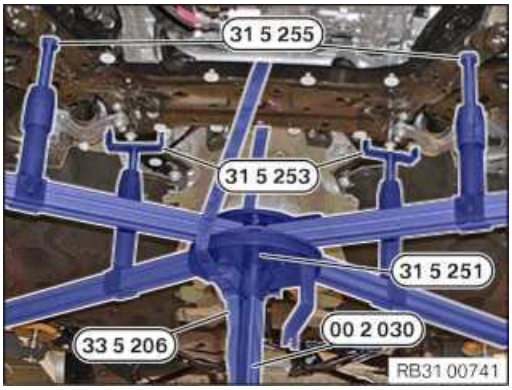
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

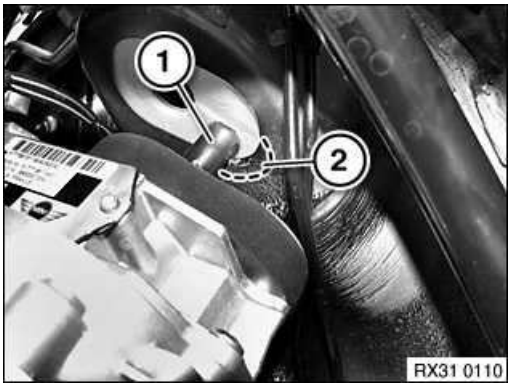
NOTICE



Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

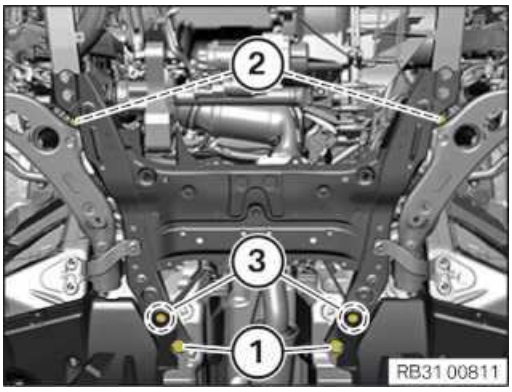


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



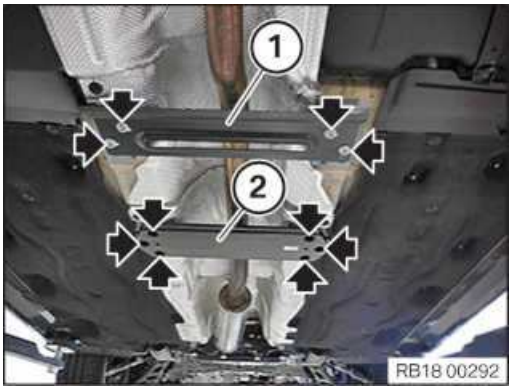
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



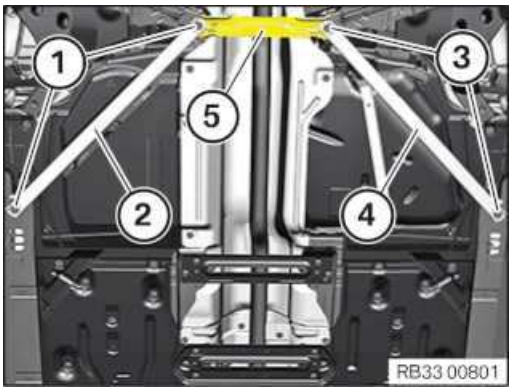
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

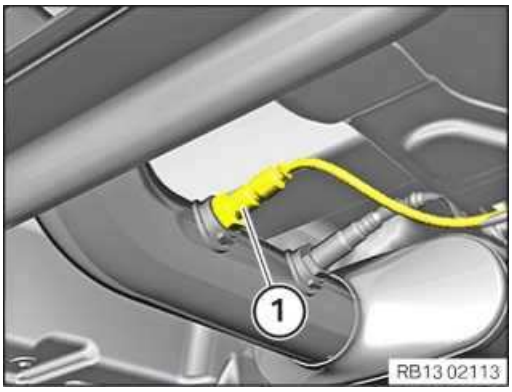
31 – Remove exhaust system

cardiagn.com

WARNING

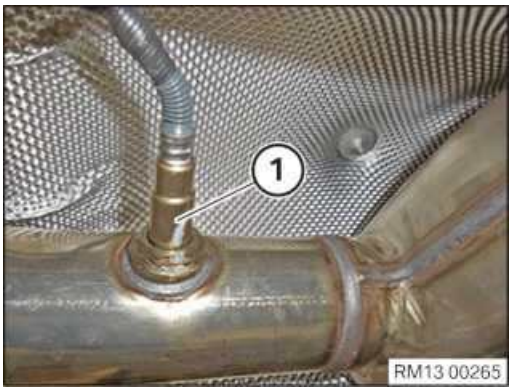
Hot surfaces.

Risk of burning!



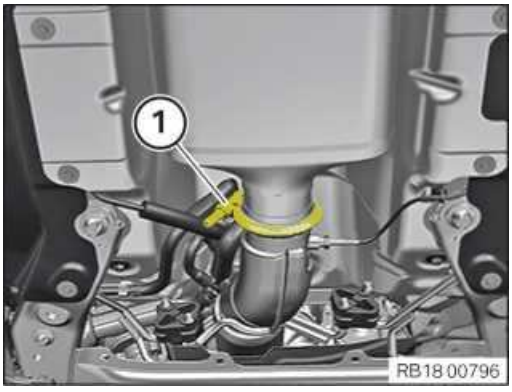
- Perform all work only on components that have cooled down.

CAUTION



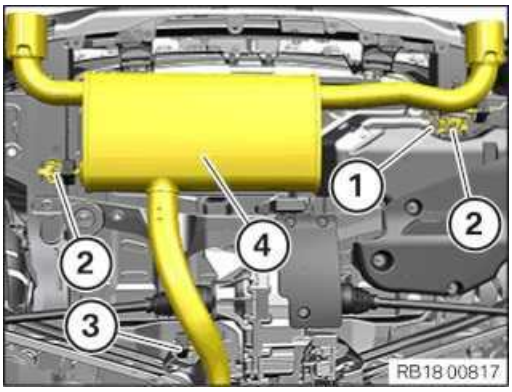
Heavy component.

Heavy components can lead to injury or damage.

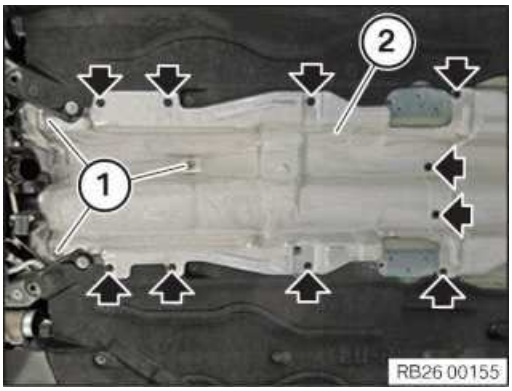


- Remove and install heavy components with the aid of another person/other persons.

- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

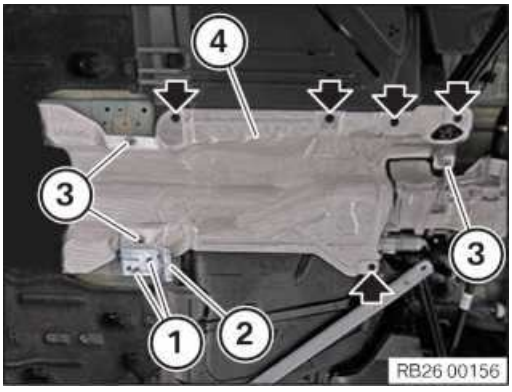


- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

cardiagn.com



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

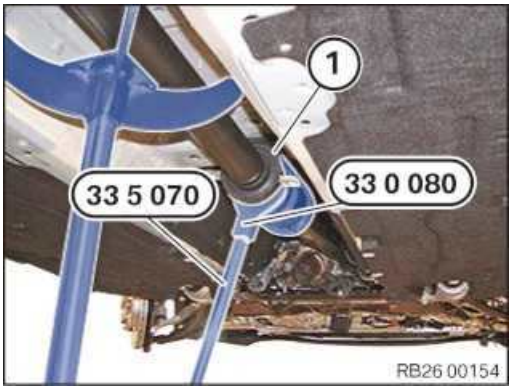
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

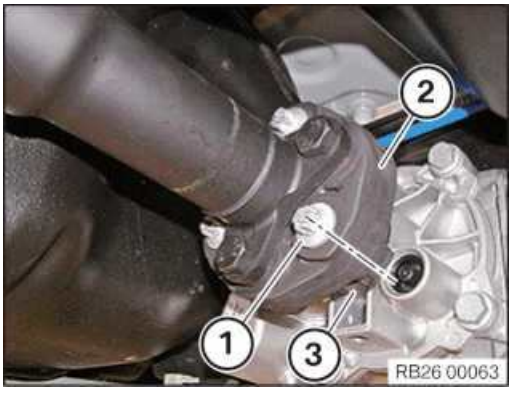
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.

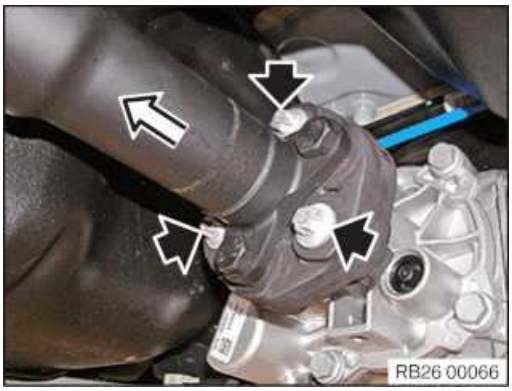


- Always support the propeller shaft (1) with a conventional jack.

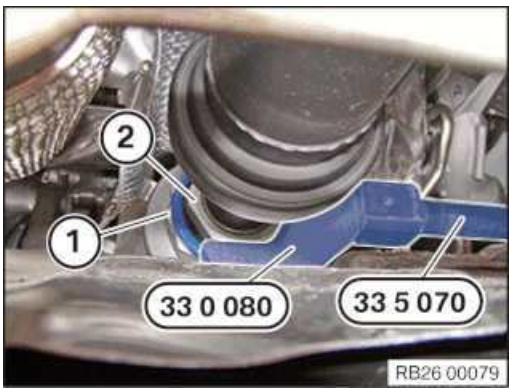
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



cardiagn.com

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

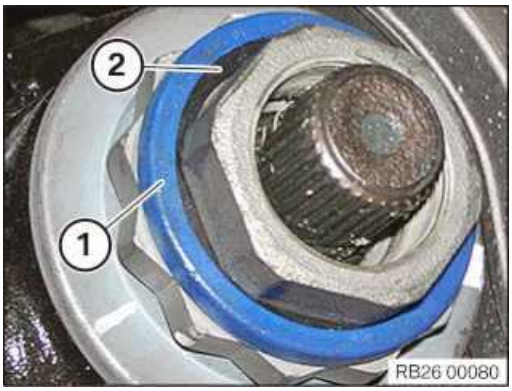
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

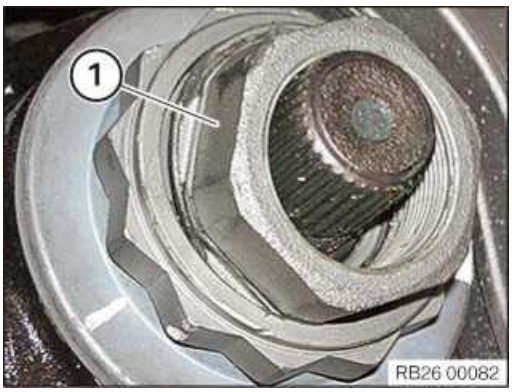
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

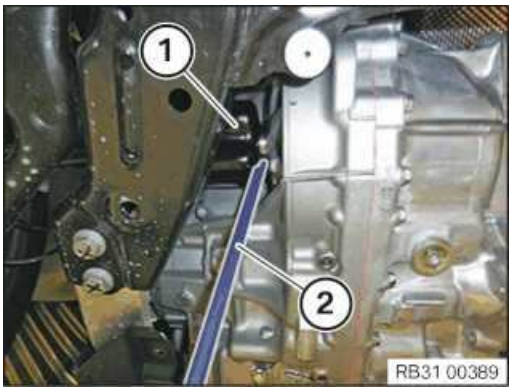
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

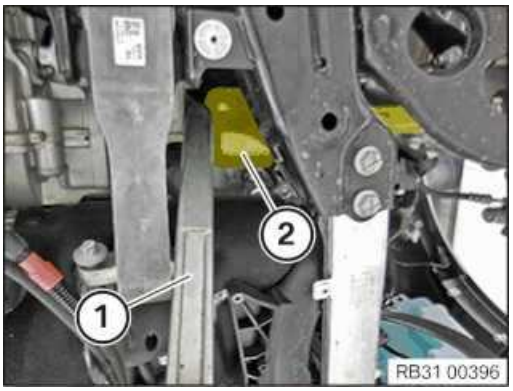
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



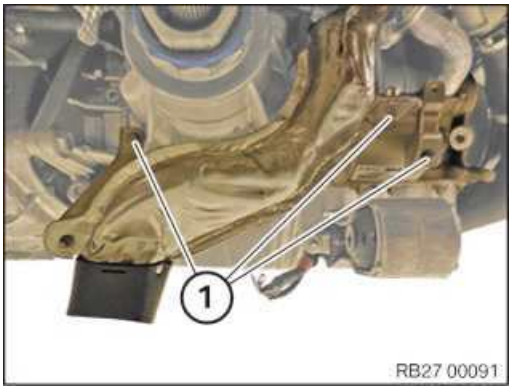
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



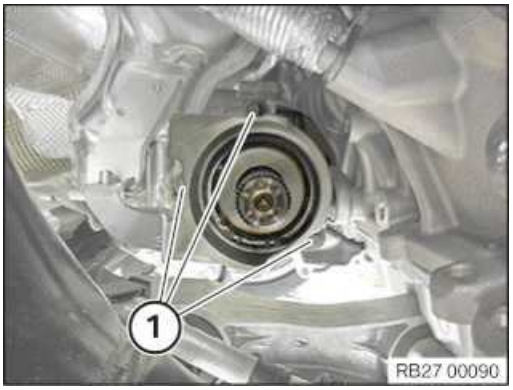
36 – Partially removing the left output shaft

cardiagn.com

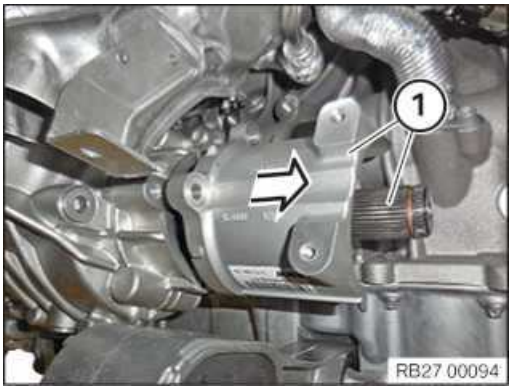


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

37 – Partially removing right output shaft



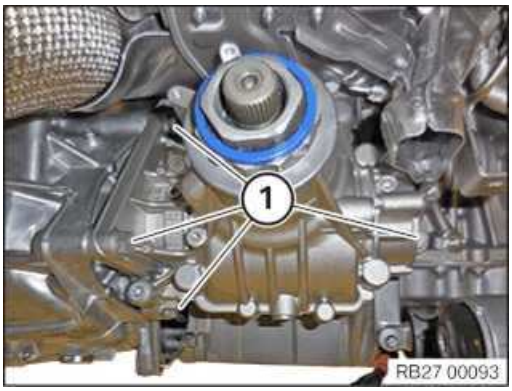
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).



38 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

cardiagn.com

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

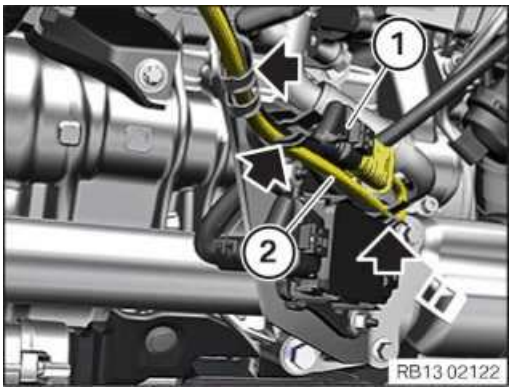
40 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

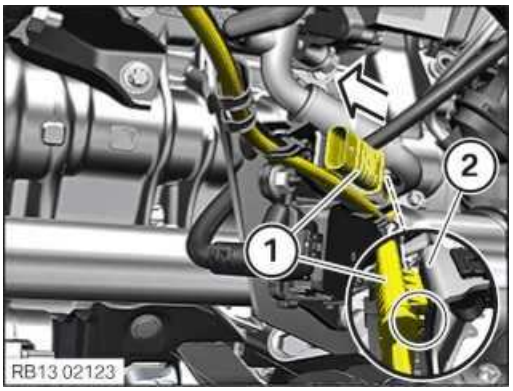
Risk of burning!

- Perform all work only on components that have cooled down.



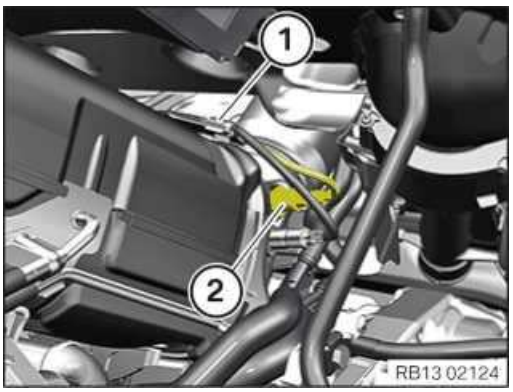
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

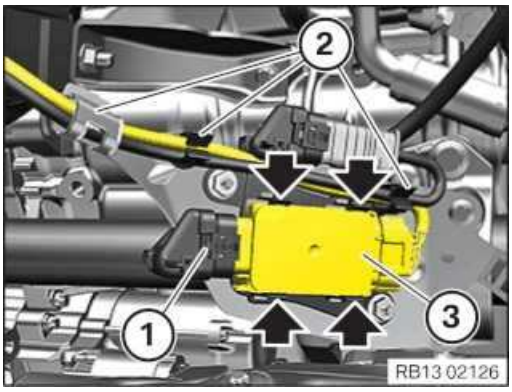
41 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

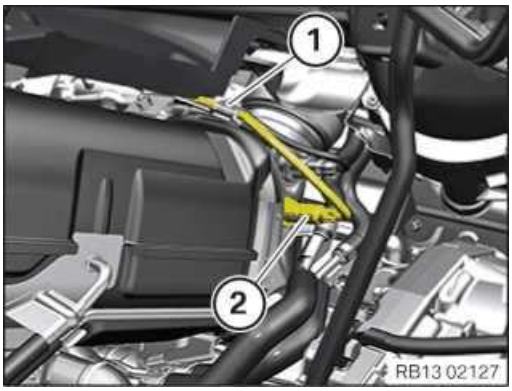
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

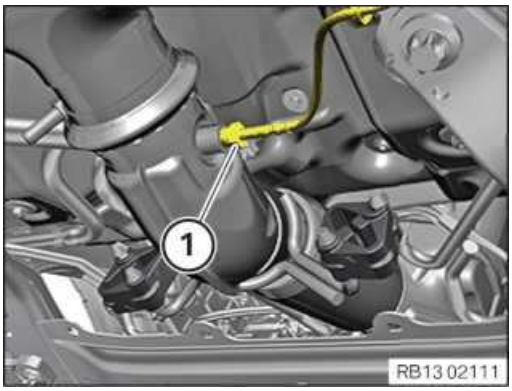
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

44 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

cardiagn.com

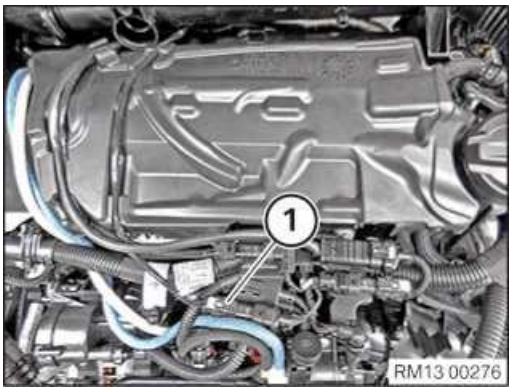
WARNING

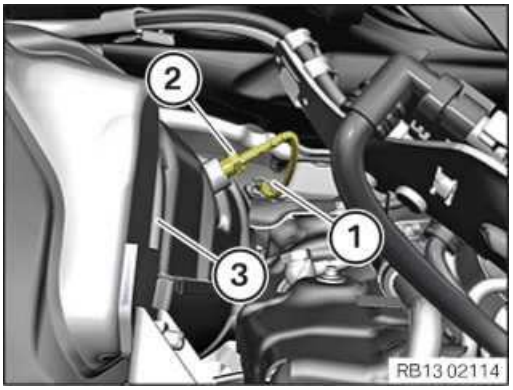
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

45 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
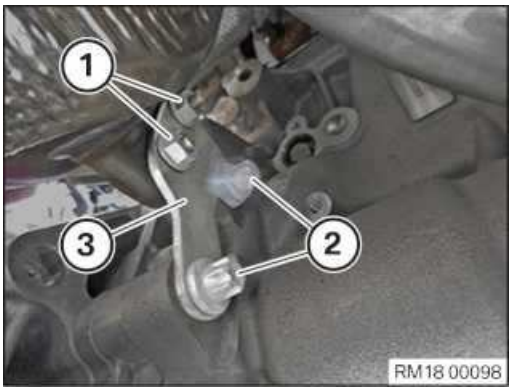
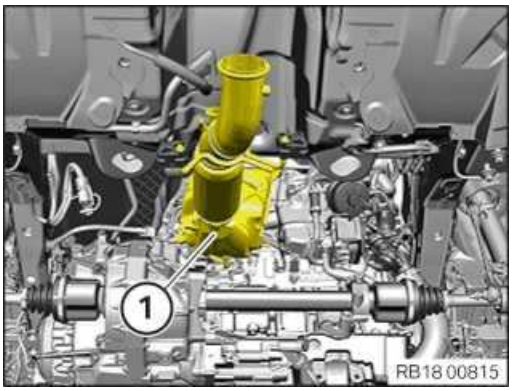
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

- Loosen nuts (1).



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

cardiagn.com

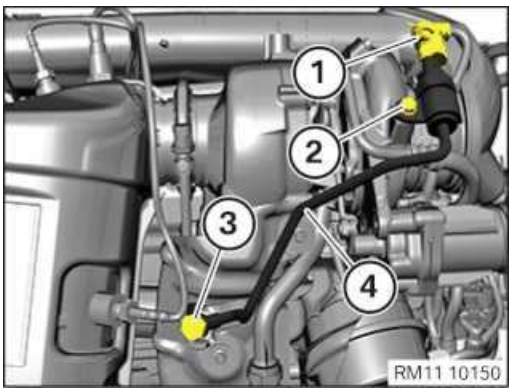
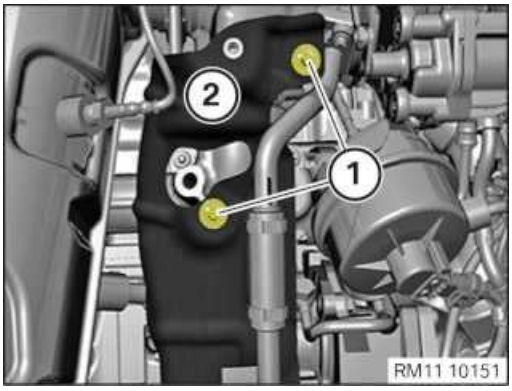
- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

- Feed out diesel particulate filter (1) toward the bottom and remove.



48 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

49 – Removing the low-pressure stage turbocharger

cardiagn.com

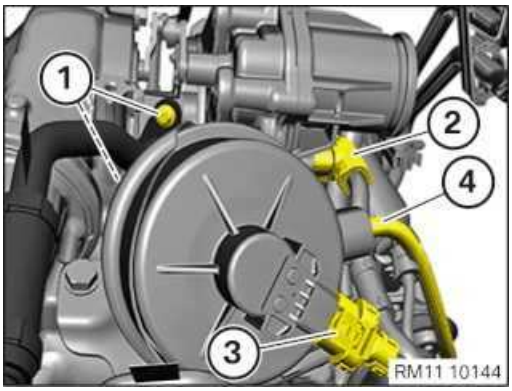
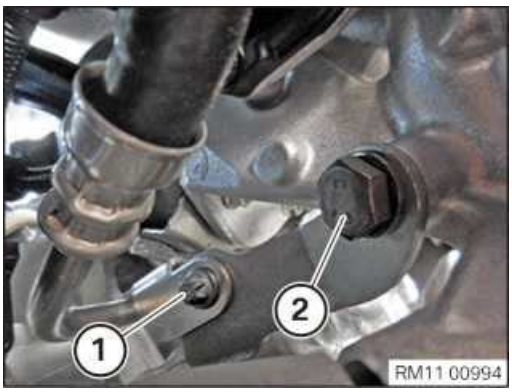
WARNING



Hot surfaces.

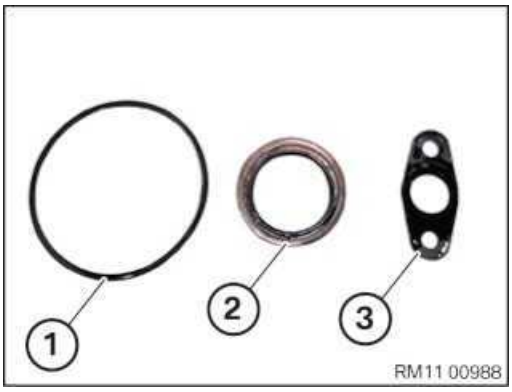
Risk of burning!



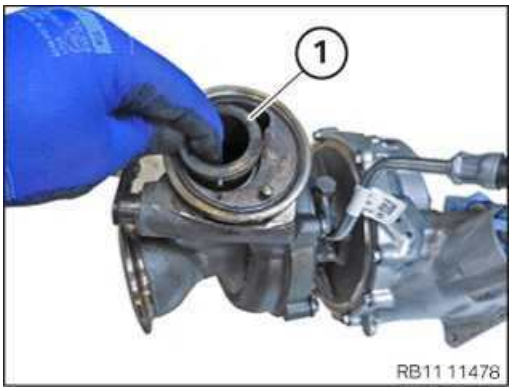
- Perform all work only on components that have cooled down.

- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

cardiagn.com

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

MAIN WORK

POSTPROCESSES

50 – Prepare for the installation of the exhaust turbocharger

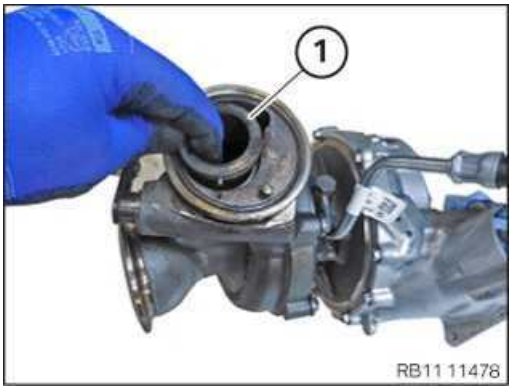
- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

51 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

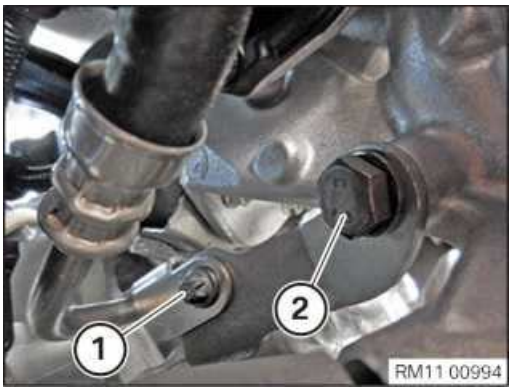
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

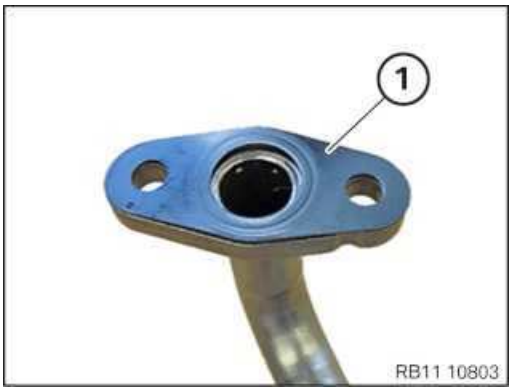
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

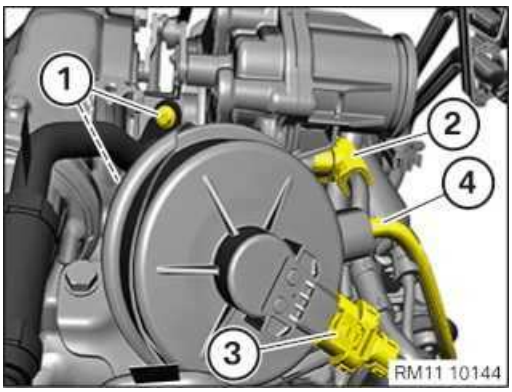
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

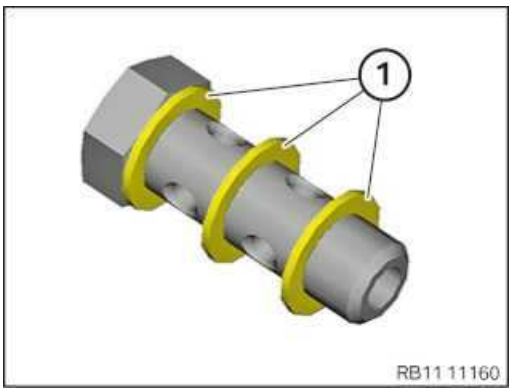


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

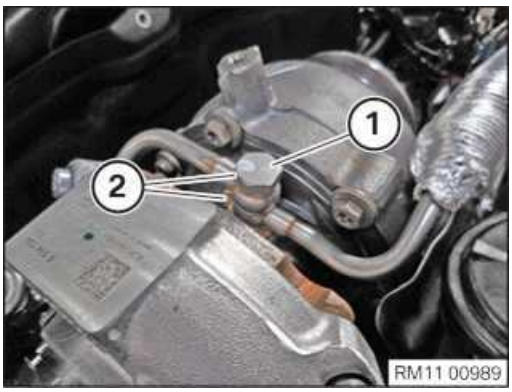
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

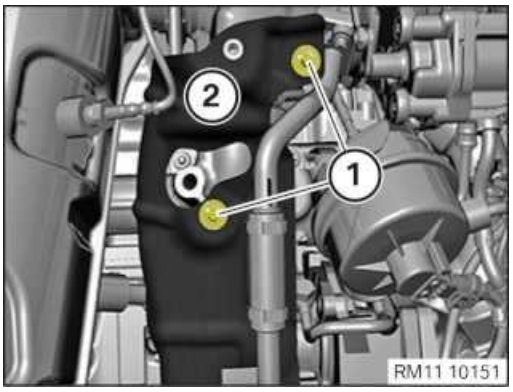
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

52 – Installing heat shield on exhaust turbocharger at bottom

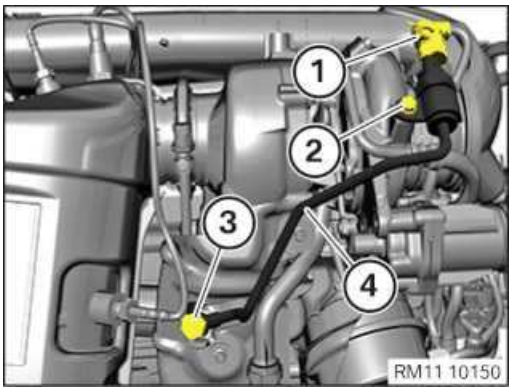


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).

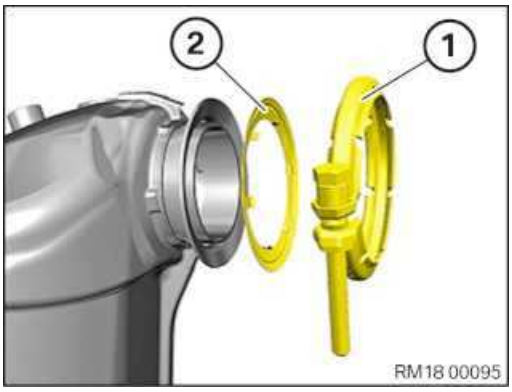
Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

53 – Installing the diesel particulate filter



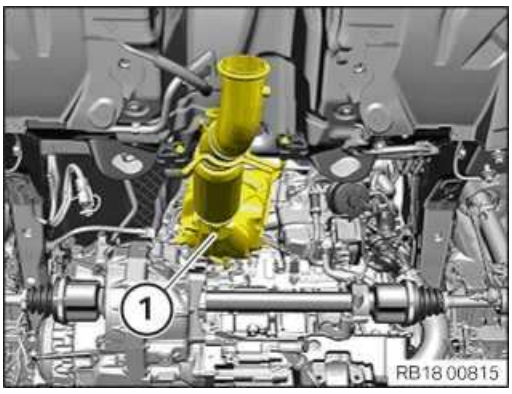
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

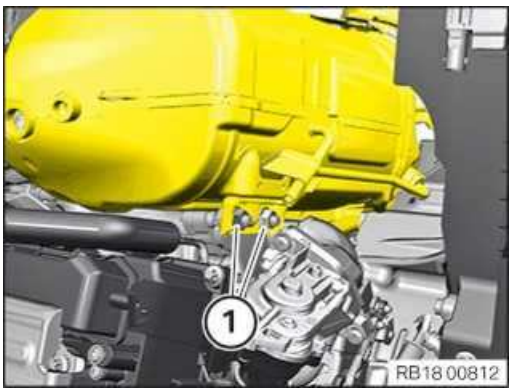
cardiagn.com



- Renew the V-clip (1).

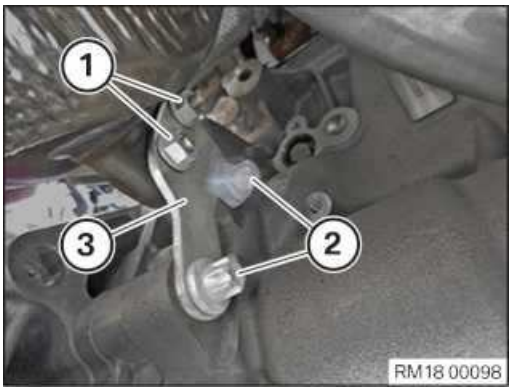
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

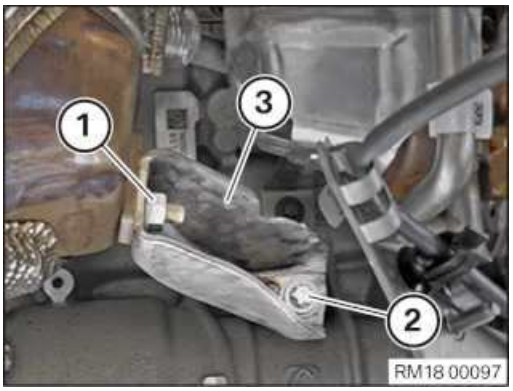


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

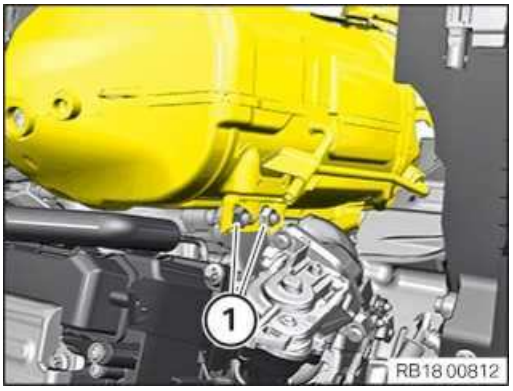


- Tighten nuts (1) by hand.

cardiagn.com

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

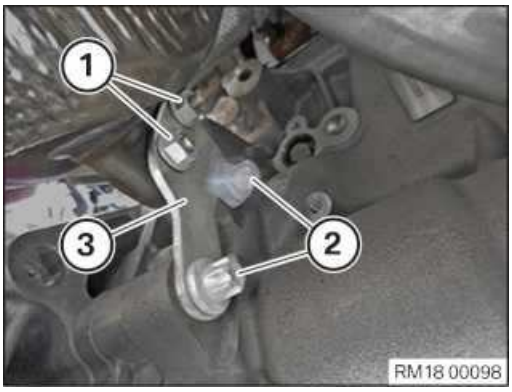


- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



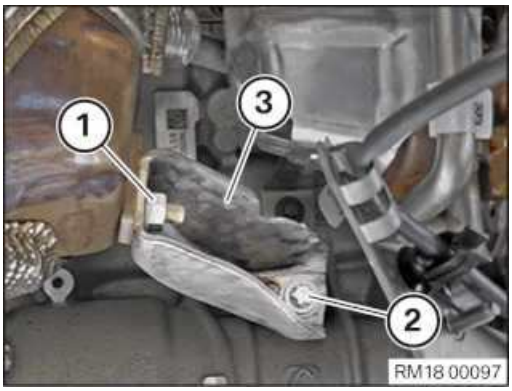
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

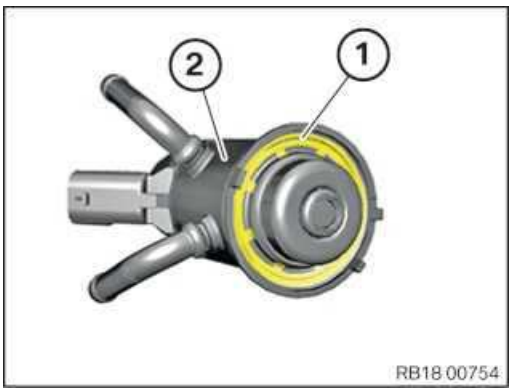
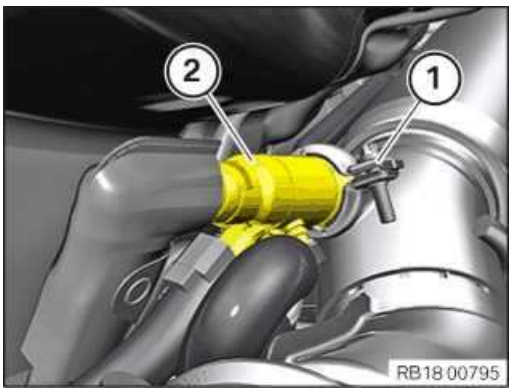
- Tighten down screw (2).



Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

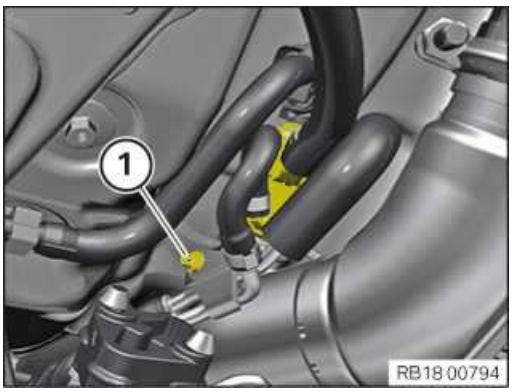


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

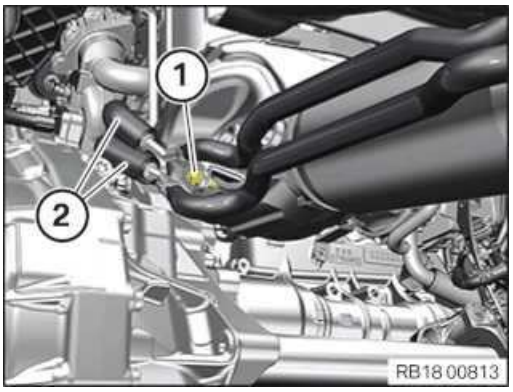


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

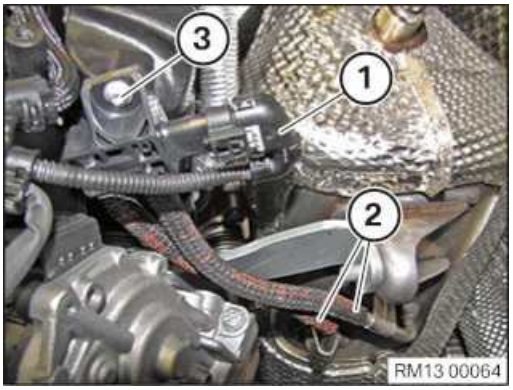


- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▶ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

54 – Install the control sensor

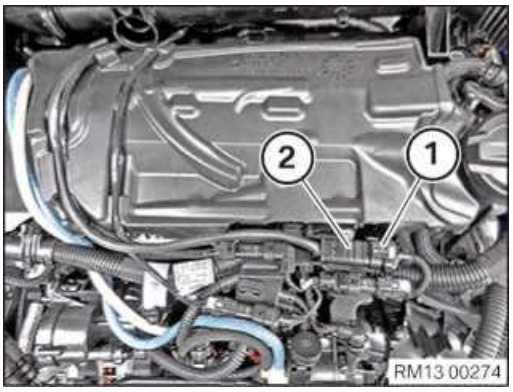
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

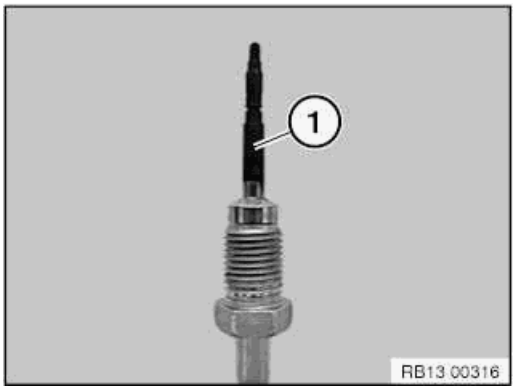
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

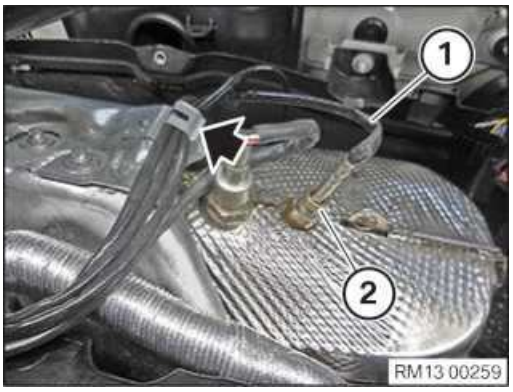


cardiagn.com

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

55 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

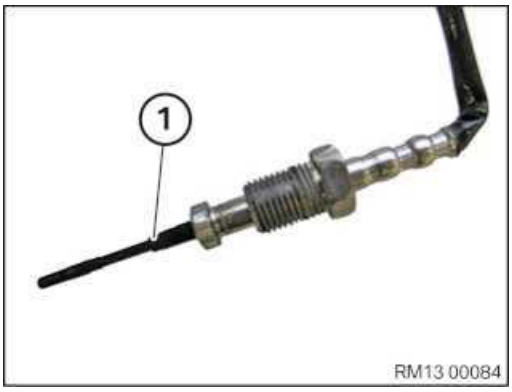
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

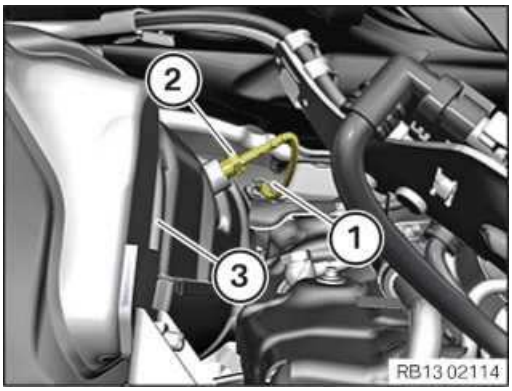
  The connector (1) must engage audibly.

56 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

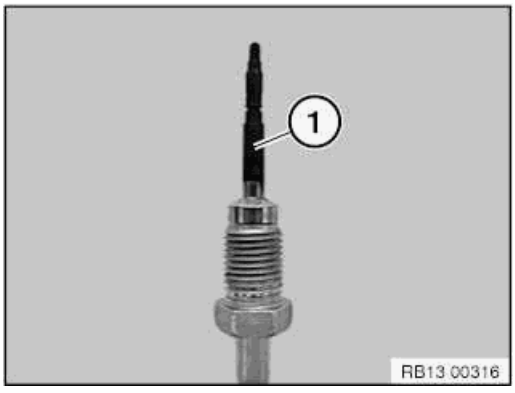
- Make sure that the gauge tip is not damaged.

cardiagn.com

- Make sure the gauge tip (1) is not damaged during installation.

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

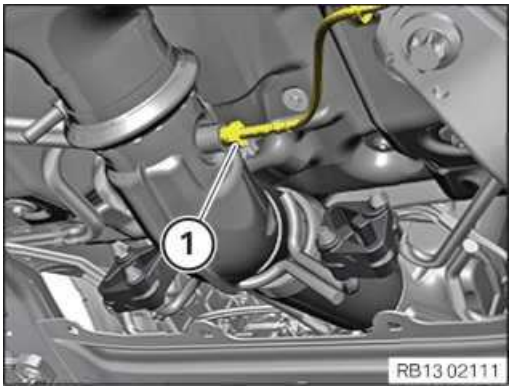


Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

57 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

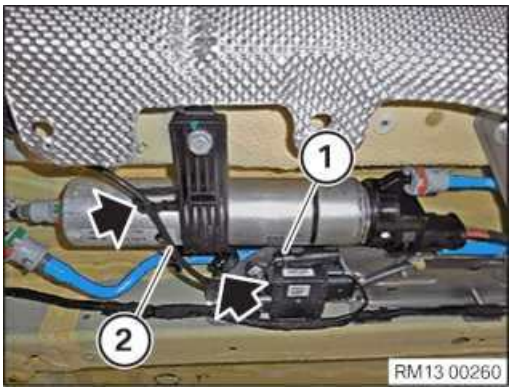
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

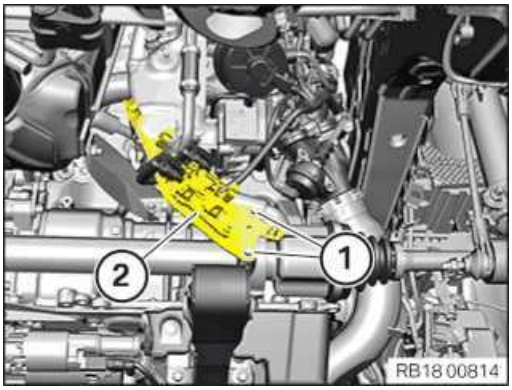
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com

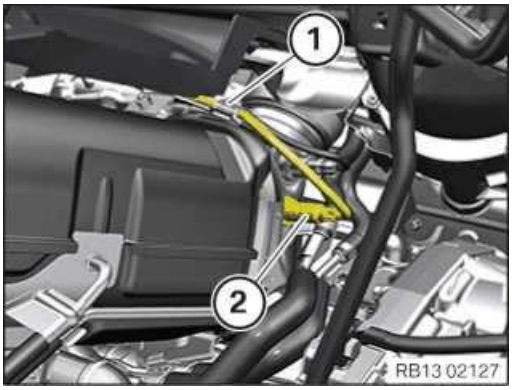


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

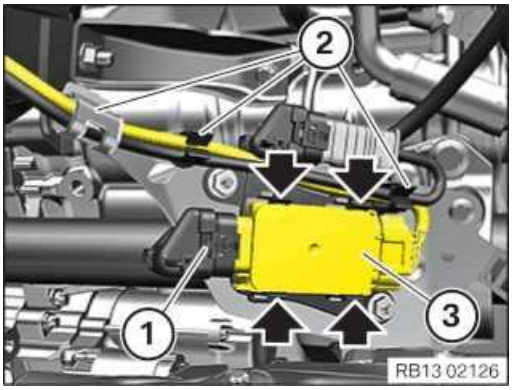
58 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



59 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

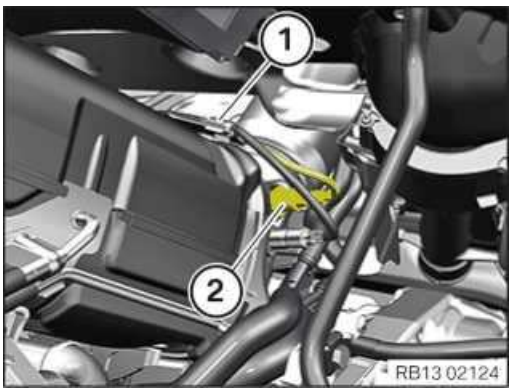
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

cardiagn.com

60 – Install the monitoring sensor



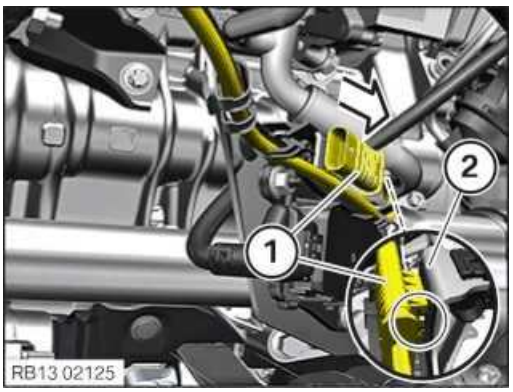
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

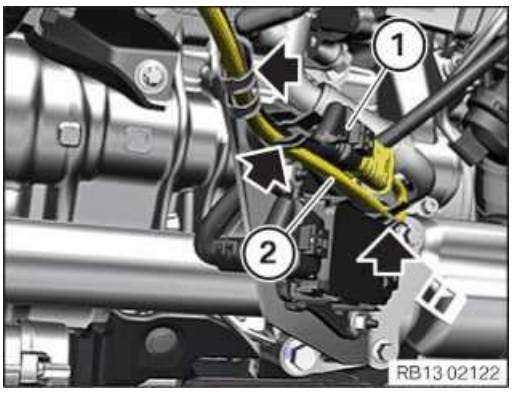
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

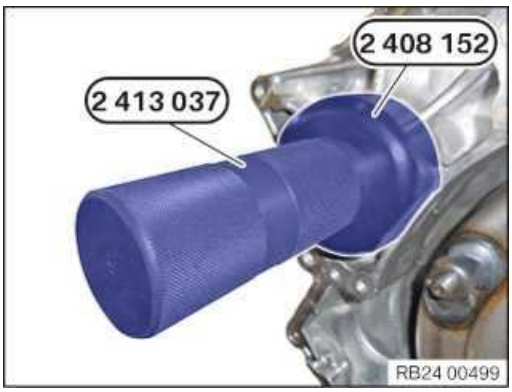
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

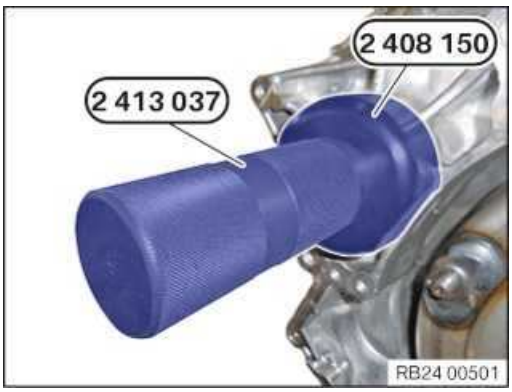
61 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

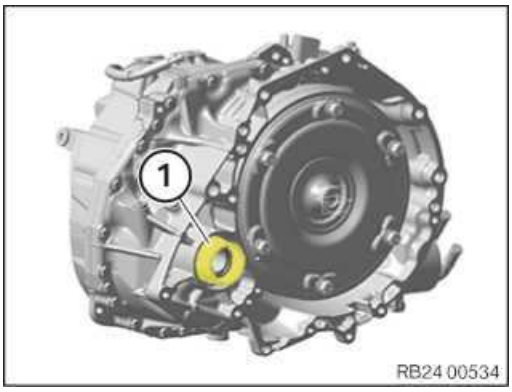


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

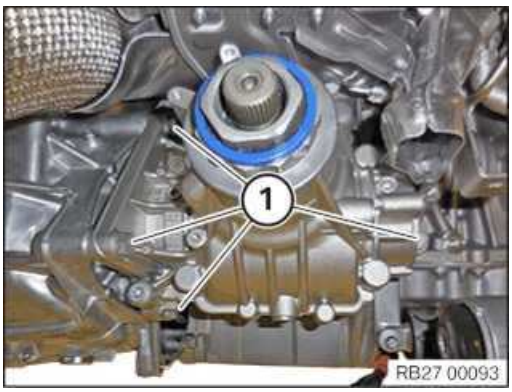
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

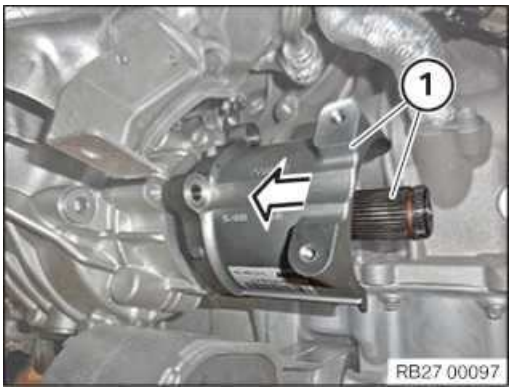
Technically suitable transfer box and electrical transmission oils	

Main group 27

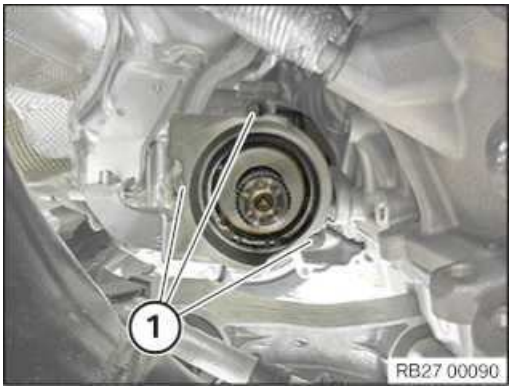
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



62 – Install the intermediate shaft with the support tube



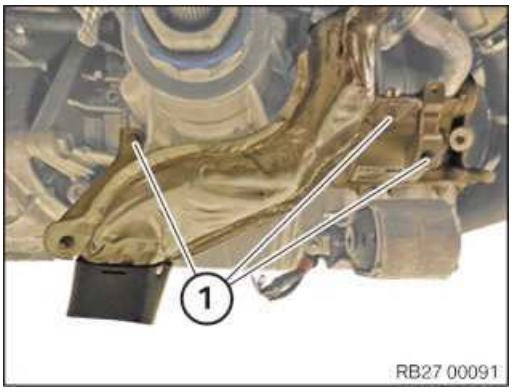
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

63 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

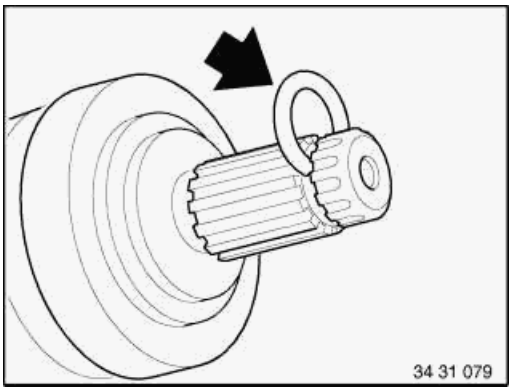
64 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

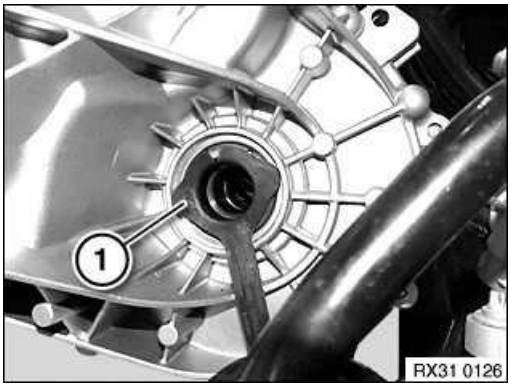
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

65 – Partially installing the left output shaft



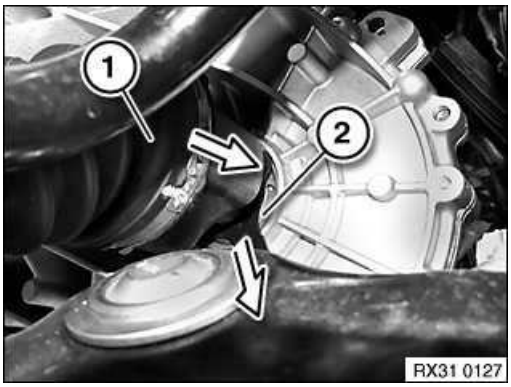
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

66 – Install propeller shaft.

CAUTION

Component with heavy weight.

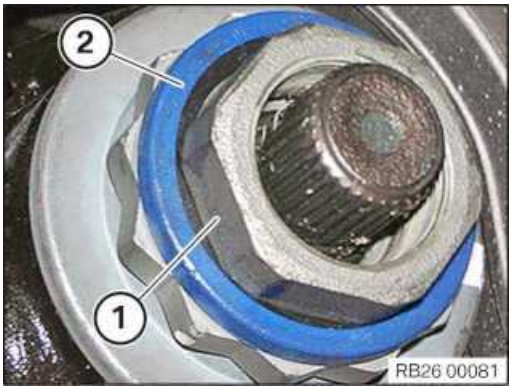
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

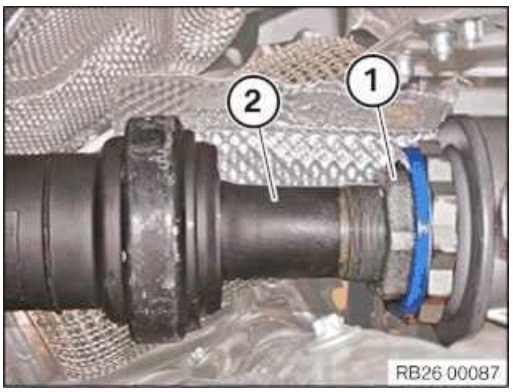
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

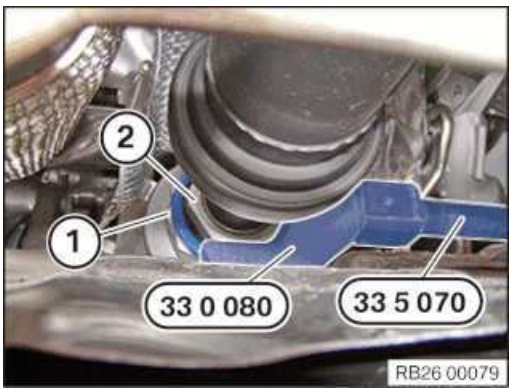
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

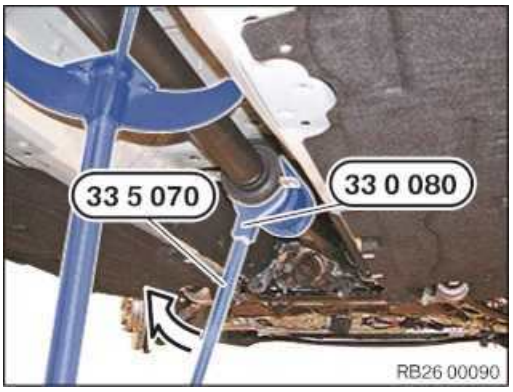
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

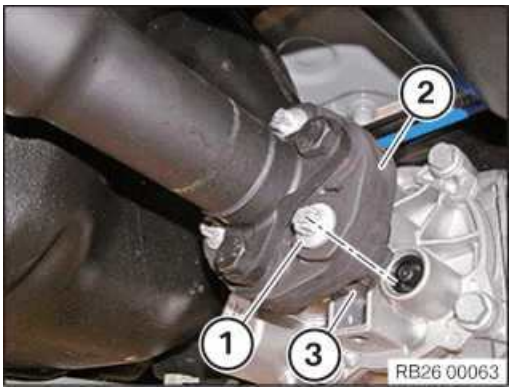


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

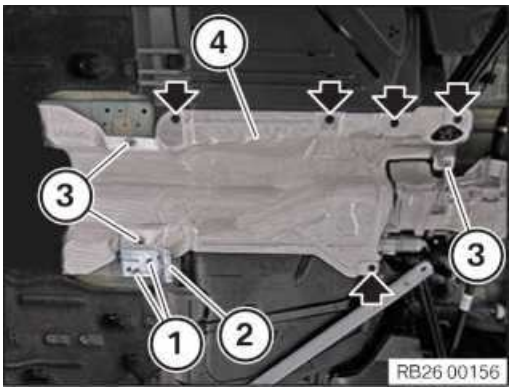
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

cardiagn.com

- Guide the special too l out between the front and rear propeller shaft and remove.

67 – Installing the rear heat shield

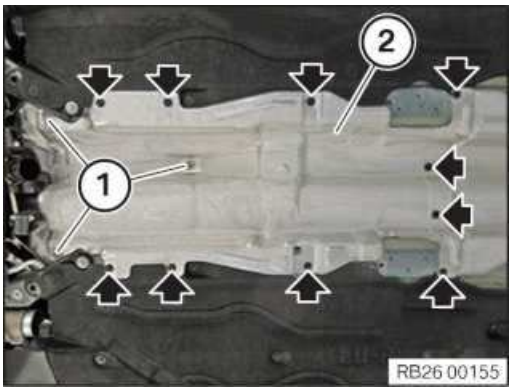
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

68 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

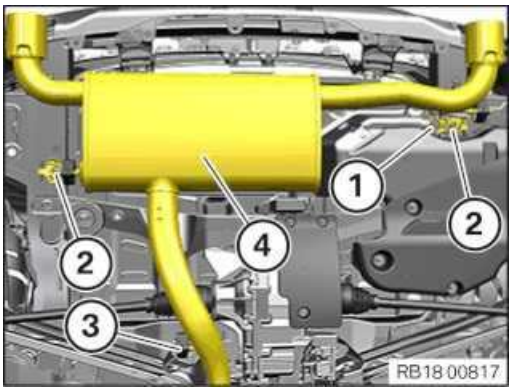
69 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

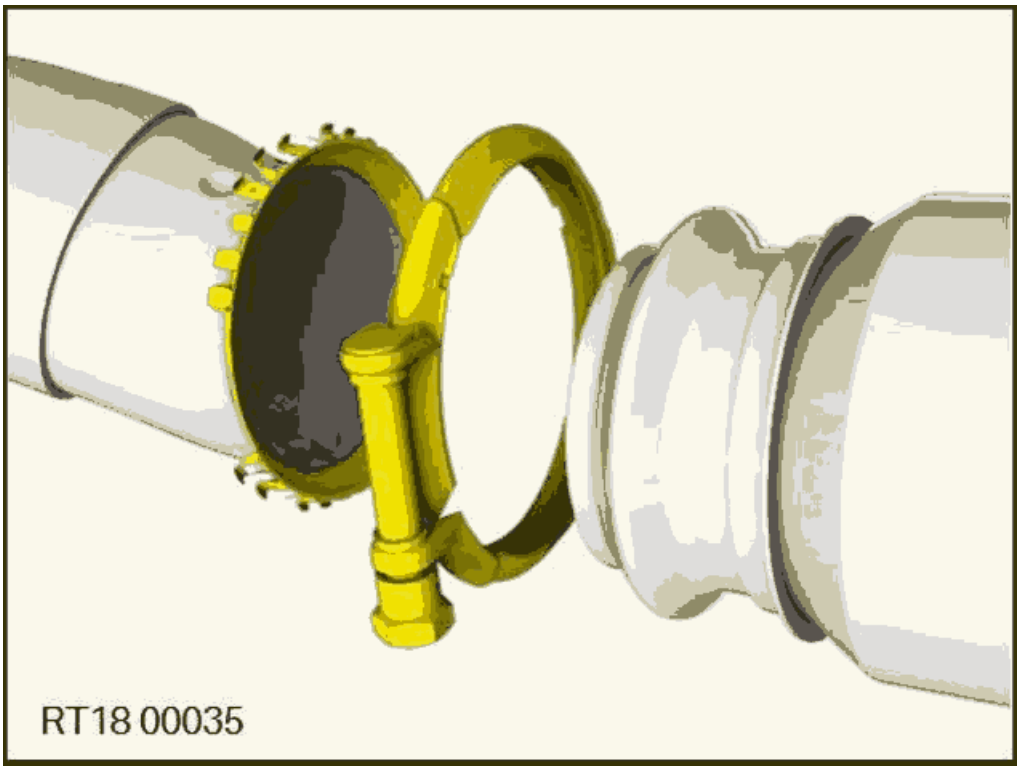
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

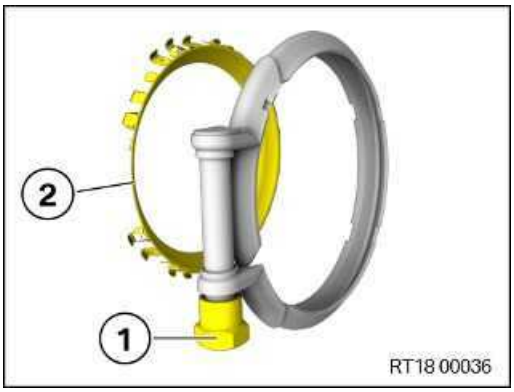
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



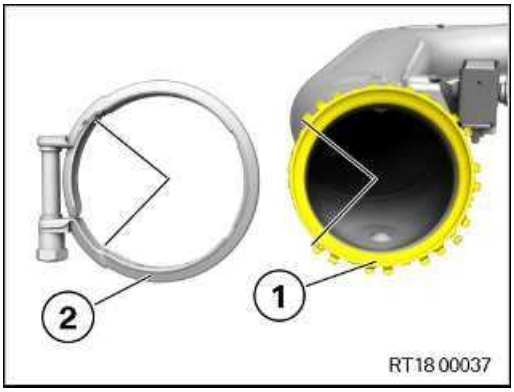
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



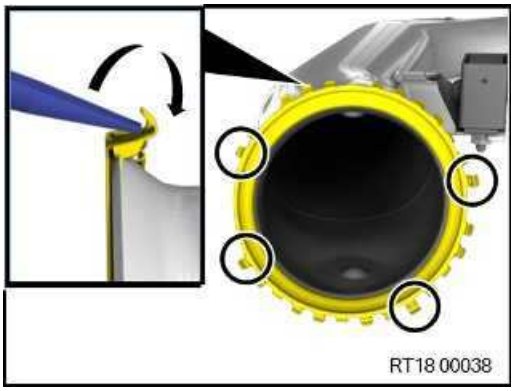
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

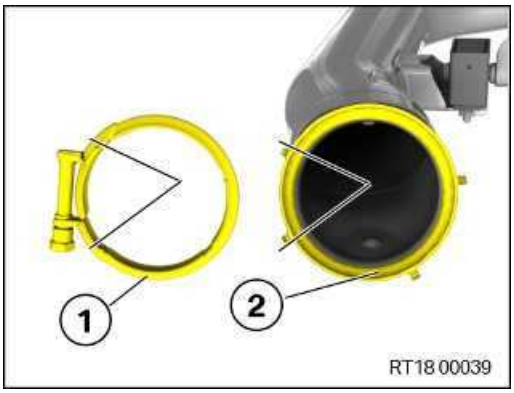


V-band clamp

cardiagn.com



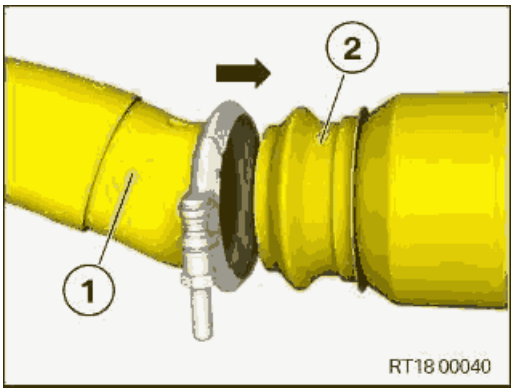
- Unscrew the nut (1) and remove the sealing ring (2).



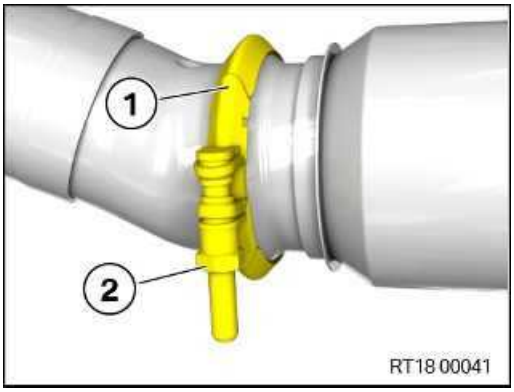
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

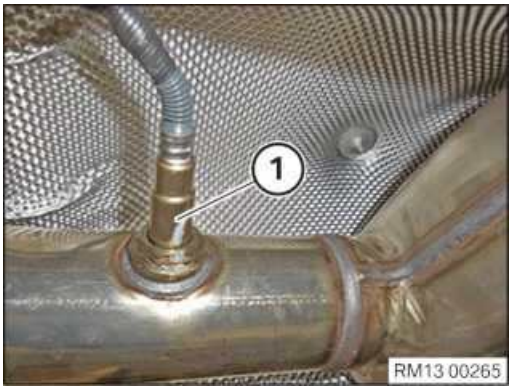


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

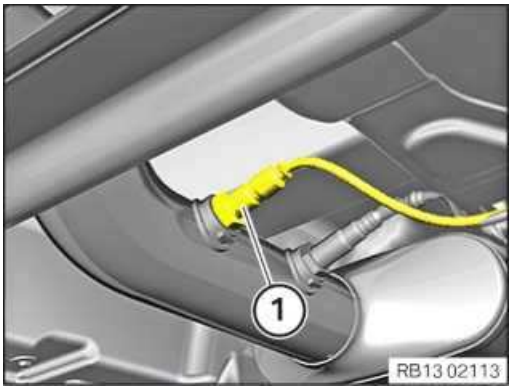
cardiagn.com



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

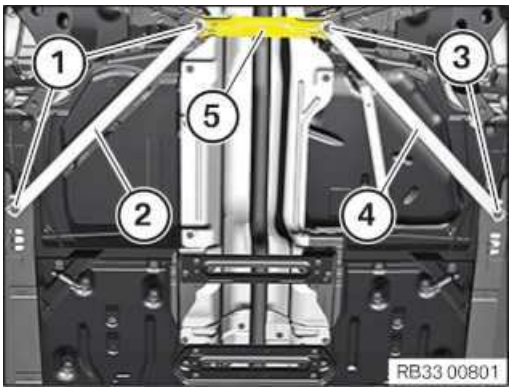


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

70 – Install the cross-member with torsion struts

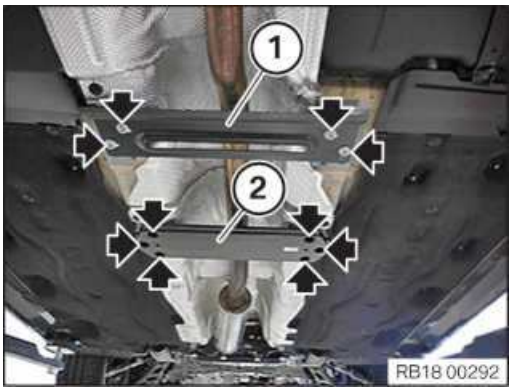
cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

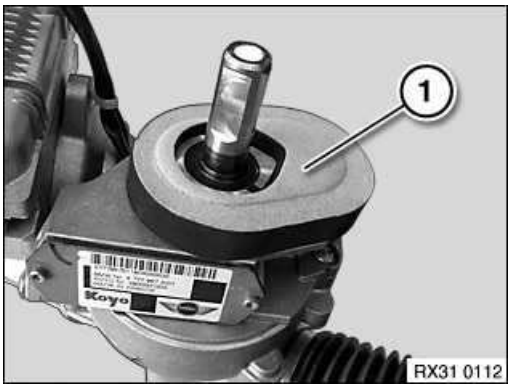
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

71 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

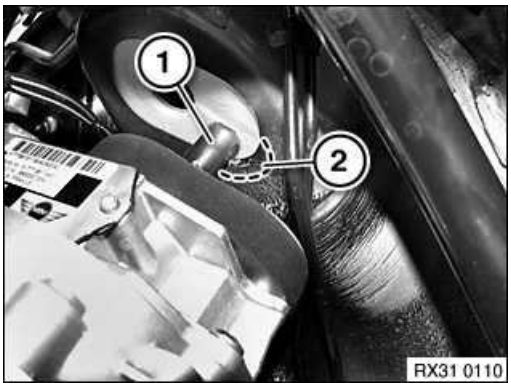


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

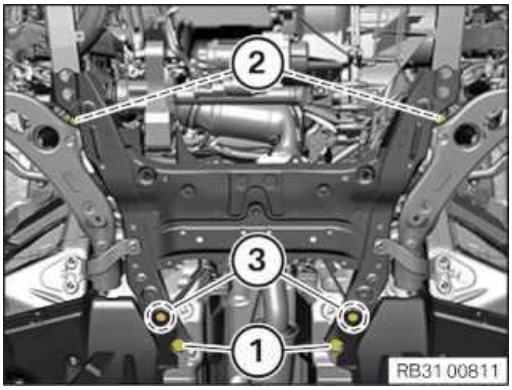


72 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

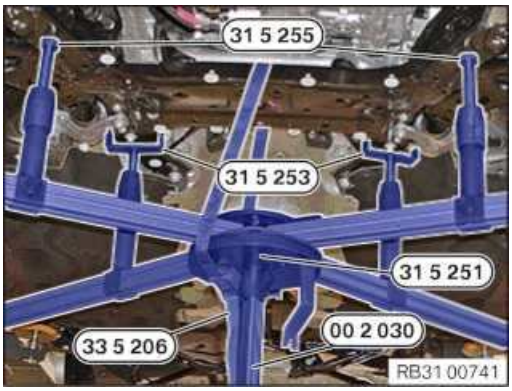
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

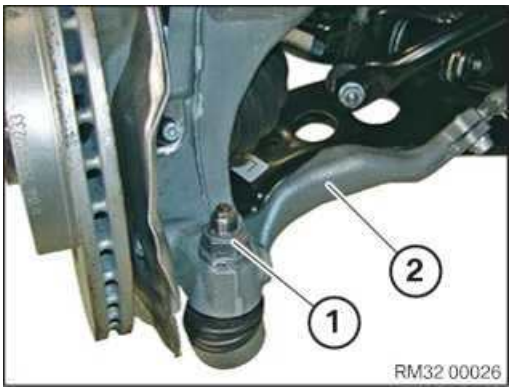
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



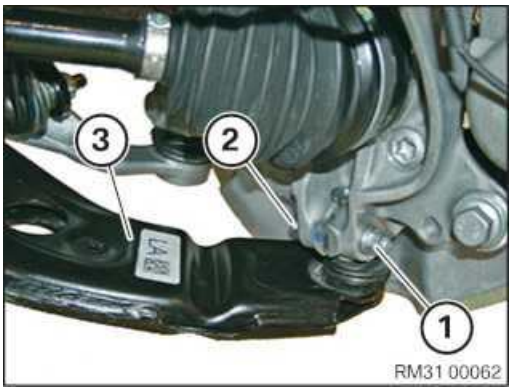
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

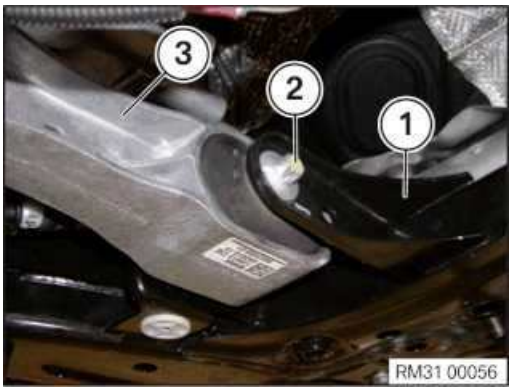
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

73 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

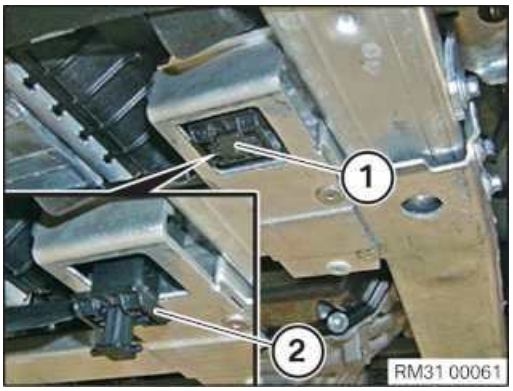


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

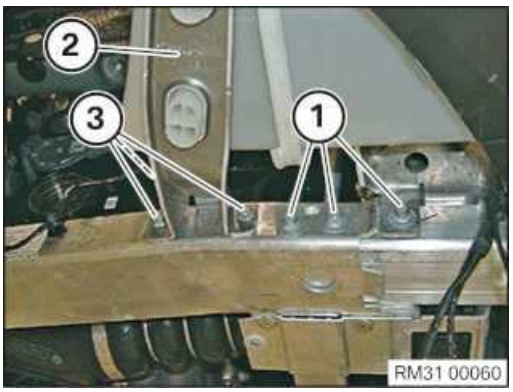
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



cardiagn.com

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

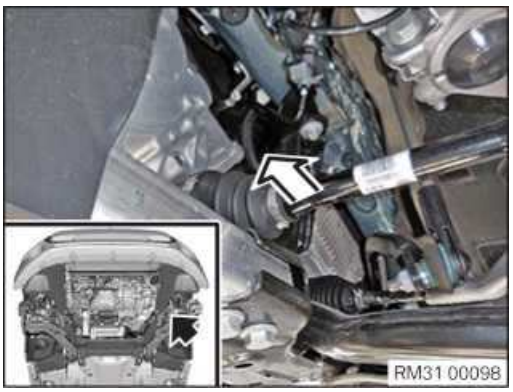
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

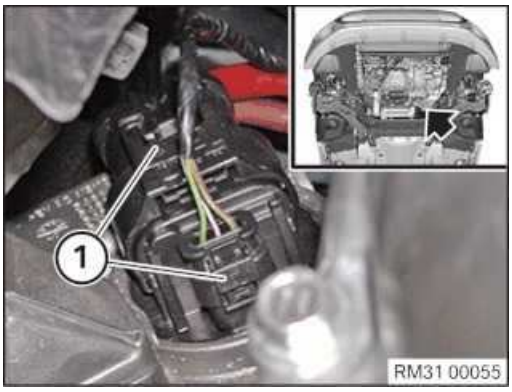


Perform the operations on the left and right side.

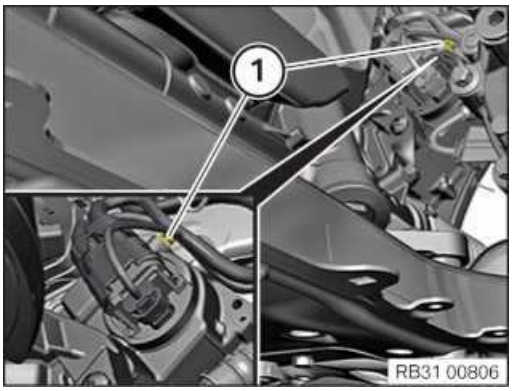
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



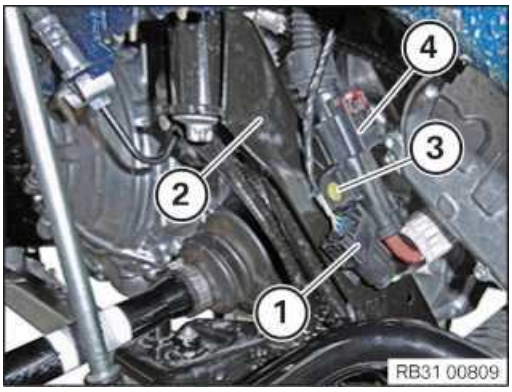
74 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

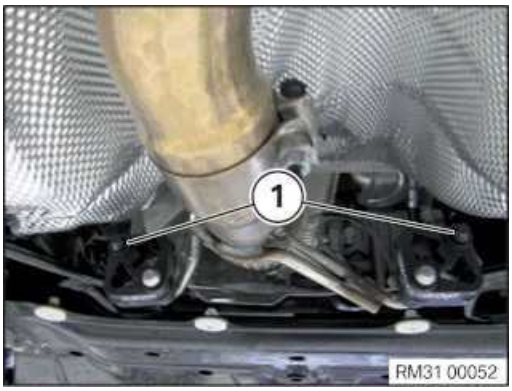
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

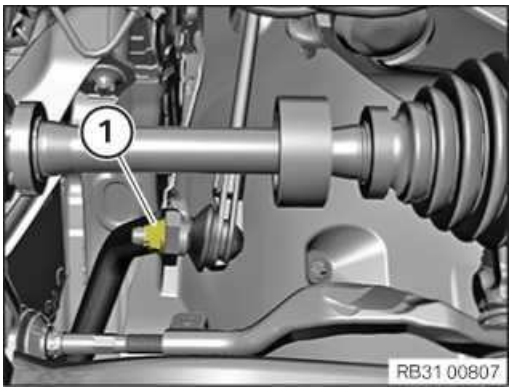
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

75 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



76 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

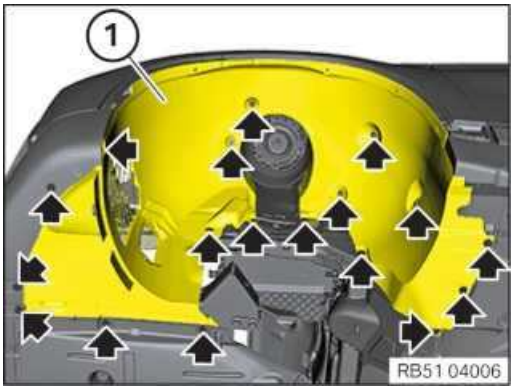
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

77 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

78 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

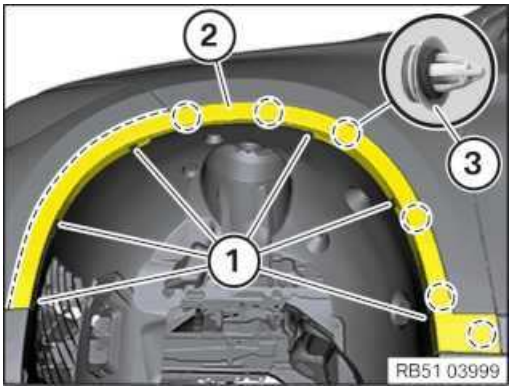
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

79 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

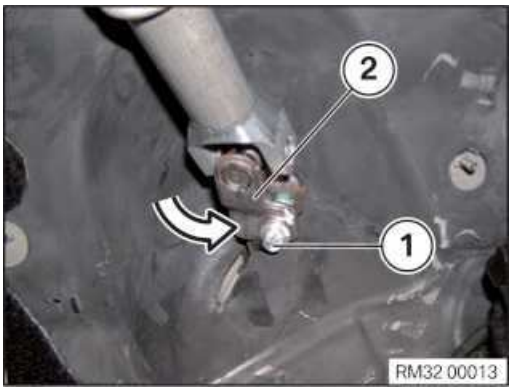
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

80 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

81 – Secure the steering shaft at the bottom on the steering gear

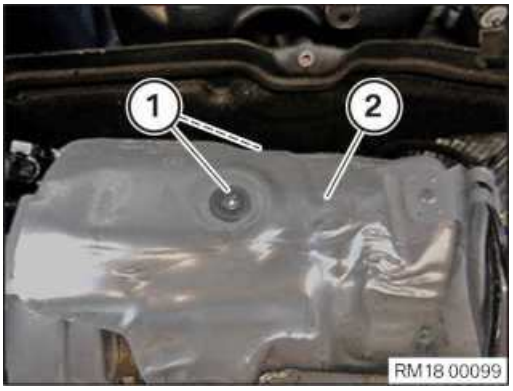
81 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

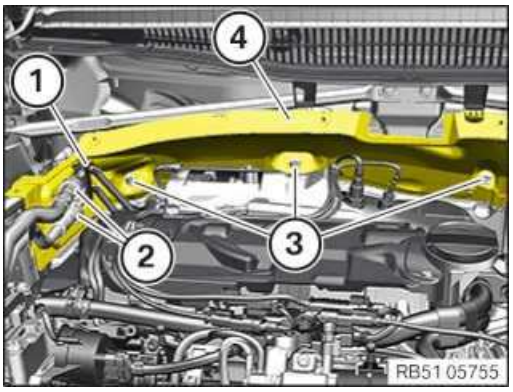


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

82 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

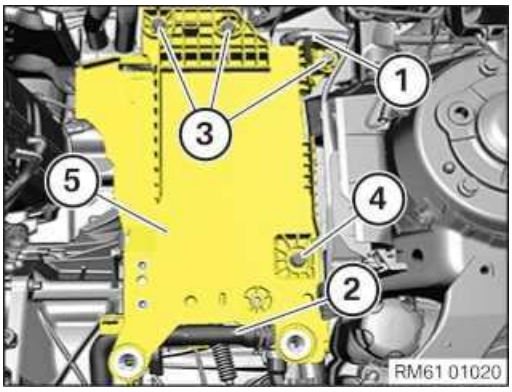
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

83 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

84 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

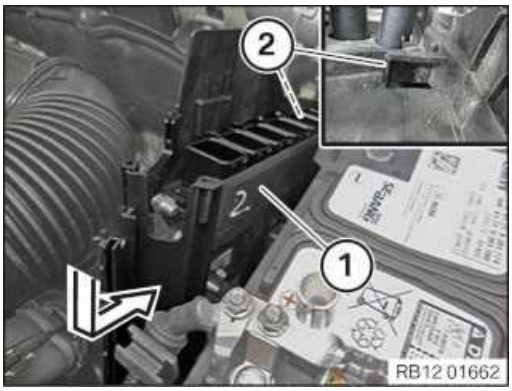
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

85 – Install electronics box

Prerequisite



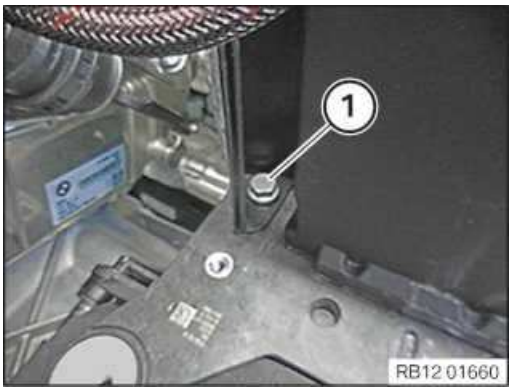
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

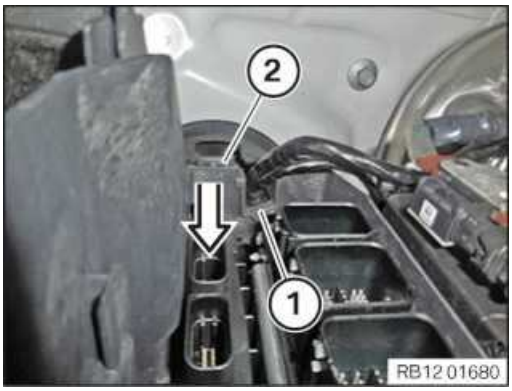
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

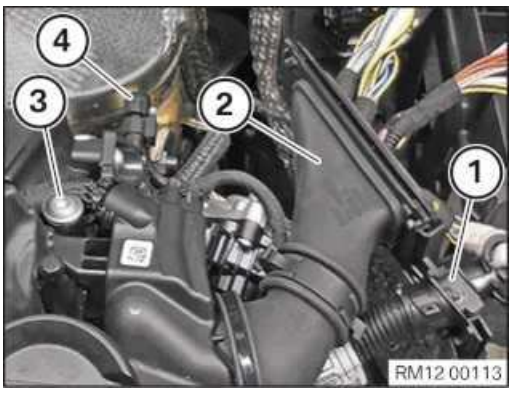


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

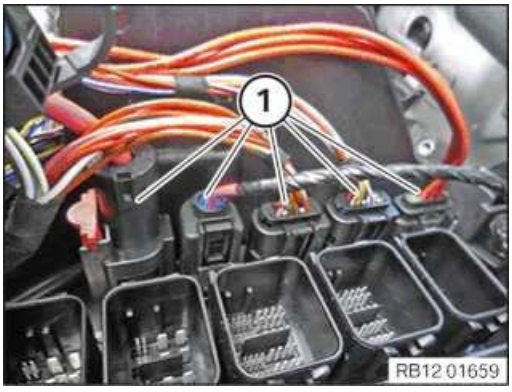


- Tighten down screw (1).

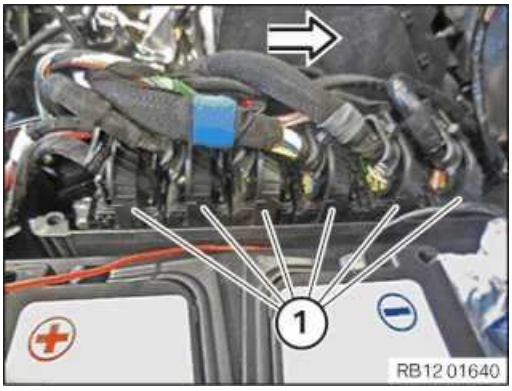
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



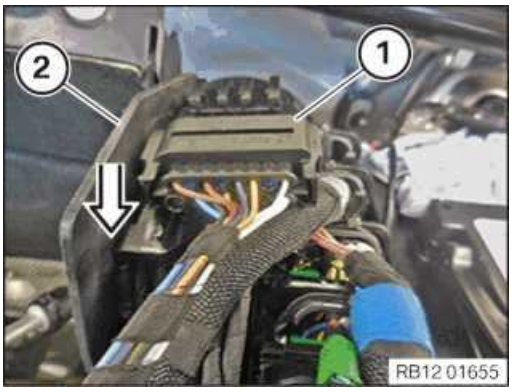
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



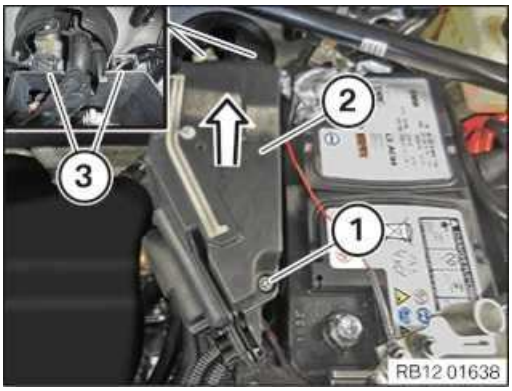
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

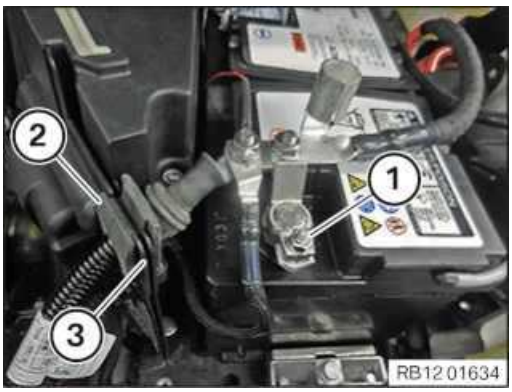


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

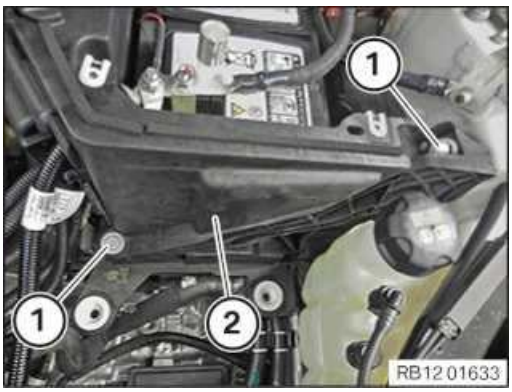
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

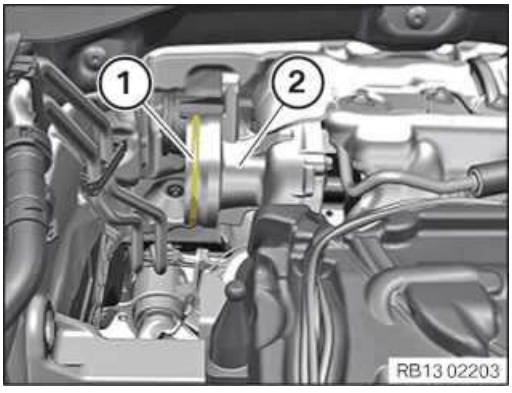


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

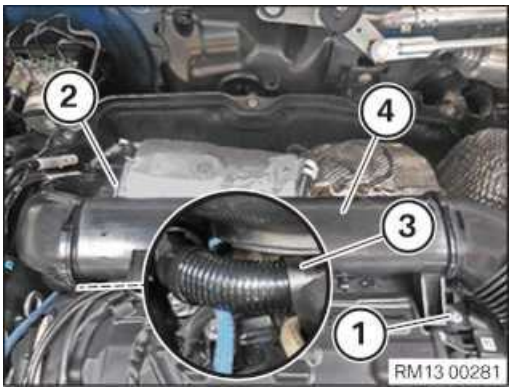
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

86 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

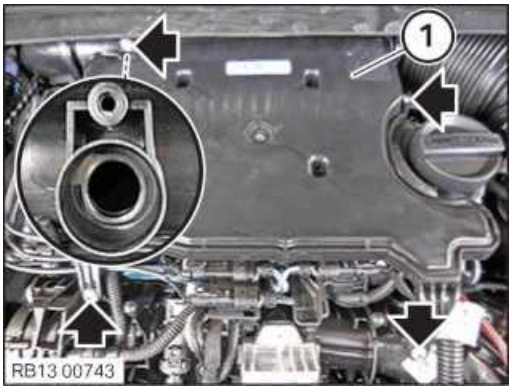
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

87 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

88 – Install acoustic cover

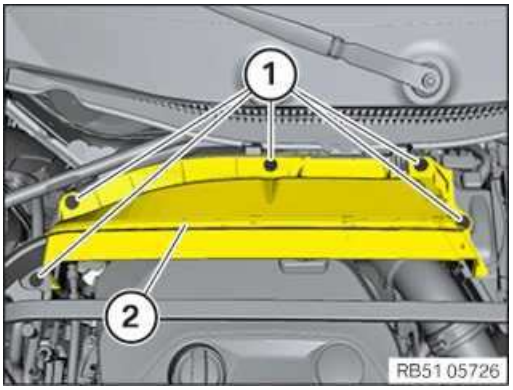
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

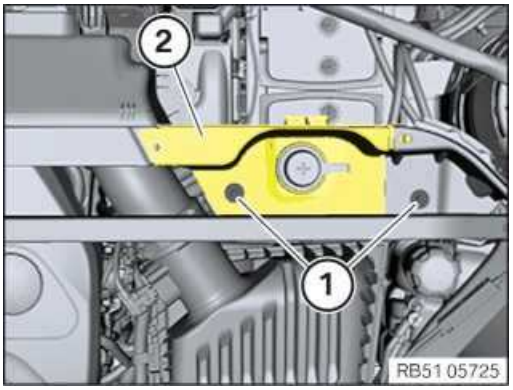
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

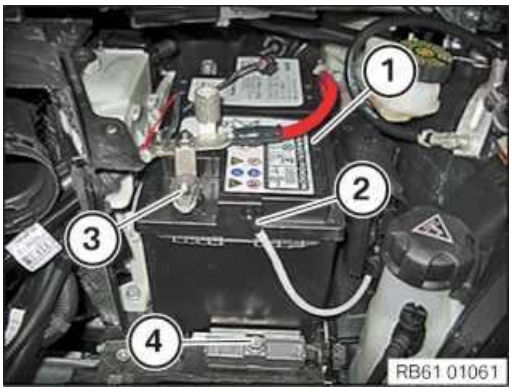


89 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

90 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

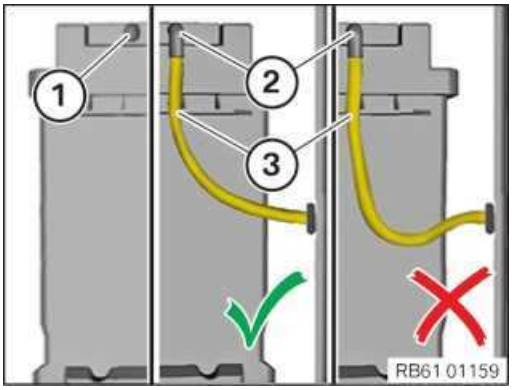
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

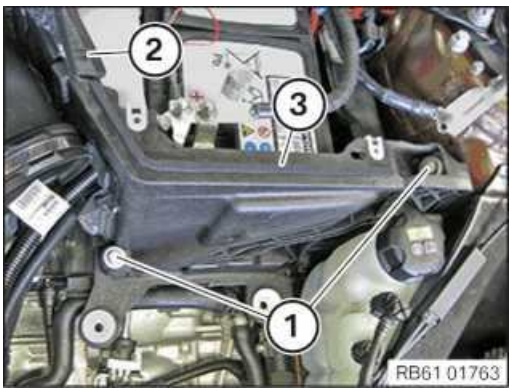
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

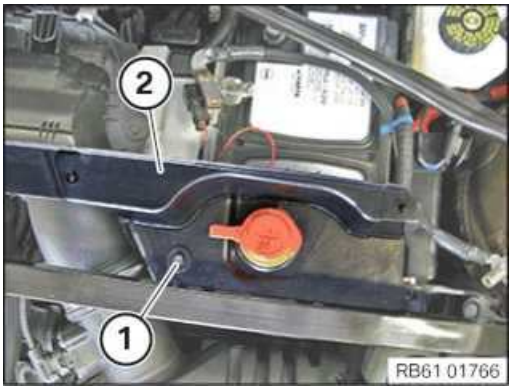
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

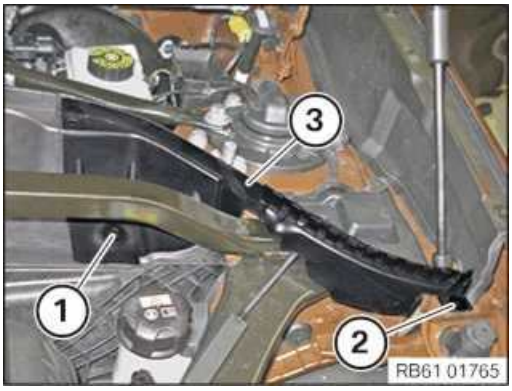


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

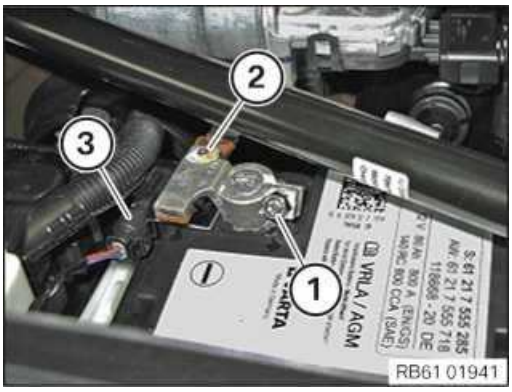
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

91 – Connecting the battery earth lead

TECHNICAL INFORMATION



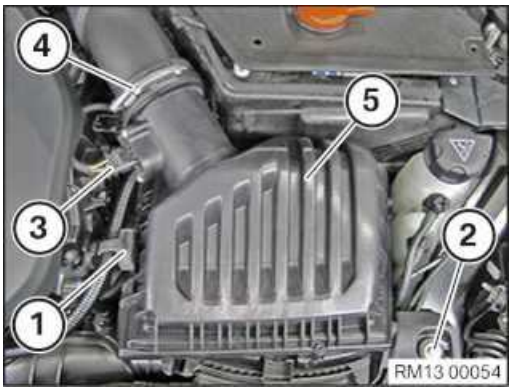
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

92 – Installing intake silencer housing

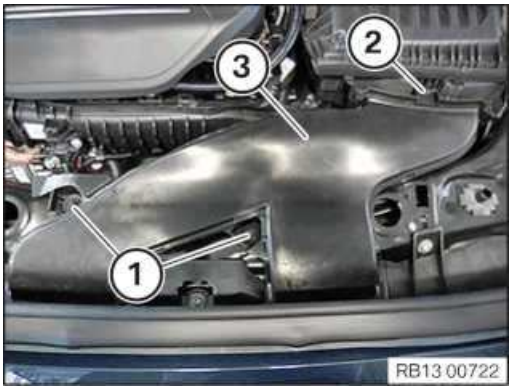
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

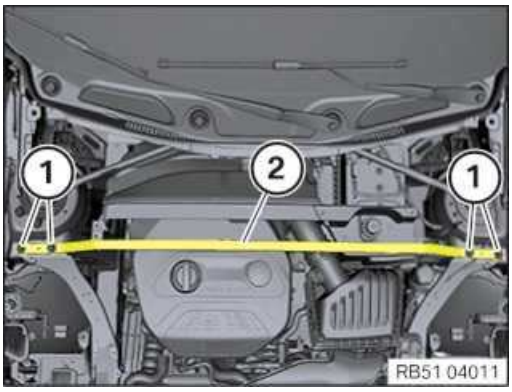
  The connector (3) must engage audibly.
- Insert and install the holder (1).

93 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



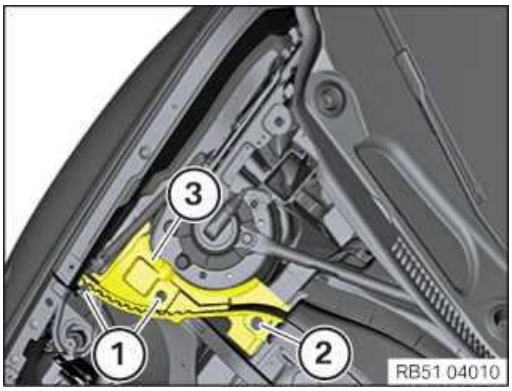
M6		Tightening torque	8 Nm

94 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

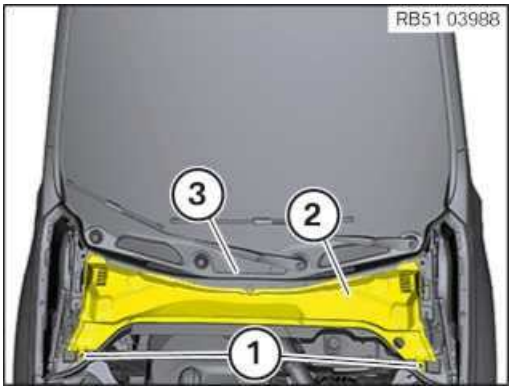
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



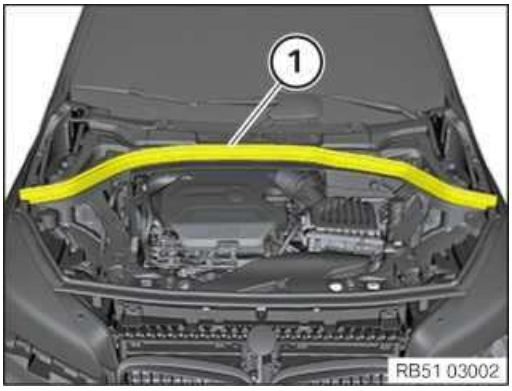
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

95 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

96 – Install the seal for the bonnet

NOTICE

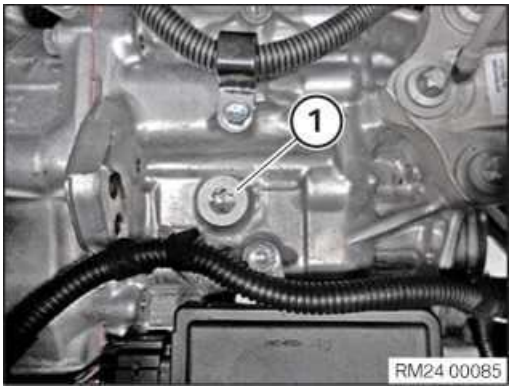
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

97 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

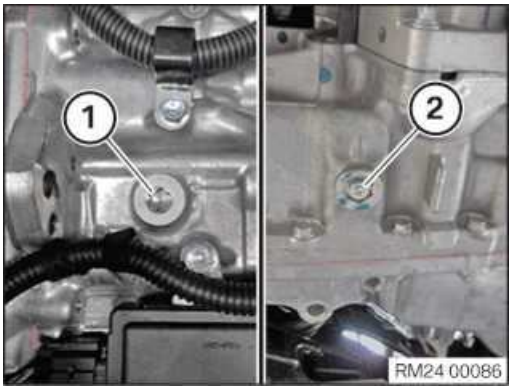
cardiagn.com

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

98 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

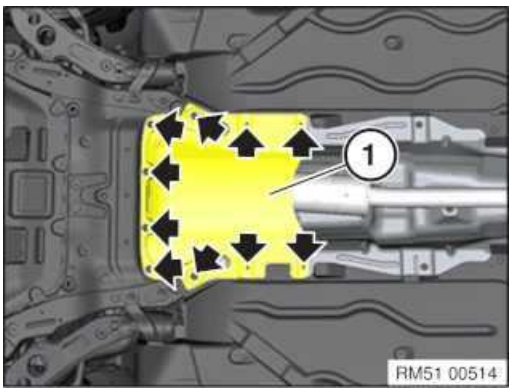
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



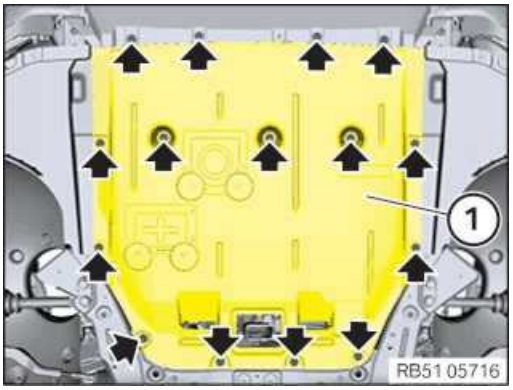
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

99 – If installed: Installing underbody protection at rear

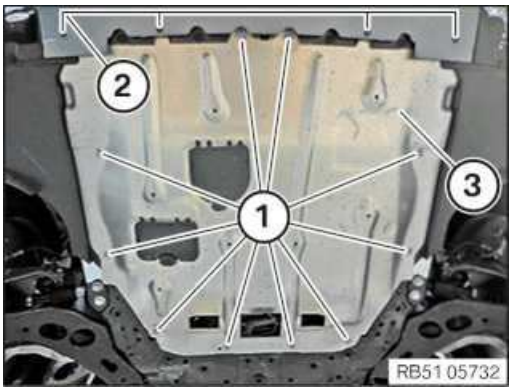


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

100 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Wheel bolts

Used in step 79

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 81

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 81

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 82

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 83

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 84

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 85

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 85

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 85

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 85

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 85

M8		Tightening torque	19 Nm

Clean air pipe to cylinder head cover

Used in step 86

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 86 92

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 87

Screw TS6	Renew screw.	Tightening torque	5 Nm

cardiagn.com

Cover of top bulkhead

Used in step 89

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 89

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray

Used in step 90

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 90 91

NutM6			5 Nm

Trailing link

Used in step 90

M8		Tightening torque	19 Nm

Battery cover

Used in step 90

M8			2,8 Nm

Intake silencer housing to lock bridge

Used in step 92

M6X30		Tightening torque	8 Nm

Intake neck to cross connection

Used in step 93

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome

Used in step 94

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

Used in step 94

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing

Used in step 97

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

Used in step 97

M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug

Used in step 98

Hexagon socket		Tightening torque	43 Nm

Underbody protection front

Used in step 100

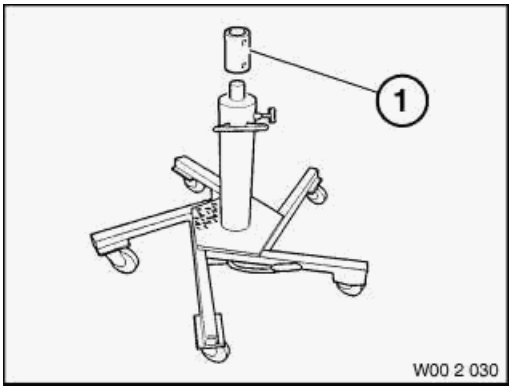
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side

Used in step 101

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side



Used in step 101

Plastic nut		Tightening torque	2,6 Nm

cardiagn.com

Overview of Special Tools

0 490 133 (00 2 030) Device

Common Used in step 28 72

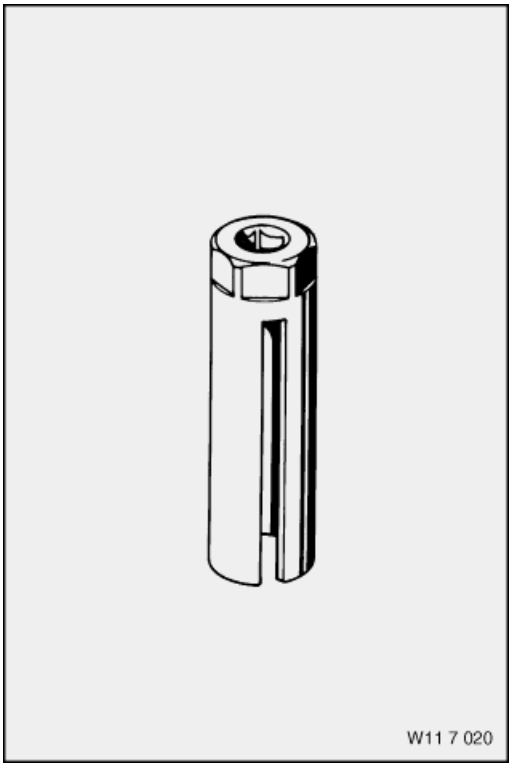
Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common Used in step 34 66



Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

0 491 074 (11 7 020) Socket wrench insert

Common

Used in step 40 41 60

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

2 409 025 Puller

Common	Used in step 61
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 61
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

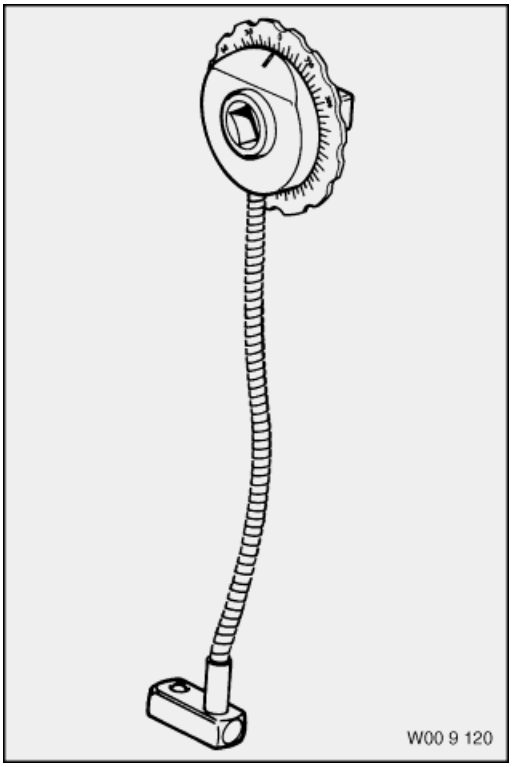
cardiagn.com

2 408 152 Striking element

Common	Used in step 61
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

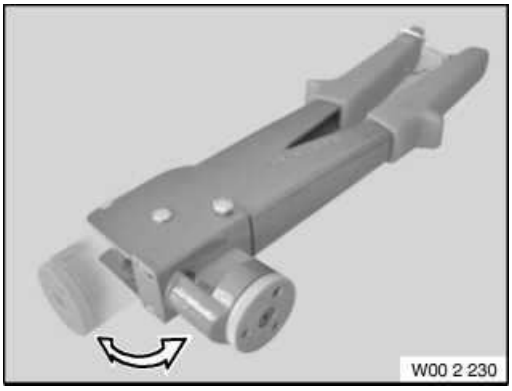
Common	Used in step 61
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



2 408 150 Striking element

Common	Used in step 61
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com



0 490 504 (00 9 120) Torque angle measuring dial

Common Used in step 66

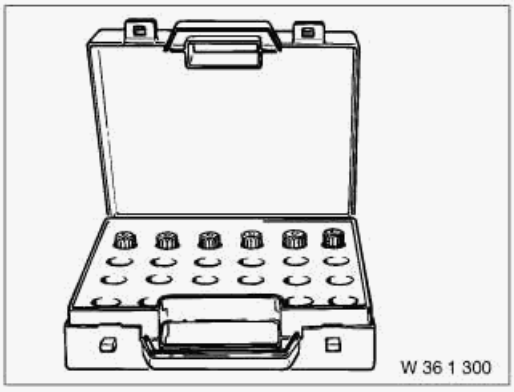
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

0 496 521 (00 2 230) Pliers

Common Used in step 78

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool



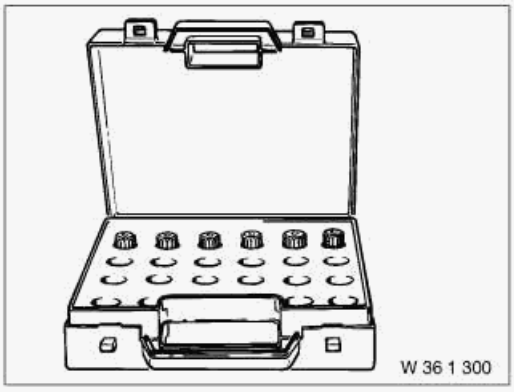
Common Used in step 79

Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

cardiagn.com

0 495 221 (36 1 323) Wheel stud



Common	Used in step 18
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518

Operating materials	Used in step

cardiagn.com

11 42 235 Removing and installing/sealing or replacing oil feed line for low pressure exhaust turbocharger

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

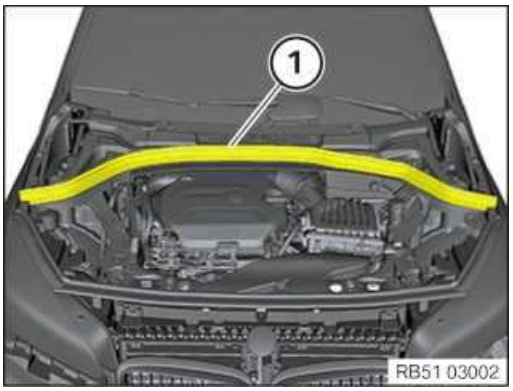
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

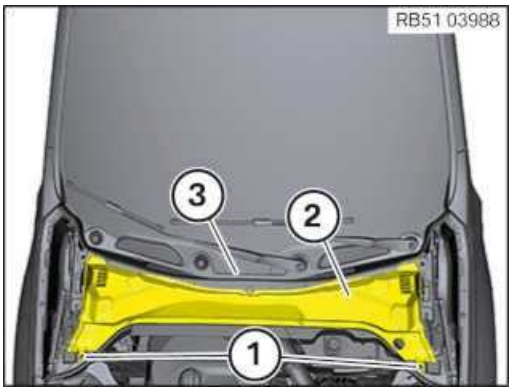


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

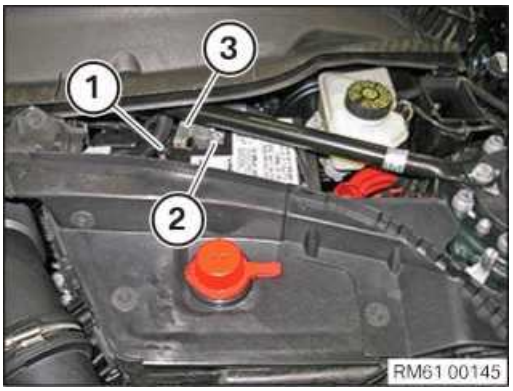
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

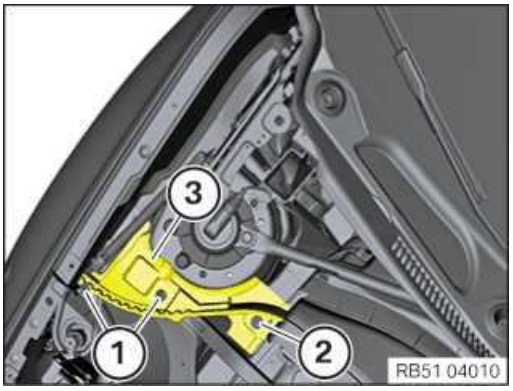


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

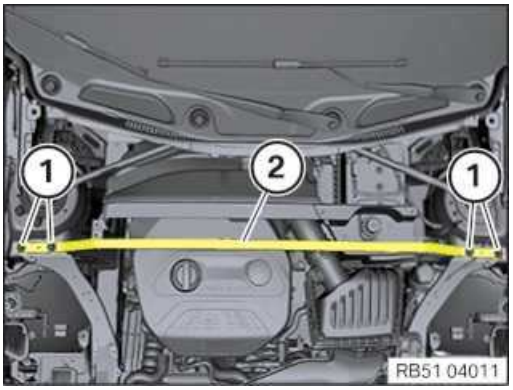
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

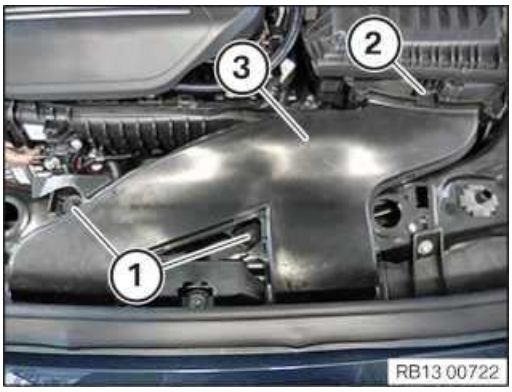
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

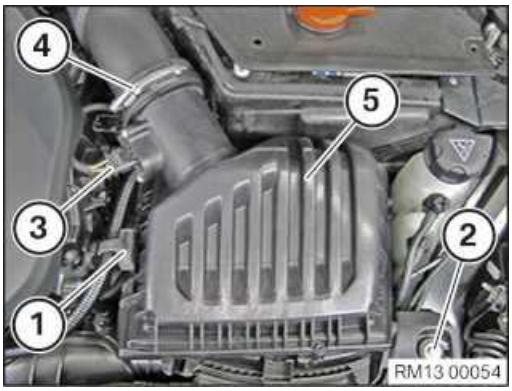
NOTICE

Description is for right component only. The procedure on the left side is identical.



- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



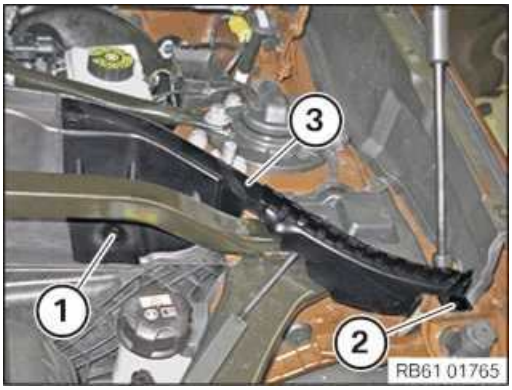
5 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

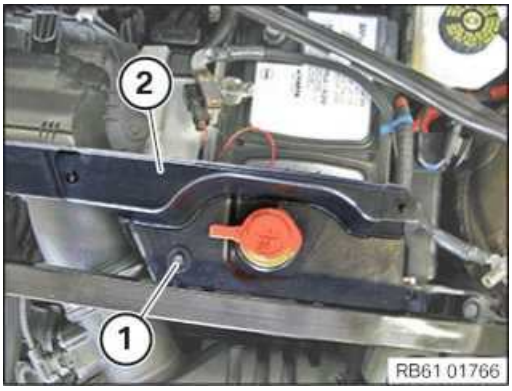
6 – Removing intake silencer housing

- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



7 – Remove vehicle battery

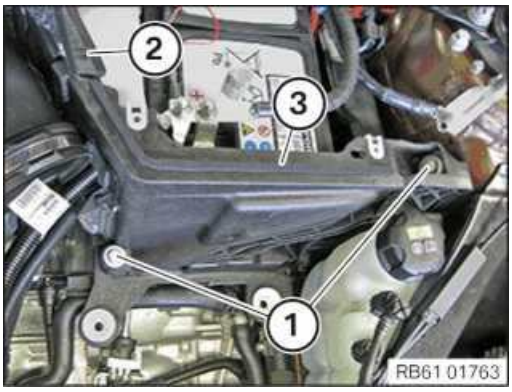
WARNING



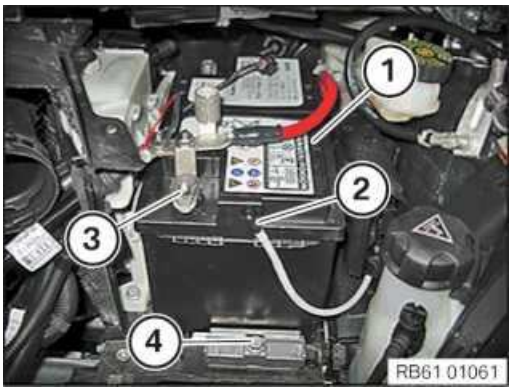
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



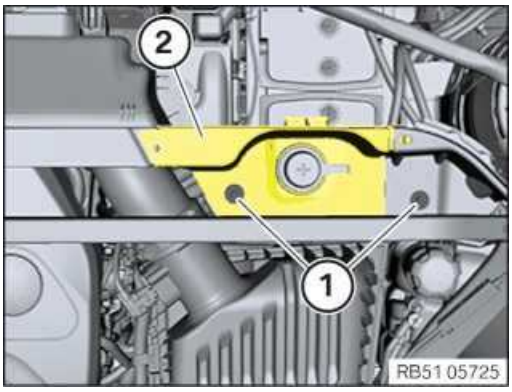
- Loosen screw (1).
- Remove the cover (2).

cardiagn.com

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

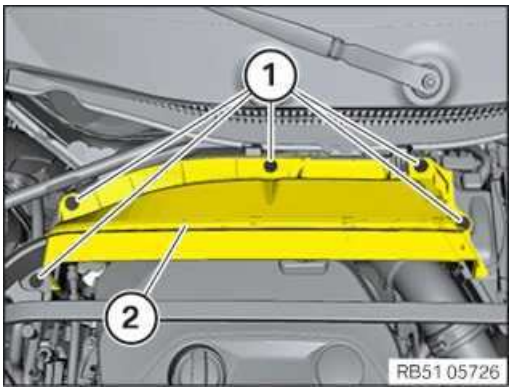
- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING



Unprotected battery terminals.

Risk of short circuits! Risk of fire!



- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

8 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

9 – Removing the acoustic cover

cardiagn.com

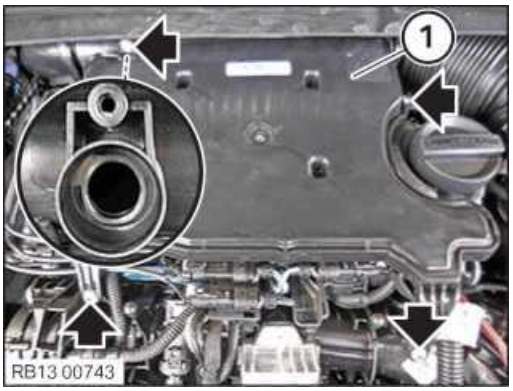
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



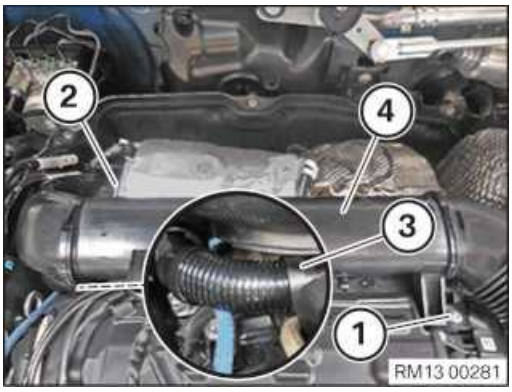
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

cardiagn.com

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

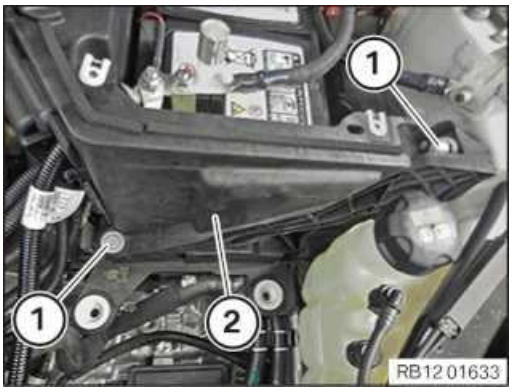
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

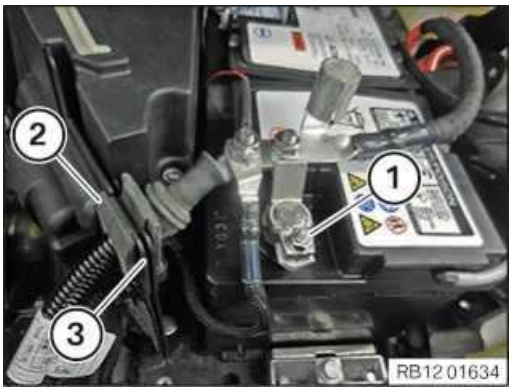
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



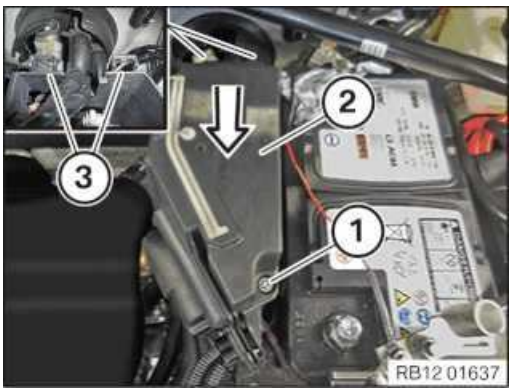
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

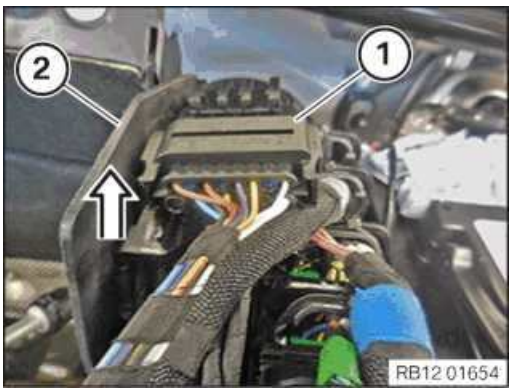


TECHNICAL INFORMATION

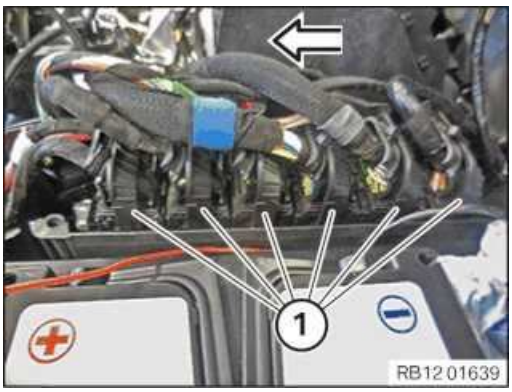
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



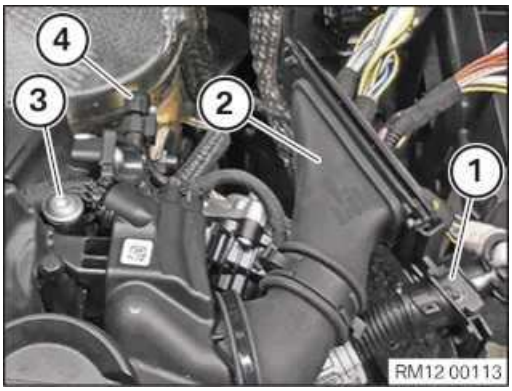
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



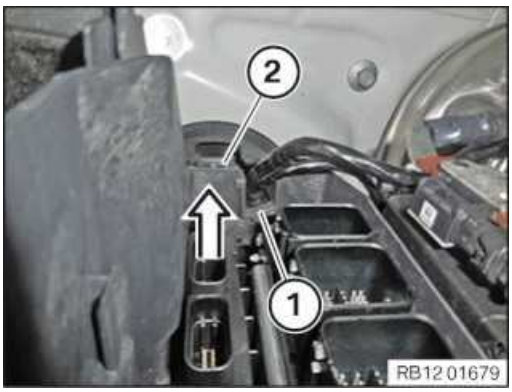
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

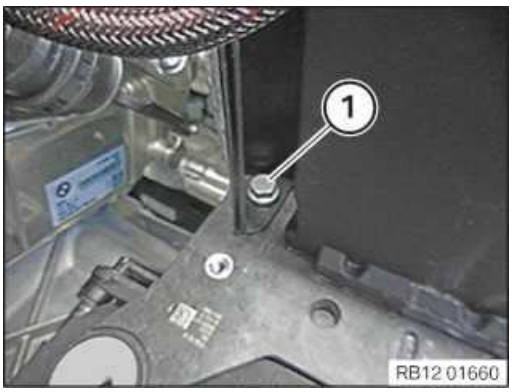
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



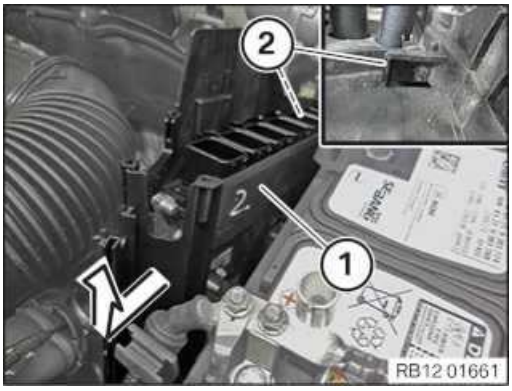
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com

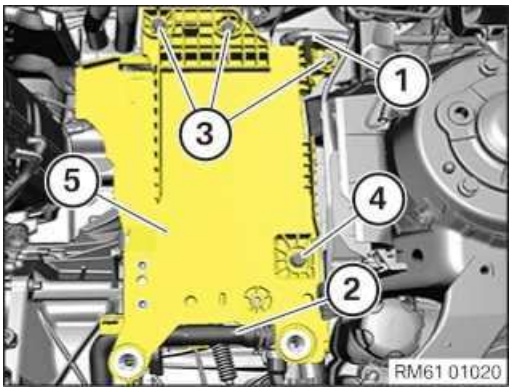


- Unlock and loosen connector (1).



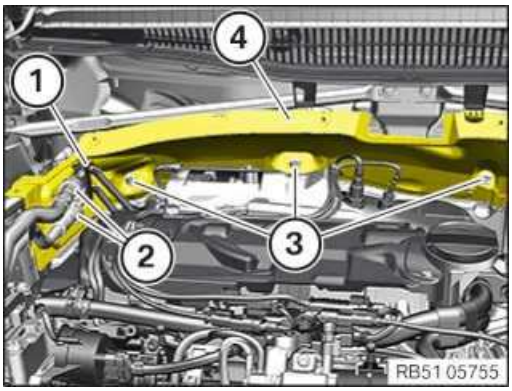
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



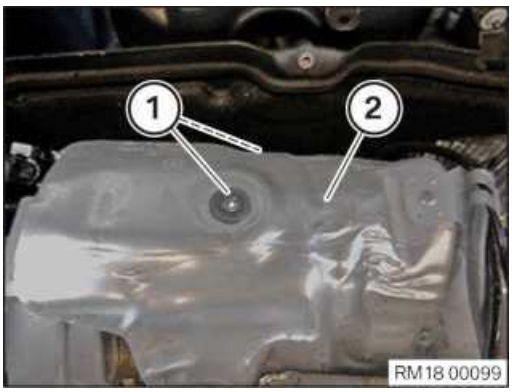
13 – Remove battery holder

cardiagn.com

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

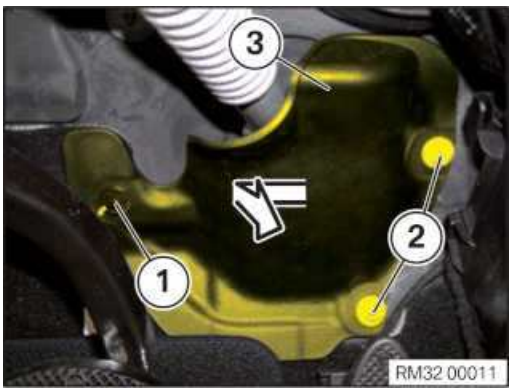
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.



15 – Removing heat shield from top exhaust turbocharger

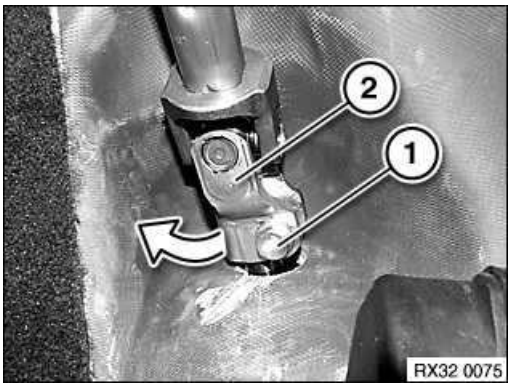
WARNING

Hot surfaces.



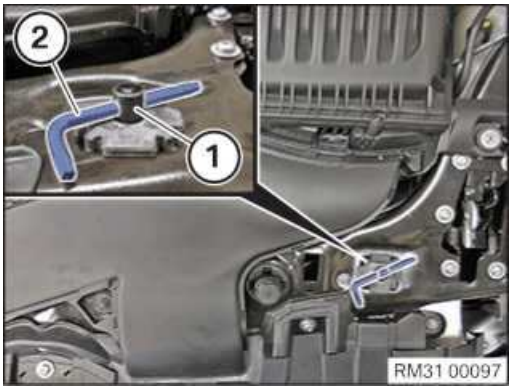
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.
  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

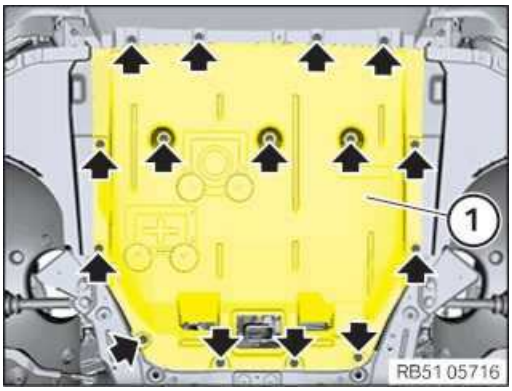
17 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

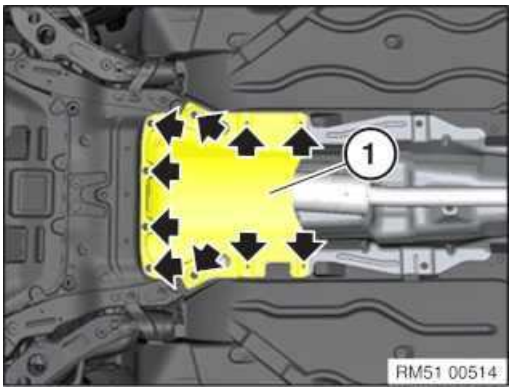


▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

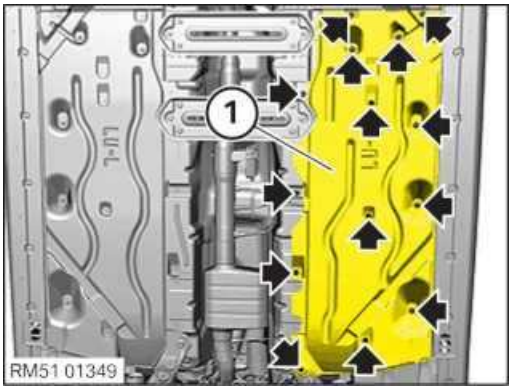
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com



- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

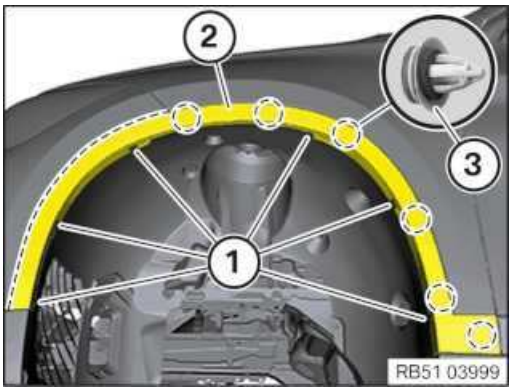
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

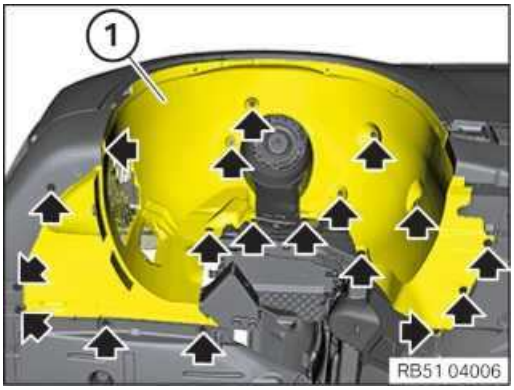
▸ **Remove the front wheel arch trim**



NOTICE

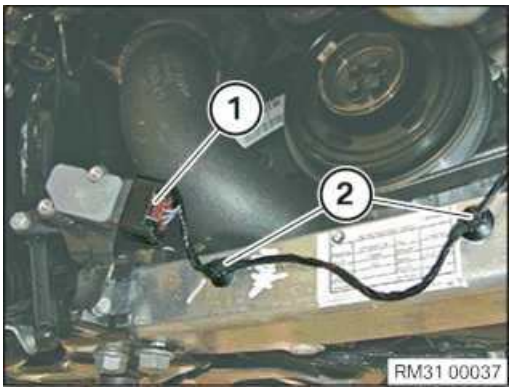
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

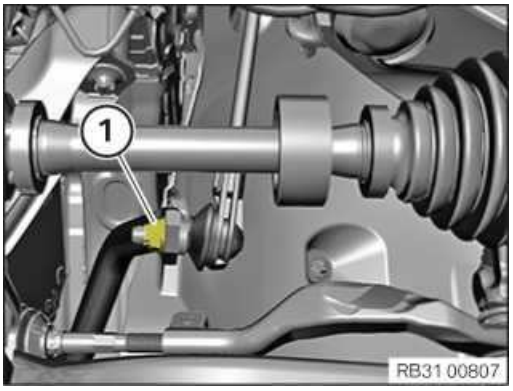


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



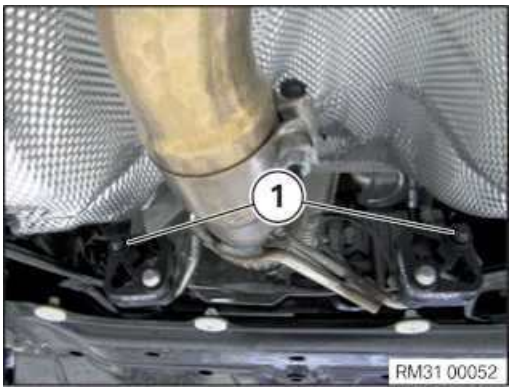
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

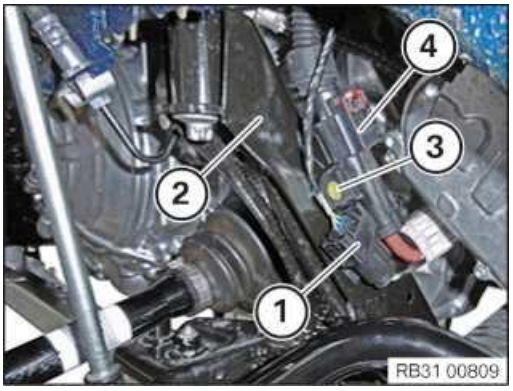


- Unfasten nut (1).

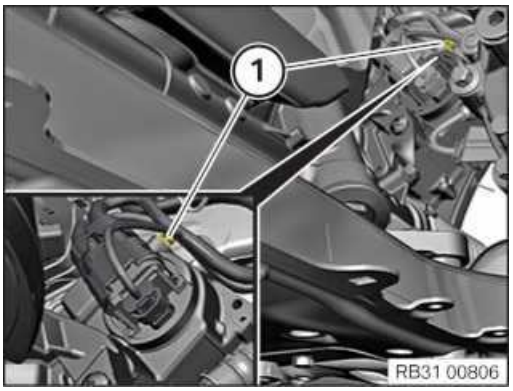
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

cardiagn.com

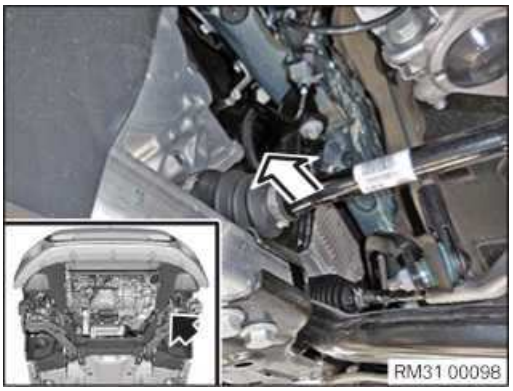


25 – Detaching rubber mount from front axle support



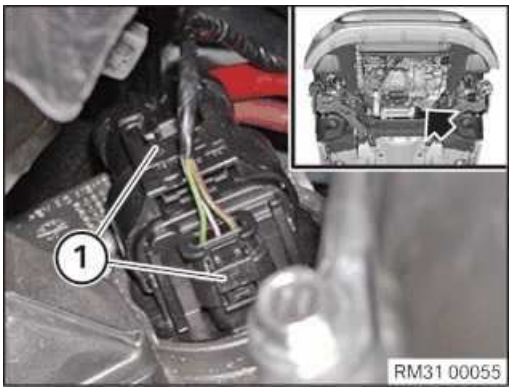
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▸ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

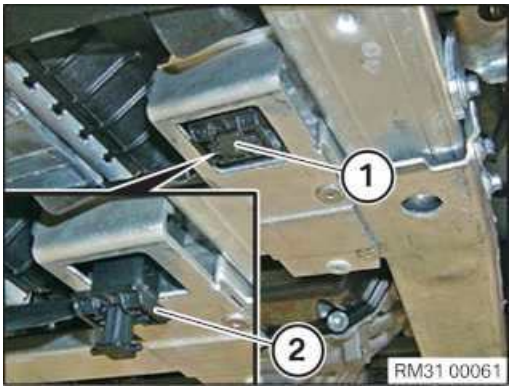
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

cardiagn.com

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

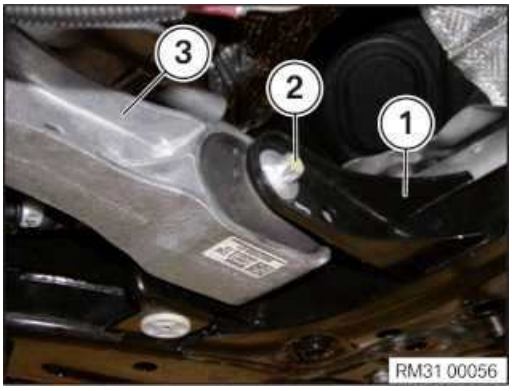
27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



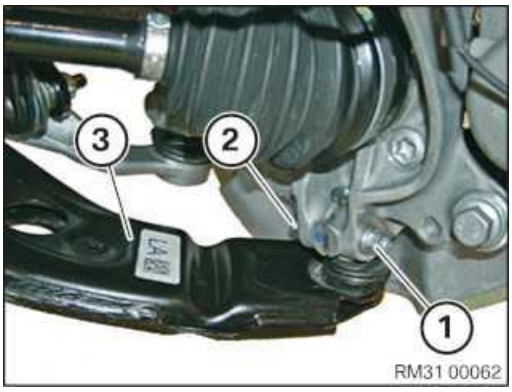
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

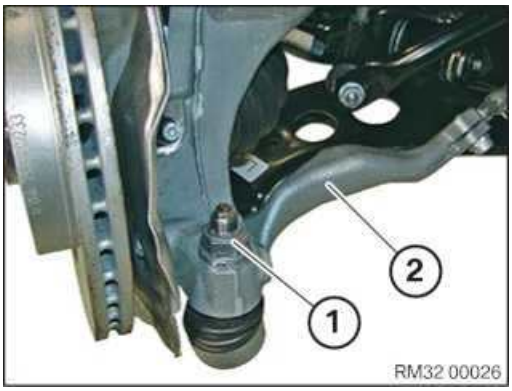


NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

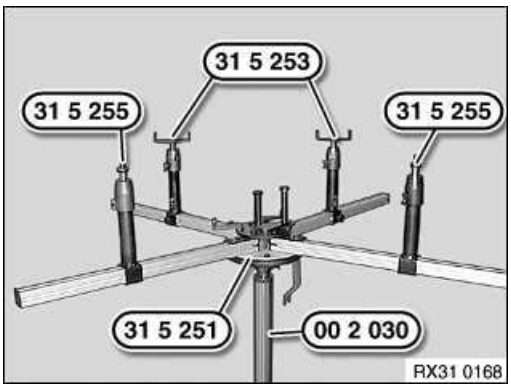
28 – Detaching and removing front axle completely



cardiagn.com

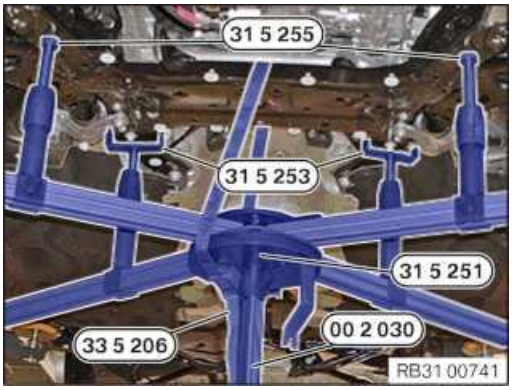
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

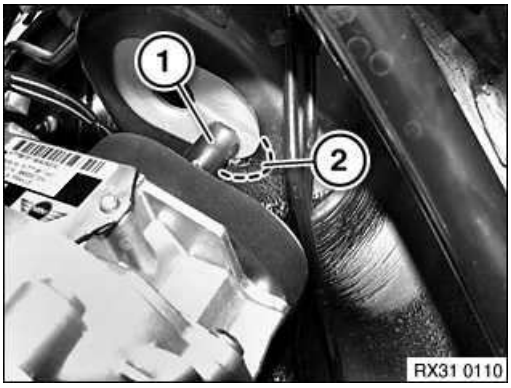
NOTICE



Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

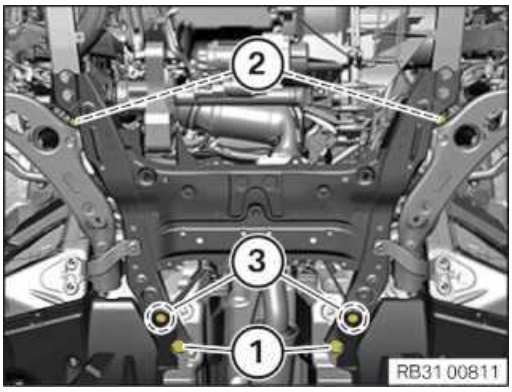


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



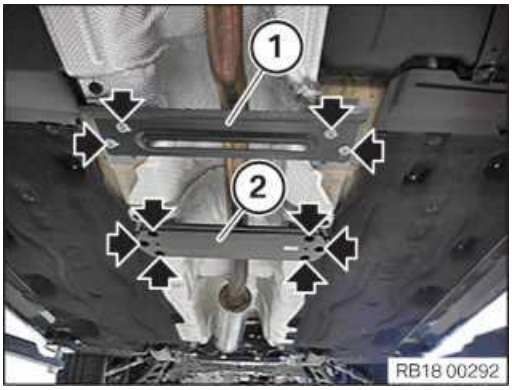
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



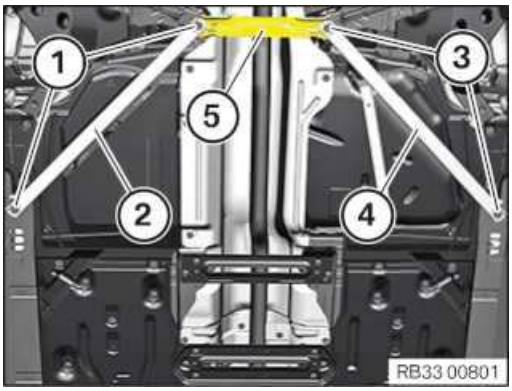
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

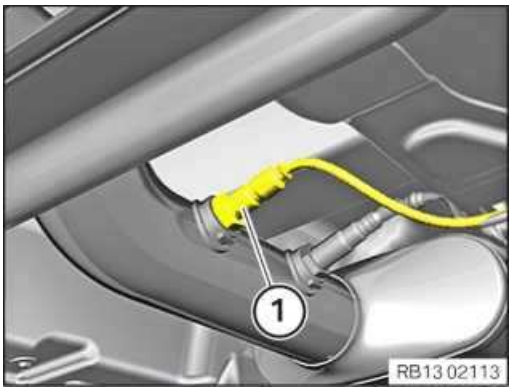
31 – Remove exhaust system

cardiagn.com

WARNING

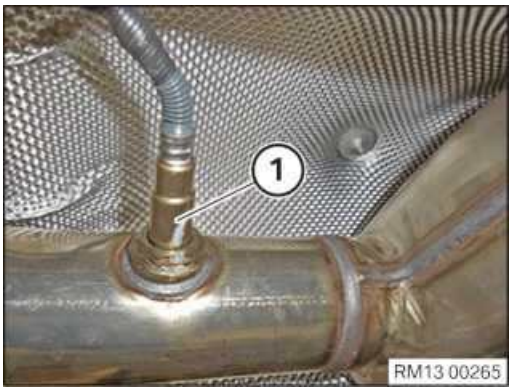
Hot surfaces.

Risk of burning!



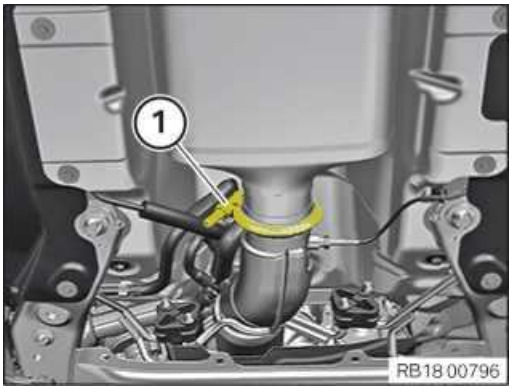
- Perform all work only on components that have cooled down.

CAUTION



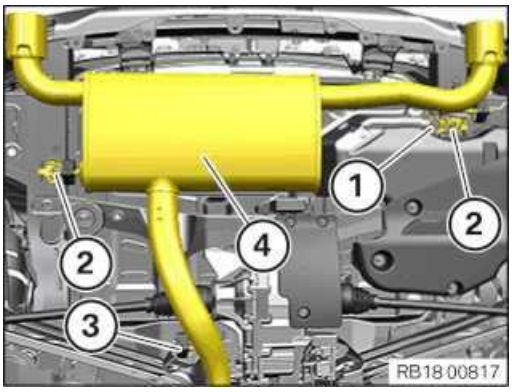
Heavy component.

Heavy components can lead to injury or damage.

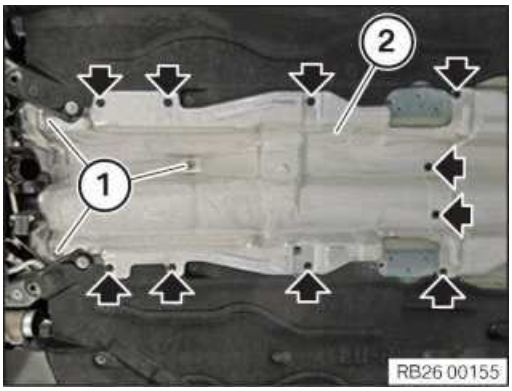


- Remove and install heavy components with the aid of another person/other persons.

- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

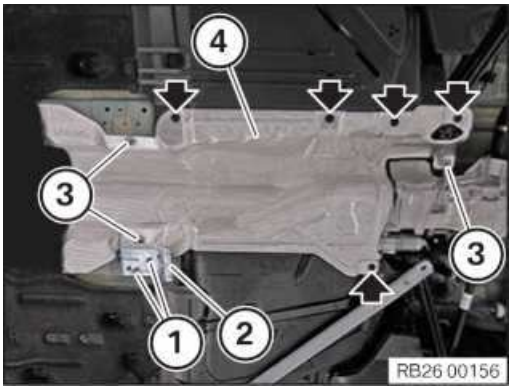


- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

cardiagn.com



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

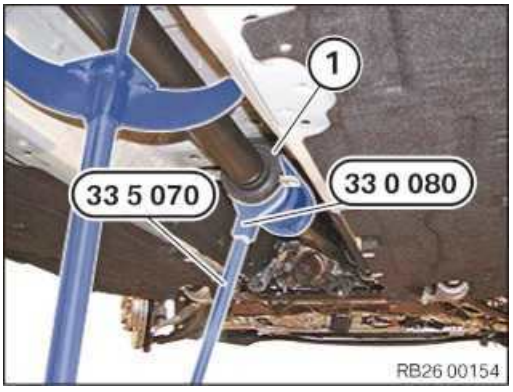
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

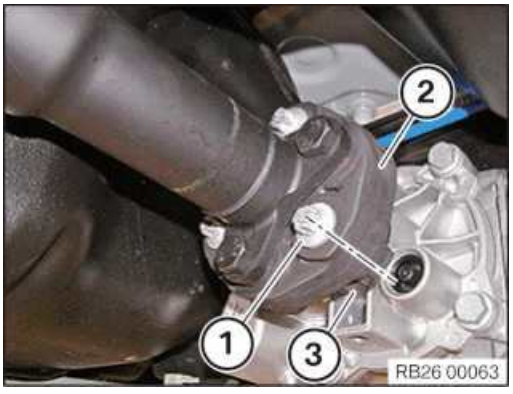
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.

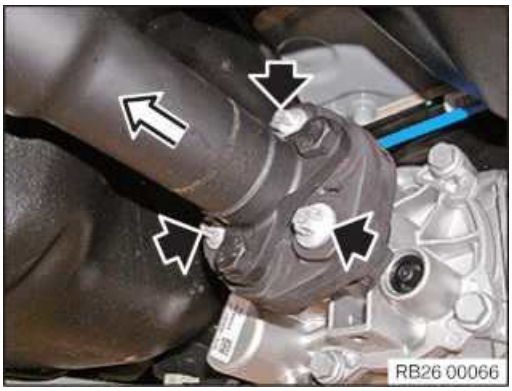


- Always support the propeller shaft (1) with a conventional jack.

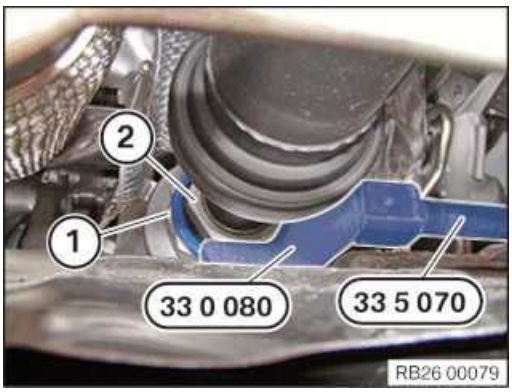
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



cardiagn.com

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

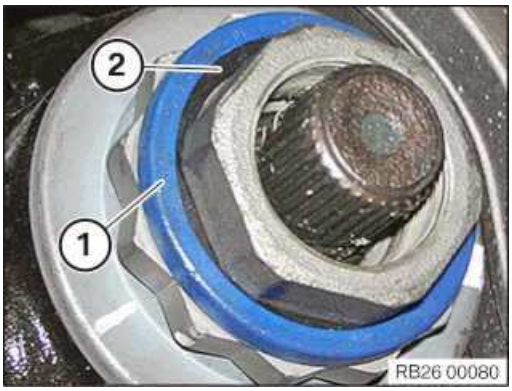
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

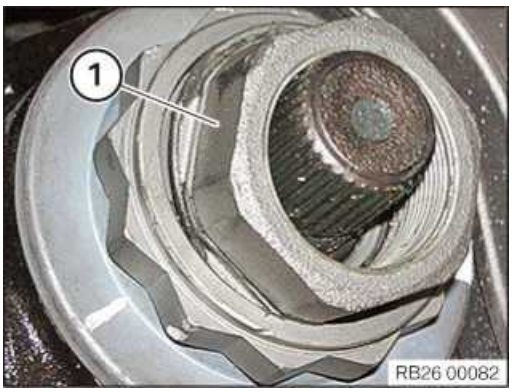
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

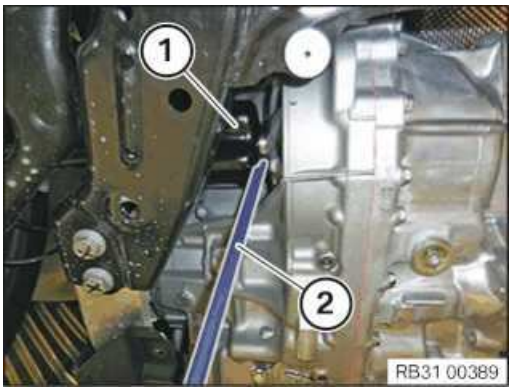
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

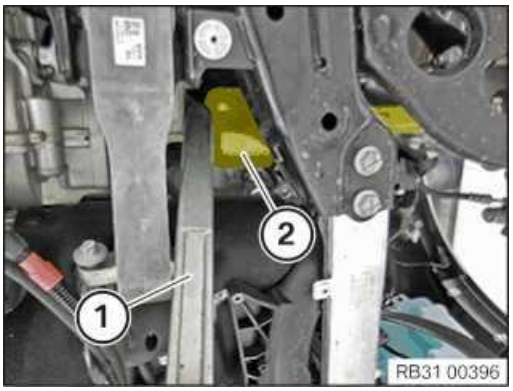
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



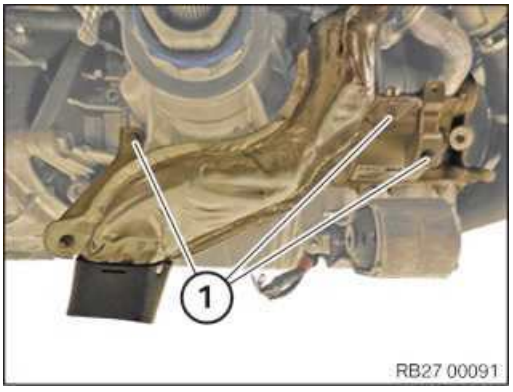
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



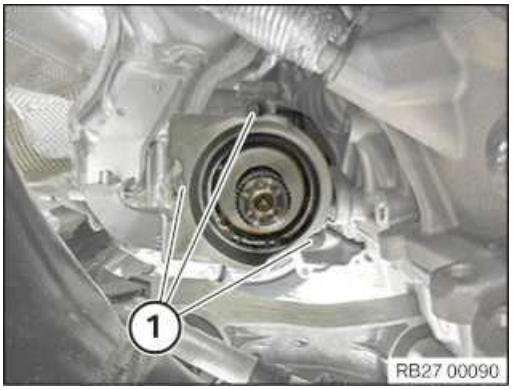
36 – Partially removing the left output shaft

cardiagn.com

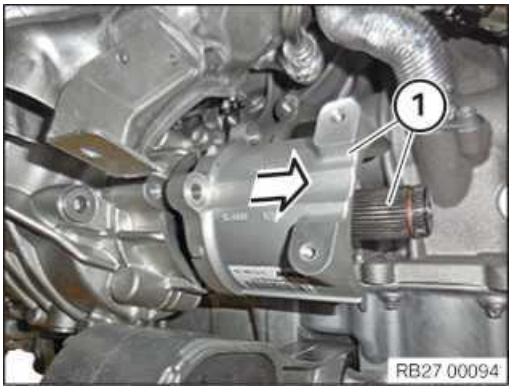


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

37 – Partially removing right output shaft



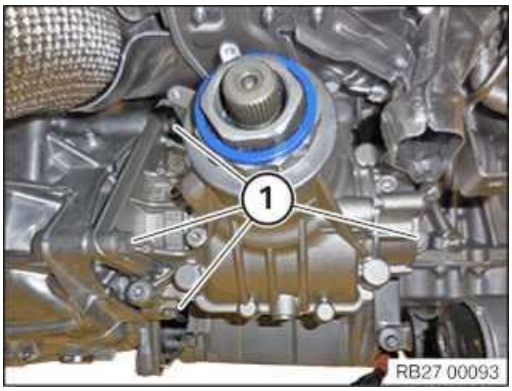
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).



38 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

cardiagn.com

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

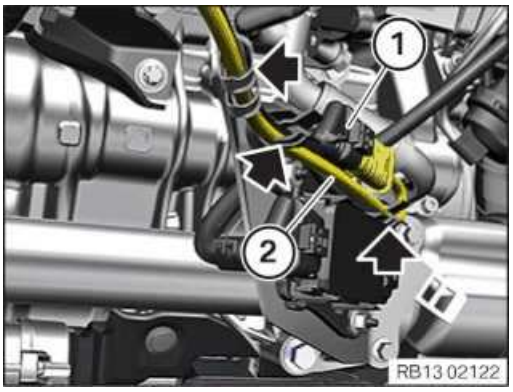
40 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

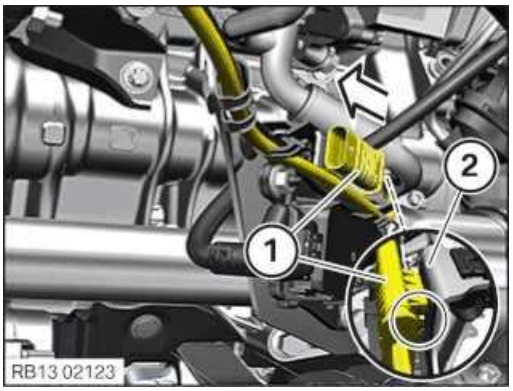
Risk of burning!

- Perform all work only on components that have cooled down.



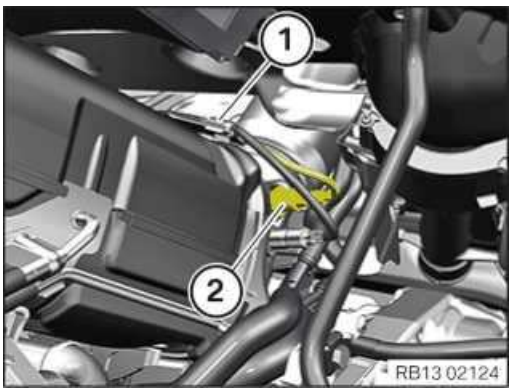
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

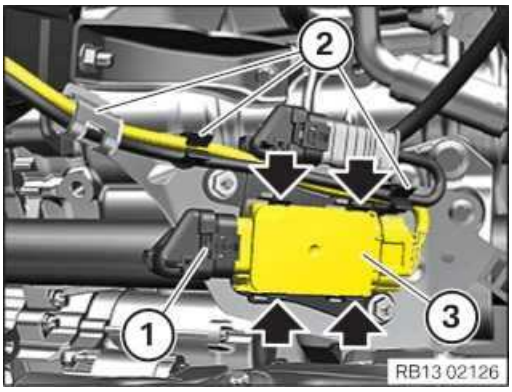
41 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

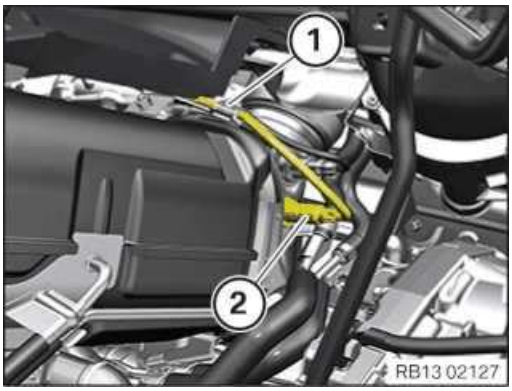
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

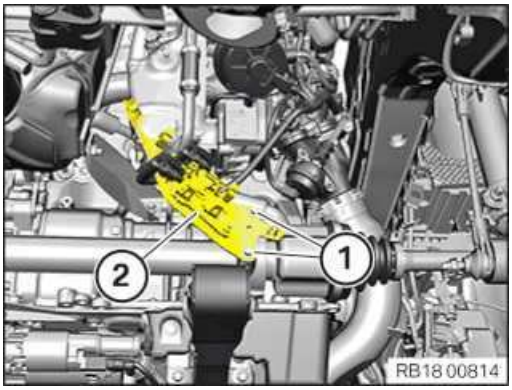
Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

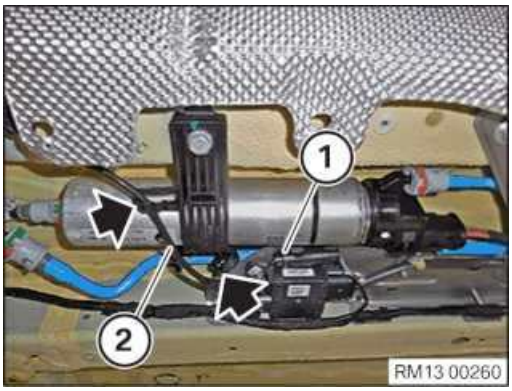
43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

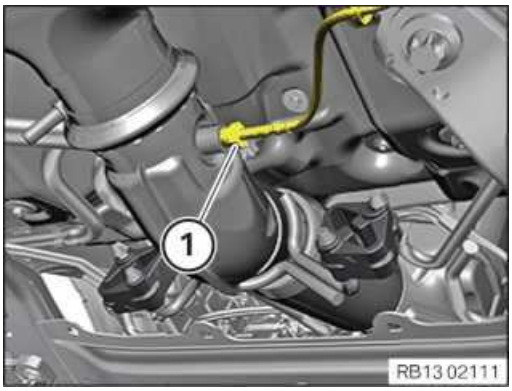


cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.

- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
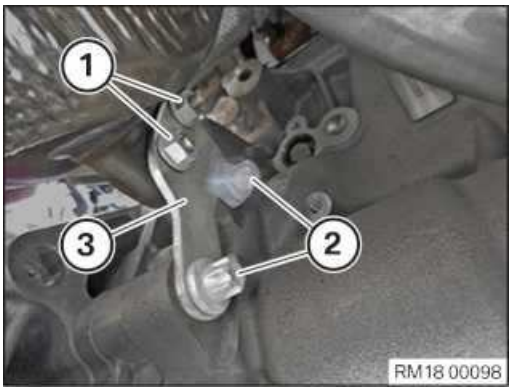
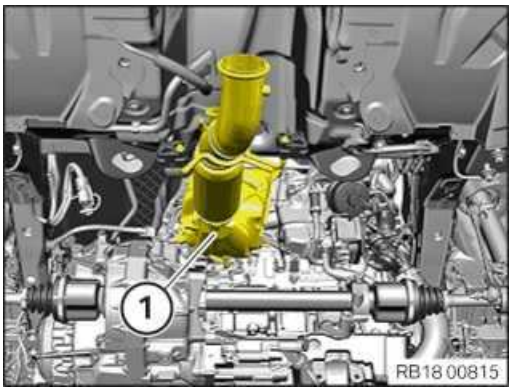
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

- Loosen nuts (1).



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

cardiagn.com

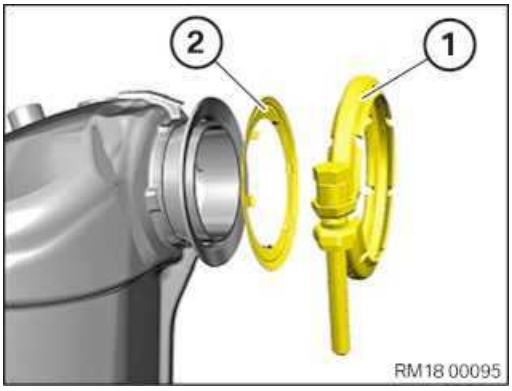
- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

- Feed out diesel particulate filter (1) toward the bottom and remove.

MAIN WORK

POSTPROCESSES



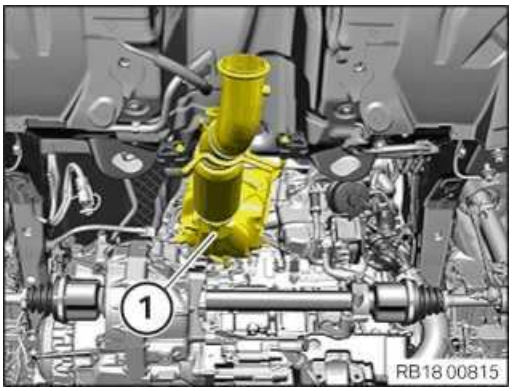
48 – Installing the diesel particulate filter

CAUTION

Heavy component.

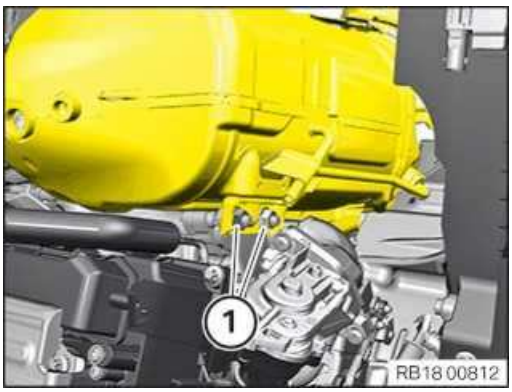
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

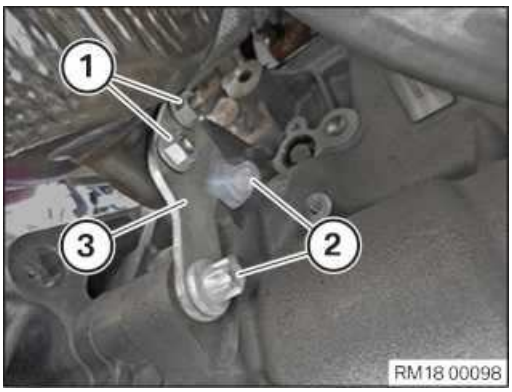


- Renew the V-clip (1).
  Parts: V-band clamp
- Renew the gasket (2).
  Parts: Gasket

cardiagn.com

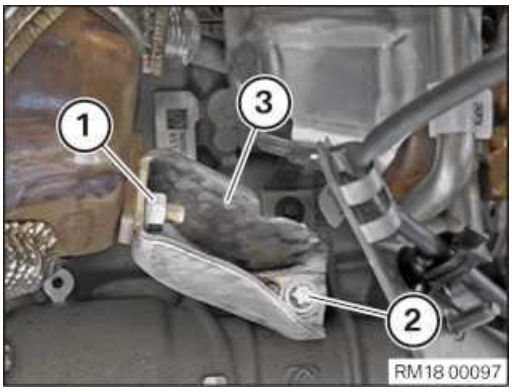


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

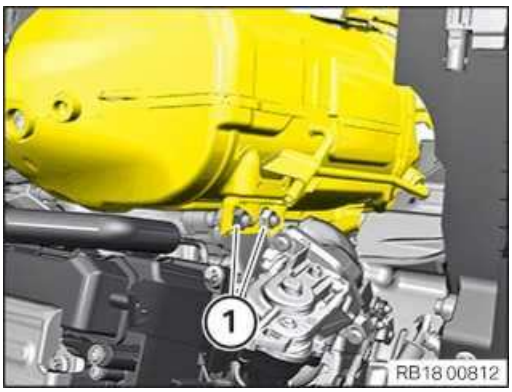


- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

cardiagn.com

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).



- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

▸ **Installing differential pressure sensor**

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

49 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

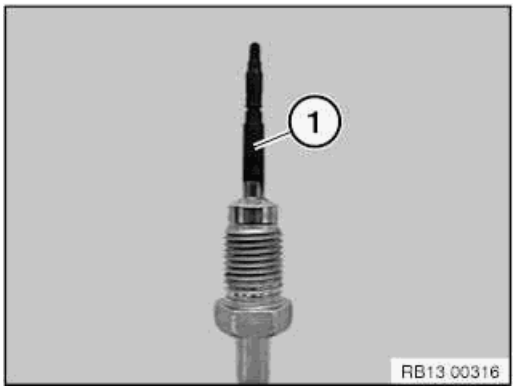
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

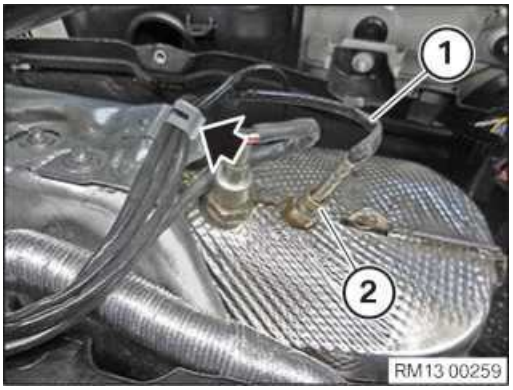


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

50 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

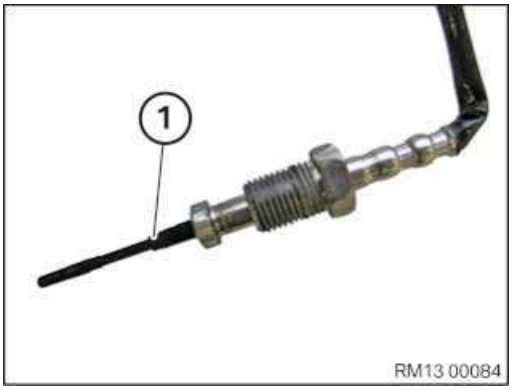
- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

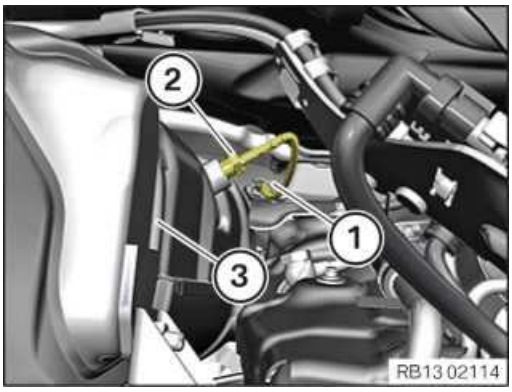
  The connector (1) must engage audibly.



51 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

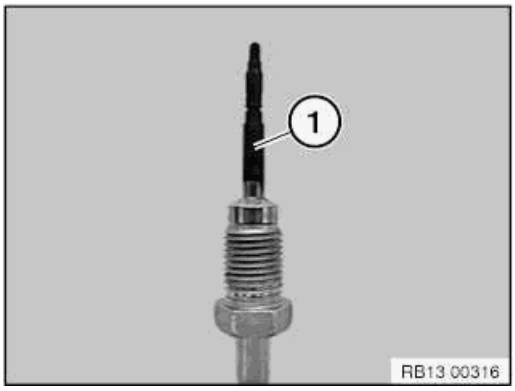
- Make sure the gauge tip (1) is not damaged during installation.

cardiagn.com

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

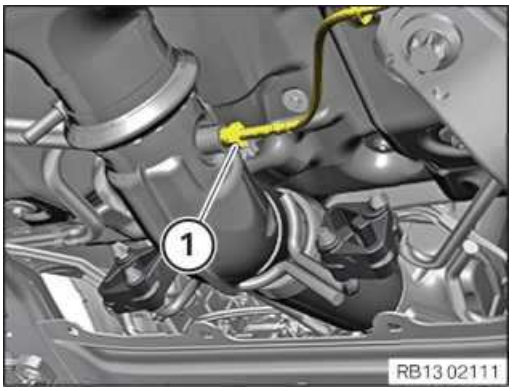


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

52 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

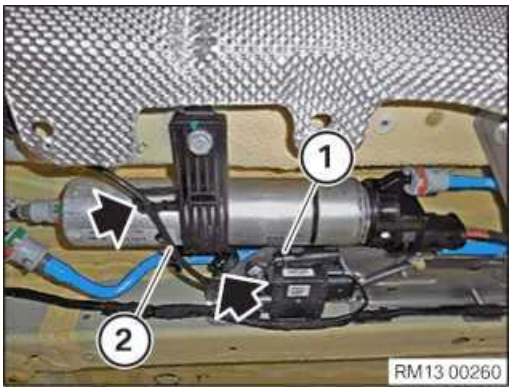
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

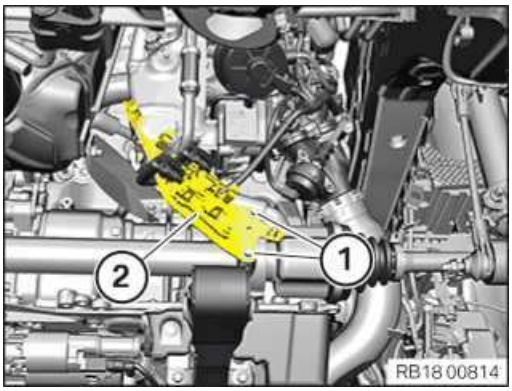
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

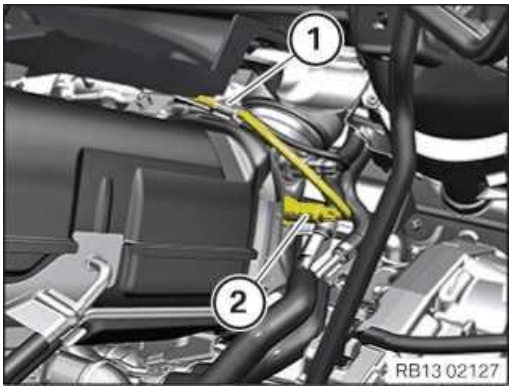


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

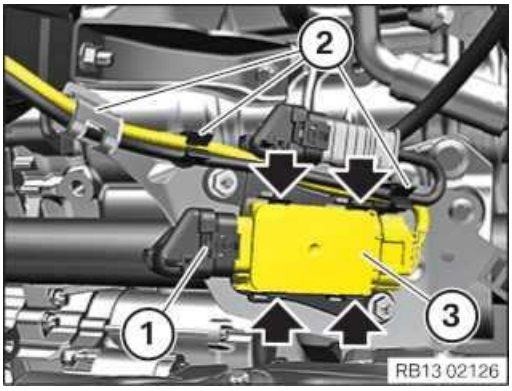
53 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



54 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

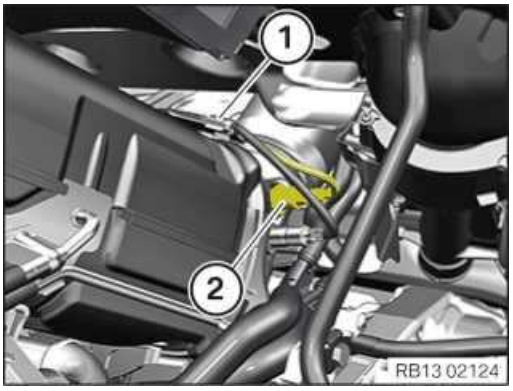
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

55 – Install the monitoring sensor

cardiagn.com



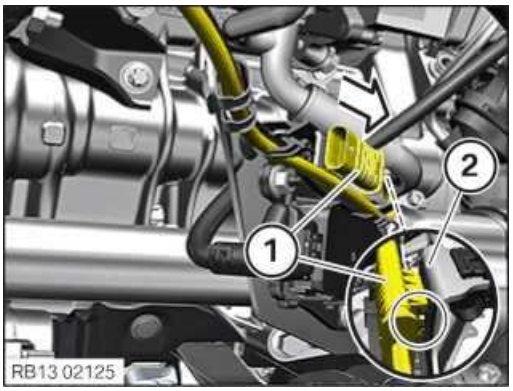
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

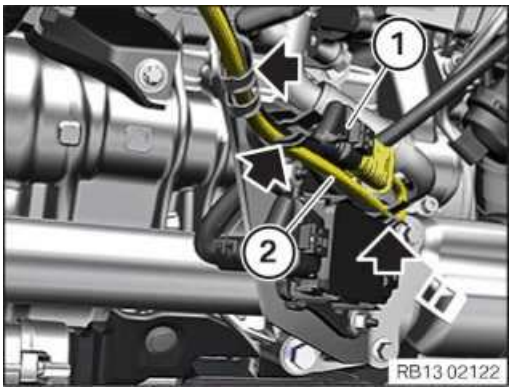
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

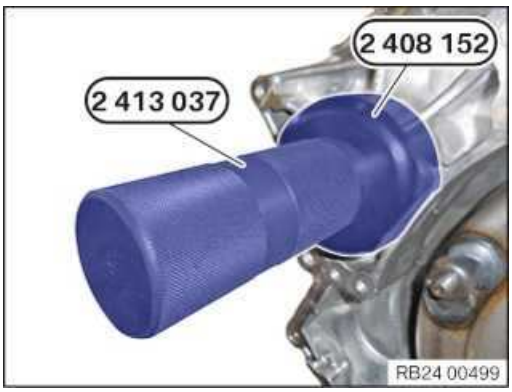
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

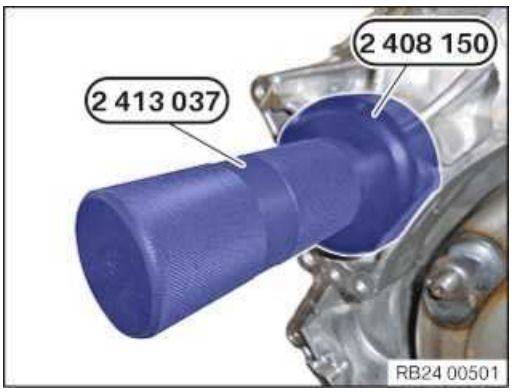
56 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

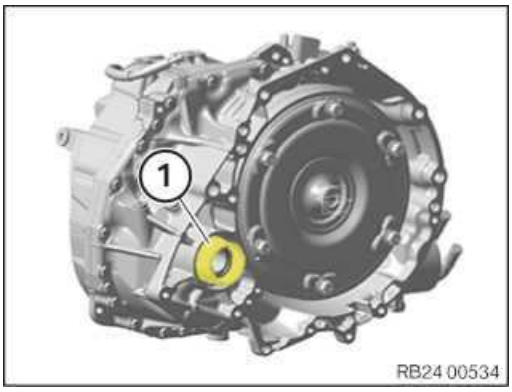


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

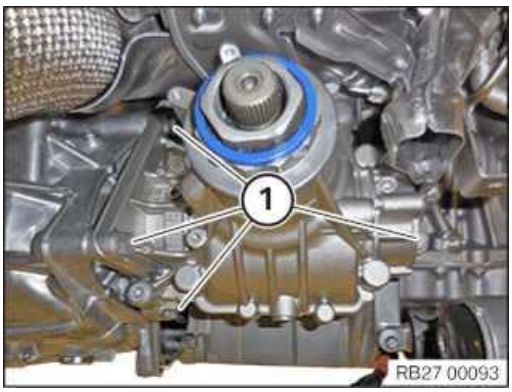
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

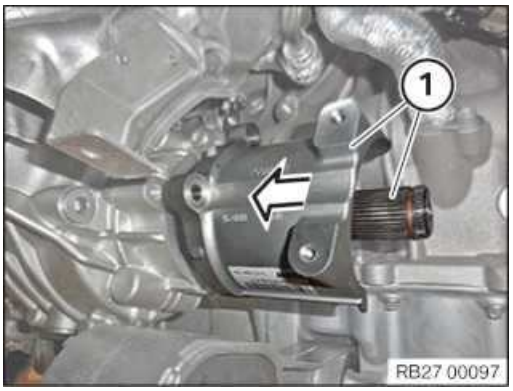
Technically suitable transfer box and electrical transmission oils		

Main group 27

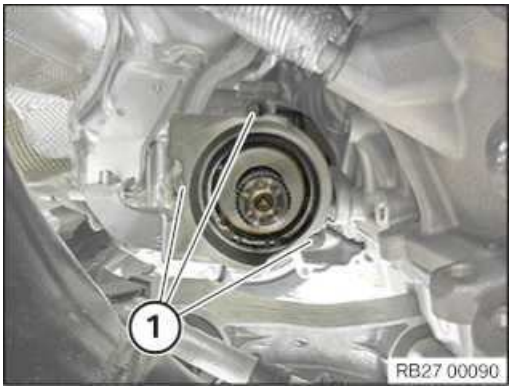
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



57 – Install the intermediate shaft with the support tube



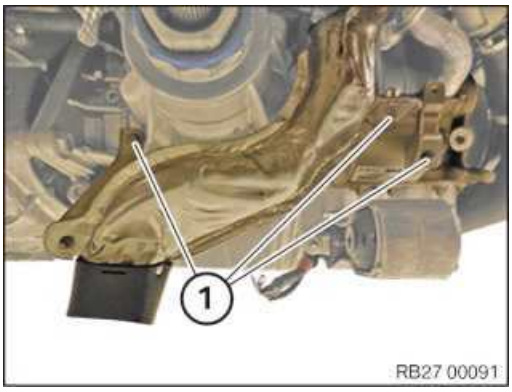
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

58 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

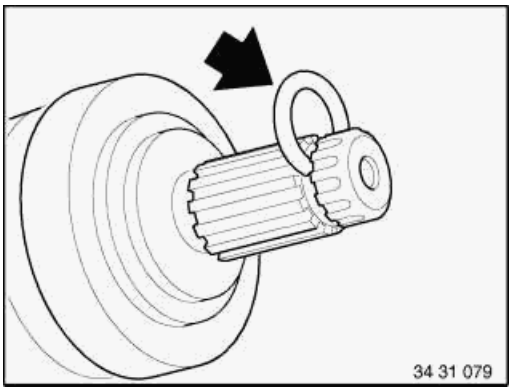
59 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

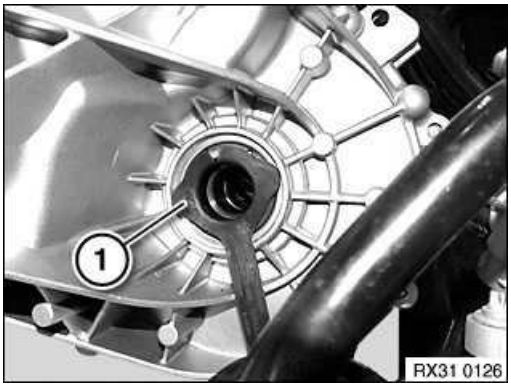
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

60 – Partially installing the left output shaft



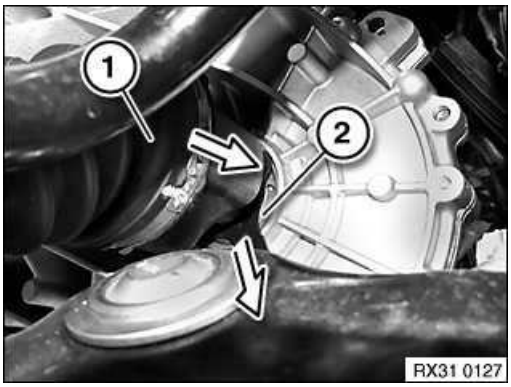
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

61 – Install propeller shaft.

CAUTION

Component with heavy weight.

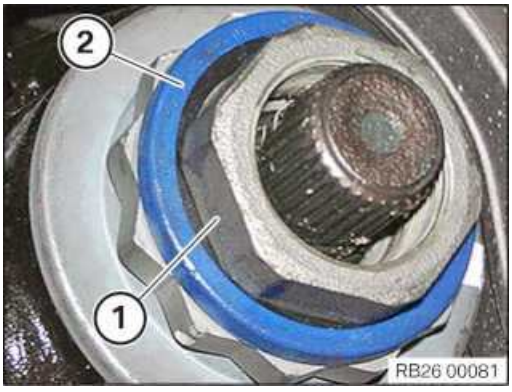
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

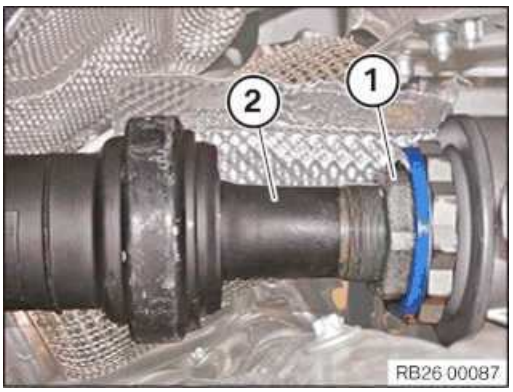
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

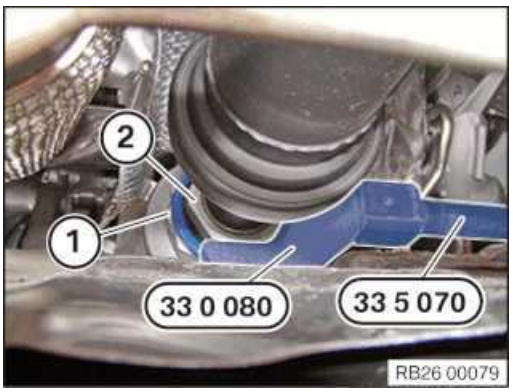
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

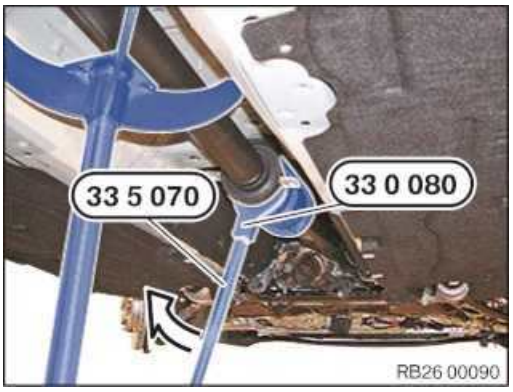
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

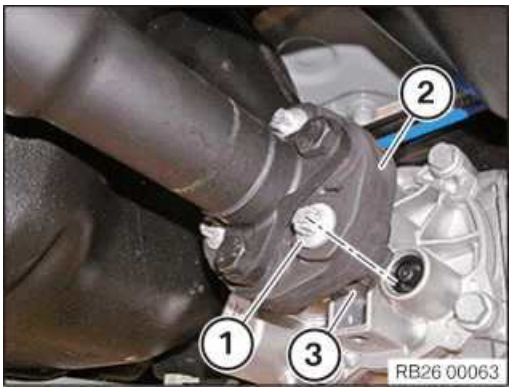


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body

- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

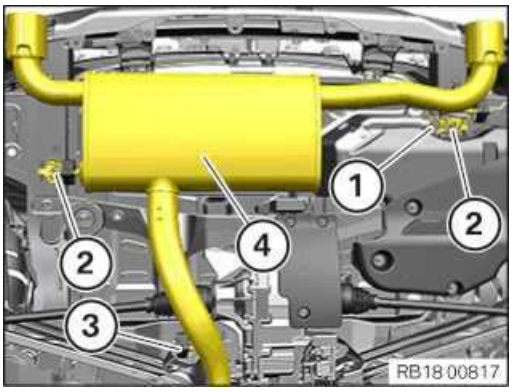
64 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

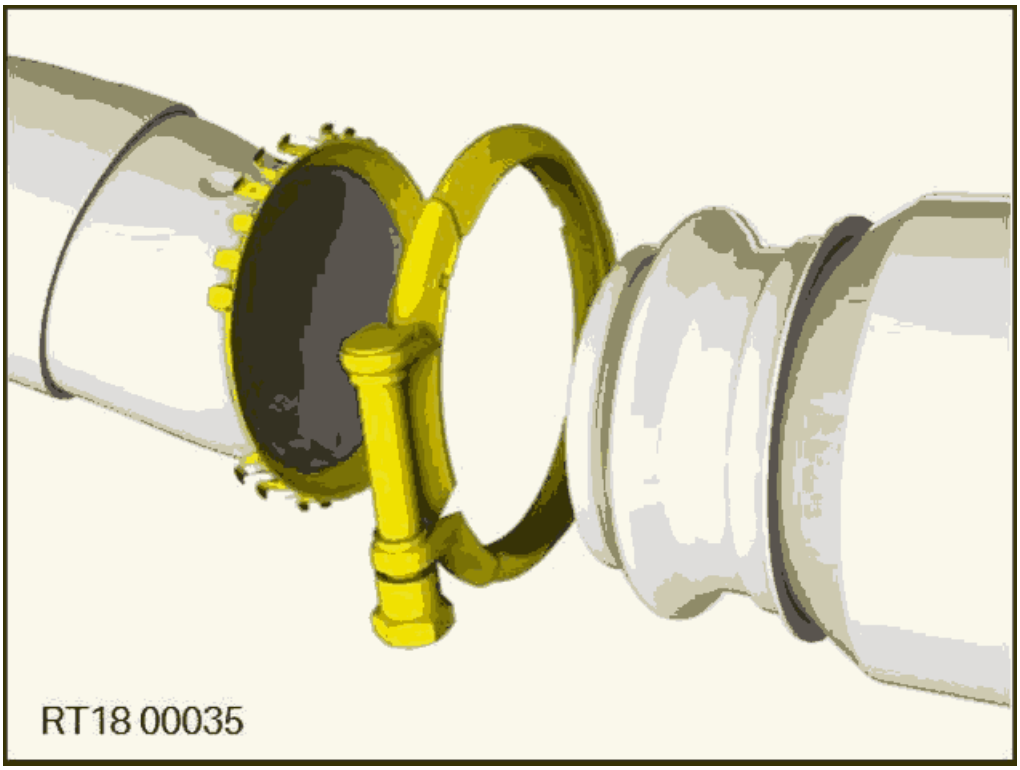
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

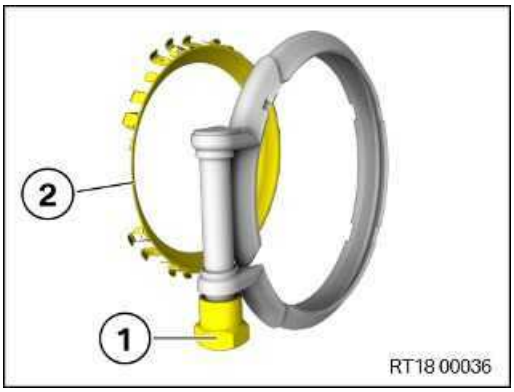
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



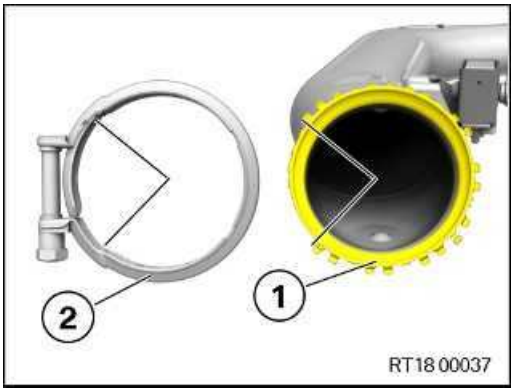
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



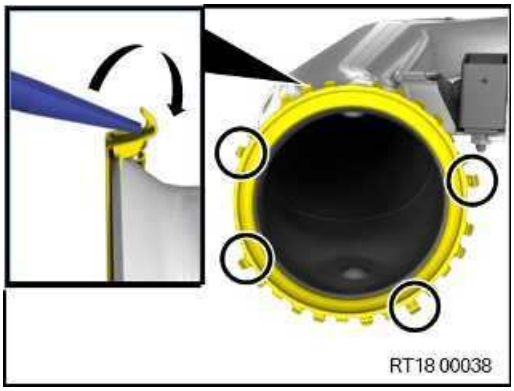
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

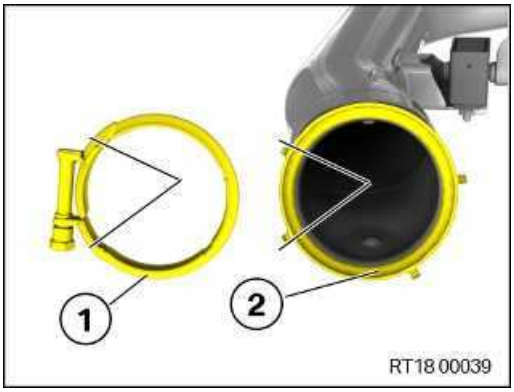


V-band clamp

cardiagn.com



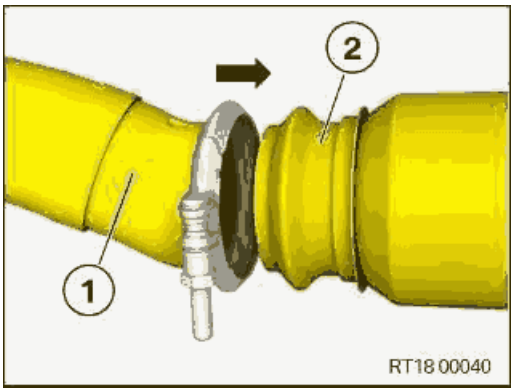
- Unscrew the nut (1) and remove the sealing ring (2).



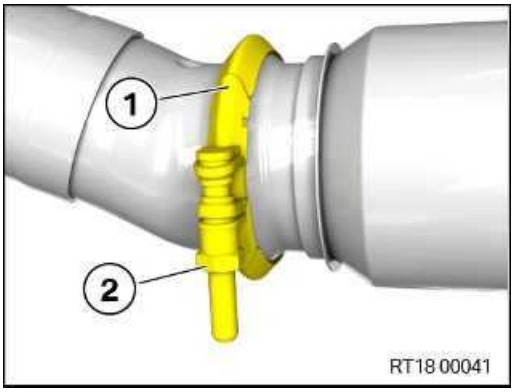
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

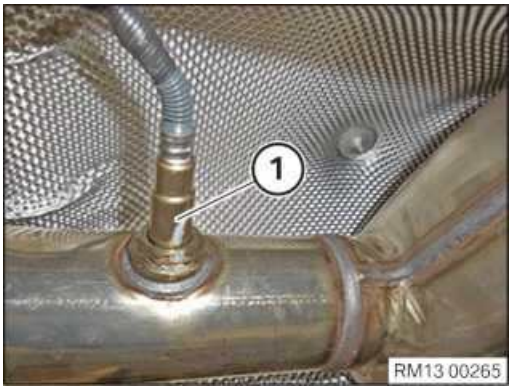


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

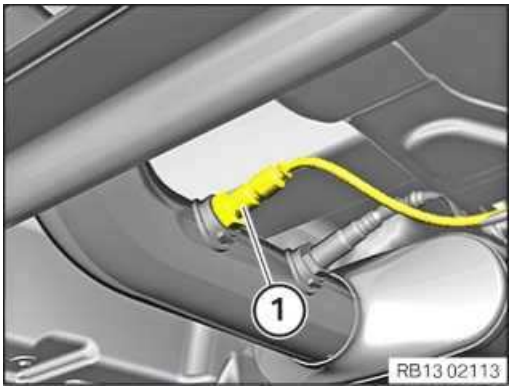
cardiagn.com



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

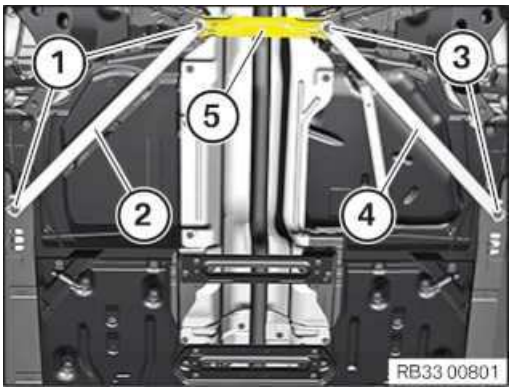


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

65 – Install the cross-member with torsion struts

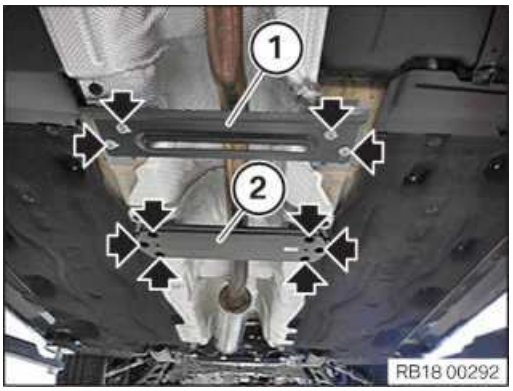
cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

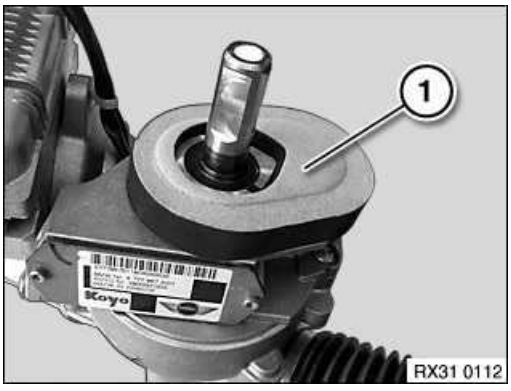
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

66 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

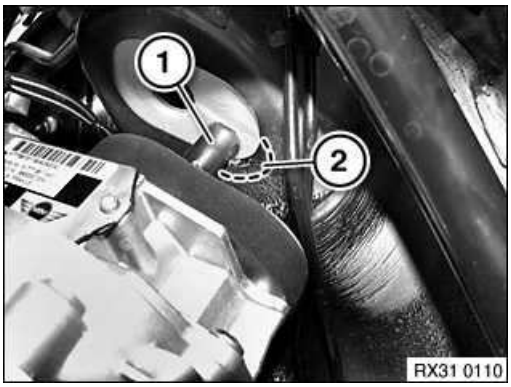


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

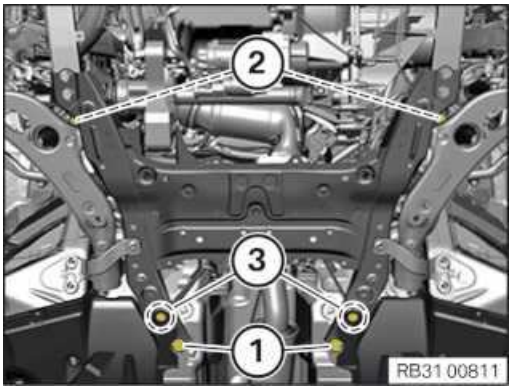


67 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

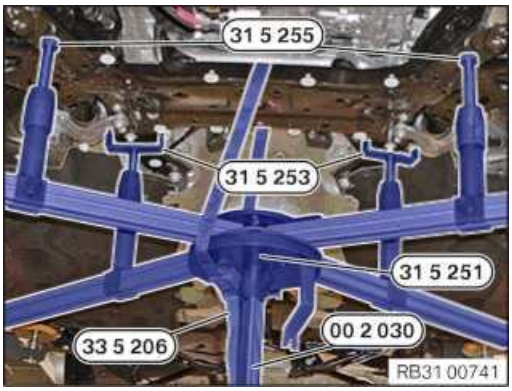
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

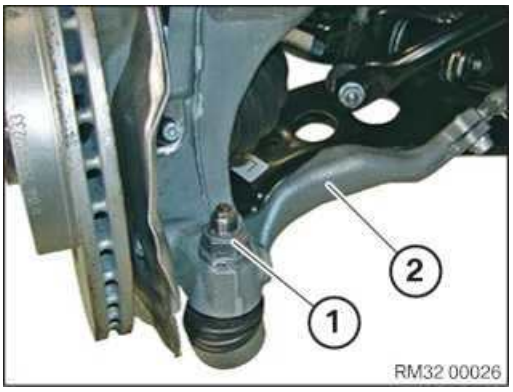
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



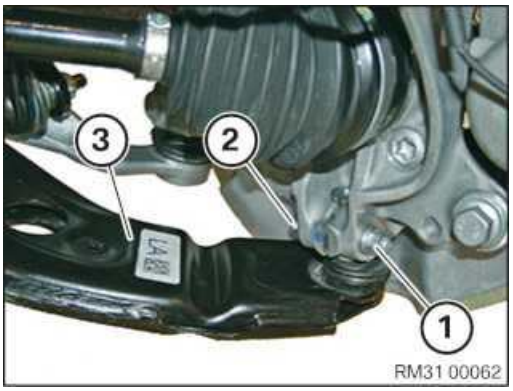
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

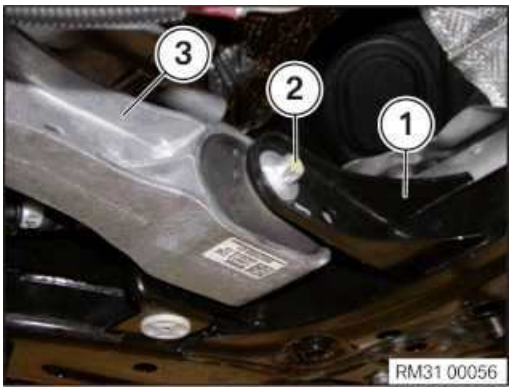
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

68 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

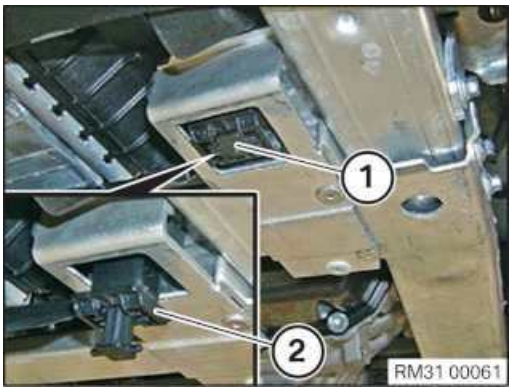


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

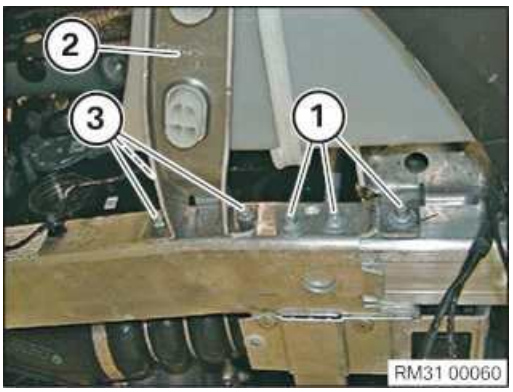
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



cardiagn.com

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

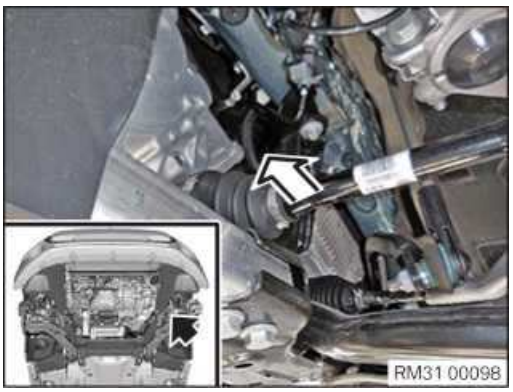
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

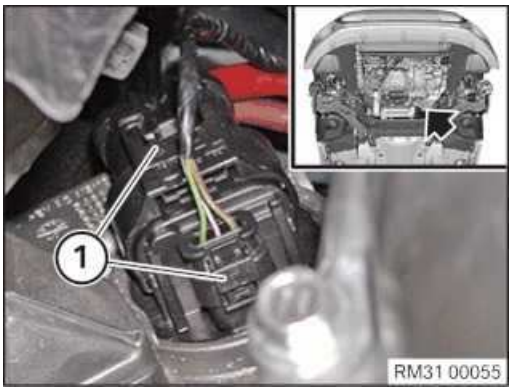


Perform the operations on the left and right side.

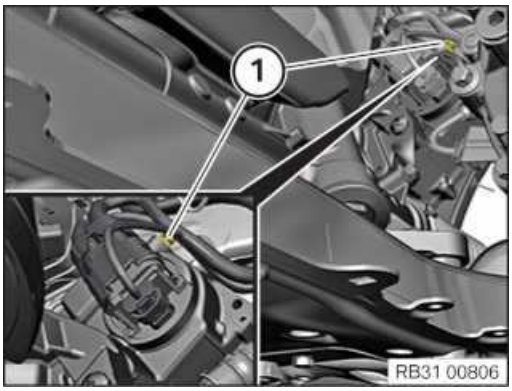
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



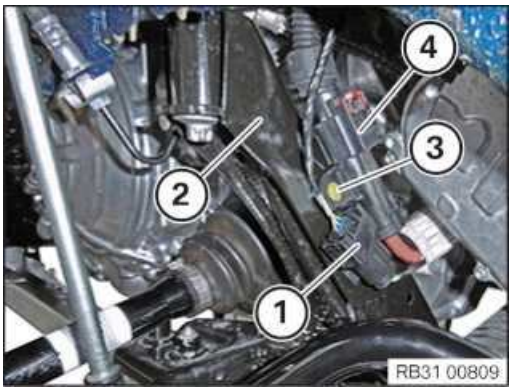
69 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

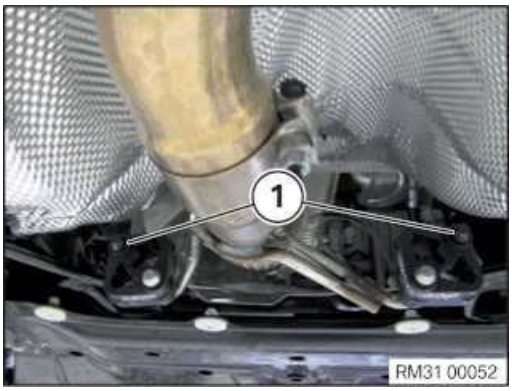
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

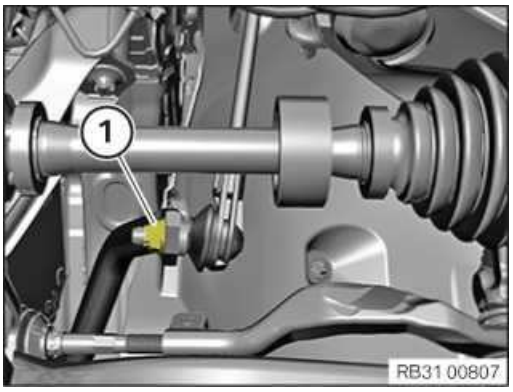
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

70 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



71 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

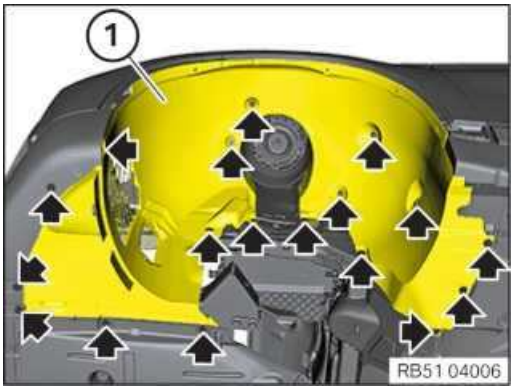
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

72 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

73 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

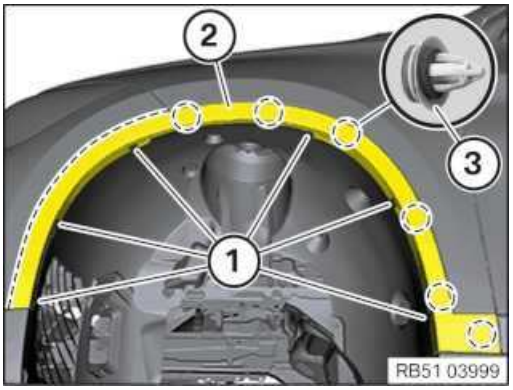
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

74 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

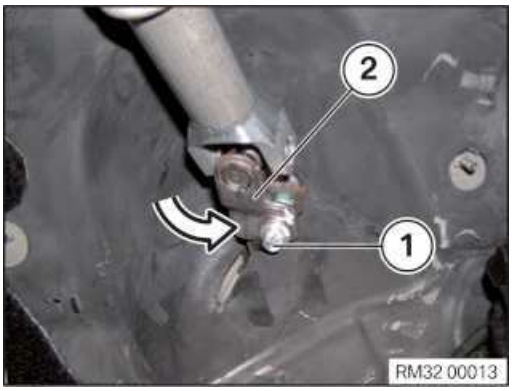
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

75 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

76 – Secure the steering shaft at the bottom on the steering gear

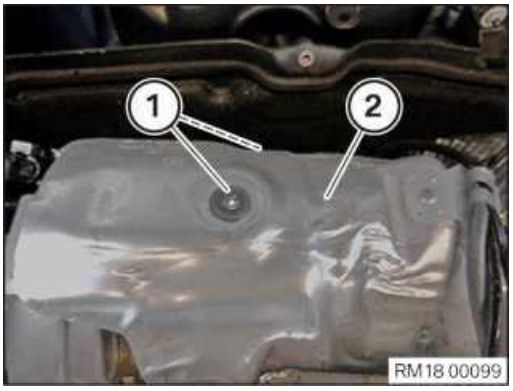
76 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

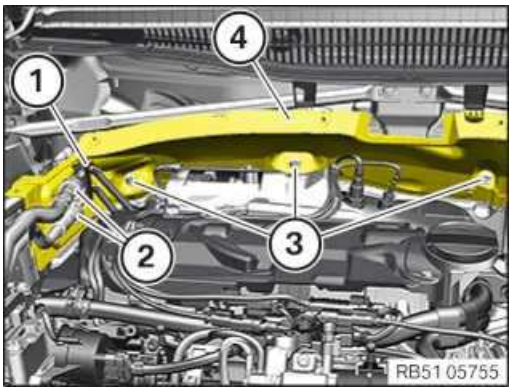


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

77 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

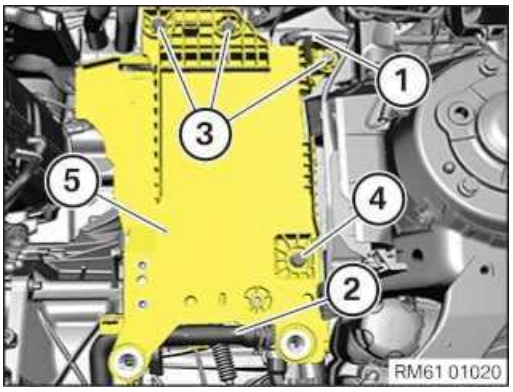
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

78 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

79 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

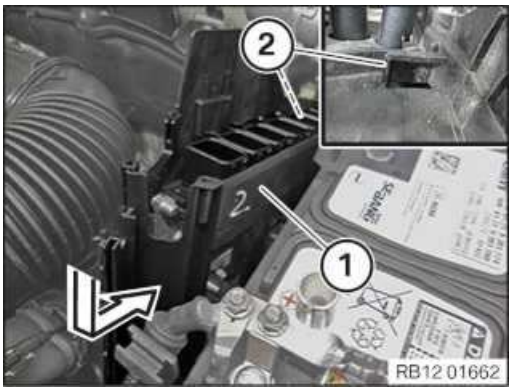
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

80 – Install electronics box

Prerequisite



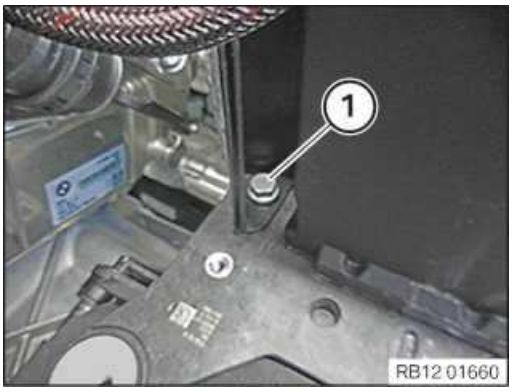
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

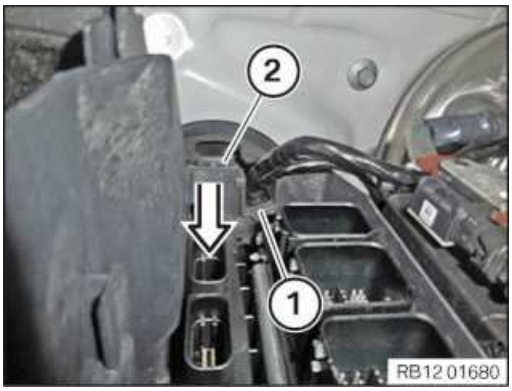
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

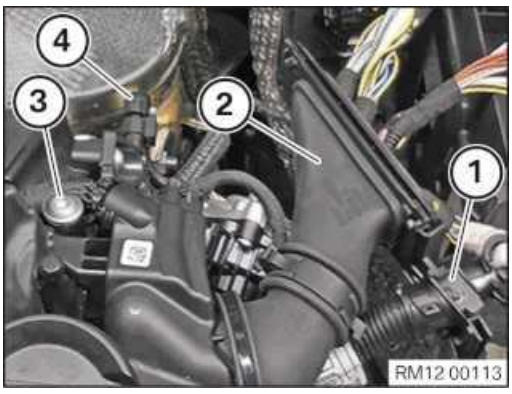


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

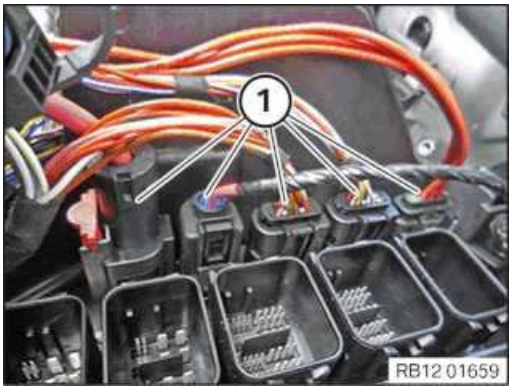


- Tighten down screw (1).

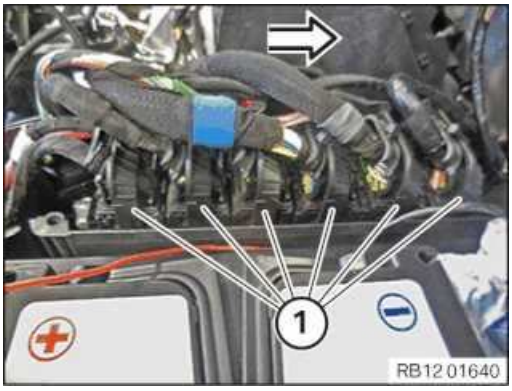
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



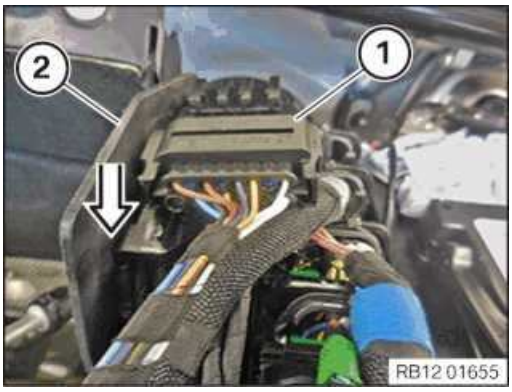
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



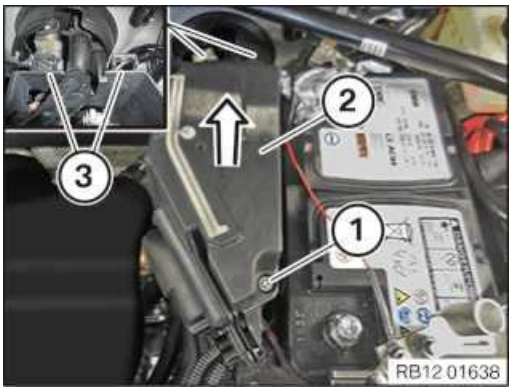
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

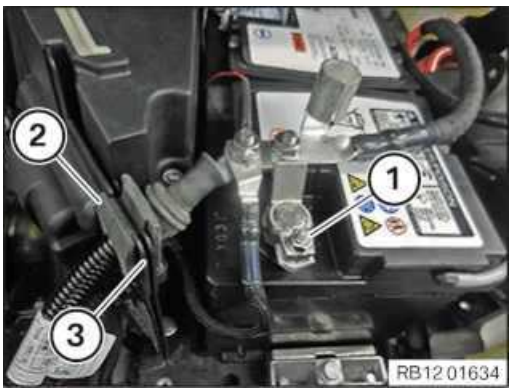


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

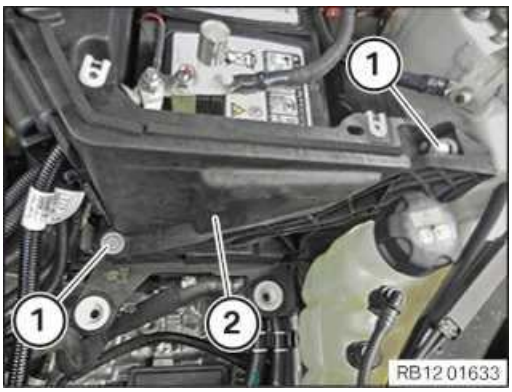
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

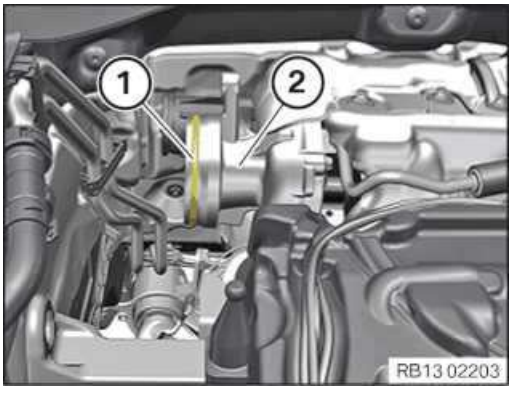


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

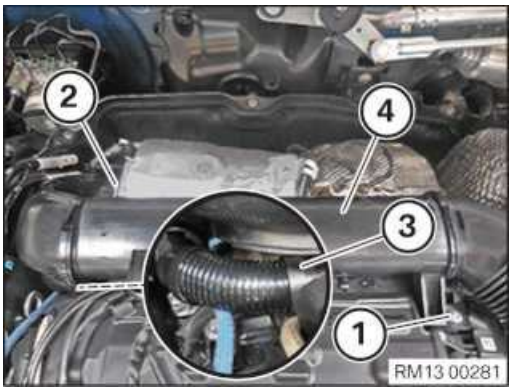
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

81 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

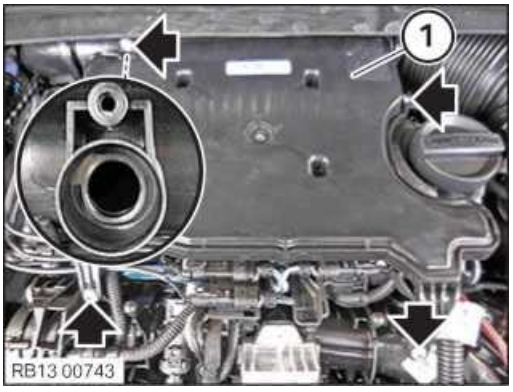
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

82 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

83 – Install acoustic cover

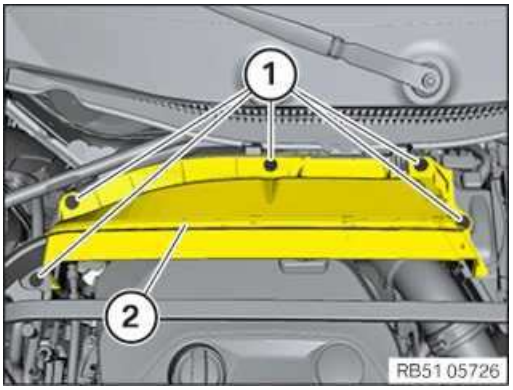
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

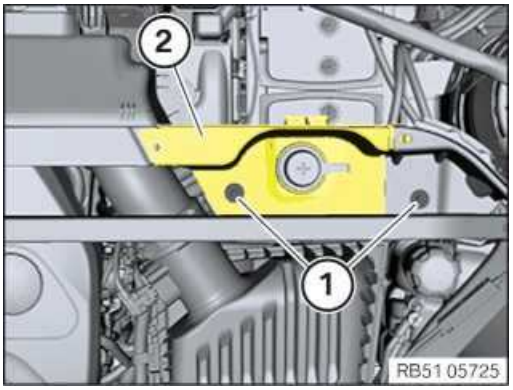
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

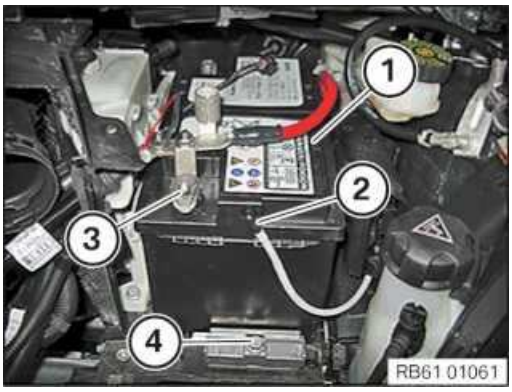


84 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

85 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

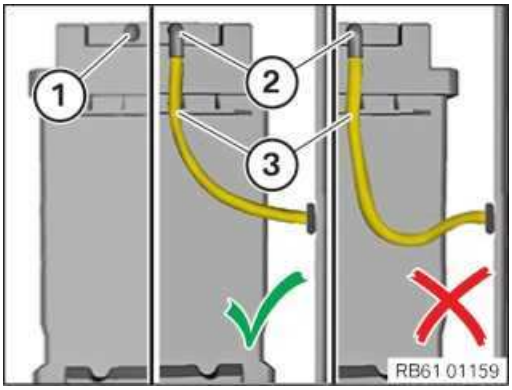
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

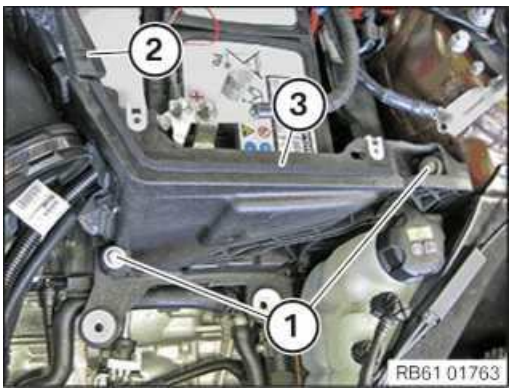
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

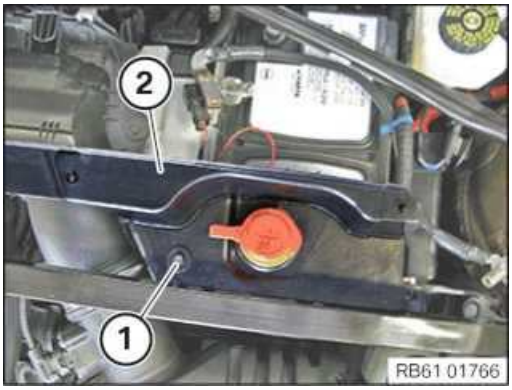
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

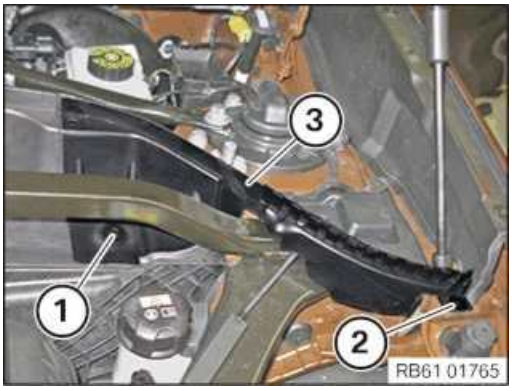


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

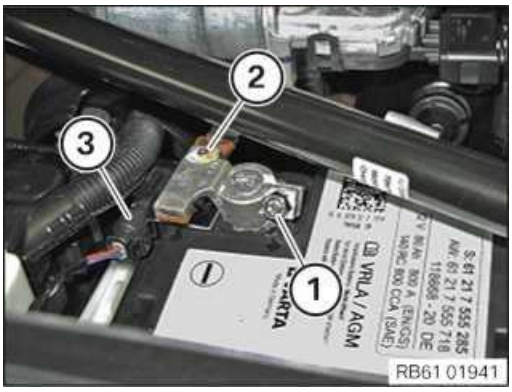
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

86 – Connecting the battery earth lead

TECHNICAL INFORMATION



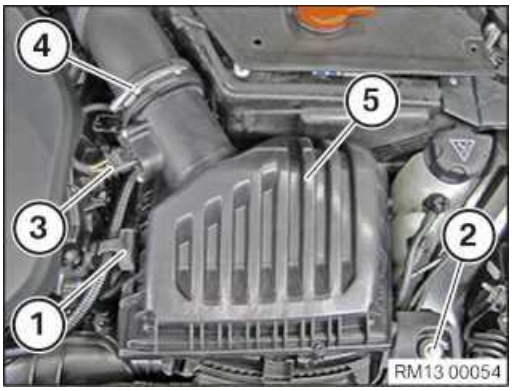
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

87 – Installing intake silencer housing

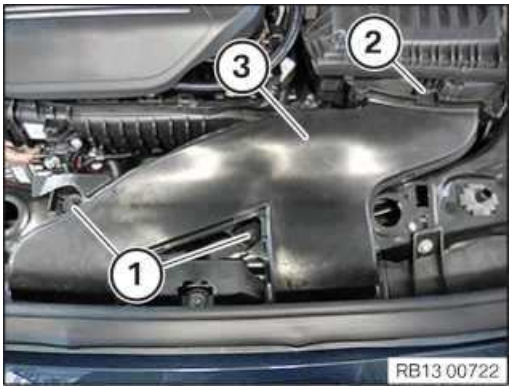
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

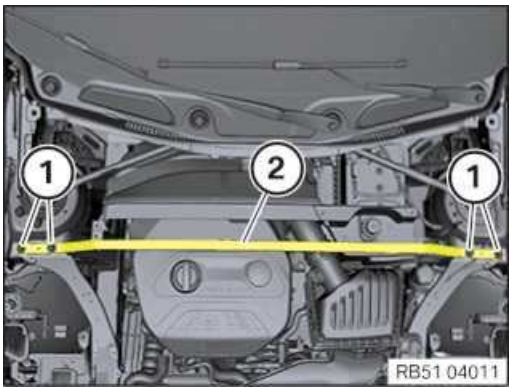
  The connector (3) must engage audibly.
- Insert and install the holder (1).

88 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



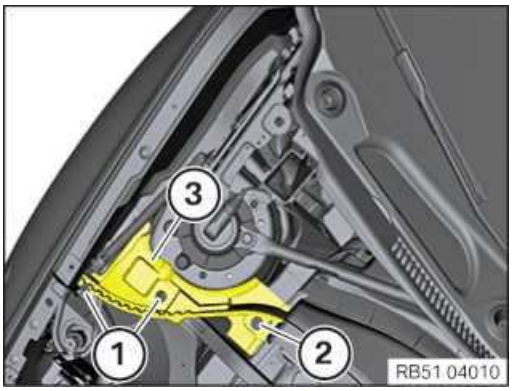
M6		Tightening torque	8 Nm

89 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

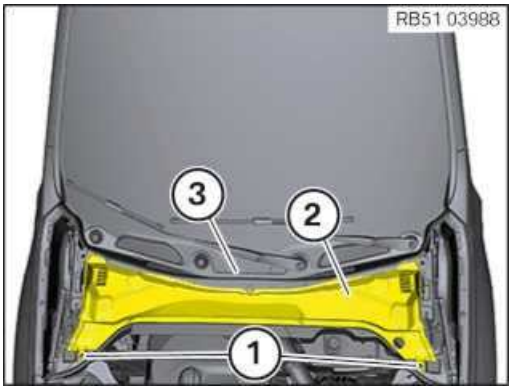
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



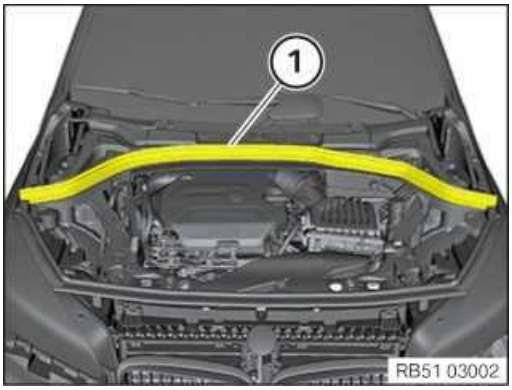
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

90 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

91 – Install the seal for the bonnet

NOTICE

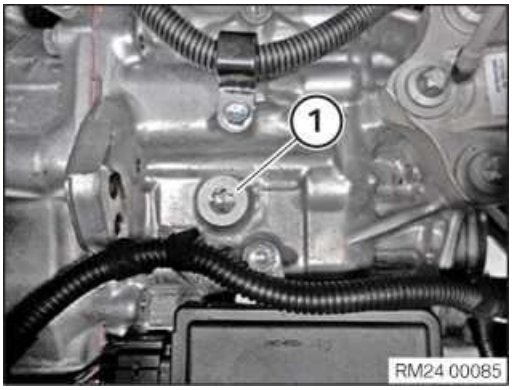
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

92 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

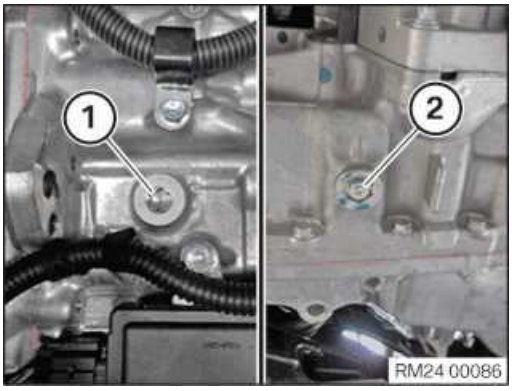
cardiagn.com

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

93 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

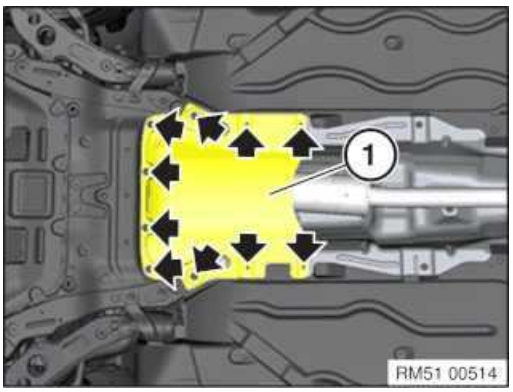
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 68

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 69

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 71

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 73

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 73

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 73

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 74

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 74

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 74

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 76

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 76

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 77

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 78

cardiagn.com

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support Used in step 79

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray Used in step 80

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover Used in step 80

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box Used in step 80

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery Used in step 80

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray Used in step 80

M8		Tightening torque	19 Nm

Clean air pipe to cylinder head cover Used in step 81

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing Used in step 81 87

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe Used in step 82

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead Used in step 84

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal Used in step 84

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray Used in step 85

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal Used in step 85 86

NutM6			5 Nm

Trailing link Used in step 85

M8		Tightening torque	19 Nm

Battery cover Used in step 85

M8			2,8 Nm

Intake silencer housing to lock bridge Used in step 87

M6X30		Tightening torque	8 Nm

cardiagn.com

Intake neck to cross connection — Used in step 88

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome — Used in step 89

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body — Used in step 89

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing — Used in step 92

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug — Used in step 92

M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug — Used in step 93

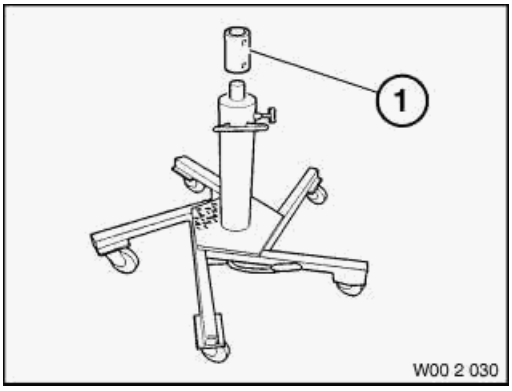
Hexagon socket		Tightening torque	43 Nm

Underbody protection front — Used in step 95

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side — Used in step 96

Hexagon screw		Tightening torque	2,6 Nm



Underbody panelling, side — Used in step 96

Plastic nut		Tightening torque	2,6 Nm

Overview of Special Tools

cardiagn.com

0 490 133 (00 2 030) Device

Common

Used in step 28 67

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

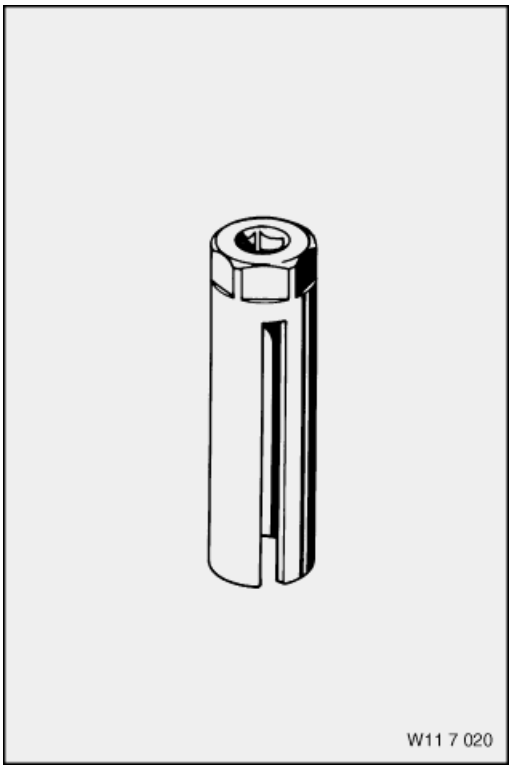
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

Common



Used in step 34 61

Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

0 491 074 (11 7 020) Socket wrench insert

Common

Used in step 40 41 55

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

2 409 025 Puller

Common Used in step 56

Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common Used in step 56

Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 152 Striking element

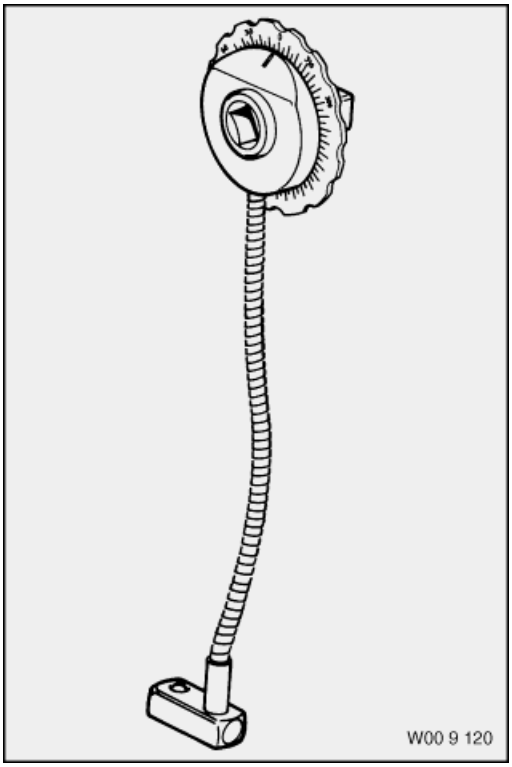
Common Used in step 56

Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

2 413 037 Handle

Common	Used in step 56
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

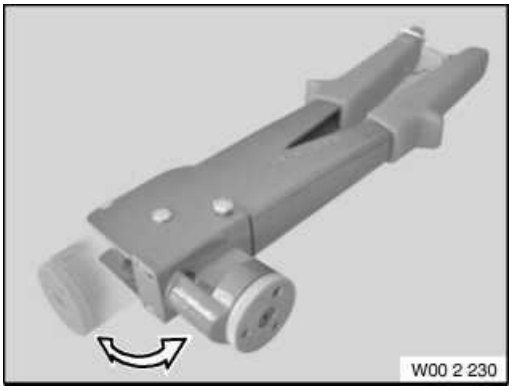


2 408 150 Striking element

Common	Used in step 56
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



Common

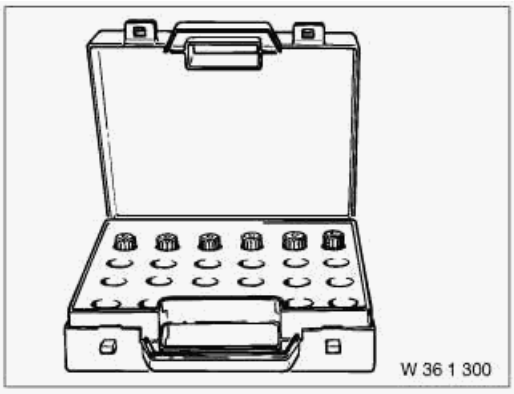
Used in step 61

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 521 (00 2 230) Pliers

Common	Used in step 73
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



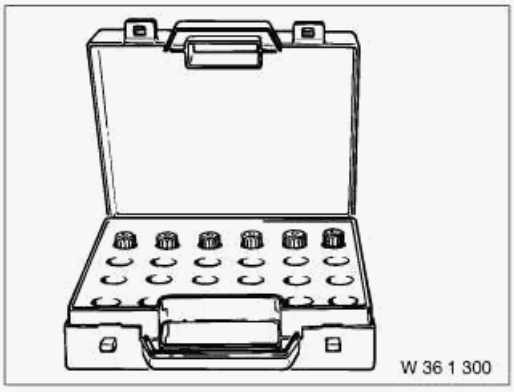
2 344 011 Tool

Common	Used in step 74
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

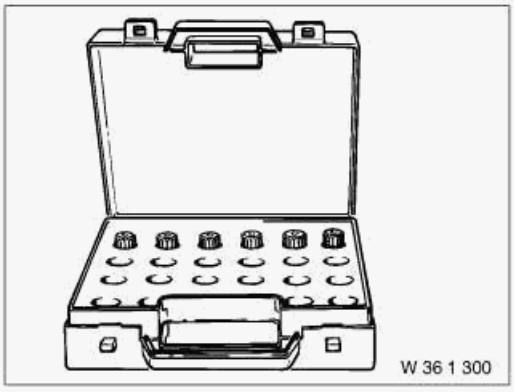
0 495 221 (36 1 323) Wheel stud

Common	Used in step 18
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 224 (36 1 326) Wheel stud

Common	Used in step 18
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 495 225 (36 1 327) Wheel stud

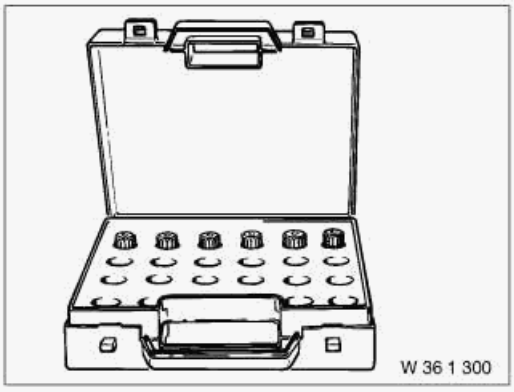
Common	Used in step 18
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 18
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 227 (36 1 329) Wheel stud

Common	Used in step 18
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 228 (36 1 331) Wheel stud

Common	Used in step 18
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 229 (36 1 332) Wheel stud

Common	Used in step 18
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518

Operating materials	Used in step

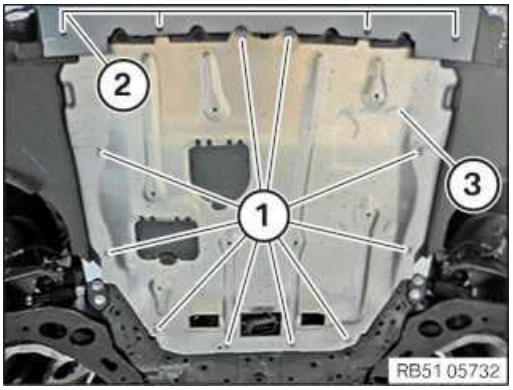
cardiagn.com



11 42 245 Removing and installing/sealing or replacing the oil return line for low pressure exhaust turbocharger

PRELIMINARY WORK

1 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

2 – Removing the acoustic cover

WARNING

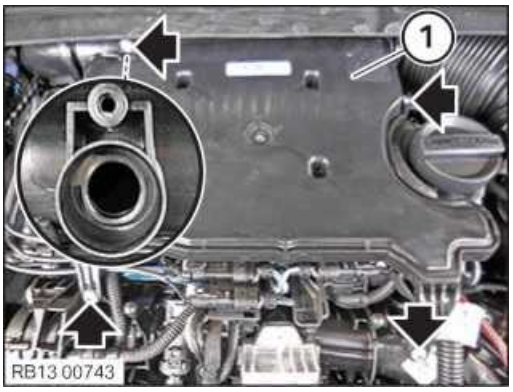
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



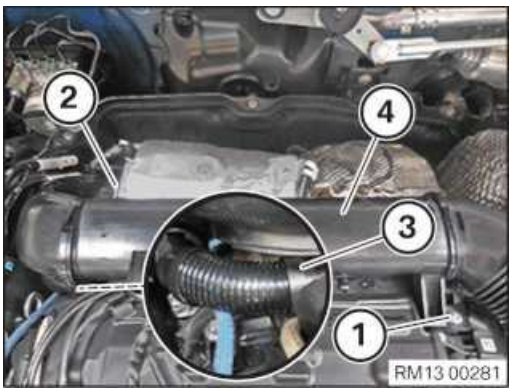
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove resonator

cardiagn.com

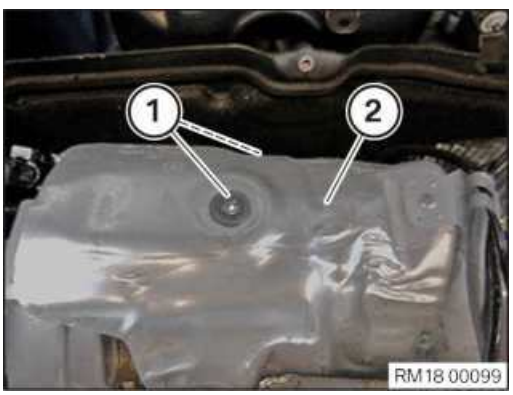


- Remove screws (arrows).
- Guide out and remove the resonator (1).

4 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



5 – Removing heat shield from top exhaust turbocharger

WARNING

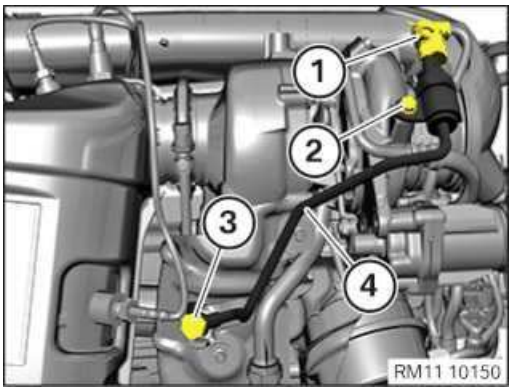
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

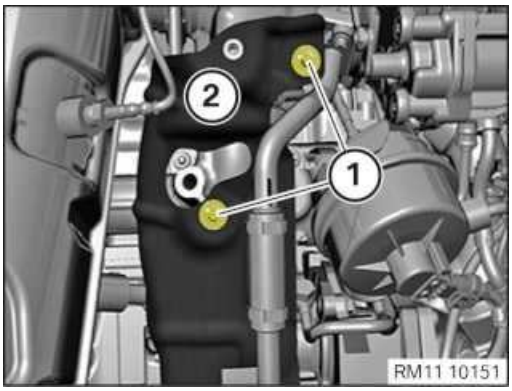
- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

6 – Remove the heat shield from the exhaust turbocharger at the bottom



cardiagn.com

WARNING



Hot surfaces.

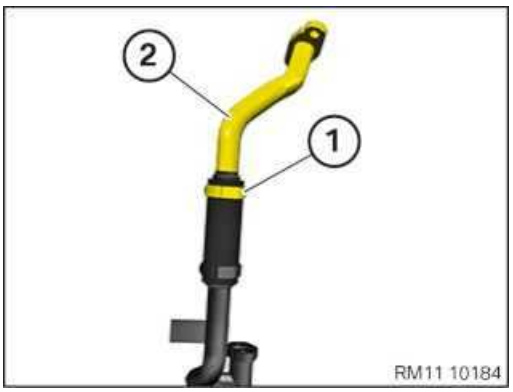
Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

cardiagn.com



7 – Remove the oil return line for the low-pressure stage turbocharger

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

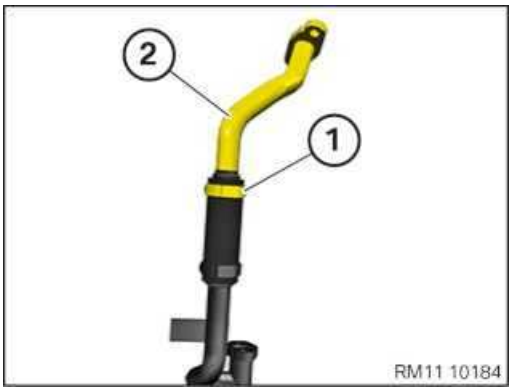
- Detach the clamp (1).

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Guide out and remove the oil return line (2).

  The oil return line (2) must be reinstalled in the same mounting orientation, make marks if applicable.



8 – Install the oil return line for the low-pressure stage turbocharger

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew the clamp (1).

  Parts: Clamp

- Insert and install the clamp (1).

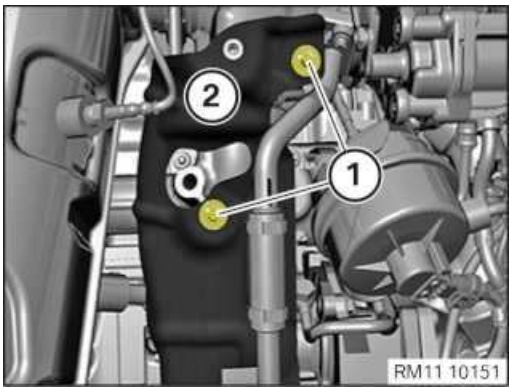
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

- Thread in the oil return line (2) in the correct mounting orientation and install. Observe any marks that may exist.
- Position and secure the clamp (1).

POSTPROCESSES

9 – Installing heat shield on exhaust turbocharger at bottom

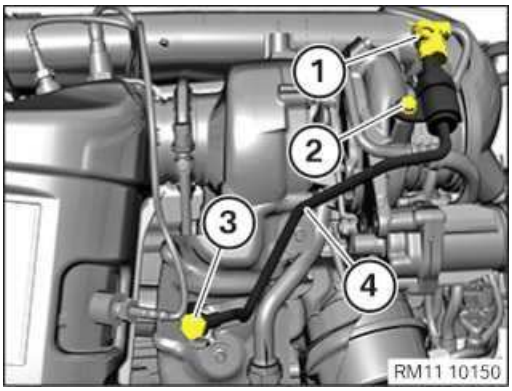


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).

Standard screw connection M6

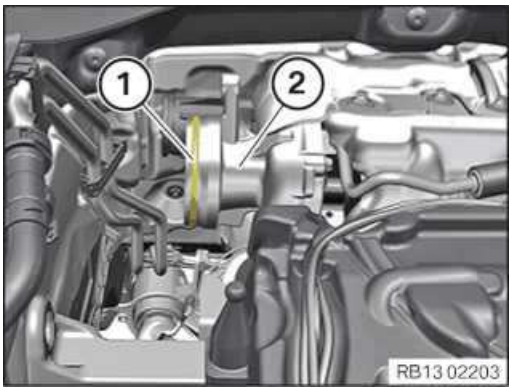
M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

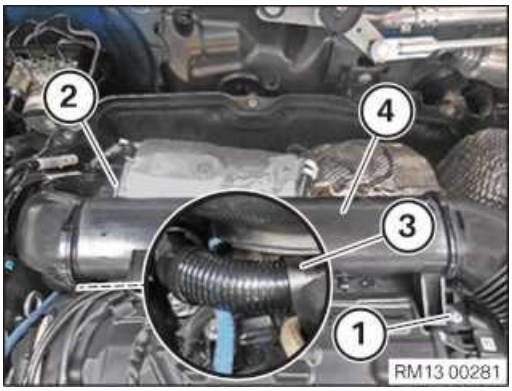
10 – Install the heat shield on the exhaust turbocharger

- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.



Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm



- Fasten the cable at the clips .

11 – Installing clean air pipe

cardiagn.com

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

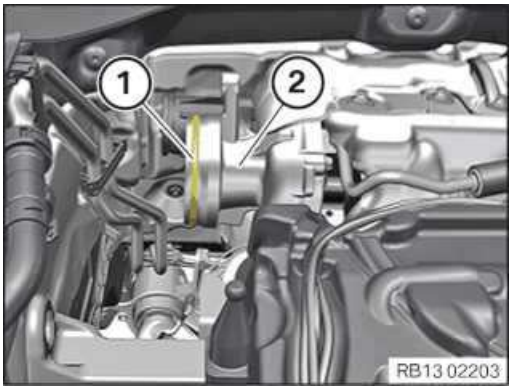
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

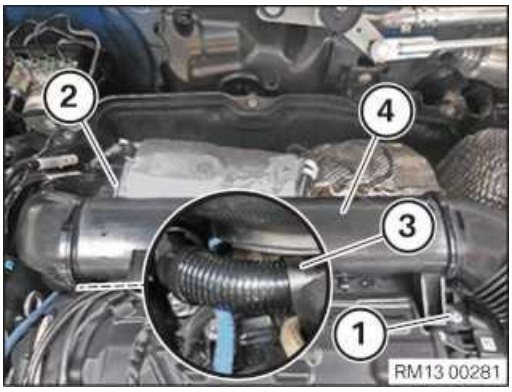
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

12 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.

- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

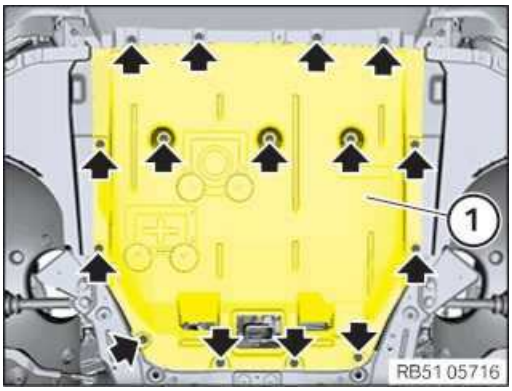
13 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

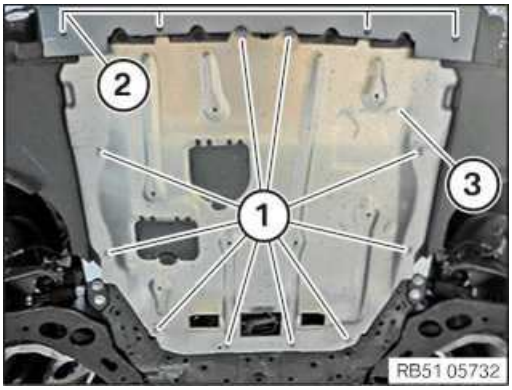
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.



14 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

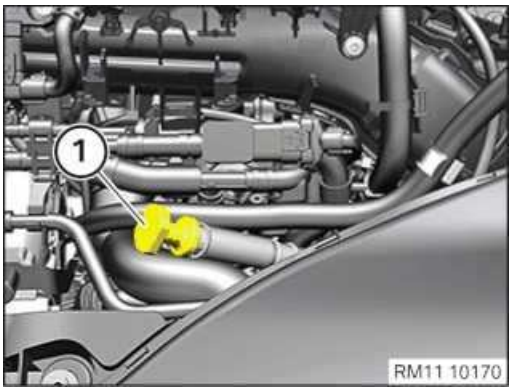
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

15 – Check engine oil level



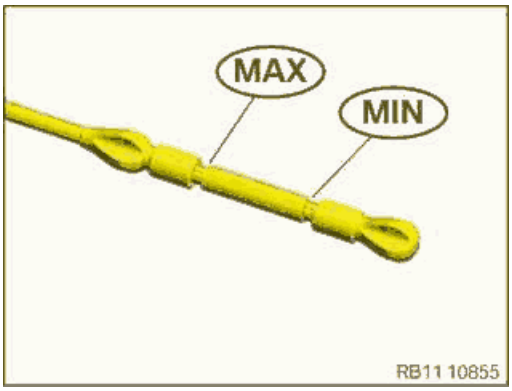
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

cardiagn.com



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

Additional Information

Overview of Tightening Torques

Heat shield for exhaust turbocharger — Used in step 9

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold — Used in step 9

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Standard screw connection M6 — Used in step 9

M6			8 Nm

Heat shield for exhaust turbocharger — Used in step 10

Torx screw BM 6x12		Tightening torque	10 Nm

Clean air pipe to cylinder head cover — Used in step 11 12

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 11 12

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 14

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Parts

Parts required

Designation	Used in step

cardiagn.com

11 42 827 Replace control valve of central piston cooling

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

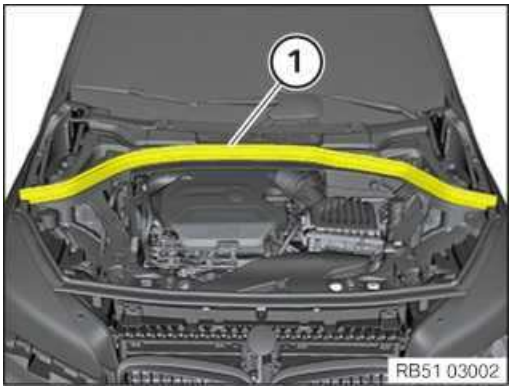
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

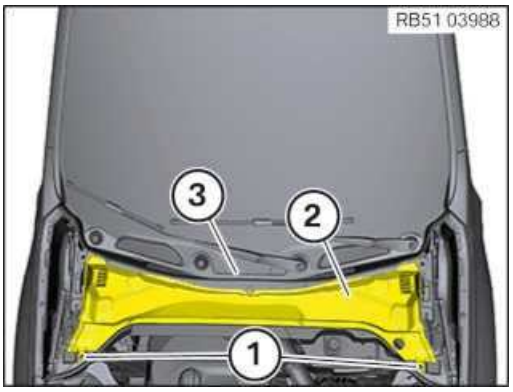


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

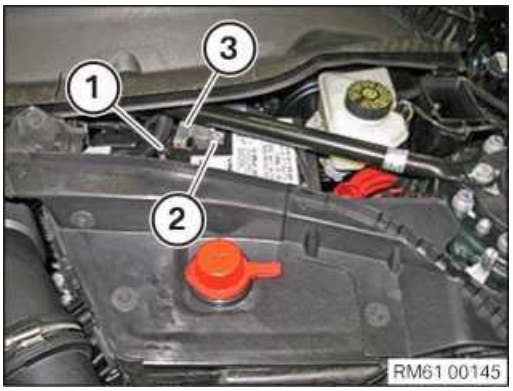
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

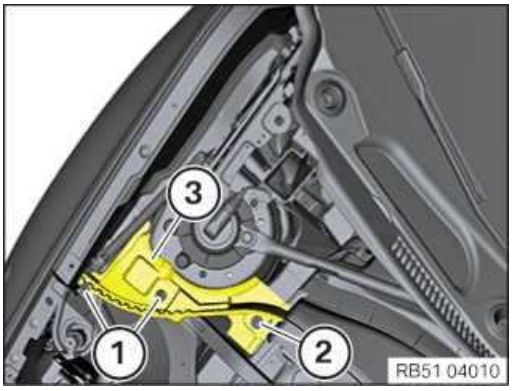


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

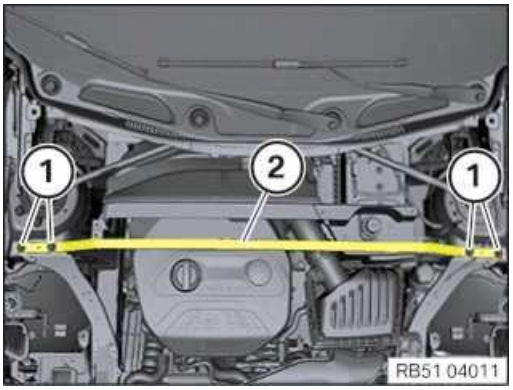
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

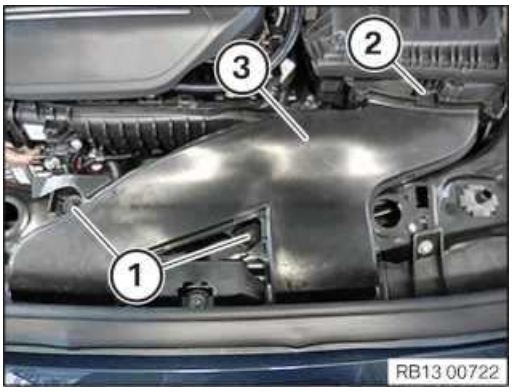
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

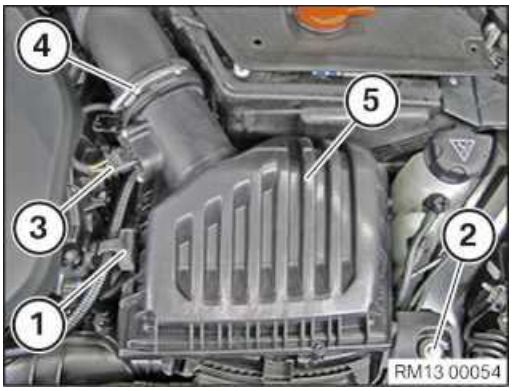
NOTICE

Description is for right component only. The procedure on the left side is identical.



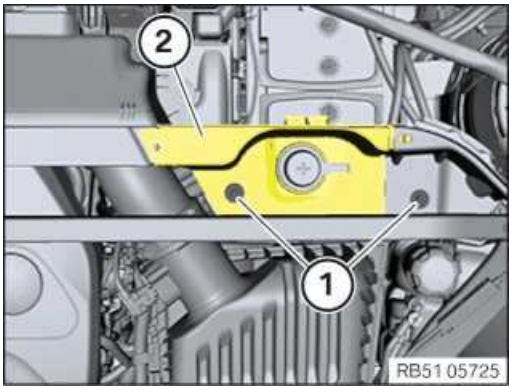
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



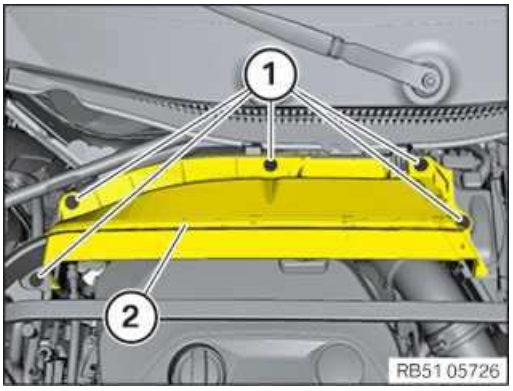
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



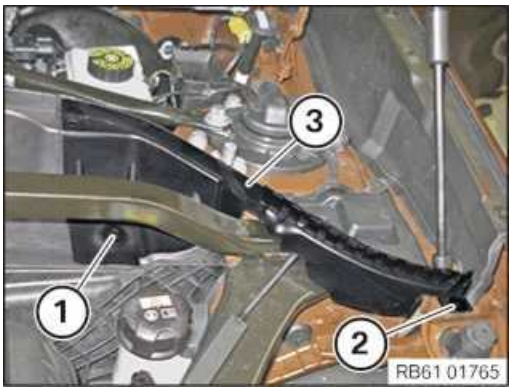
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

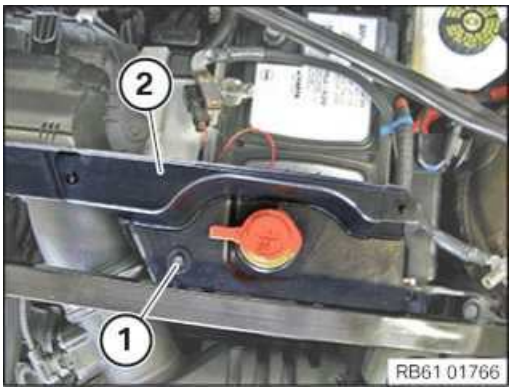
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



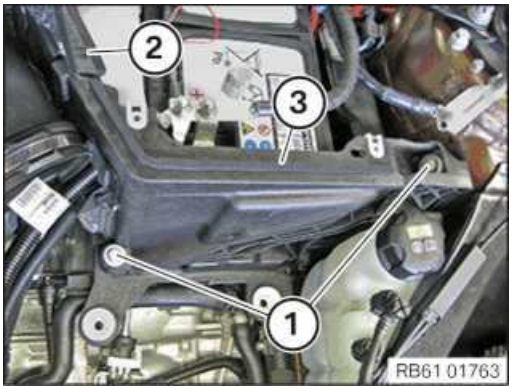
cardiagn.com

WARNING

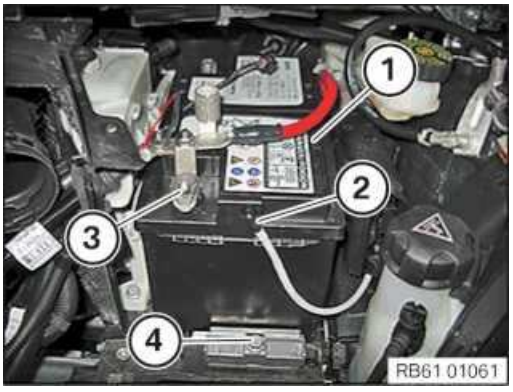


Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

cardiagn.com

9 – Removing the acoustic cover

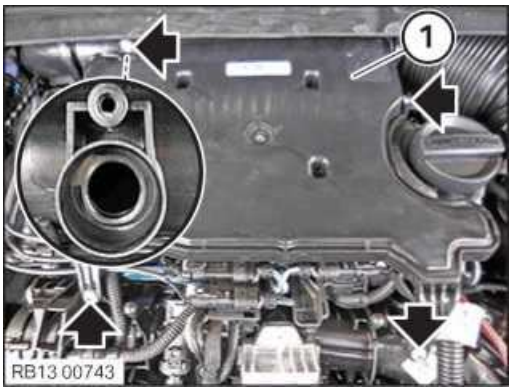
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



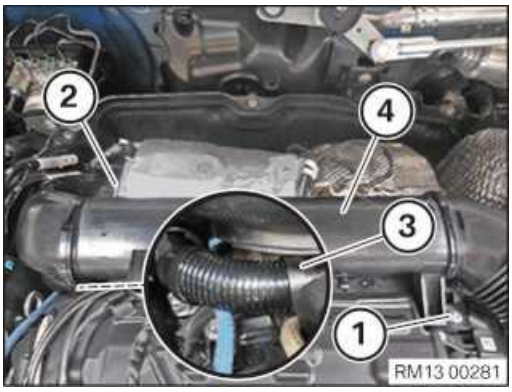
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

cardiagn.com

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

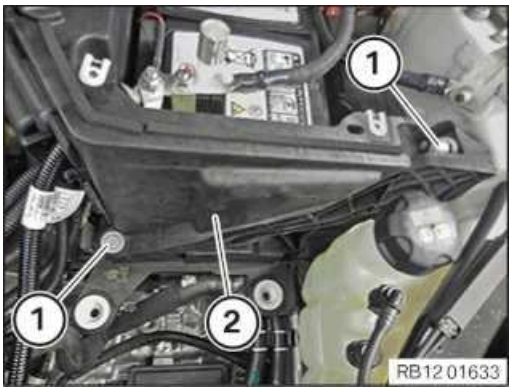
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

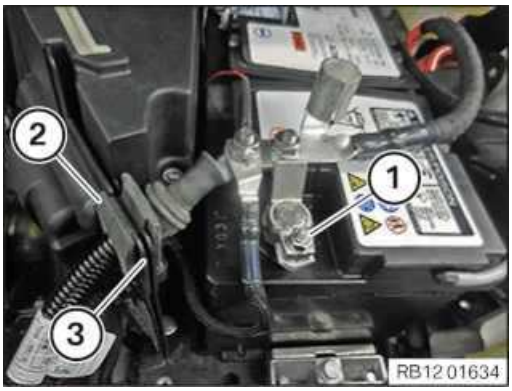
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



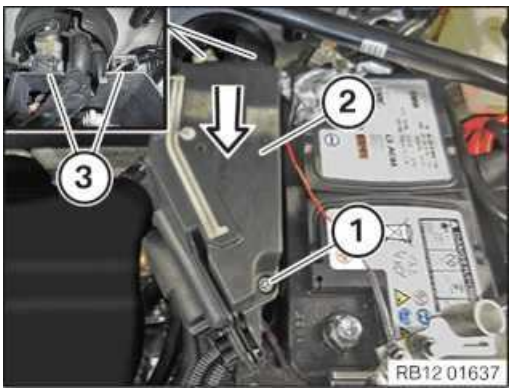
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

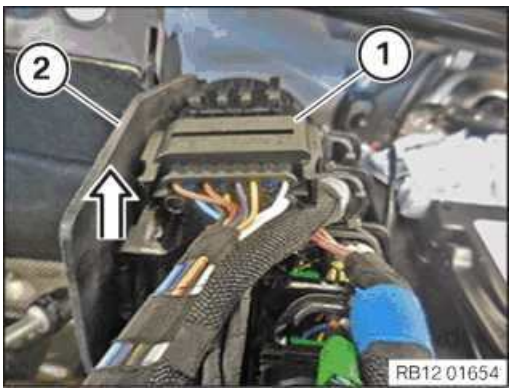


TECHNICAL INFORMATION

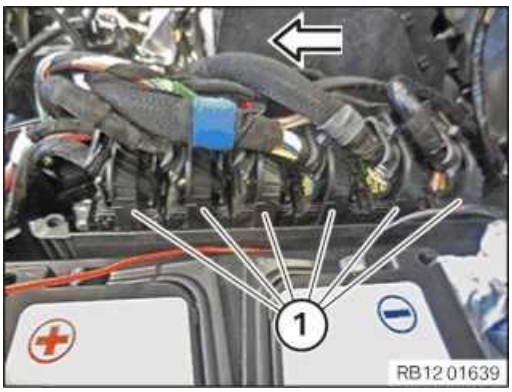
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



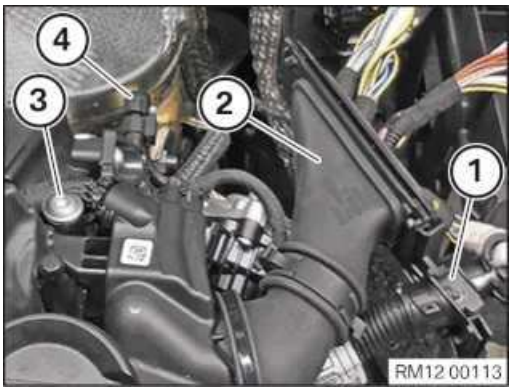
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



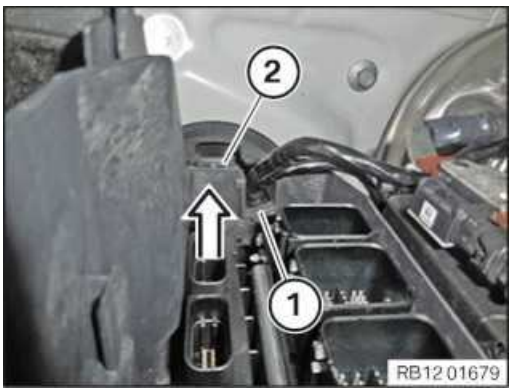
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

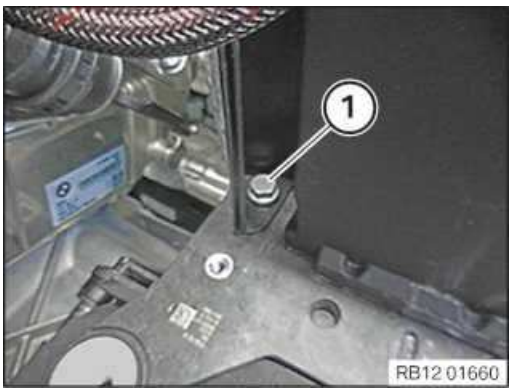
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



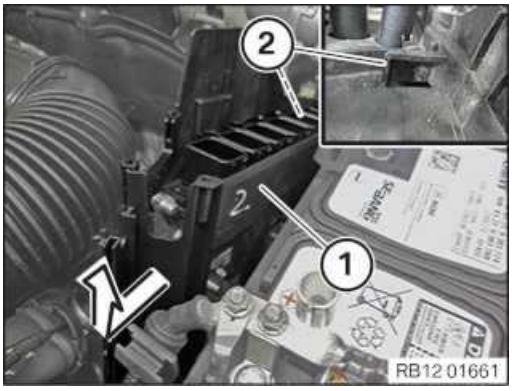
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com

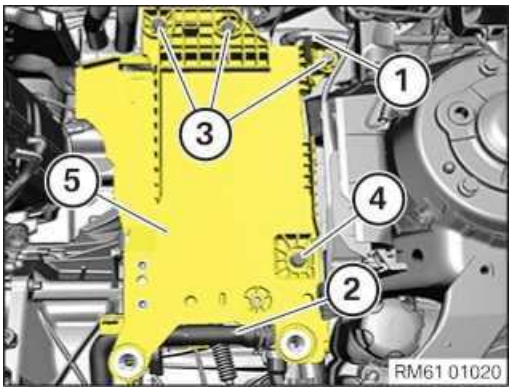


- Unlock and loosen connector (1).



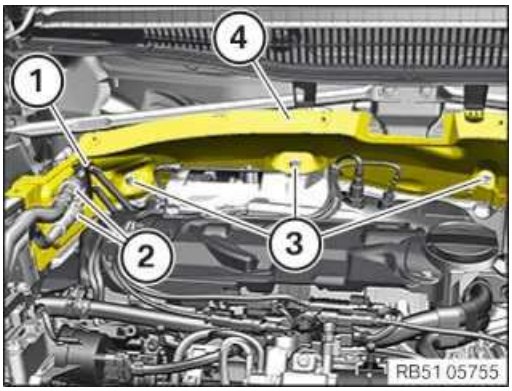
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



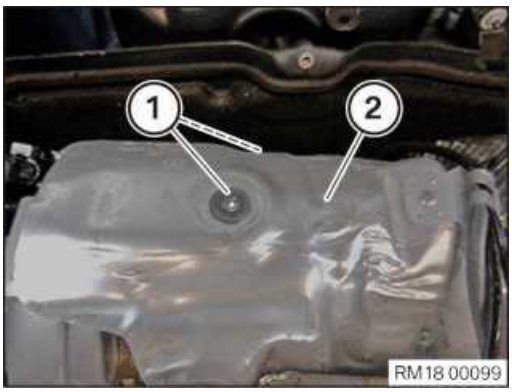
13 – Remove battery holder

cardiagn.com

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

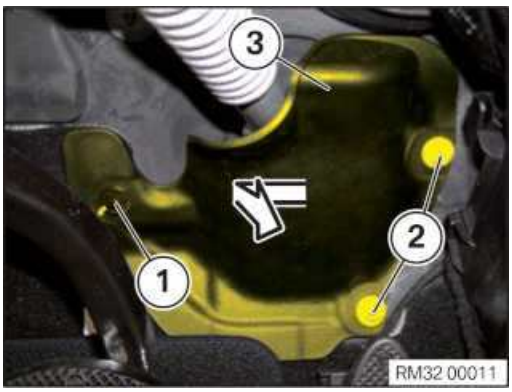
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.



15 – Removing heat shield from top exhaust turbocharger

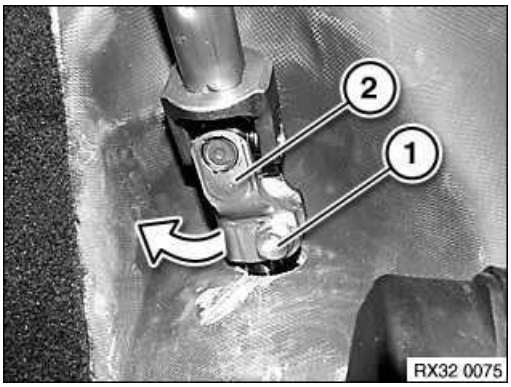
WARNING

Hot surfaces.



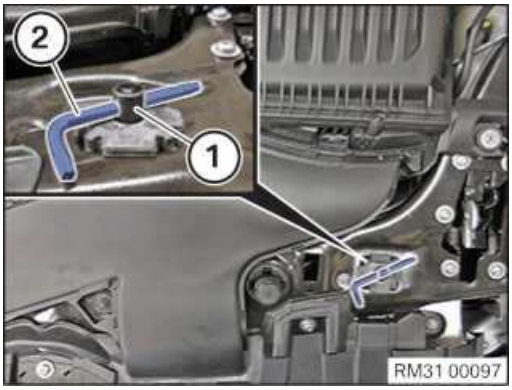
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.
  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

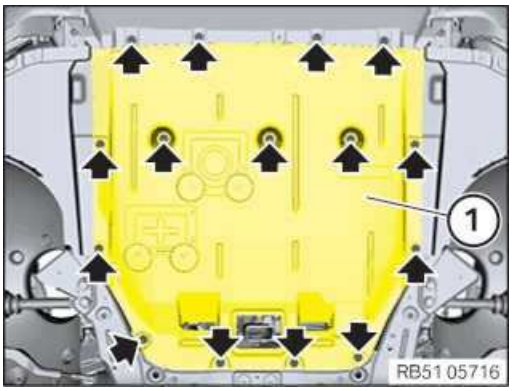
17 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

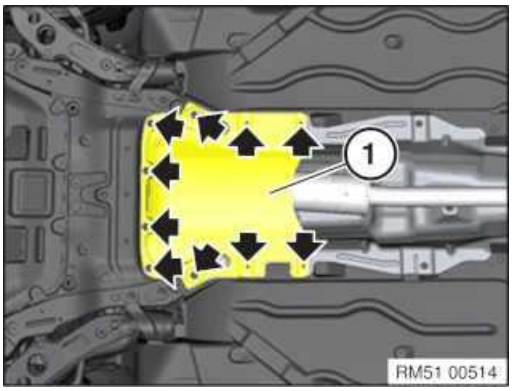


▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

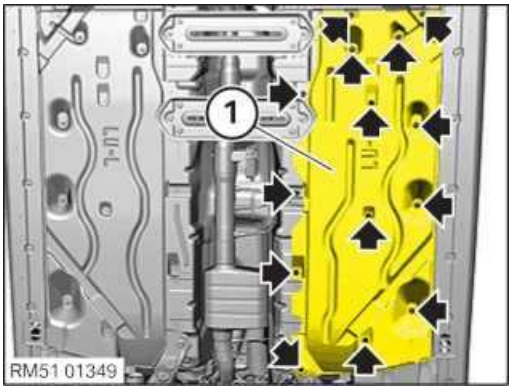
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com



- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

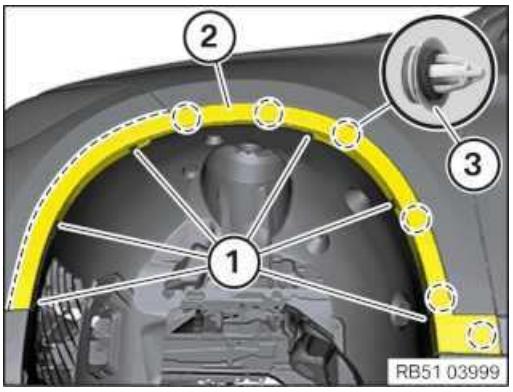
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

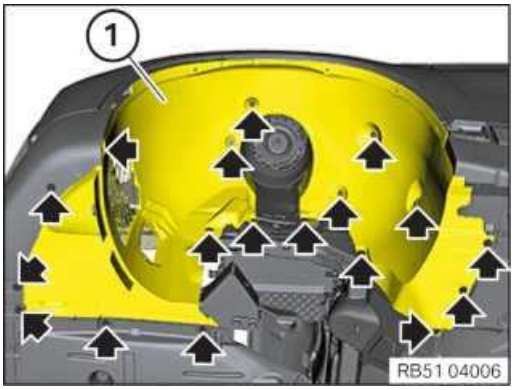
▸ **Remove the front wheel arch trim**



NOTICE

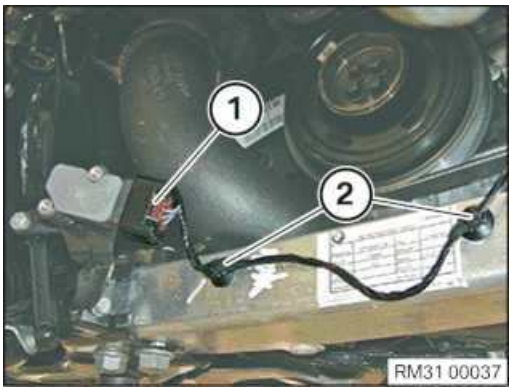
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

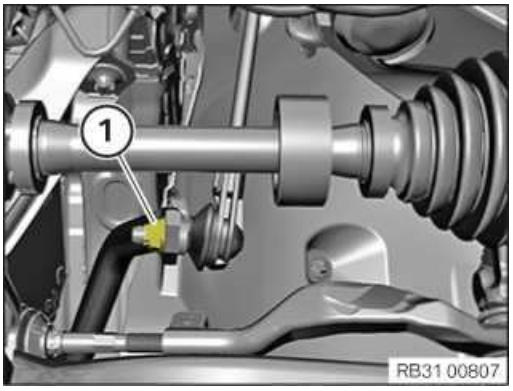


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



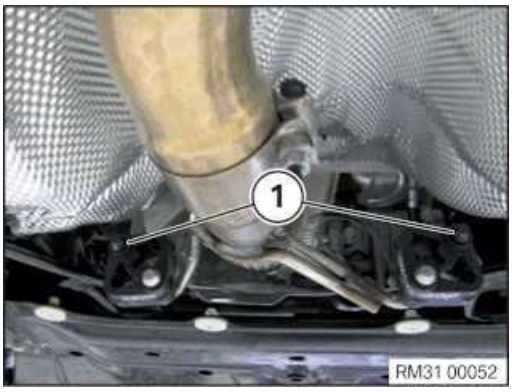
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

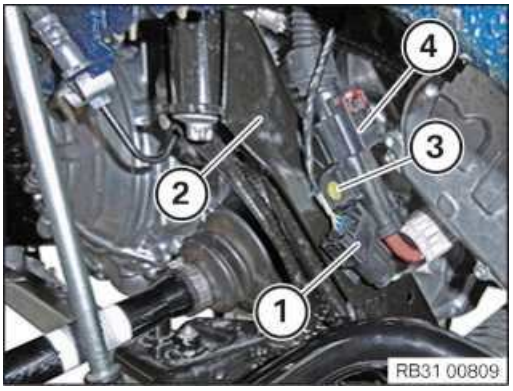


- Unfasten nut (1).

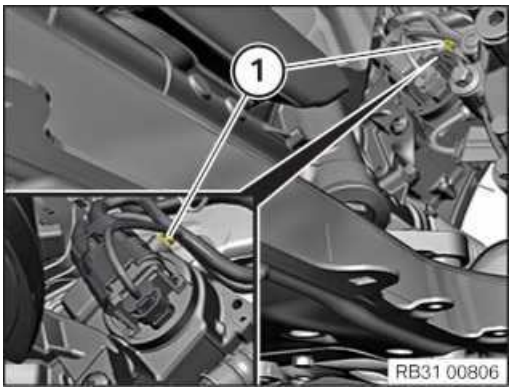
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

cardiagn.com

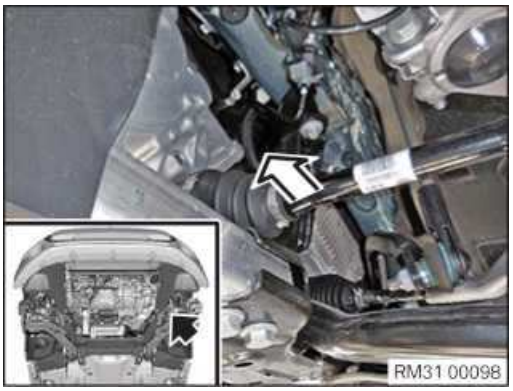


25 – Detaching rubber mount from front axle support



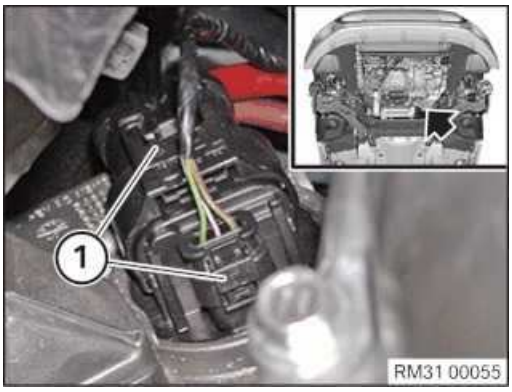
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▸ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

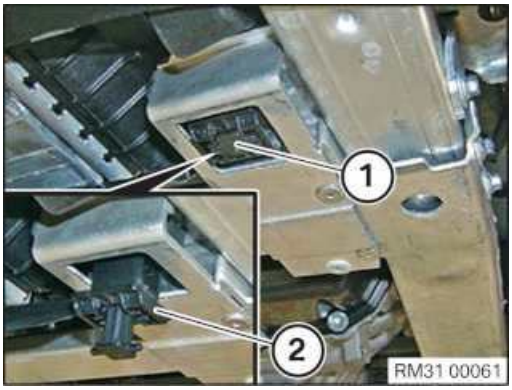
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

cardiagn.com

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

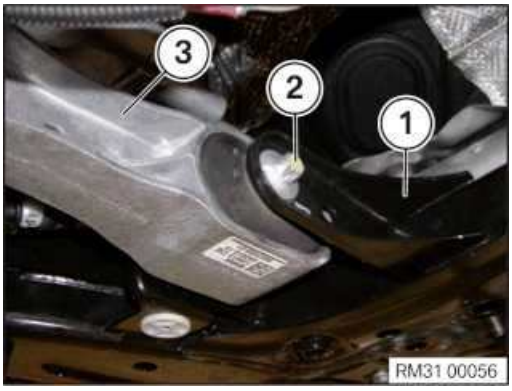
27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



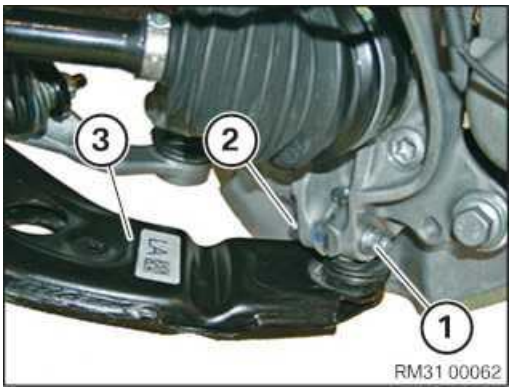
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

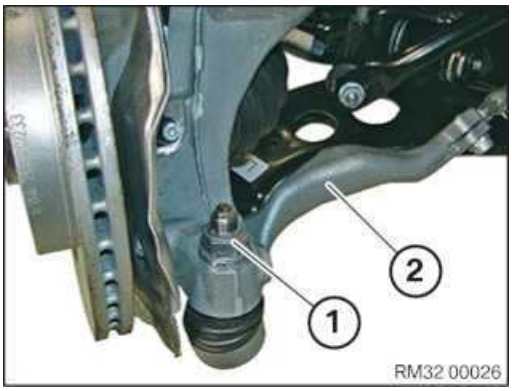


NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

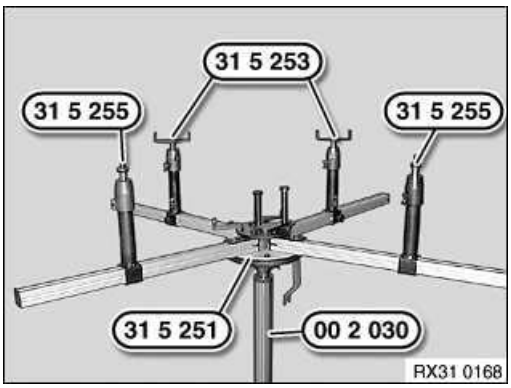
28 – Detaching and removing front axle completely



cardiagn.com

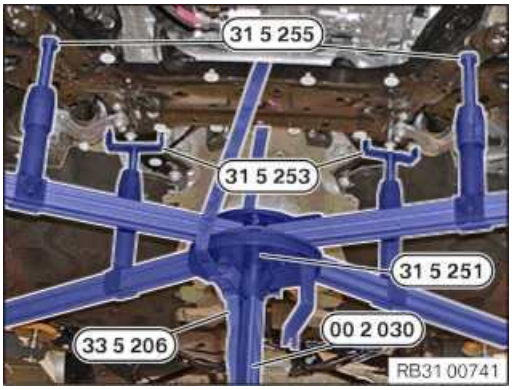
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

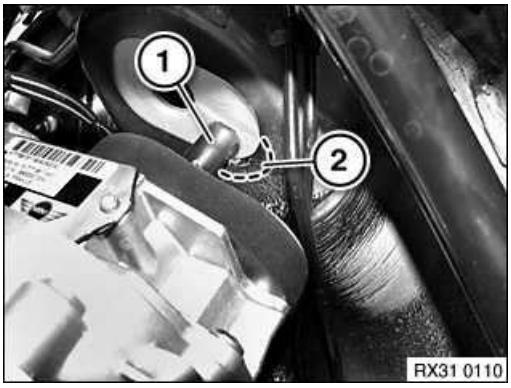
NOTICE



Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

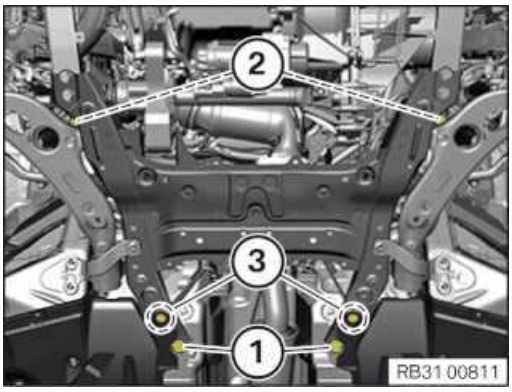


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



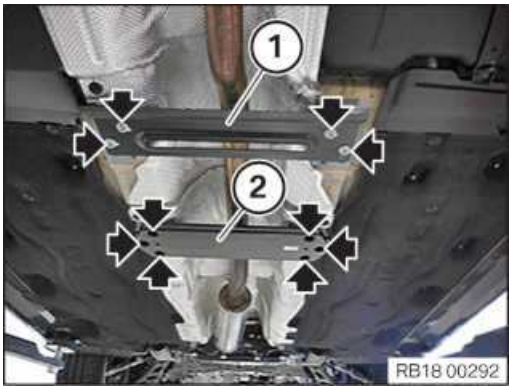
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



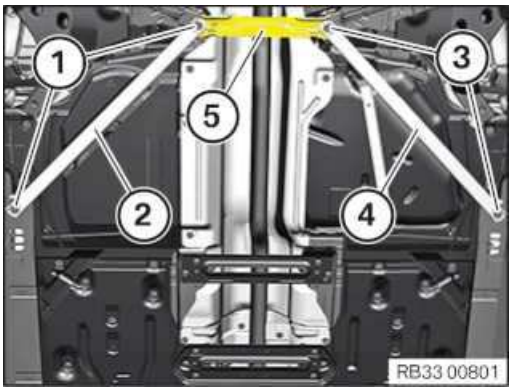
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

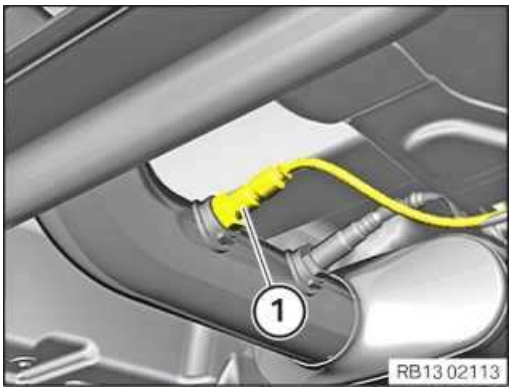
31 – Remove exhaust system

cardiagn.com

WARNING

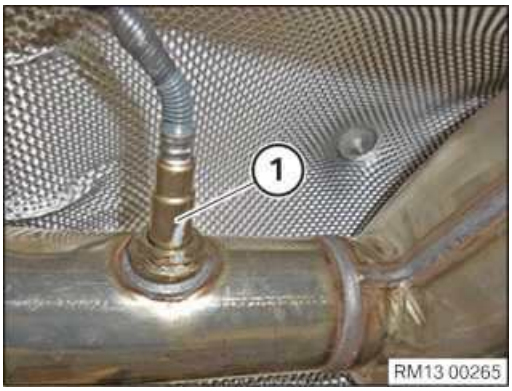
Hot surfaces.

Risk of burning!



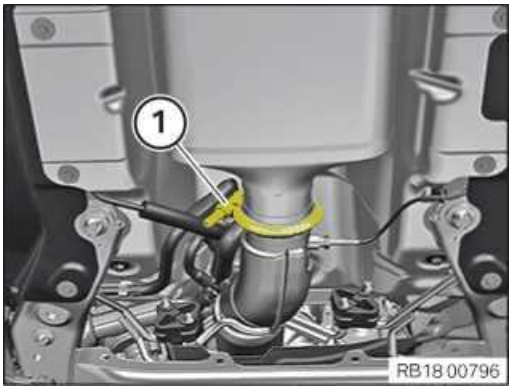
- Perform all work only on components that have cooled down.

CAUTION



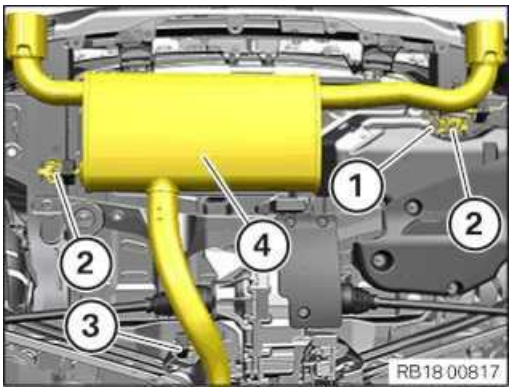
Heavy component.

Heavy components can lead to injury or damage.

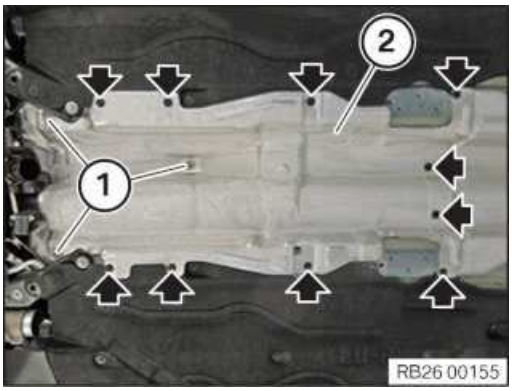


- Remove and install heavy components with the aid of another person/other persons.

- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

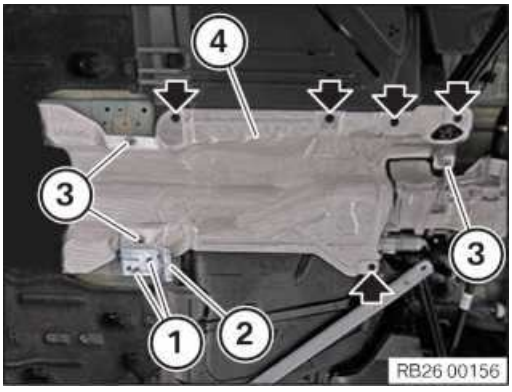


- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

cardiagn.com



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

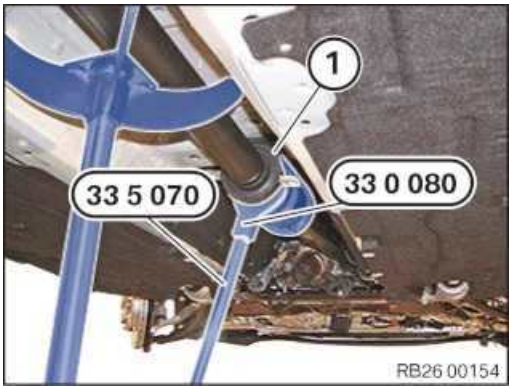
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

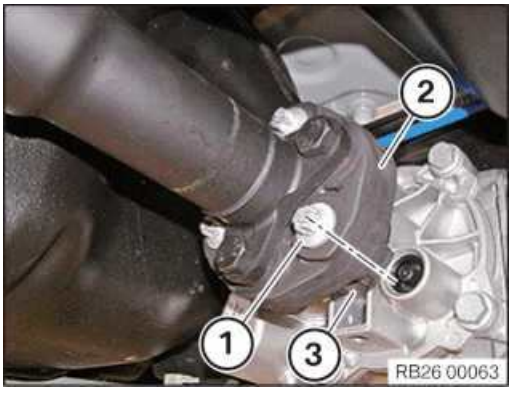
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.

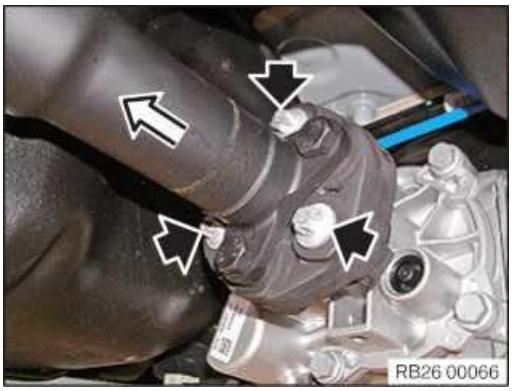


- Always support the propeller shaft (1) with a conventional jack.

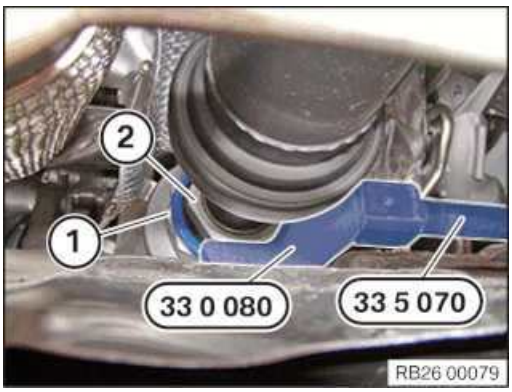
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



cardiagn.com

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

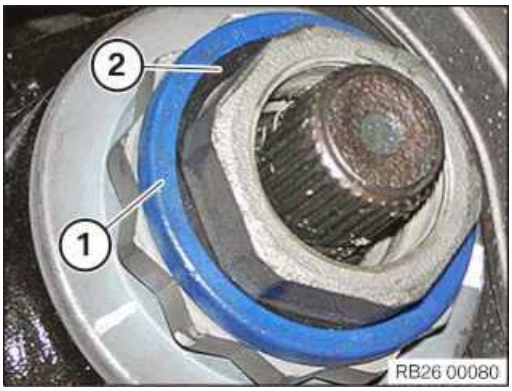
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

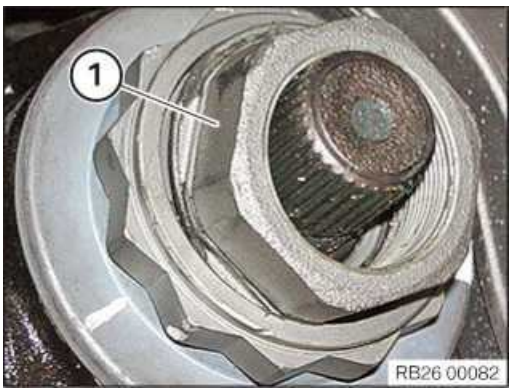
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

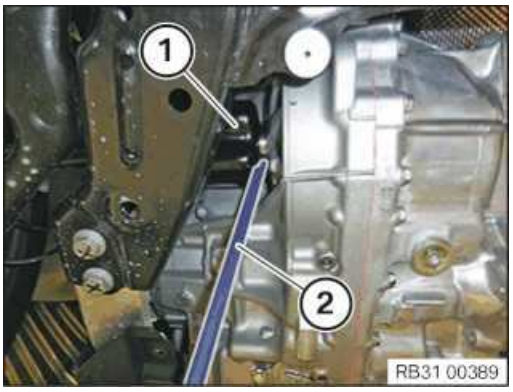
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

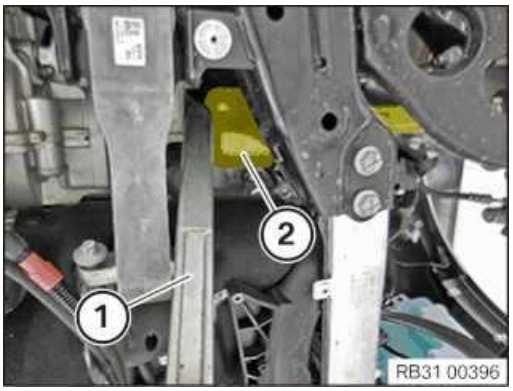
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



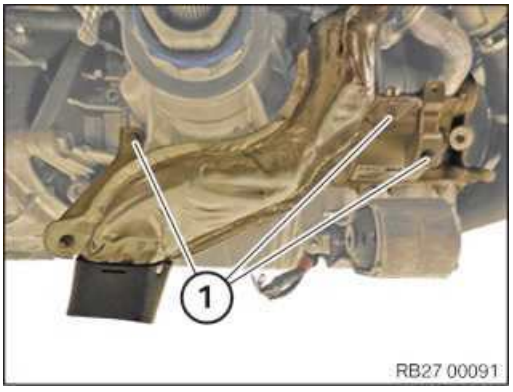
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



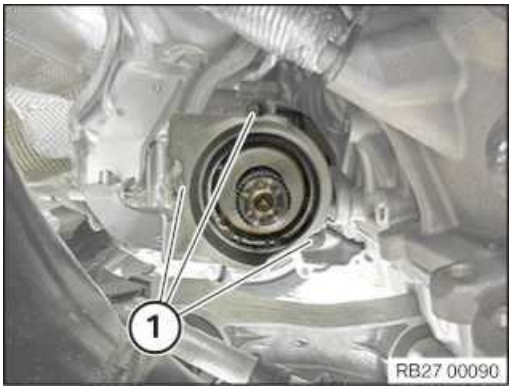
36 – Partially removing the left output shaft

cardiagn.com

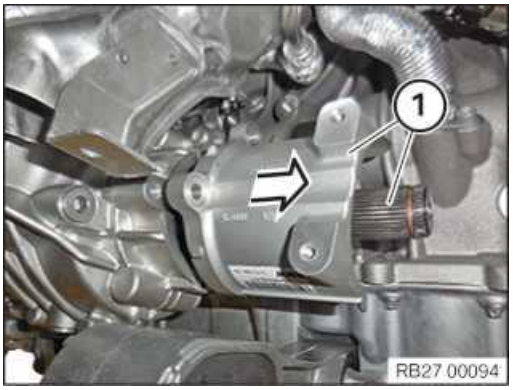


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

37 – Partially removing right output shaft



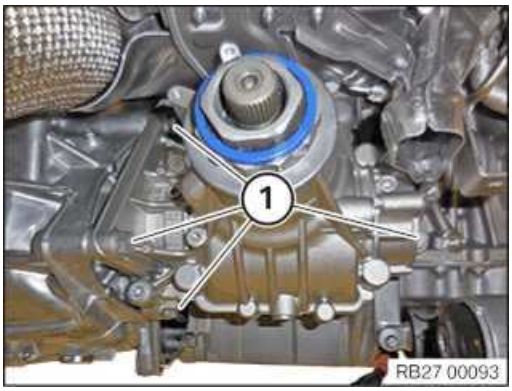
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).



38 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

cardiagn.com

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

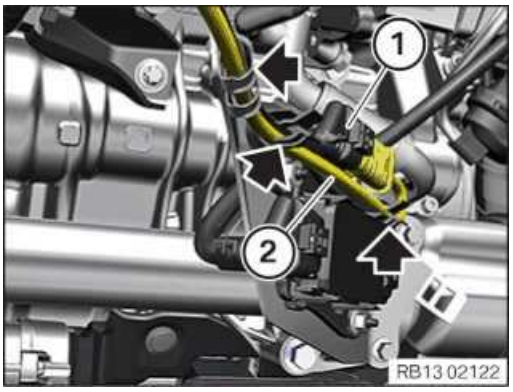
40 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

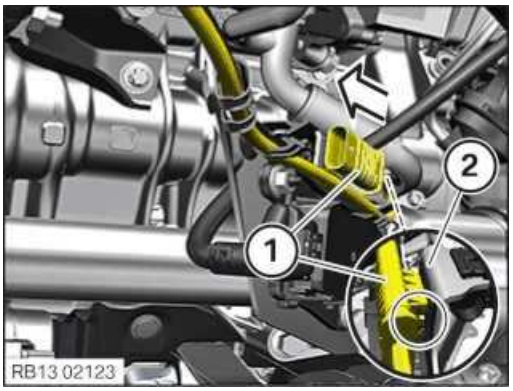
Risk of burning!

- Perform all work only on components that have cooled down.



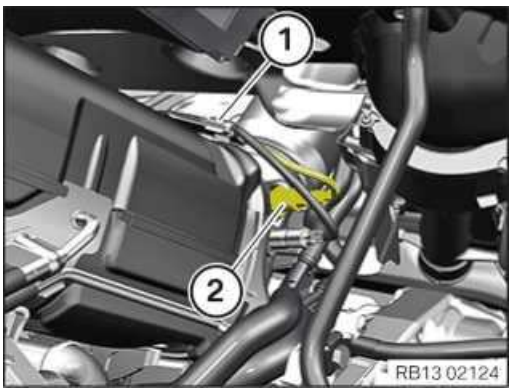
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

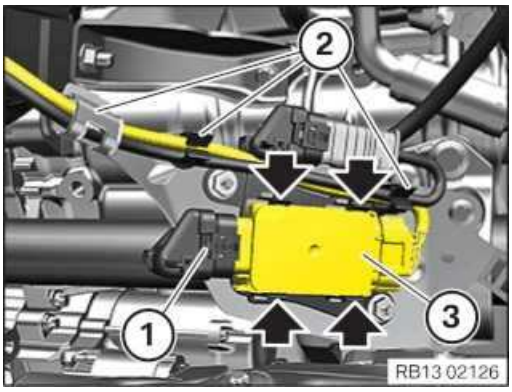
41 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

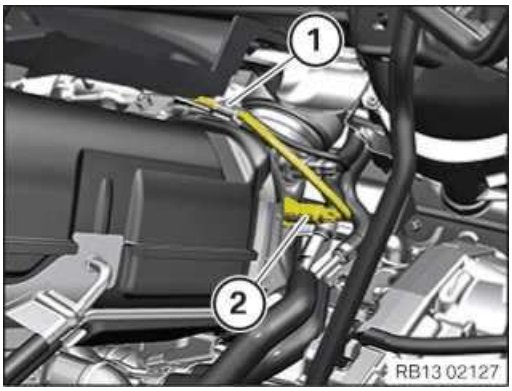
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

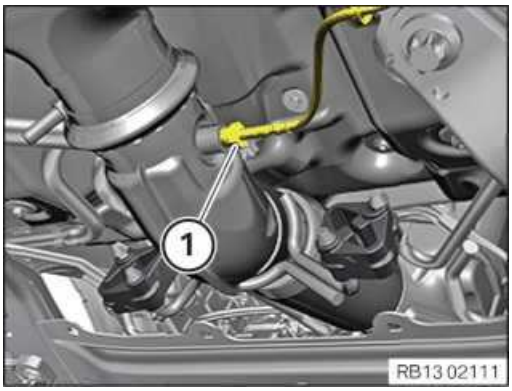
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

44 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

cardiagn.com

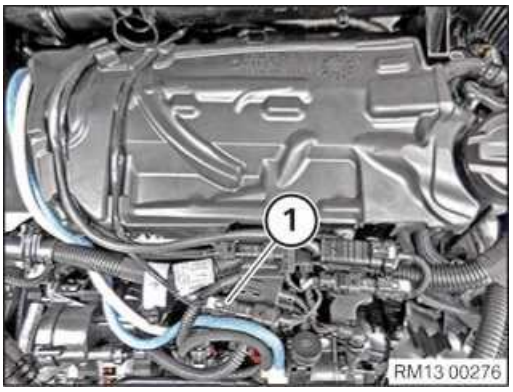
WARNING

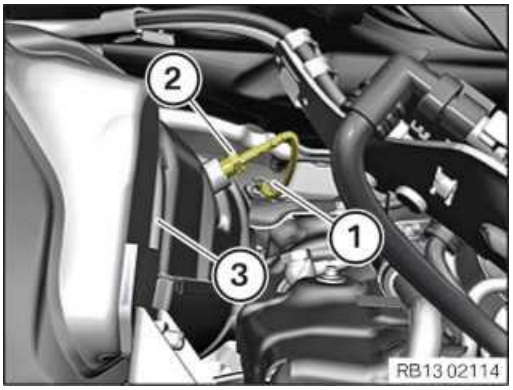
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

45 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

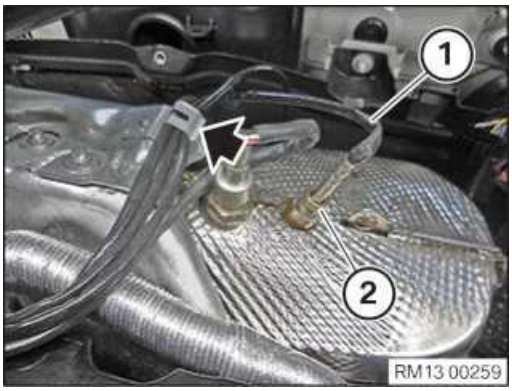
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

46 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

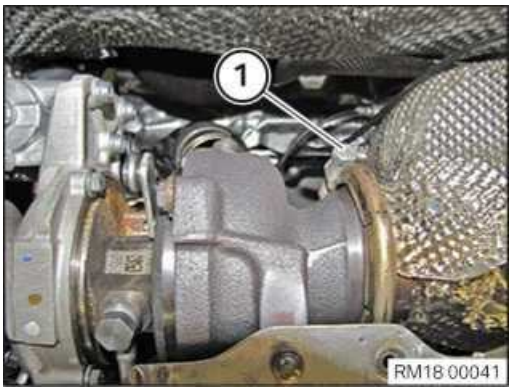
47 – Removing the diesel particulate filter

WARNING

Hot surfaces.

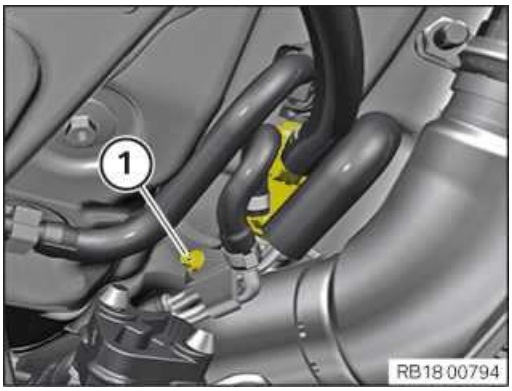
Risk of burning!

- Perform all work only on components that have cooled down.



CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▸ **Remove differential pressure sensor**

cardiagn.com

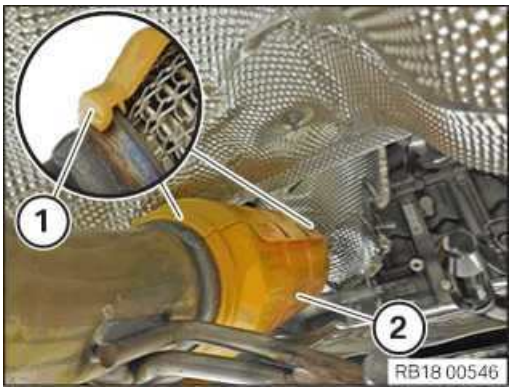
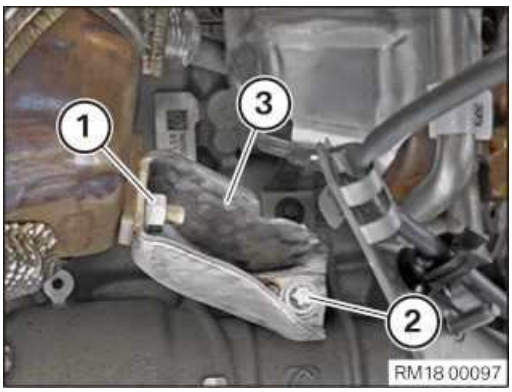
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

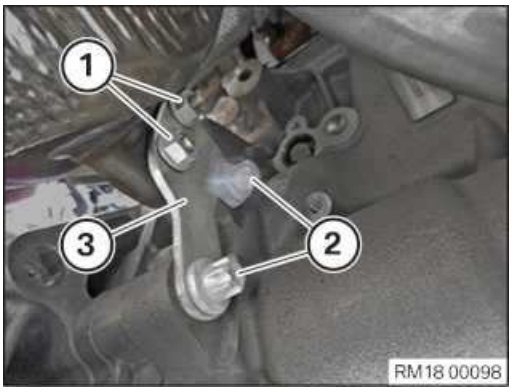


- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

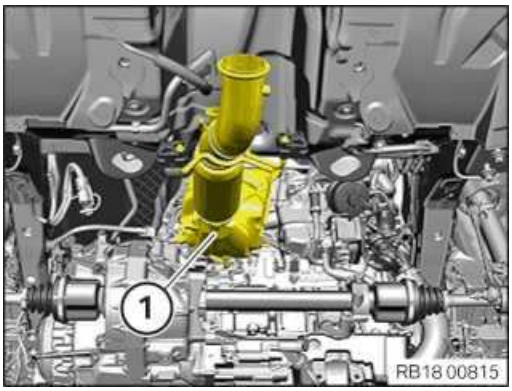


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

- Loosen nuts (1).



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

cardiagn.com

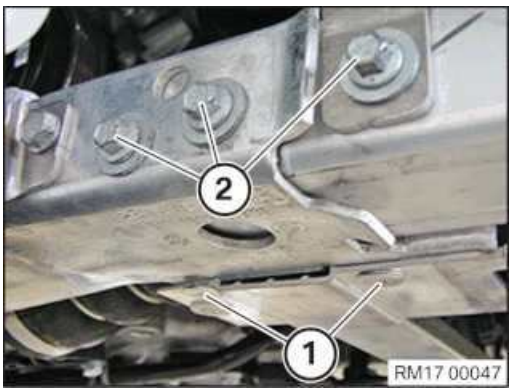
- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

- Feed out diesel particulate filter (1) toward the bottom and remove.

48 – Remove the washer fluid reservoir from the fixture

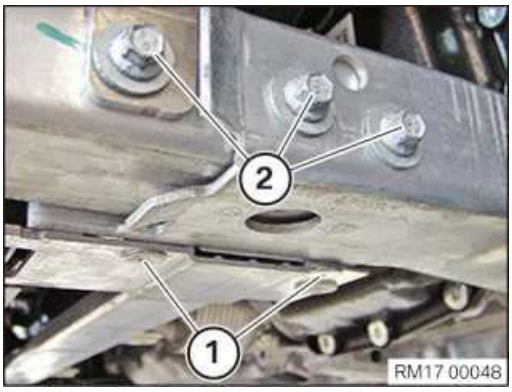
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



49 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

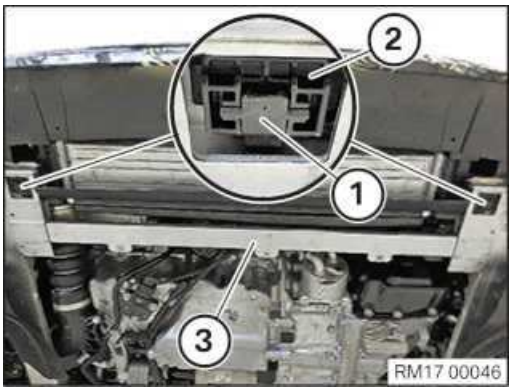
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

cardiagn.com

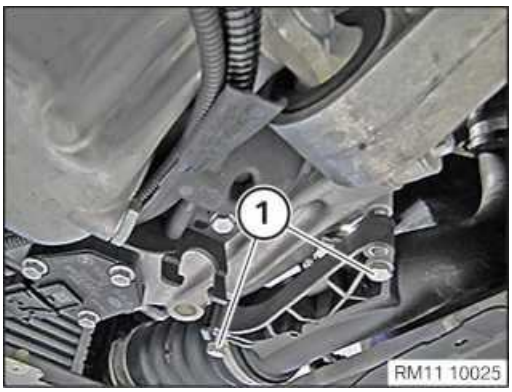
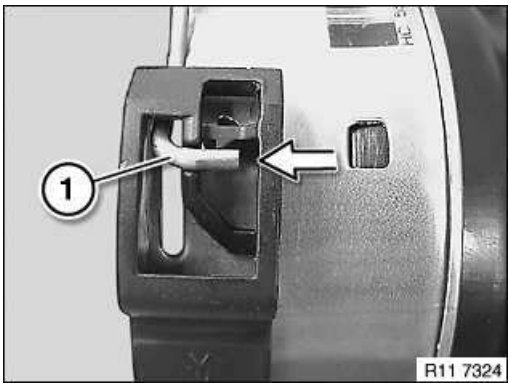
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

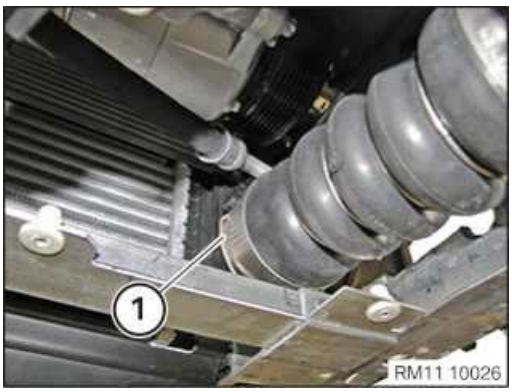


- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



- Release screws (1) of charge air duct on right oil sump.

cardiagn.com

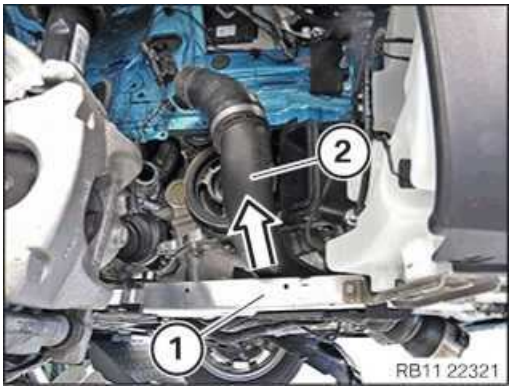
- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.

50 – Remove the heat shield from the exhaust turbocharger at the bottom

cardiagn.com

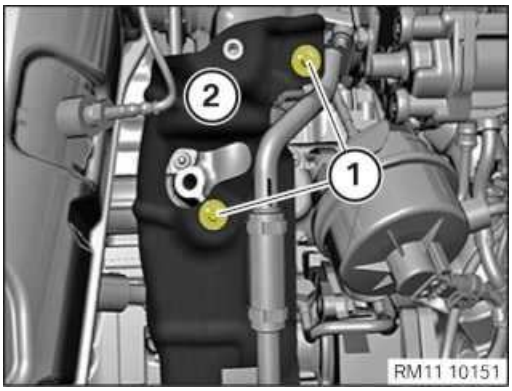
WARNING



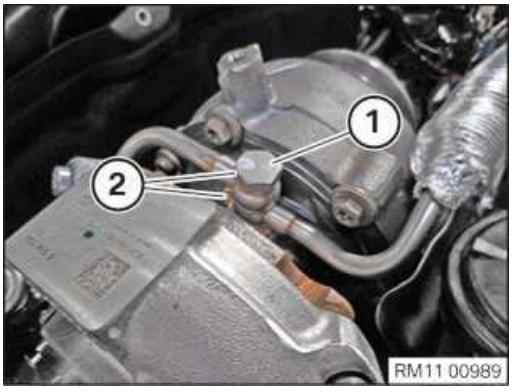
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

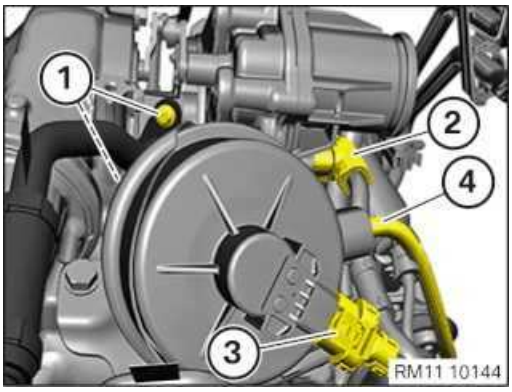
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



51 – Removing the low-pressure stage turbocharger

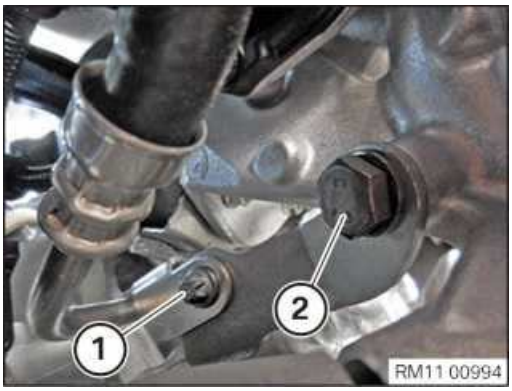
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

cardiagn.com

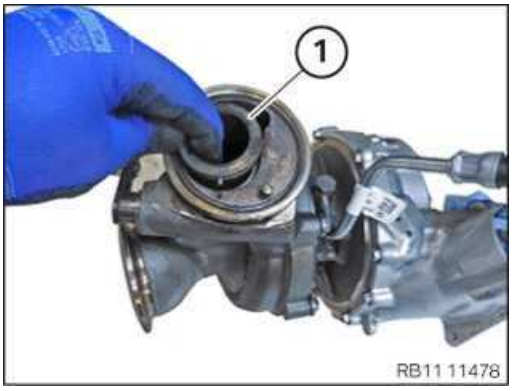
- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

52 – Removing the high-pressure stage exhaust turbocharger

cardiagn.com

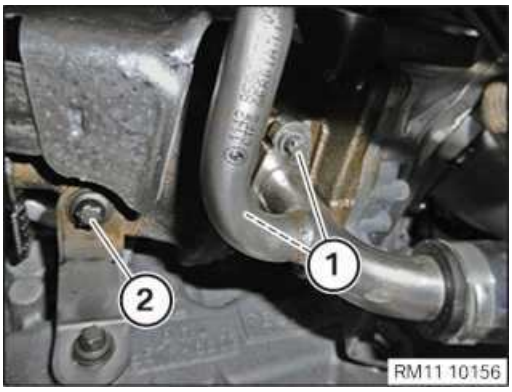
WARNING

Hot surfaces.

Risk of burning!

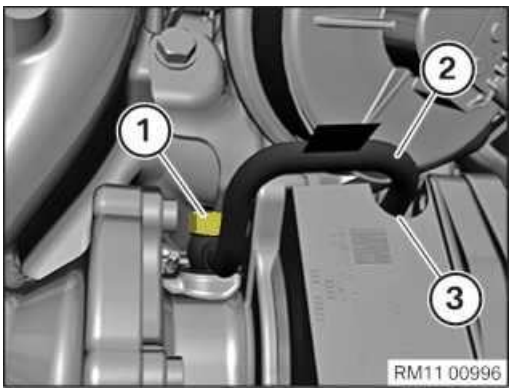


- Perform all work only on components that have cooled down.

CAUTION

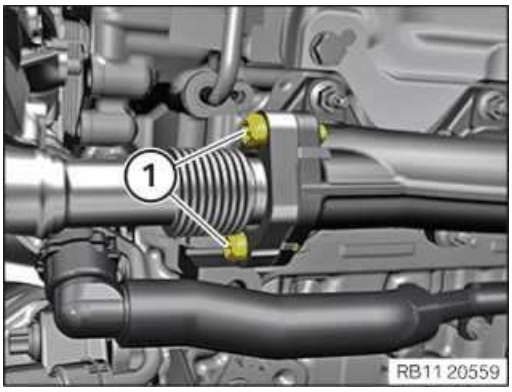
Heavy component.

Heavy components can lead to injury or damage.

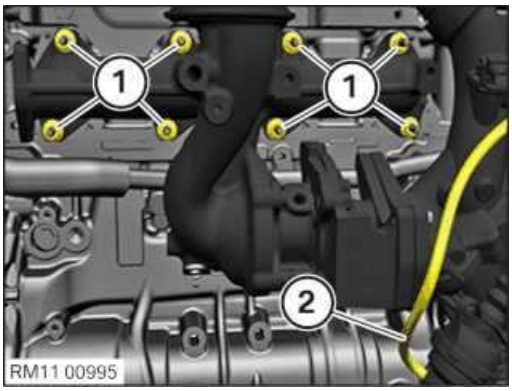


- Remove and install heavy components with the aid of another person/other persons.

- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.



- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

cardiagn.com

- Loosen screws (1).

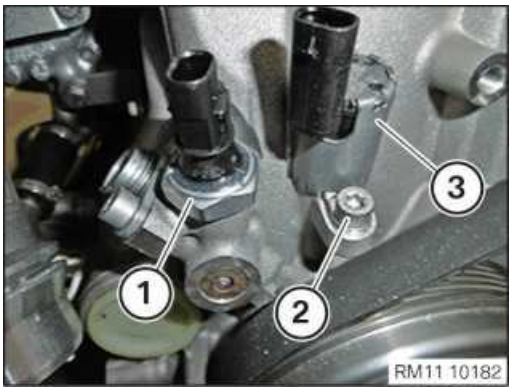
- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

MAIN WORK

53 – Removing the control valve for central piston cooling

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Unlock and disconnect plug connections (1).

cardiagn.com

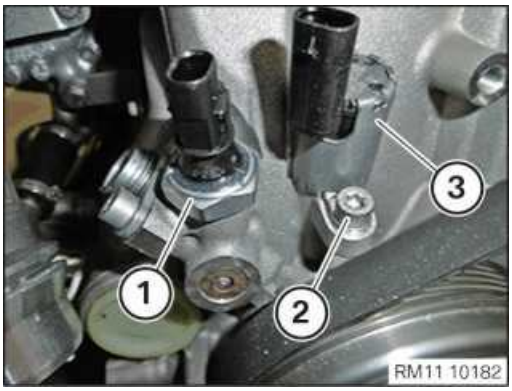
- Loosen and remove the oil pressure switch (1).
- Loosen screw (2).

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the control valve (3) for central piston cooling.

54 – Installing the control valve for central piston cooling



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Renew the gasket (1) using the special tool **0 496 714 (00 9 030)**.

  Parts: Gasket

- Clean sealing surface.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Install the control valve (3) for central piston cooling.
- Tighten down screw (2).

Central piston cooling valve to crankcase

M6x16		Tightening torque	8 Nm

- Replace oil pressure switch (1) .

  Parts: Oil pressure switch

- Install and tighten the oil pressure switch (1).

Oil pressure switch to crankcase

Sensor	Replace oil pressure switch.	Tightening torque	22 Nm

cardiagn.com

- Connect and lock the connector (1).

  The connectors (1) must engage audibly.

POSTPROCESSES

55 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

56 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

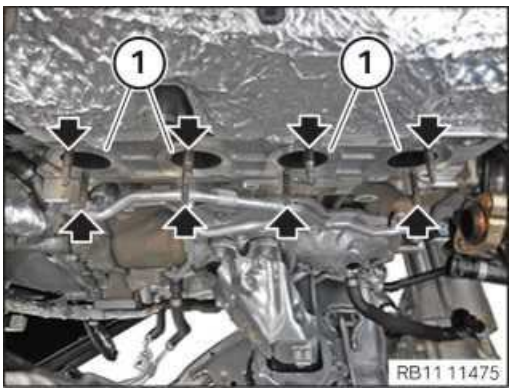
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

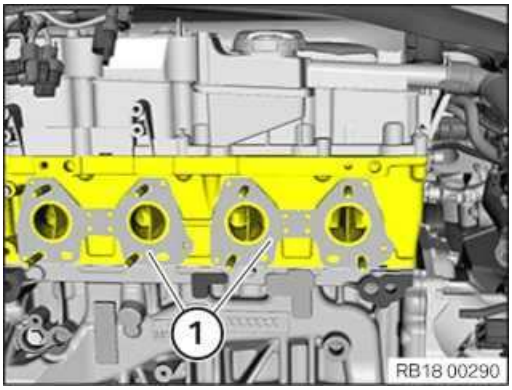


Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

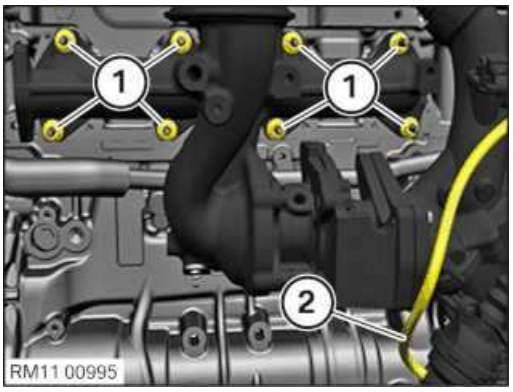
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

cardiagn.com

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

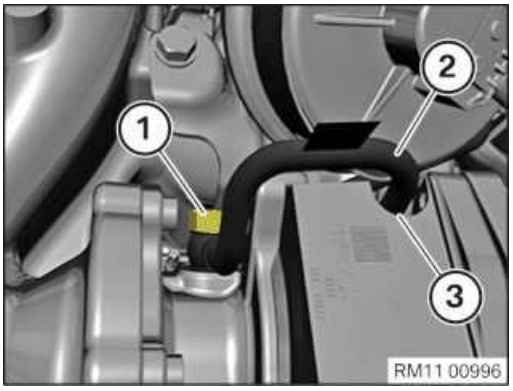
  Parts: Nuts
- Connect vacuum hose(2).

- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Tighten the screws (1).

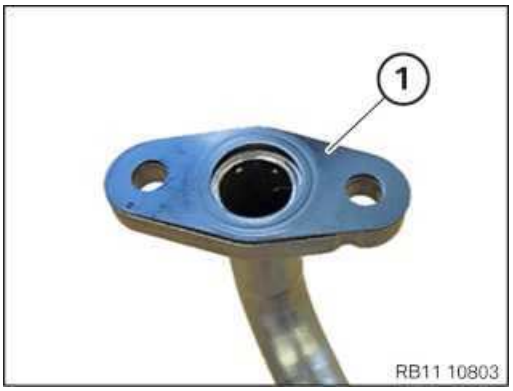


Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

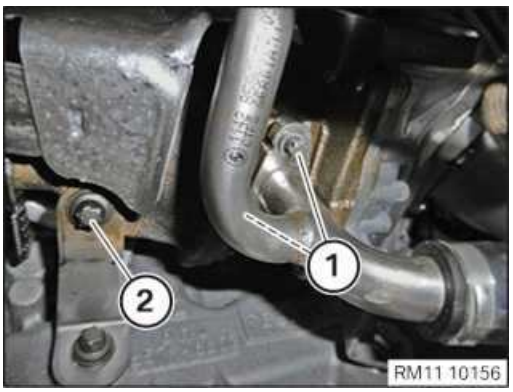
- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring



- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).

cardiagn.com



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

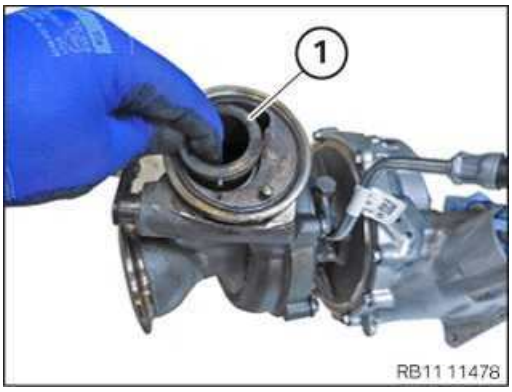
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

57 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

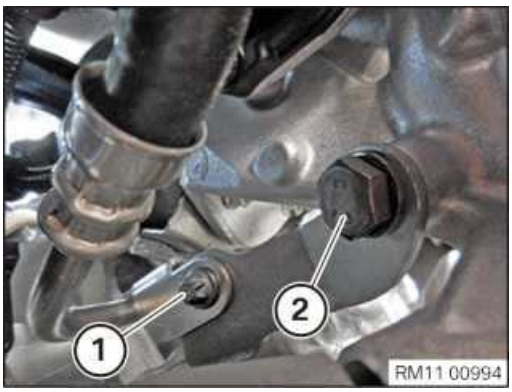
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

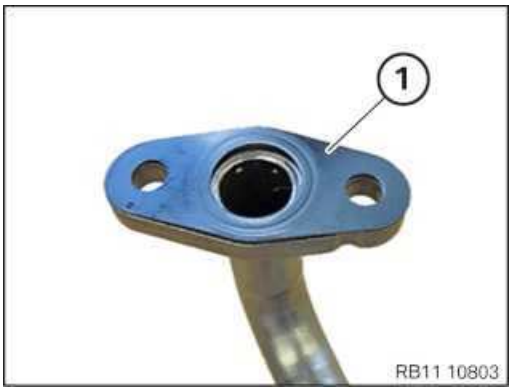
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

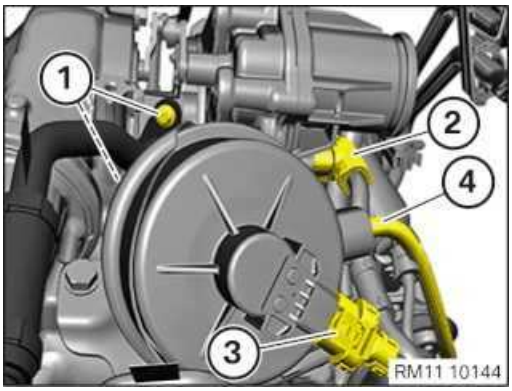
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

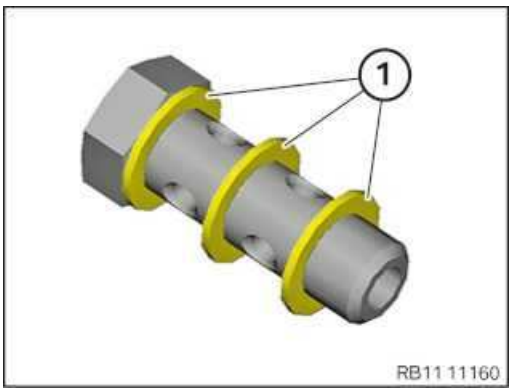


M8x16		Tightening torque	22 Nm

cardiagn.com

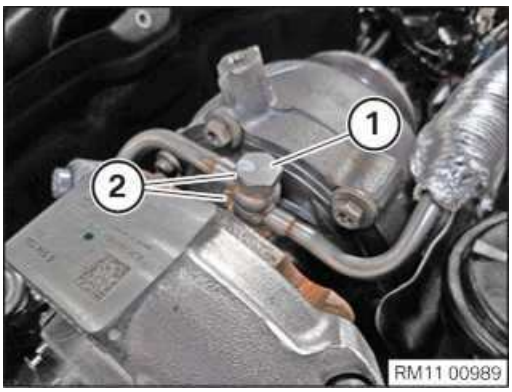
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

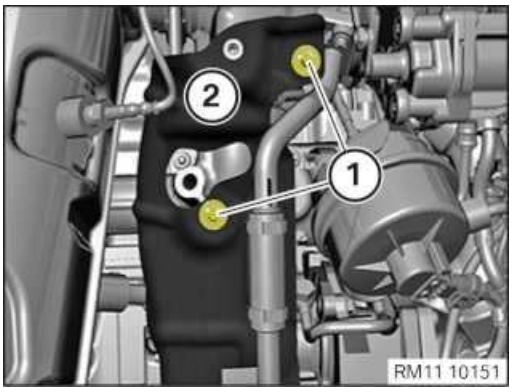
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

58 – Installing heat shield on exhaust turbocharger at bottom

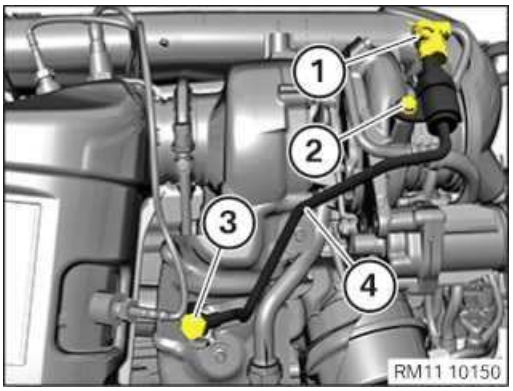


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

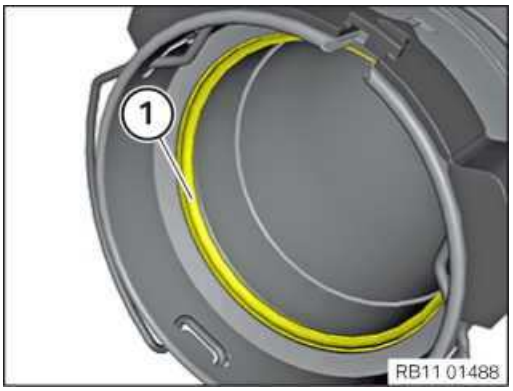
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



59 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

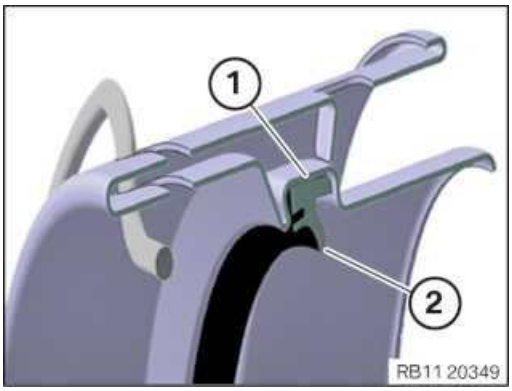
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

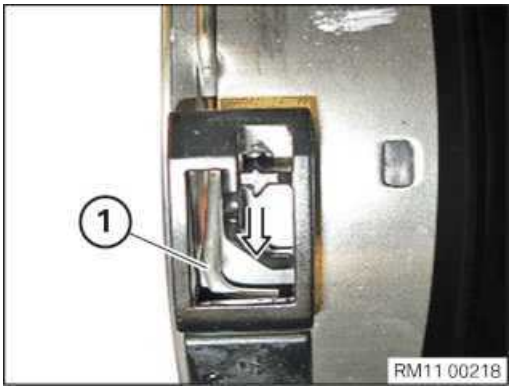


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

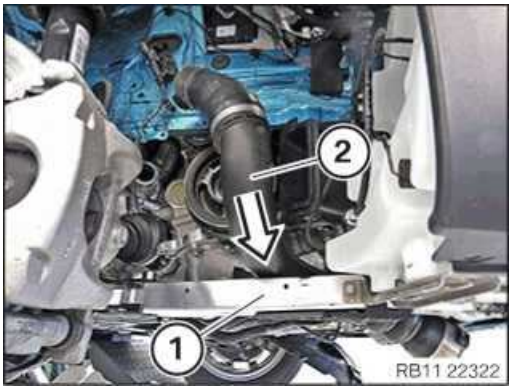
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



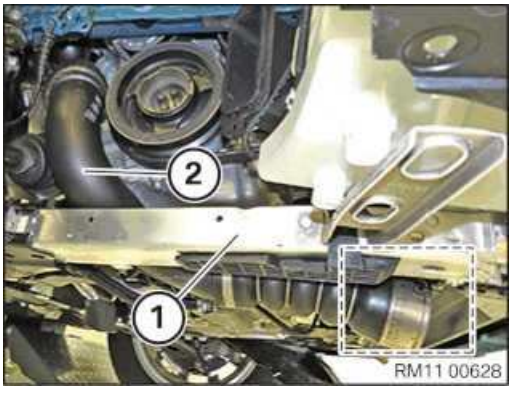
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



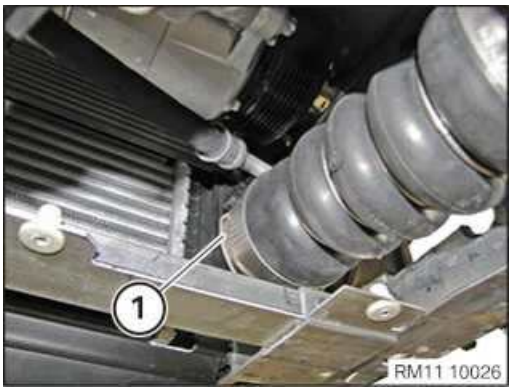
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

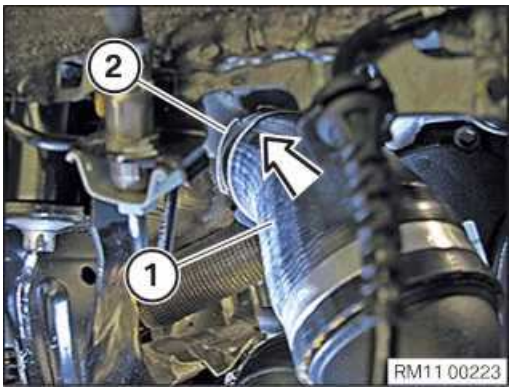


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

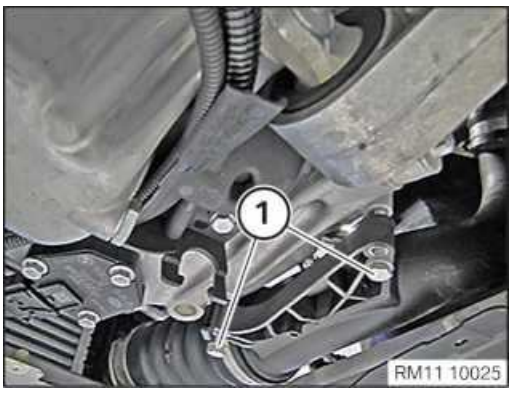


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

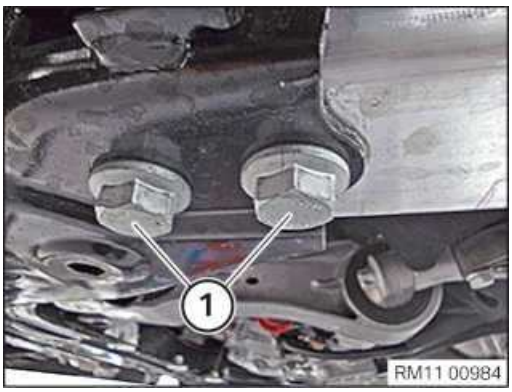
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



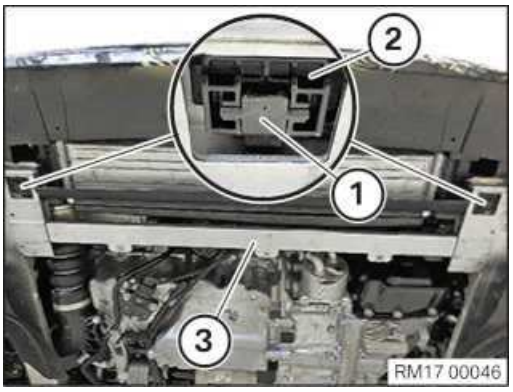
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

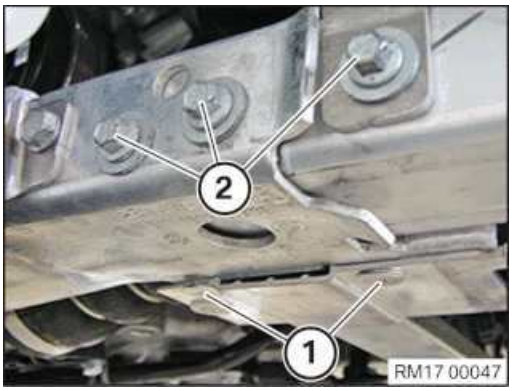
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.

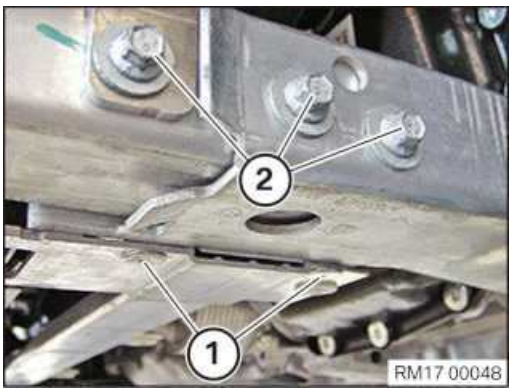


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

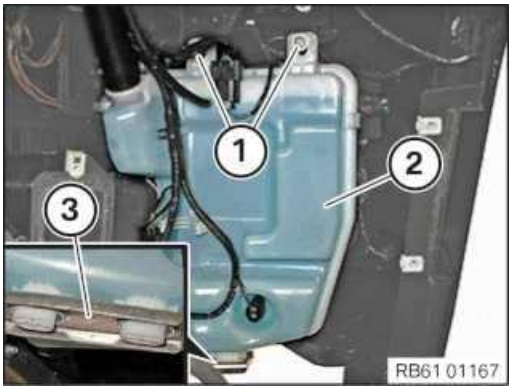
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

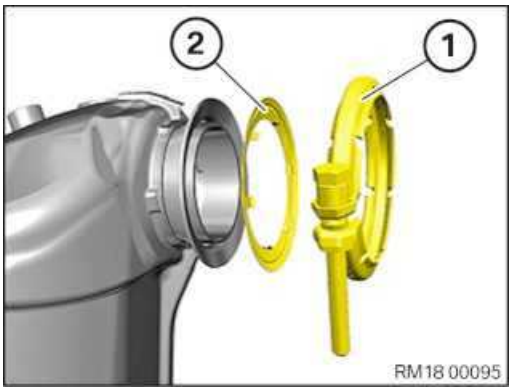
60 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

61 – Installing the diesel particulate filter



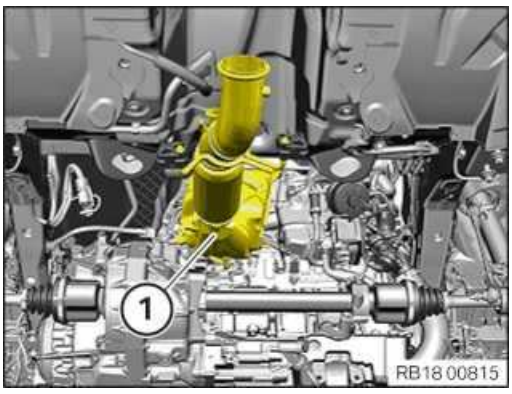
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

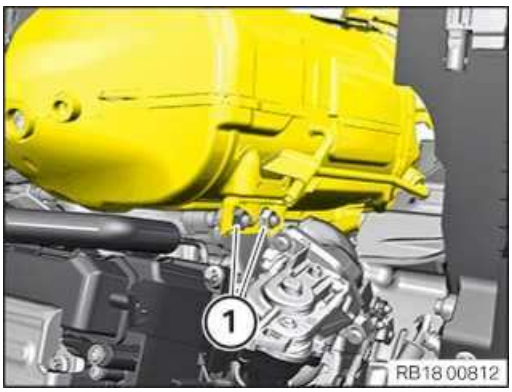
cardiagn.com



- Renew the V-clip (1).

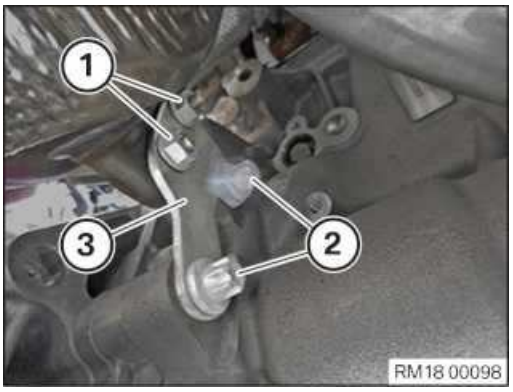
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

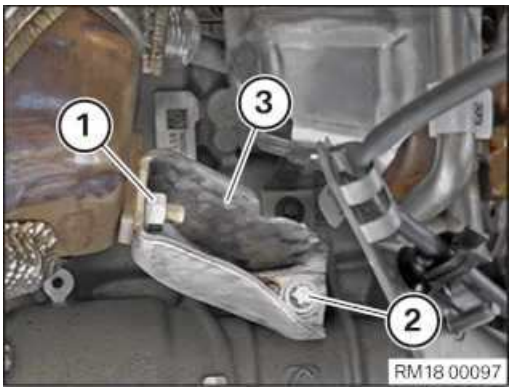


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

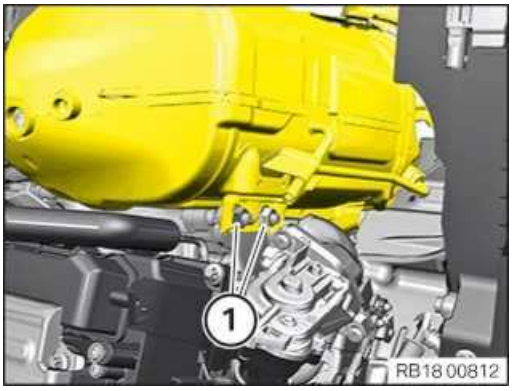


- Tighten nuts (1) by hand.

cardiagn.com

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

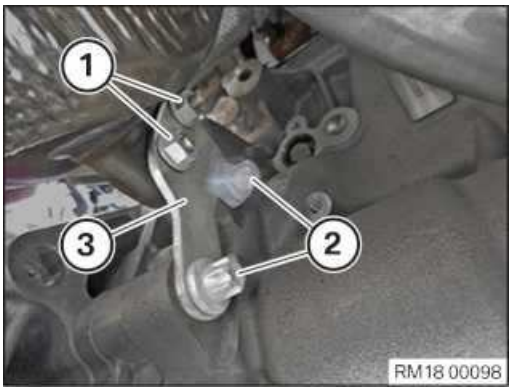


- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



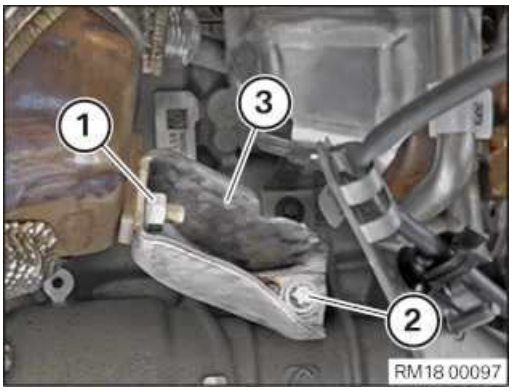
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

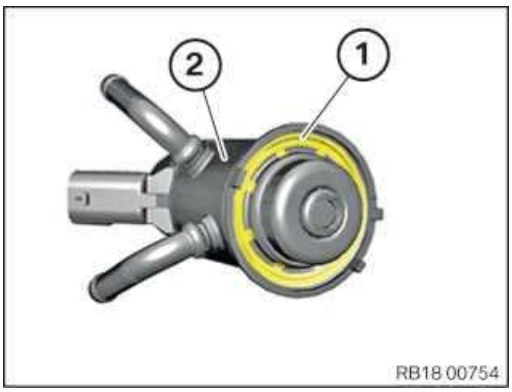
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

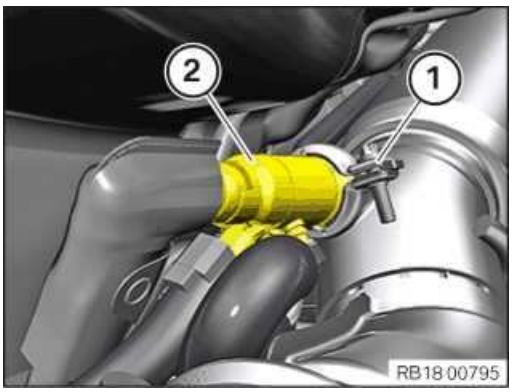
- Tighten down screw (2).



Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

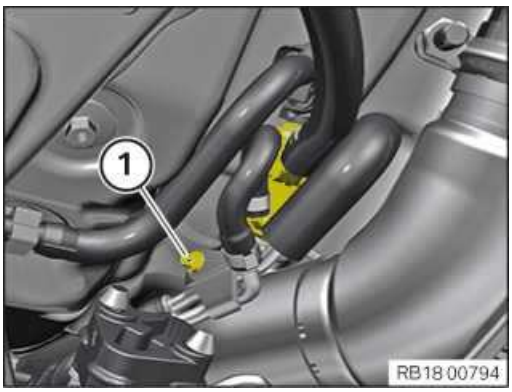


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

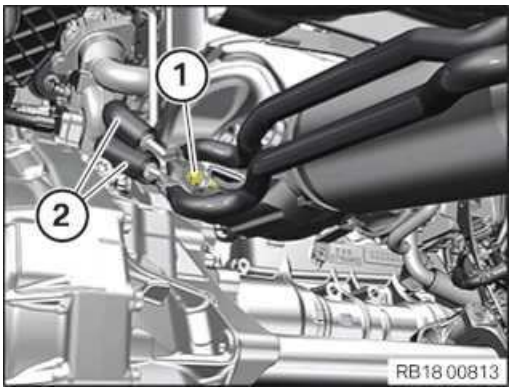


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

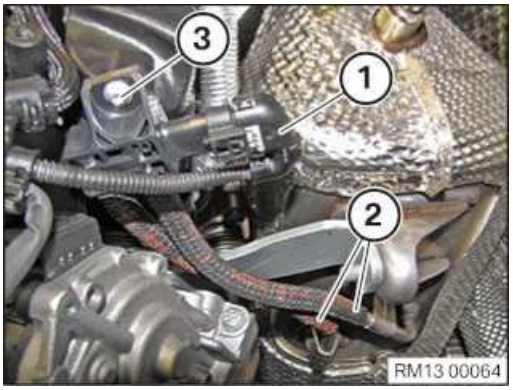


- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▸ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

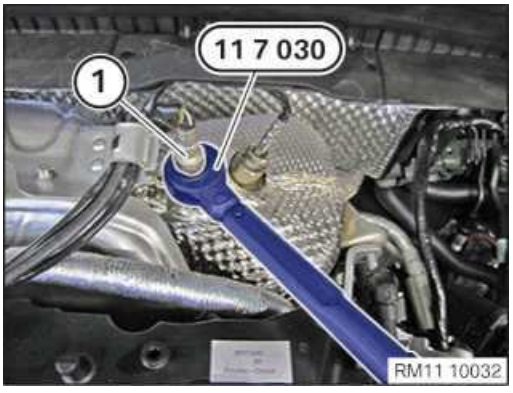
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

62 – Install the control sensor



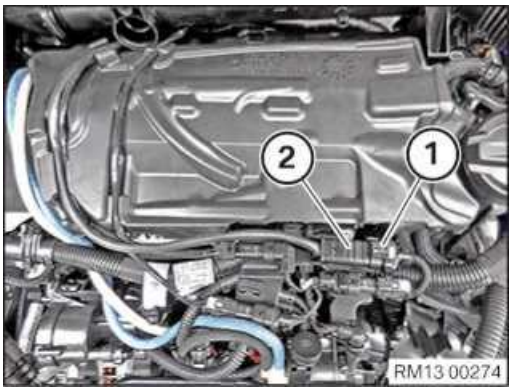
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

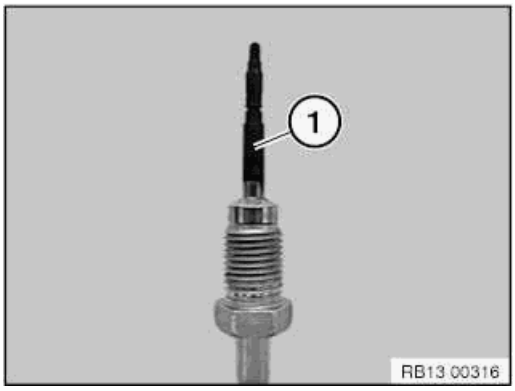
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

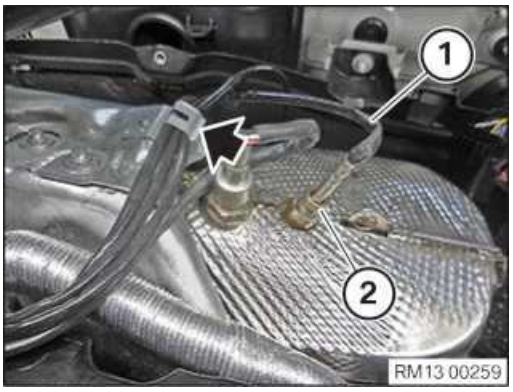


cardiagn.com

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

63 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

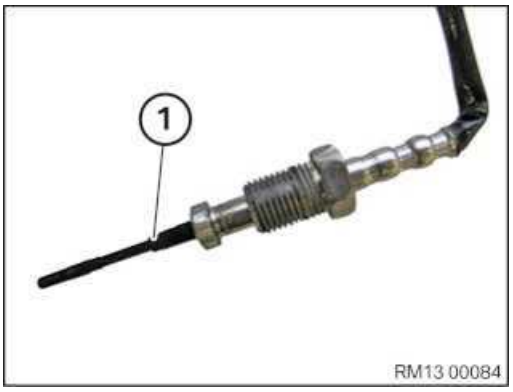
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

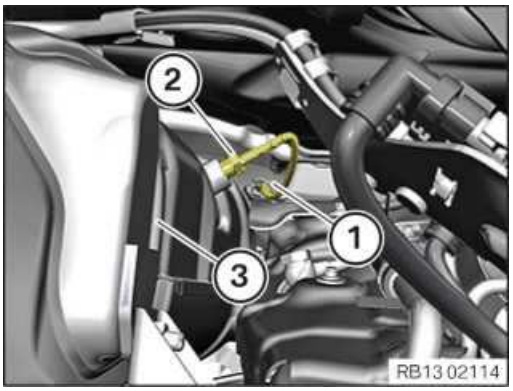
  The connector (1) must engage audibly.

64 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

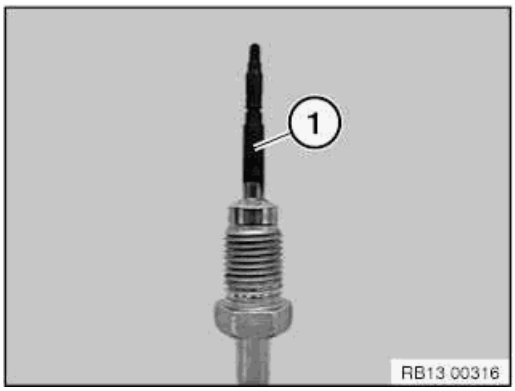
- Make sure that the gauge tip is not damaged.

cardiagn.com

- Make sure the gauge tip (1) is not damaged during installation.

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

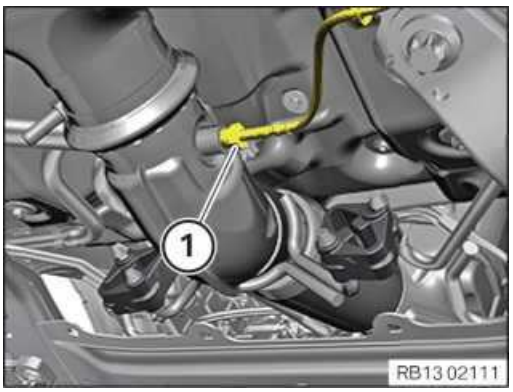


Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

65 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

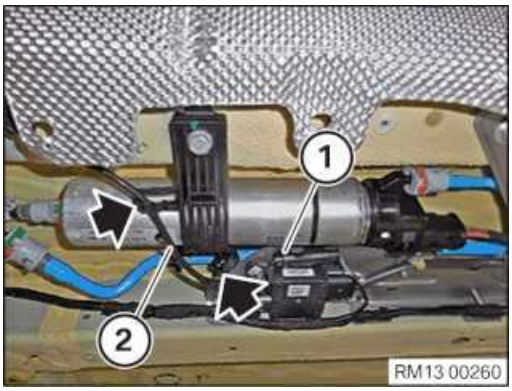
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

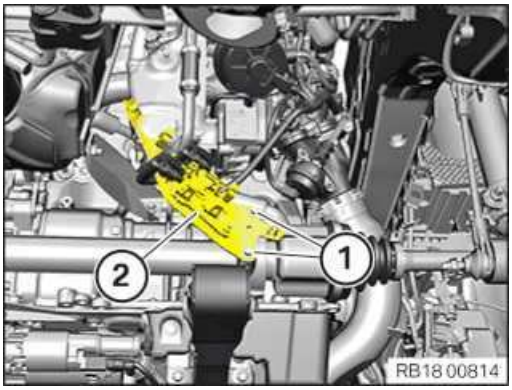
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com

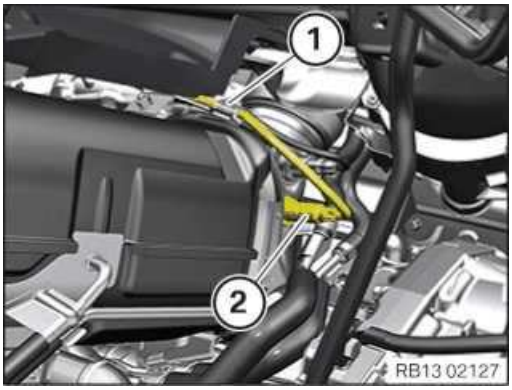


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

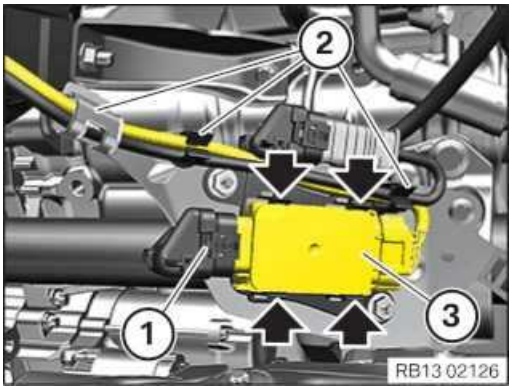
66 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



67 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

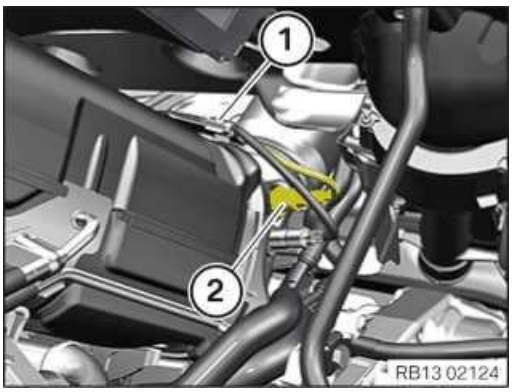
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

cardiagn.com

68 – Install the monitoring sensor



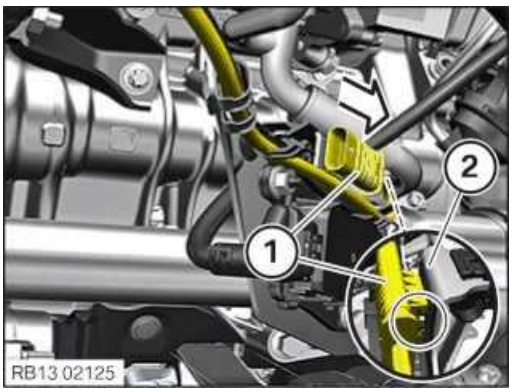
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

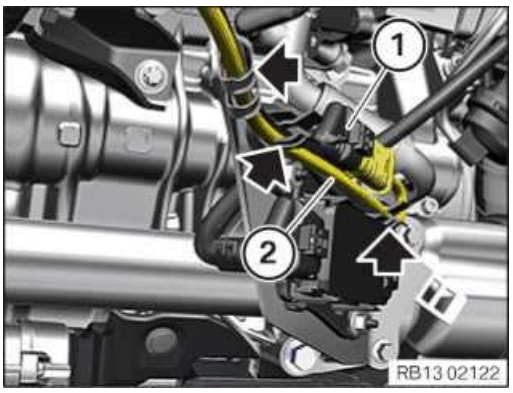
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

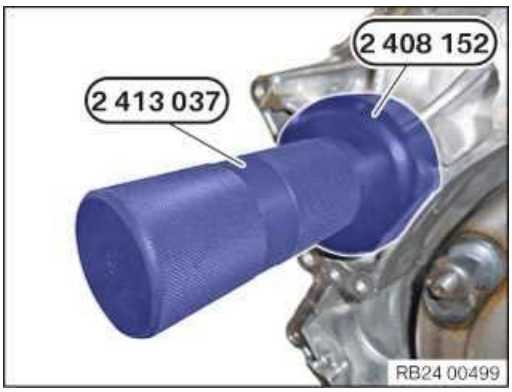
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

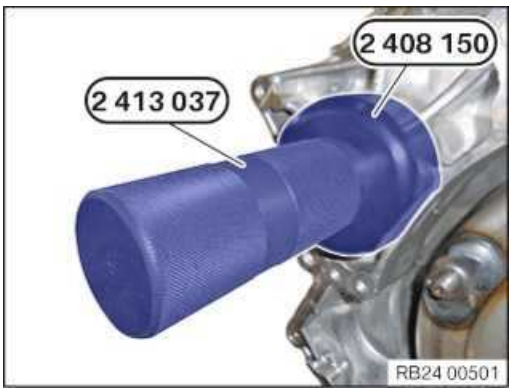
69 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

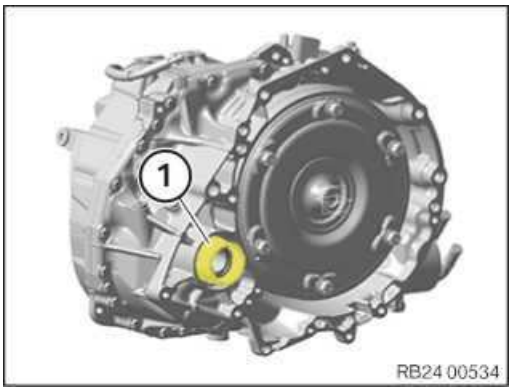


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

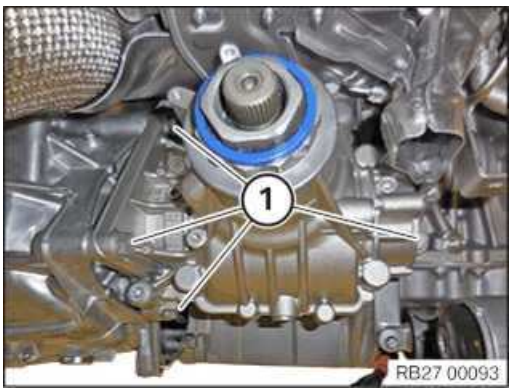
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

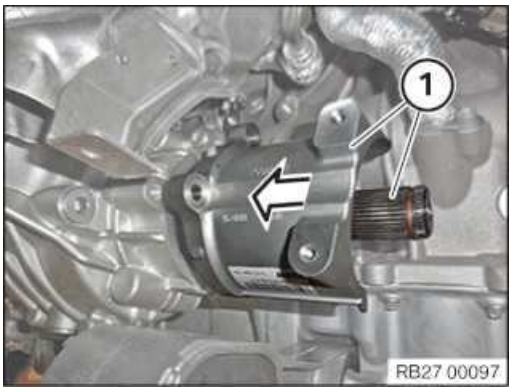
Technically suitable transfer box and electrical transmission oils	

Main group 27

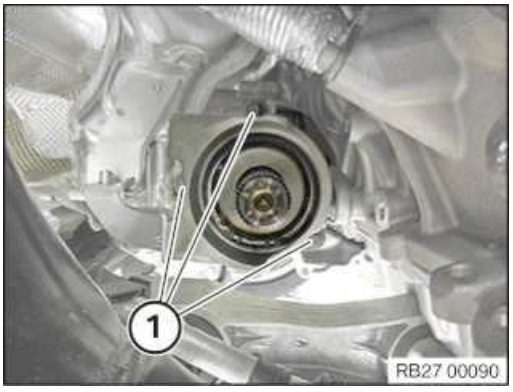
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



70 – Install the intermediate shaft with the support tube



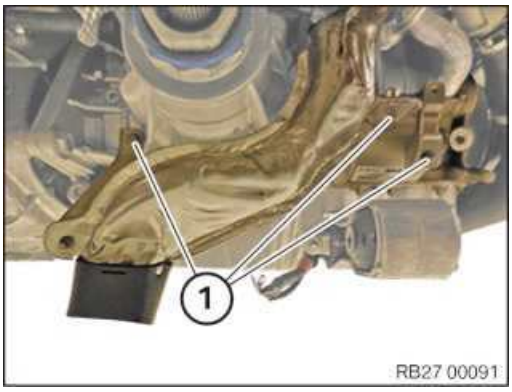
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

71 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

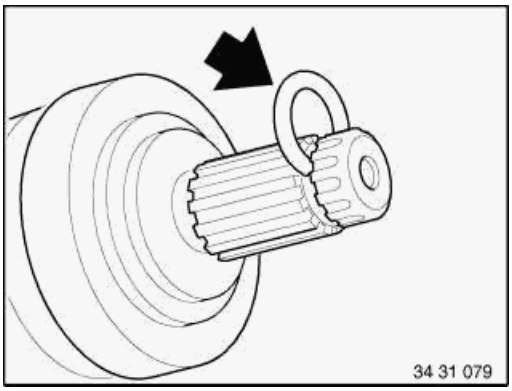
72 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

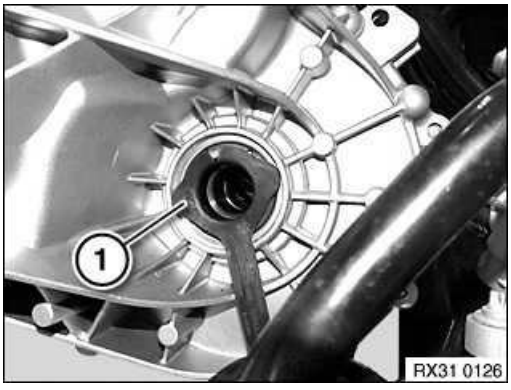
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

73 – Partially installing the left output shaft



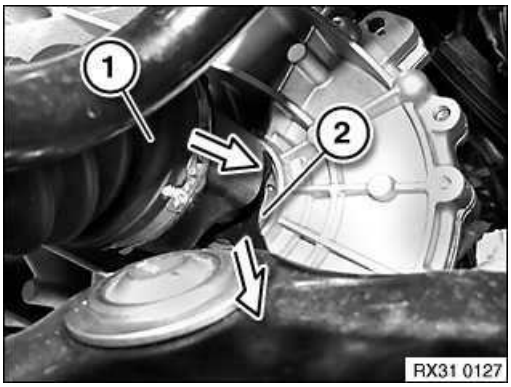
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

74 – Install propeller shaft.

CAUTION

Component with heavy weight.

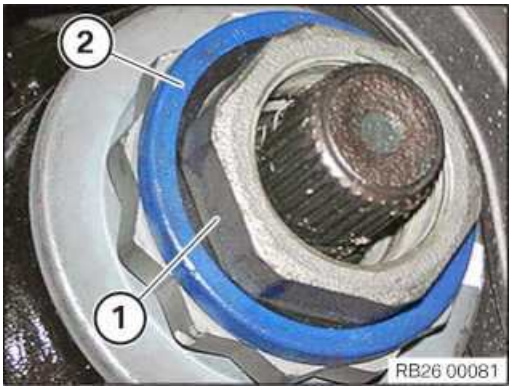
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

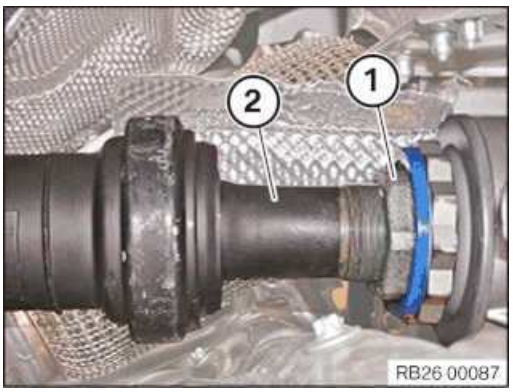
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

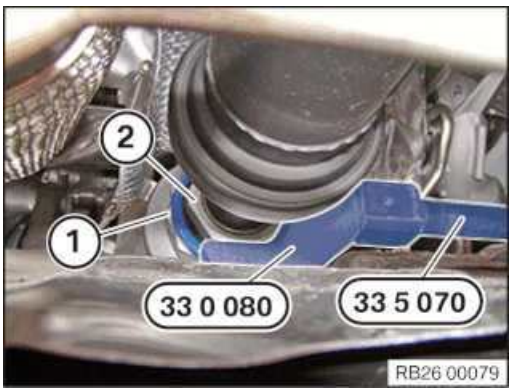
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

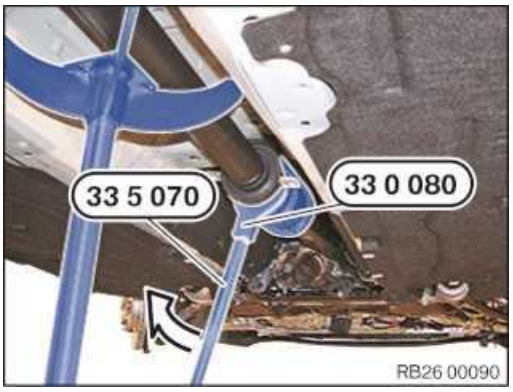
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

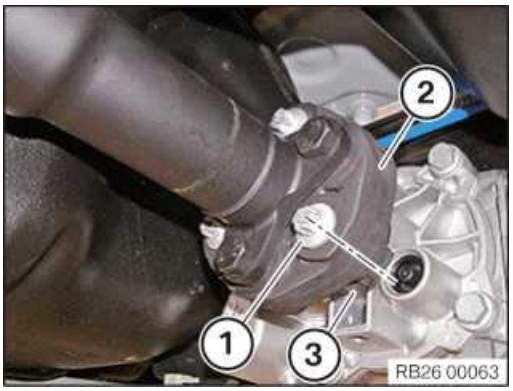


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

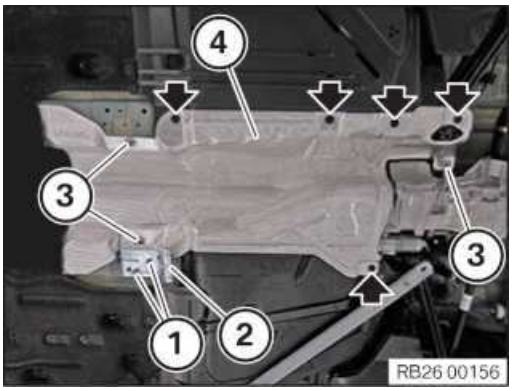
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

cardiagn.com

- Guide the special too l out between the front and rear propeller shaft and remove.

75 – Installing the rear heat shield

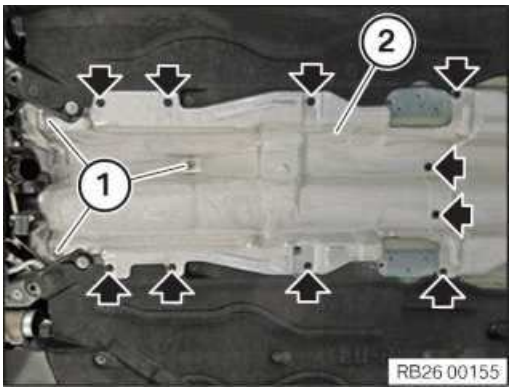
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

76 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

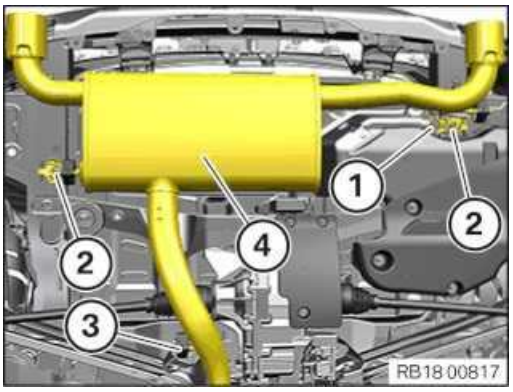
77 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

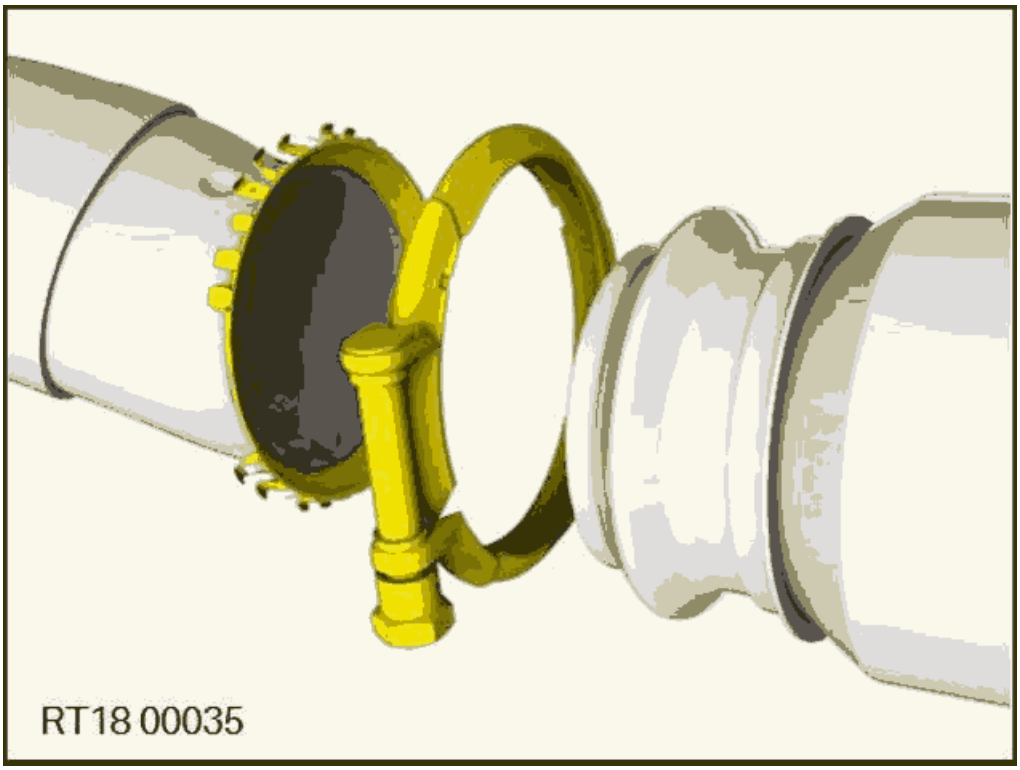
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

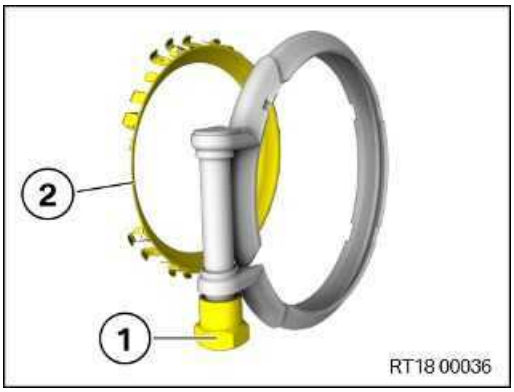
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



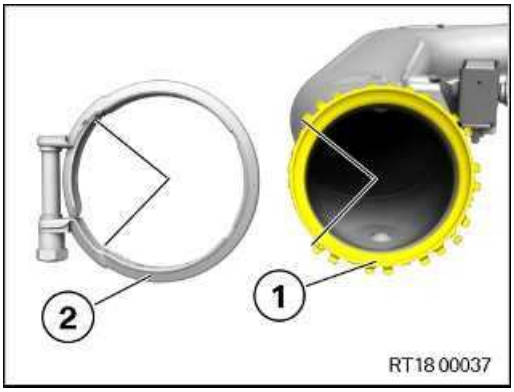
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



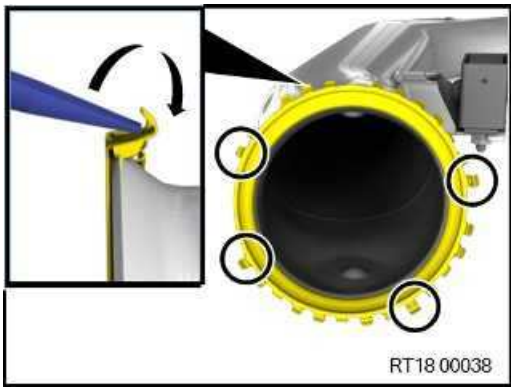
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

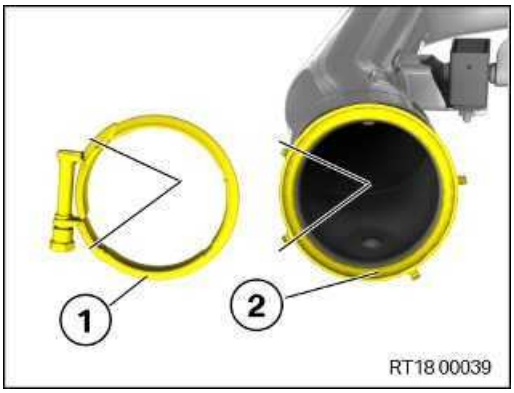


V-band clamp

cardiagn.com



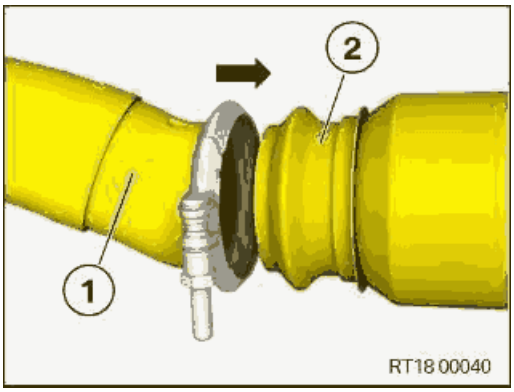
- Unscrew the nut (1) and remove the sealing ring (2).



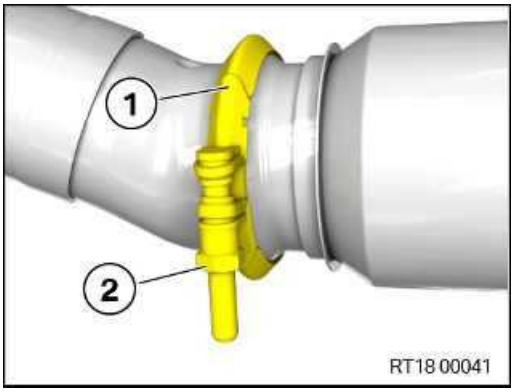
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

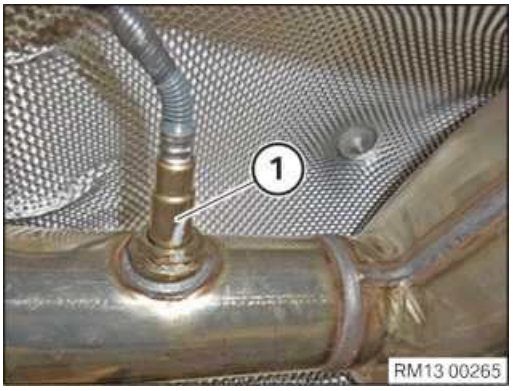


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

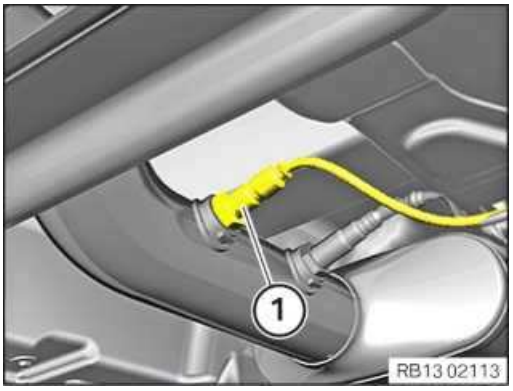
cardiagn.com



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

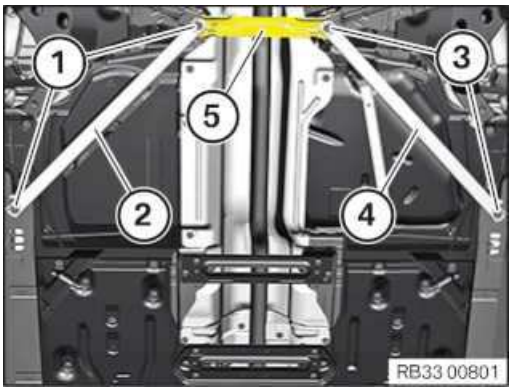


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

78 – Install the cross-member with torsion struts

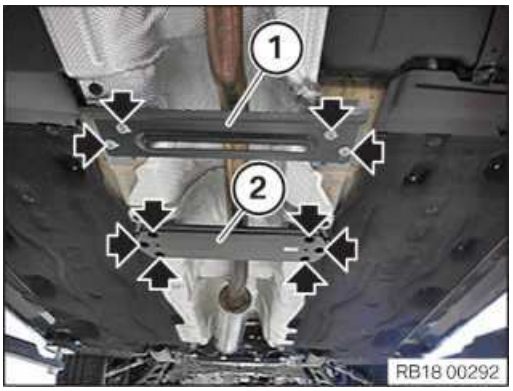
cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

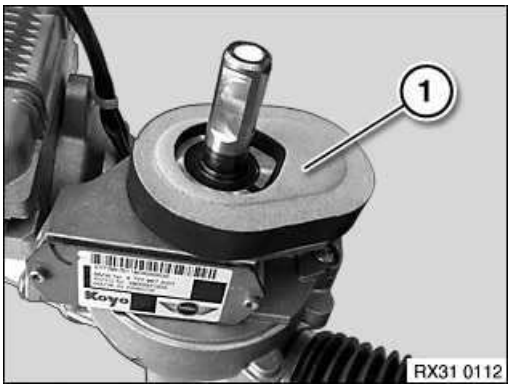
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

79 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

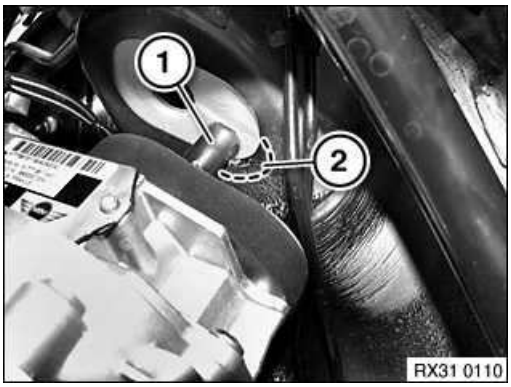


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

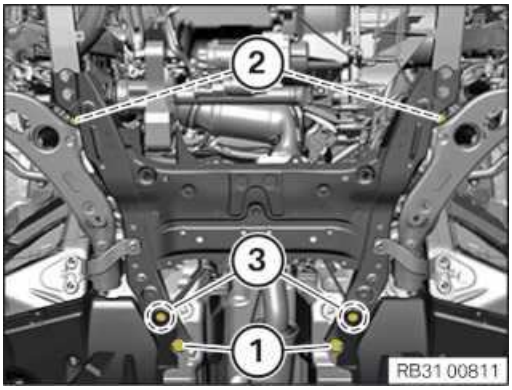


80 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

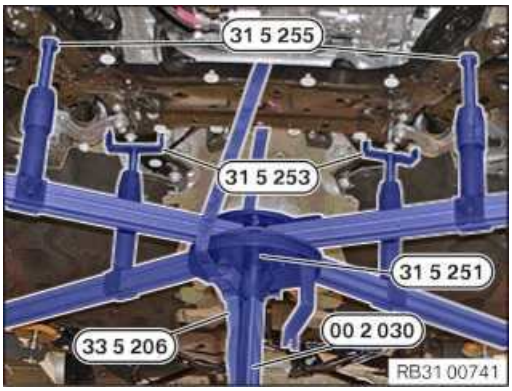
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

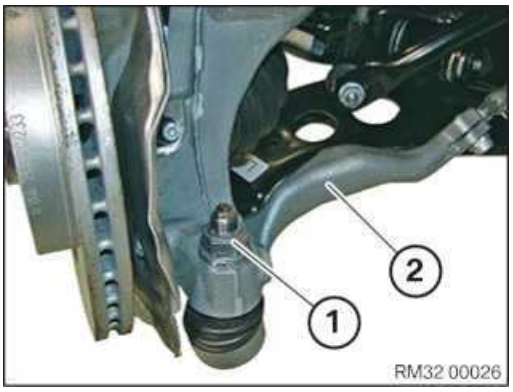
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



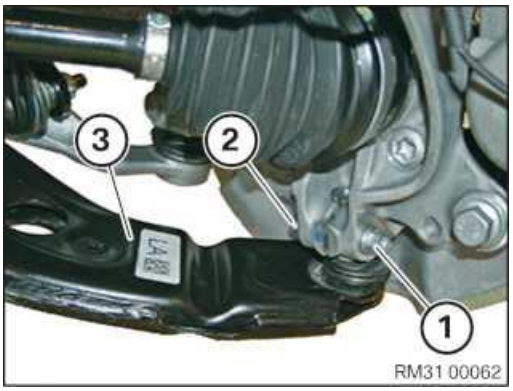
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

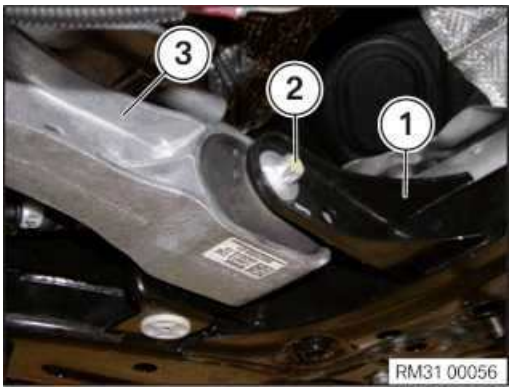
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

81 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

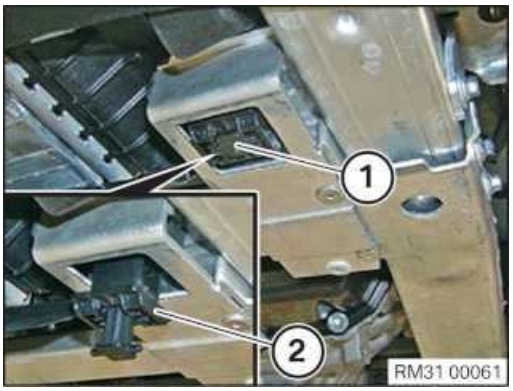


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

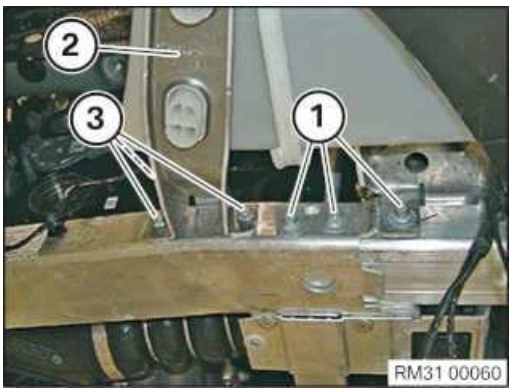
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



cardiagn.com

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

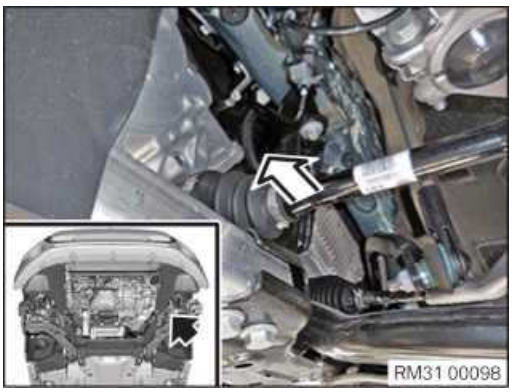
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

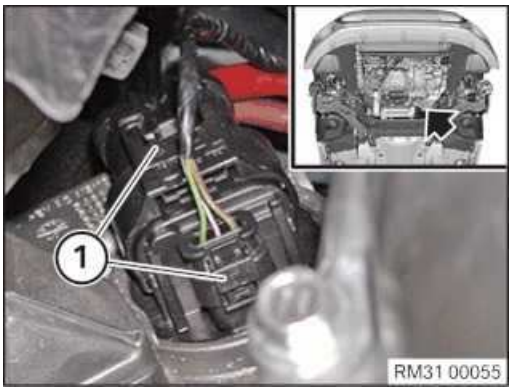


Perform the operations on the left and right side.

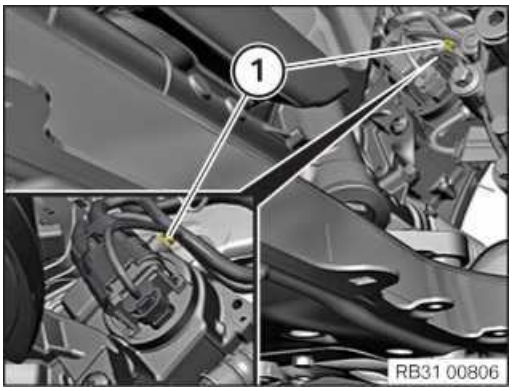
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



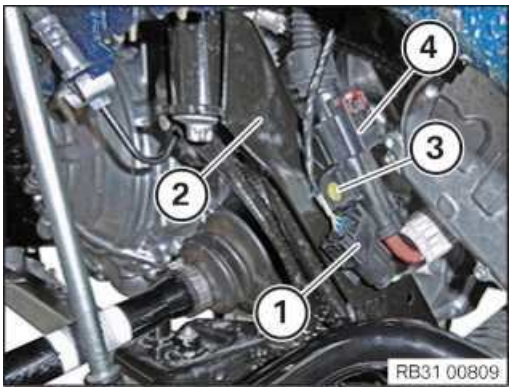
82 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

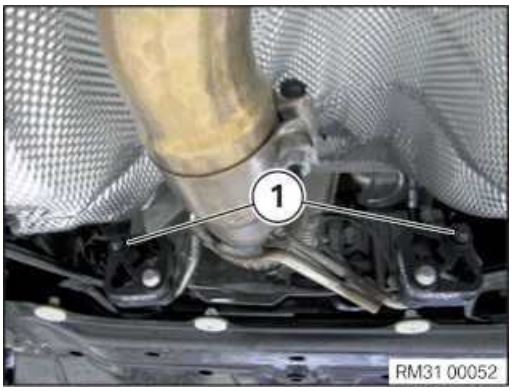
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

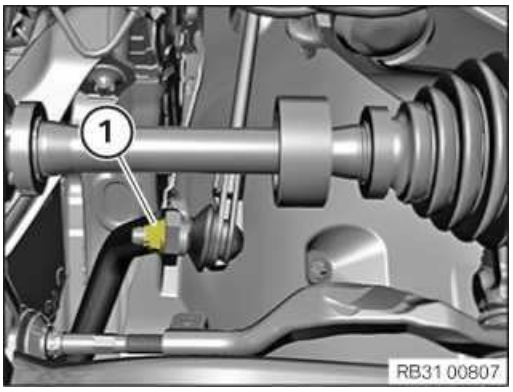
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

83 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



84 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

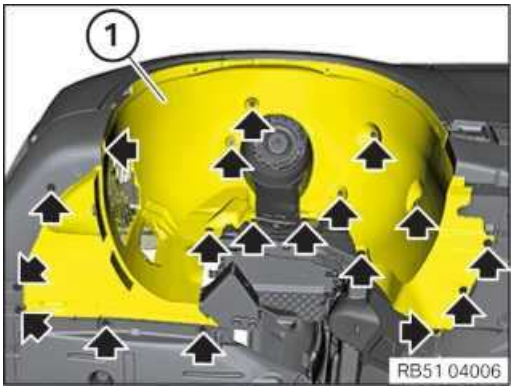
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

85 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

86 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

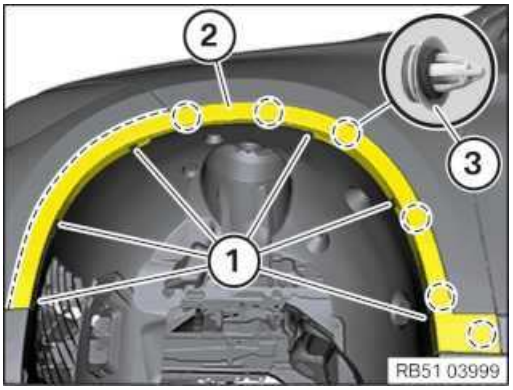
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

87 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

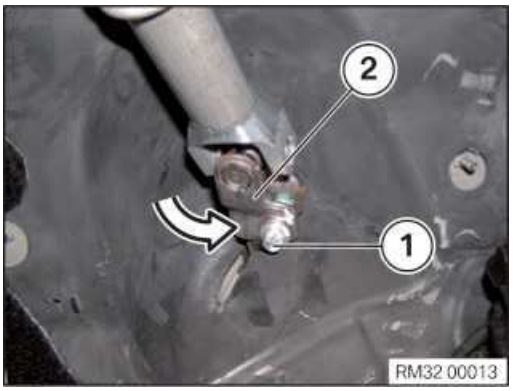
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

88 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

89 – Secure the steering shaft at the bottom on the steering gear

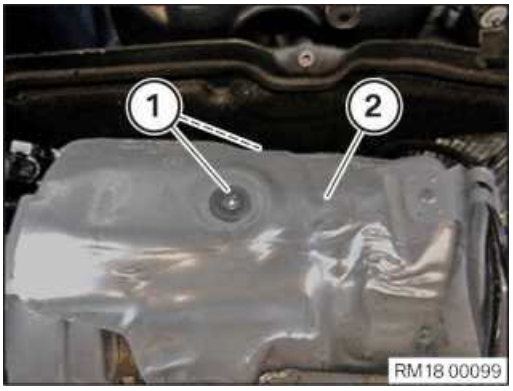
89 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

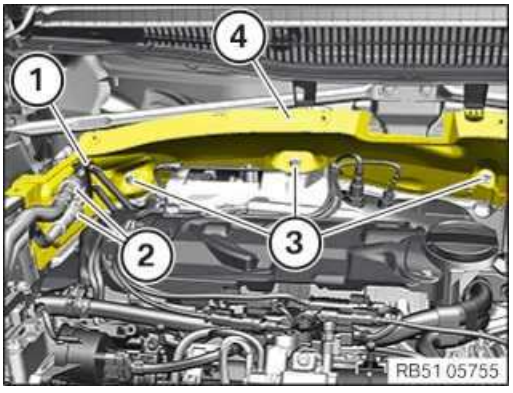


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

90 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

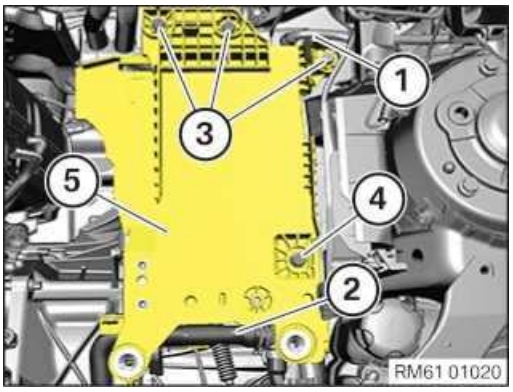
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

91 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

92 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

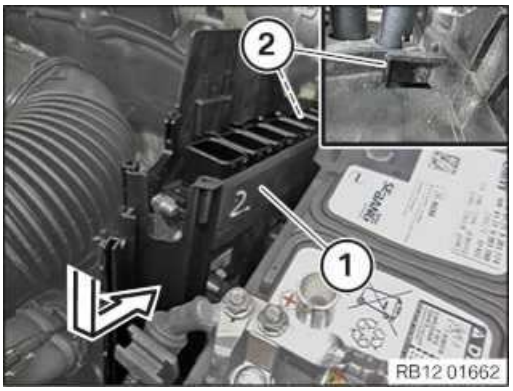
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

93 – Install electronics box

Prerequisite



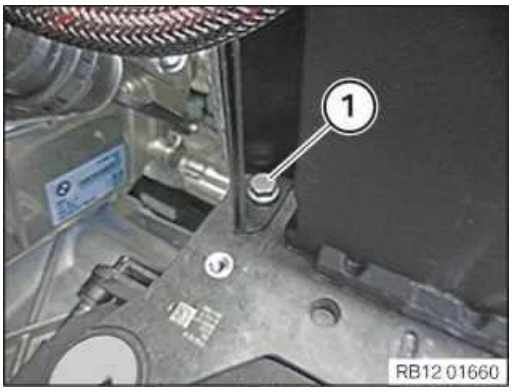
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

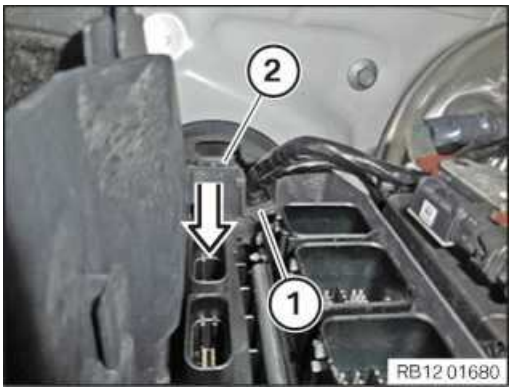
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

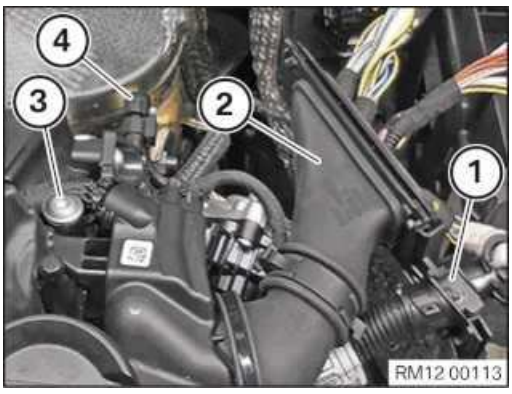


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

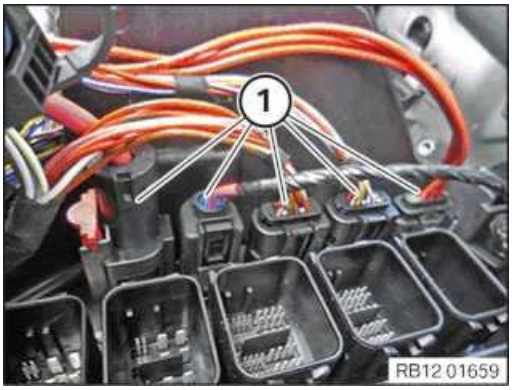


- Tighten down screw (1).

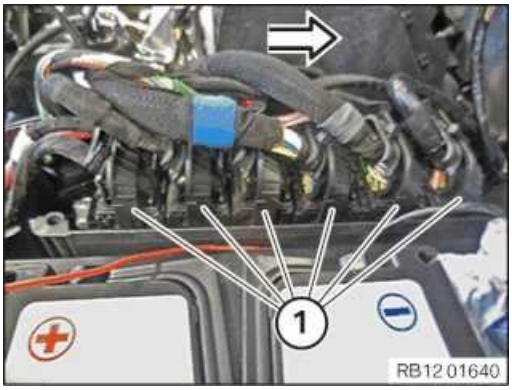
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



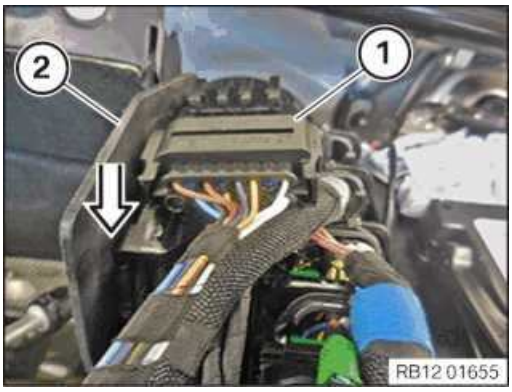
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



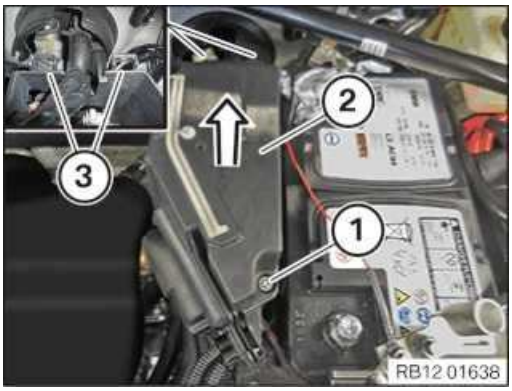
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

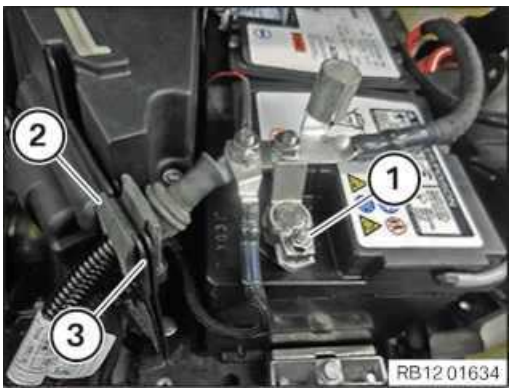


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

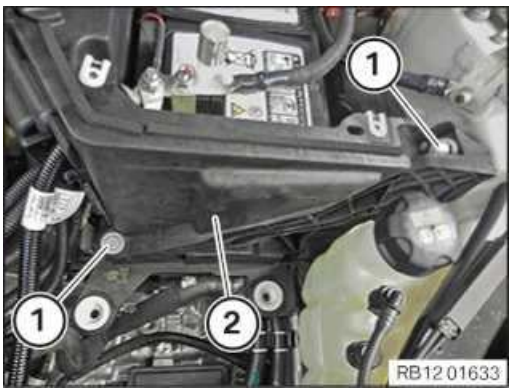
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

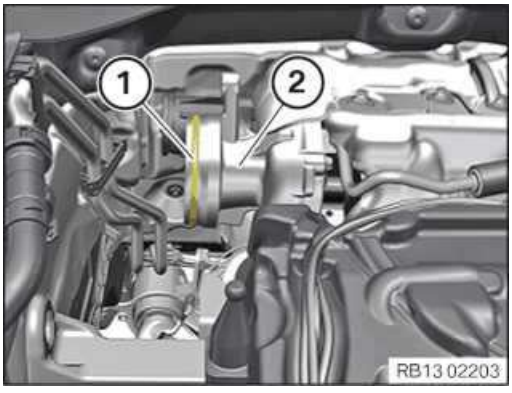


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

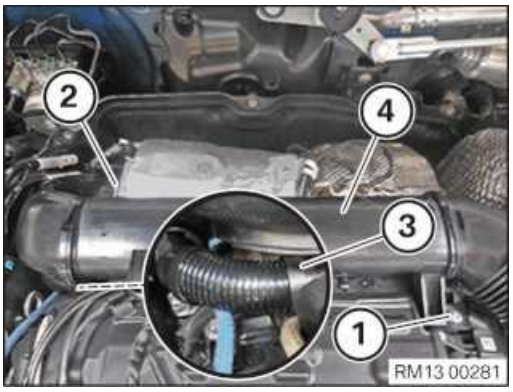
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

94 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

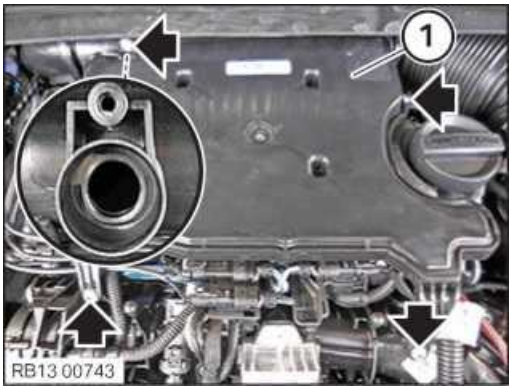
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

95 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

96 – Install acoustic cover

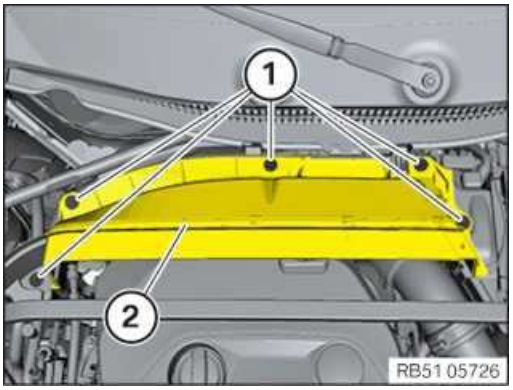
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

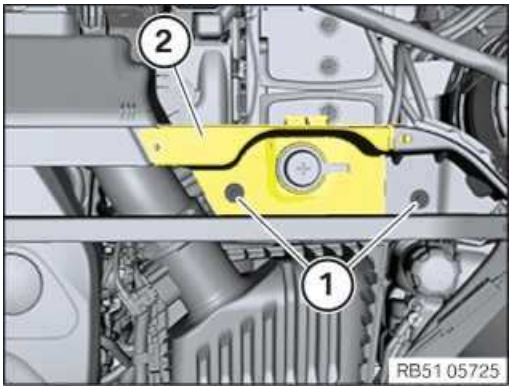
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

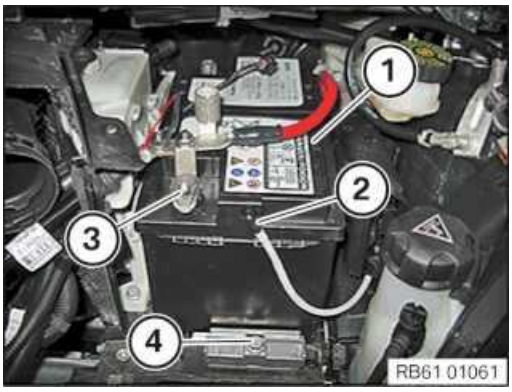


97 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

98 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

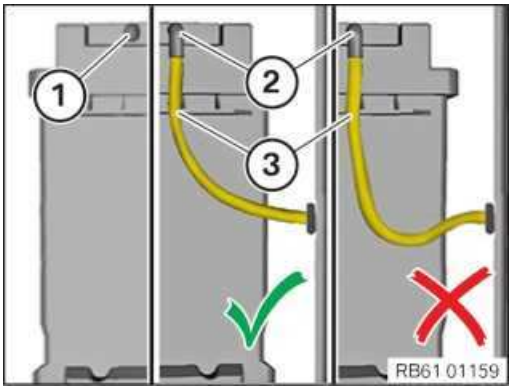
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

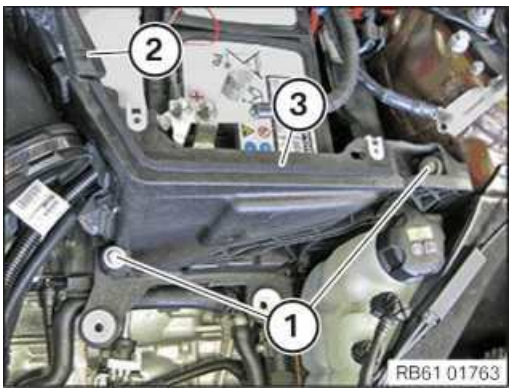
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

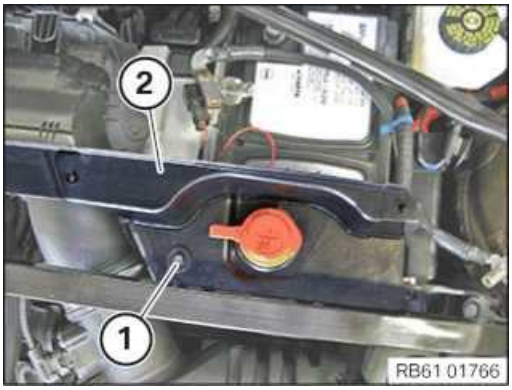
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

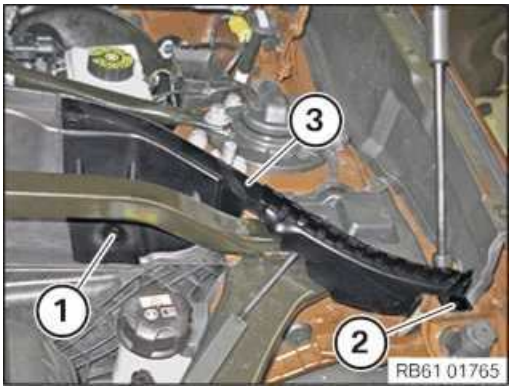


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

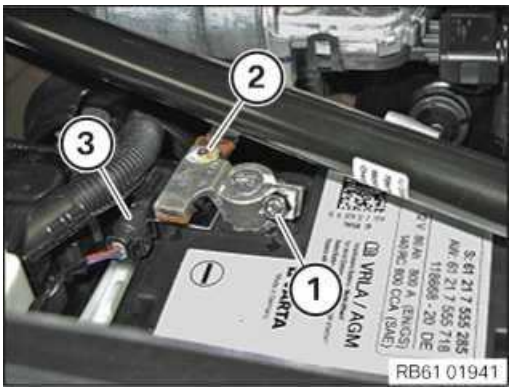
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

99 – Connecting the battery earth lead

TECHNICAL INFORMATION



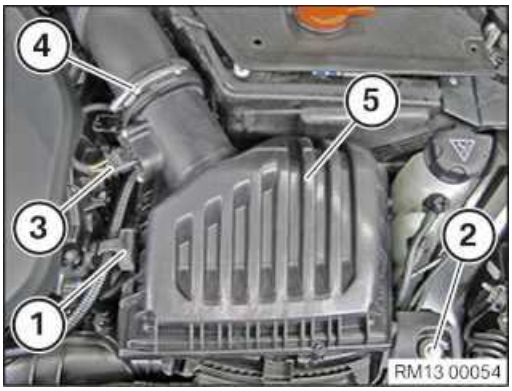
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

100 – Installing intake silencer housing

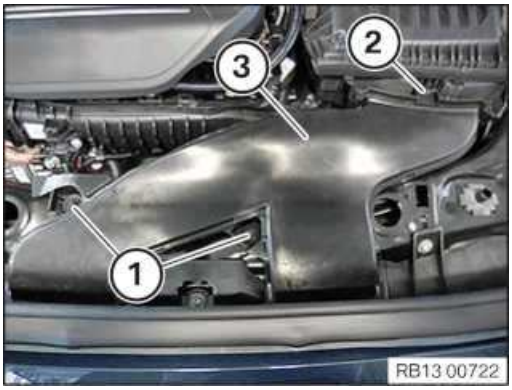
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

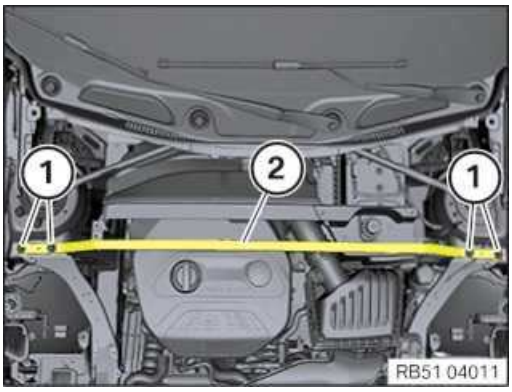
  The connector (3) must engage audibly.
- Insert and install the holder (1).

101 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



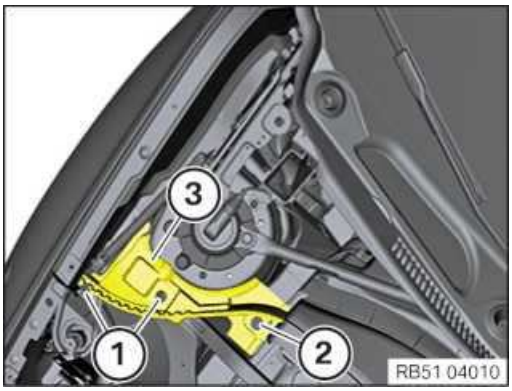
M6		Tightening torque	8 Nm

102 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

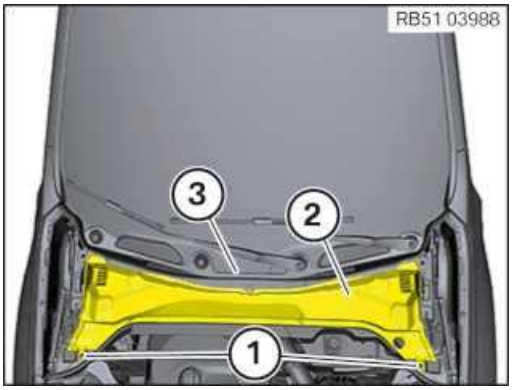
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



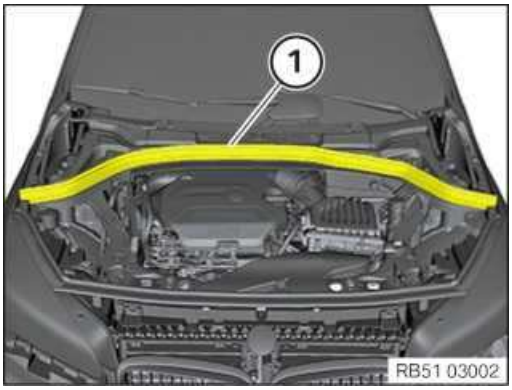
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

103 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

104 – Install the seal for the bonnet

NOTICE

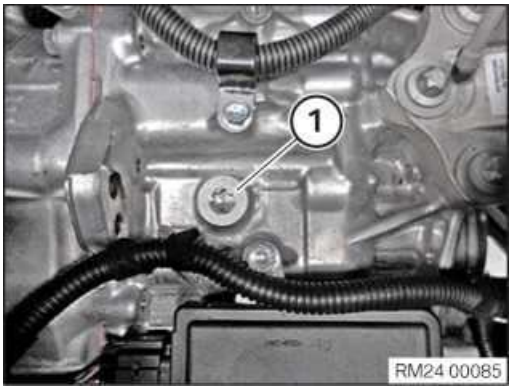
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

105 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

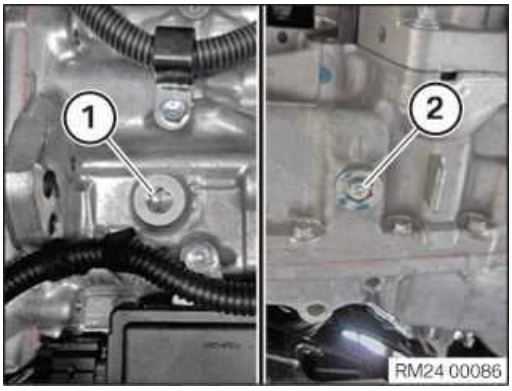
cardiagn.com

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

106 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

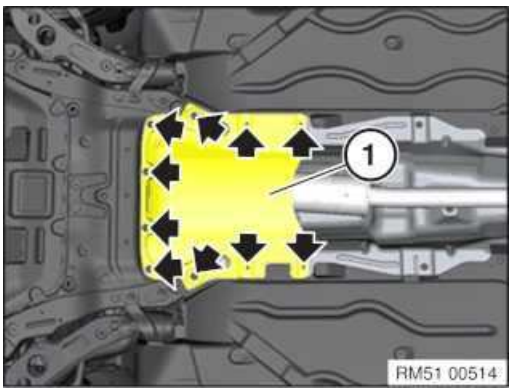
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Cross-brace to spring strut dome

Used in step 102

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

Used in step 102

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing

Used in step 105

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

Used in step 105

M6	Renew the sealing ring.		8 Nm

Oil drain plug / oil filler plug

Used in step 106

Hexagon socket		Tightening torque	43 Nm

Underbody protection front

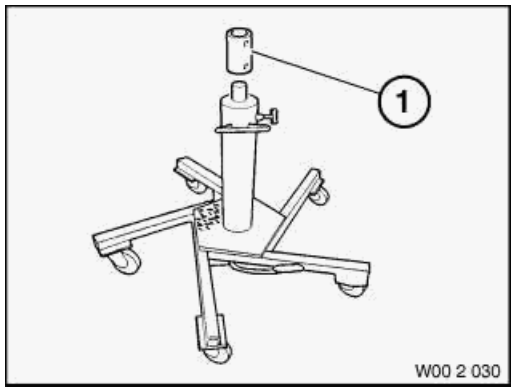
Used in step 108

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side

Used in step 109

Hexagon screw		Tightening torque	2,6 Nm



Underbody panelling, side

Used in step 109

Plastic nut		Tightening torque	2,6 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common

Used in step 28 80

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

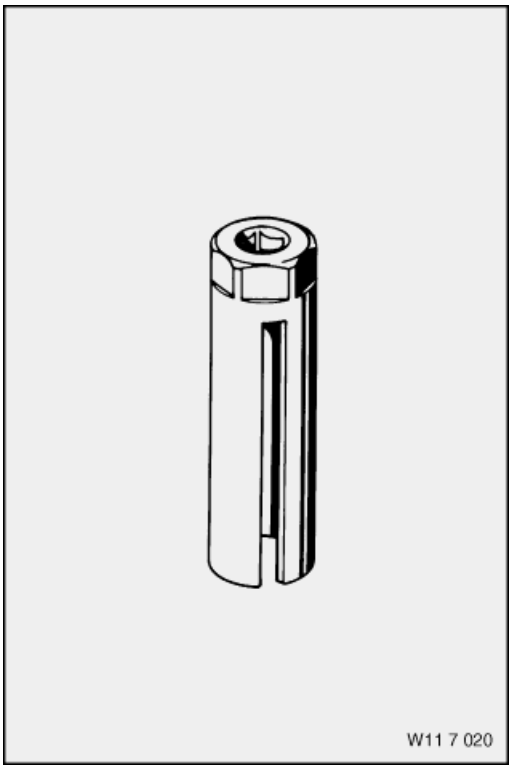
0 495 554 (33 5 070) Extension

Common



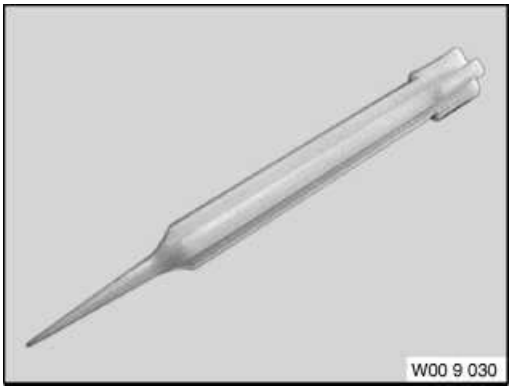
Used in step 34 74

Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

0 491 074 (11 7 020) Socket wrench insert



Common

Used in step 40 41 68

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 714 (00 9 030) Wedge

Common Used in step 54

Usage	For dismantling O-rings, gaskets and trim panels. This special tool replaces special tool 00 9 316.
Included in the tool or work	
Storage location	A50
Replaced by	
In connection with	
SI-Number	01 20 09 (581)

0 495 102 (11 4 470) Tool

Common Used in step 56

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

2 409 025 Puller

Common	Used in step 69
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

Common	Used in step 69
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 408 152 Striking element

Common	Used in step 69
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

Common	Used in step 69
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

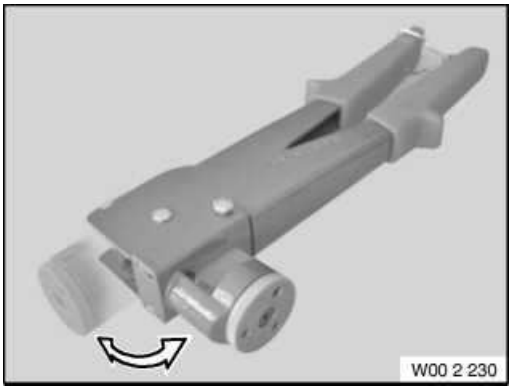
2 408 150 Striking element

Common	Used in step 69
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



0 490 504 (00 9 120) Torque angle measuring dial

Common	Used in step 74
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

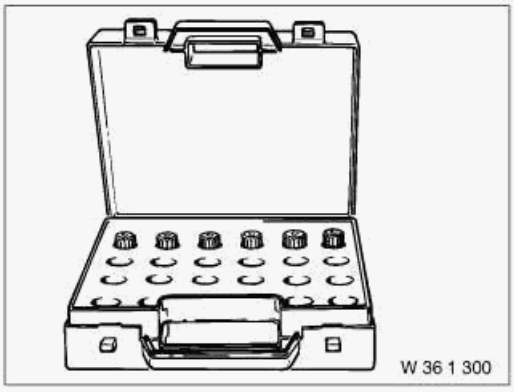
0 496 521 (00 2 230) Pliers

Common	Used in step 86
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 87
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 18
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 224 (36 1 326) Wheel stud

Common	Used in step 18
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 18
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 18
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

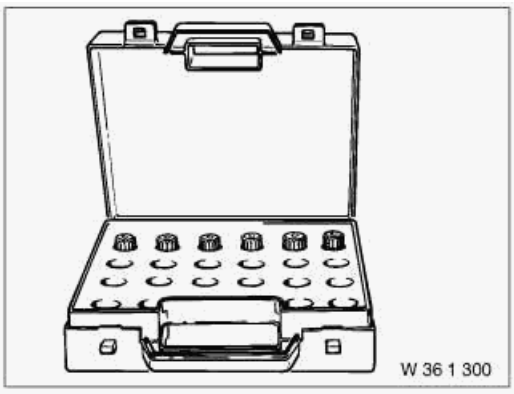
0 495 227 (36 1 329) Wheel stud

Common	Used in step 18
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 228 (36 1 331) Wheel stud

Common	Used in step 18
Usage	(Code 37) With centring bore available separately (see EPC) under 36 13 6 762 342
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 229 (36 1 332) Wheel stud

Common	Used in step 18
Usage	(Code 38) With centring bore available separately (see EPC) under 36 13 6 762 343
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with

Designation	Used in step
Seal of central piston cooling control valve to crankcase	54

cardiagn.com

11 42 826 Replace switch valve of central piston cooling

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

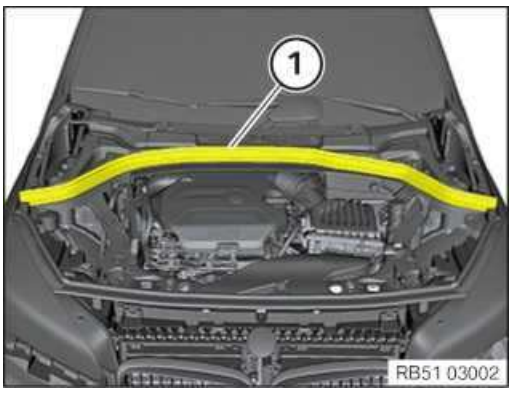
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

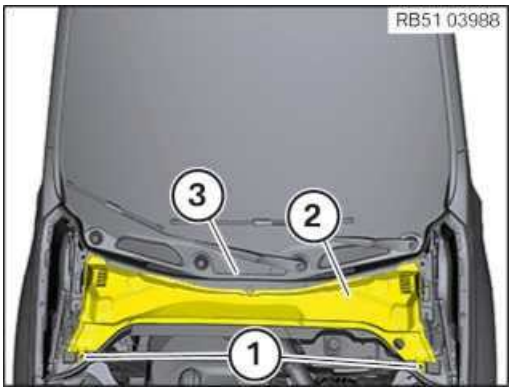


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

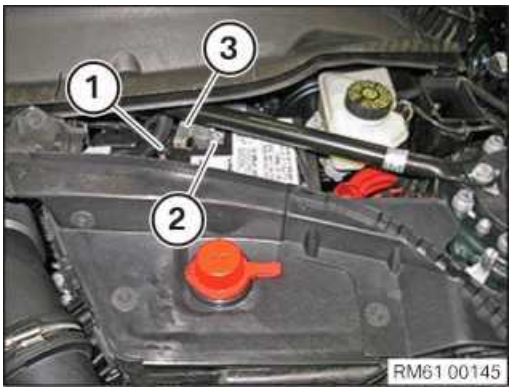
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

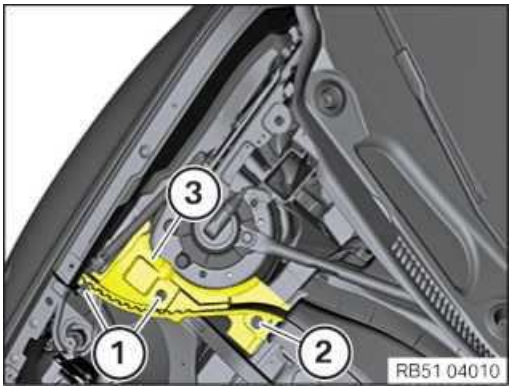


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

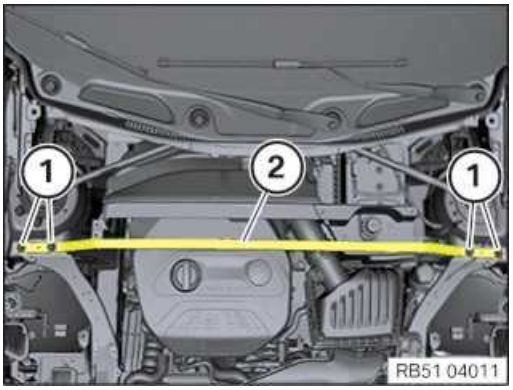
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

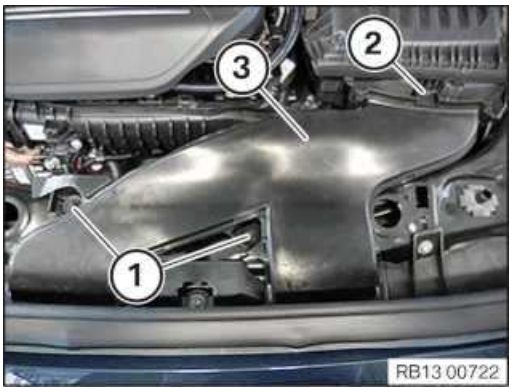
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

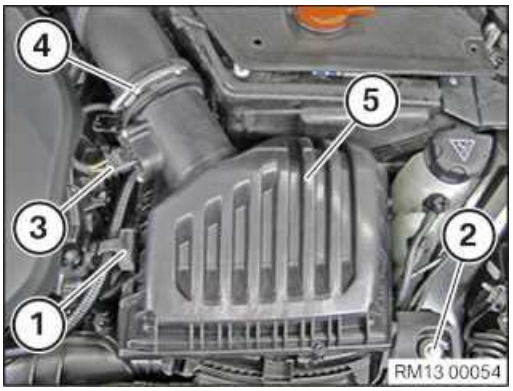
NOTICE

Description is for right component only. The procedure on the left side is identical.



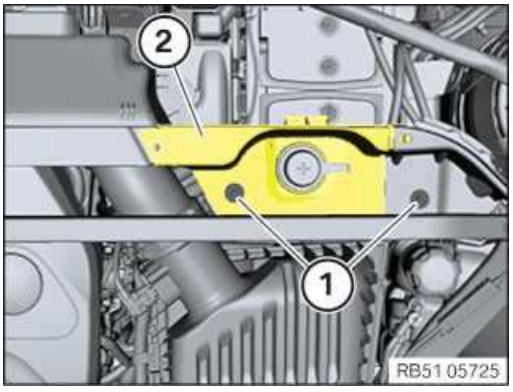
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



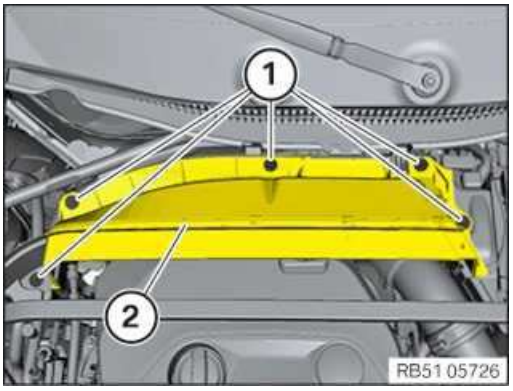
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



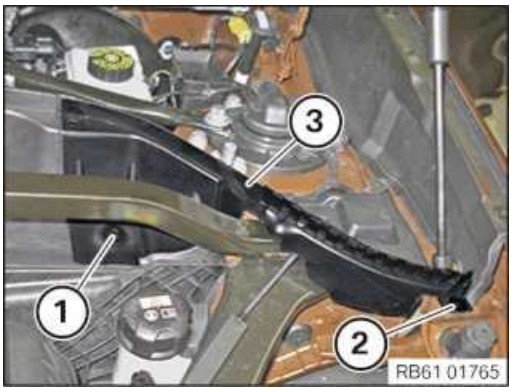
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

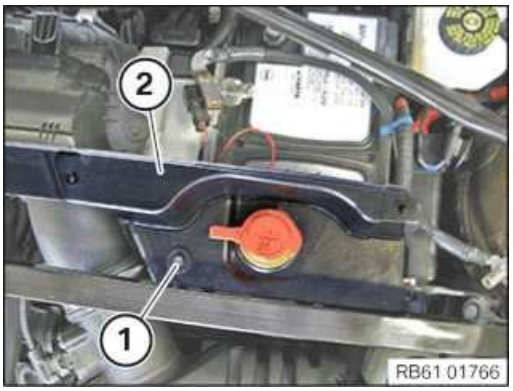
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



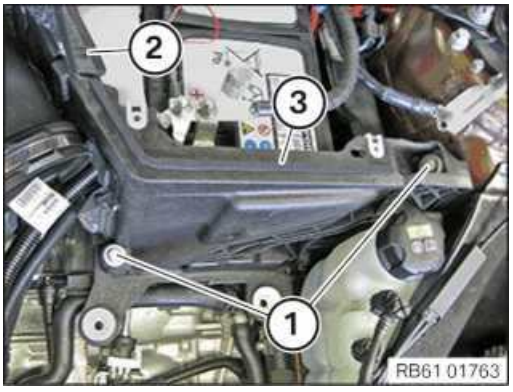
cardiagn.com

WARNING

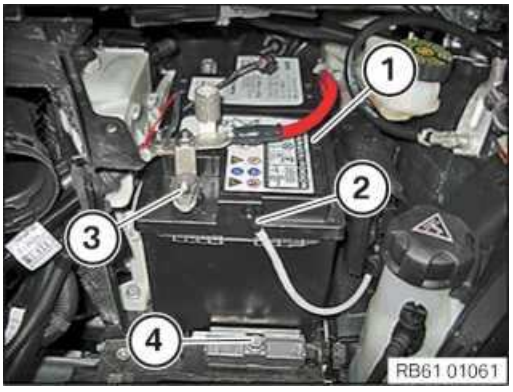


Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

cardiagn.com

9 – Removing the acoustic cover

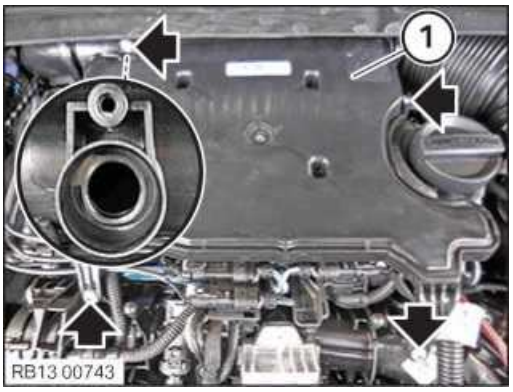
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



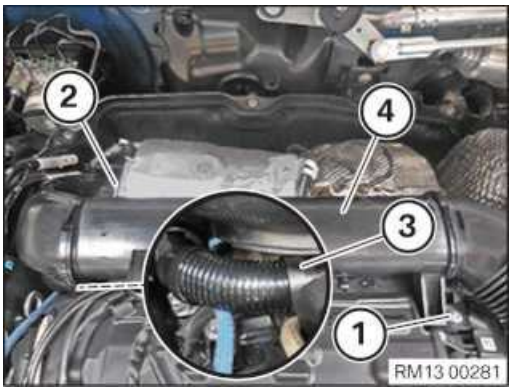
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

cardiagn.com

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

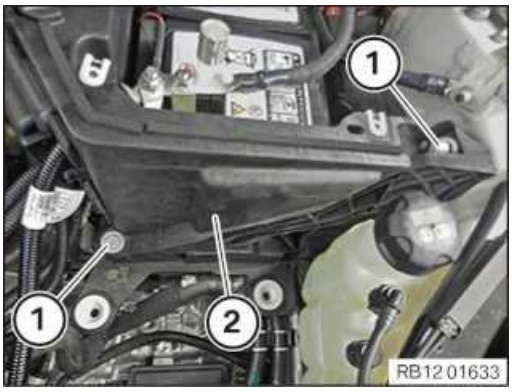
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

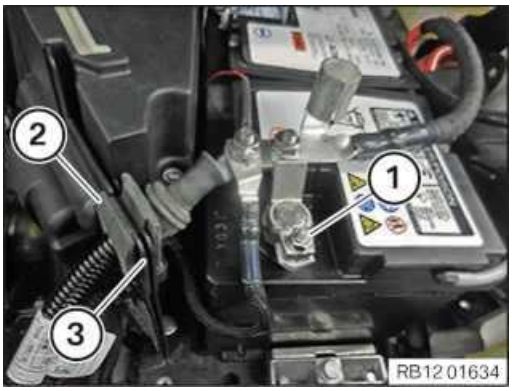
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



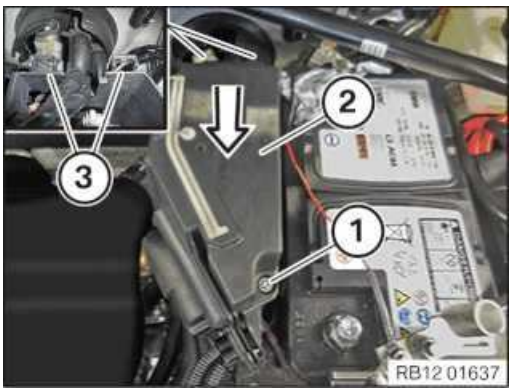
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

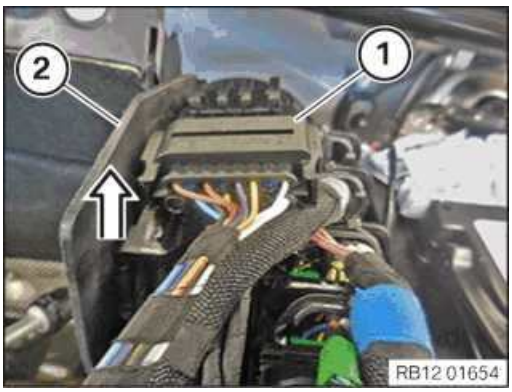


TECHNICAL INFORMATION

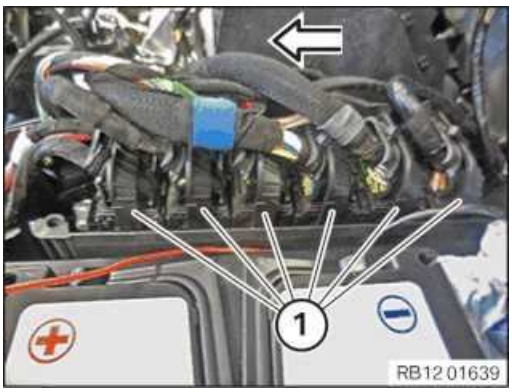
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



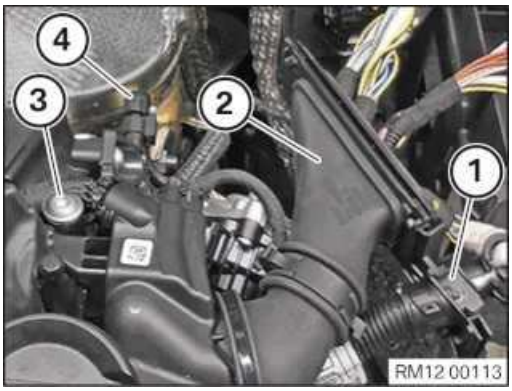
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



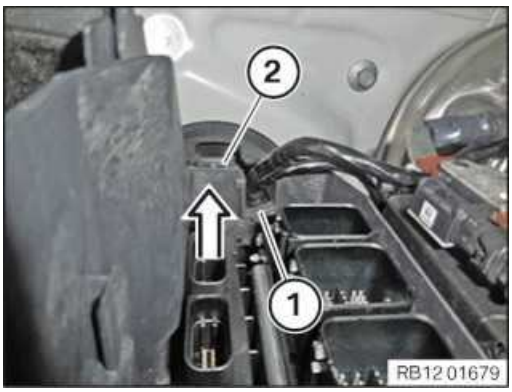
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

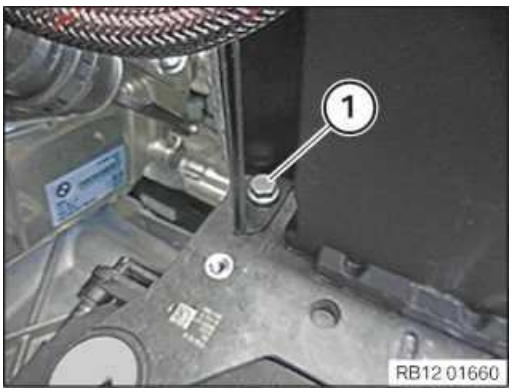
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



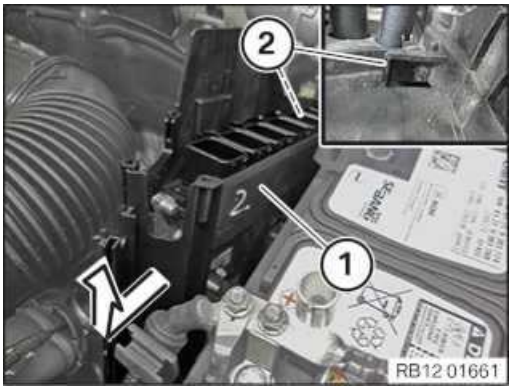
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com

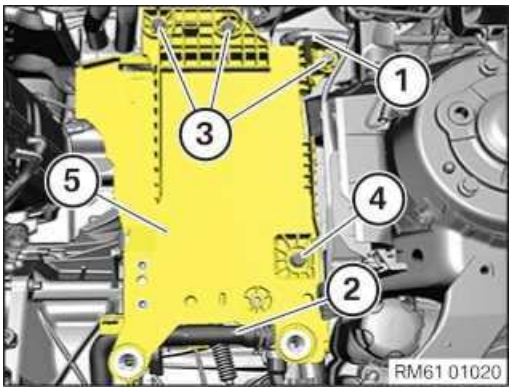


- Unlock and loosen connector (1).



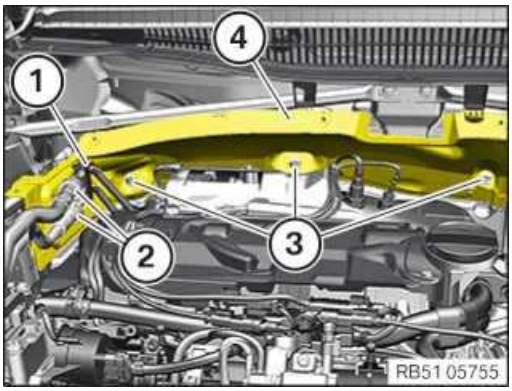
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



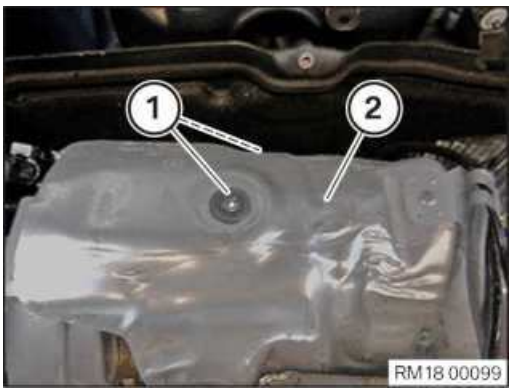
13 – Remove battery holder

cardiagn.com

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

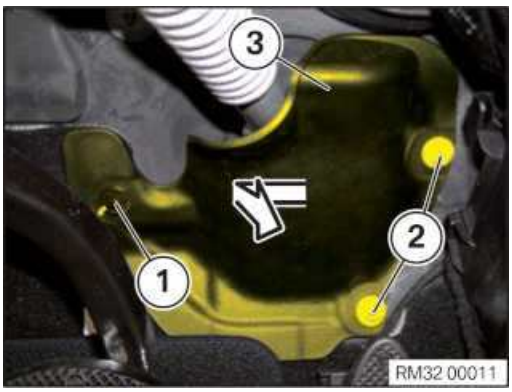
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.



15 – Removing heat shield from top exhaust turbocharger

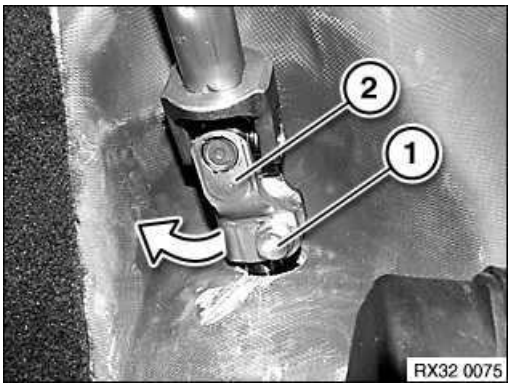
WARNING

Hot surfaces.



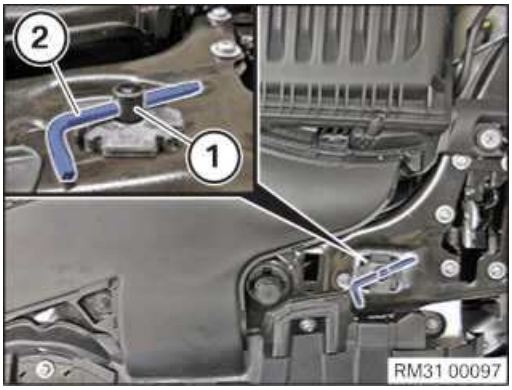
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.
  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

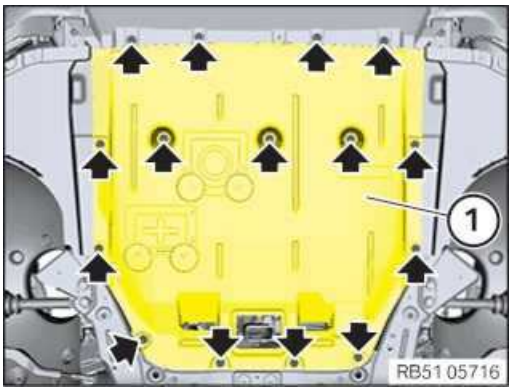
17 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

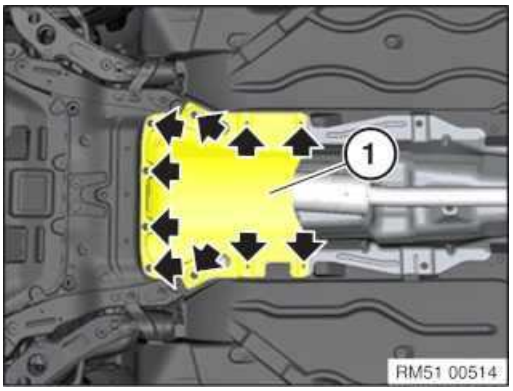


▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

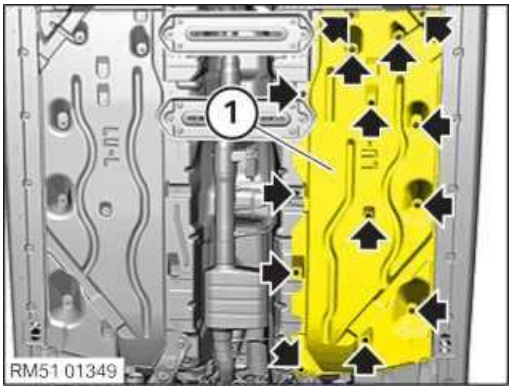
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com



- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

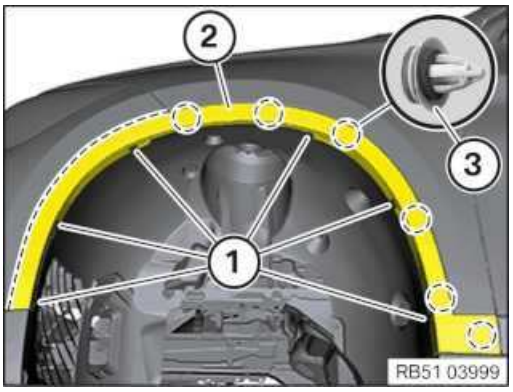
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

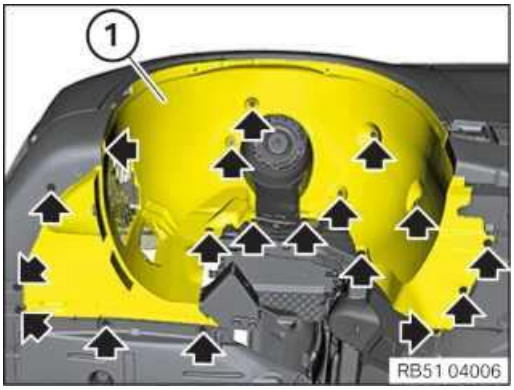
▸ **Remove the front wheel arch trim**



NOTICE

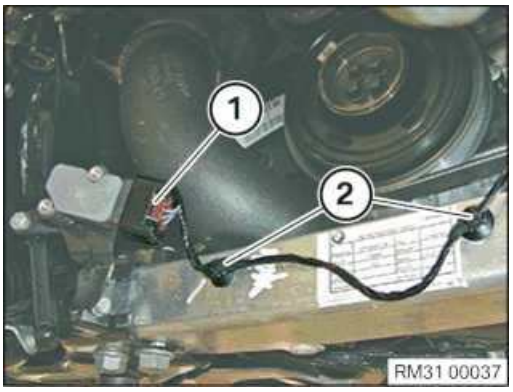
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

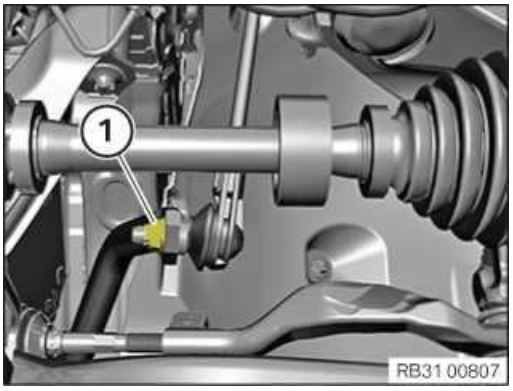


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



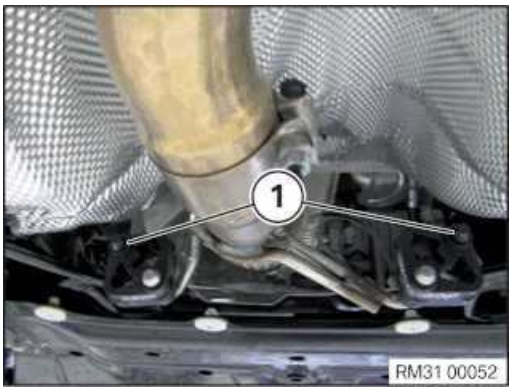
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

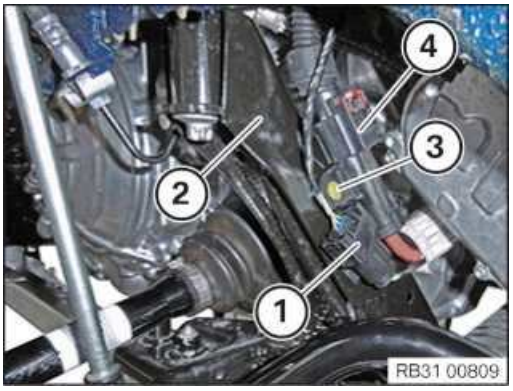


- Unfasten nut (1).

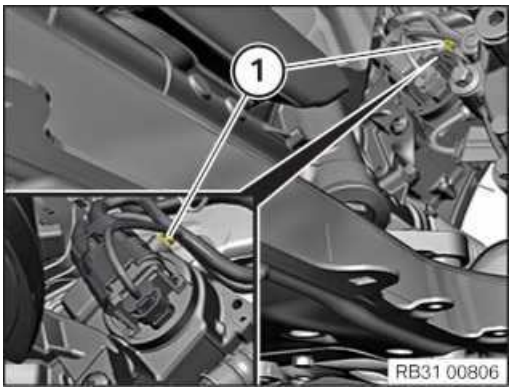
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

cardiagn.com

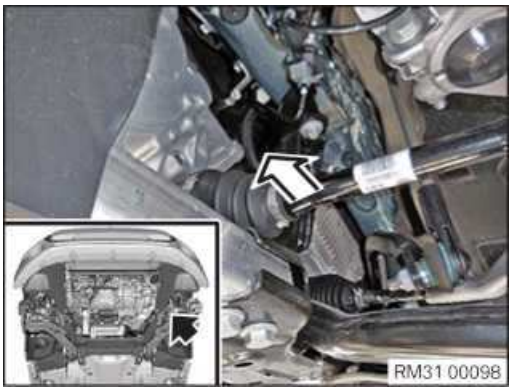


25 – Detaching rubber mount from front axle support



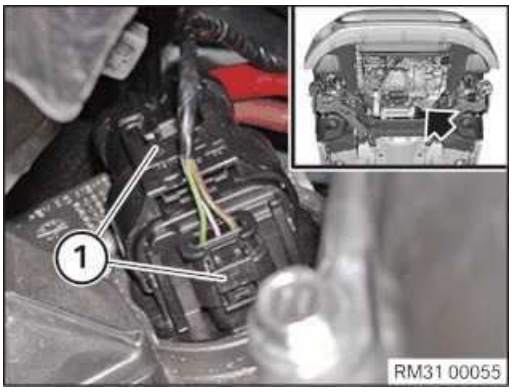
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▸ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

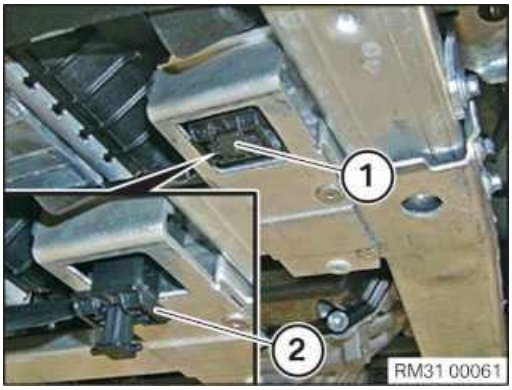
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

cardiagn.com

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

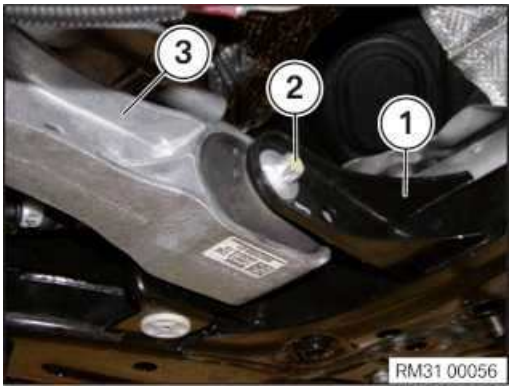
27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



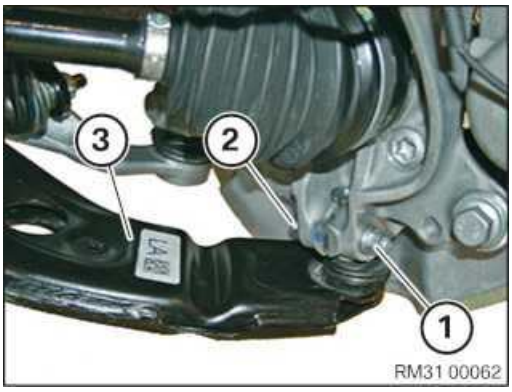
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

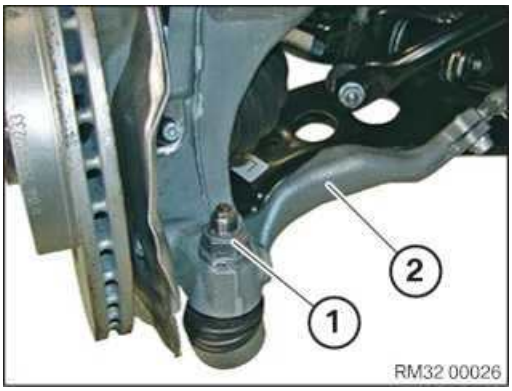


NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

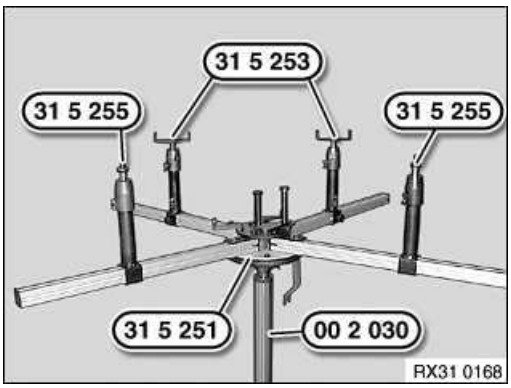
28 – Detaching and removing front axle completely



cardiagn.com

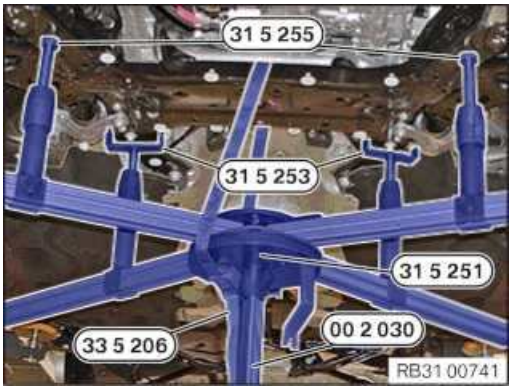
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

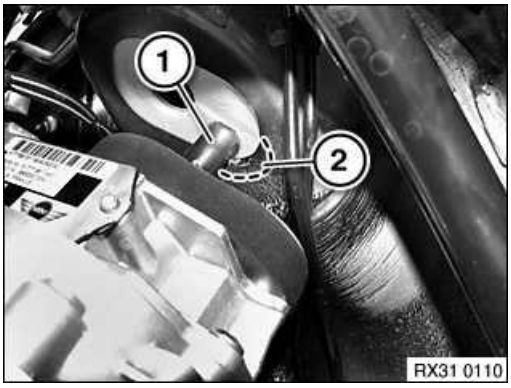
NOTICE



Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

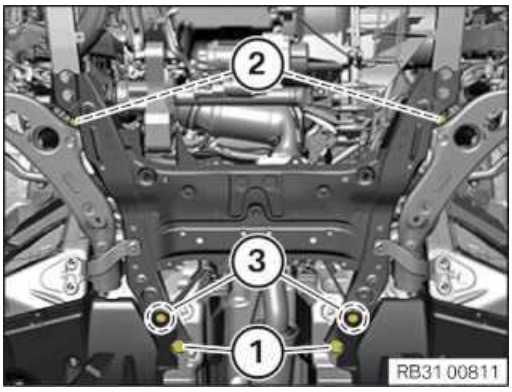


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



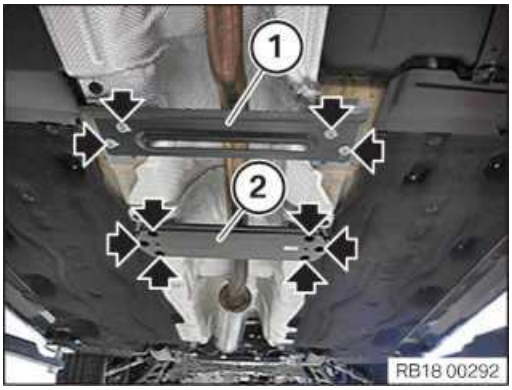
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



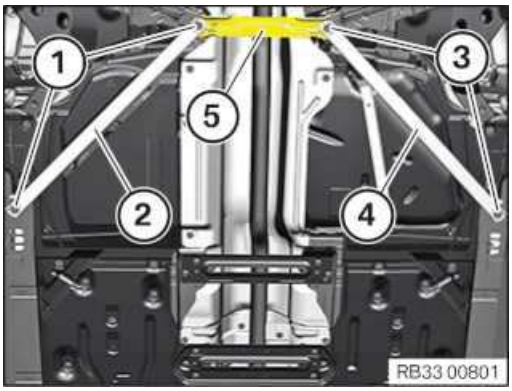
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

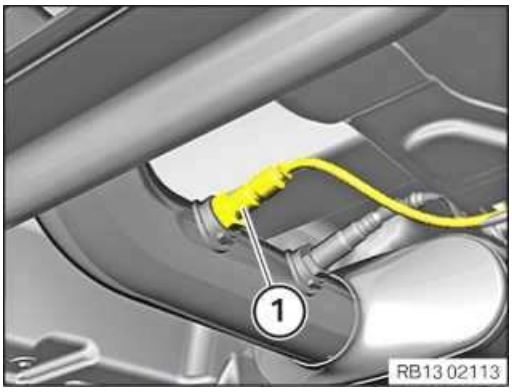
31 – Remove exhaust system

cardiagn.com

WARNING

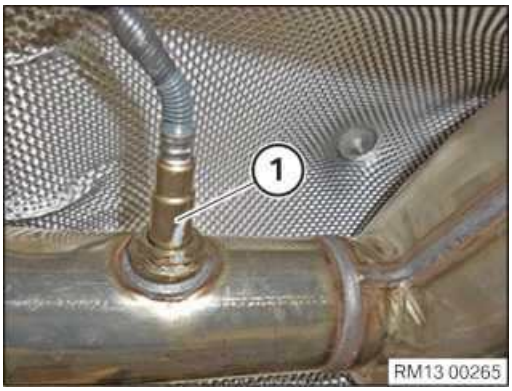
Hot surfaces.

Risk of burning!



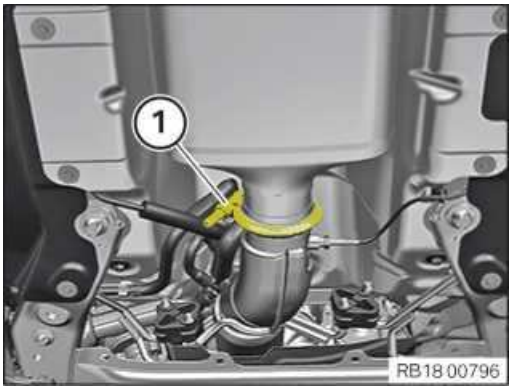
- Perform all work only on components that have cooled down.

CAUTION



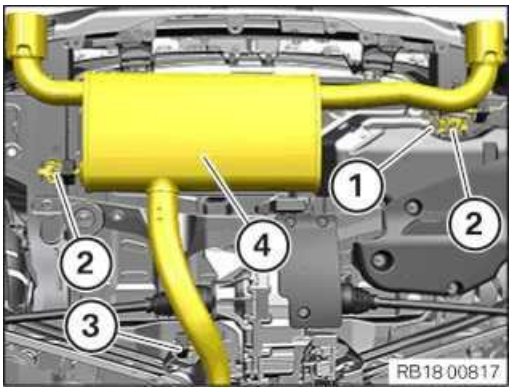
Heavy component.

Heavy components can lead to injury or damage.

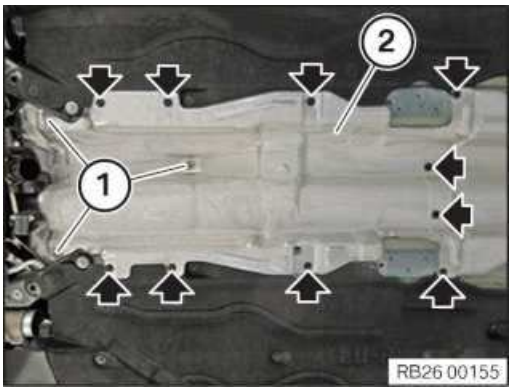


- Remove and install heavy components with the aid of another person/other persons.

- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

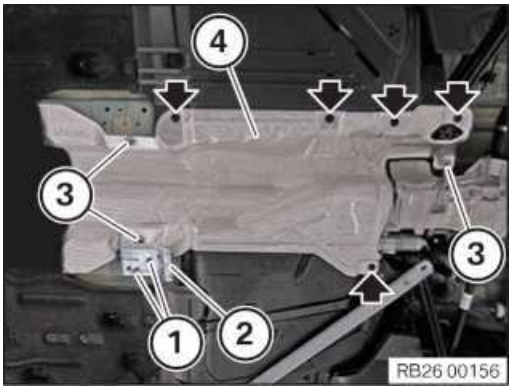


- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

cardiagn.com



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

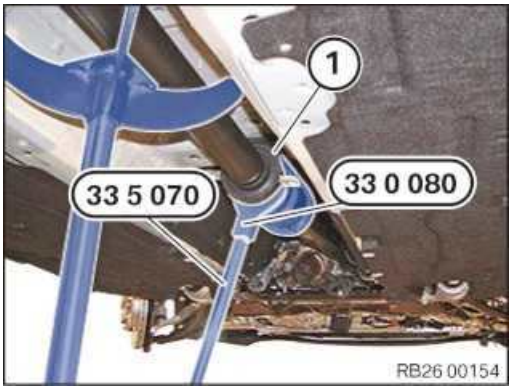
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

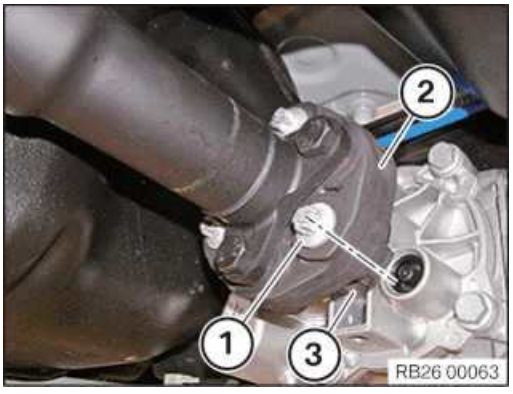
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.

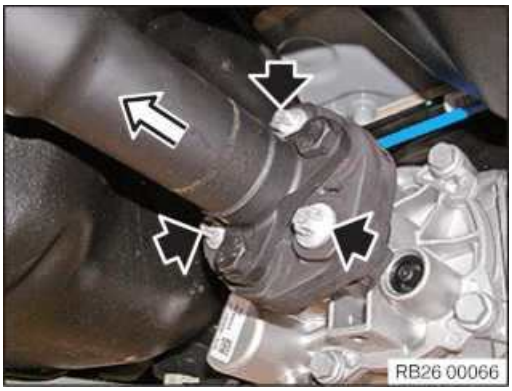


- Always support the propeller shaft (1) with a conventional jack.

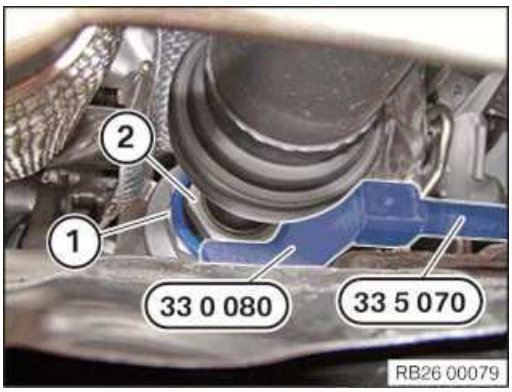
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



cardiagn.com

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

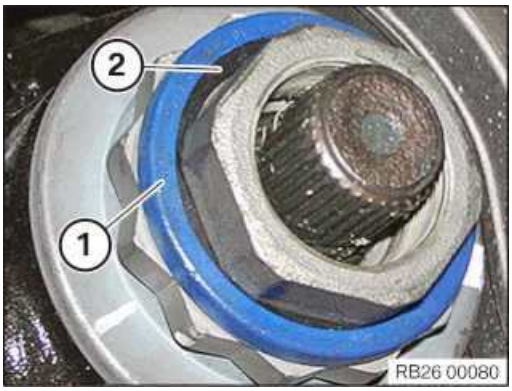
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

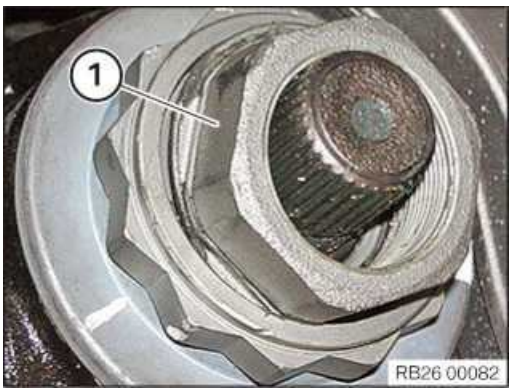
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

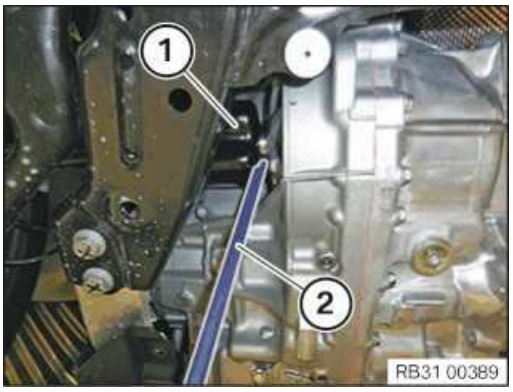
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

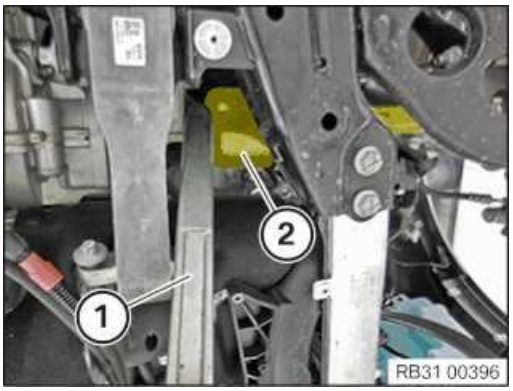
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



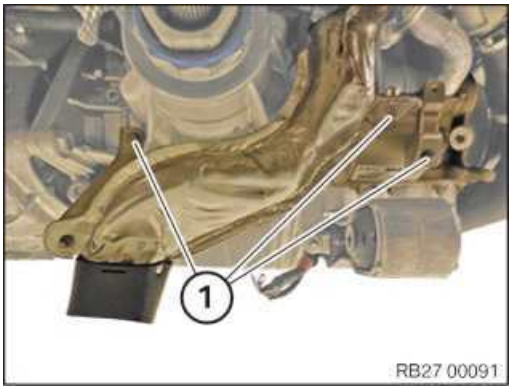
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



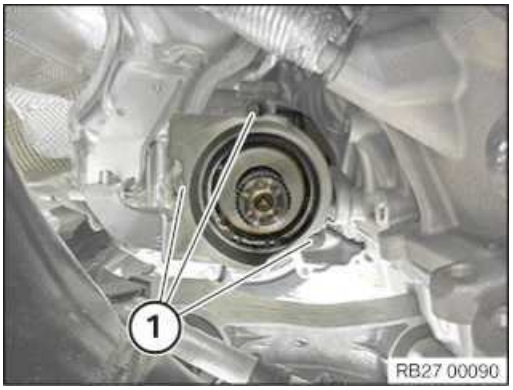
36 – Partially removing the left output shaft

cardiagn.com

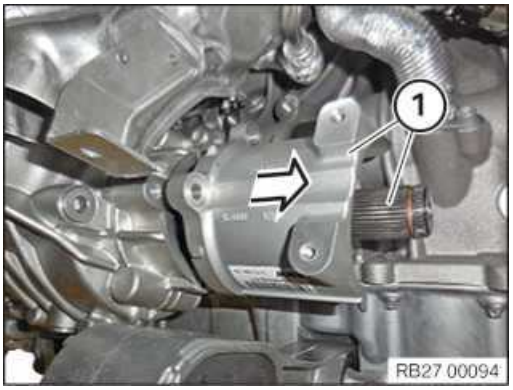


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

37 – Partially removing right output shaft



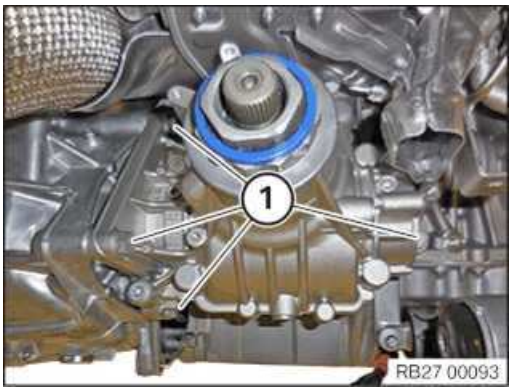
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).



38 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

cardiagn.com

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

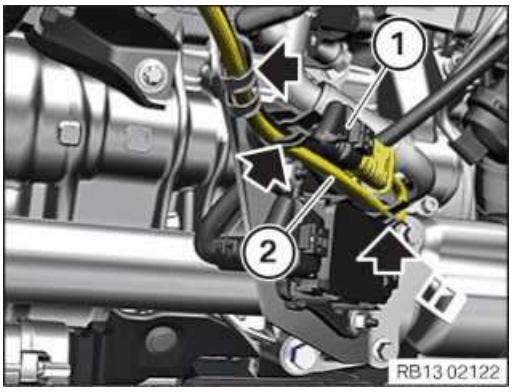
40 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

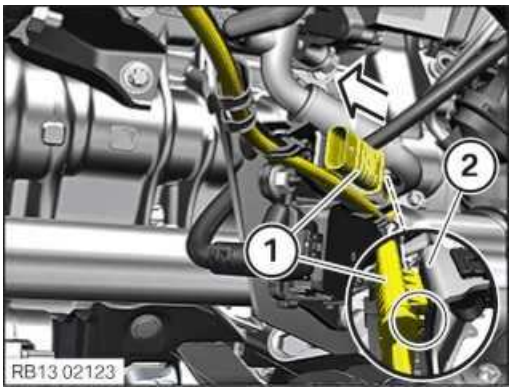
Risk of burning!

- Perform all work only on components that have cooled down.



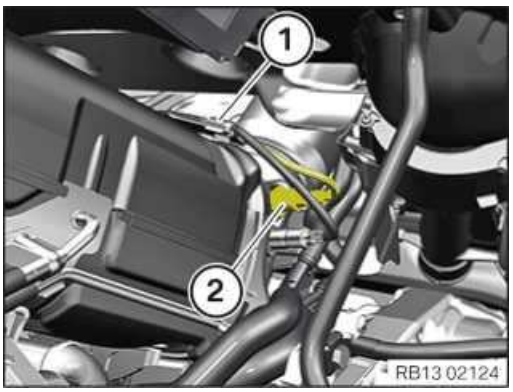
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

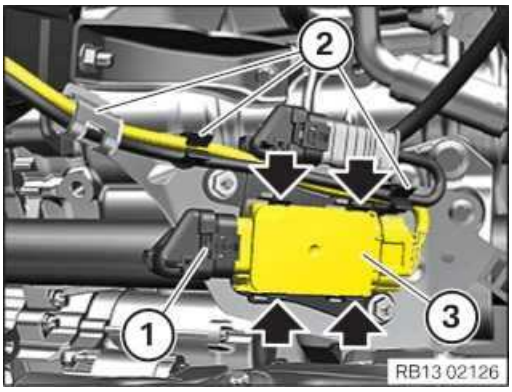
41 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

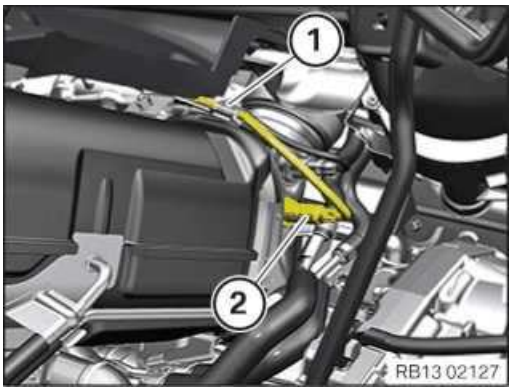
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
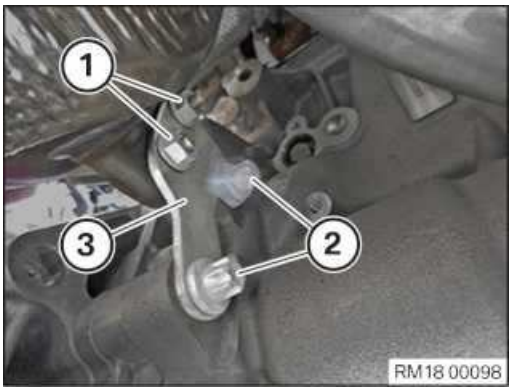
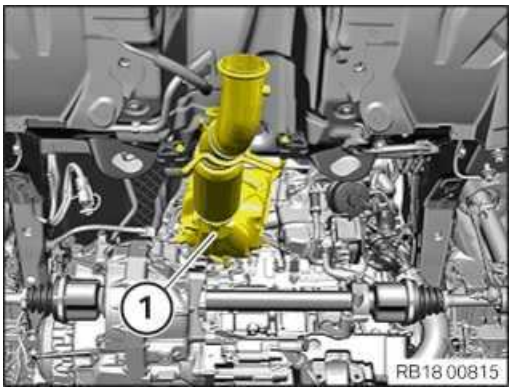
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

- Loosen nuts (1).



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

cardiagn.com

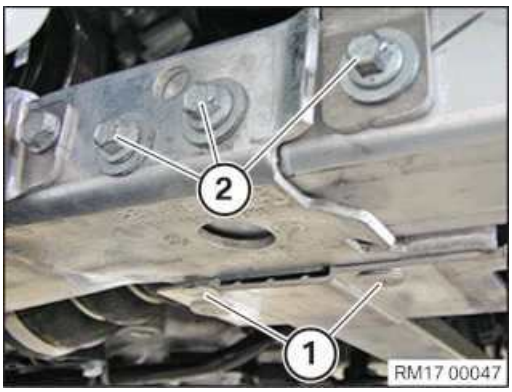
- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

- Feed out diesel particulate filter (1) toward the bottom and remove.

48 – Remove the washer fluid reservoir from the fixture

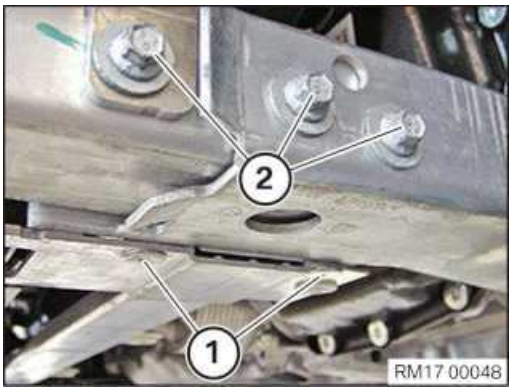
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



49 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

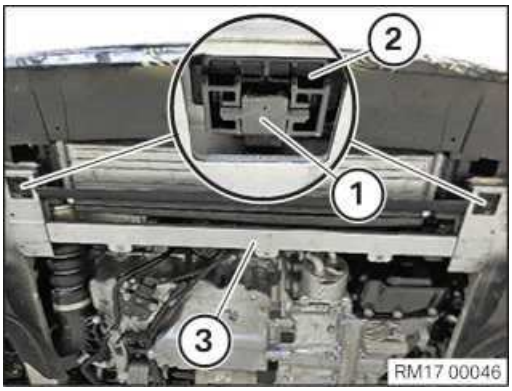
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

cardiagn.com

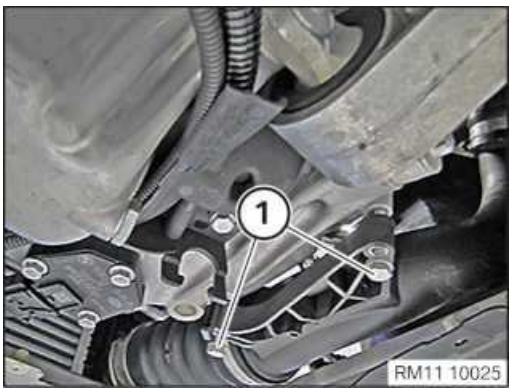
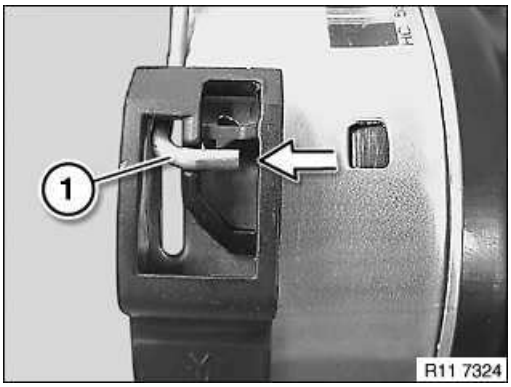
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

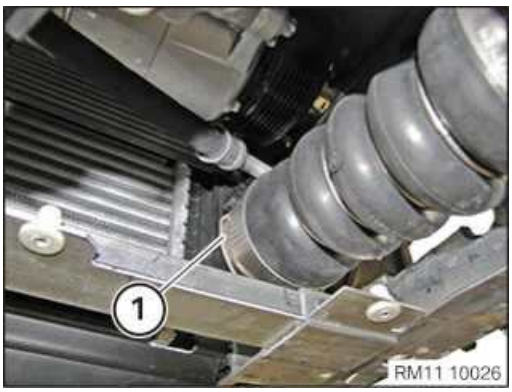


- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



- Release screws (1) of charge air duct on right oil sump.

cardiagn.com

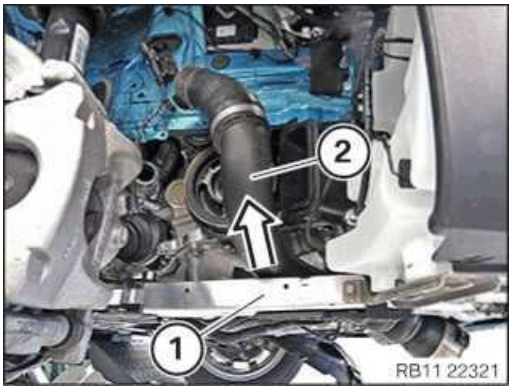
- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.

50 – Remove the heat shield from the exhaust turbocharger at the bottom

cardiagn.com

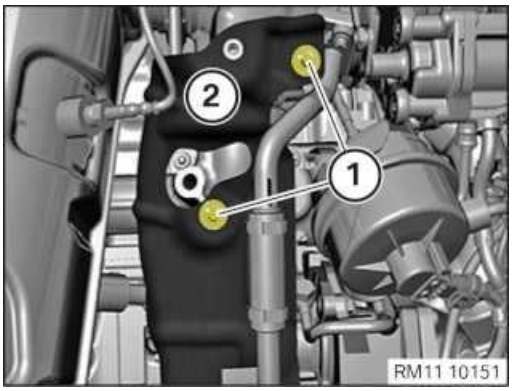
WARNING



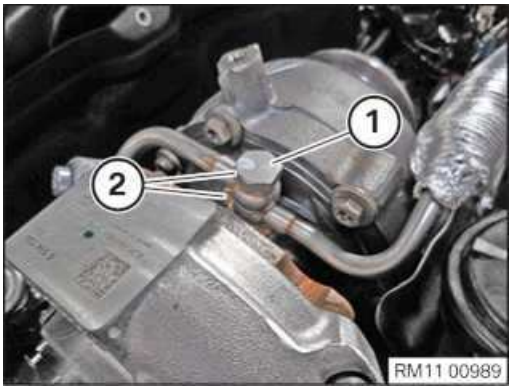
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

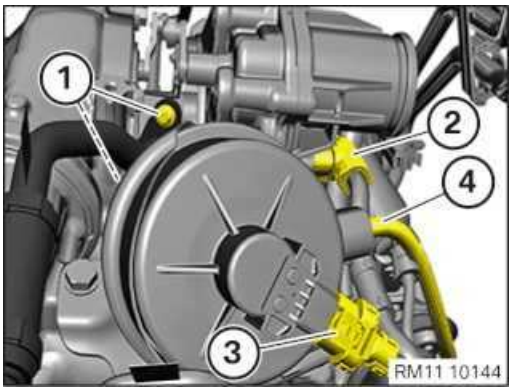
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



51 – Removing the low-pressure stage turbocharger

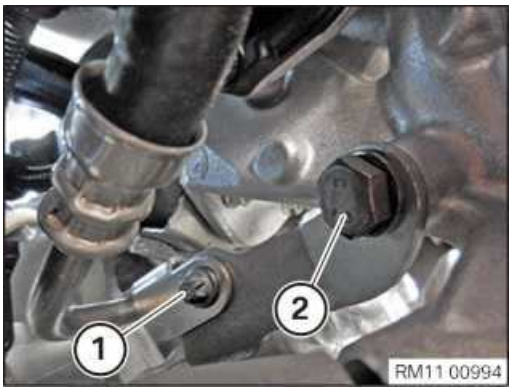
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

cardiagn.com

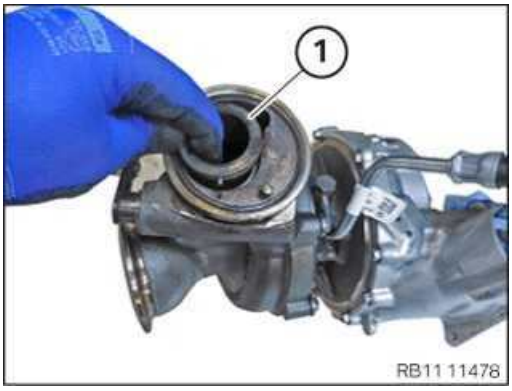
- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

52 – Removing the high-pressure stage exhaust turbocharger

cardiagn.com

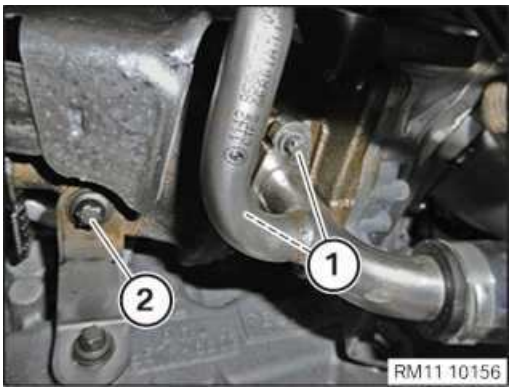
WARNING

Hot surfaces.

Risk of burning!

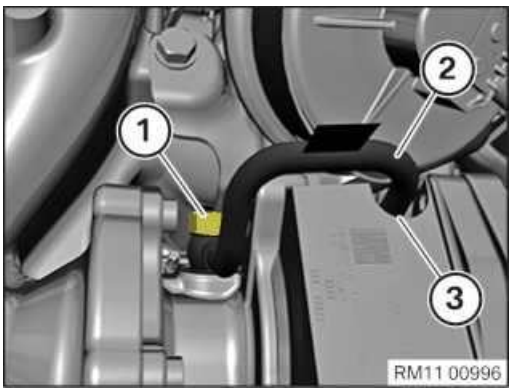


- Perform all work only on components that have cooled down.

CAUTION

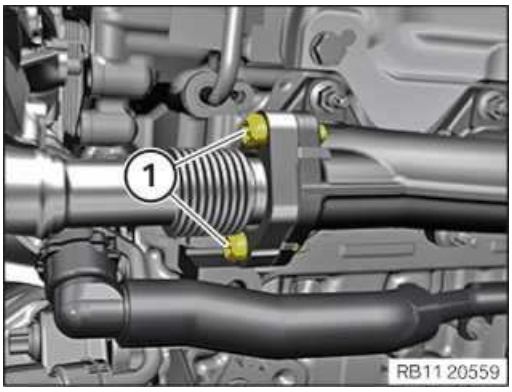
Heavy component.

Heavy components can lead to injury or damage.

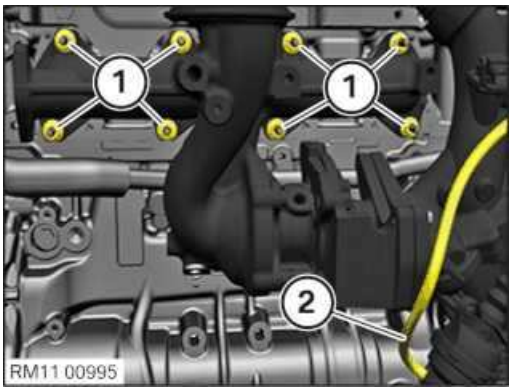


- Remove and install heavy components with the aid of another person/other persons.

- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.



- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

cardiagn.com

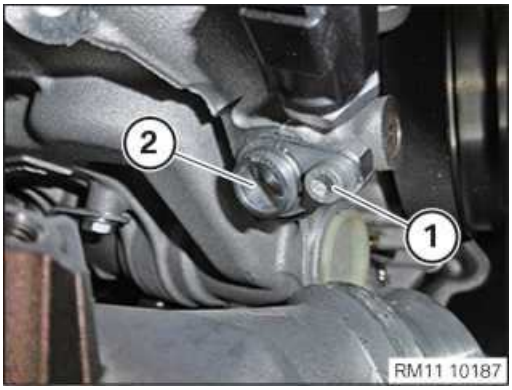
- Loosen screws (1).



- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

MAIN WORK

53 – Removing the central piston cooling relay valve

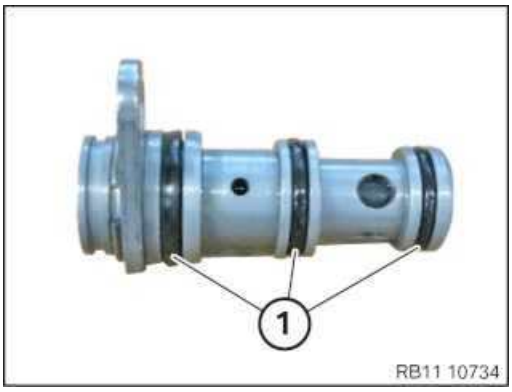
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

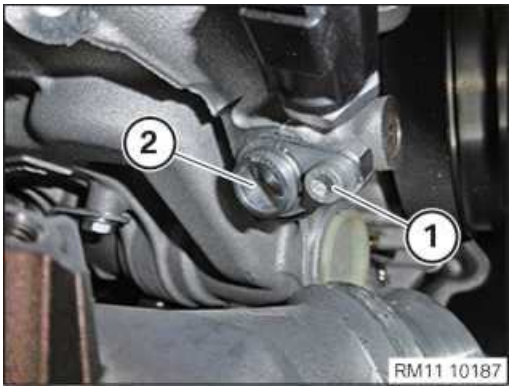
- Remove the relay valve (2) for the central piston cooling.

54 – Installing the relay valve for central piston cooling

cardiagn.com

- Renew the seals (1) with the special tool **0 496 714 (00 9 030)**.

  Parts: Seals



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Clean sealing surface.

- Install the relay valve (2) for central piston cooling.
- Tighten down screw (1).

Central piston cooling valve to crankcase

M6x16		Tightening torque	8 Nm

POSTPROCESSES

55 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

56 – Installing the high-pressure stage exhaust turbocharger

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

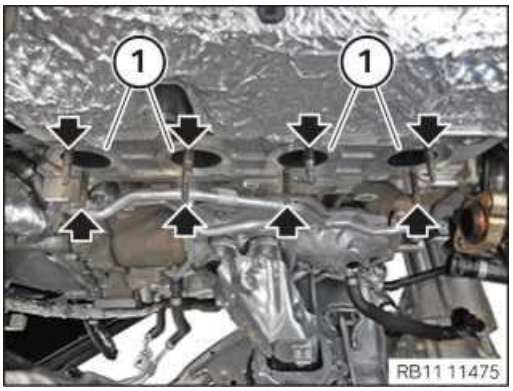
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE



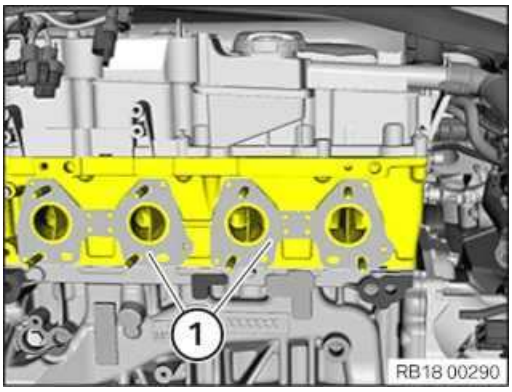
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

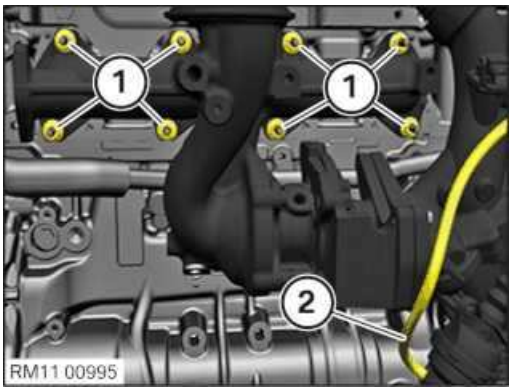
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.

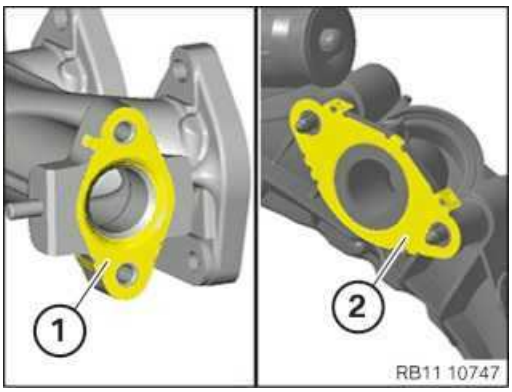
- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.



cardiagn.com

- Renew gasket (1).

  Parts: Gasket

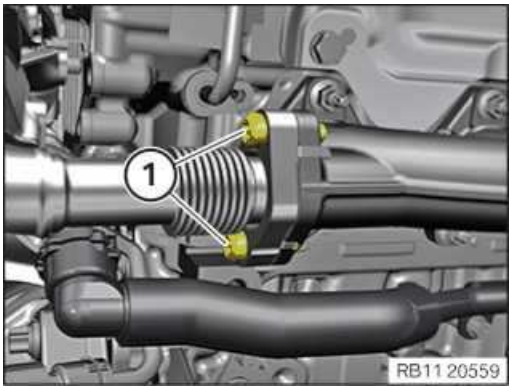


- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

  Parts: Nuts

- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

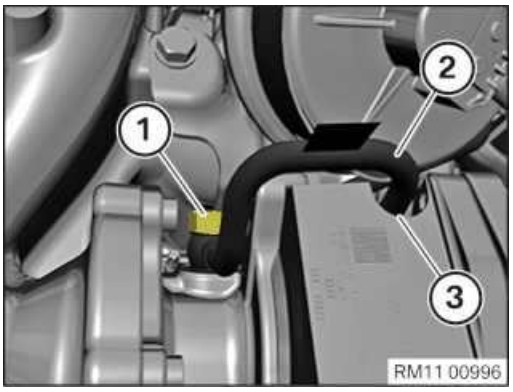
  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold



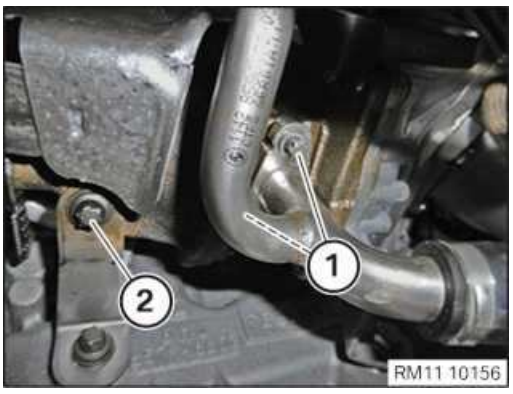
M8x28	Replace screws	Tightening torque	32 Nm

- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

cardiagn.com

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

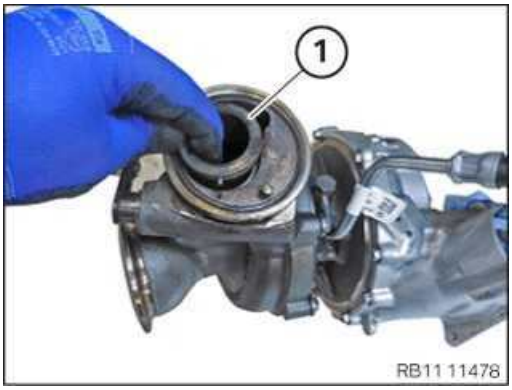
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

57 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

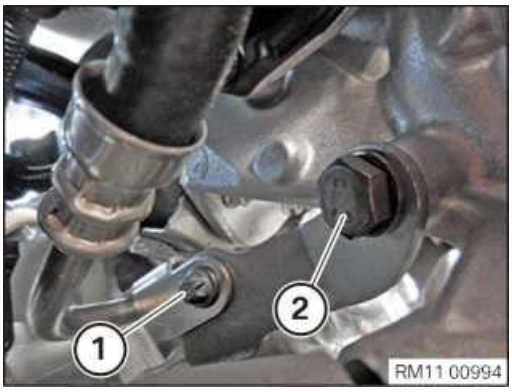
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

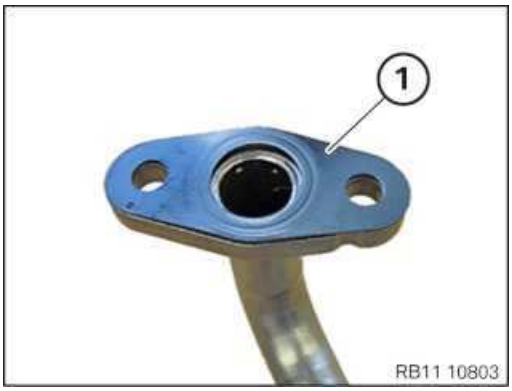
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

cardiagn.com

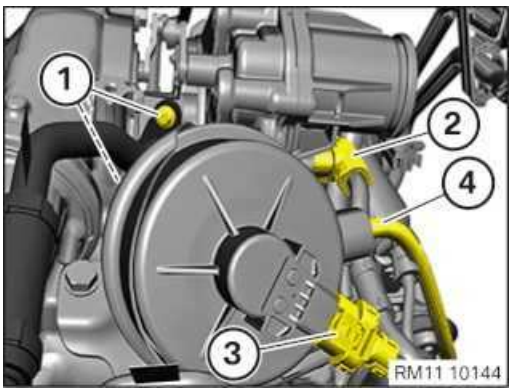
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

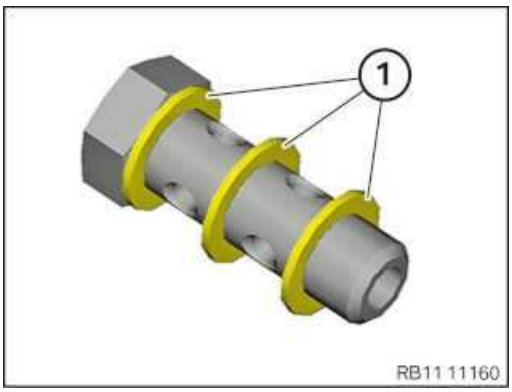


Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

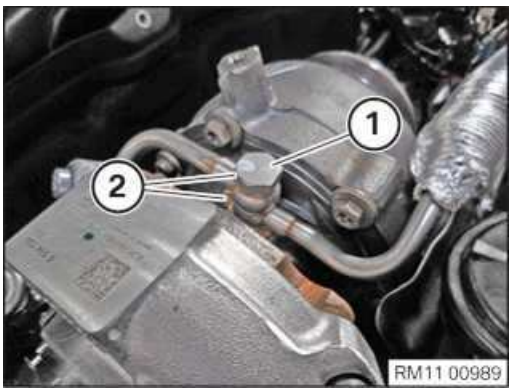
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

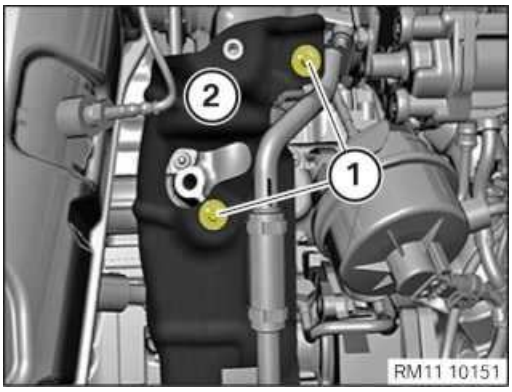
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

58 – Installing heat shield on exhaust turbocharger at bottom

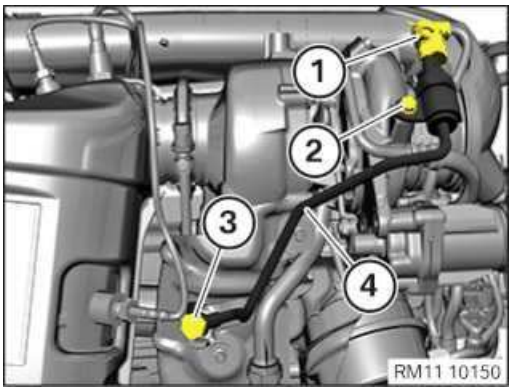


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

- Tighten down screw (2).

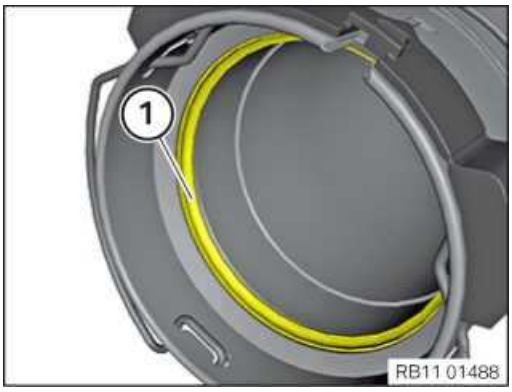
Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

59 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler



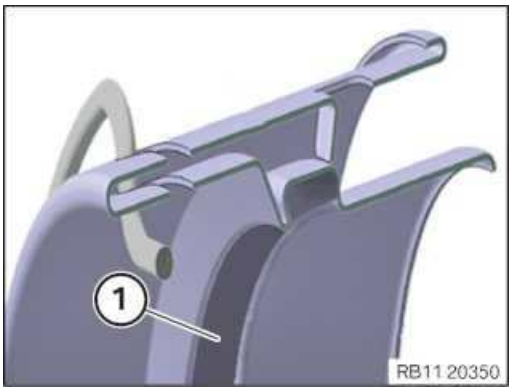
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

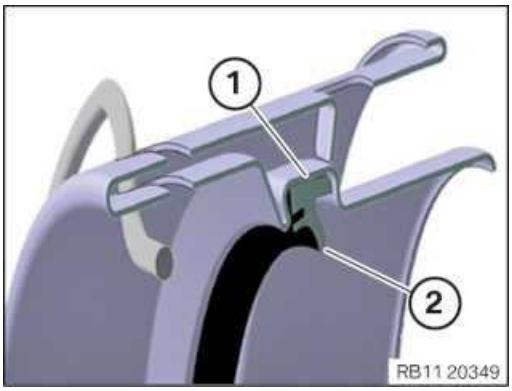
cardiagn.com



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

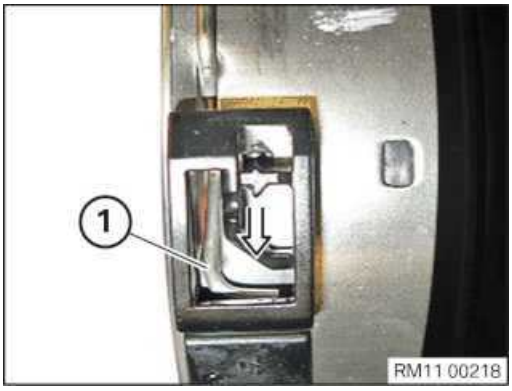


TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

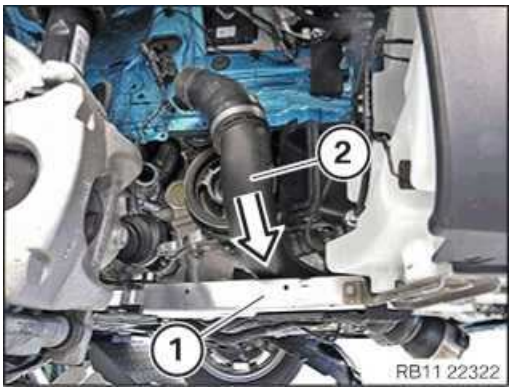
  The gasket groove (1) must be clean.



- Renew gasket.

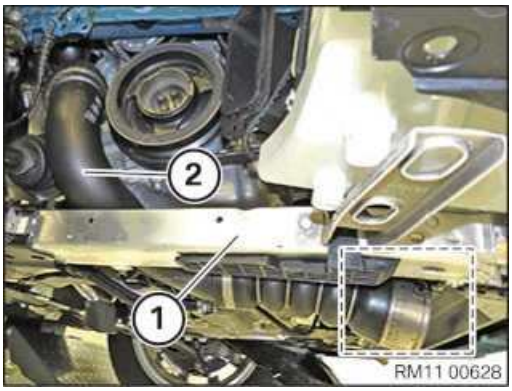
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

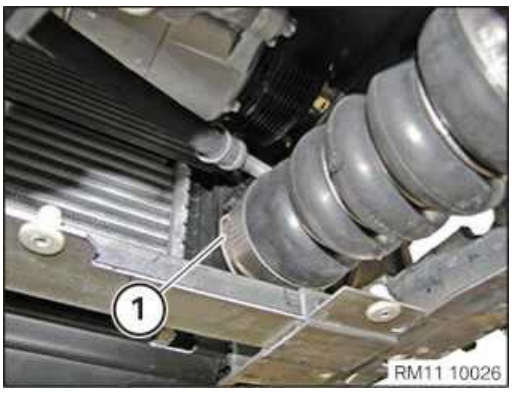


Incorrect assembly is possible. Ensure correct installation position.

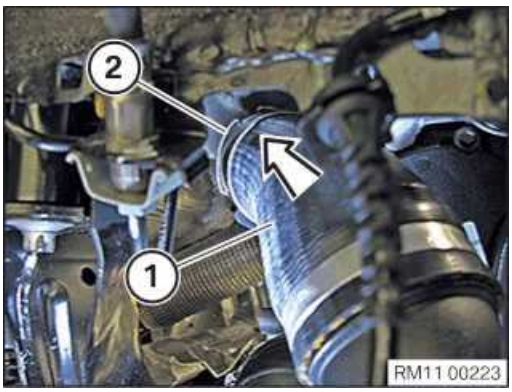
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

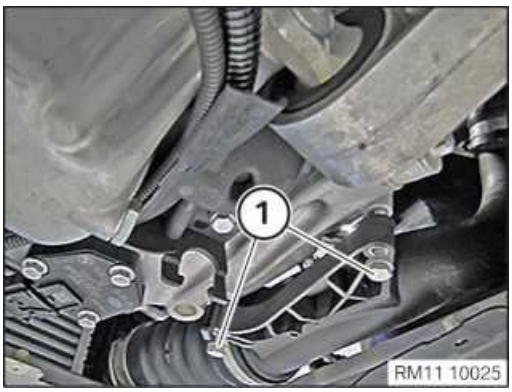


cardiagn.com



- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.

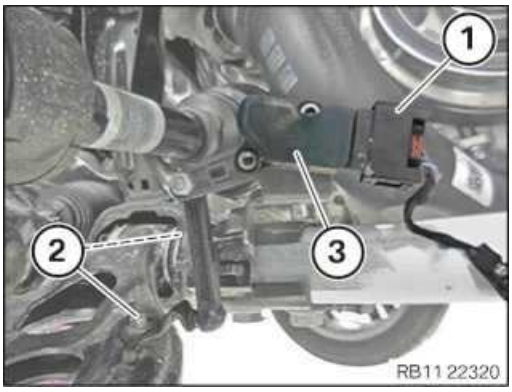
- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

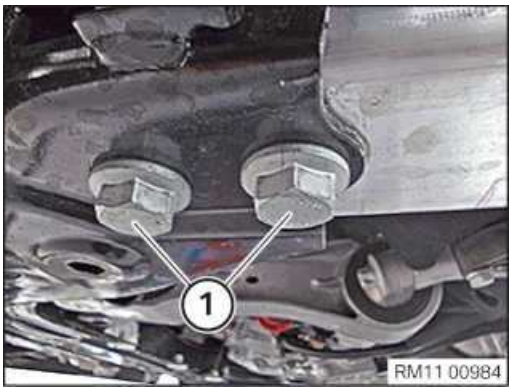


- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm

cardiagn.com



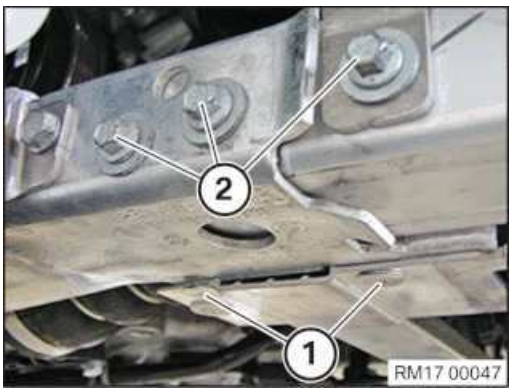
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

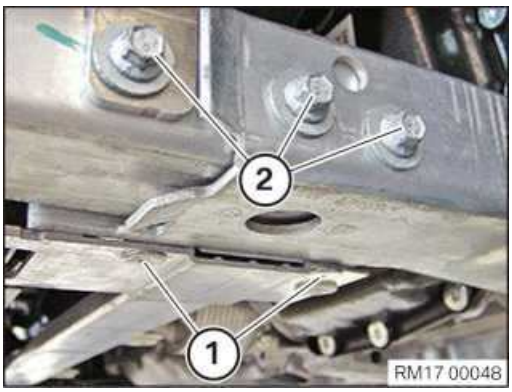


- Tighten the screws (1) on the adapter of the front axle support.

Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

Cross connection to front axle support

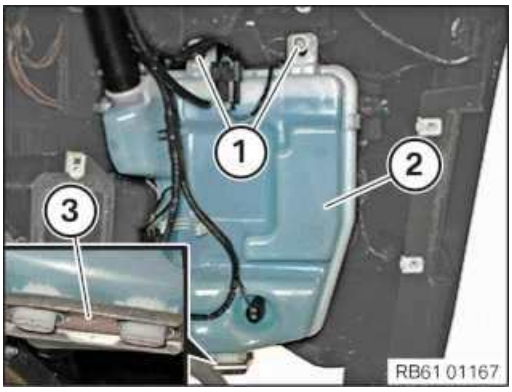
M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.

Cross connection to front axle support



M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

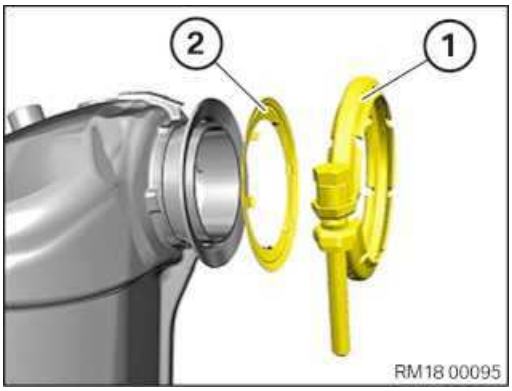
60 – Install the washer fluid reservoir in the fixture

cardiagn.com

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm



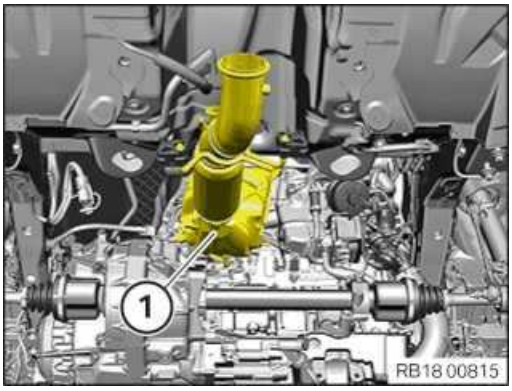
61 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

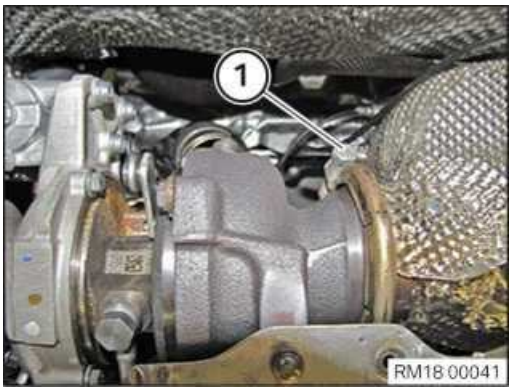
- Remove and install heavy components with the aid of another person/other persons.



- Renew the V-clip (1).

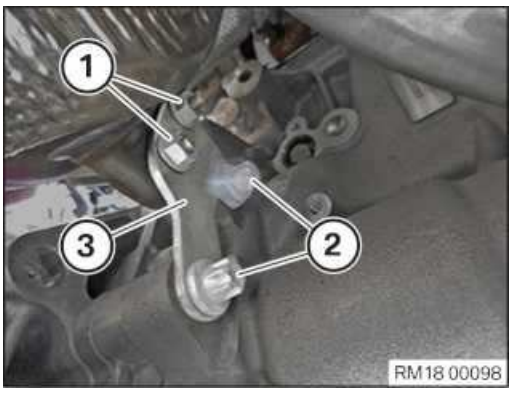
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

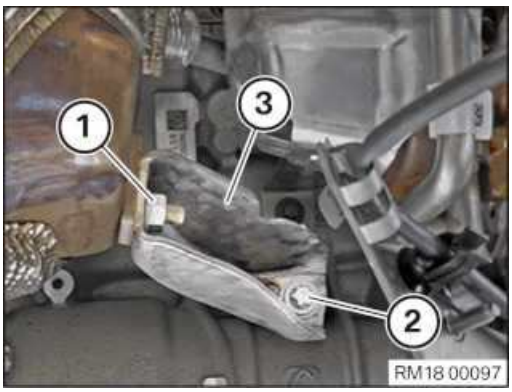


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



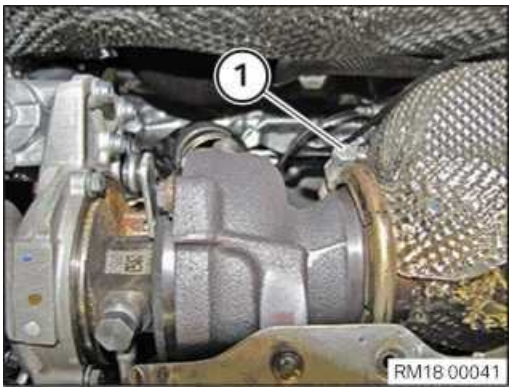
cardiagn.com



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.



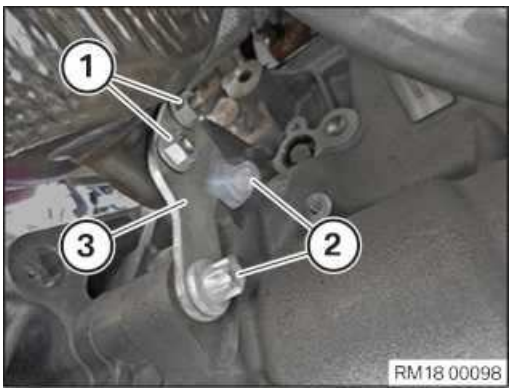
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

- Remove fitting aid (1) for the flexible tube.

cardiagn.com

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



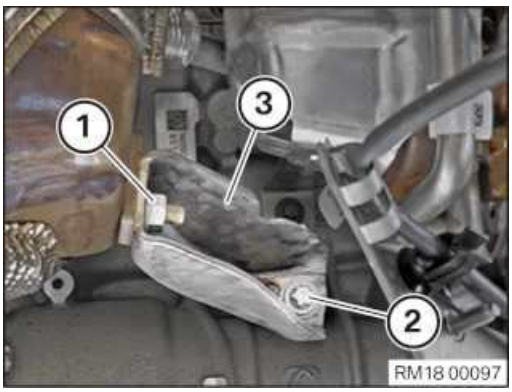
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

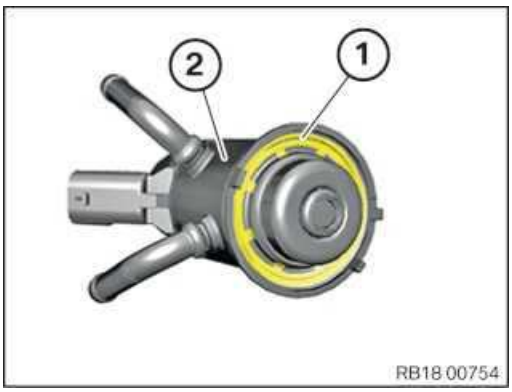
M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screw (2).

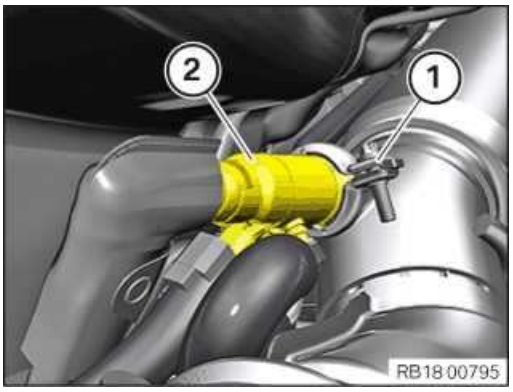


Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

Diesel particle filter to holder

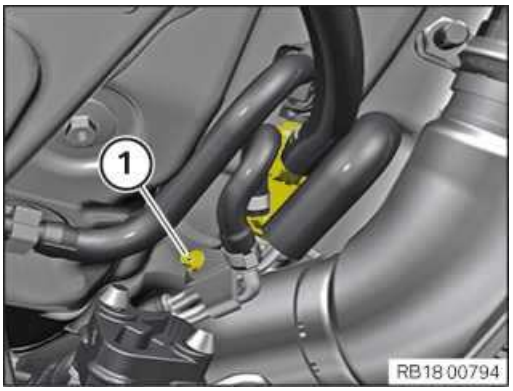


M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

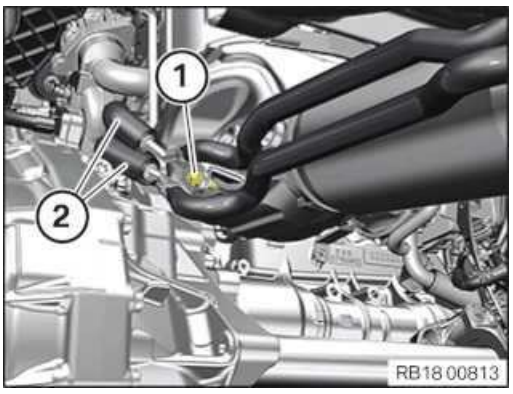
cardiagn.com



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

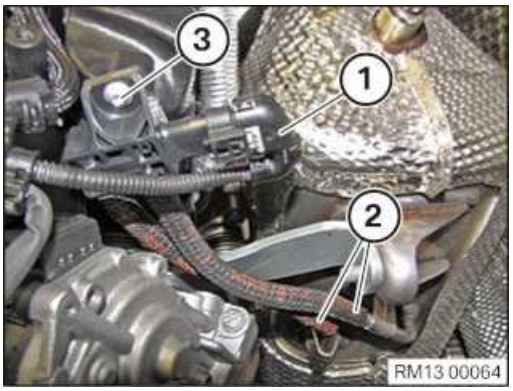


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▸ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

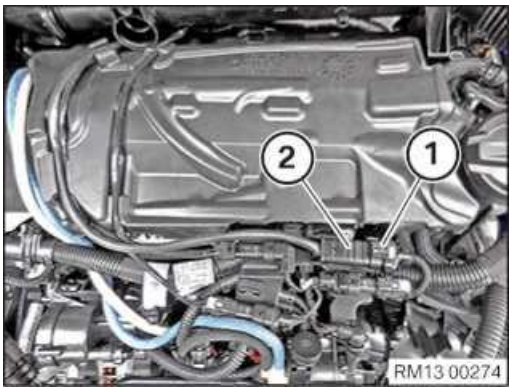
cardiagn.com

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

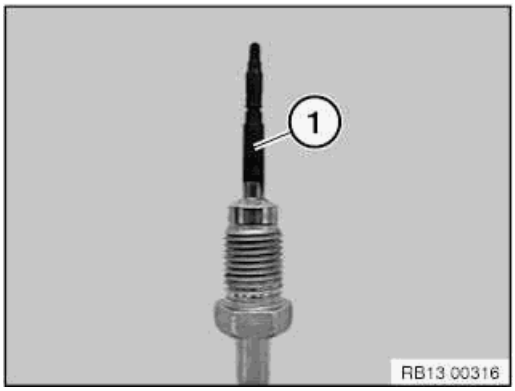
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).



For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

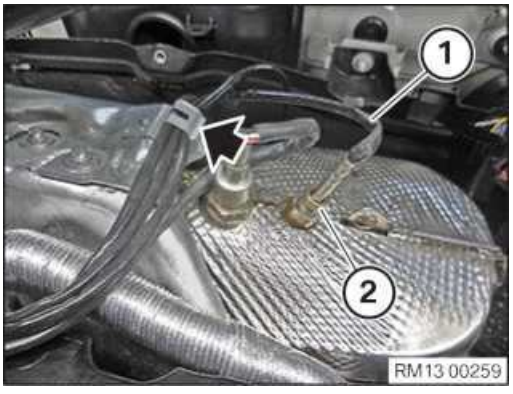


Control sensor		Tightening torque	50 Nm

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

63 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

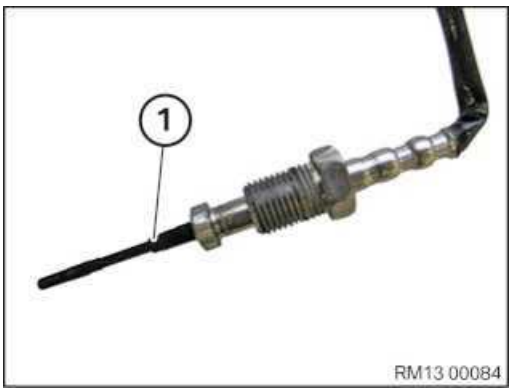
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

cardiagn.com

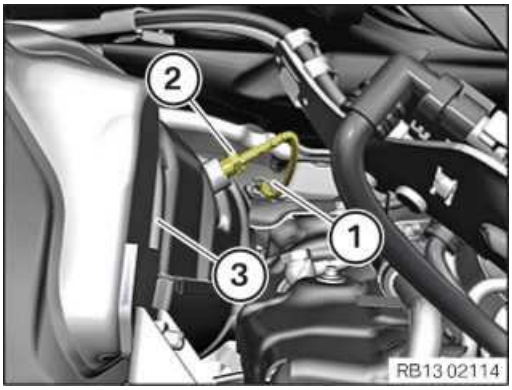
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.



64 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

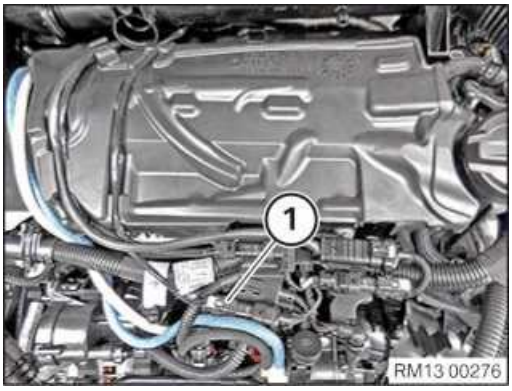


Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Make sure the gauge tip (1) is not damaged during installation.

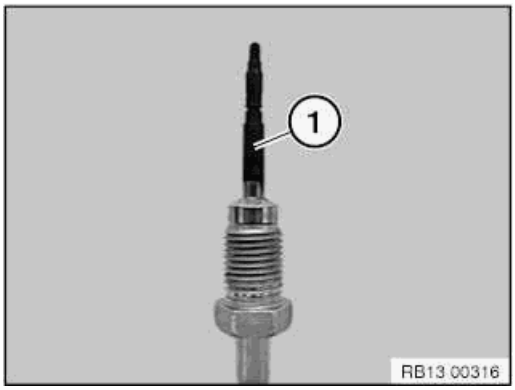


- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

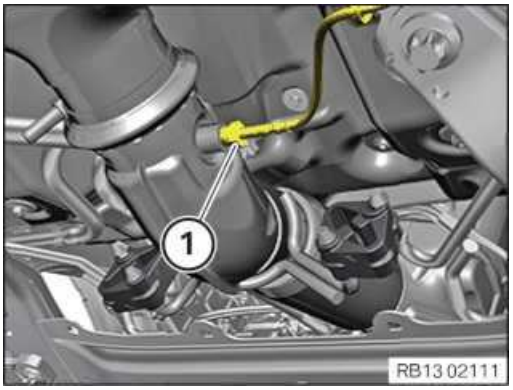


- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

65 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com



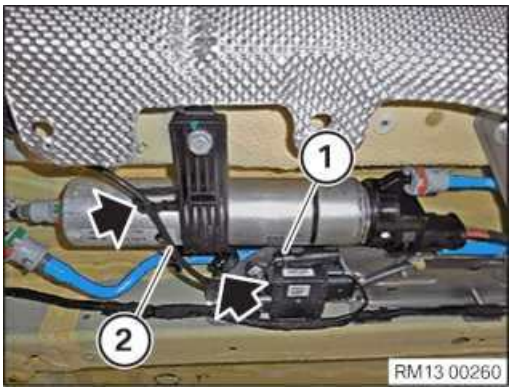
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

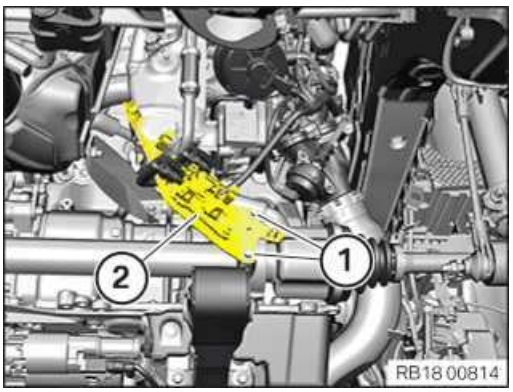
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

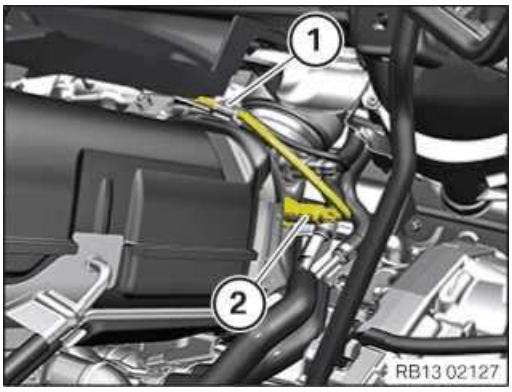


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

66 – Install holder for oxygen sensor

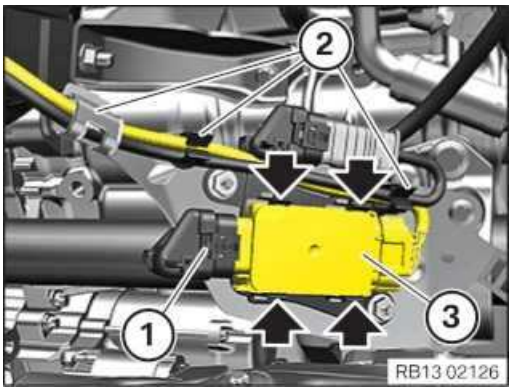


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

67 – Installing the nitrogen oxide sensor before SCR catalytic converter



cardiagn.com

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

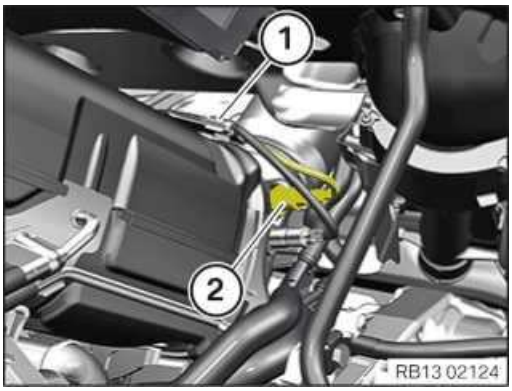
Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

68 – Install the monitoring sensor



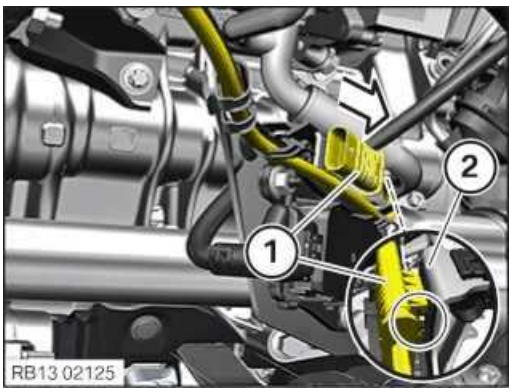
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

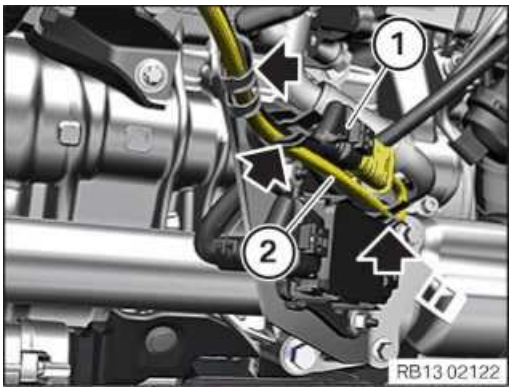
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

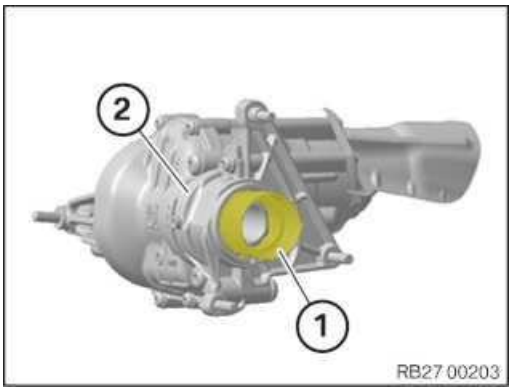
Sensor		Tightening torque	50 Nm



- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



cardiagn.com

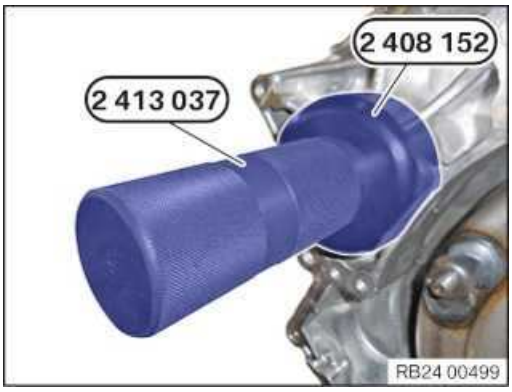
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

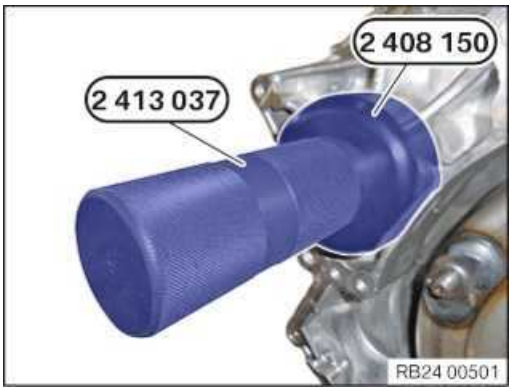
69 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

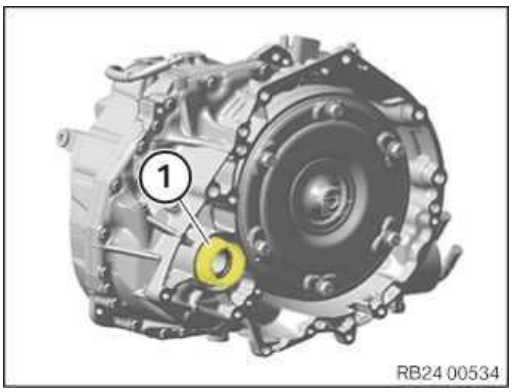
- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.



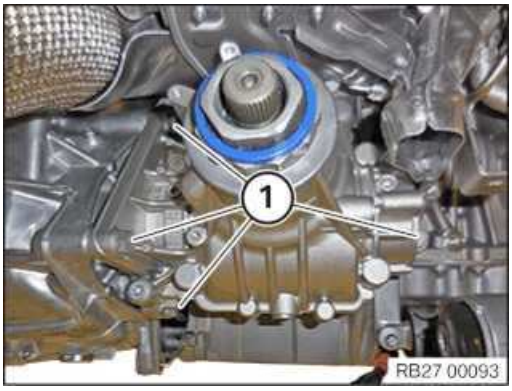
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



cardiagn.com

- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

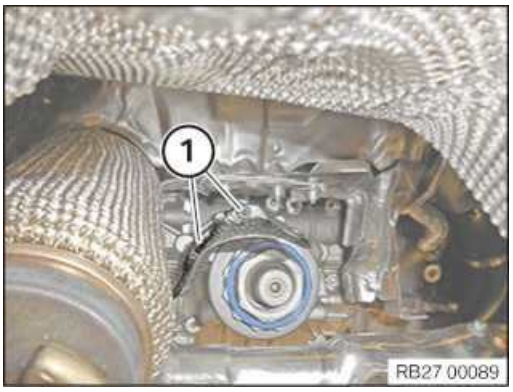


- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754



- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

cardiagn.com

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

Technically suitable transfer box and electrical transmission oils	

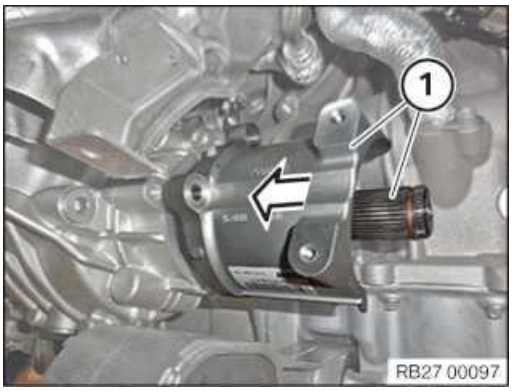
Main group 27

- Tighten the oil filler plug (1).

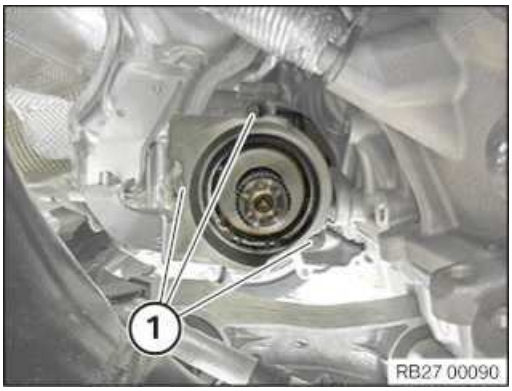
Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm

70 – Install the intermediate shaft with the support tube



- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

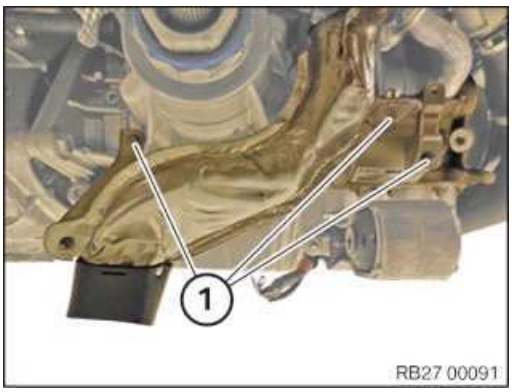


Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

cardiagn.com

- Install the intermediate shaft with support tube (1) in the transfer box.



- Position screws (1).

Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

- If installed: Install air duct.
- Tighten the screws (1).

71 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

72 – Installing right output shaft partially

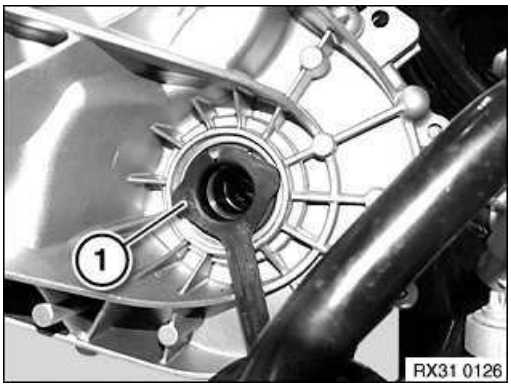
- Renew the circlip (1).

  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

73 – Partially installing the left output shaft

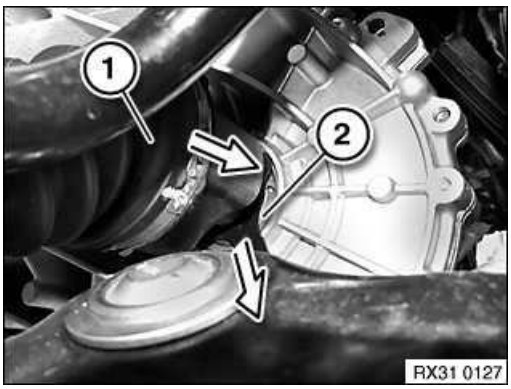
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



cardiagn.com

- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

74 – Install propeller shaft.

CAUTION

Component with heavy weight.

Danger of injury!

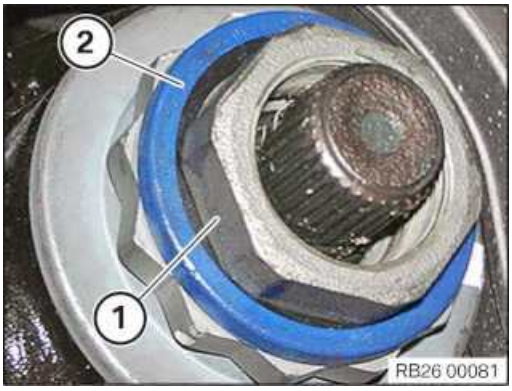
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.



cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

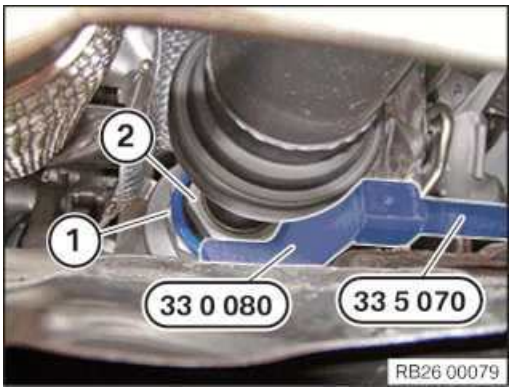
- Renew recessed nut (1).

  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.

- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.



- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

cardiagn.com

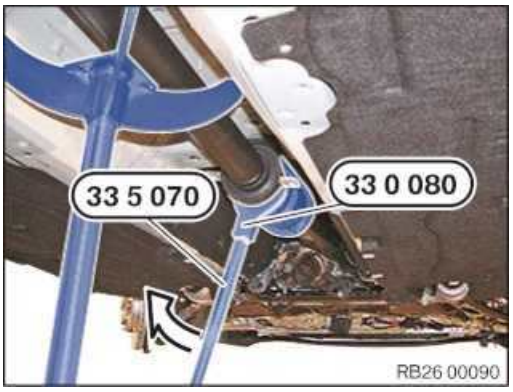
RISK OF DAMAGE

Damage to the transfer box.



Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

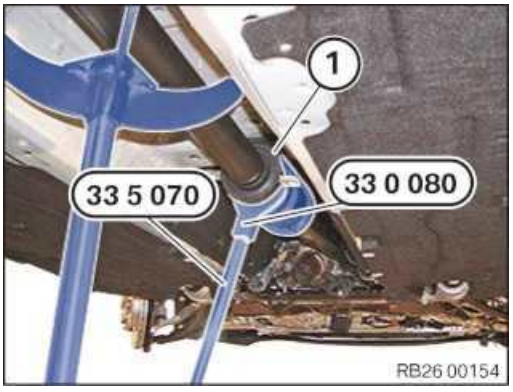
  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

cardiagn.com

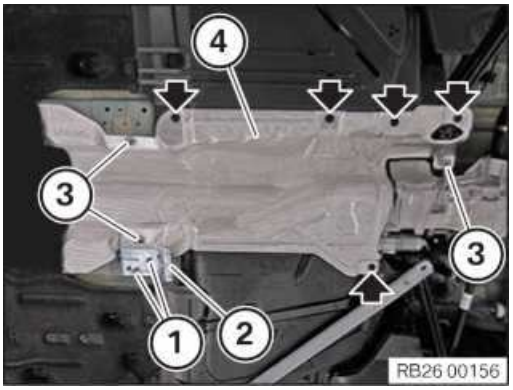
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).



Centre mount to body

M8		Tightening torque	19 Nm

- Guide the special too l out between the front and rear propeller shaft and remove.

75 – Installing the rear heat shield

- Insert and install the heat shield (4).
- Tighten screws (arrows).

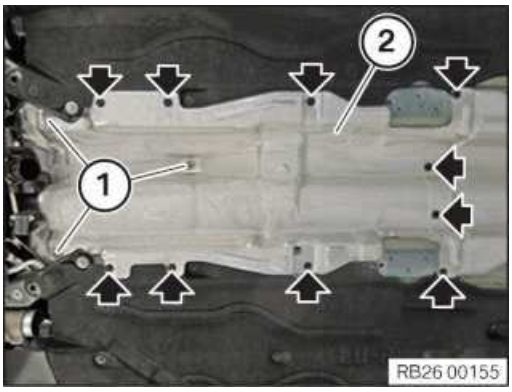
Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm



- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

76 – Install the front heat shield

cardiagn.com

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

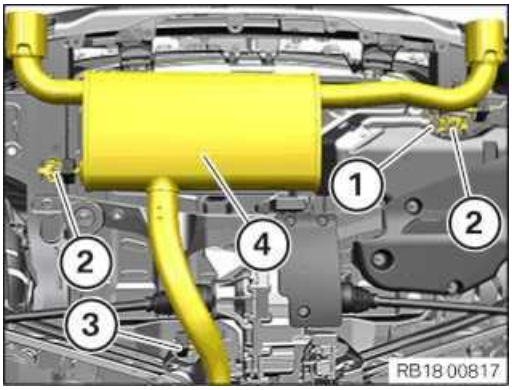
Bolts/nut		Tightening torque	3 Nm

77 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!



- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

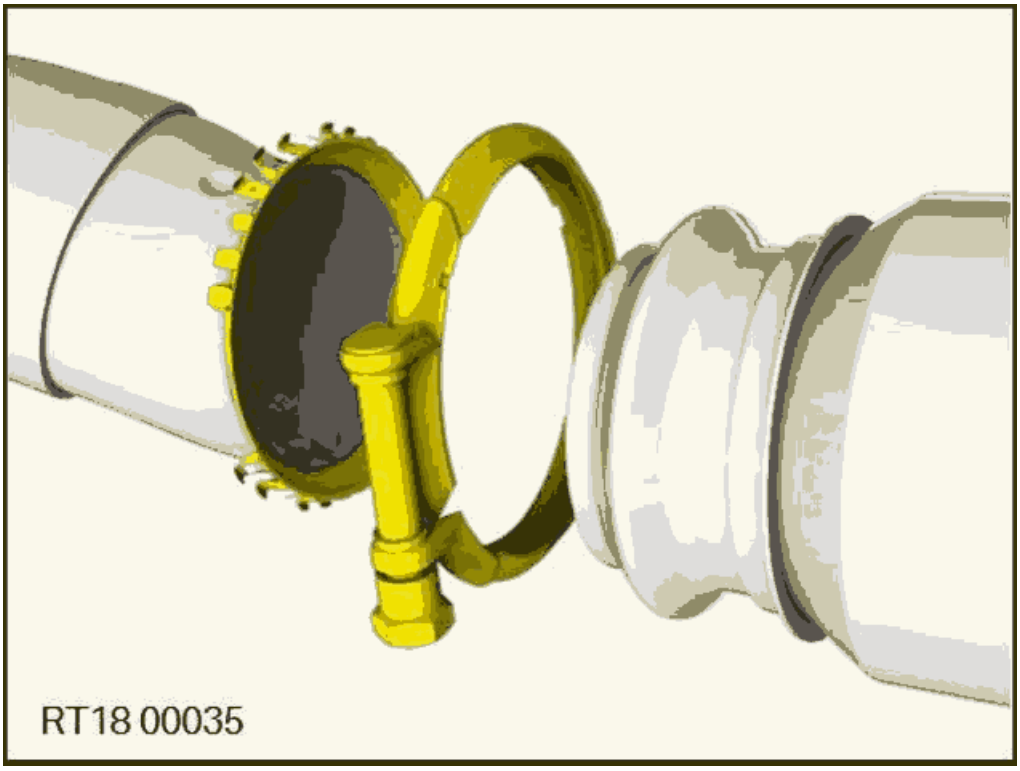
  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

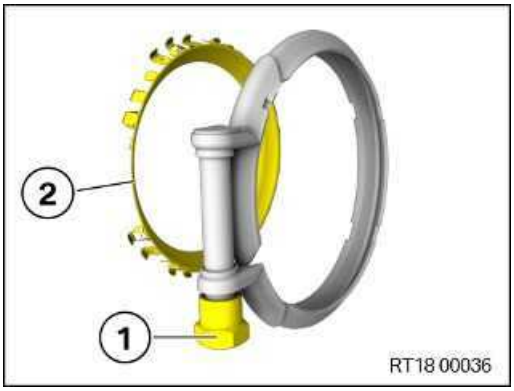
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body



Hexagon screw M8x30		Tightening torque	19 Nm



- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

cardiagn.com

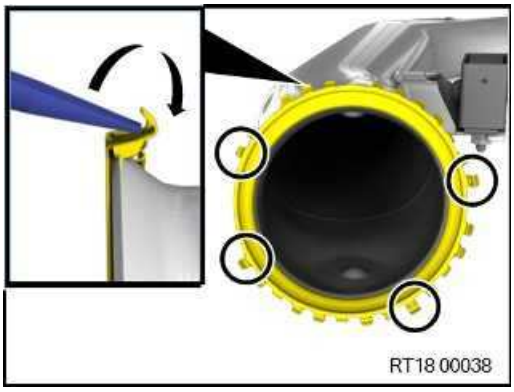
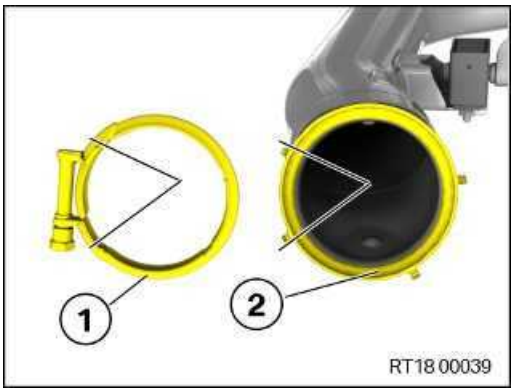
V-band clamp



- Unscrew the nut (1) and remove the sealing ring (2).



- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

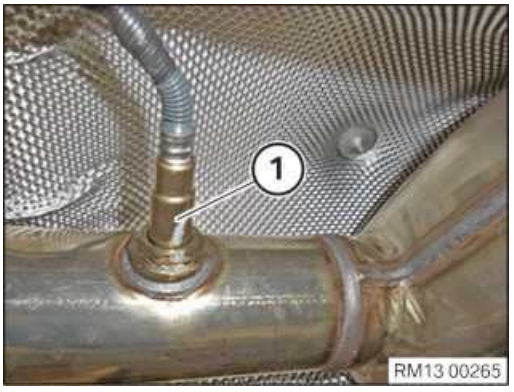
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

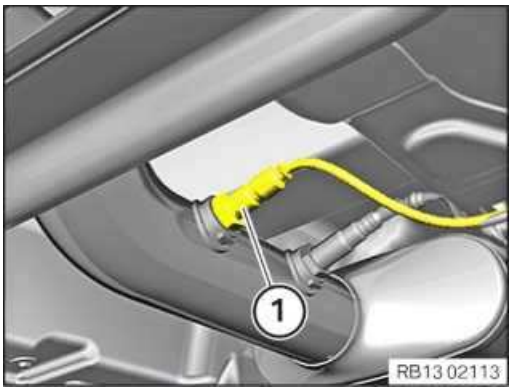


- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

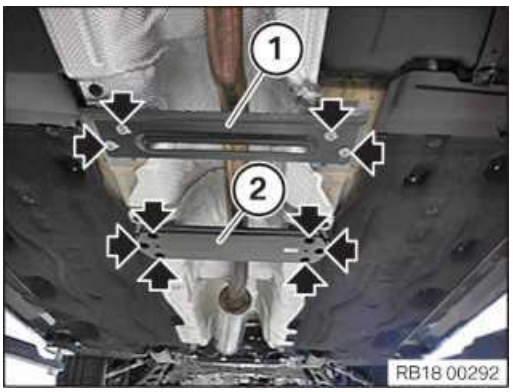
78 – Install the cross-member with torsion struts

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

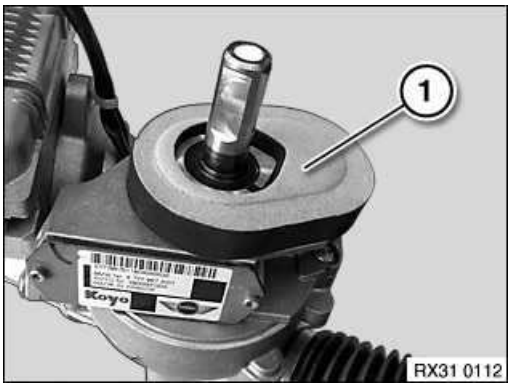
M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

79 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

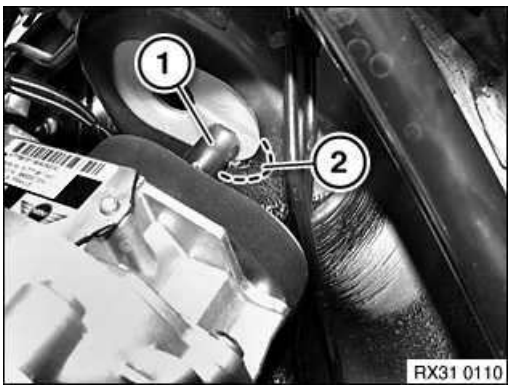
M10x18		Tightening torque	56 Nm



- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm



80 – Mount and secure the complete front axle

cardiagn.com

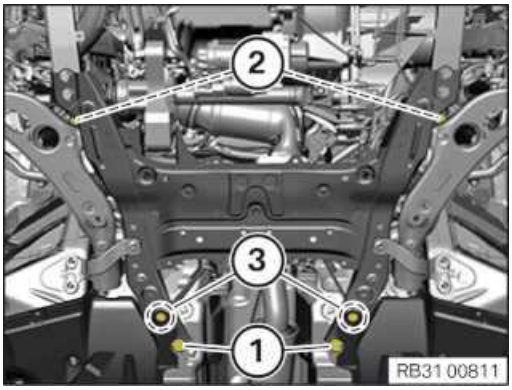
- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

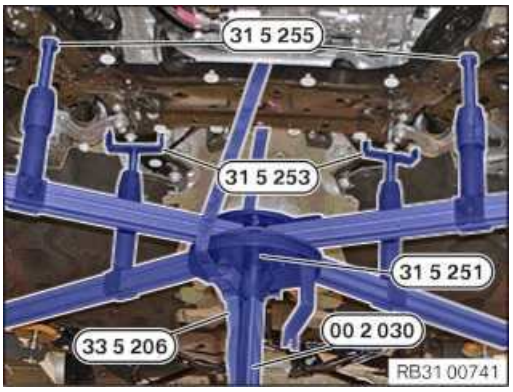
  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

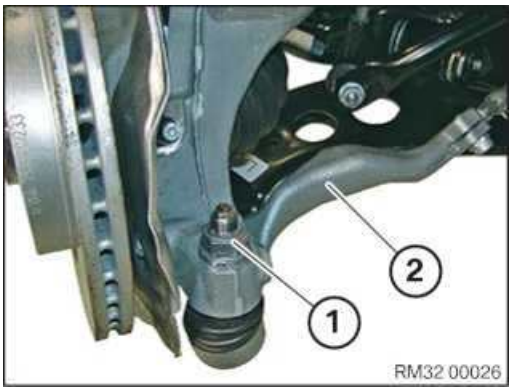
- Tighten down screws (2).

Front axle support, front to body



M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



Underbody protection to body

Screw		Tightening torque	3 Nm

cardiagn.com

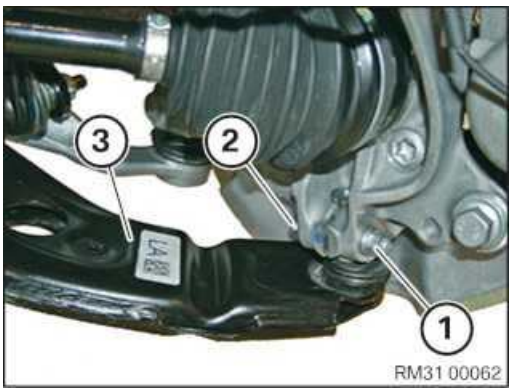
- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

81 – Install the mounted parts on the front axle support

cardiagn.com

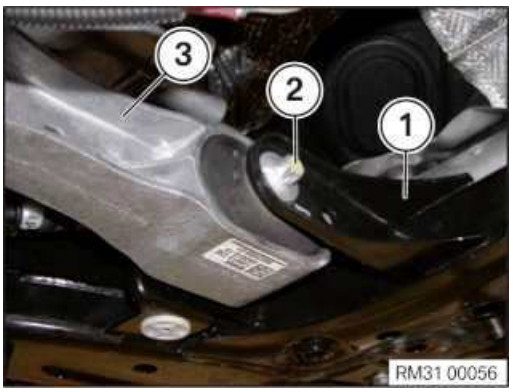
NOTICE

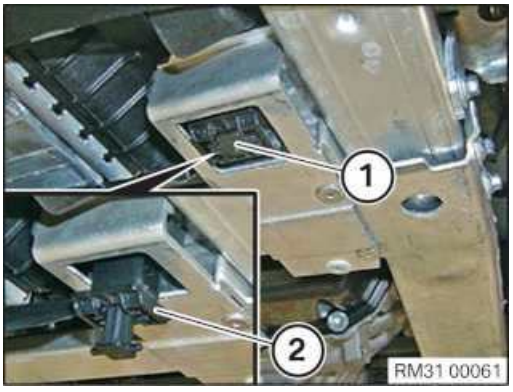


Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

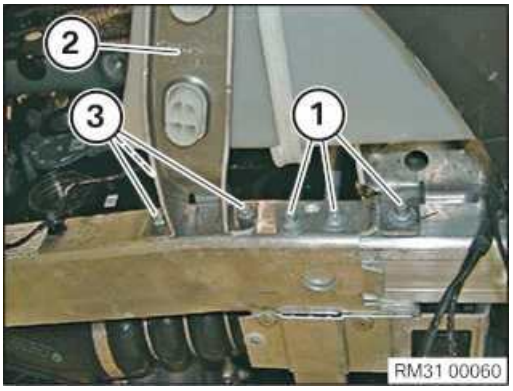
Holder, wishbone rubber mount, to body



M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

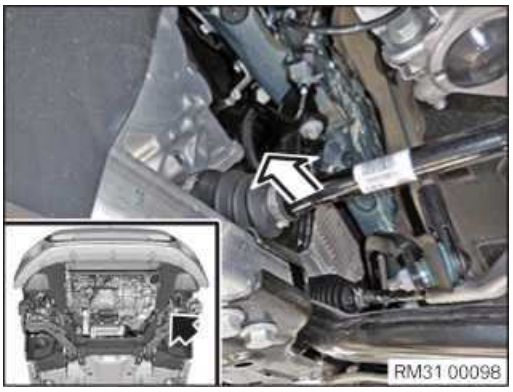
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE



Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

cardiagn.com

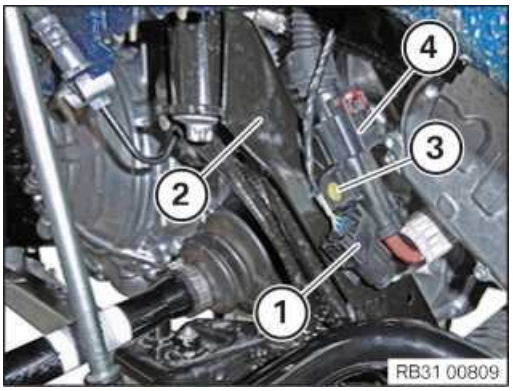
- To connect the connector (see the following step): Connect the connector with the right hand.

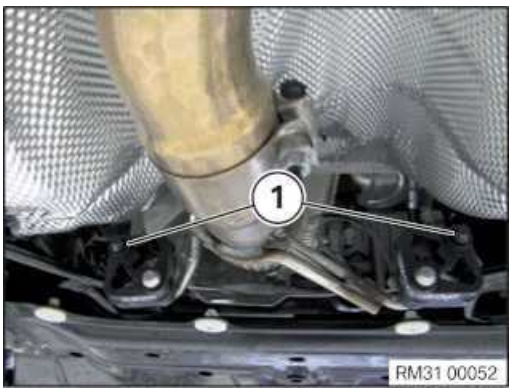
  The connectors can be accessed via the left output shaft.



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

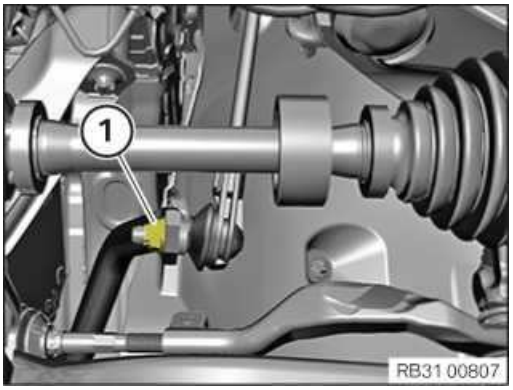
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

83 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount



- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

cardiagn.com

84 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

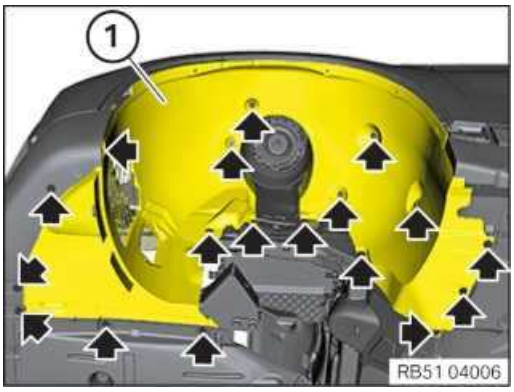
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

85 – With right installation: Securing the cable for the ride height sensor

- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.



86 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

cardiagn.com

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

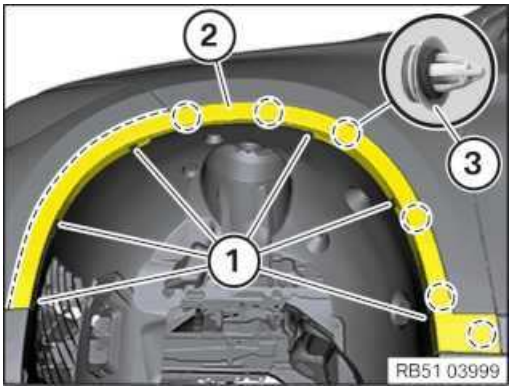
Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

87 – Installing both front wheels

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

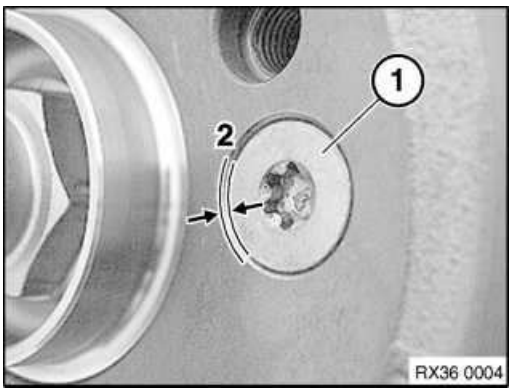
▸ **Mounting the wheel**

▹ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.



- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

- Renew mounting bolt (1).

  Parts: Mounting bolt
- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

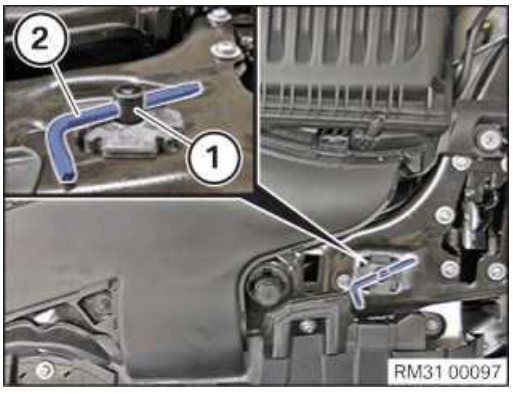
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



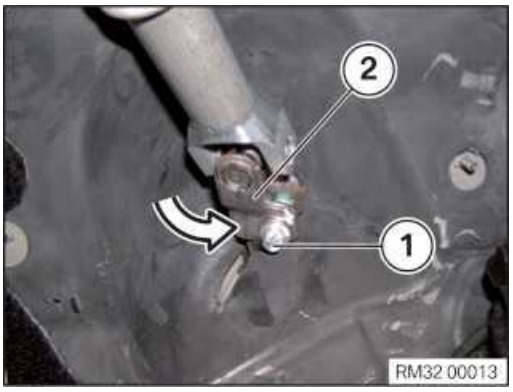
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

88 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

89 – Secure the steering shaft at the bottom on the steering gear

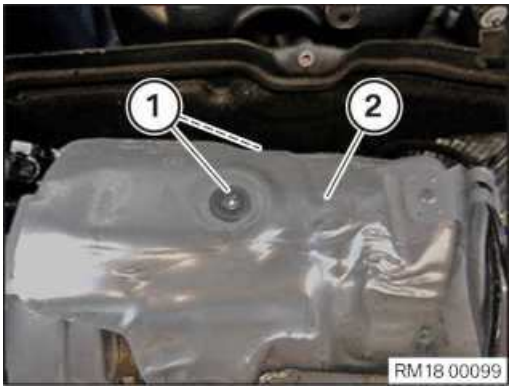
cardiagn.com

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

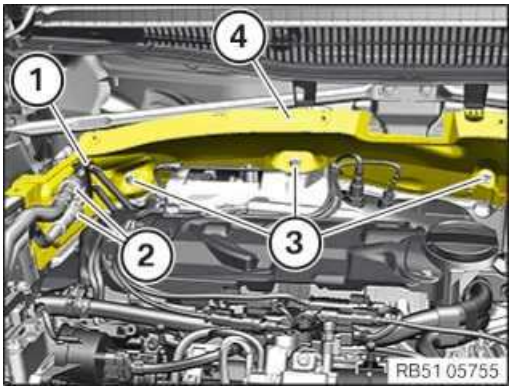


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

90 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

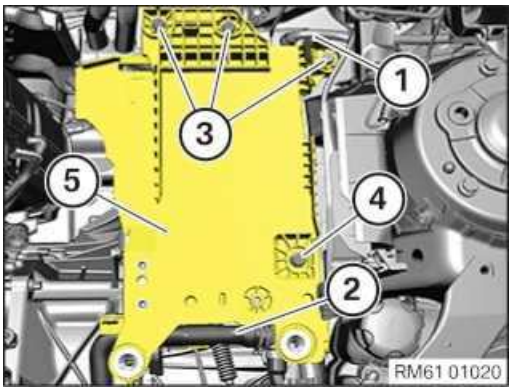
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

91 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

92 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

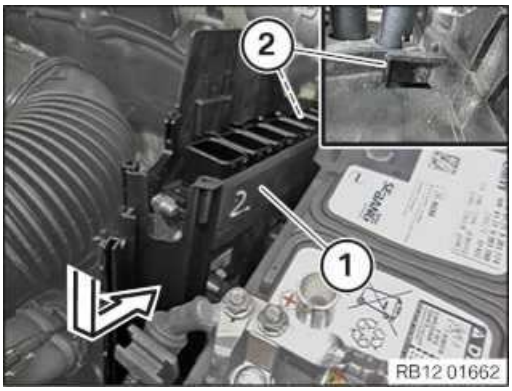
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

93 – Install electronics box

Prerequisite



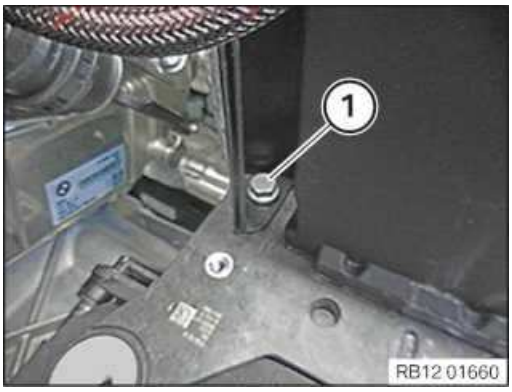
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

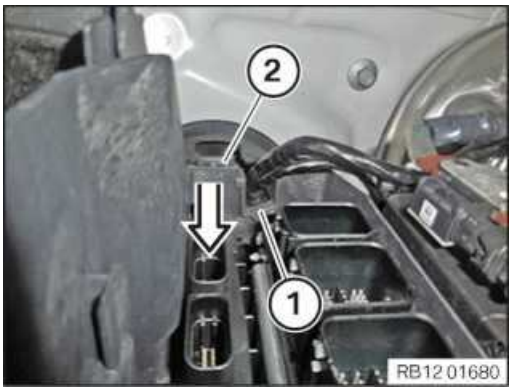
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

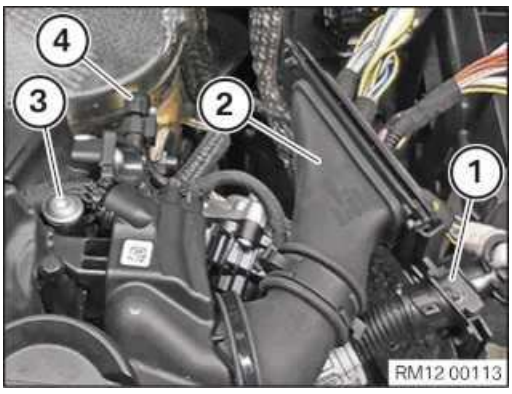


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

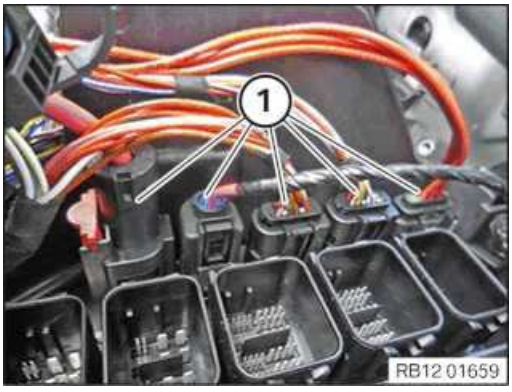


- Tighten down screw (1).

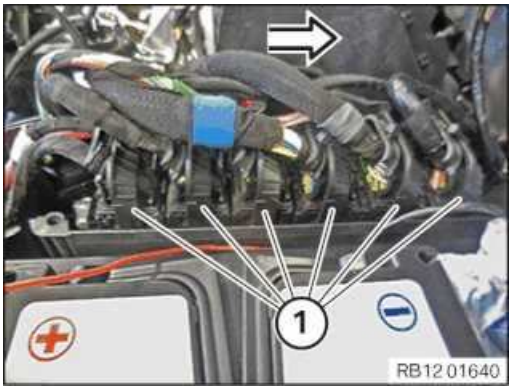
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



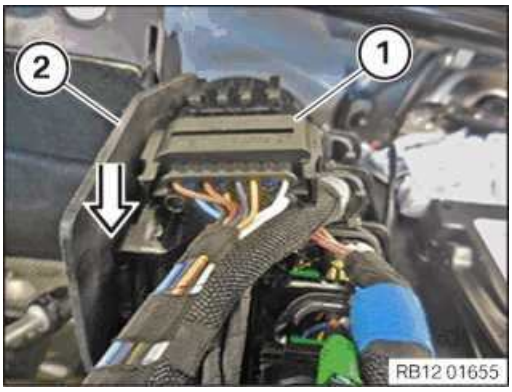
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



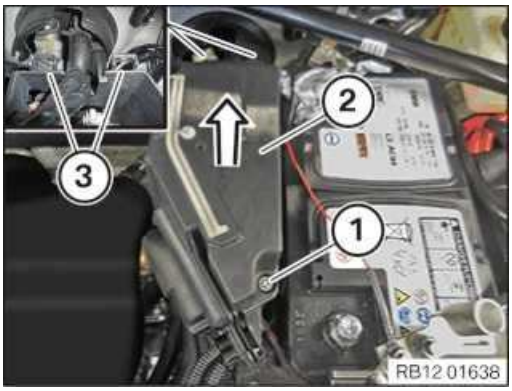
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

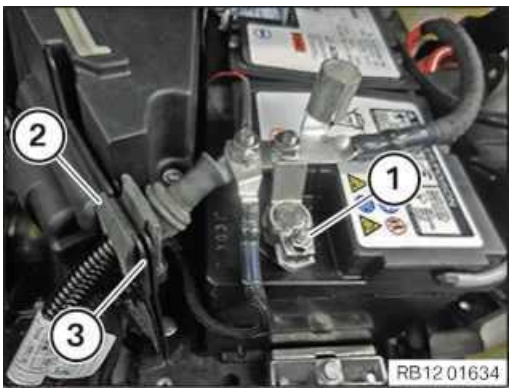


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

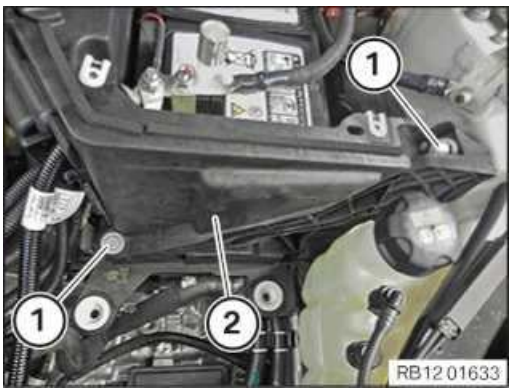
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

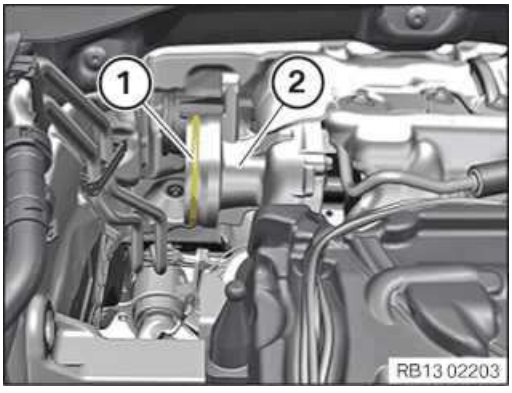


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

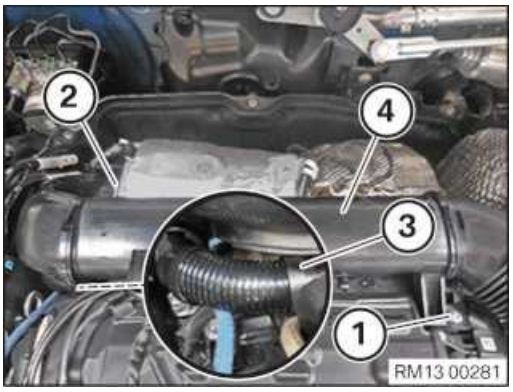
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

94 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

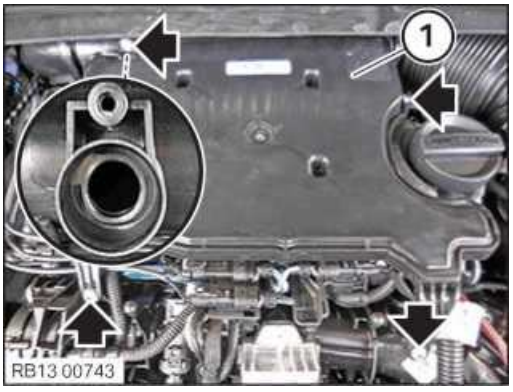
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

95 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

96 – Install acoustic cover

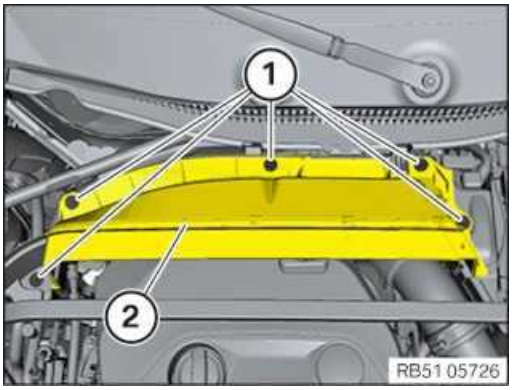
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

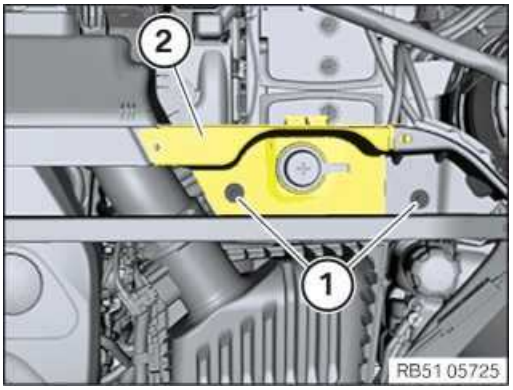
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

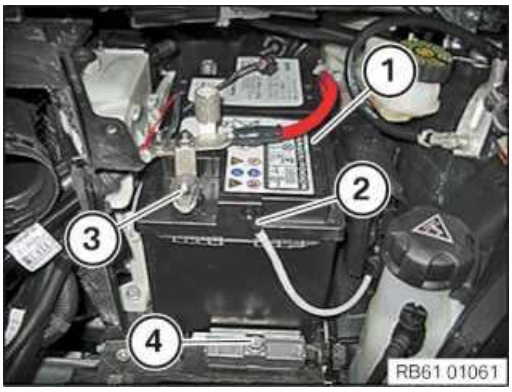


97 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

98 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

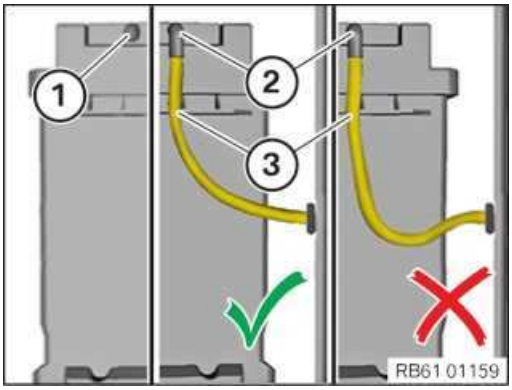
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

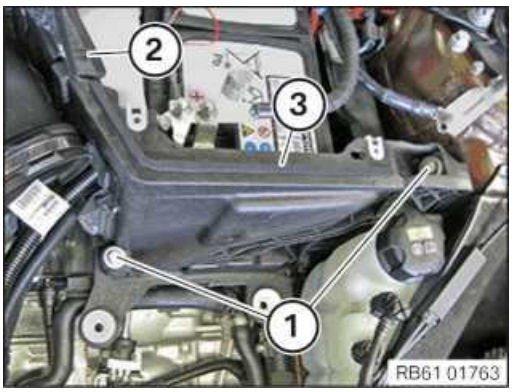
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

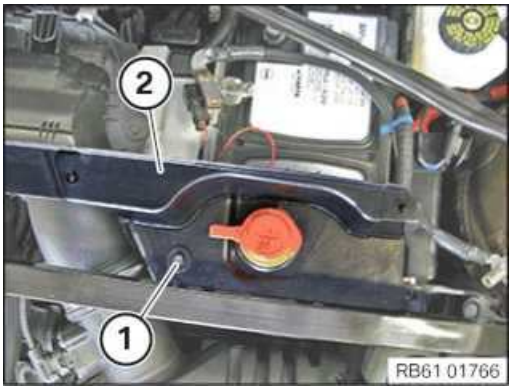
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

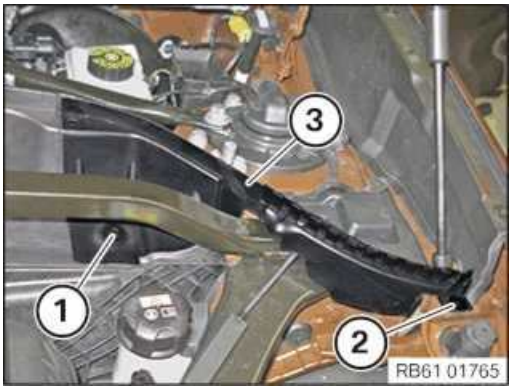


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

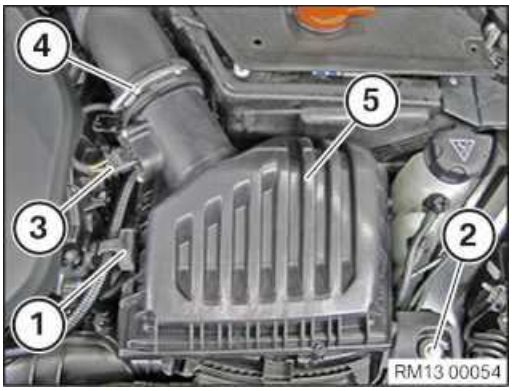
61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

100 – Installing intake silencer housing

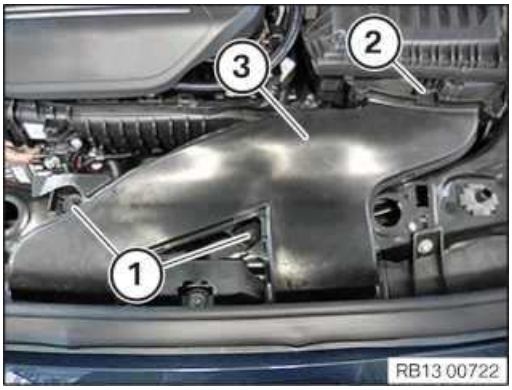
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

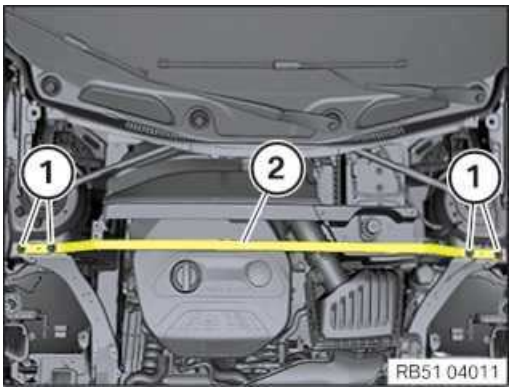
  The connector (3) must engage audibly.
- Insert and install the holder (1).

101 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



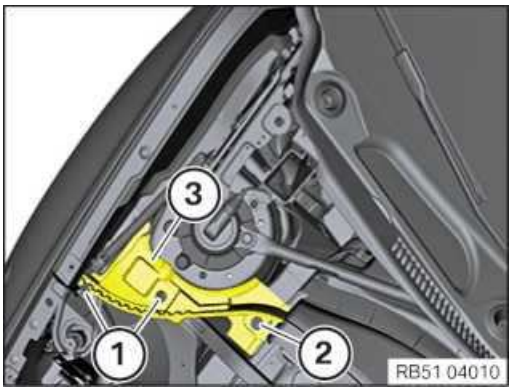
M6		Tightening torque	8 Nm

102 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

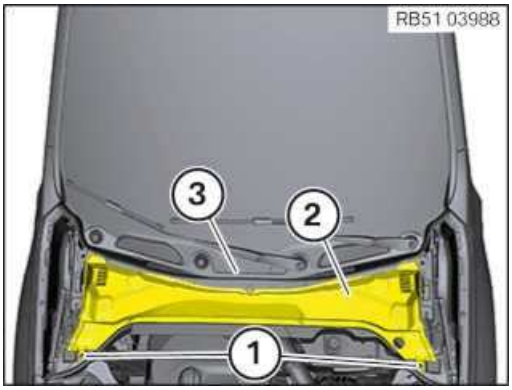
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



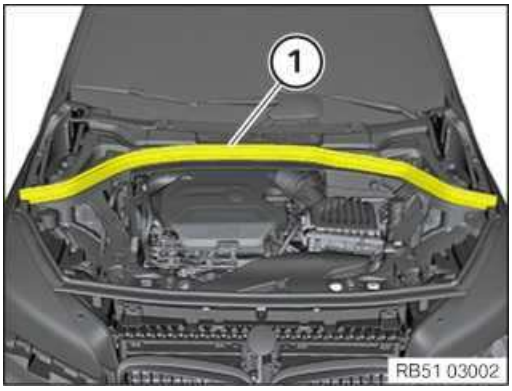
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

103 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

104 – Install the seal for the bonnet

NOTICE

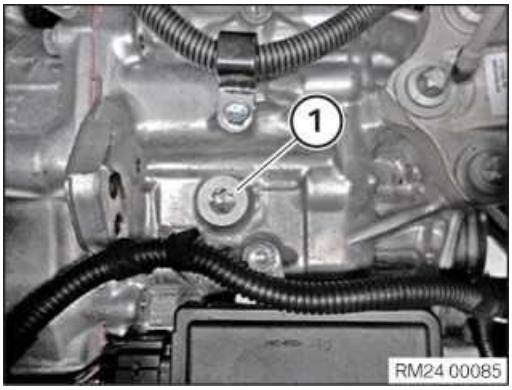
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

105 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

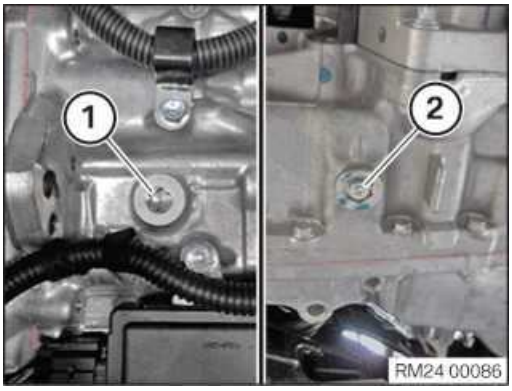
cardiagn.com

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

106 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

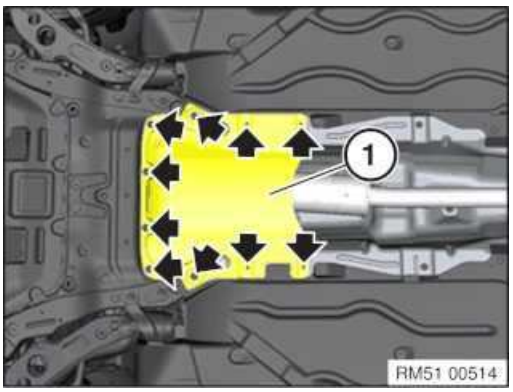
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



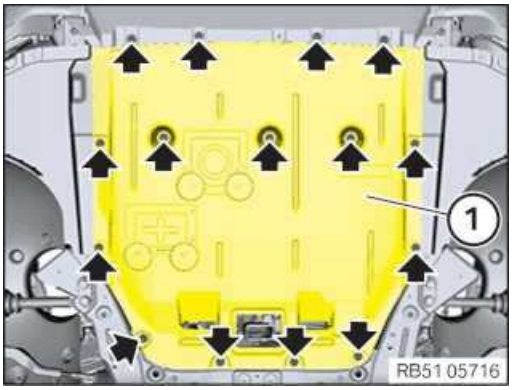
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

107 – If installed: Installing underbody protection at rear

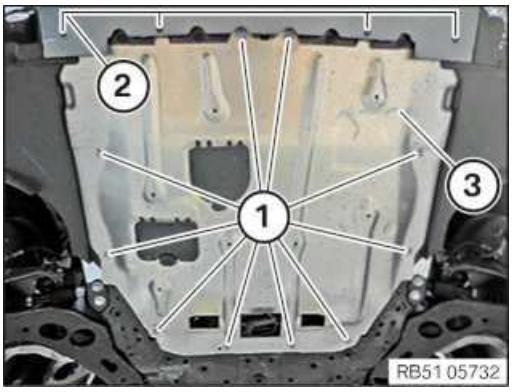


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

108 – Installing the front underbody protection

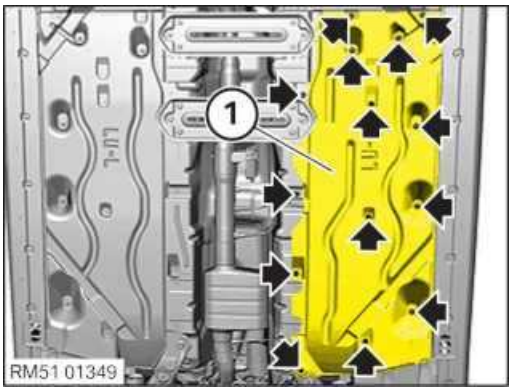


- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

109 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

Additional Information

Overview of Tightening Torques

Central piston cooling valve to crankcase — Used in step 54

M6x16		Tightening torque	8 Nm

Exhaust-gas recirculation cooler to exhaust manifold — Used in step 56

M8x28	Replace screws	Tightening torque	32 Nm

Oil return line to turbocharger — Used in step 56 57

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase — Used in step 56

M8x16		Tightening torque	22 Nm

Exhaust turbocharger to exhaust manifold — Used in step 57

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket — Used in step 57

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase — Used in step 57

M8x16		Tightening torque	22 Nm

Heat shield for exhaust turbocharger — Used in step 58

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

Banjo bolt for exhaust pressure pipe to exhaust manifold — Used in step 58

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Standard screw connection M6 — Used in step 58

M6			8 Nm

Charge air duct to oil sump — Used in step 59

M6		Tightening torque	8 Nm

Ride height sensor holder to front axle support — Used in step 59

M6		Tightening torque	8 Nm

Adapter, front axle support to front axle support — Used in step 59

		Tightening torque	100 Nm

Cross connection to front axle support — Used in step 59

M6		Tightening torque	12 Nm

Washer fluid reservoir to body — Used in step 60

M6x20		Tightening torque	8 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 61

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 61

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 61

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 61

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system — Used in step 61

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 61

Torx bolt BM6x16		Tightening torque	8 Nm

Differential pressure sensor to holder — Used in step 61

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 61

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor — Used in step 62

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 63 64

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com

Exhaust-gas temperature sensor to exhaust system

Used in step 65

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 66

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 67

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 68

Sensor		Tightening torque	50 Nm

Transfer box to transmission

Used in step 69

M10		Tightening torque	56 Nm

Heat shield to transfer box

Used in step 69

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG)

Used in step 69

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box

Used in step 70

M8x35		Tightening torque	19 Nm

Starter motor to transmission

Used in step 71

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 71

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box

Used in step 74

		Tightening torque	80 Nm

Flexible disc to rear axle final drive

Used in step 74

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body

Used in step 74

M8		Tightening torque	19 Nm

Heat shield to body

Used in step 75 76

Bolts/nut		Tightening torque	3 Nm

Bracket to body

Used in step 75

M8		Tightening torque	21 Nm

Exhaust system to body

Used in step 77

M8	Replace nuts.	Tightening torque	19 Nm

cardagn.com

Exhaust bracket on body

Used in step 77

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter

Used in step 77

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 77

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 77

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 78

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 79

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 79

M8x18		Tightening torque	28 Nm

Rear end of front axle support to body

Used in step 80

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body

Used in step 80

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body

Used in step 80 107

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing

Used in step 80

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 80

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 81

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 81

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 81

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 81

		Tightening torque	11,8 Nm

cardiagn.com

Holder to front axle support

Used in step 82

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 84

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 86

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 86

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 86

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 87

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 87

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 87

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 89

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 89

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 90

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 91

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 92

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 93

cardiagn.com

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover Used in step 93

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box Used in step 93

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery Used in step 93

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray Used in step 93

M8		Tightening torque	19 Nm

Clean air pipe to cylinder head cover Used in step 94

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing Used in step 94 100

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe Used in step 95

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead Used in step 97

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal Used in step 97

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray Used in step 98

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal Used in step 98 99

NutM6			5 Nm

Trailing link Used in step 98

M8		Tightening torque	19 Nm

Battery cover Used in step 98

M8			2,8 Nm

Intake silencer housing to lock bridge Used in step 100

Overview of Special Tools

0 490 133 (00 2 030) Device

Common

Used in step 28 80

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

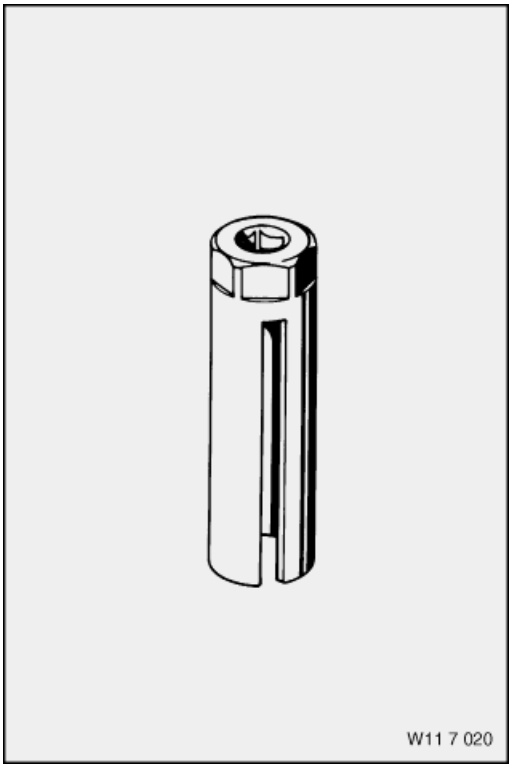
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

cardiagn.com

0 495 554 (33 5 070) Extension

Common



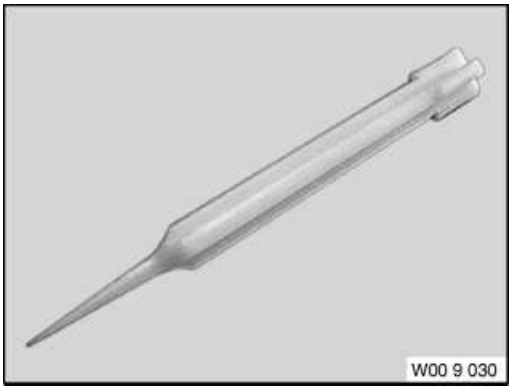
Used in step 34 74

Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

0 491 074 (11 7 020) Socket wrench insert

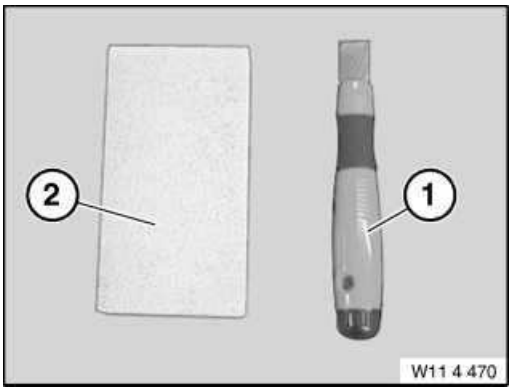


Common

Used in step 40 41 68

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com



0 496 714 (00 9 030) Wedge

Common Used in step 54

Usage	For dismantling O-rings, gaskets and trim panels. This special tool replaces special tool 00 9 316.
Included in the tool or work	
Storage location	A50
Replaced by	
In connection with	
SI-Number	01 20 09 (581)

0 495 102 (11 4 470) Tool

Common Used in step 56

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)

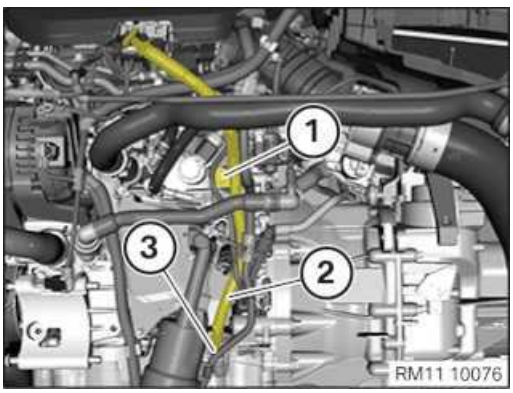
11 43 000 Removing and installing or replacing guide tube for dipstick (B47)

Necessary preliminary tasks:



- Remove fan cowl

Removal:

Release screw (1).
Remove guide tube (2) in an upward direction.

Installation:

Part: Replace O-ring.
Mount new O-ring (3) on guide tube.
Install guide tube (2).
Tighten screw (1).

Required follow-up work:

- Install fan cowl.

cardiagn.com

11 43 000 Removing and installing/sealing the oil dipstick guide tube

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Removing the acoustic cover

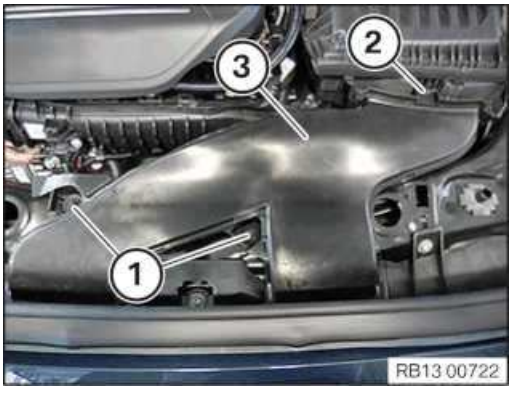
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

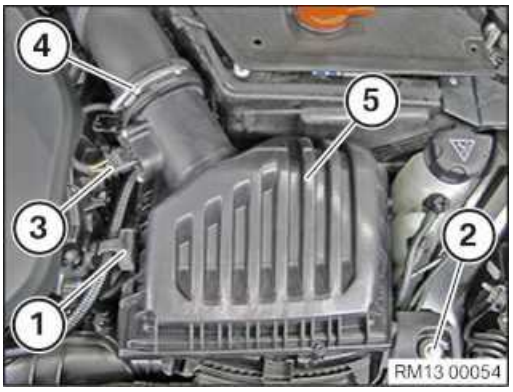


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

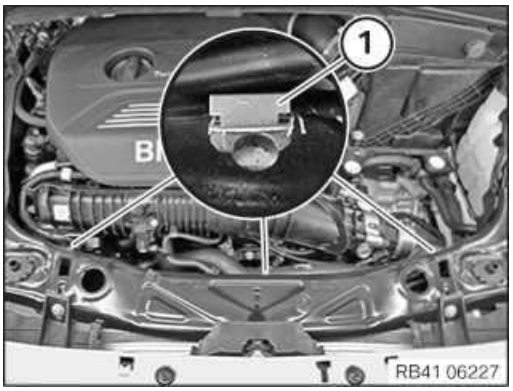
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



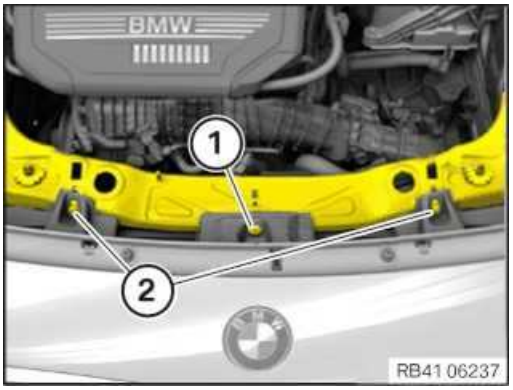
2 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

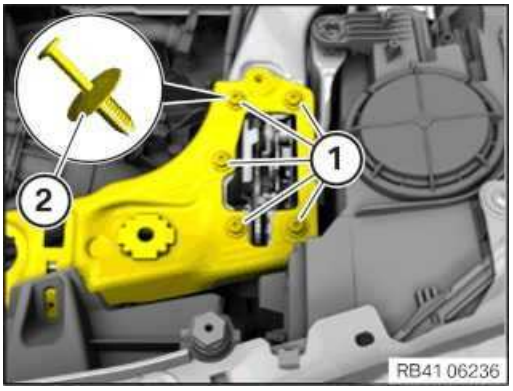


3 – Removing intake silencer housing

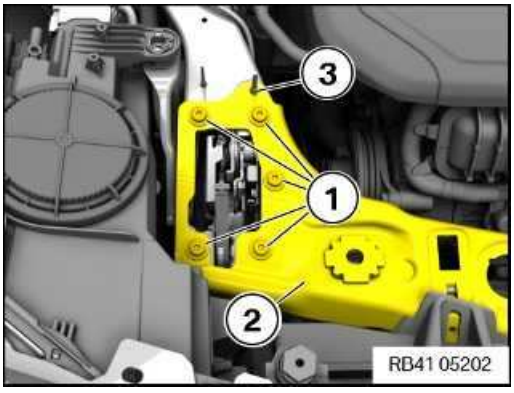
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



4 – Remove front cross connection



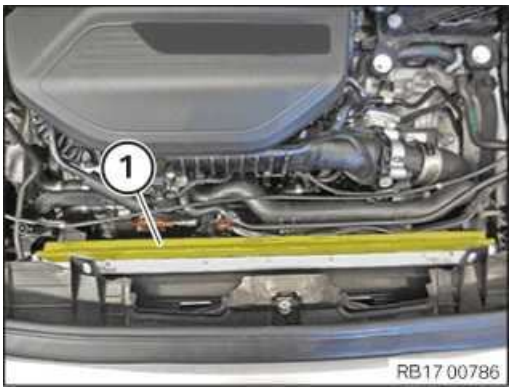
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

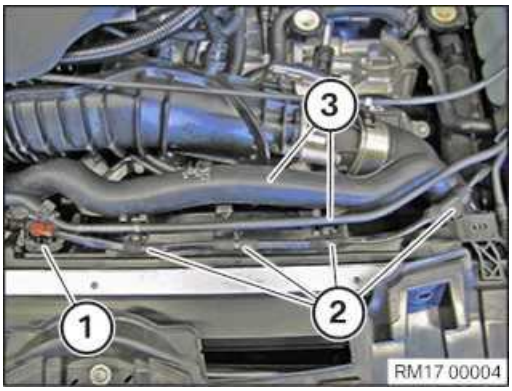
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

5 – Removing the fan cowl with electric fan



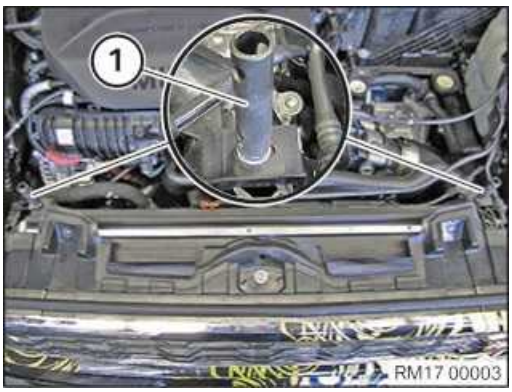
cardiagn.com

WARNING

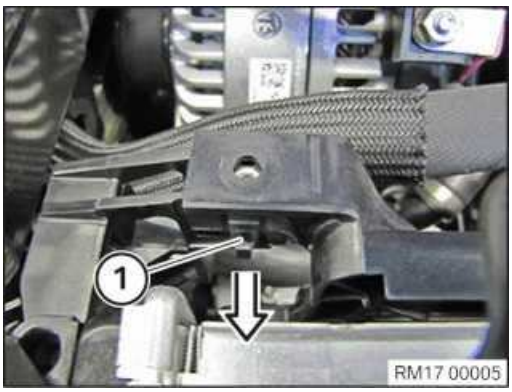


Hot surfaces.

Risk of burning!

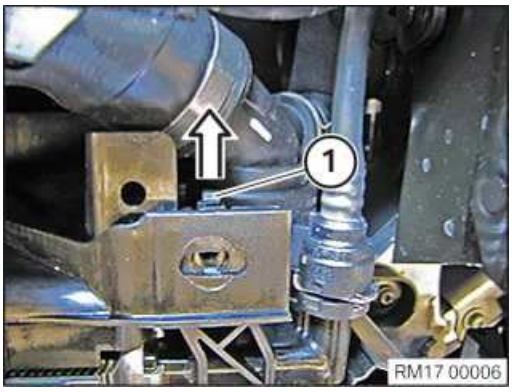


- Perform all work only on components that have cooled down.

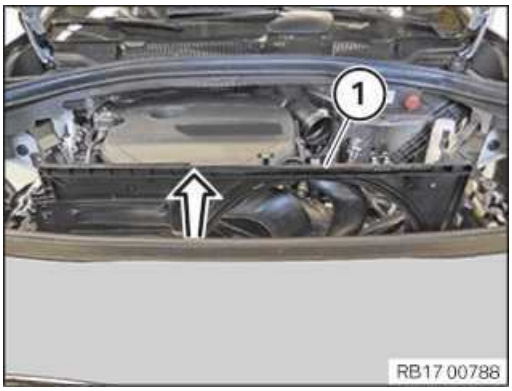


- Feed out and remove the sealing (1) from the radiator.

- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

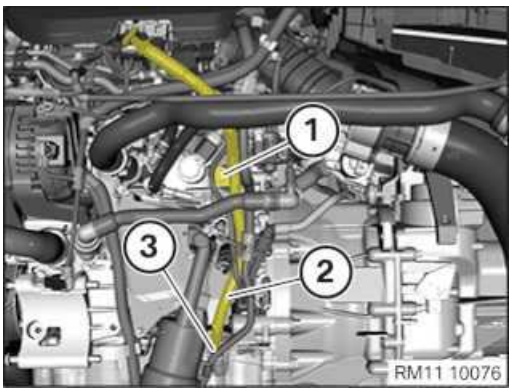


- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

- Guide out fan cowl (1) in direction of arrow and remove.

MAIN WORK

6 – Removing the guide tube for the oil dipstick

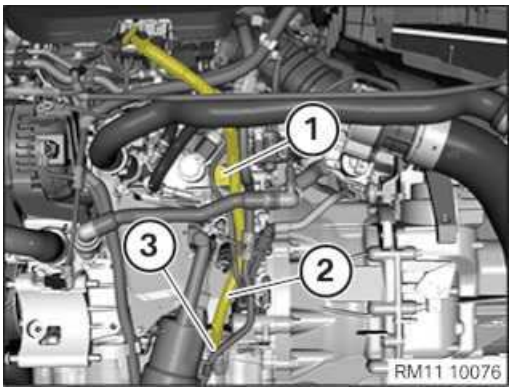
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

7 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

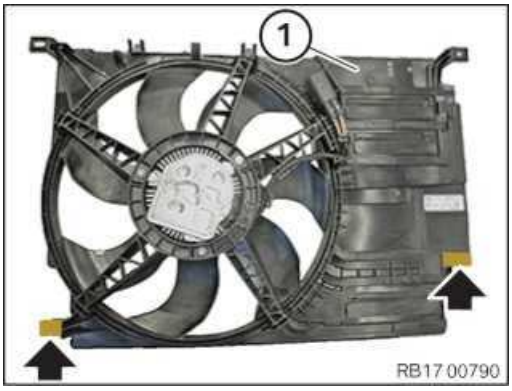
cardiagn.com

- Renew O-ring (1).

  Parts: O-ring

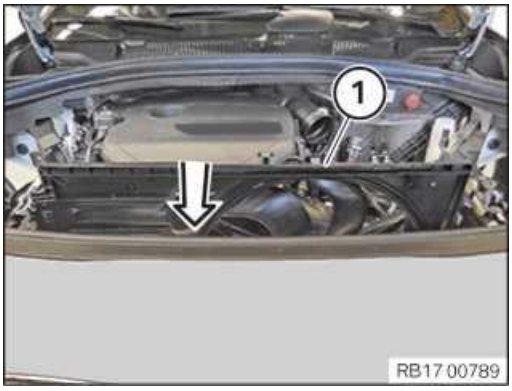
- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine



M8x16		Tightening torque	19 Nm

POSTPROCESSES

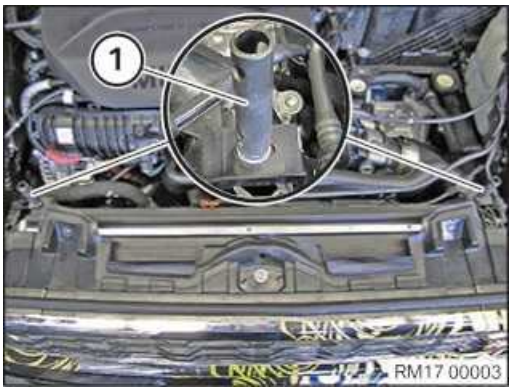


8 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

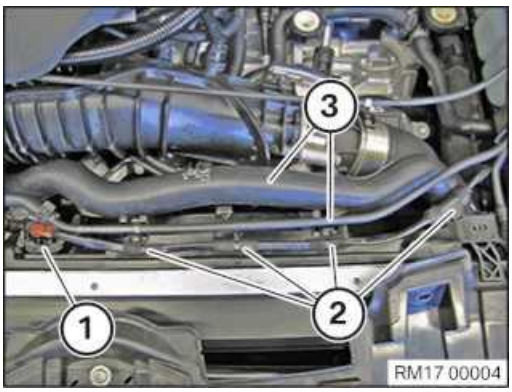
Make sure that the connections are locked correctly. The locks must engage audibly.

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



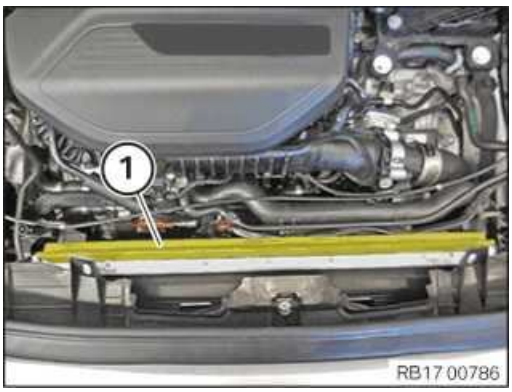
- Feed in and install the fan cowl (1) in the direction of the arrow.

cardiagn.com



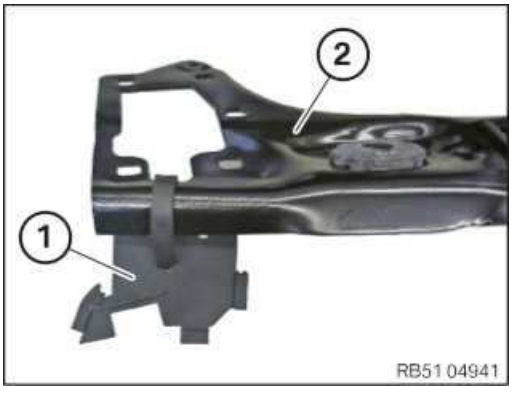
- Lock the left and right locks (arrows).

- Tighten the screws (1).



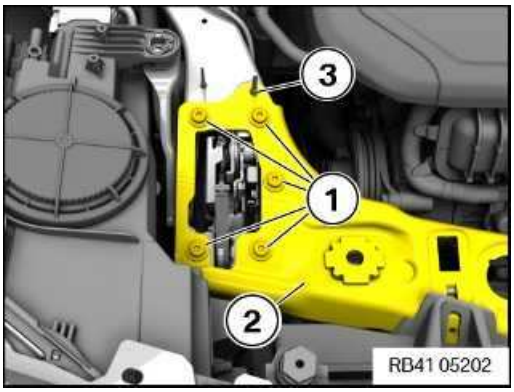
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

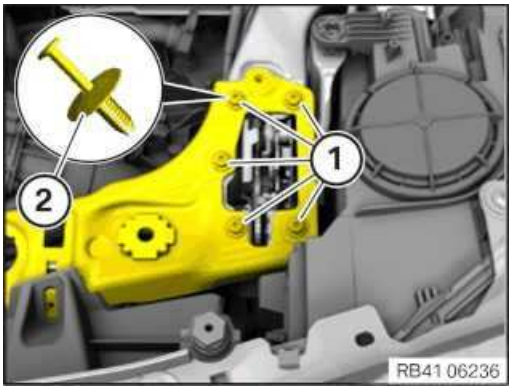
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

9 – Install front cross connection

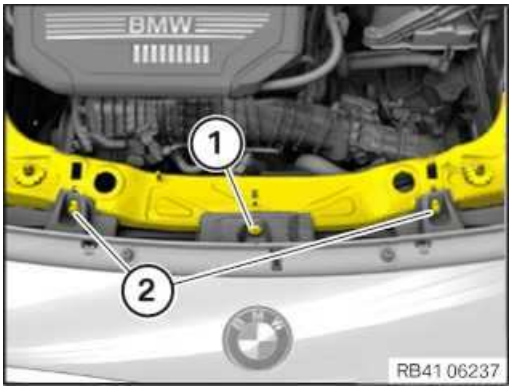
- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.



cardiagn.com

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

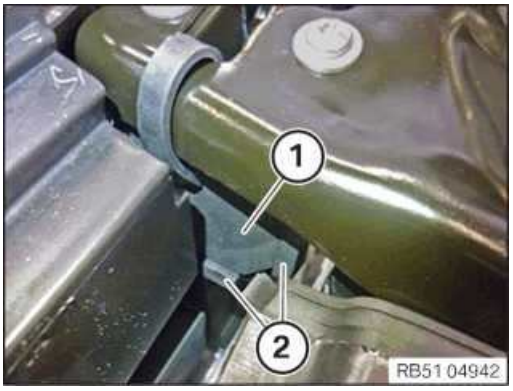
Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

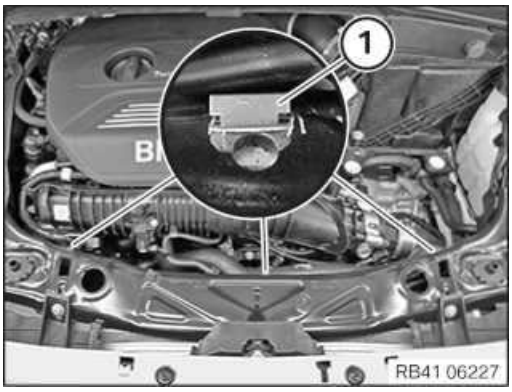
- Tighten down screws (2).



Air duct to upper connection

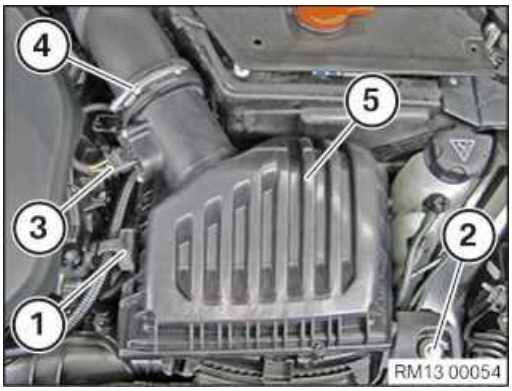
M6x20 screw		Tightening torque	11,8 Nm

- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

cardiagn.com

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

10 – Installing intake silencer housing

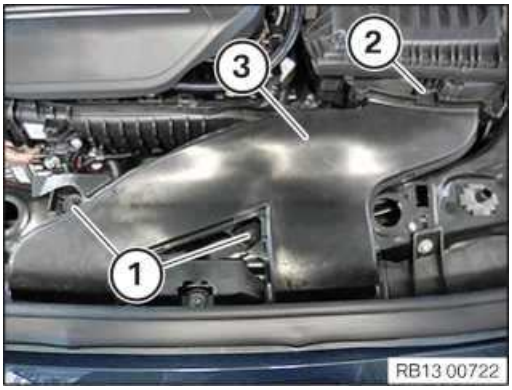
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

11 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

12 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

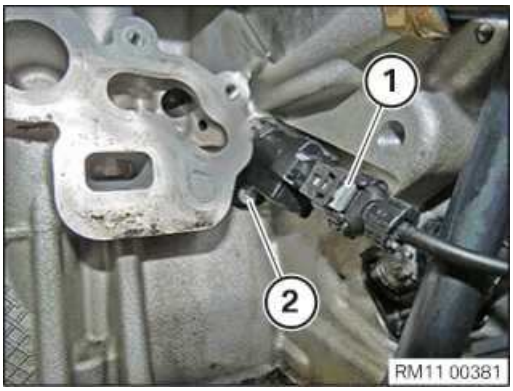
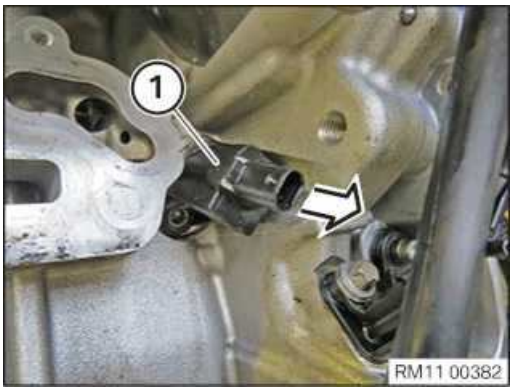
Seal, guide tube for oil dipstick on oil sump	7



cardiagn.com

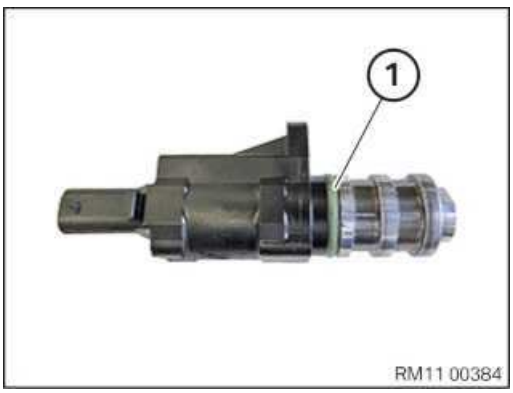
11 41 115 Removing and installing/replacing hydraulic valve (B47)



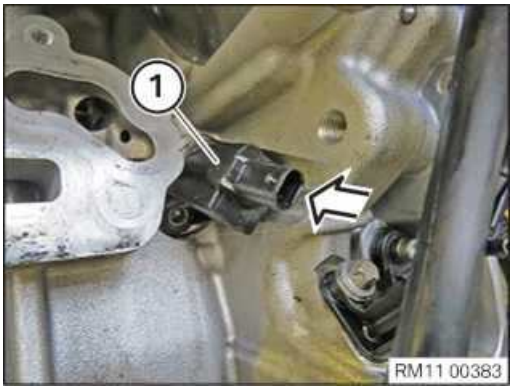
Necessary preliminary tasks:

- Remove full-flow oil filter.

Removal:

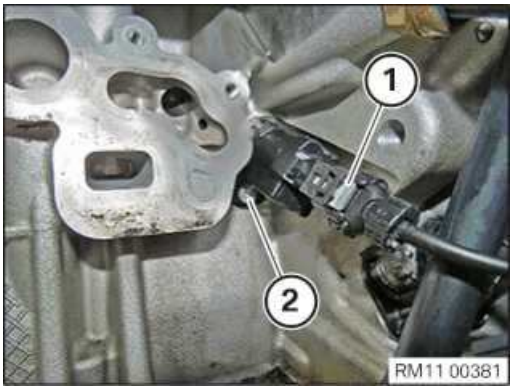


Unlock and disconnect the connector (1).
Release screw (2).



Remove hydraulic valve (1) in direction of arrow.

Installation:



Parts: Replace O-ring (1).
Oil O-ring (1).

cardiagn.com

Install hydraulic valve (1) in direction of arrow.

Tighten screw (2).
Tightening torque: 11 00 2AZ.
Connect the plug (1).

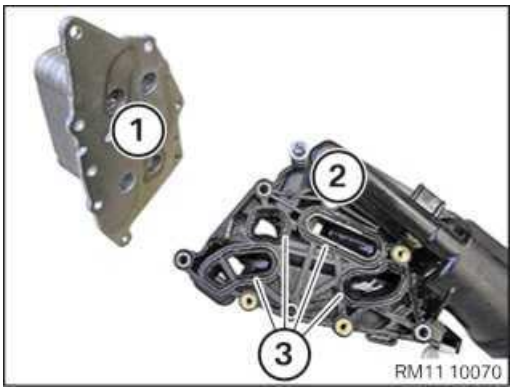
Required follow-up work:

- Install full-flow oil filter
- Assemble engine

cardiagn.com

11 44 000 Removing and installing/replacing oil-to-water heat exchanger (B47)

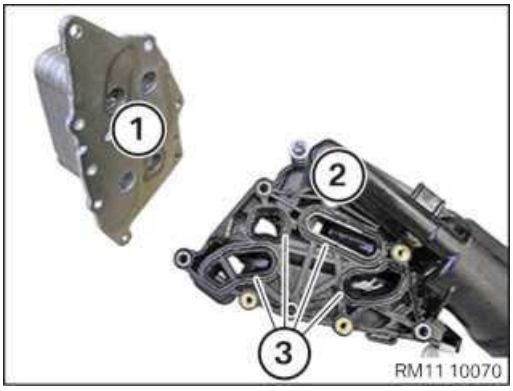
Necessary preliminary tasks:



- Remove full-flow oil filter.

Removal:

Release screws (1).



Remove heat exchanger.

Replace gaskets (3) on full-flow oil filter (2).

Installation:

cardiagn.com

Installation note:
All sealing surfaces and gaskets must be cleaned and free of oil.

Replace gaskets (3).

Place oil-to-water heat exchanger (1) on full-flow oil filter (2).

Tighten down screws (1).

Tightening torque: 11 42 7AZ.

Required follow-up work:

- Install full-flow oil filter

cardiagn.com

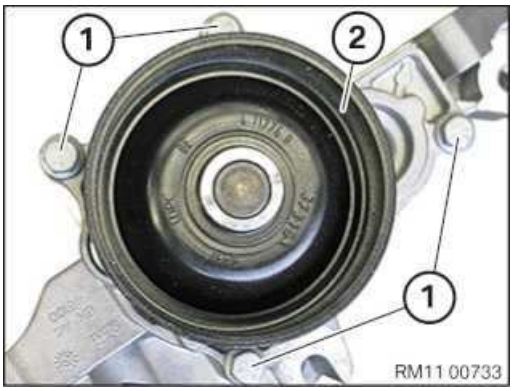
11 51 000 Removing and installing/replacing coolant pump (B47)

Warning!

Risk of scalding!

Only perform these tasks on an engine that has cooled down.

Recycling:

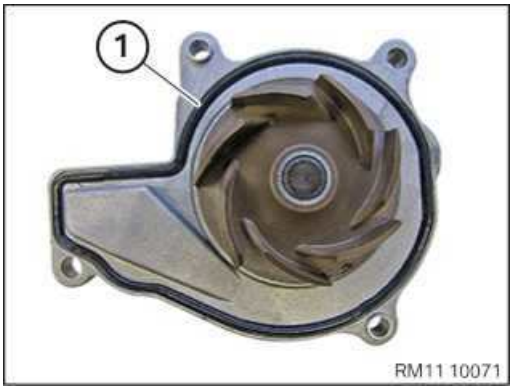


Catch and dispose of drained coolant.

Observe country-specific waste disposal regulations.

Necessary preliminary tasks:

- Remove alternator bracket

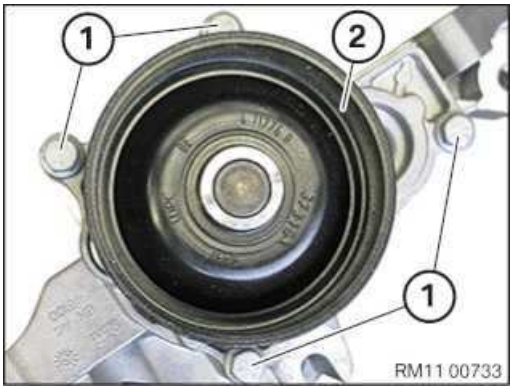


Removal:

Release screws (1).

Remove coolant pump (2) from alternator bracket.

Installation:



Sealing bead (1) is applied to housing of coolant pump.*Installation note:* If the sealing bead (1) protrudes slightly and if the sealing bead (1) is not damaged, the coolant pump can be reinstalled.

If the sealing bead (1) is damaged, remove sealing bead (1) with a suitable tool and replace with sealing compound 2.2 (Loctite 5970).

Sealant height approximately 2 to 2.5 mm.

cardiagn.com

Position coolant pump (2) at alternator bracket.
Tighten down screws (1).
Tightening torque 11 51 1AZ.

Required follow-up work:

- Install alternator bracket
- Assemble engine
- Check engine for leak tightness

cardiagn.com

11 51 000 Removing and installing/replacing the coolant pump

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

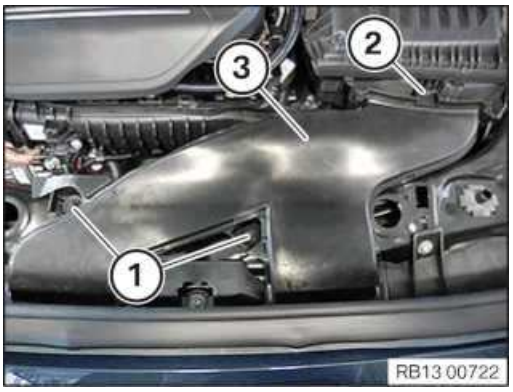
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

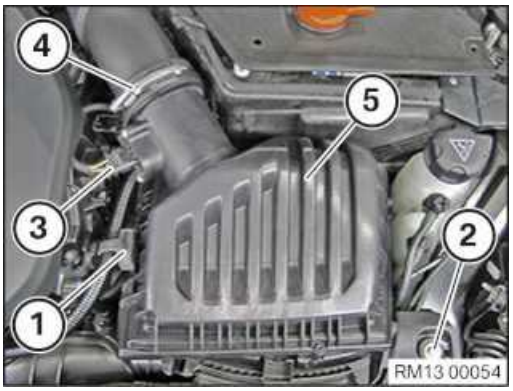
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

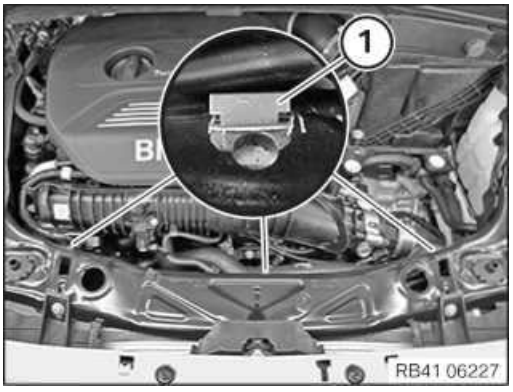
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



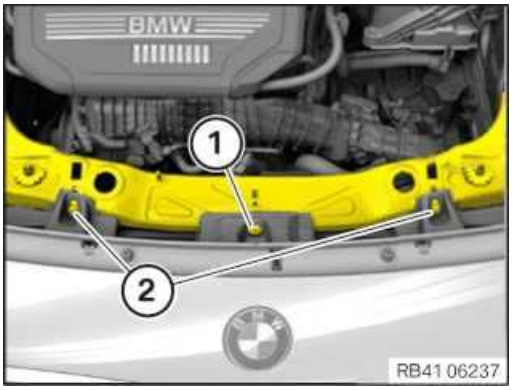
3 – Remove the intake neck for intake silencer housing

cardiagn.com

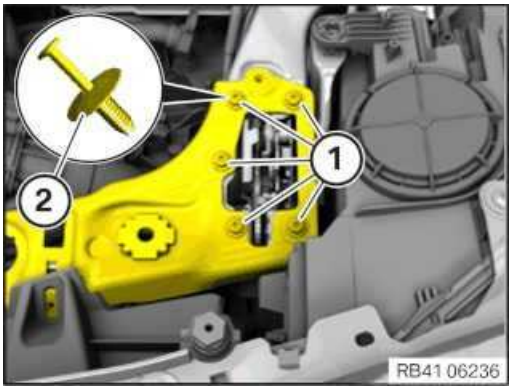


- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

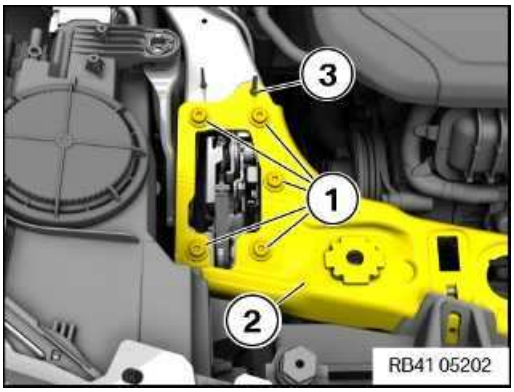


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

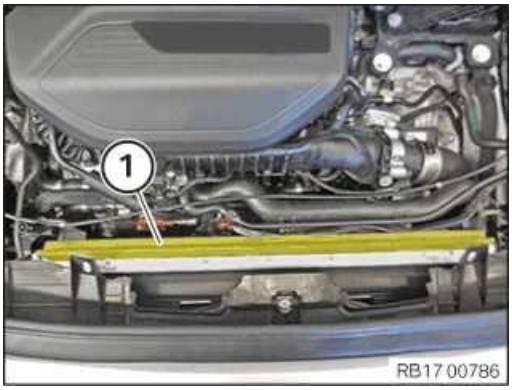


- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

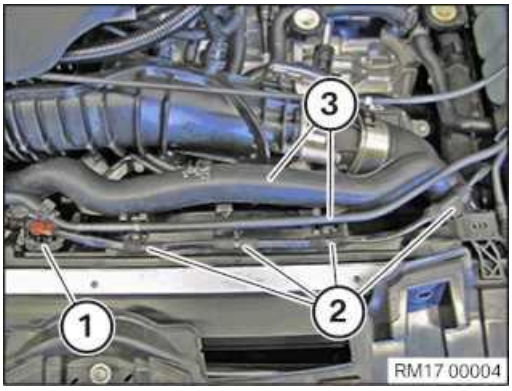
cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

WARNING

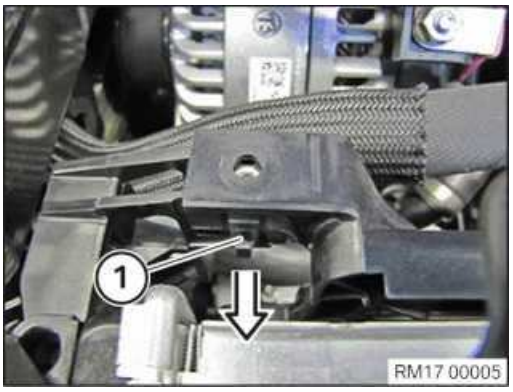


Hot surfaces.

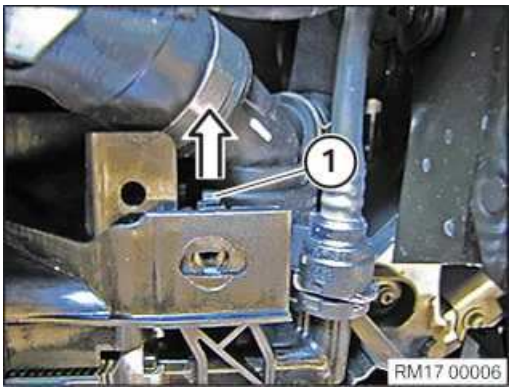
Risk of burning!

- Perform all work only on components that have cooled down.

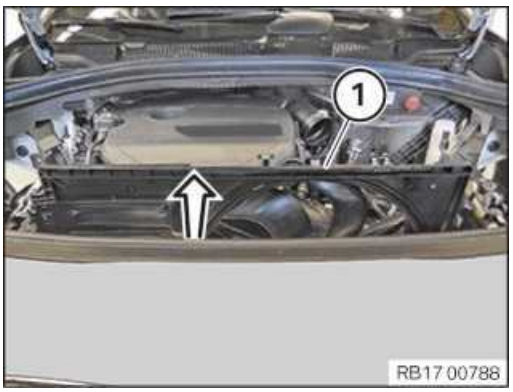
- Feed out and remove the sealing (1) from the radiator.



- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

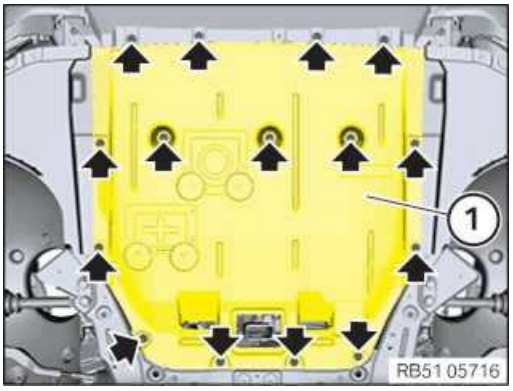


- Loosen screws (1).

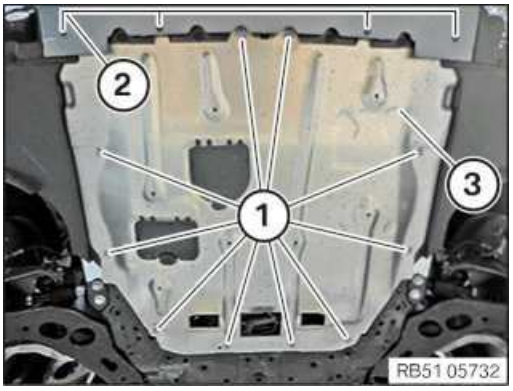


cardiagn.com

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

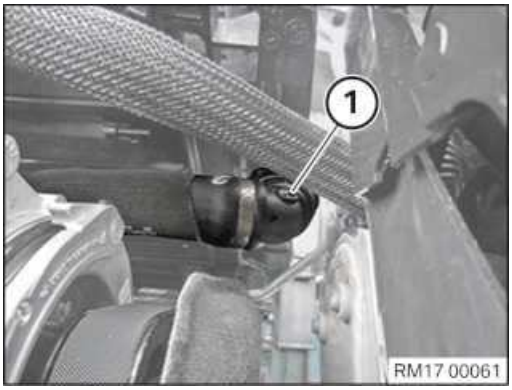
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

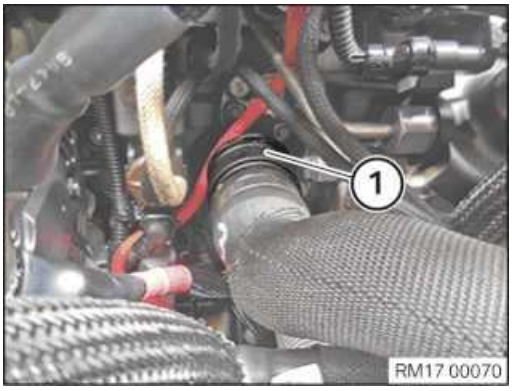
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

cardiagn.com

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

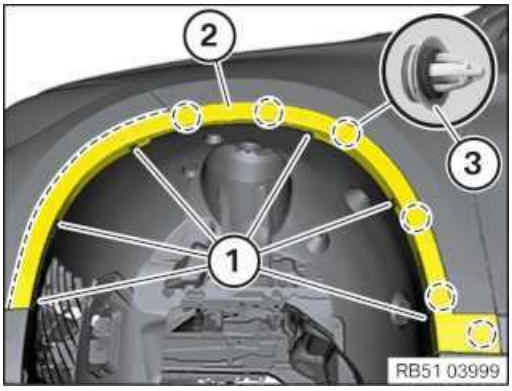
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

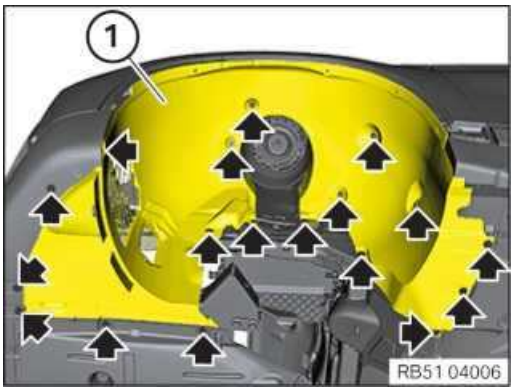
10 – Removing the front right wheel arch cover



▸ **Remove the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

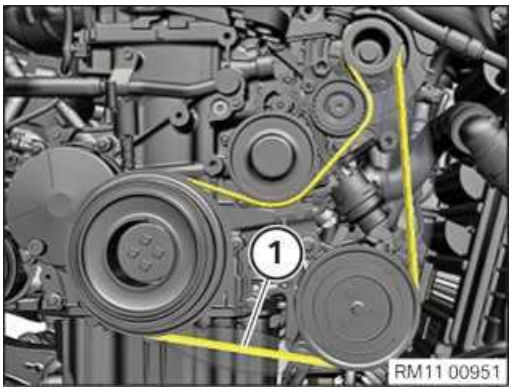
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

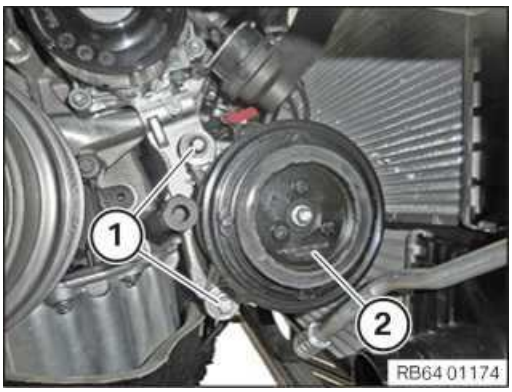


TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

cardiagn.com

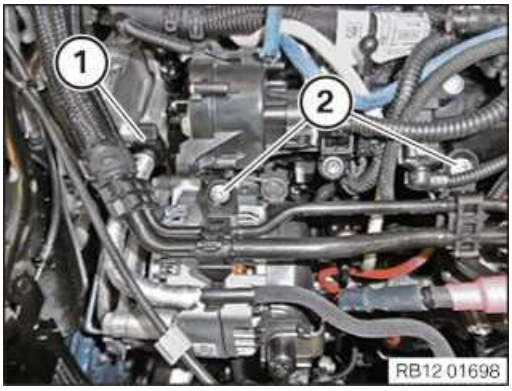


- Guide out the drive belt for the alternator (1) and remove it.

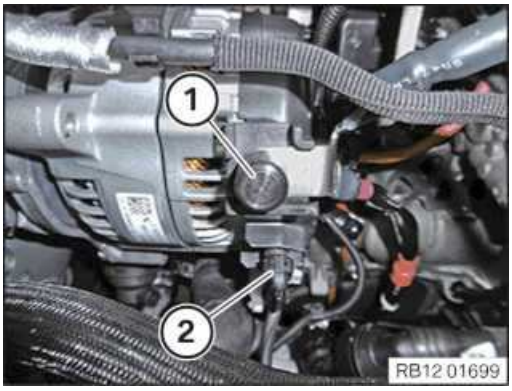
12 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



TECHNICAL INFORMATION

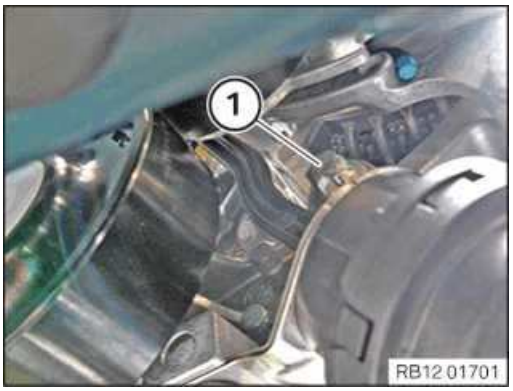


Secure component against falling.

- Loosen screws (1).
- Detach the air conditioning compressor (2) from the component carrier and protect it from falling.

Note: Tie the air conditioning compressor up.

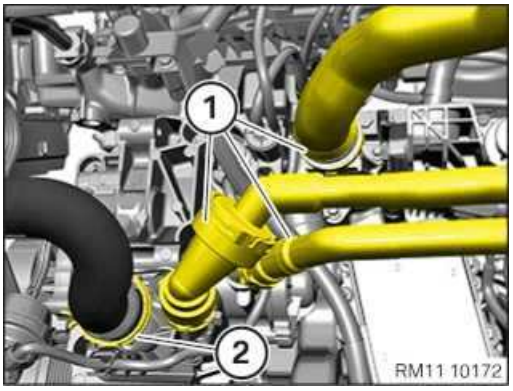
- Unlock the coolant ventilation line (1) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.
- Loosen screws (2).
- Place fuel feed and return line to one side.



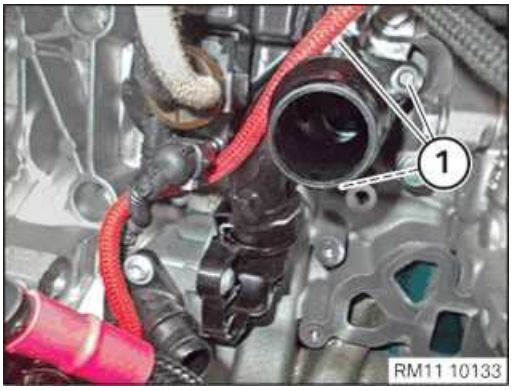
- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

cardiagn.com

- Detach screw (1) on top on the alternator.

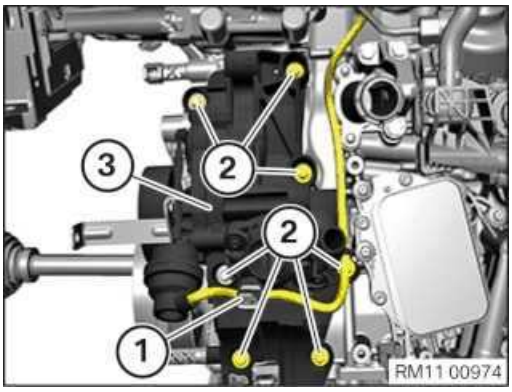


- Detach screw (1) below on the alternator.



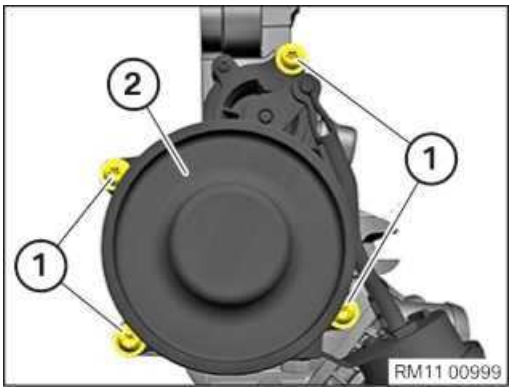
- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.

13 – Removing the component carrier



- Unlock the lock of the coolant lines.
- Pull off coolant lines (1) and place to one side.
- Loosen hose clamp (2).
- Remove coolant hose.

- Loosen screws (1).



cardiagn.com

- Disconnect the vacuum line (1) from the vacuum unit and detach it from the clamp on the component carrier.
- Loosen screws (2).
- Lift off and remove the component carrier (3) from the crankcase.

MAIN WORK

14 – Removing the coolant pump

- Loosen screws (1).

TECHNICAL INFORMATION

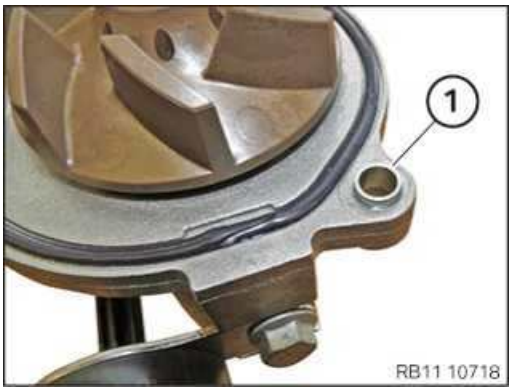
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Feed out and remove the coolant pump (2).

15 – Installing coolant pumps

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Clean the sealing surfaces (1) with the special tool **0 495 102 (11 4 470)**.

Check

- Check the fitting sleeve (1) for damage.

desired state

- Fitting sleeve must not be scratched or deformed.

Result

» Fitting sleeve is damaged.

cardiagn.com

Measure

- Completely renew the coolant pump.

  Parts: Coolant pump

Check

- Check the sealing bead for damage.
- Measure the height of the sealing bead in reference to the surface.

Height of the sealing bead

	2,0 mm ... 2,5 mm

Result

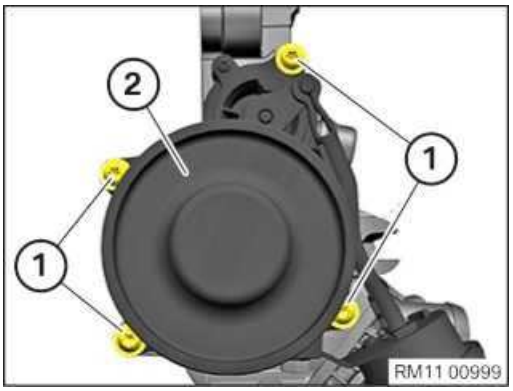
» The sealing bead is damaged or the measured dimension deviates.

Measure

- Remove sealing bead.

11 00 ... Overview of consumables (Electronic Parts Catalogue)

- Reapply sealing bead.



Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

Processing time of liquid sealing compound

	< 12 min

- Insert and install the coolant pump (2).
- Tighten bolts (1).

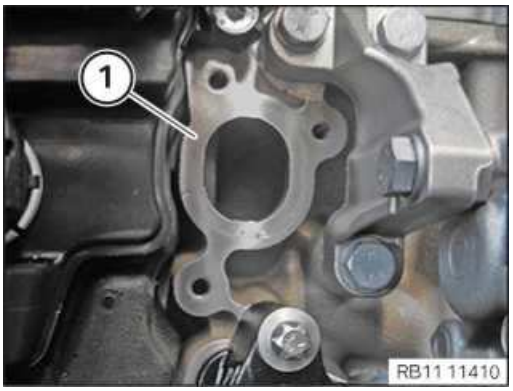
Coolant pump to crankcase

M6	If reusing the coolant pump: Apply Loctite 5970 For additional information see: 11 00 ... Overview of consumables in EPC (Electronic Parts Catalogue) sealing compound 2.2	Tightening torque	8 Nm

POSTPROCESSES

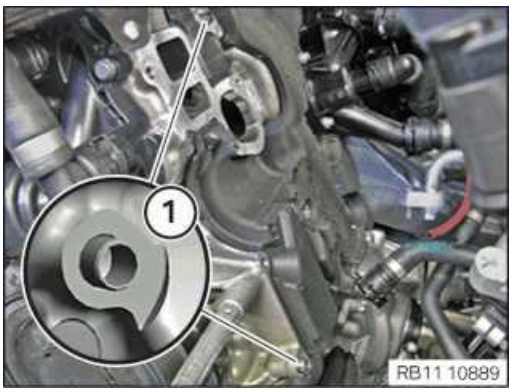
16 – Installing the component carrier

cardiagn.com



RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

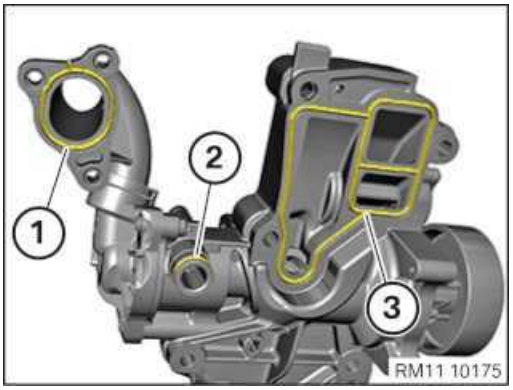
- Clean the sealing surface using special tool **0 495 102 (11 4 470)**.

- Clean the sealing surface (1) using special tool **0 495 102 (11 4 470)**.

Check

- Check the fitting sleeves (1) for damage.

desired state



- Fitting sleeves must not be scratched or deformed.

Result

» Fitting sleeves are damaged.

Measure

- Renew fitting sleeves.

- Renew gasket (1).

  Parts: Gasket

- Replace O-ring (2).

  Parts: O-ring

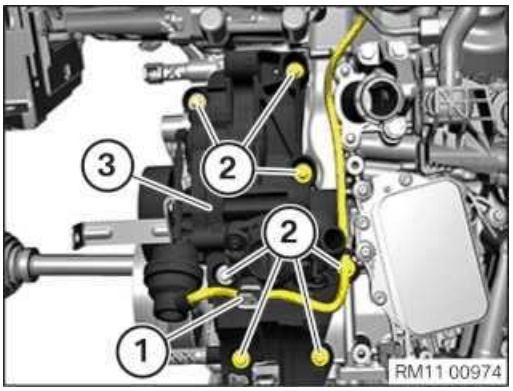
- Check the sealing bead (3) for damage.
- Check the height of the sealing bead in reference to the surface.

Height of the sealing bead

	2,0 mm ... 2,5 mm

cardiagn.com

- If necessary, reapply the sealing bead.



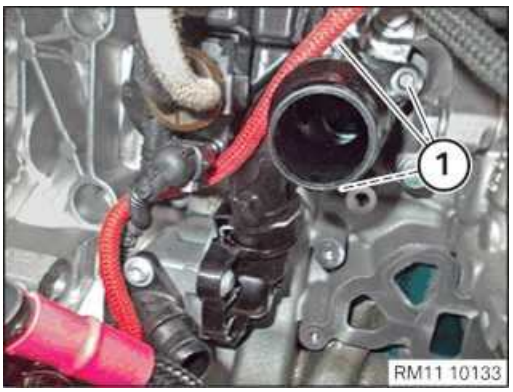
Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

Processing time of liquid sealing compound

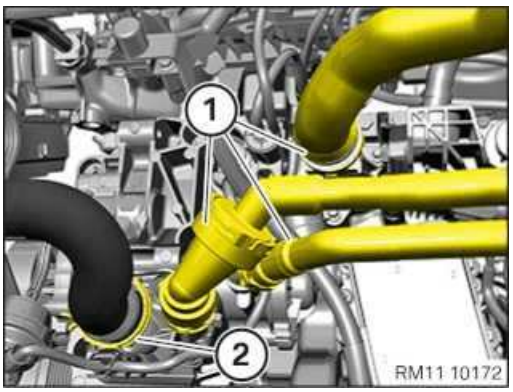
< 12 min



- Position the component carrier (3) on the crankcase.
- Tighten down screws (2).

Component carrier to crankcase

M8x35		Tightening torque	19 Nm



- Connect the vacuum line (1) on the vacuum unit and attach it in the clamp on the component carrier.

- Tighten the screws (1).

Connecting branch to engine block

M6x25		Tightening torque	8 Nm

- Connect and lock the coolant lines (1).

  The locks must engage audibly.
- Connect the coolant hose and fasten the hose clamp (2).

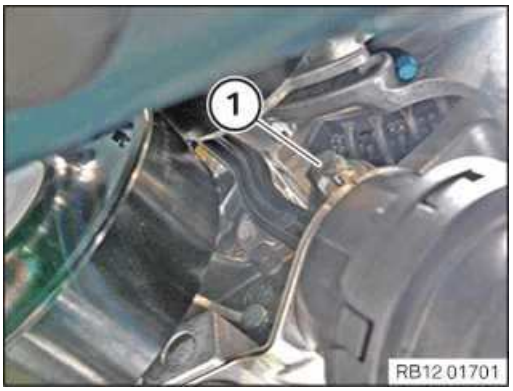
17 – Installing the alternator

Prerequisite

Battery earth lead is disconnected.

CAUTION

Improper routing of the positive battery cable.



Risk of short circuits!

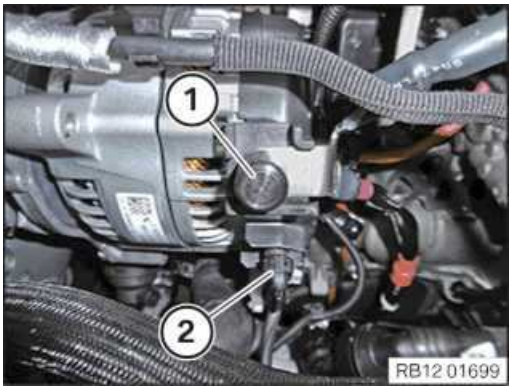
- Route the positive battery cable without abrasions and do not trap.

cardiagn.com

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

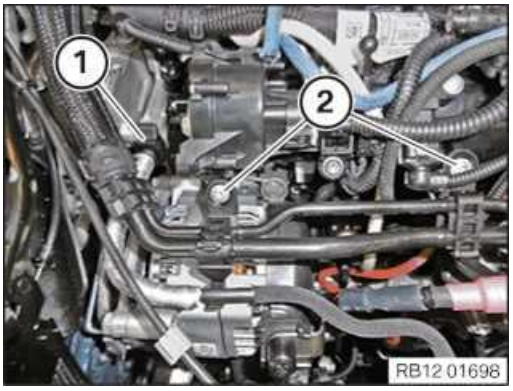


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

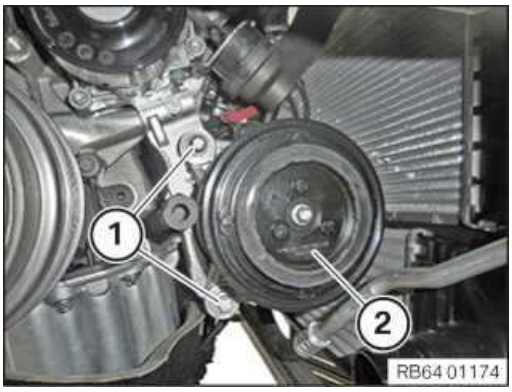


- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.



- Mount fuel supply and return line.
- Tighten down screws (2).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

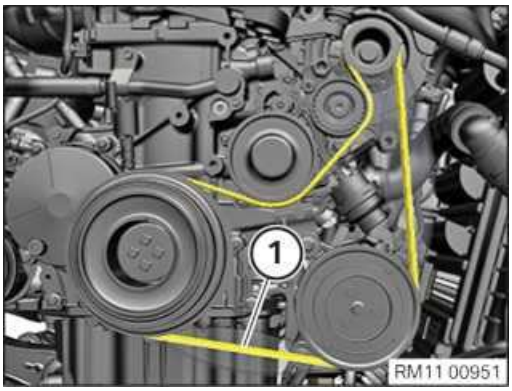
- Connect the coolant ventilation line (1) to the cylinder head and audibly lock.

cardiagn.com

- Correctly position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm



18 – Installing the drive belt for alternator

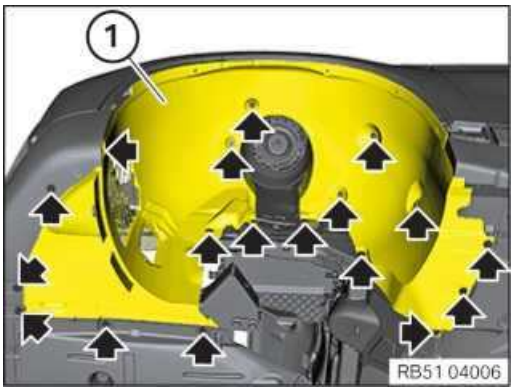
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

19 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

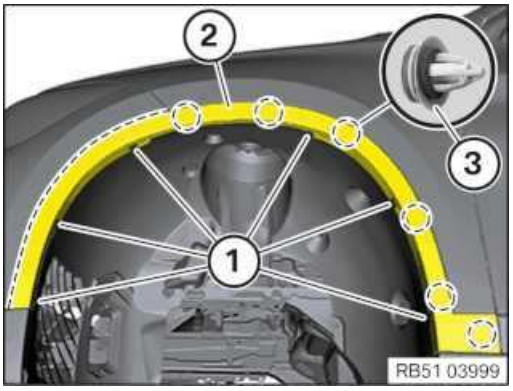
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

20 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

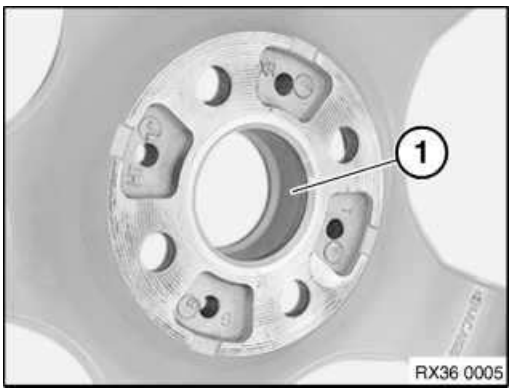
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

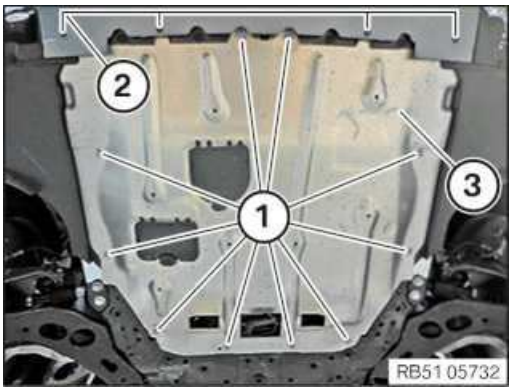
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com



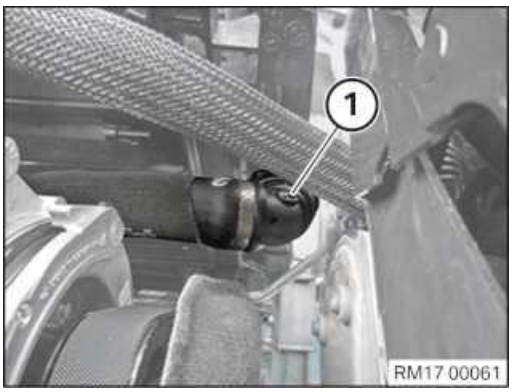
21 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

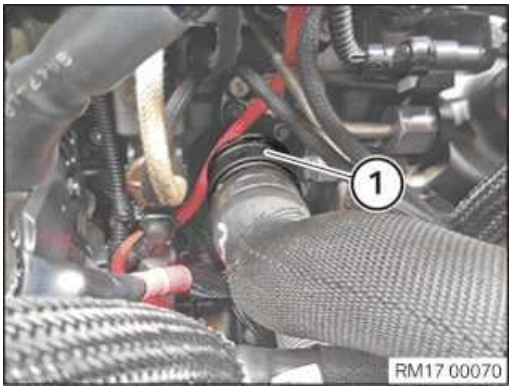
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

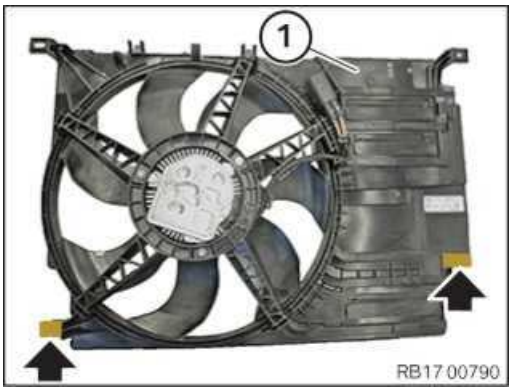


22 – Connect the coolant line

TECHNICAL INFORMATION

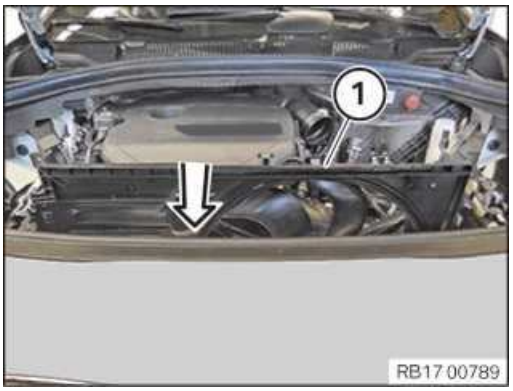
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

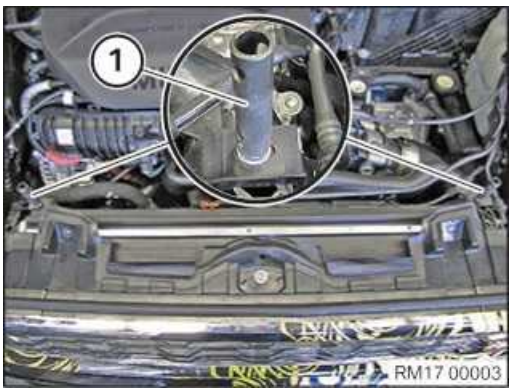
23 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

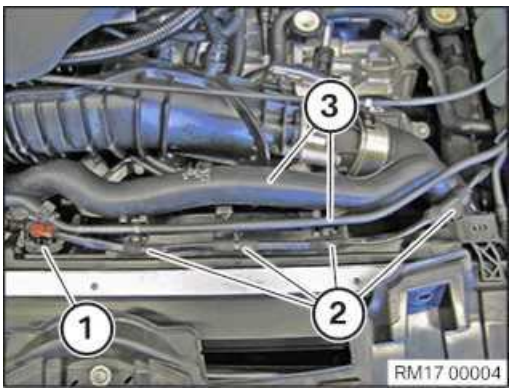
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

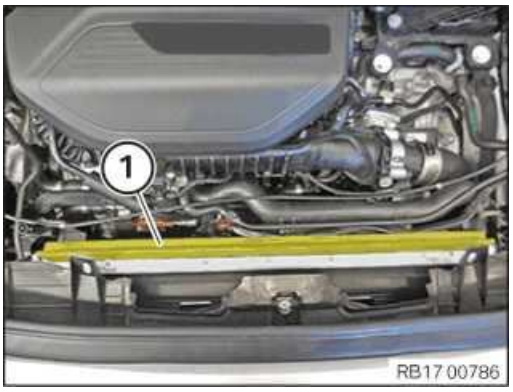
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

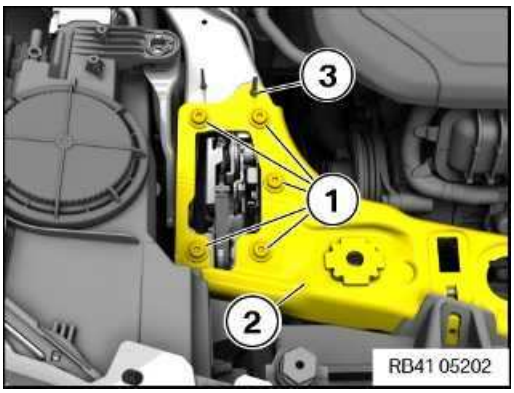


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

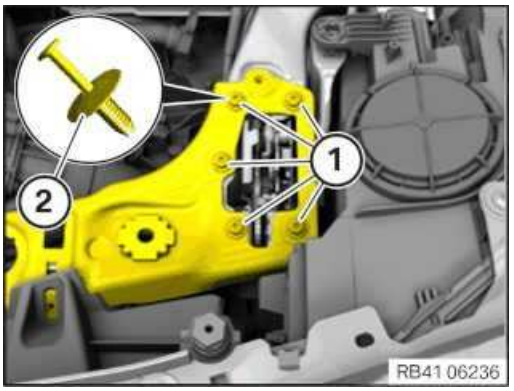
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

24 – Install front cross connection

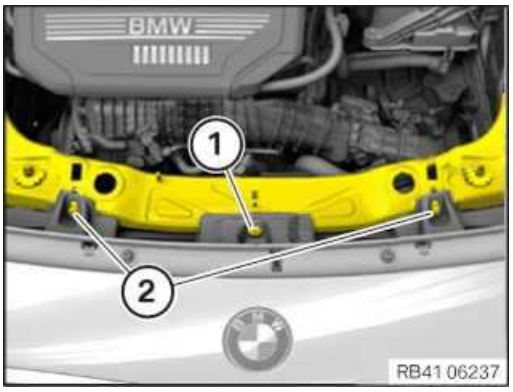


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

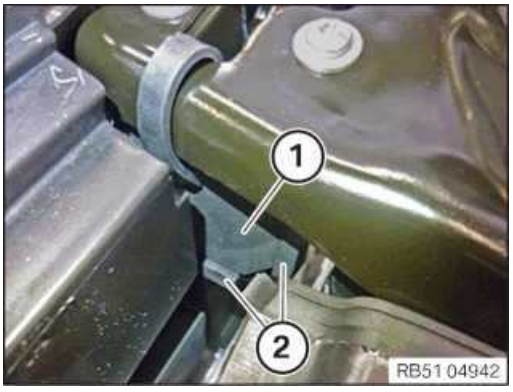
cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

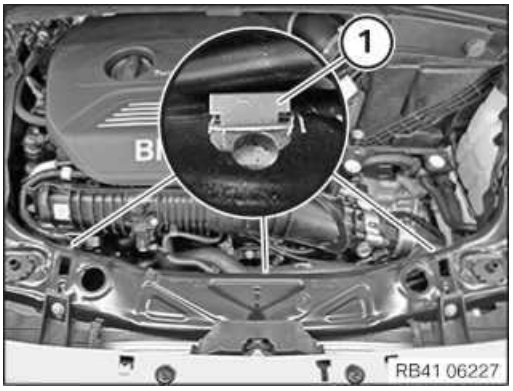
Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).



Air duct to upper connection

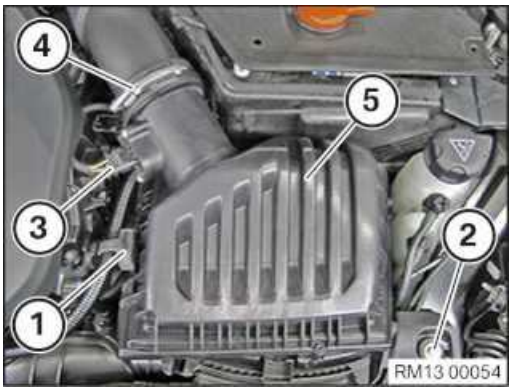
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

25 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

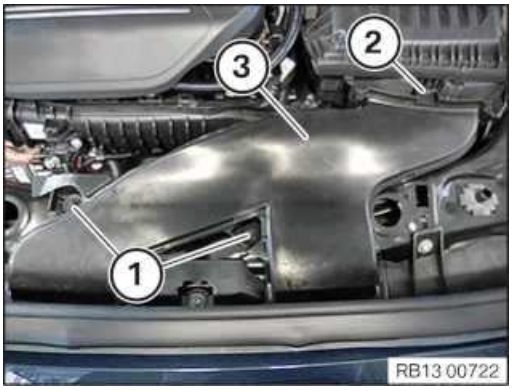
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

26 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

27 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

28 – Disconnecting all battery earth leads

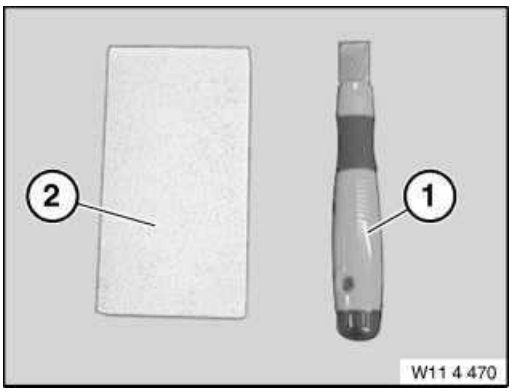
Overview of Special Tools

cardiagn.com

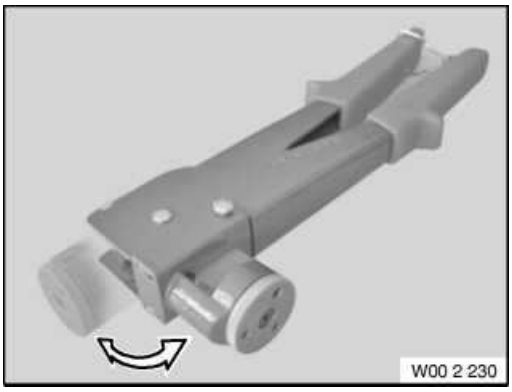


0 496 268 (11 0 390) Pin

Common Used in step 11 18

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

0 495 102 (11 4 470) Tool



Common Used in step 15 16

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 496 521 (00 2 230) Pliers

Common Used in step 19

Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

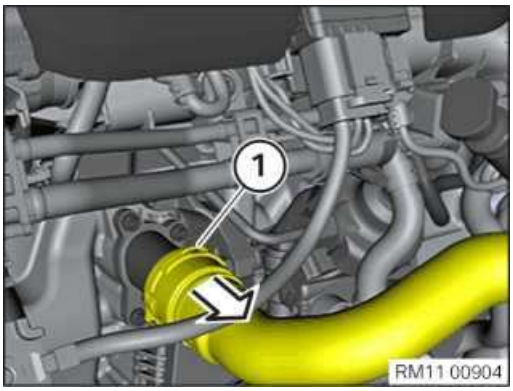
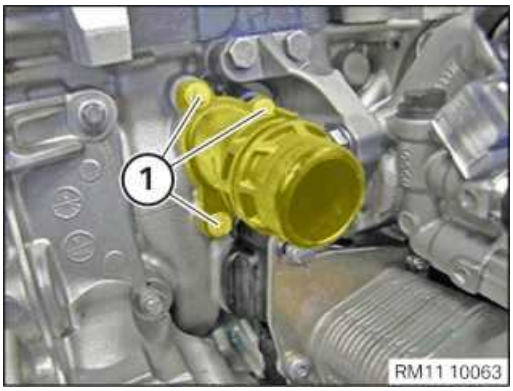
2.0 Grease for wheel centring	20



cardiagn.com

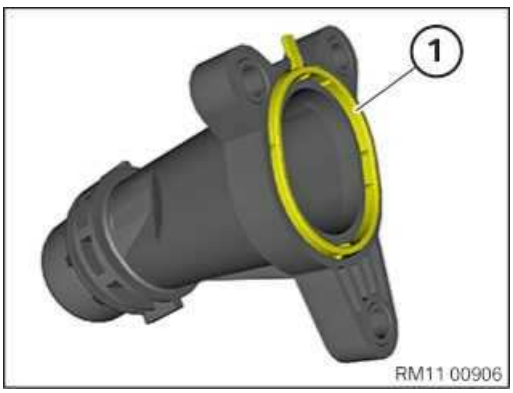
11 53 942 Remove and install (replace) connecting branch (B47)



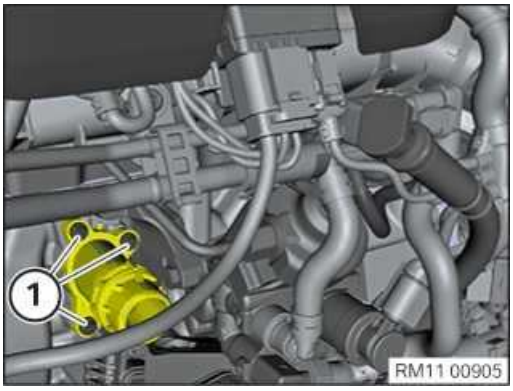
Necessary preliminary tasks:

- Drain coolant

Removal:

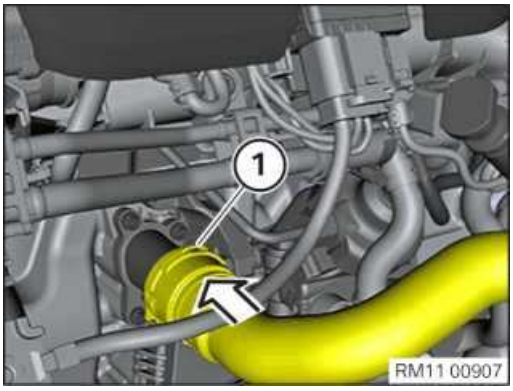


Unlock coolant hose (1) and disconnect from connecting branch.



Release screws (1) on connecting branch.
Remove connecting branch.

Installation:



Part: Replace gasket (1).
Install gasket (1).

cardiagn.com

Position connecting branch.
Tighten screws (1) on connecting branch.
Tightening torque 11 51 2AZ.

Mount coolant hose on connecting branch (1).
Lock must snap audibly into place.

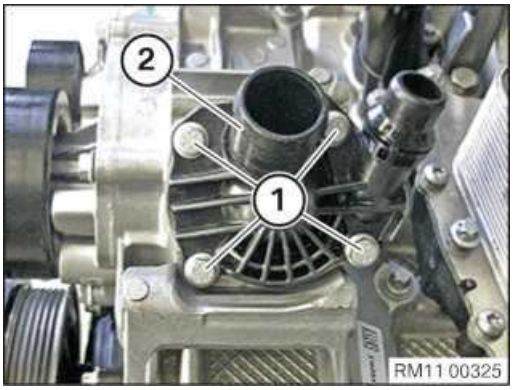
Required follow-up work:

- Add coolant

cardiagn.com

11 53 000 Removing and installing or replacing coolant thermostat (B47)

Recycling:



Catch and dispose of drained coolant.

Observe country-specific waste disposal regulations.

Necessary preliminary tasks:

- Remove alternator bracket.

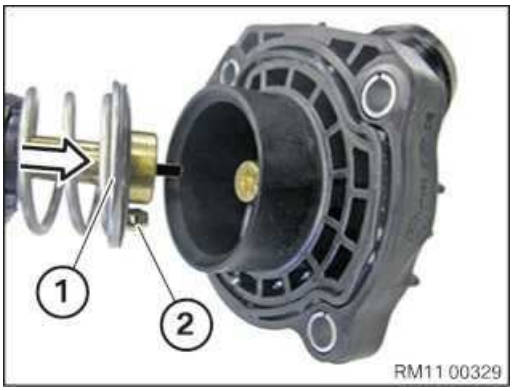
Removal:

Release screws (1).

Remove thermostat housing (2).

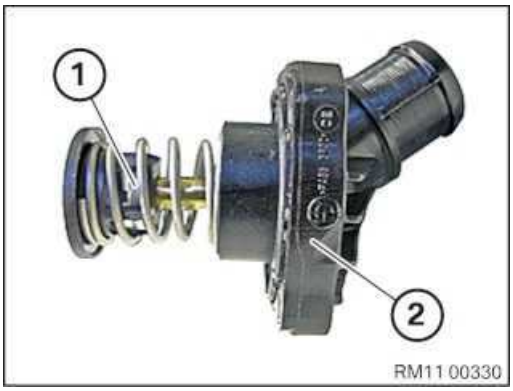
Remove thermostat (1) from housing in direction of arrow.

Installation:

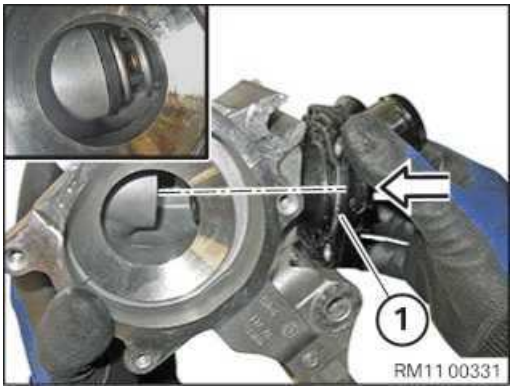


cardiagn.com

Note:
Guide sleeve (1) must not be damaged or missing.

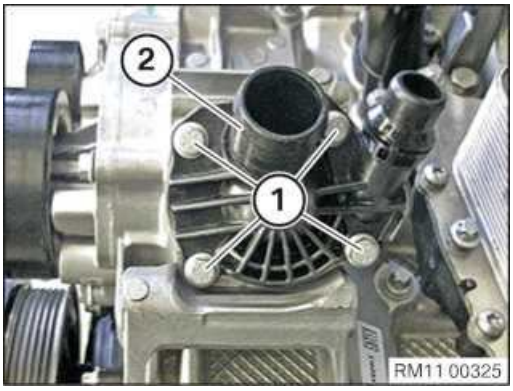


Parts: Replace profile seal (1).



Note:
Valve (2) must be positioned at bottom.

Insert thermostat (1) in housing.



Important!
Thermostat (1) must not tilt out of housing (2) during installation.

cardiagn.com

Note:
Alternator bracket dismantled for improved clarity.

Install thermostat housing (1) with thermostat in a straight line and free from stress.

Tighten down screws (1).

Tightening torque: 11 00 2AZ.

Required follow-up work:

- Install alternator bracket.

cardiagn.com

11 53 000 Removing and installing/replacing coolant thermostat

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

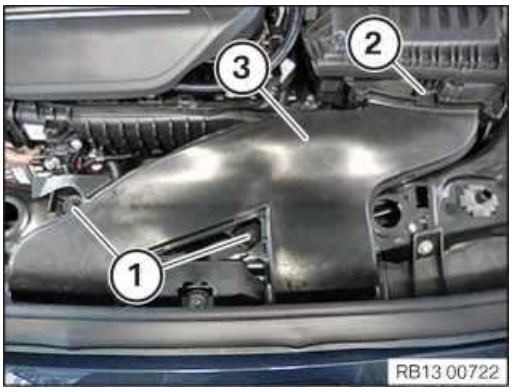
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

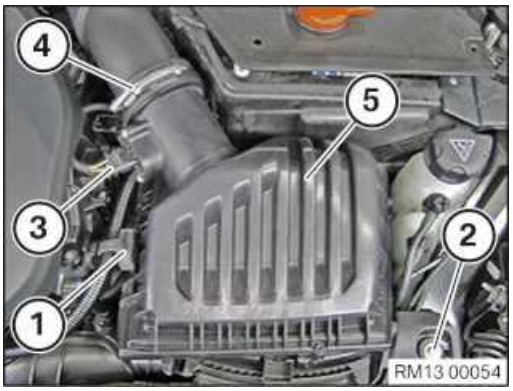
Damage to the acoustic cover.



Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

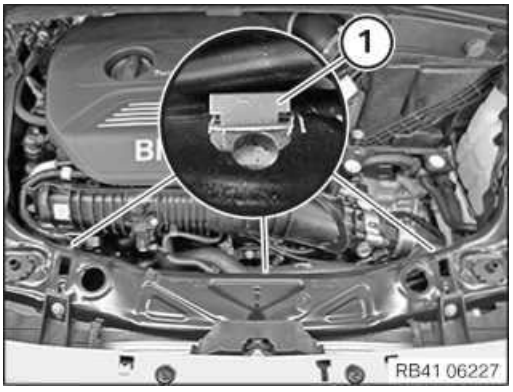
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



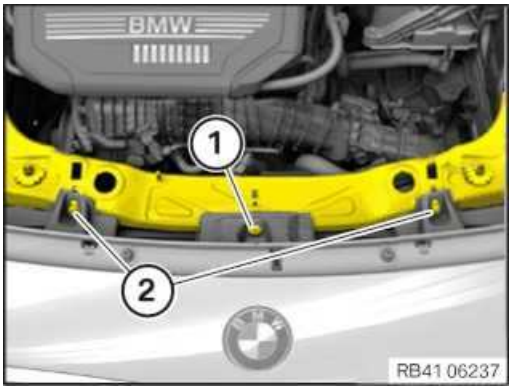
3 – Remove the intake neck for intake silencer housing

cardiagn.com

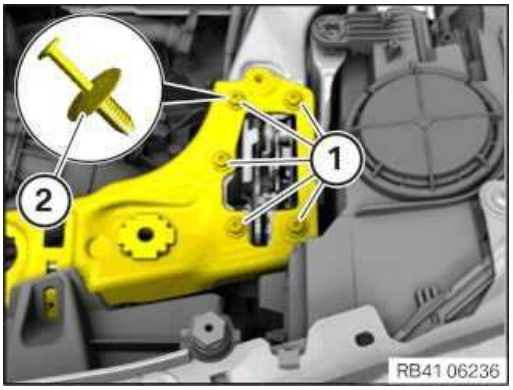


- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

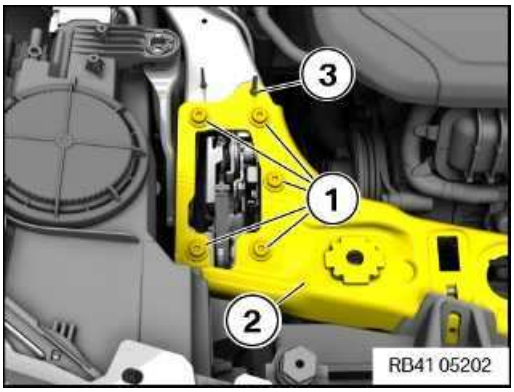


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection

- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

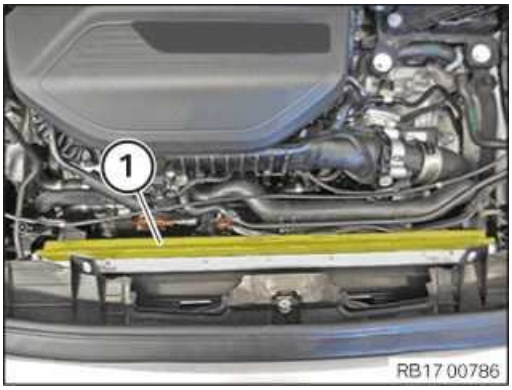


- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

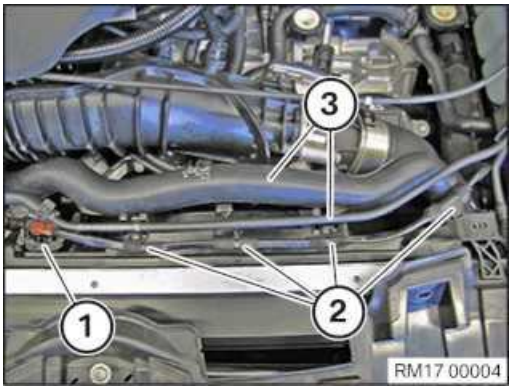
cardiagn.com

- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

WARNING

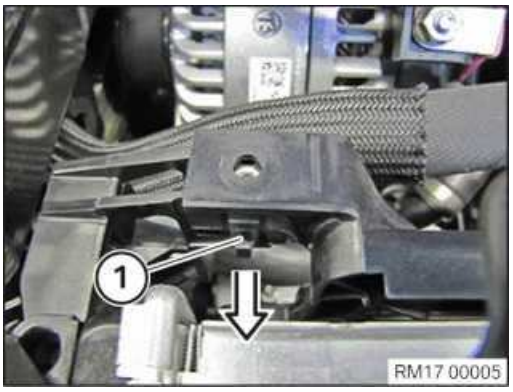


Hot surfaces.

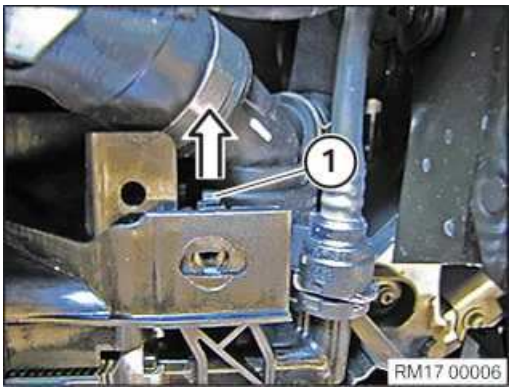
Risk of burning!

- Perform all work only on components that have cooled down.

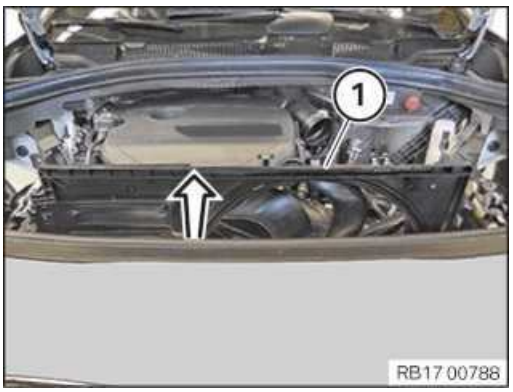
- Feed out and remove the sealing (1) from the radiator.



- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

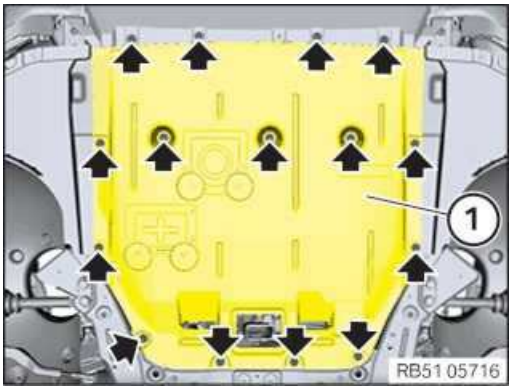


- Loosen screws (1).

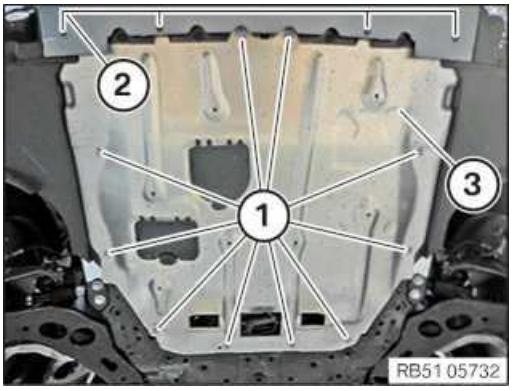


cardiagn.com

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

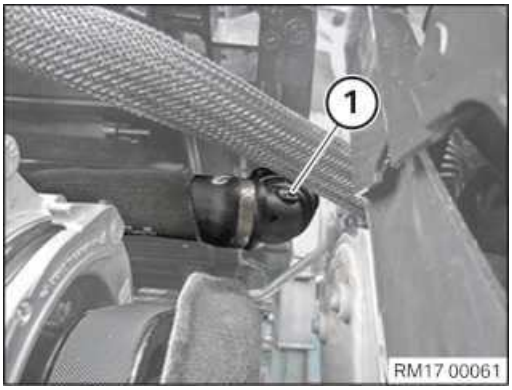
- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

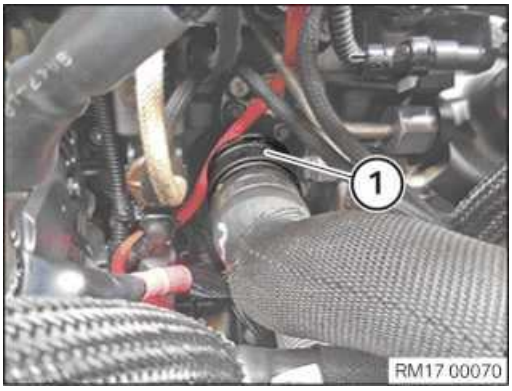
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

cardiagn.com

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

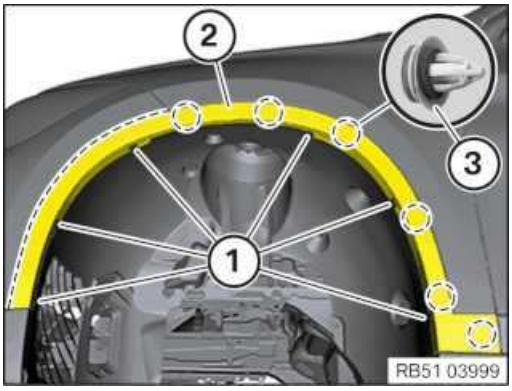
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

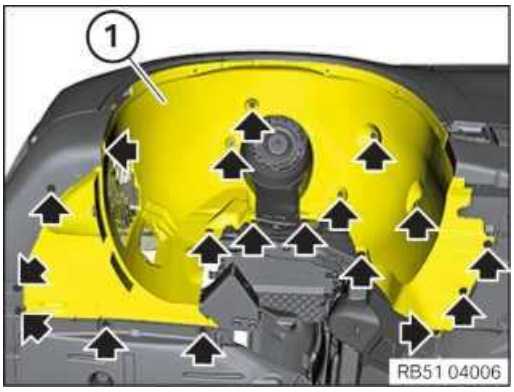
10 – Removing the front right wheel arch cover



▸ **Remove the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

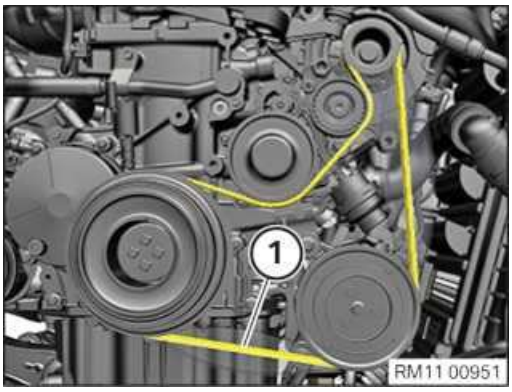
Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

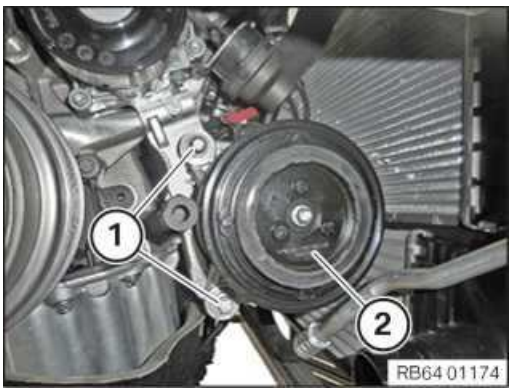


TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool **0 496 268 (11 0 390)**.

cardiagn.com

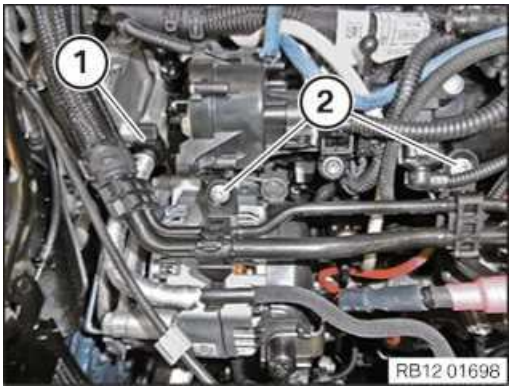


- Guide out the drive belt for the alternator (1) and remove it.

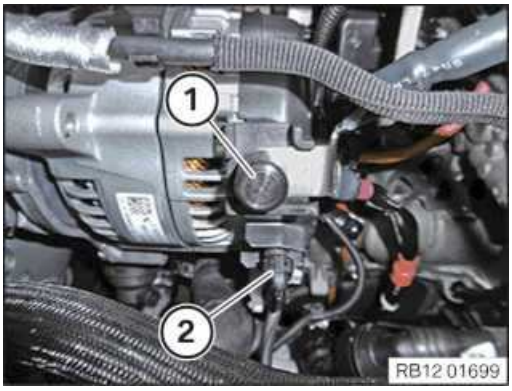
12 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



TECHNICAL INFORMATION

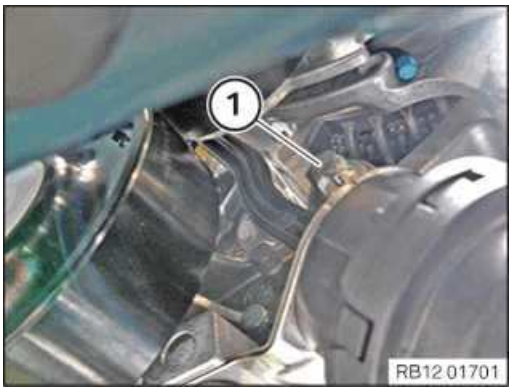


Secure component against falling.

- Loosen screws (1).
- Detach the air conditioning compressor (2) from the component carrier and protect it from falling.

Note: Tie the air conditioning compressor up.

- Unlock the coolant ventilation line (1) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.
- Loosen screws (2).
- Place fuel feed and return line to one side.

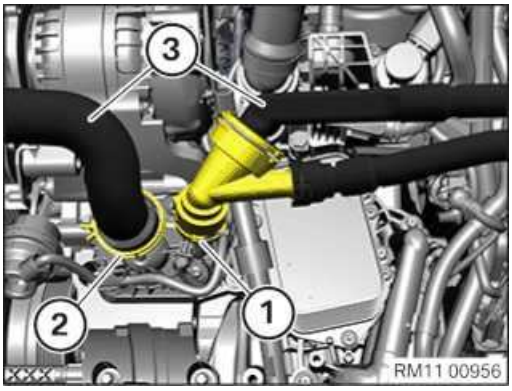


- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock and disconnect the connector (2) from the alternator.

cardiagn.com

- Detach screw (1) on top on the alternator.

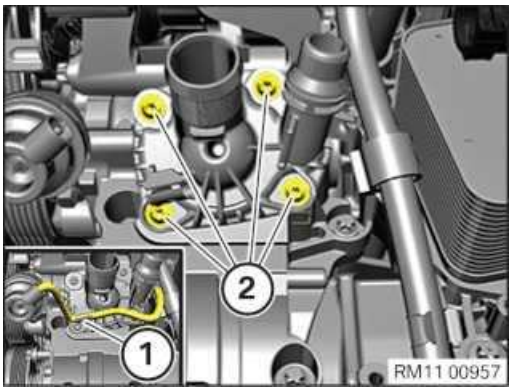
- Detach screw (1) below on the alternator.



- Feed out alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support and remove.

MAIN WORK

13 – Removing the coolant thermostat



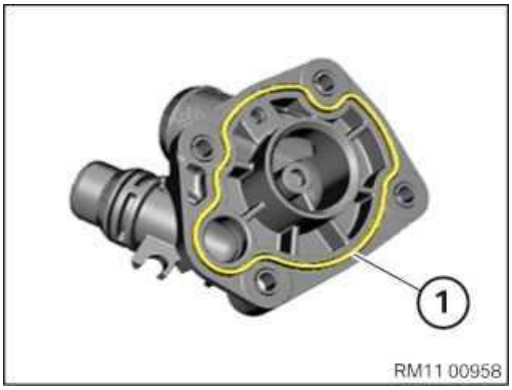
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock of the coolant pipe on the thermostat housing (1).
- Loosen hose clamp (2).
- Disconnect the coolant pipe and coolant hose (3) from the thermostat housing and set aside.
- Catch and dispose of escaping coolant.

cardiagn.com

- Take the vacuum hose (1) out of the holder.
- Unscrew the bolts (2) on the thermostat housing.
- Thread out and remove the thermostat housing.
- Catch and dispose of escaping coolant.



- Remove the coolant thermostat (1) from the thermostat housing in the direction of the arrow.

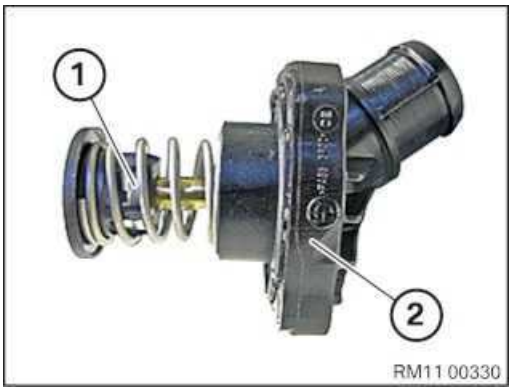
14 – Installing the coolant thermostat

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

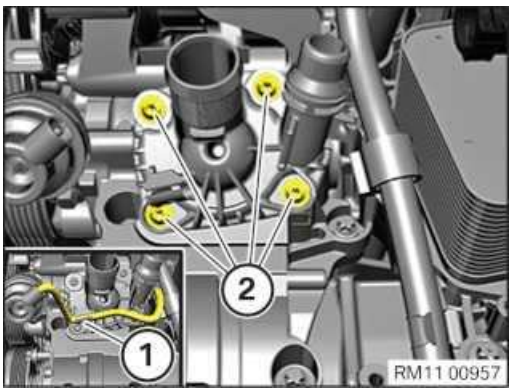
- Renew seal (1) from thermostat housing.

  Parts: Gasket



- Check the guide sleeve (1) for damage and renew if necessary.

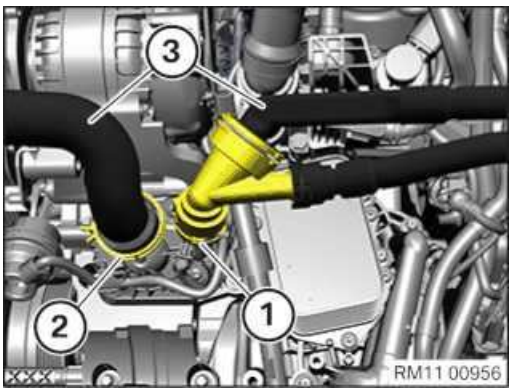
  The guide sleeve (1) must not be damaged or missing.



cardiagn.com

- Insert the coolant thermostat (1) into the thermostat housing so that the valve (2) is on the bottom.

- Make sure that the coolant thermostat (1) does not fall out of the thermostat housing (2) during the installation.



- Install the thermostat housing with the coolant thermostat.
- Tighten down screws (2).

Thermostat housing to component carrier

M6		Tightening torque	8 Nm

- Secure vacuum hose (1) in holder on thermostat housing.

- Connect coolant line and coolant hose (3).
- Make sure that the coolant line (3) engages audibly on the thermostat housing.
- Secure coolant hose with hose clamp (2).

POSTPROCESSES

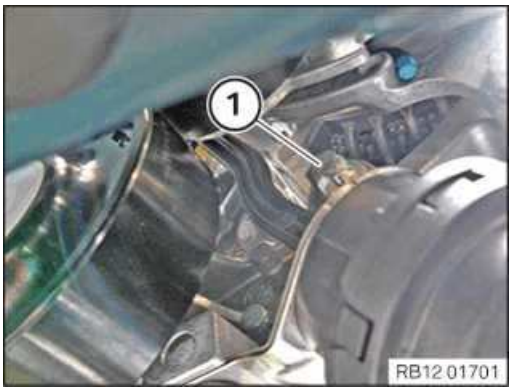
15 – Installing the alternator

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

CAUTION



Improper routing of the positive battery cable.

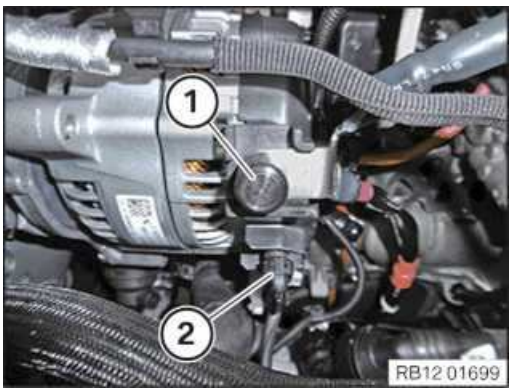
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install alternator (1) along with the screw (2) on the bottom of the alternator through the slot on the support.

- Tighten the screw (1) below on the alternator.

Alternator to component carrier

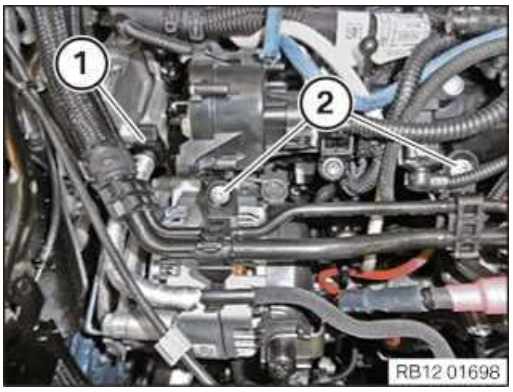


M10x75 / M10x125		Tightening torque	38 Nm

- Tighten the bolt (1) on top on the alternator.

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



- Mount positive battery cable to the alternator.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1).
- Connect the connector (2) to the alternator and lock audibly.

cardiagn.com

- Mount fuel supply and return line.
- Tighten down screws (2).

Fuel line to intake plenum

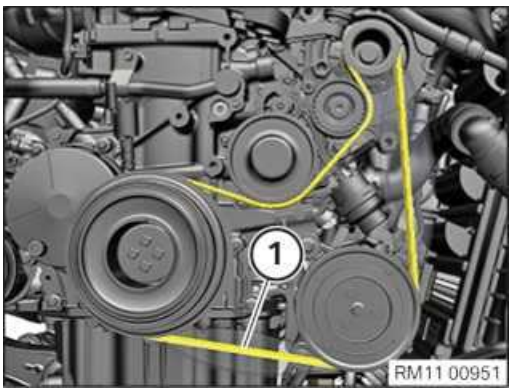
TS6x20		Tightening torque	5 Nm

- Connect the coolant ventilation line (1) to the cylinder head and audibly lock.

- Correctly position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm



16 – Installing the drive belt for alternator

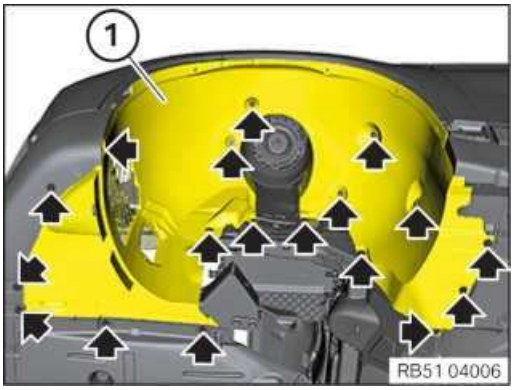
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Feed in the drive belt for the alternator (1) and install it.



- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool **0 496 268 (11 0 390)** out of the belt tensioner and remove it.

17 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

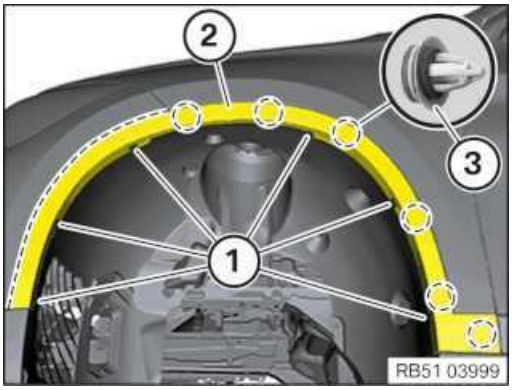
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

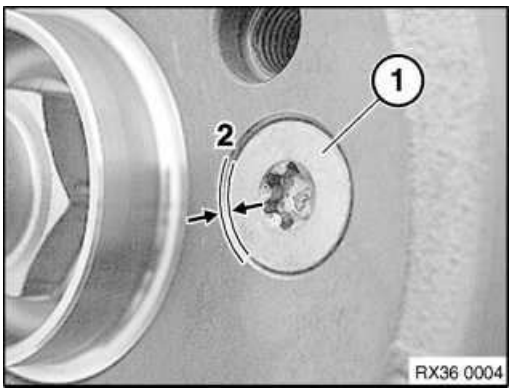
18 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

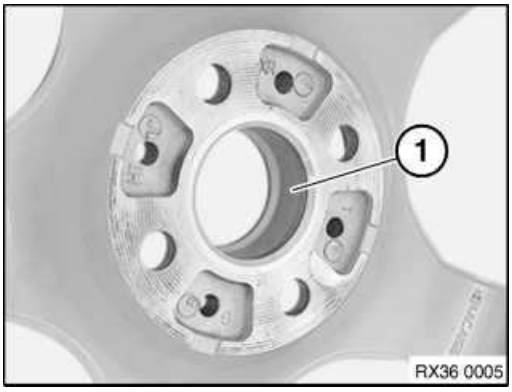


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

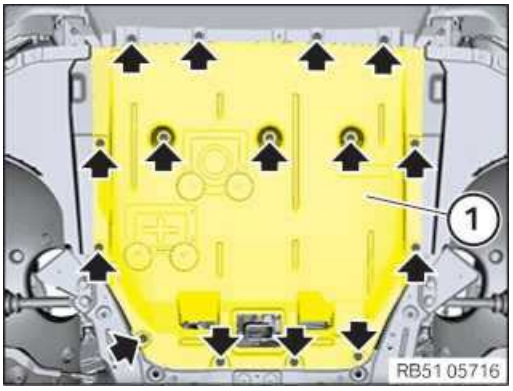
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



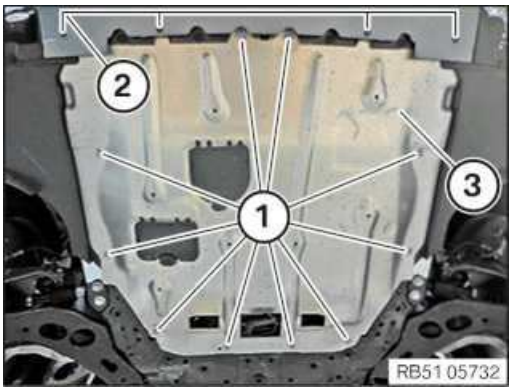
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

19 – Installing the front underbody protection



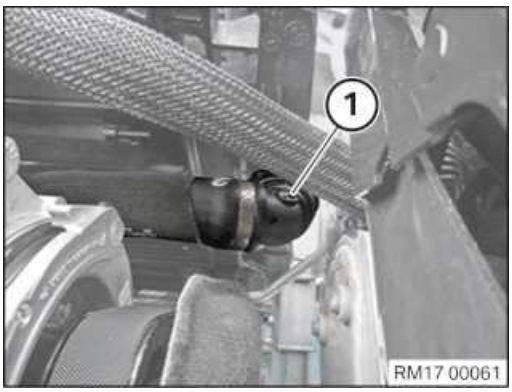
- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

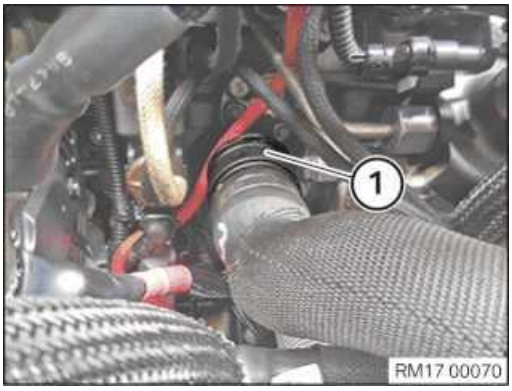
cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

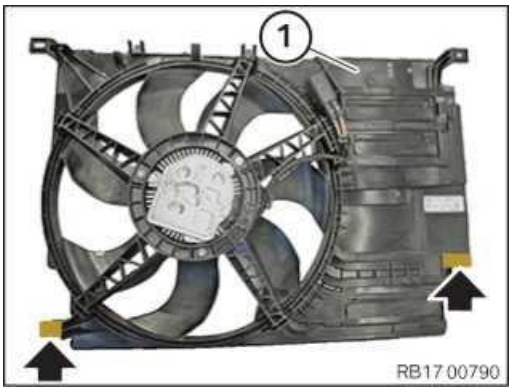


20 – Connect the coolant line

TECHNICAL INFORMATION

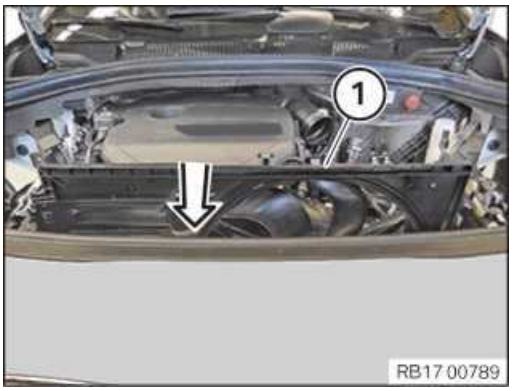
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

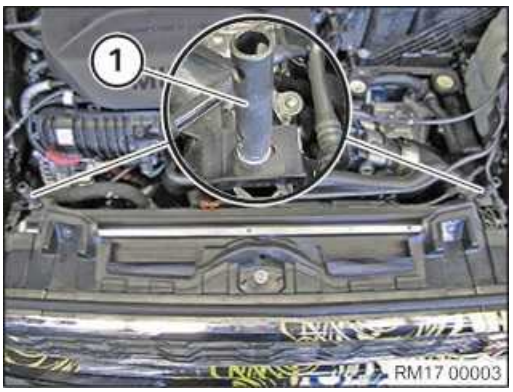
21 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

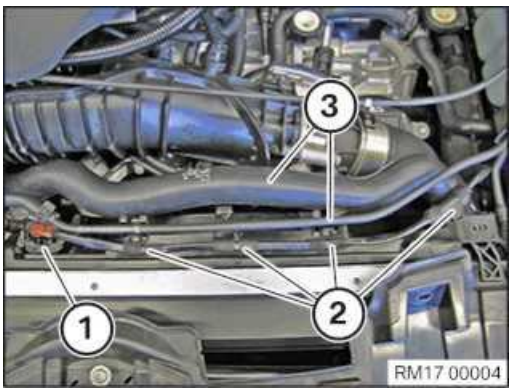
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

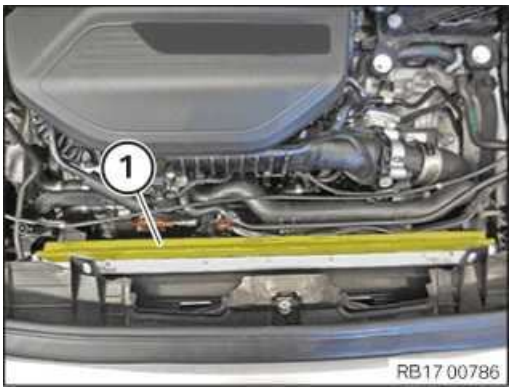
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

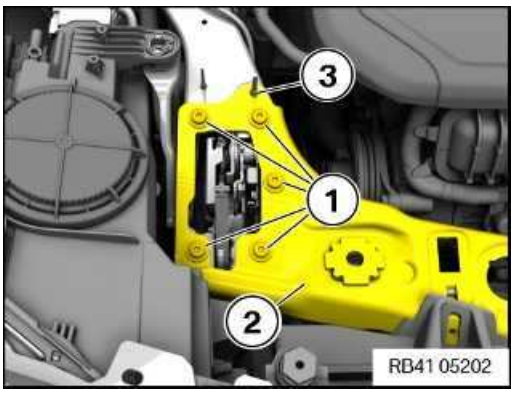


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

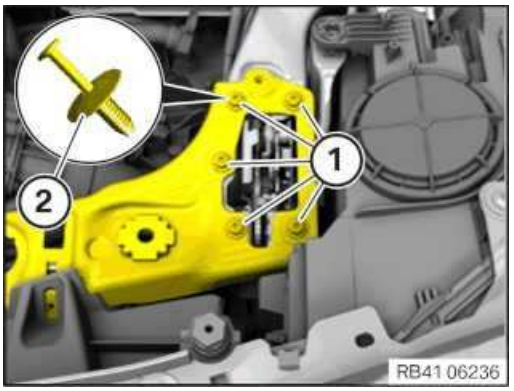
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

22 – Install front cross connection

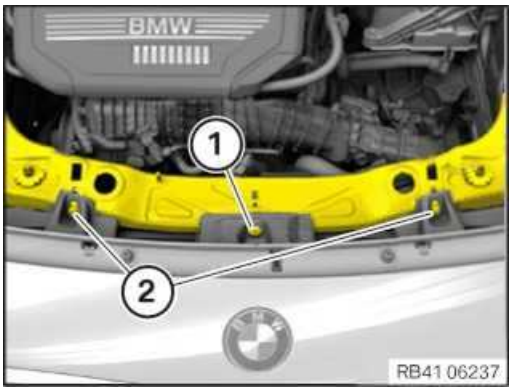


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

- Position screws (3) on the rubber mounts for the radiator and tighten.

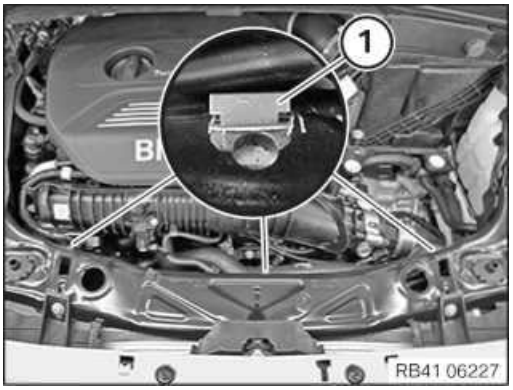
Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).

Air duct to upper connection

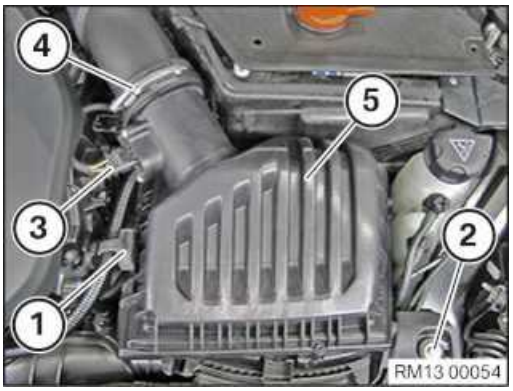
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

23 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

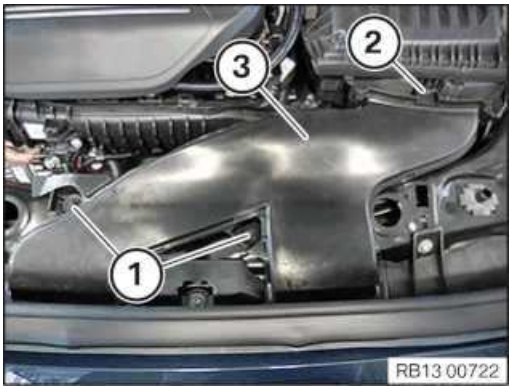
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

24 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

25 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

26 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

27 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

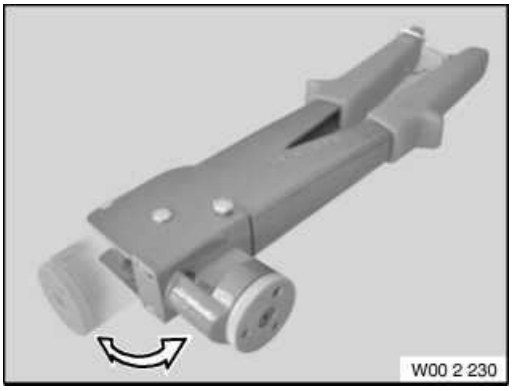
Overview of Special Tools

0 496 268 (11 0 390) Pin



Common

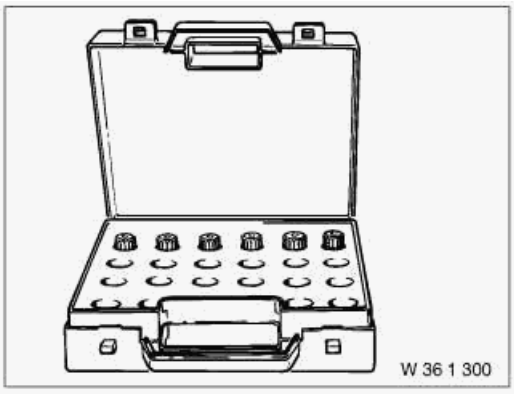
Used in step 11 16

Usage	(roll pin) For securing new tensioning pulley (poly-V belt)
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 15 07 (390)

cardiagn.com

0 496 521 (00 2 230) Pliers

Common	Used in step 17
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)



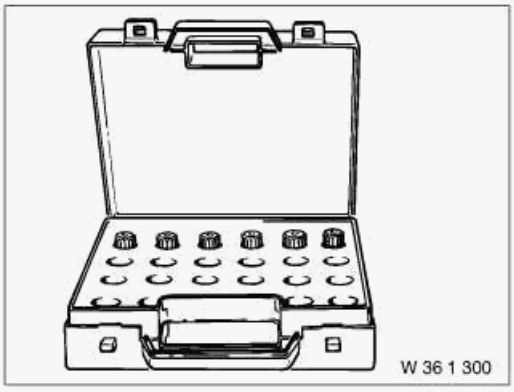
2 344 011 Tool

Common	Used in step 18
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

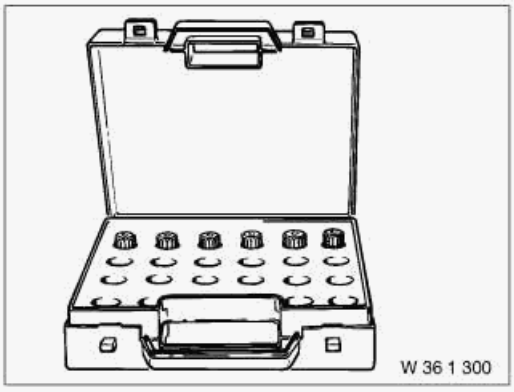
0 495 221 (36 1 323) Wheel stud

Common	Used in step 9
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 224 (36 1 326) Wheel stud

Common	Used in step 9
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



cardiagn.com

0 495 225 (36 1 327) Wheel stud

Common	Used in step 9
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 9
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 227 (36 1 329) Wheel stud

Common	Used in step 9
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518

cardiagn.com

11 53 002 Removing and installing/replacing the secondary coolant thermostat

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

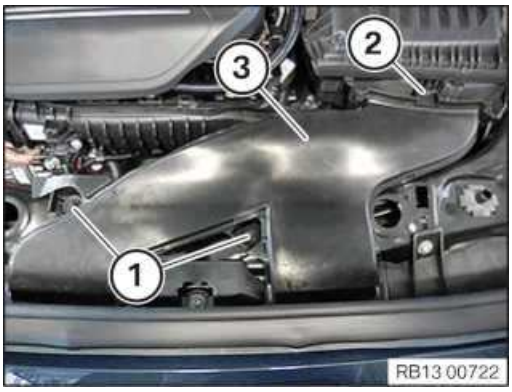
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

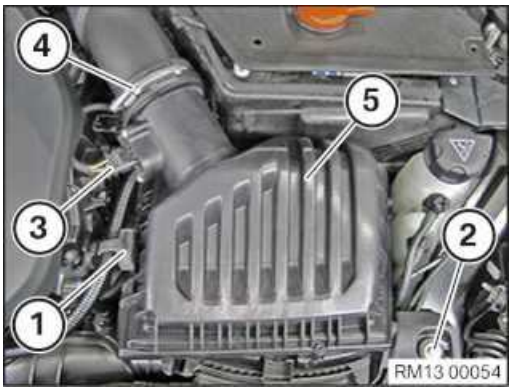
RISK OF DAMAGE



Damage to the acoustic cover.

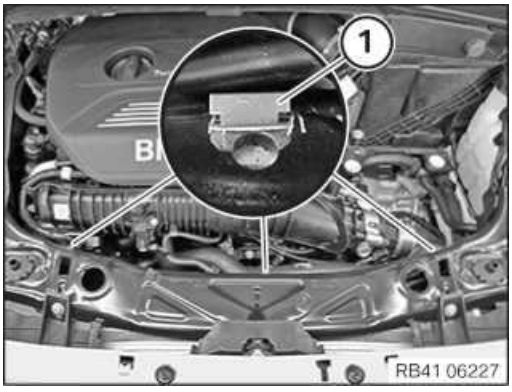
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



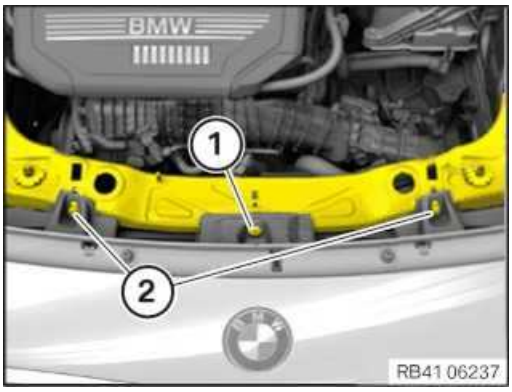
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing



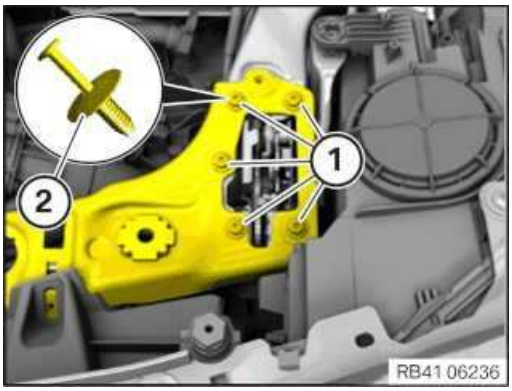
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing

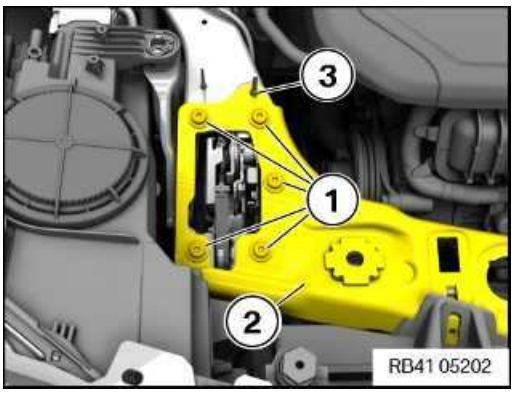


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove front cross connection



- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

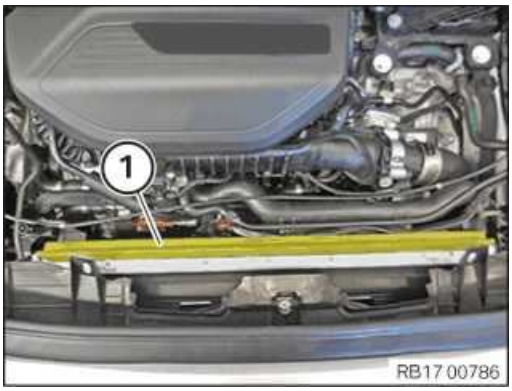


cardiagn.com

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

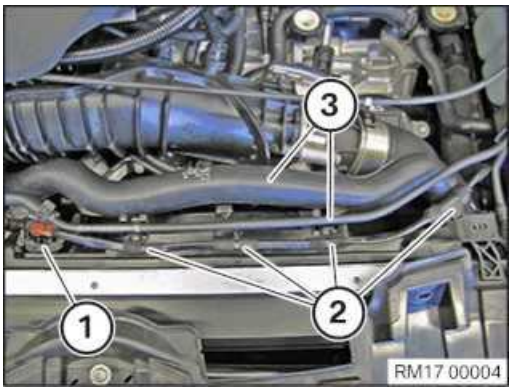
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.



6 – Removing the fan cowl with electric fan

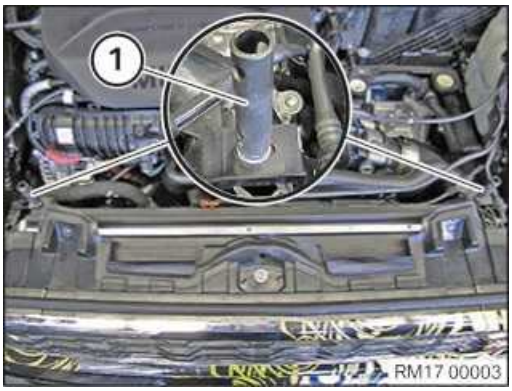
WARNING

Hot surfaces.

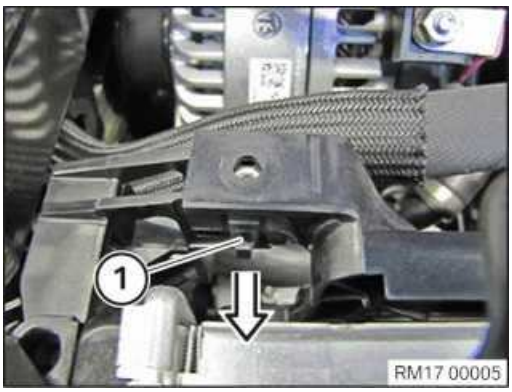


Risk of burning!

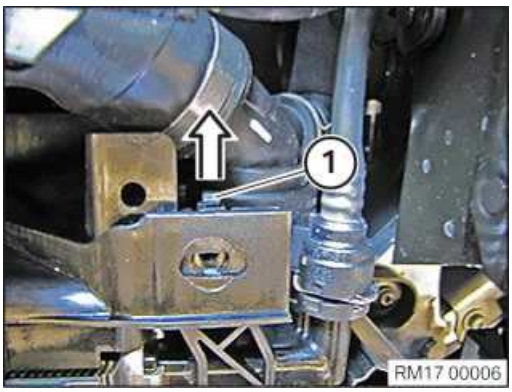
- Perform all work only on components that have cooled down.



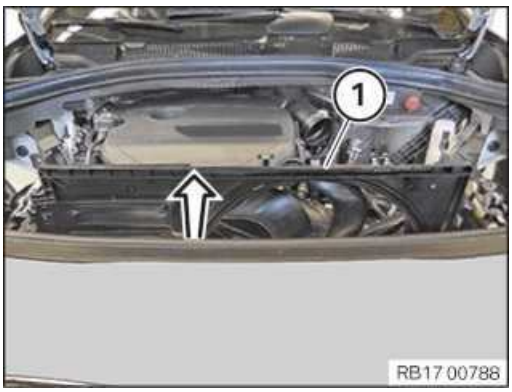
- Feed out and remove the sealing (1) from the radiator.



cardiagn.com

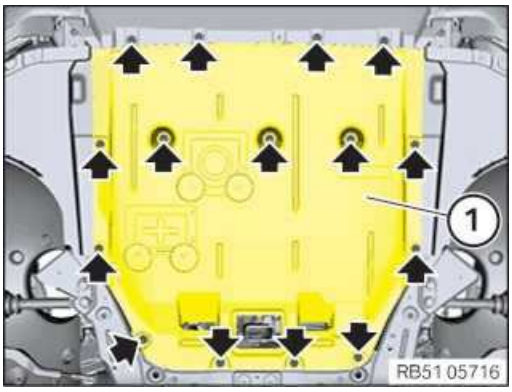


- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

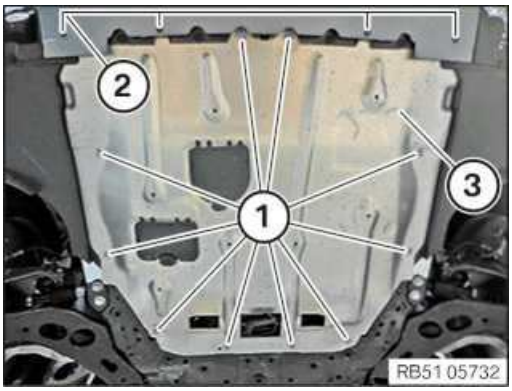


- Loosen screws (1).

- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection

cardiagn.com

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

8 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

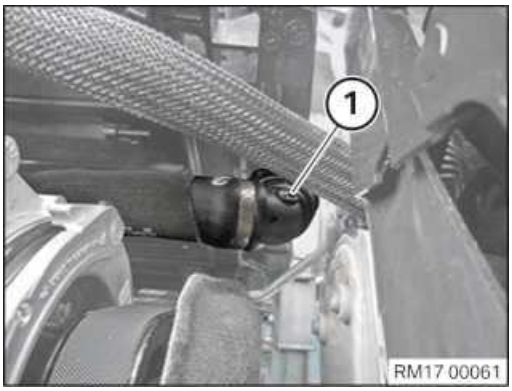
TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

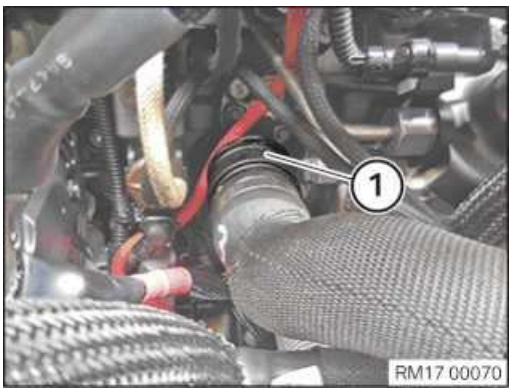
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



cardiagn.com

- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

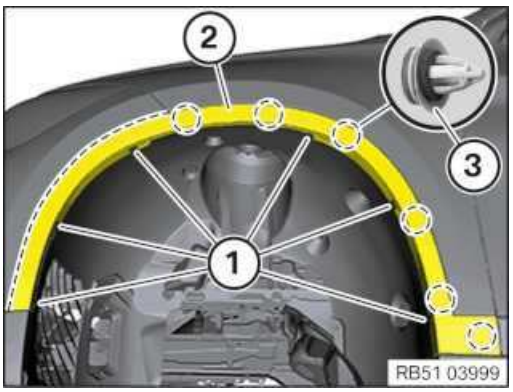
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

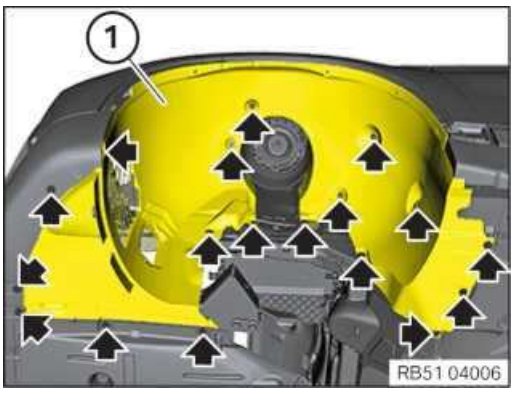
cardiagn.com

10 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

NOTICE

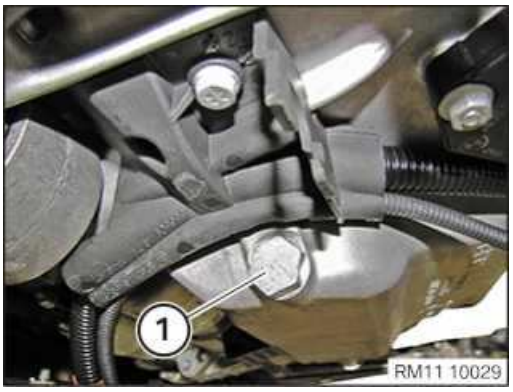
Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

11 – Removing the oil filler cap

- Open oil filler cap (1).

12 – Releasing the oil drain plug



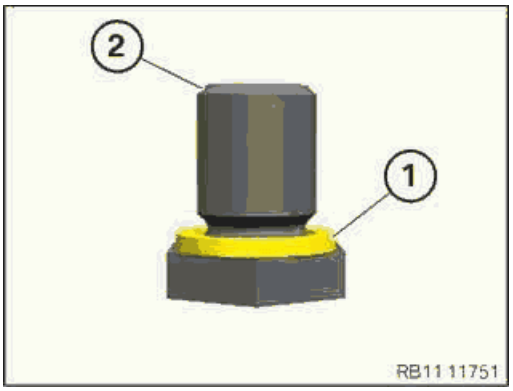
cardiagn.com

WARNING

Hot fluids.

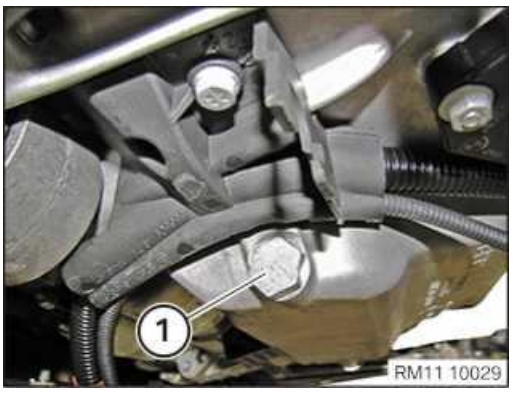
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.



- Release oil drain plug (1).
- Drain engine oil.

13 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.

- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

14 – Undoing the oil drain plug on the oil filter cover

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

15 – Tightening the oil drain plug on the oil filter cover

- Renew oil drain plug (1) with the sealing ring (2).

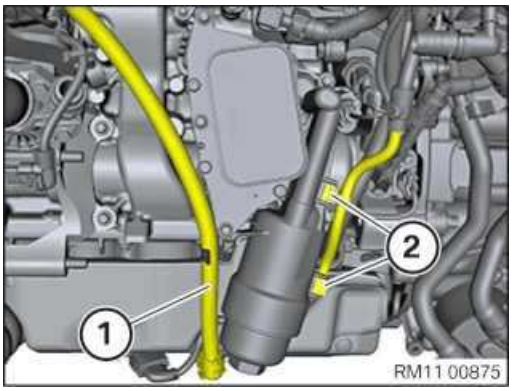
  Parts: Oil drain plug, sealing ring

- Feed in and install the oil drain plug (1).
- Tighten the oil drain plug (1) on the oil filter cover (2).

Oil drain plug to oil filter cover

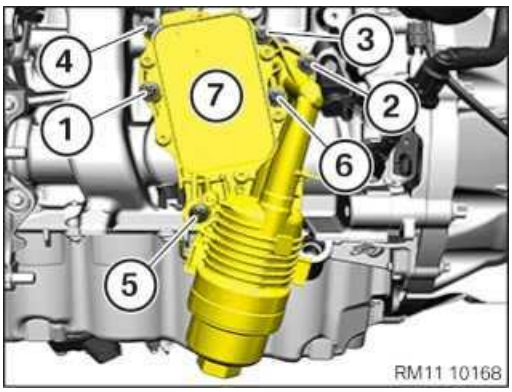
	Renewoil drain plug.	Tightening torque	6 Nm

16 – Remove full-flow oil filter



TECHNICAL INFORMATION

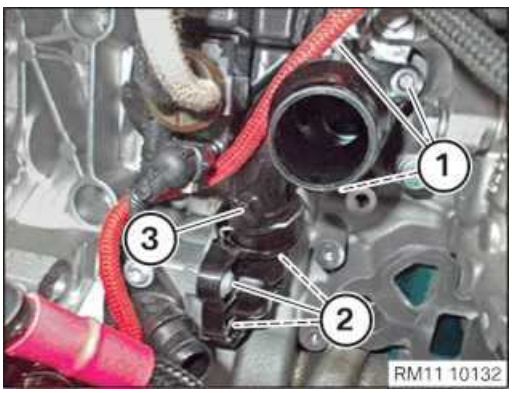
Make sure that there are no particles or impurities in the medium openings. Coolant or foreign substances in the oil can cause engine damage such as damage to the connecting rod bearing.



cardiagn.com

- Unlock coolant lines (1).
- Pull off coolant lines (1) and place to one side.
- Catch and dispose of escaping coolant.

- Release positive battery cable (1) on full-flow oil filter from the clamp.
- Release the engine wiring harness (2) from the full-flow oil filter.



- Loosen screws in the order (6) to (1).
- Guide out the full-flow oil filter (7) upwards and remove.

MAIN WORK

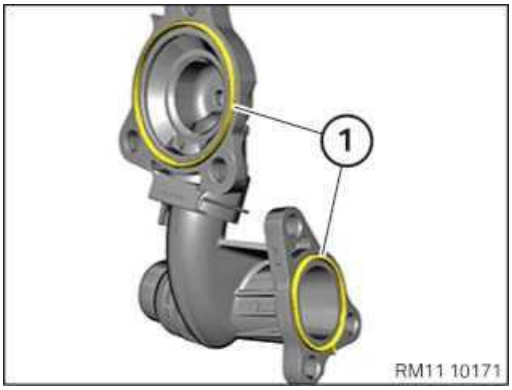
17 – Removing the secondary coolant thermostat

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

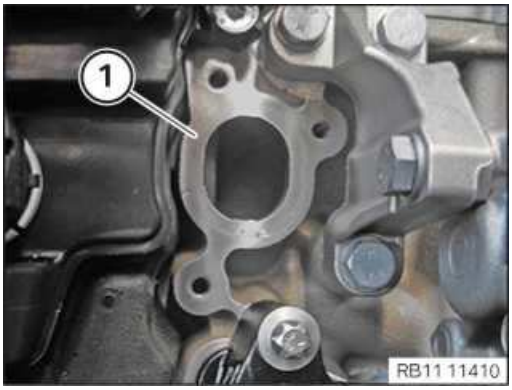
- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove the connecting branch (3).

cardiagn.com



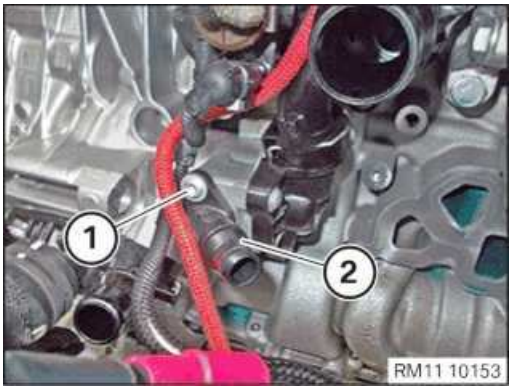
- Removing the secondary coolant thermostat.
- Ensure that the guide sleeve (1) is present on the secondary coolant thermostat.

18 – Installing the secondary coolant thermostat



TECHNICAL INFORMATION

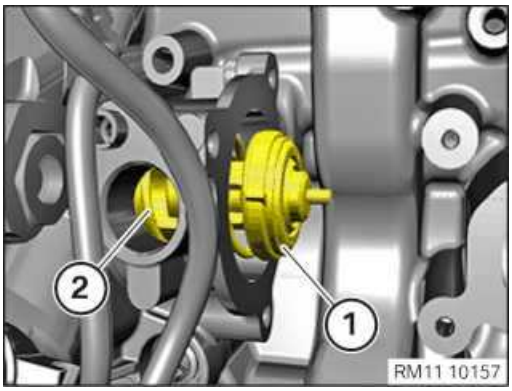
The sealing surfaces must be free from oils, grease and cleaning agents.



- Replace the seals (1).

  Parts: Seals

- Clean the sealing surfaces (1) on the engine block and component carriers with special tool **0 495 102 (11 4 470)**.



- Loosen screw (1).
- Guide out and remove the connecting branch (2).

cardiagn.com

- Ensure that the guide (1) is present on the secondary coolant thermostat.

  The guide (1) must not be damaged or missing, replace coolant thermostat if necessary.

- Position the coolant thermostat (1) in the component carrier.
- Fasten the coolant thermostat through the opening (2).

- When positioning the housing, make absolutely sure that the guide of the coolant thermostat (1) sits correctly in the housing (2).

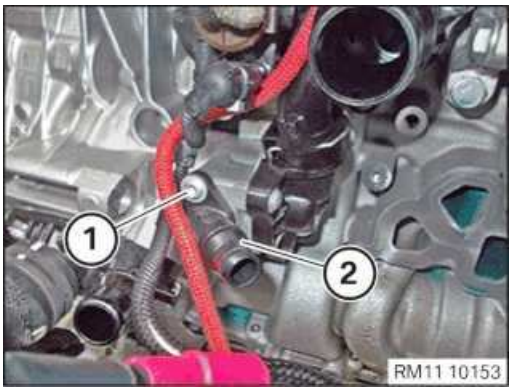
- Feed in the connecting branch (2) and position it so that the coolant thermostat sits in the guide.
- Tighten down screws (2).

Connecting branch to component carrier

M6x20		Tightening torque	8 Nm

- Tighten the screws (1).

Connecting branch to engine block



M6x25		Tightening torque	8 Nm

- Renew the O-ring (1) on the connecting branch.

  Parts: O-ring.

cardiagn.com

- Insert connecting branch (2) and install.
- Tighten down screw (1).

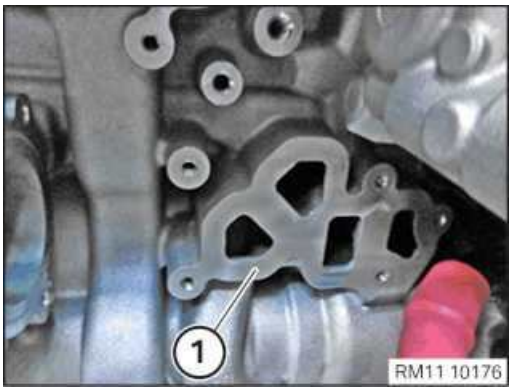
Connecting branch to component carrier

M6x20		Tightening torque	8 Nm

POSTPROCESSES

19 – Install full-flow oil filter

RISK OF DAMAGE



Damage to the surface.

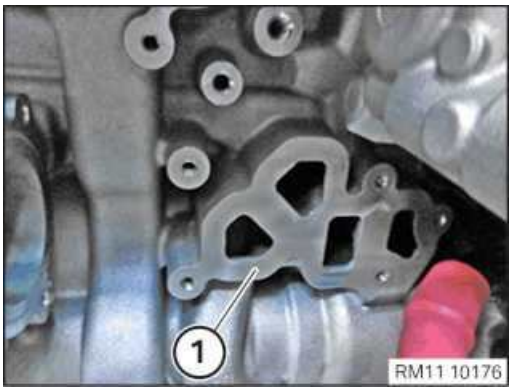
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean any sealing residue on the sealing surface of the crankcase (1) with special tool **0 495 102 (11 4 470)**.

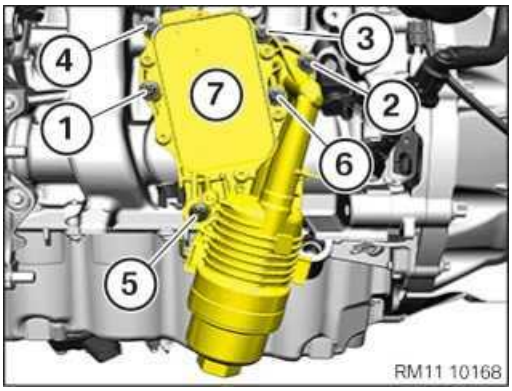


- Remove seals (1) using a suitable tool.
- Clean the sealing residue from the full-flow oil filter.
- Renew gaskets (1).

  Parts: Sealing kit
- Install seal (1).

cardiagn.com

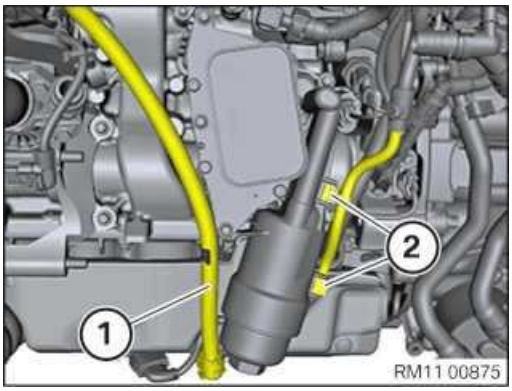
- Crank the engine twice with the special tool **0 493 380 (11 6 480)** in the direction of rotation.



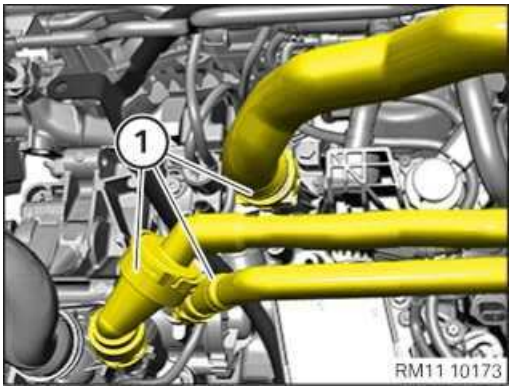
- Have a cleaning cloth ready.
- Catch any engine oil leaking from the oil duct of the crankcase (1) and dispose of this.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean sealing surface (1).



- Feed in and install the full-flow oil filter (7).
- Make sure seals are correctly seated.
- Tighten screws in the order (1) to (6).

Full-flow oil filter to crankcase

Screw M6	Observe tightening sequence.	Jointing torque Tighten down	8 Nm 8 Nm

- Secure the positive battery cable (1) on the full-flow oil filter in the clamp.
- Secure engine wiring harness (2) on full-flow oil filter.

- Connect and lock the coolant lines (1).

  The locks of the coolant lines (1) must audibly engage.

20 – Installing the front right wheel arch cover

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

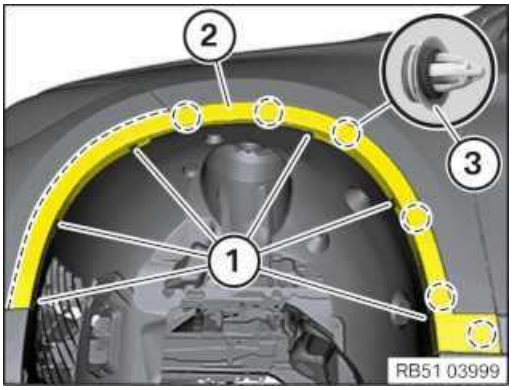
- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm



▸ **Installing front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

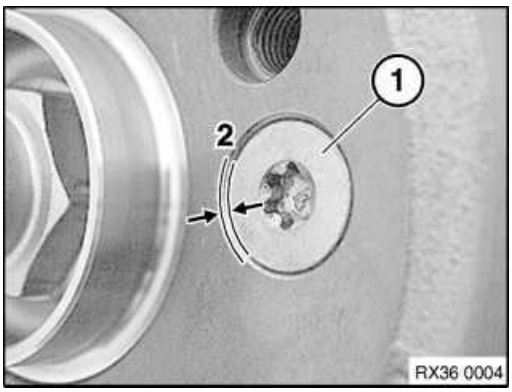
21 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

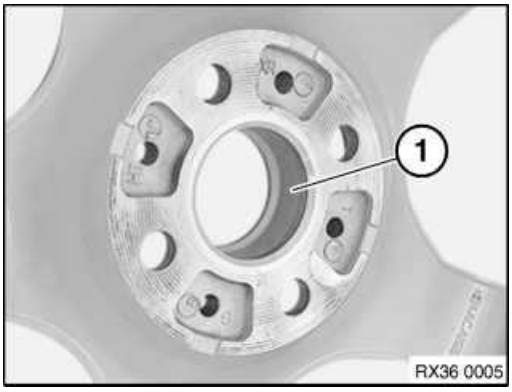


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

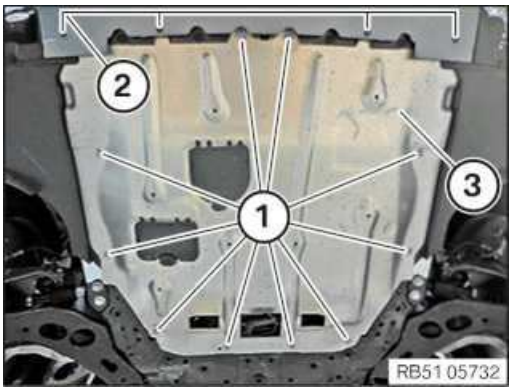
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com



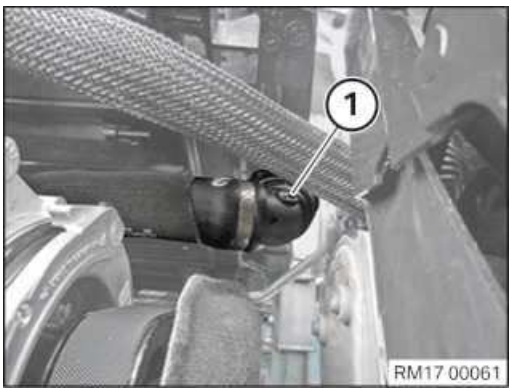
22 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

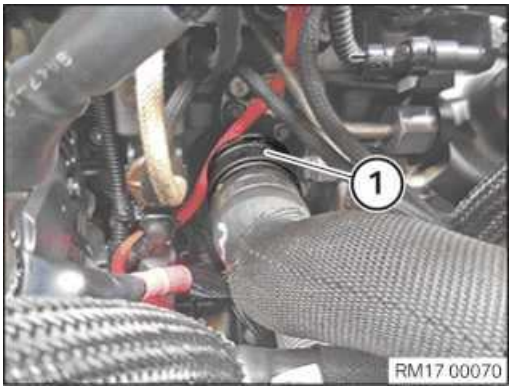
Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).



Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

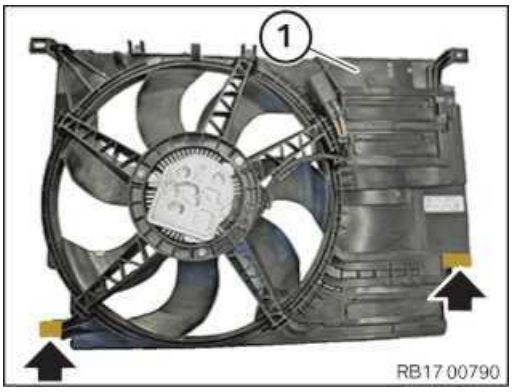


23 – Connect the coolant line

TECHNICAL INFORMATION

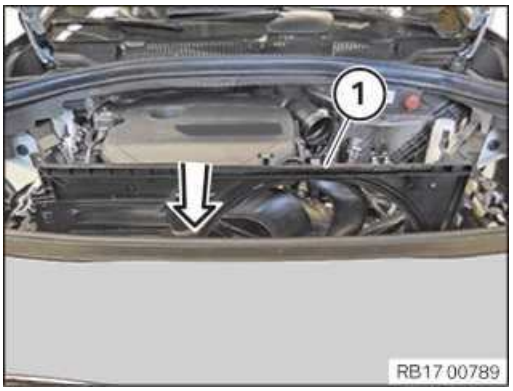
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

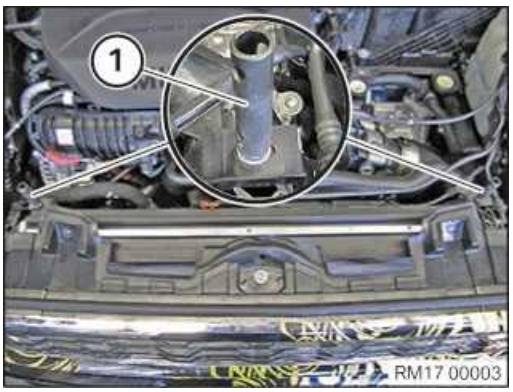
24 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

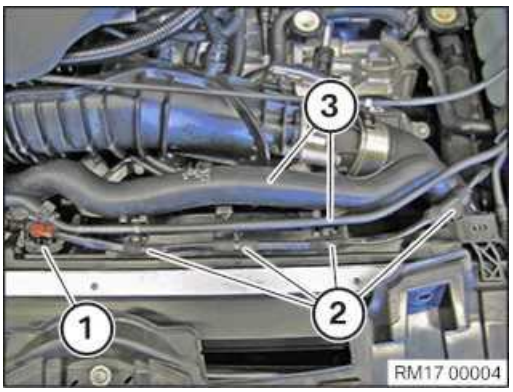
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

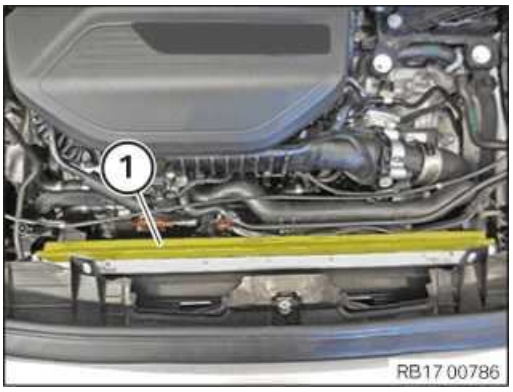
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

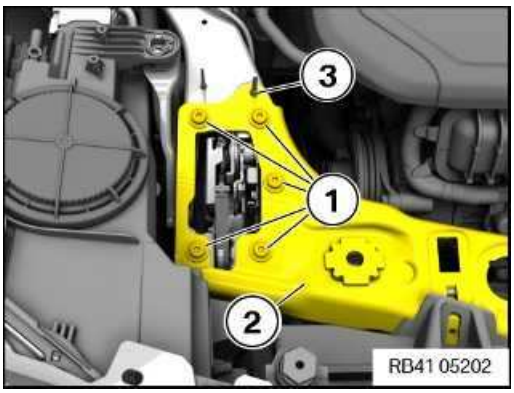


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

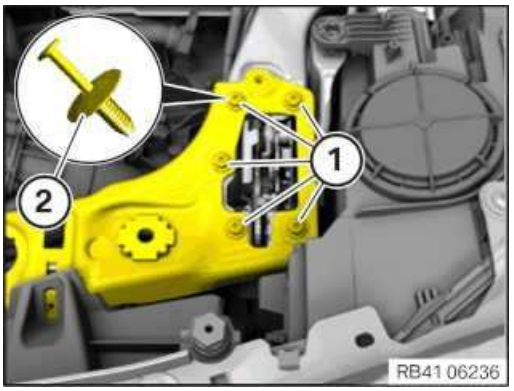
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

25 – Install front cross connection

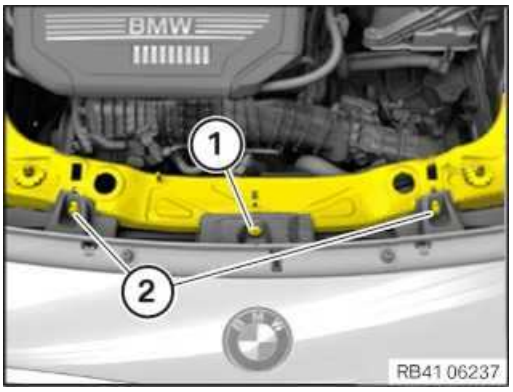


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

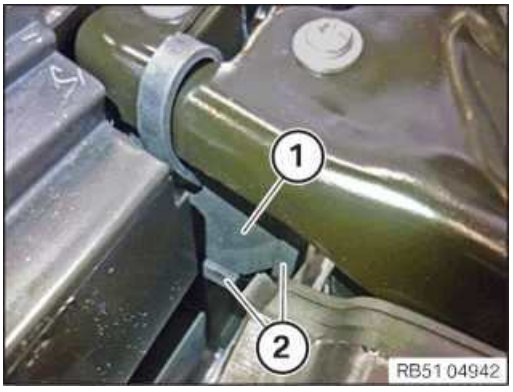
cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

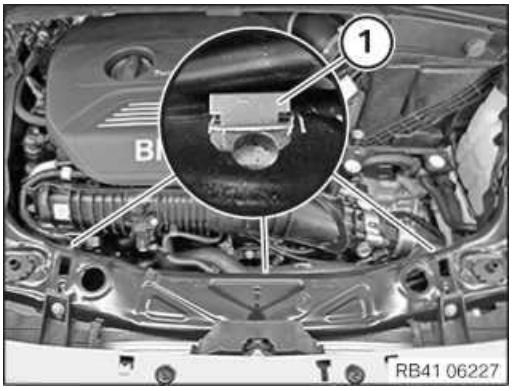
Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).



Air duct to upper connection

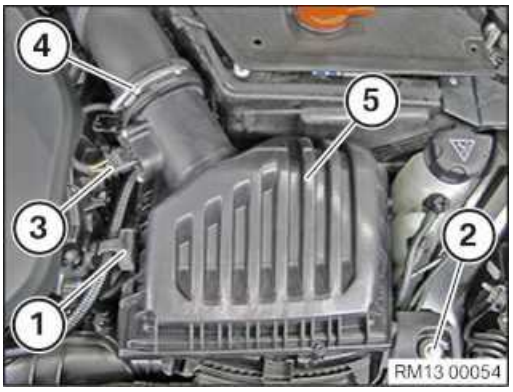
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

26 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

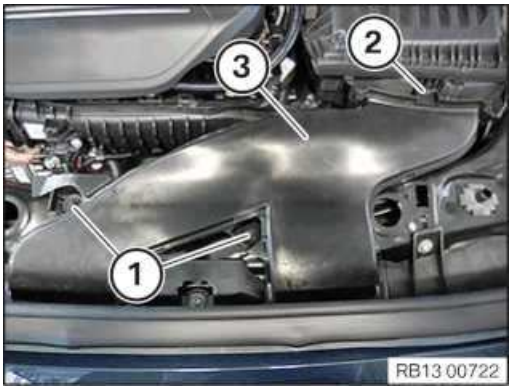
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

27 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

28 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

29 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB47TÜ1

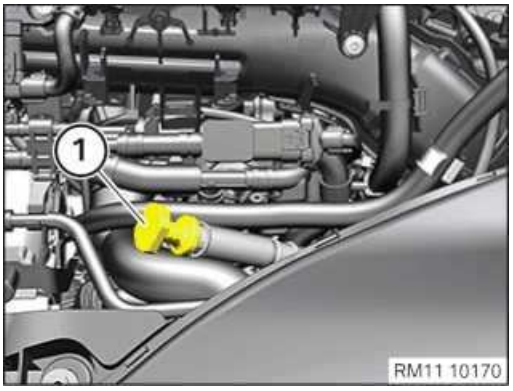
Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

30 – Installing the oil filler cap

- Close oil filler cap (1).

31 – Check engine oil level



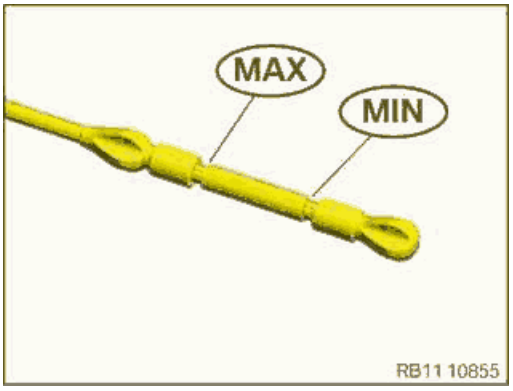
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

32 – Disconnecting all battery earth leads

- See additional information.

33 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

11 61 730 BMW leakage test for differentiated intake system

Special tools required:

- 81 29 0 426 464
- 81 31 2 353 954
- 2 409 665
- 2 358 459
- 0 426 464
- 81 31 2 357 800
- 2 353 954

Caution!

Excess pressure and vacuum lines can be recognised by the size of their fasteners and are colour-coded blue and red respectively.

Identification:

- Pressure line blue
- Vacuum line red

Excess pressure and vacuum lines must not be mixed up.

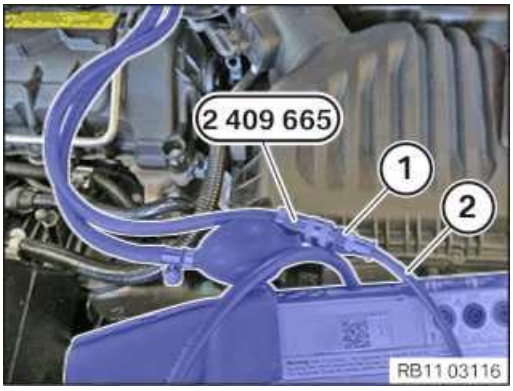
Mixing up the lines will result in engine damage.

Necessary preliminary work:

- Release the intake filter housing.
- Prepare BMW diagnosis system
- Start diagnosis program
  1. Power train
  2. Engine electronics
  3. Air supply
  4. Charging pressure control system or perception of lack of power

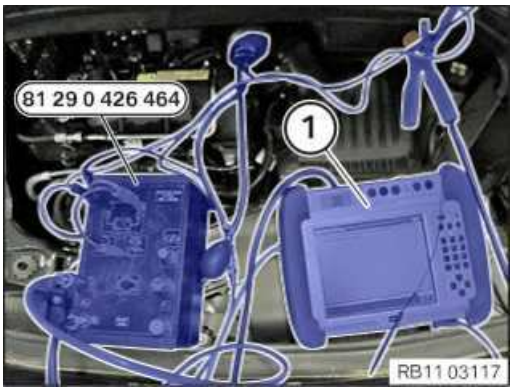
Ordering information:

- Workshop Equipment - Start BMW
- Workshop equipment catalogue
- Measuring and test equipment
- Service and diagnosis
- Order number 81 29 0 426 464
- Order number 81 31 2 353 954



cardiagn.com

Check intake system for leaks:

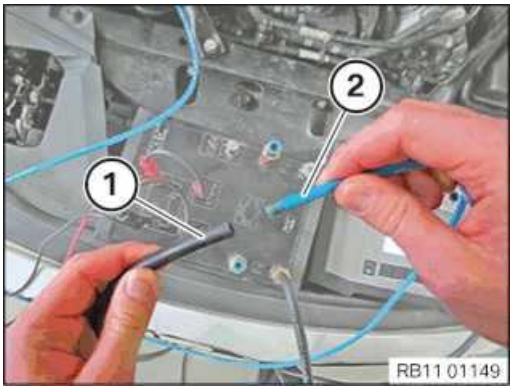


For a precise leakage test, both clean air pipes must be closed with the special tool 2 409 665 .

Connect the pressure hose (1) with special tool 2 358 459 .

Insert the blue excess pressure line (2) into the pneumatic coupling (1) up to the limit position.

Connect the pressure lines with the diagnosis system and the IMIB.



Insert the blue overpressure lines on the diagnosis auxiliary device 0 426 464 on the connector (1).

Connect Integrated Measurement Interface Box (1 via the hose 81 31 2 357 800 (previously: 81 38 2 201 924) with the connection piece of the diagnostics aid.

Installation note:
Follow diagnosis instruction.

Leak detection with BMW smoke tester:

Disconnect the overpressure line (2) on the diagnosis auxiliary device.

Connect pressure line (1) from the BMW smoke tester 2 353 954 with the overpressure line (2).

cardiagn.com

Put the BMW smoke tester 2 353 954 into operation according to the operating instructions.

Observe BMW diagnosis instructions.

Leaks on the air intake duct are detected by escaping smoke.

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

Special tools required:

- 11 8 880
- 11 0 235
- 2 302 630
- 11 6 480
- 11 6 050
- 2 356 969
- 2 356 966
- 2 356 967

Necessary preliminary work:

- Disconnect negative battery lead
- Removing intake plenum
- Remove front right wheel arch panel

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

Cleaning intake plenum:

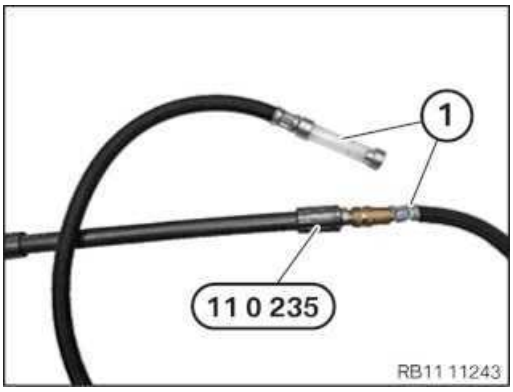
- Wear personal protective clothing/equipment
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (see Section 3.2)
- Place intake plenum in cleaning agent
- Observe application time of at least 1 hour

cardiagn.com

Cleaning intake ports: Caution!

Risk of engine damage!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

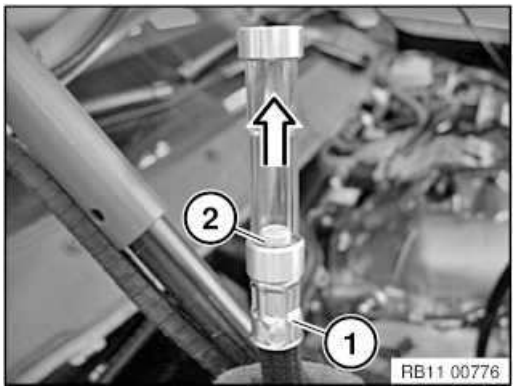


Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Start with the 1st cylinder when cleaning the intake ports.

Remove glow-plug cylinder 1.

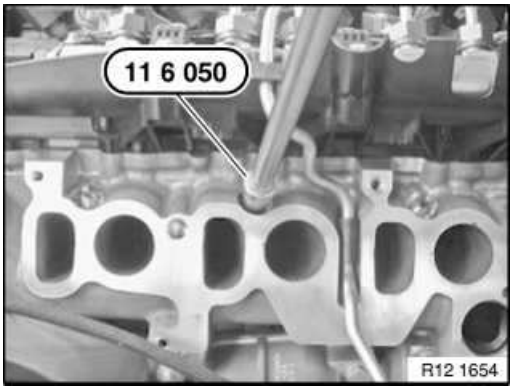
Screw in special tools 11 8 880 and 11 0 235 .



Connect TDC determination unit (1) from special tool 2 302 630 with special tool 11 0 235 .

Turn the engine with special tool 11 6 480 on the central bolt till cylinder 1 is in TDC position.**Caution!**

Do not crank engine in reverse direction.

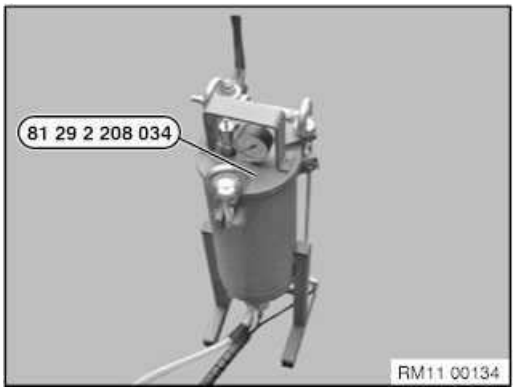


cardiagn.com

Caution!

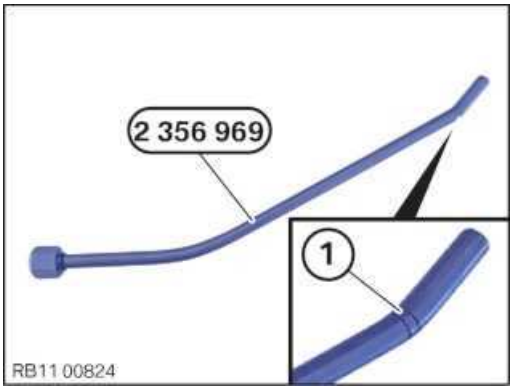
Determine the TDC (intake valves closed) using a TDC determination unit (1) via the glow-plug hole.

Turn the engine on the central bolt until cylinder 1 is in TDC position.



Remove special tools.

Reinstall glow-plug using special tool 11 6 050 .



Installation note:

Tightening torque 12 23 1AZ.

The following are required:

- Blasting tool 81 29 2 208 034
- Walnut shell granulate
- Vacuum cleaner

Caution!

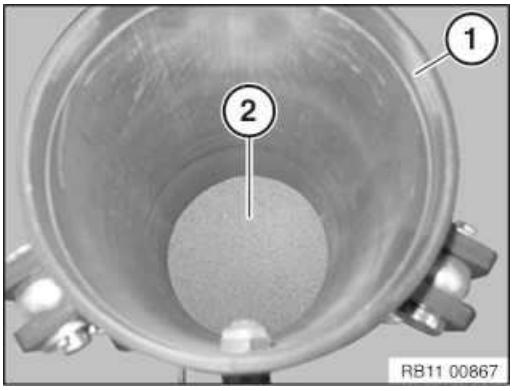
Front area of sensors is marked with two notches. These can additionally be highlighted in colour.

During the blasting process, only pull the wands out of the vacuum adapter until the mark becomes visible.

Blasting wand for swirl ports:

- 2 356 969

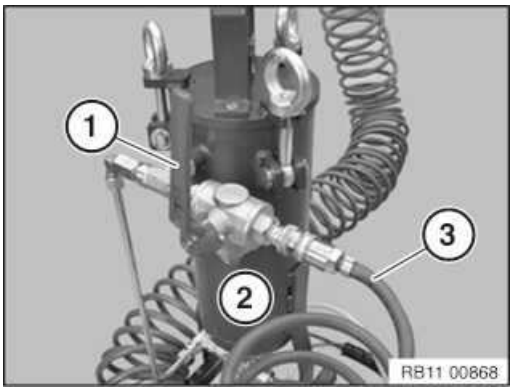
cardiagn.com



Vacuum adapter for tangential swirl port:

- 2 356 966

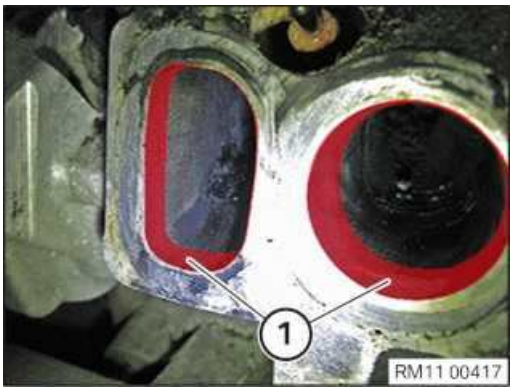
Vacuum adapter for swirl port:



- 2 356 967

Note:
Use 2 litres of granulate per cleaning operation; this corresponds to a blasting duration of approx. 20 seconds.

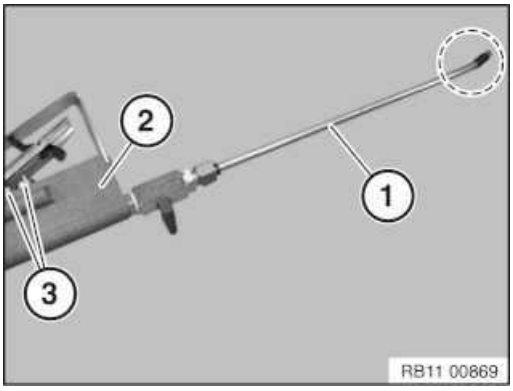
Open blasting tool (1) and pour in 2 litres of granulate (2).



Close the device again.

Note:
Operating pressure 6 - 8 bar.

Close main valve (1) on blasting tool (2).



Connect compressed air (3).

Cleaning the swirl port of 1st cylinder:

Prior to the blasting process, clean the front area of both intake ports (1) of first cylinder with a suitable tool (e.g. plastic scraper, brushes 83 19 2 298 237).

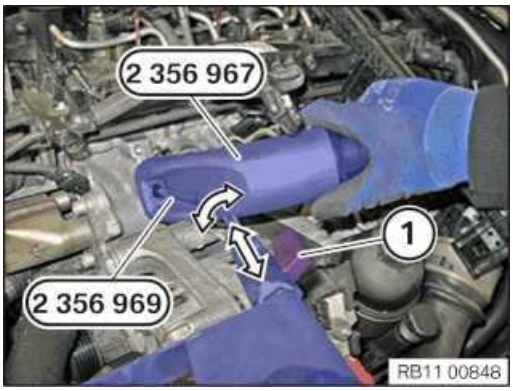
cardiagn.com

Screw together blasting wand 2 356 969 (1) and actuator (2).

Open blasting tool and pour in 2 l granulate.

Close the device again.

Note:
Actuator (3) has two stages!



In stage one, only compressed air flows through the blasting wand.

In stage two (operation is fully pressed), granulate is added (blasting process).

Connect vacuum adapter 2 356 967 to vacuum cleaner. Hold vacuum adapter 2 356 967 against swirl port at no. 1 cylinder.

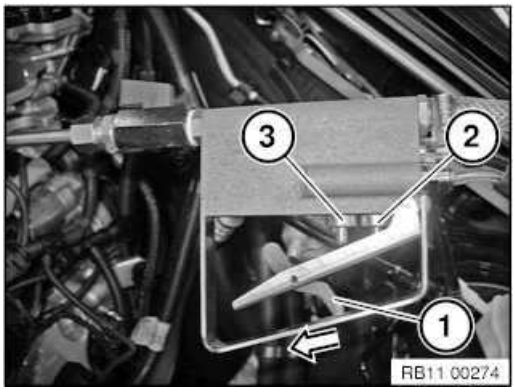
Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!

Second person required to assist.



Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 967 .

Open the actuator valve (1).

Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

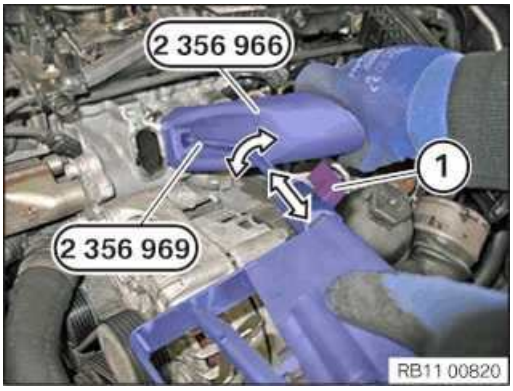
When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

cardiagn.com



Cleaning the tangential swirl port of 1st cylinder:

Open blasting tool and pour in 2 l granulate.

Close the device again.

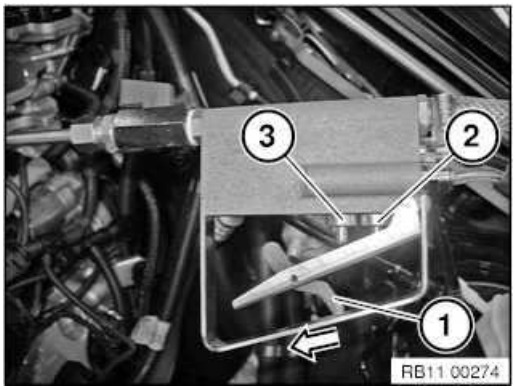
Connect vacuum adapter 2 356 966 to vacuum cleaner. Hold vacuum adapter 2 356 966 on swirl port of first cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!



Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 966 .

Open the actuator valve (1).

Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

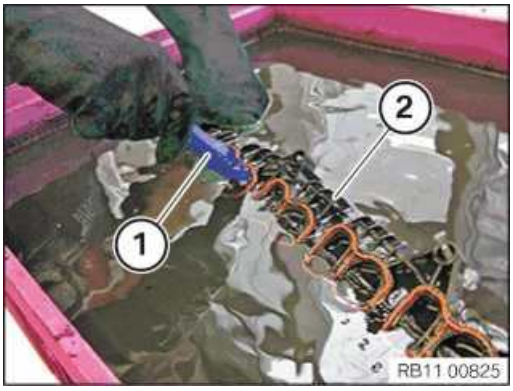
Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

Cleaning the other cylinders:

Clean the tangential ports and swirl ports of the next cylinder using the same procedure.



Caution!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Do not crank engine in reverse direction.

cardiagn.com

Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner!

Cleaning intake plenum:

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings on intake plenum (2) and swirl flap using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with the brush (1) if necessary
- Then clean intake plenum (2) with a parts cleaning unit or a high-pressure cleaner
- Check all seals for damage and renew, if applicable

Observe country-specific waste disposal regulations.

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation
- If applicable, install preheating control unit

- Crank the engine at the central bolt at minimum twice
- Install front right wheel arch panel trim
- Install intake plenum
- Connect battery earth lead

- Reset the quantity correction under:
  - Service functions
  - 01 Drive
  - Digital Diesel Electronics
  - Reset correction values of injectors

cardiagn.com

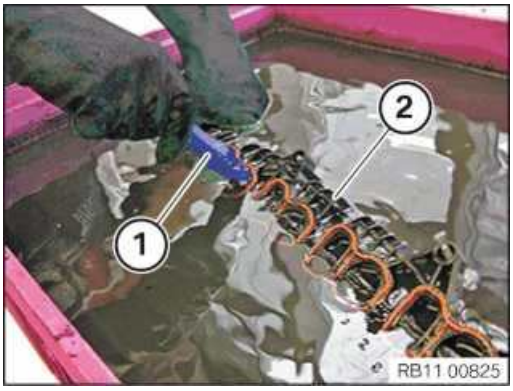
11 12 ... Clean intake plenum (B37, B47)

Necessary preliminary work:

- Remove intake plenum

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation .
- If applicable, remove preheating control unit



Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

- Put on personal protective clothing/equipment!
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (part number: 83 19 2 360 981) mixed
- Place intake plenum in cleaning agent
- Adhere to an application time of at least 1 h

Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner.

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings of the intake plenum (2) and swirl flaps using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with brush (1) if necessary
- Clean the intake plenum (2) with a parts cleaning unit or a high-pressure cleaner.
- Check all seals for damage and renew, if applicable.

Pay attention to country specific instructions for disposal.

cardiagn.com

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation.
- If applicable, install preheating control unit

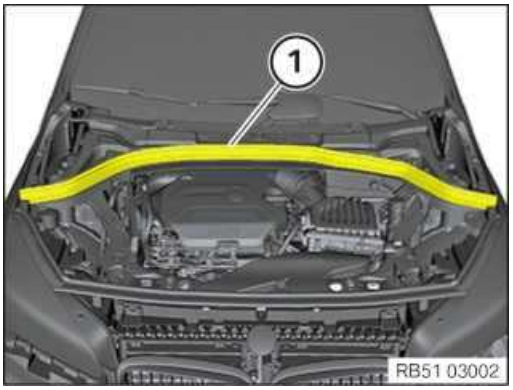
- Install intake plenum

cardiagn.com

11 61 050 Removing and installing the intake plenum.

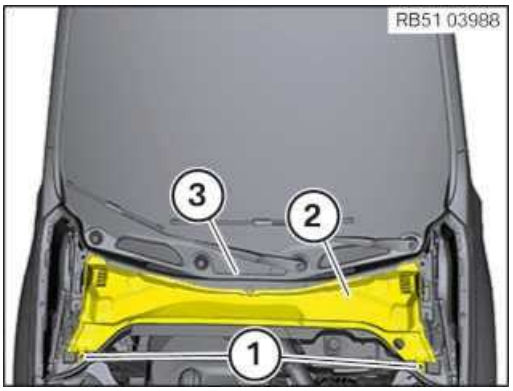
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

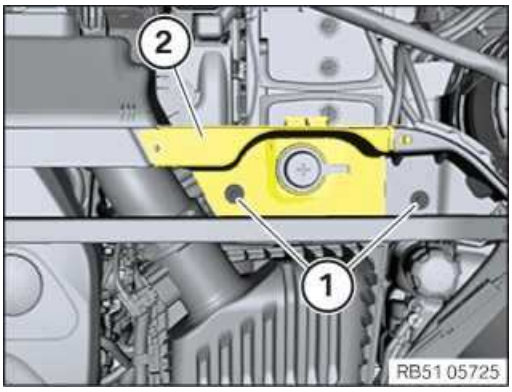
2 – Remove the seal for the rear bonnet



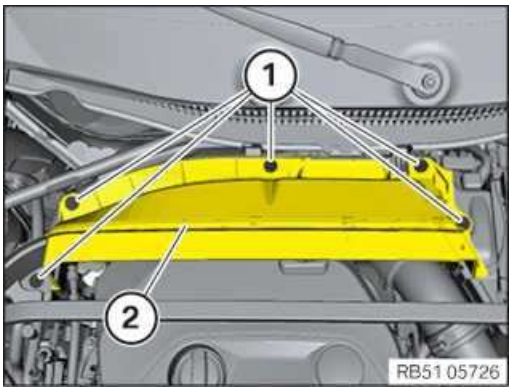
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

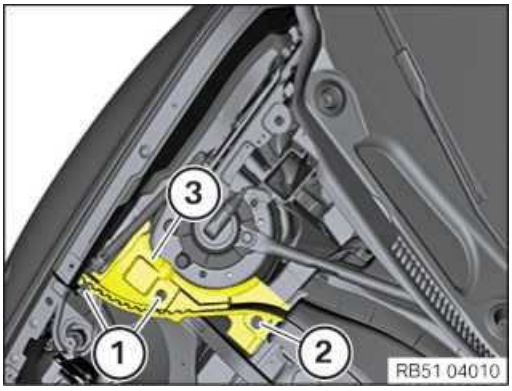


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

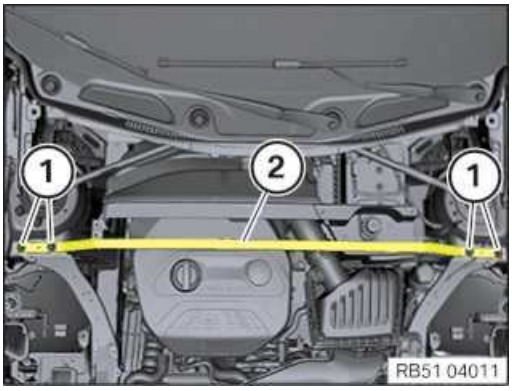
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

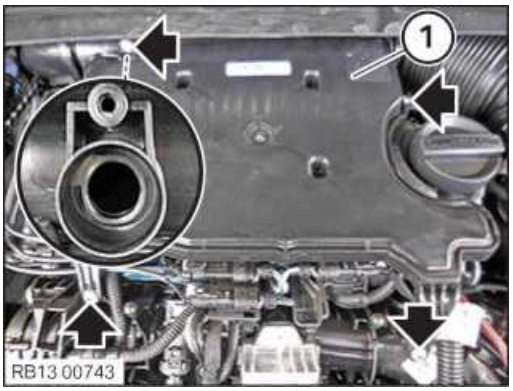
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

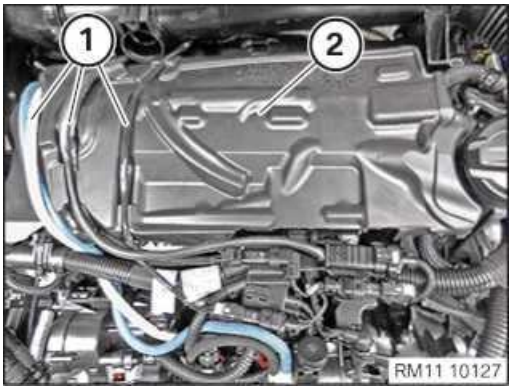
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

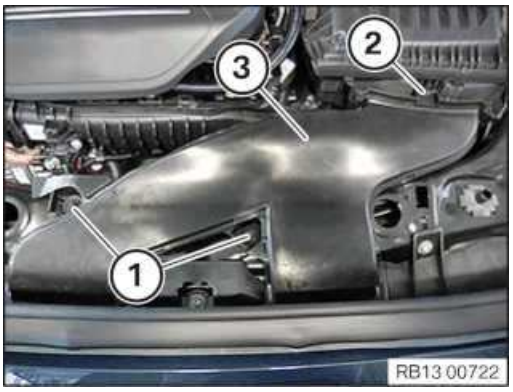
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

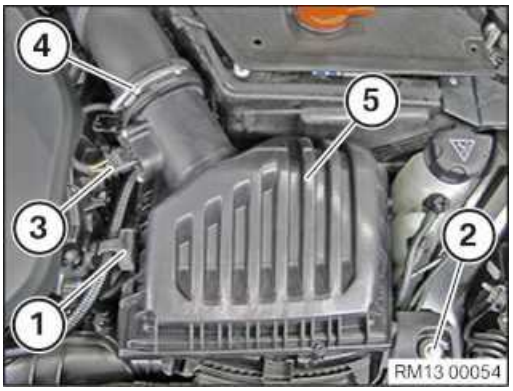
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

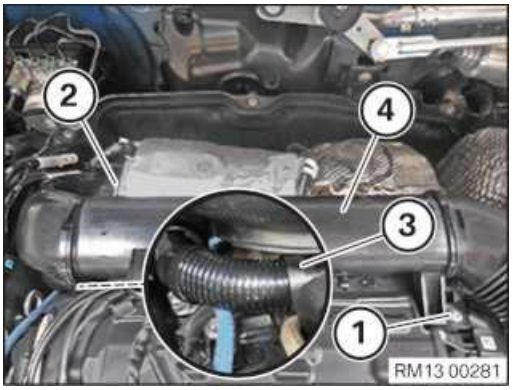


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

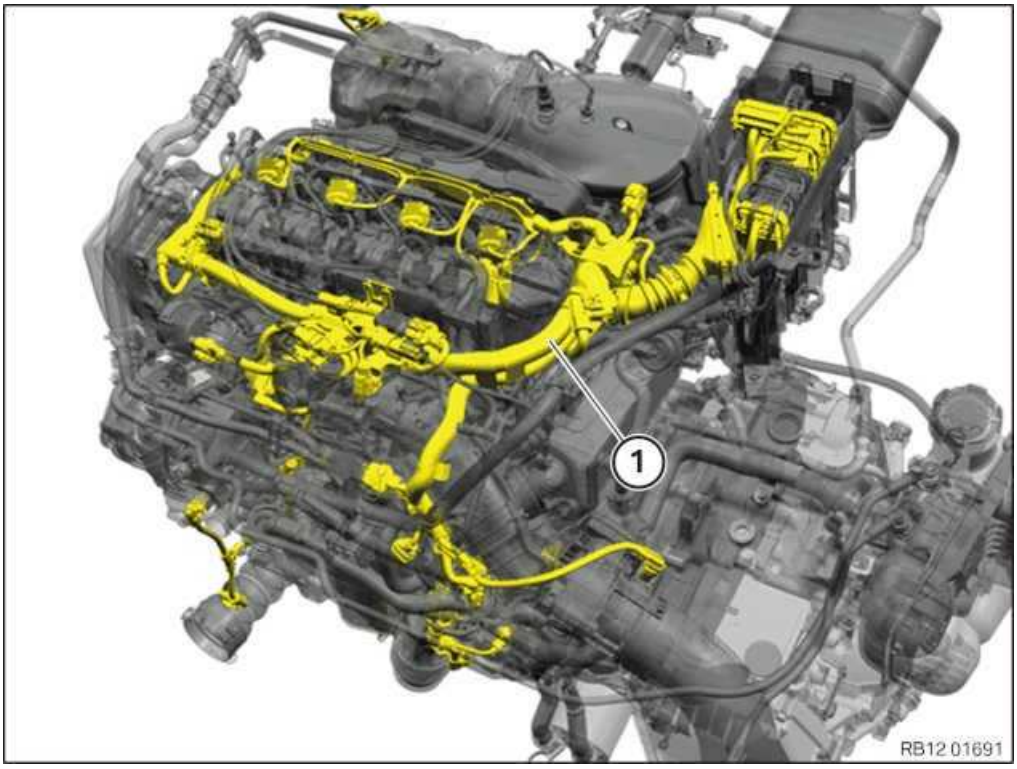
10 – Removing intake silencer housing



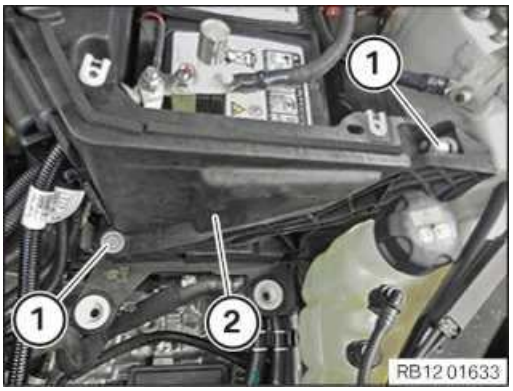
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.



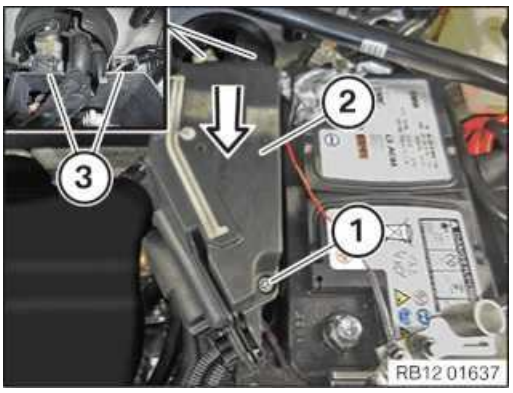
- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



12 – Releasing the wiring harness section for the intake plenum

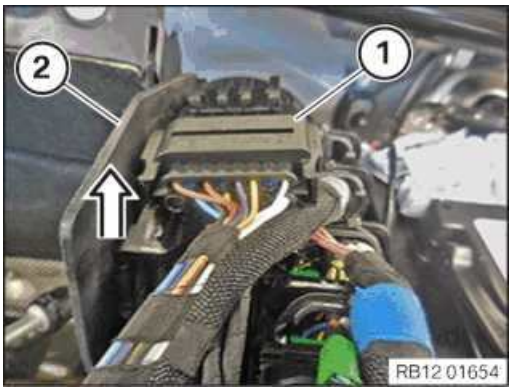
cardiagn.com

Overview: Wiring harness section for the engine

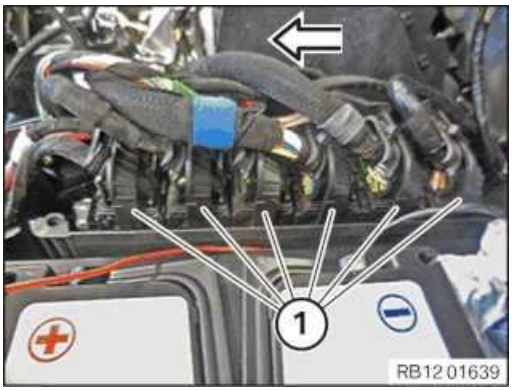


1 Wiring harness section for the engine

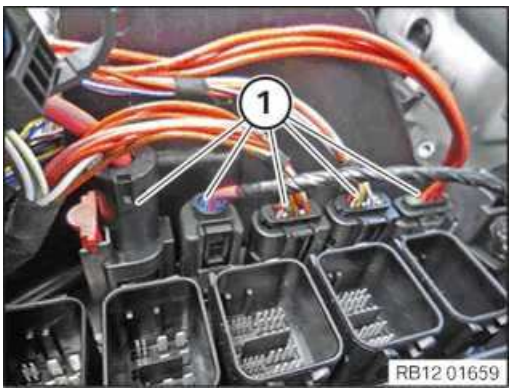
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



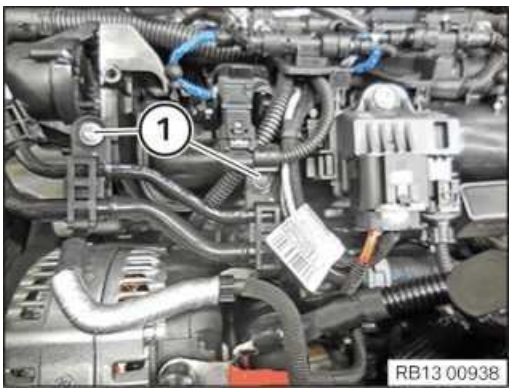
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



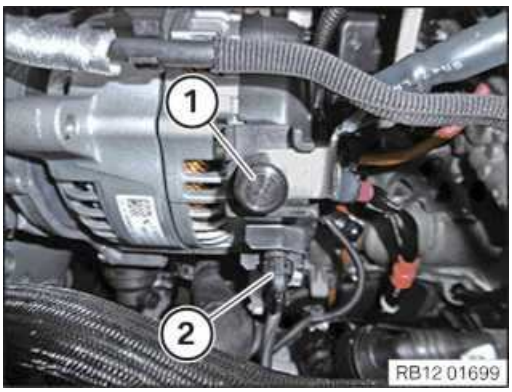
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



cardiagn.com

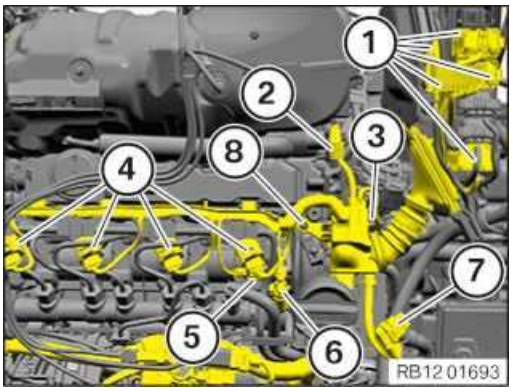


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

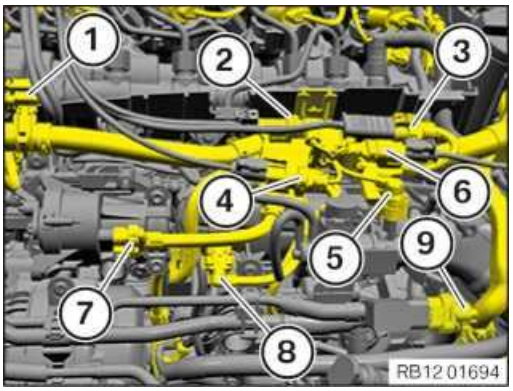


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

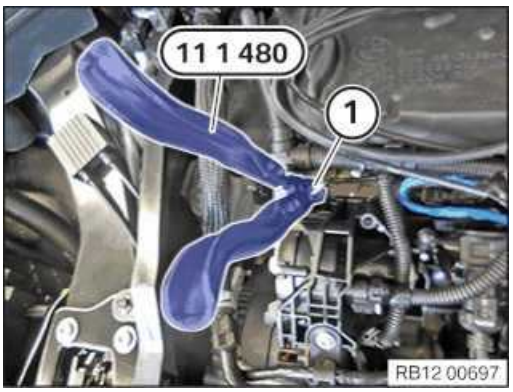
- Unlock and loosen connector (1).



- Loosen screws (1).

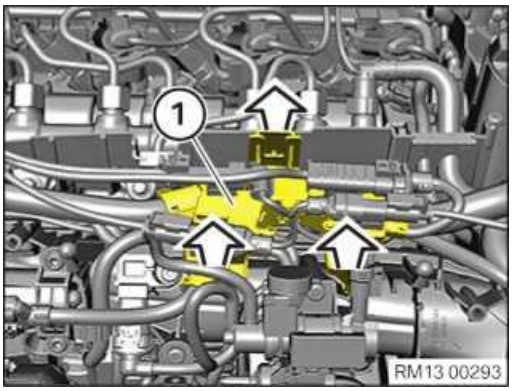


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).

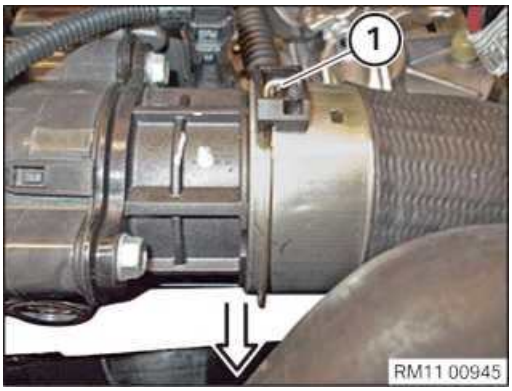


- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

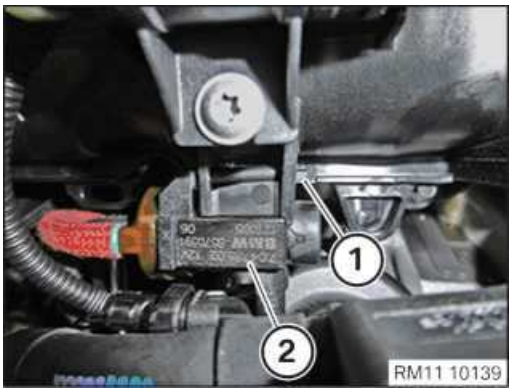
▶ **Removing the cable clips from the intake plenum**

- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

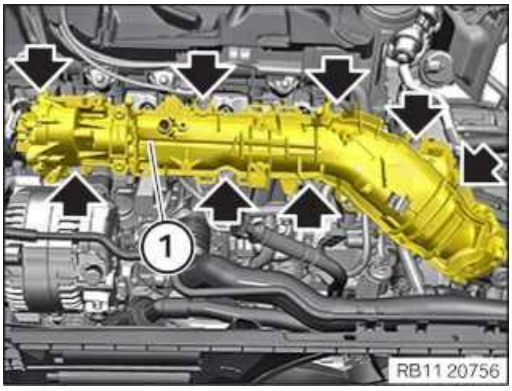


cardiagn.com

TECHNICAL INFORMATION

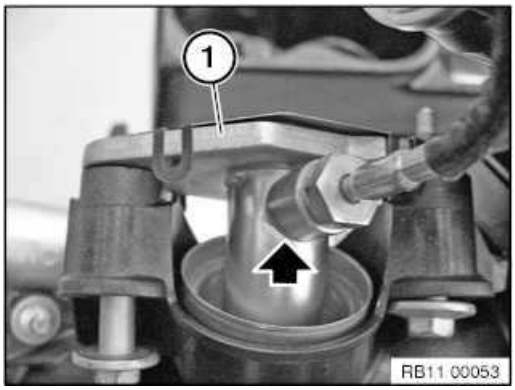


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

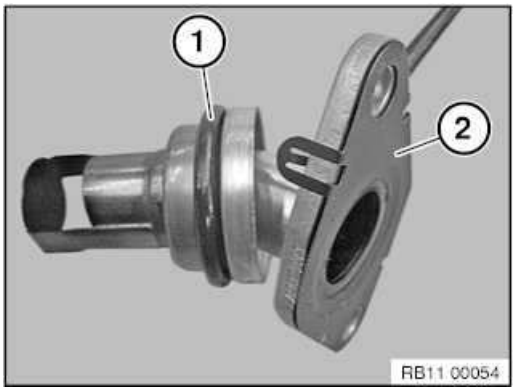


- Unlock the lock (1).

- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



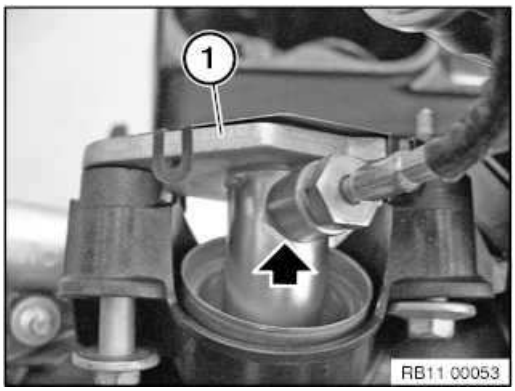
- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



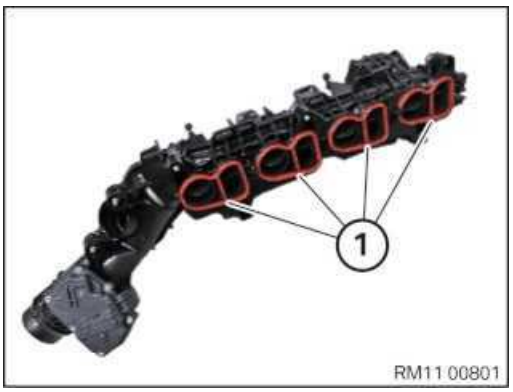
- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

cardiagn.com

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.



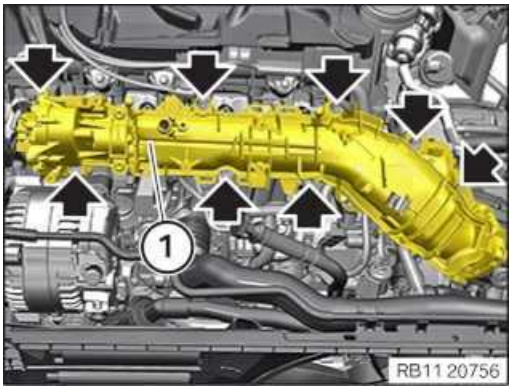
14 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

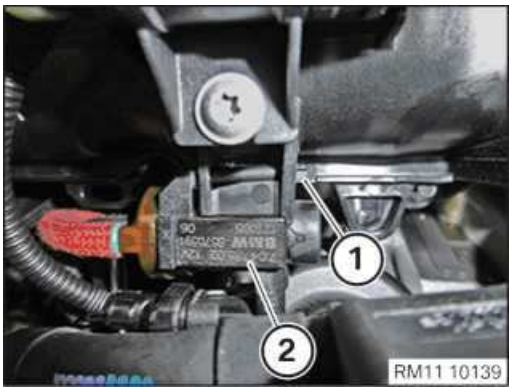
  Parts: Gasket
- Position the seal (2) and clip it in.



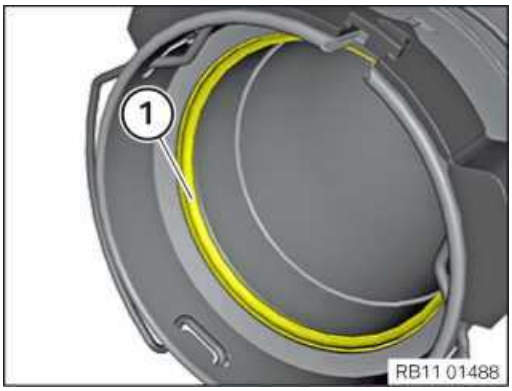
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

- Renew gaskets (1).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



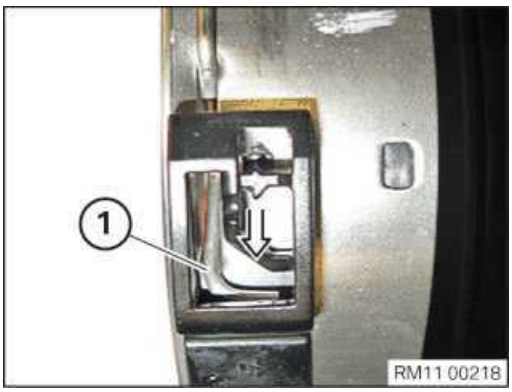
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).



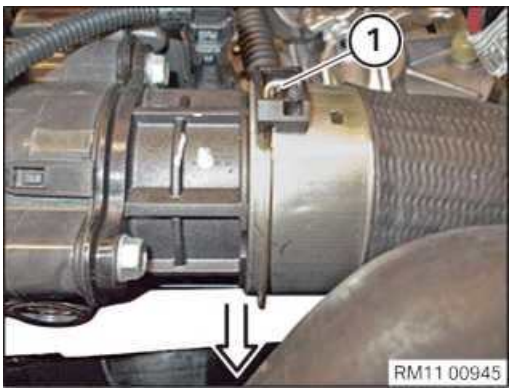
Intake plenum to cylinder head

M6		Tightening torque	11 Nm

cardiagn.com



- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

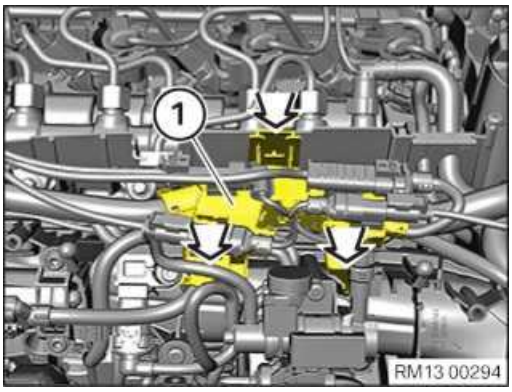
- Engage the lock (1) on the bracket (arrow).

- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

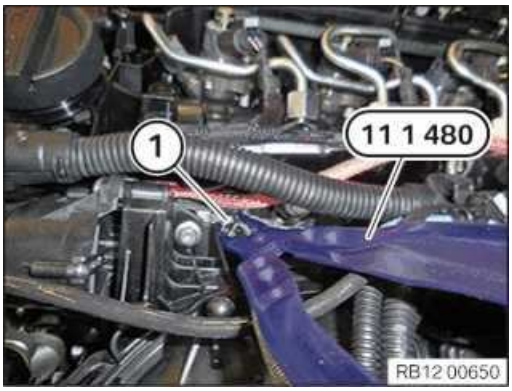
POSTPROCESSES

15 – Fastening the wiring harness section for the intake plenum



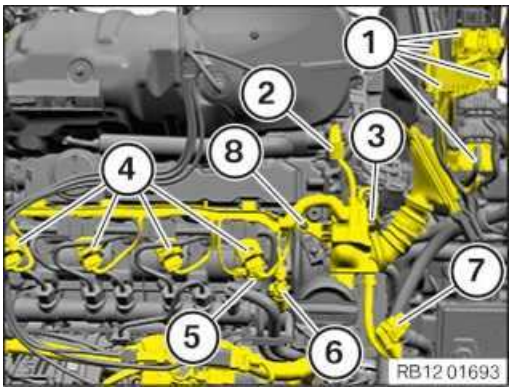
cardiagn.com

Overview: Wiring harness section for the engine



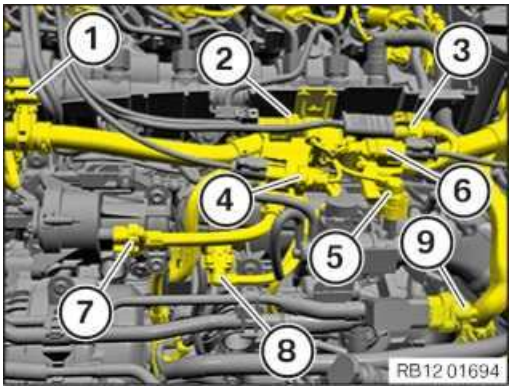
1 Wiring harness section for the engine

▶ **Installing the cable clip for the intake plenum**

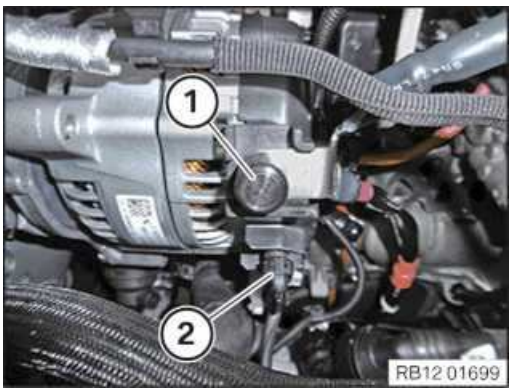


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.



cardiagn.com

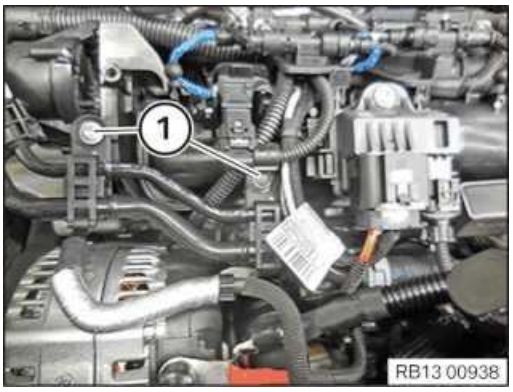


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

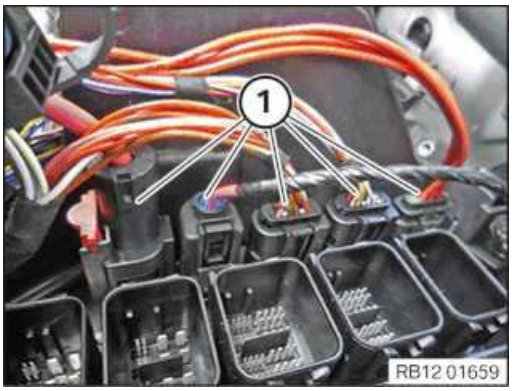


- Connect and lock the connector (2).

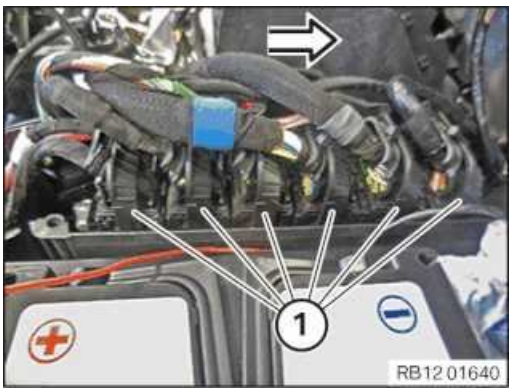
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

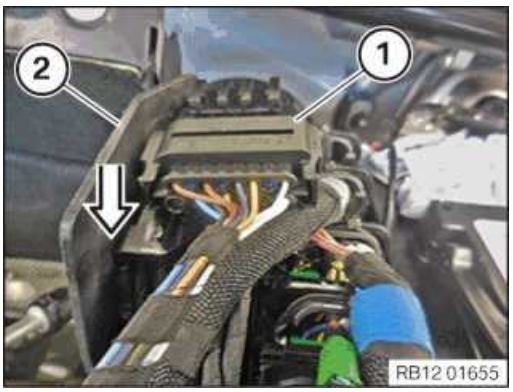


cardiagn.com

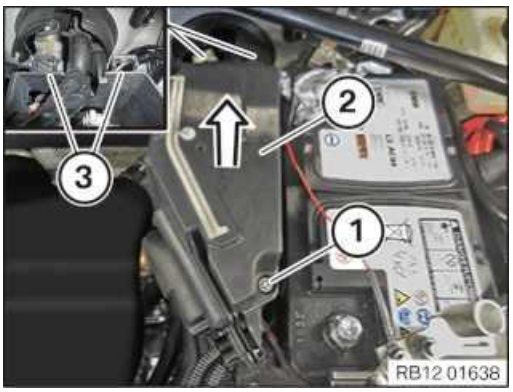


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



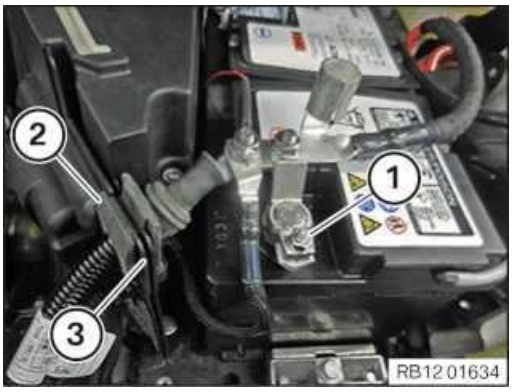
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

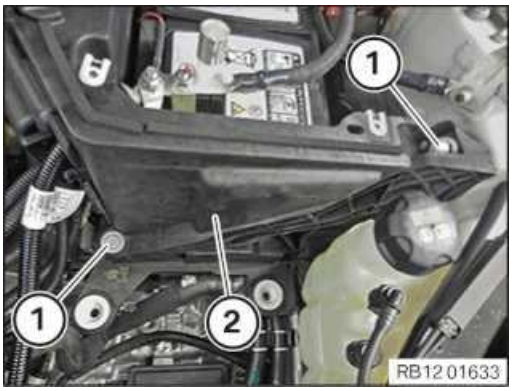
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

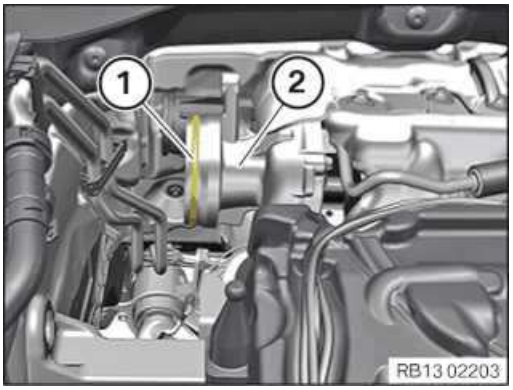


cardiagn.com

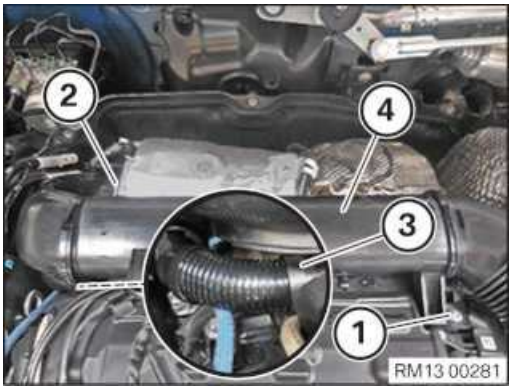
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

16 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

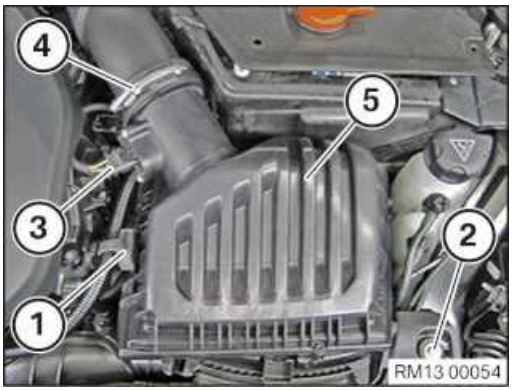
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

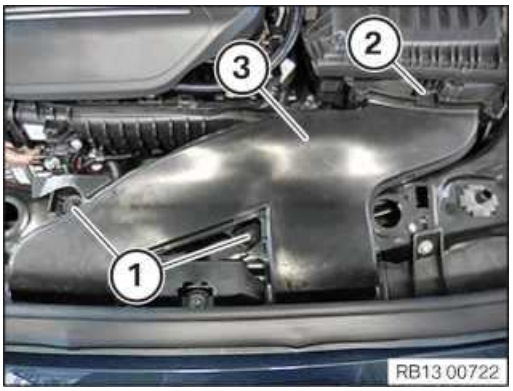
cardiagn.com

17 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



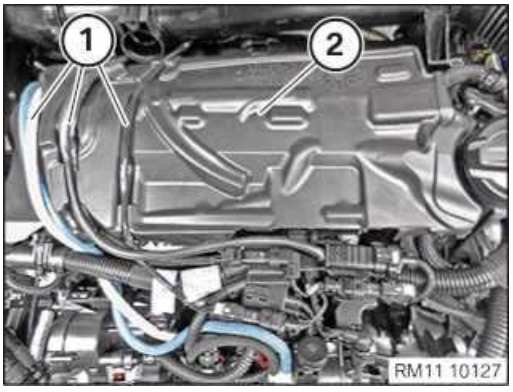
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

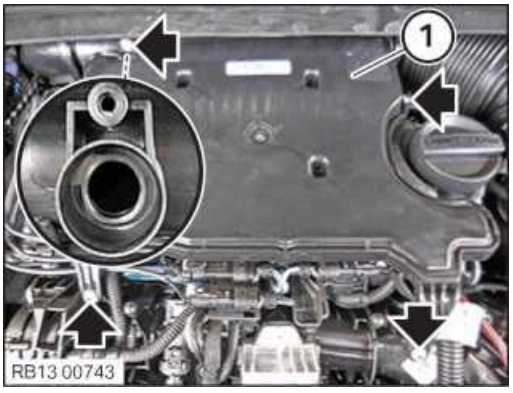
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

18 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

19 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

20 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

21 – Install acoustic cover

cardiagn.com

21 – Install acoustic cover

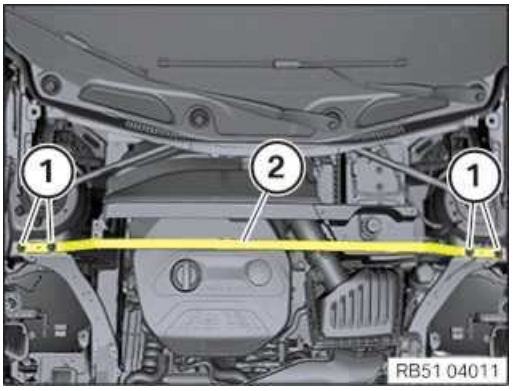
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

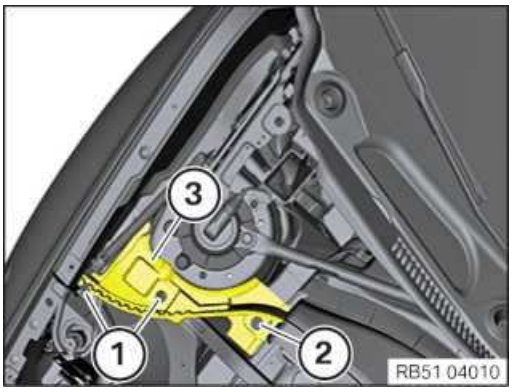


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

22 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

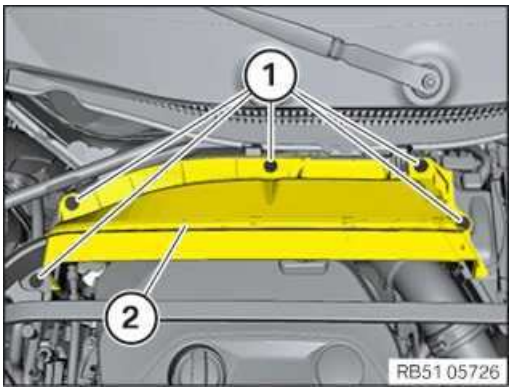
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

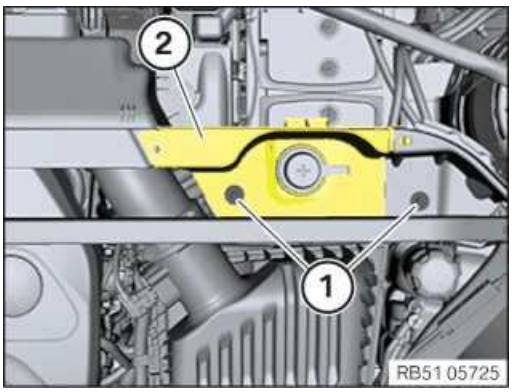


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

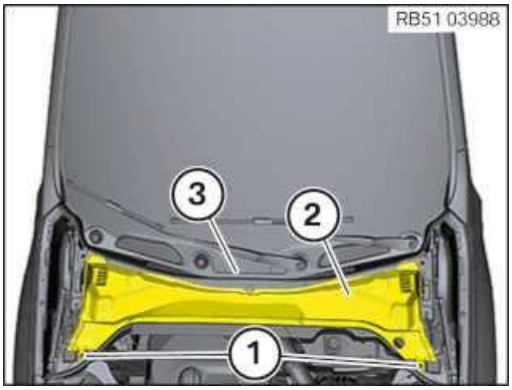


23 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

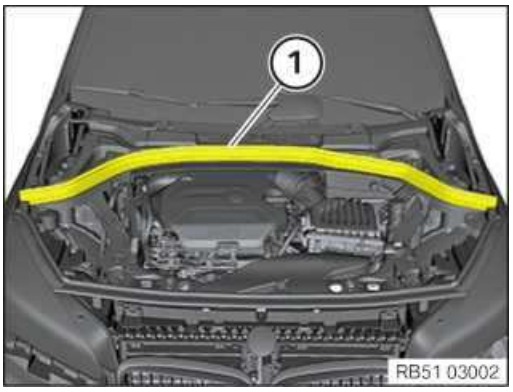


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

24 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

25 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

26 – Disconnecting all battery earth leads

- See additional information.

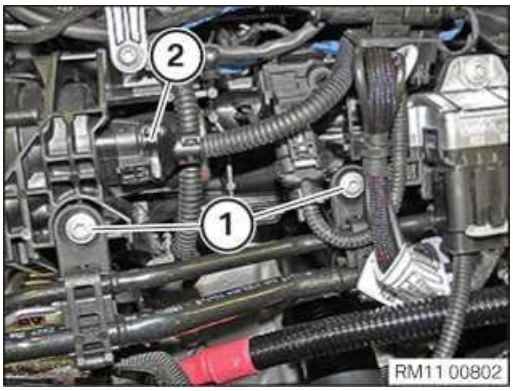
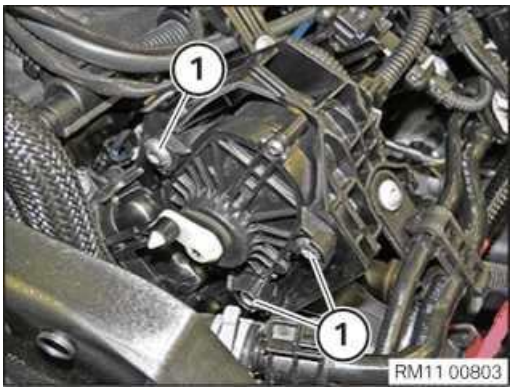
11 61 085 Removing and installing/replacing adjuster (B47)



Attention!

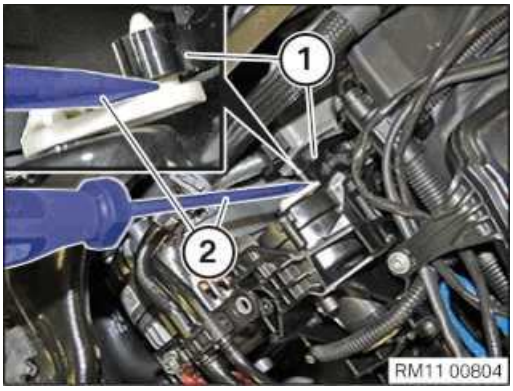
The adaptation values must be reset before the adjuster is replaced.

Necessary preliminary work:



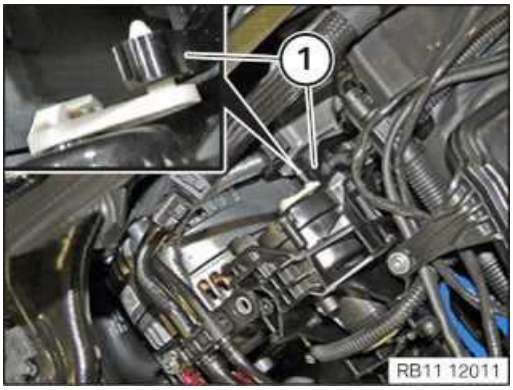
- Reset adaptation values with diagnosis system
- Remove acoustic cover

Removal:



Release screws (1).

Unlock and disconnect connector (2).

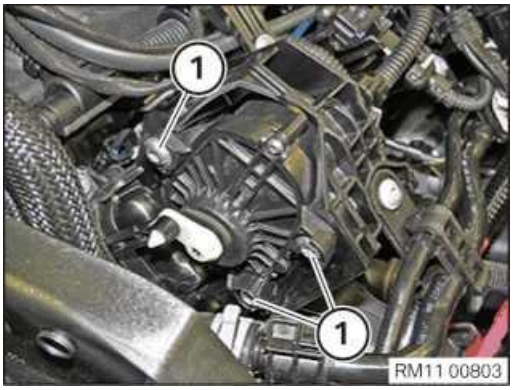


Release screws (1).

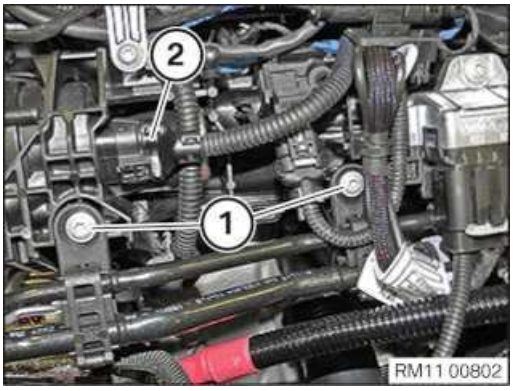
cardiagn.com

Unclip linkage (1) using screwdriver (2).
Remove adjuster.

Installation:



Attention!



Incorrect assembly will lead to malfunction of the intake system.

Make sure linkage (1) is correctly installed!

Install adjuster.
Attach linkage (1).

Tighten down screws (1).
Tightening torque 11 61 5AZ.

Connect connector (2).
Attach holder for fuel lines and secure with screws (1).

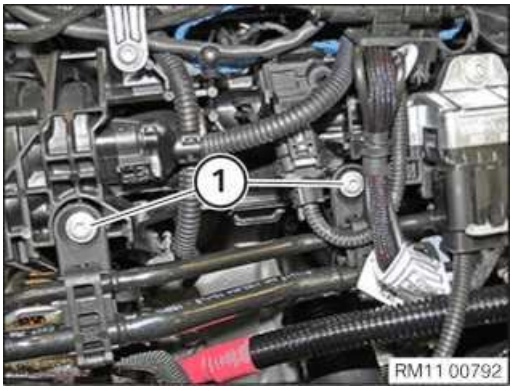
cardiagn.com

Required follow-up work:

- Install acoustic cover

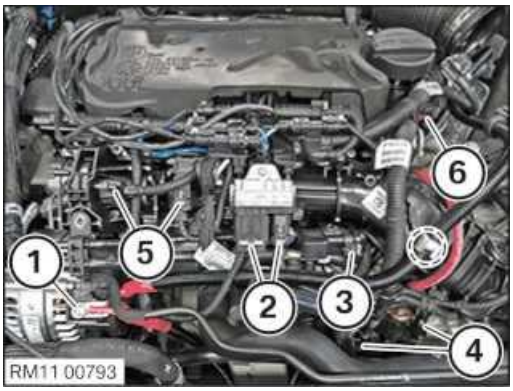
Perform vehicle test and initialise limit positions.

cardiagn.com



11 61 050 Removing and installing/replacing intake plenum (B47)

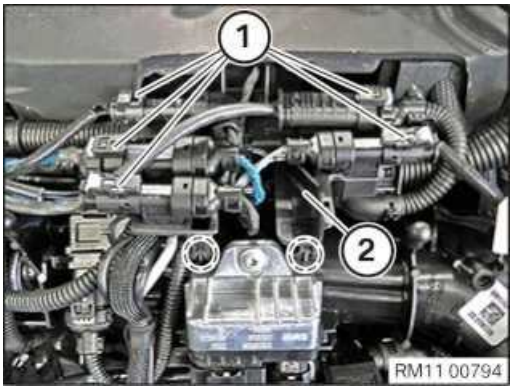
Note:
Follow diagnosis instruction.



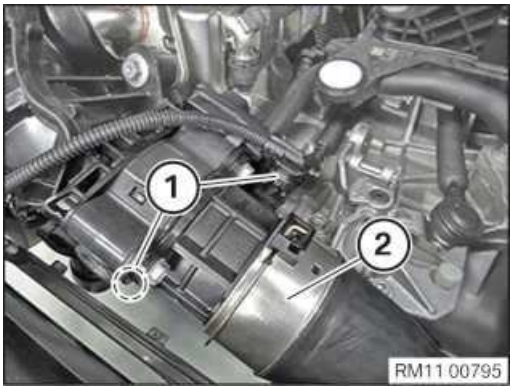
Necessary preliminary work:

- Disconnect negative battery lead.
- Remove resonator
- Remove fan cowl
- Remove underbody protection
- When replacing the intake plenum, check the part number and clear adaptations

Removal:



Release screws (1).
Release fuel lines with holder from intake plenum.

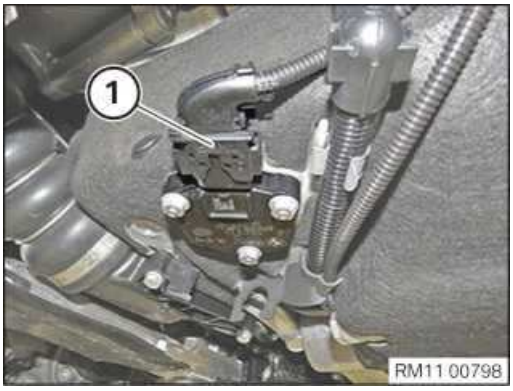


Slacken nut (1).
Release positive battery cable from alternator.
Release positive battery cable from clamp in marked area.
Unlock both connectors (2) on preheating control unit and disconnect.
Unlock and disconnect connector (3).
Unlock both connectors (4) and disconnect.
Unlock both connectors (5) and disconnect.
Release vacuum hose (6) from exhaust-gas recirculation valve.

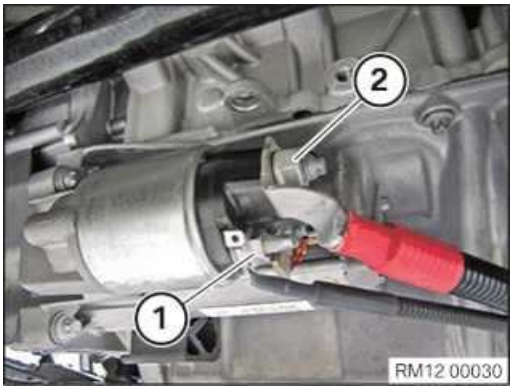
cardiagn.com

Unlock and disconnect all connectors (1).
Release holder (2) at clips in marked area towards top.

Unlock both connectors (1) and disconnect.
Unlock charge air duct (1) and pull off of intake plenum.

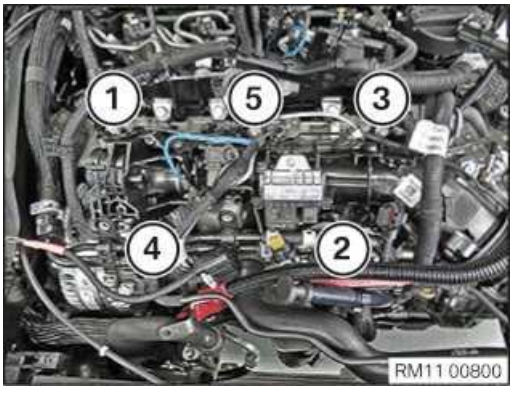


Release wiring harness at clips (1) from oil filter housing.



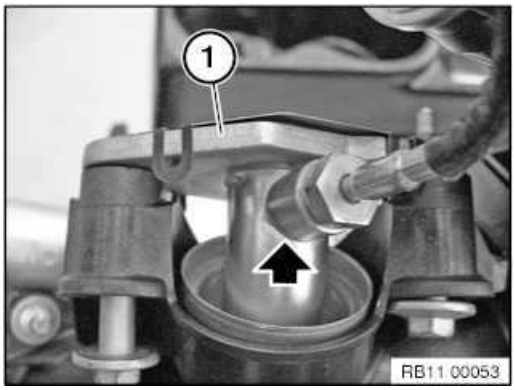
Unlock both connectors (1) and disconnect.

cardiagn.com



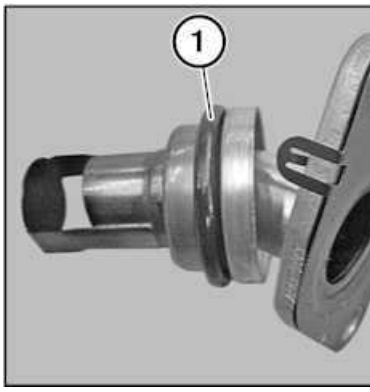
Unlock and disconnect connector (1) at oil-level sensor.

Releases nut (1) and disconnect terminal 50 cable from starter motor.
Release nut (2) and disconnect positive battery cable from starter motor.



Loosen screws (1) on exhaust-gas recirculation cooler.

Release bolts (1-5).

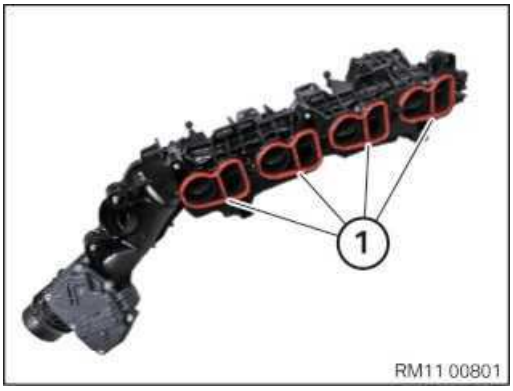


cardiagn.com

Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

Remove intake plenum towards front.

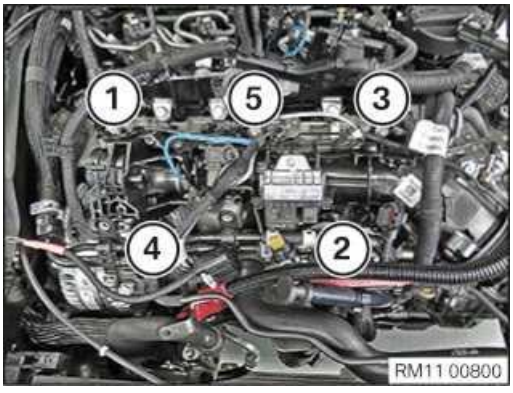
Installation:



Note:

Parts: Replace O-ring.

Install O-ring (1).

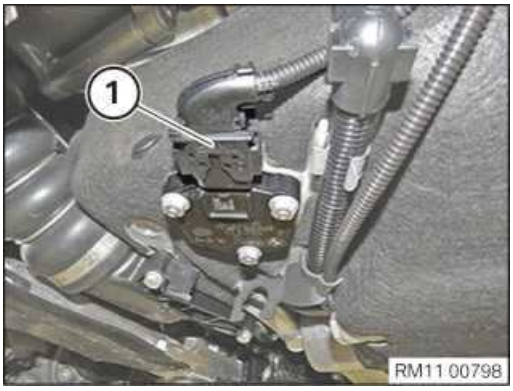


Parts: Replace beaded metal gasket.

Clip in beaded metal gasket (2).

Parts: Renew gaskets.

Install all sealing rings (2).



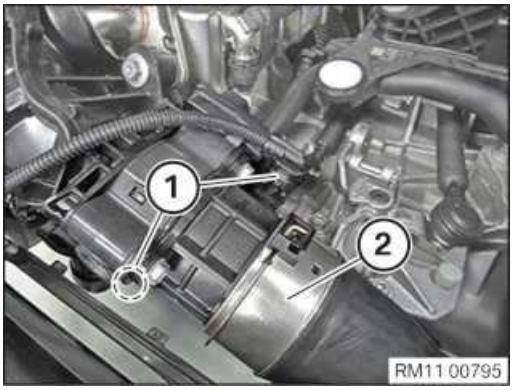
Tighten screws in order (5-1).

Tightening torque 11 61 1AZ.

cardiagn.com

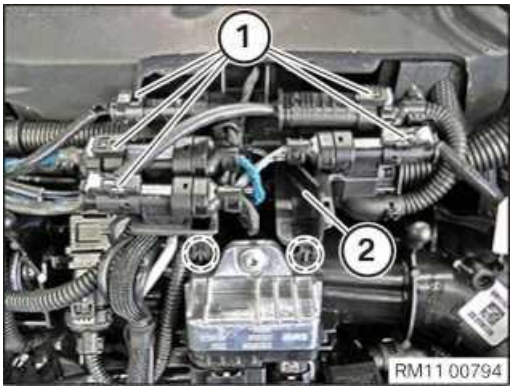
Tighten screws (1) on exhaust-gas recirculation cooler.
Tightening torque 11 61 2AZ.

Connect connector (1) for oil-level sensor.



Connect both connectors (1).

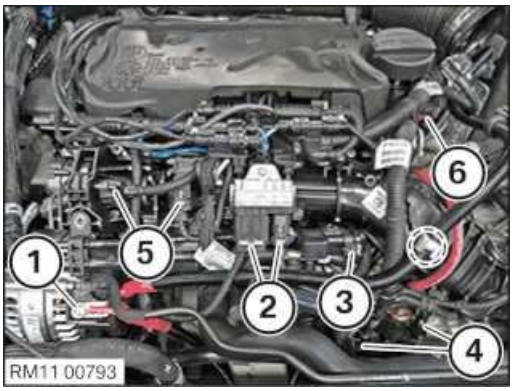
Attach wiring harness with clips (1) on oil filter housing.



cardiagn.com

Connect both connectors (1).

Connect pressure pipe (2).



Note:
Make sure pressure pipe (2) is correctly seated on intake plenum.

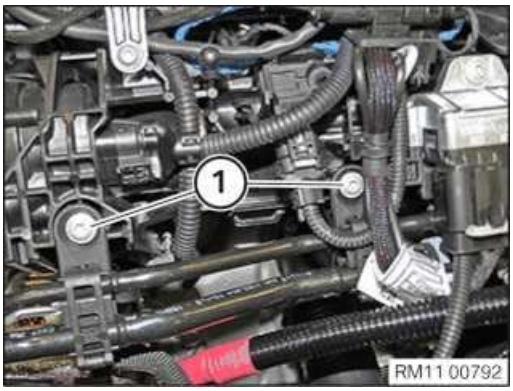
Position holder (2) on cylinder head cover.

Attach holder (2) with clamps to intake plenum.

Connect all connectors (1).

Connect vacuum hose (6) to exhaust-gas recirculation valve.

Connect both connectors (5).



Connect both connectors (4).

Connect connector (3).

Connect both connectors (2) to preheating control unit.

Firmly screw positive battery cable (1) onto alternator and clip into holder.

Tightening torque 12 52 2AZ.

Position both holders for fuel lines at intake plenum.

Tighten screws (1).

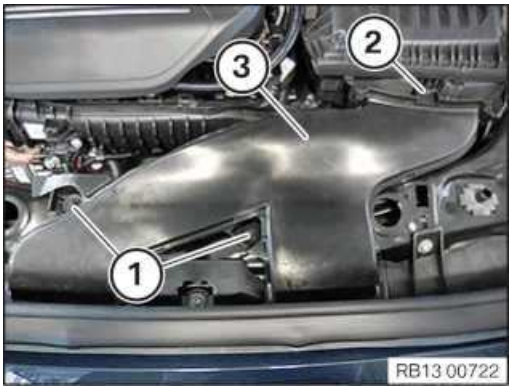
cardiagn.com

Required follow-up work:

- Remove underbody protection
- Remove fan cowl
- Install resonator
- Disconnect negative battery lead.

Assemble engine.

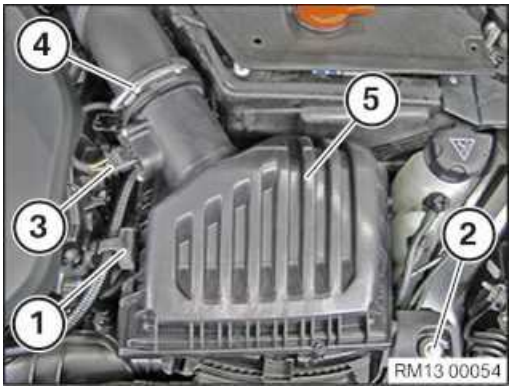
Check intake system for tightness.



Check function of DDE Digital Diesel Electronics.

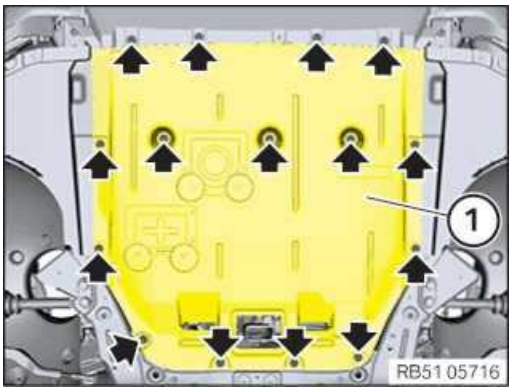
cardiagn.com

11 61 365 Removing and installing/replacing left charge air duct



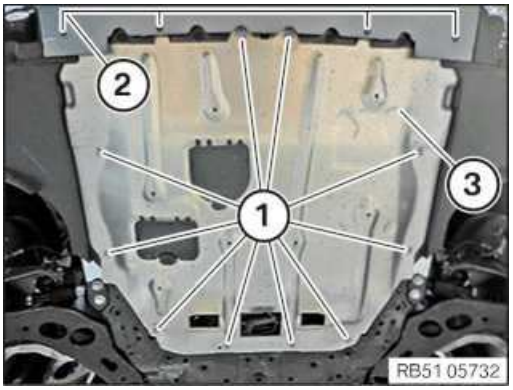
PRELIMINARY WORK

1 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

2 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

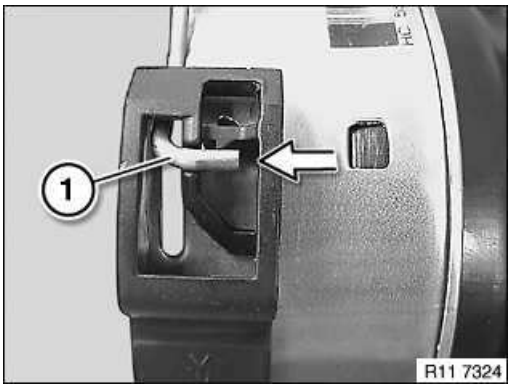
3 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

MAIN WORK

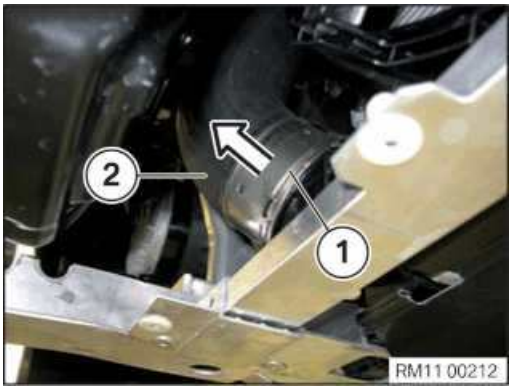
4 – Remove the pressure pipe between the throttle body and the charge air cooler



cardiagn.com

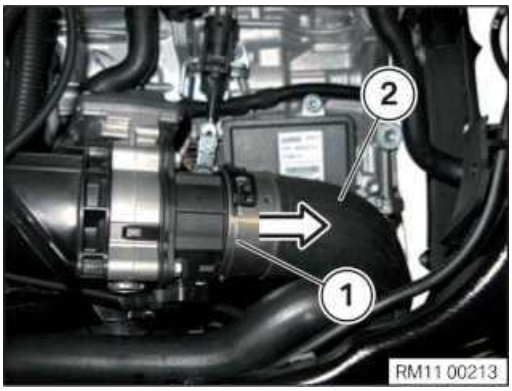
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Unlock the lock (1).

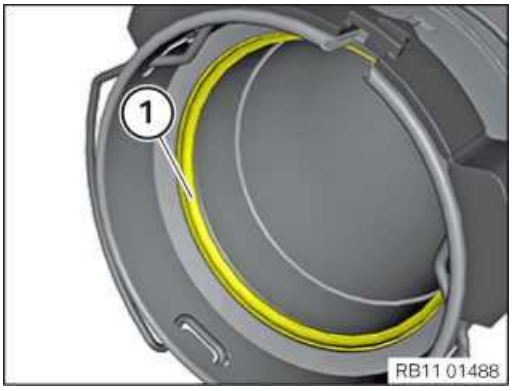
  The lock (1) must engage in the bracket (arrow).

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Remove the pressure pipe (1) in the direction of the arrow.

5 – Installing pressure pipe between throttle body and charge air cooler



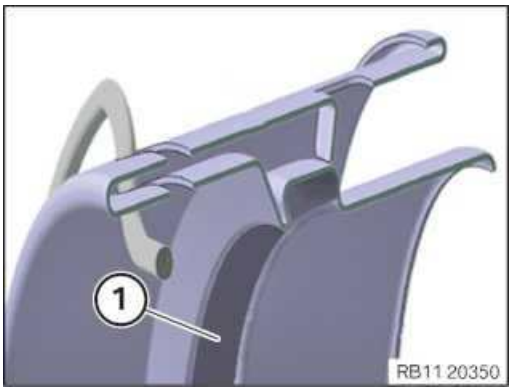
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

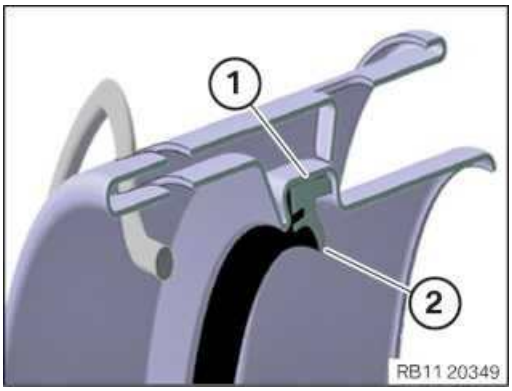
- Replace the gaskets and pressure pipe if necessary.



- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**



TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.

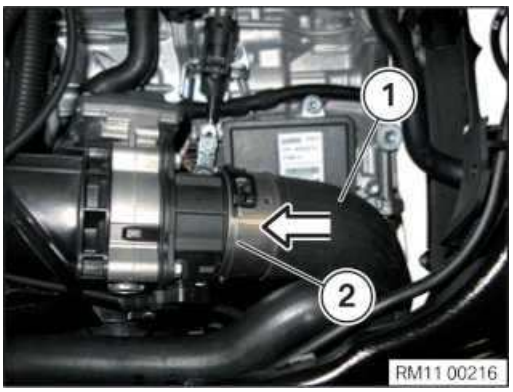
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

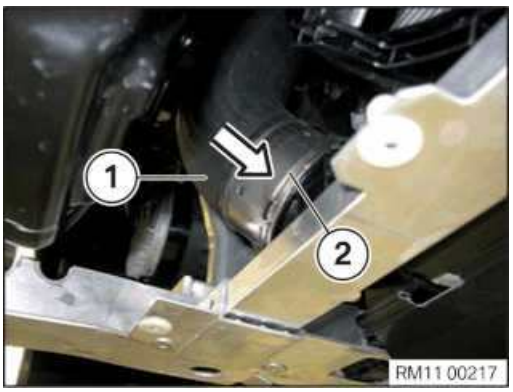
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



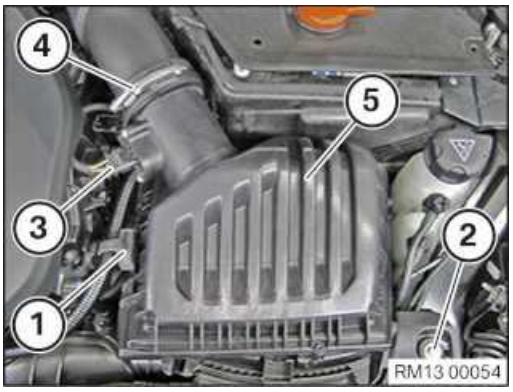
cardiagn.com



- Detach the locks (1) in the direction of the arrow from the brackets.

- Insert and install the pressure pipe (1) in the direction of the arrow.

- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.

POSTPROCESSES

6 – Installing intake silencer housing

cardiagn.com

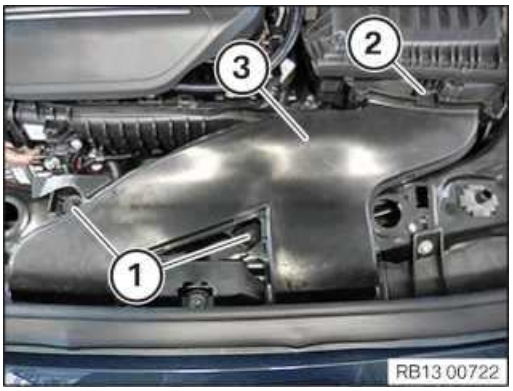
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



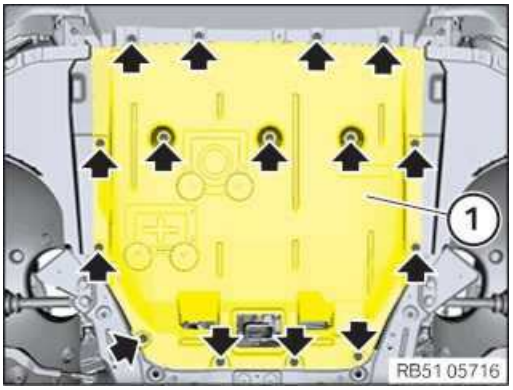
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

7 – Install the intake neck for the intake filter housing

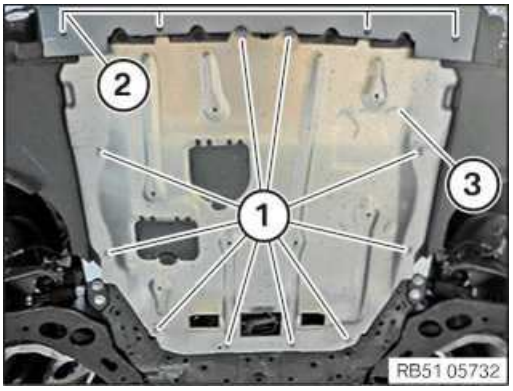


- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm



8 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

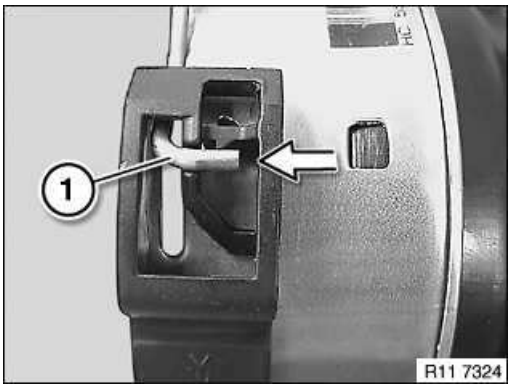
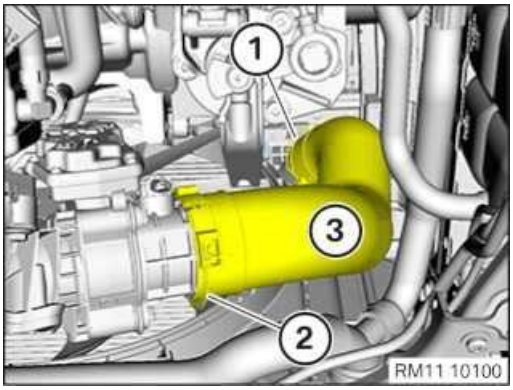
11 61 365 Removing and installing/replacing left charge air line (B47)



Safety information:

- In the event of a leak at the pressure pipe, there is a **risk of damage** to the exhaust turbocharger.



Necessary preliminary tasks:

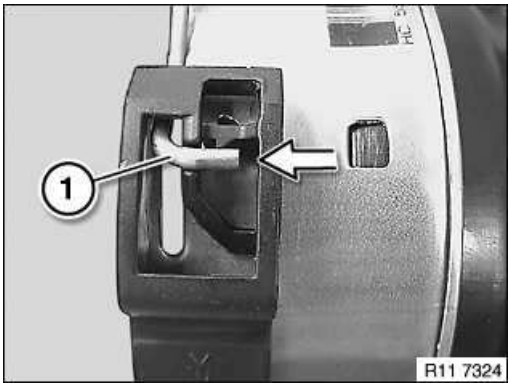
- Remove front underbody protection
- Remove intake silencer housing

Removal:

Unlock lock of charge air line.*Note:*
Lock (1) must engage during unlocking (see arrow).

Unlock lock (1) on charge air cooler.

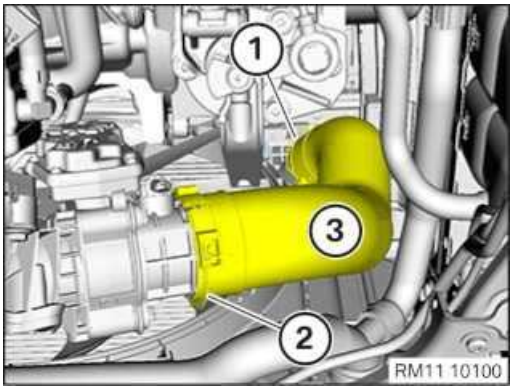
Unlock lock (2) on throttle body.



Pull off charge air line (3) from charge air cooler and exhaust turbocharger.

Preparation:

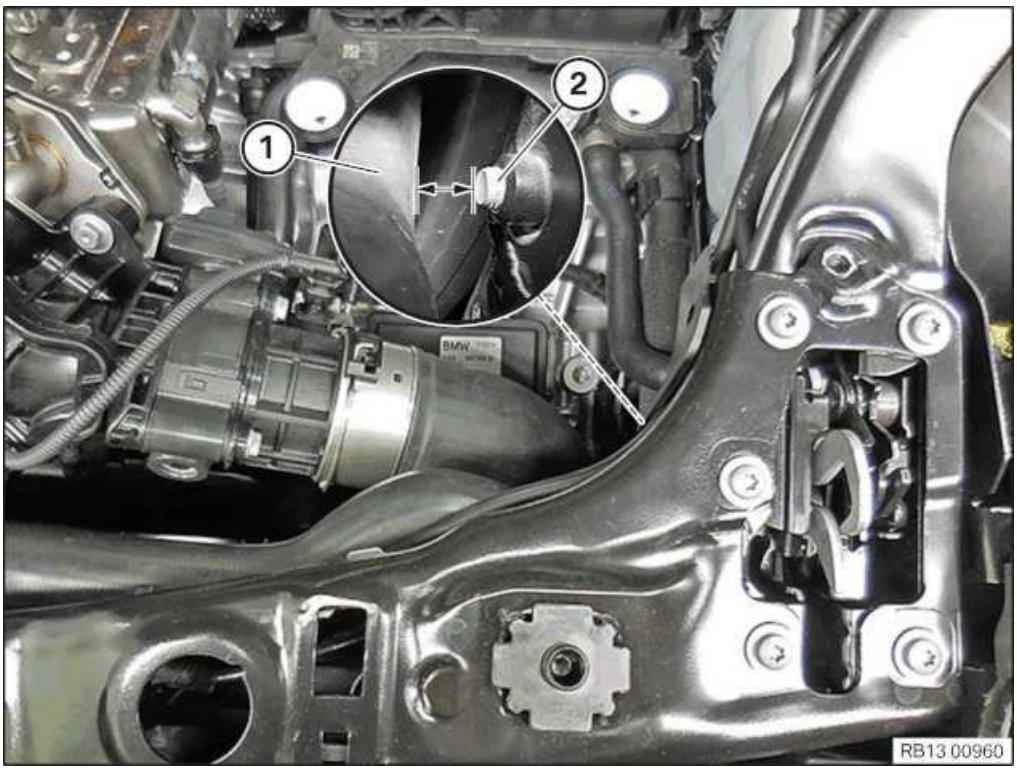
Release lock (1) of charge air line on both sides out of retaining lug.



Installation:

cardiagn.com

Note:
Release lock (1) of charge air line on both sides out of retaining lug (see arrow).



Lock must snap audibly into place.

Connect charge air line to charge air cooler and throttle body.

Lock (1) on charge air cooler must audibly engage.

Lock (2) on throttle body must audibly engage.

After installing the charge air line (1), check whether the distance to the screw connection (2) on the side member is sufficient.

Install abrasion protection, if necessary.

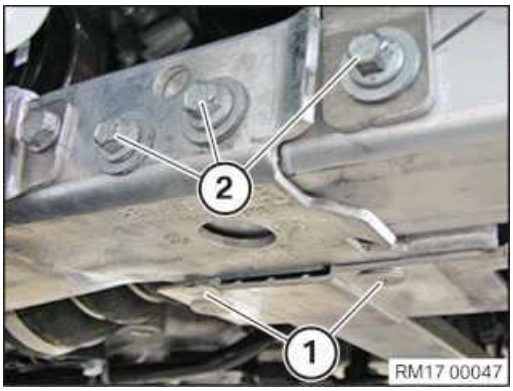
Required follow-up work:

- Install front underbody protection
- Install intake silencer housing

cardiagn.com

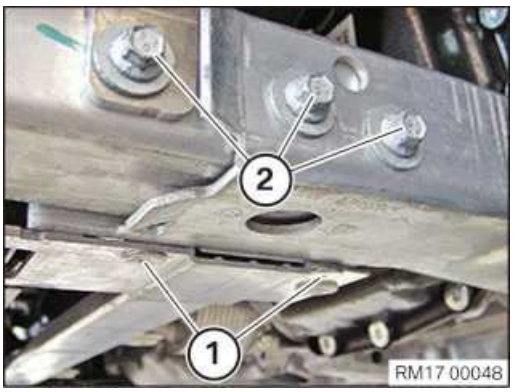
cardiagn.com

11 61 362 Removing and installing/replacing right charge-air duct (B47AO0)



Safety information:

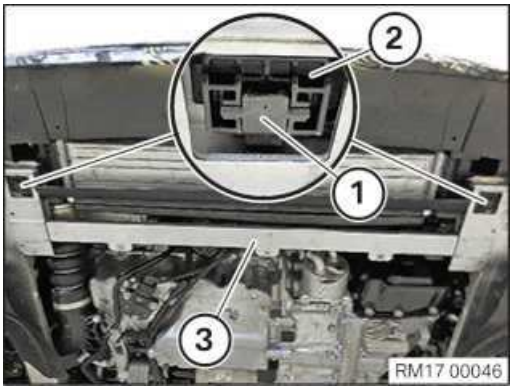
- In the event of a leak at the pressure pipe, there is a **risk of damage** on the exhaust turbocharger!



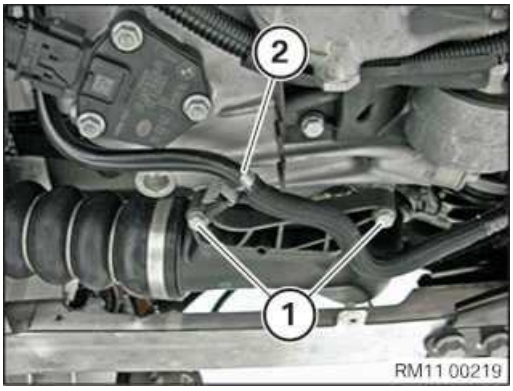
Necessary preliminary tasks:

- Remove front underbody protection
- Remove front right wheel arch panel
- Release front left wheel arch panel at bottom.

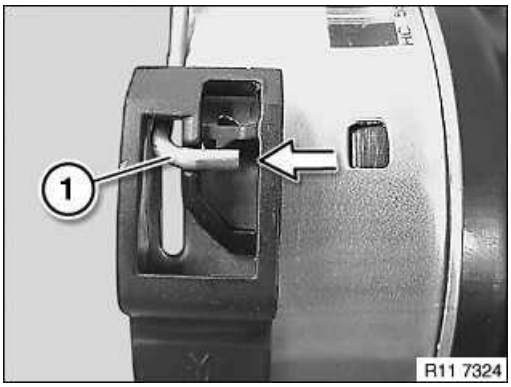
Removal:



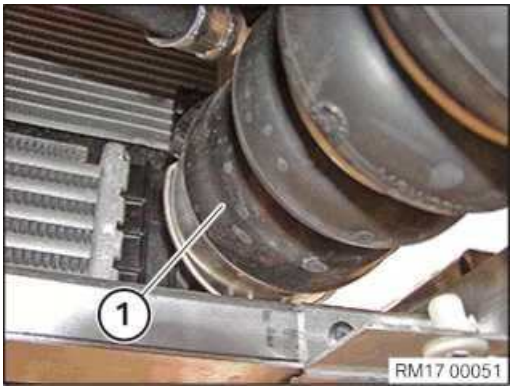
Release screws (2) for front left cross connection.
Drill out blind rivets (1) for front left cross connection.



Release screws (2) for front right cross connection.
Drill out blind rivets (1) for front right cross connection.



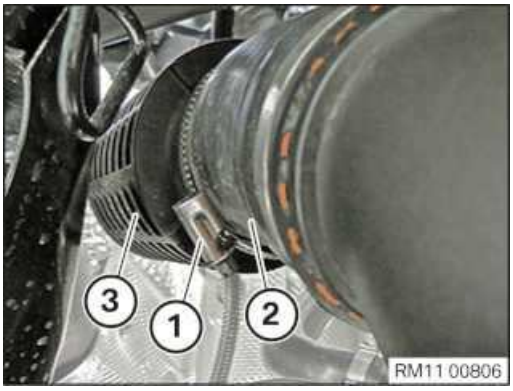
cardiagn.com



Release front left and right locking pins (1) and remove locks (2).
Remove cross connection (3).

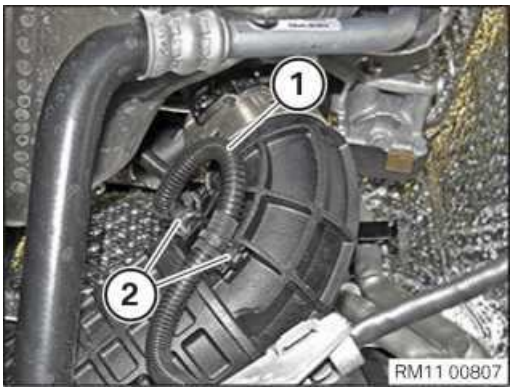
Release screws (1).
Unclip line (2).

Note:
Locks (1) must engage in brackets (see arrow).

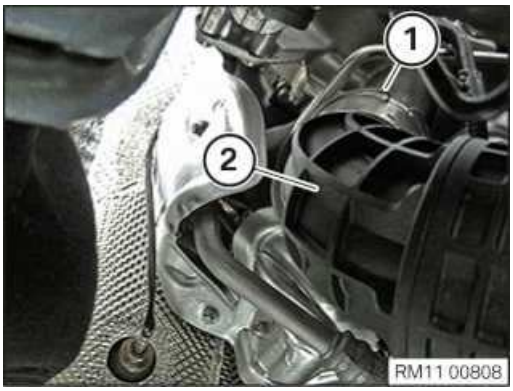


Unlock lock of charge air cooler on both sides by means of suitable tool.
Detach charge air line (1) from exhaust turbocharger.

cardiagn.com

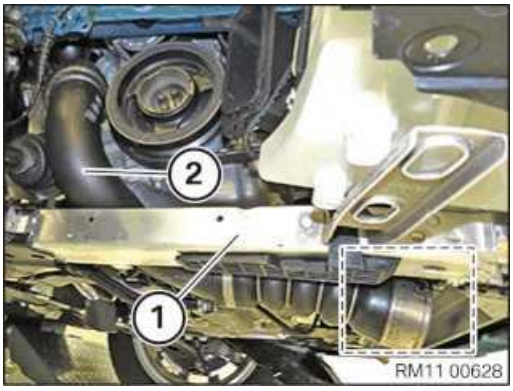


Release screw (1).



Release clamp (1).

Detach pressure pipe upper section (2) from pressure pipe lower section (3).

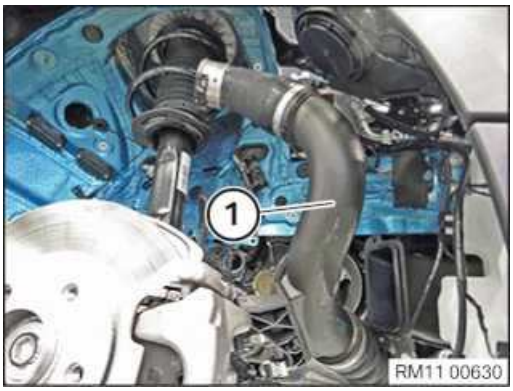


Release cable (1) from pressure pipe at clamps (2).

Unlock lock (1) of exhaust turbocharger on both sides by means of suitable tool.

Detach charge air line (2) from exhaust turbocharger.

cardiagn.com

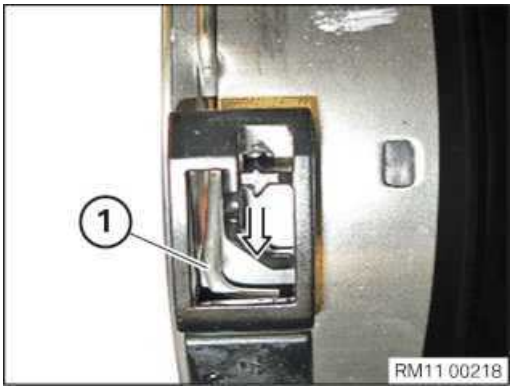


Slightly pull right deformation element (1) downwards.

Feed out lower section of charge air line (2) inside the marked area downwards.

Feed out upper section of charge air line (1) inside the marked area along the side member.

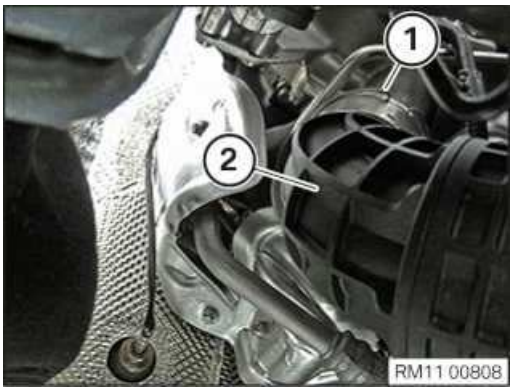
Remove charge air line (1) through the wheel arch.



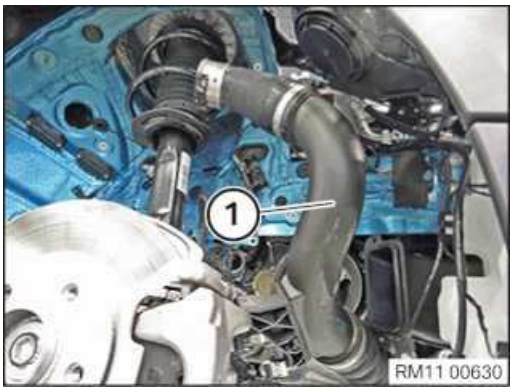
Feed out pressure pipe upper section (1) towards bottom.

Installation:

cardiagn.com



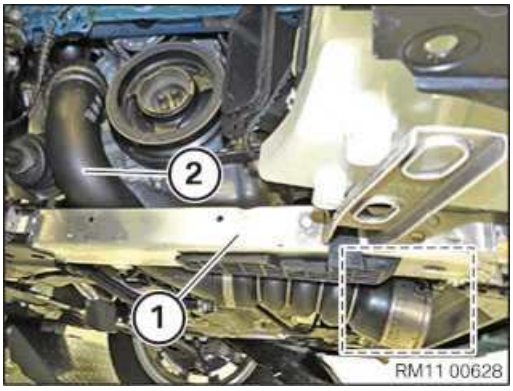
Feed in pressure pipe upper section (1).



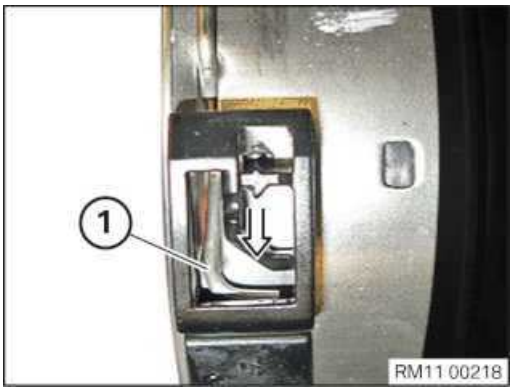
Release locks (1) from brackets.

Locks must engage.

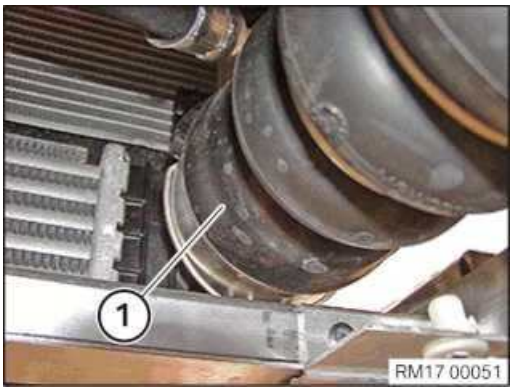
Mount pressure pipe upper section (2) on exhaust turbocharger until lock (1) engages on both sides.



Remove charge air line (1) through the front right wheel arch.

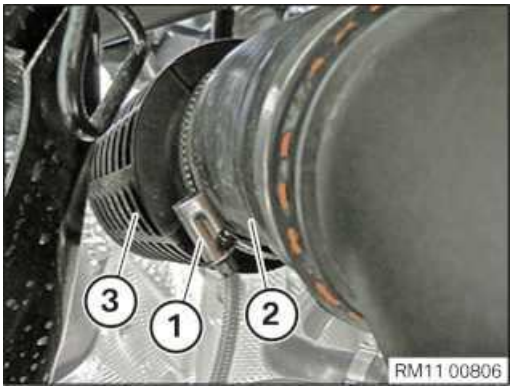


cardiagn.com

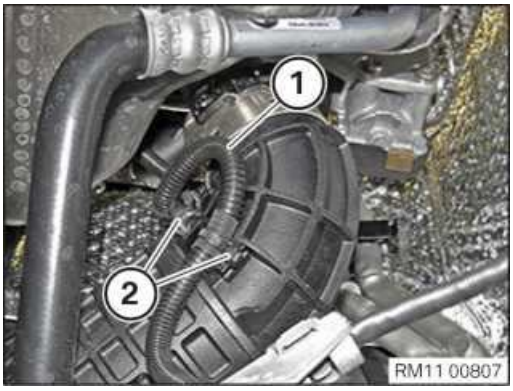


Feed in upper section of charge air line (1) passing the side member.

Feed in lower section of charge air line (2) inside the marked area.
Push right deformation element (1) upwards into initial position.



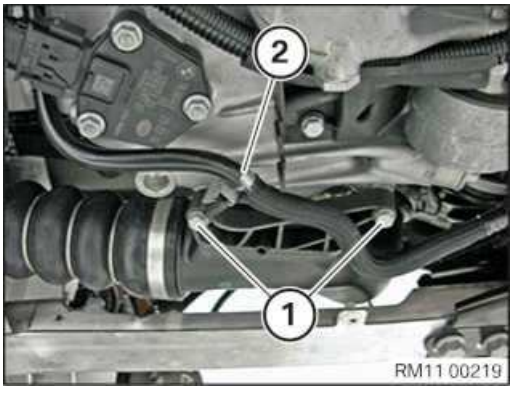
Release locks (1) from brackets.
Locks must engage.



Connect front right charge air hose (1) and lock.
Charge air hose (1) must audibly engage on charge air cooler.

cardiagn.com

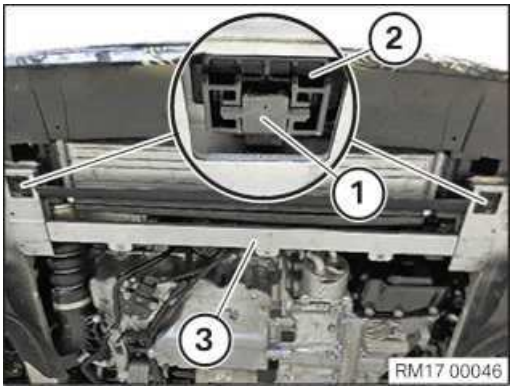
Mount pressure pipe lower section (2) on pressure pipe upper section (3).



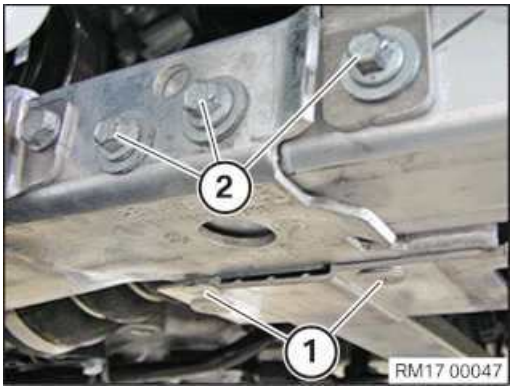
Tighten clamp (1).

Attach cable (1) to charge air line with clamps (2).

Tighten screw (1).

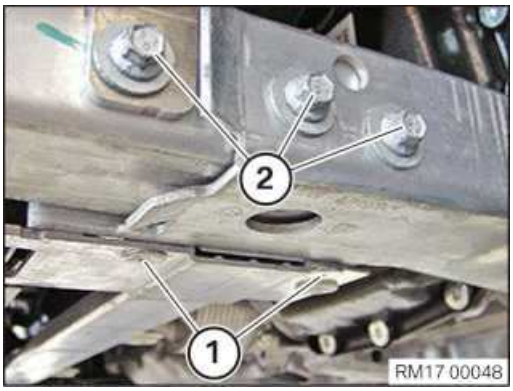


Tighten down screws (1).



Tightening torque: 11 00 2AZ.

Clip in line (2).



cardiagn.com

Install cross connection (3).
Install locks (2) and lock with locking pins (1).

Replace screws (2) for front right cross connection and tighten.
Tightening torque 17 10 9AZ.
Replace blind rivets (1) for cross connection and rivet.
Parts: Renew blind rivets (1).

Renew screws (2) for front left cross connection and tighten.
Tightening torque 17 10 9AZ.
Replace blind rivets (1) for cross connection and rivet.
Parts: Renew blind rivets (1).

Required follow-up work:

- Install front right wheel arch panel
- Install front left wheel arch panel
- Install front underbody protection
- Check charge air path for tightness
- Check function of DME.

cardiagn.com

11 61 362 Removing and installing/replacing the right charge-air duct

PRELIMINARY WORK

1 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

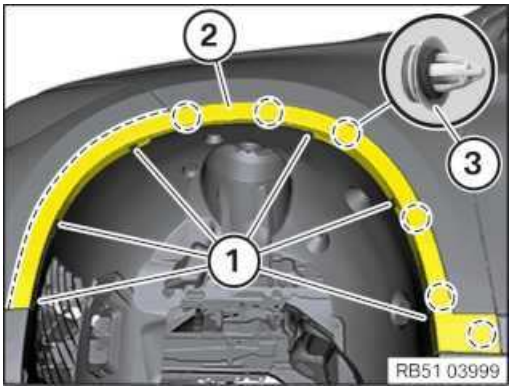
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

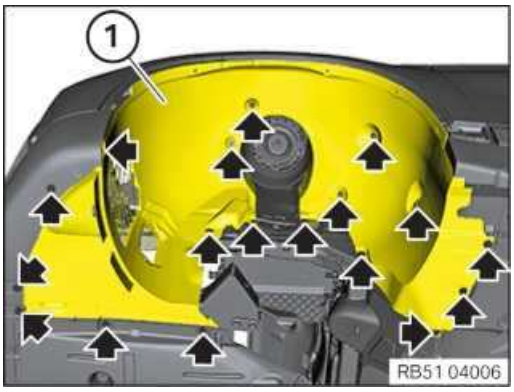
2 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

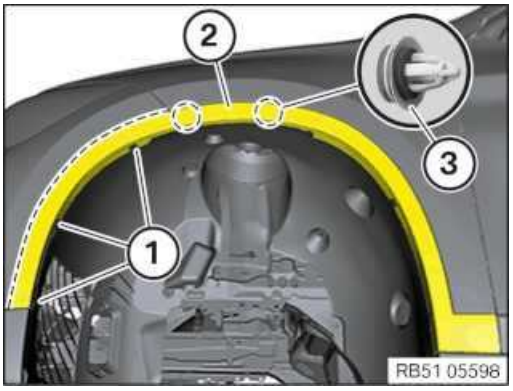
cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

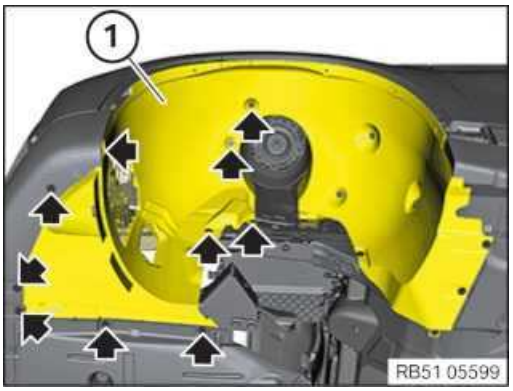
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

3 – Partially remove the front wheel arch cover



▶ Partially removing the front wheel arch trim

NOTICE

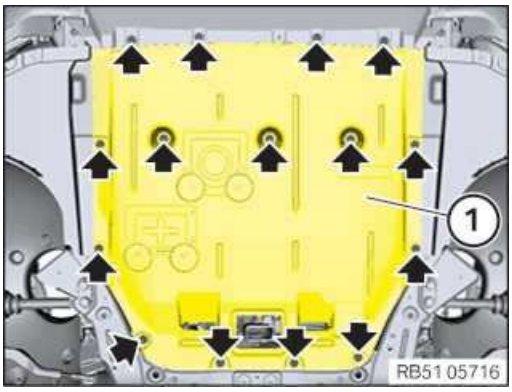


To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

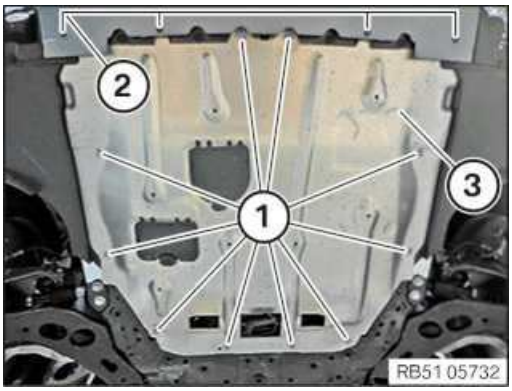
Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.



NOTICE

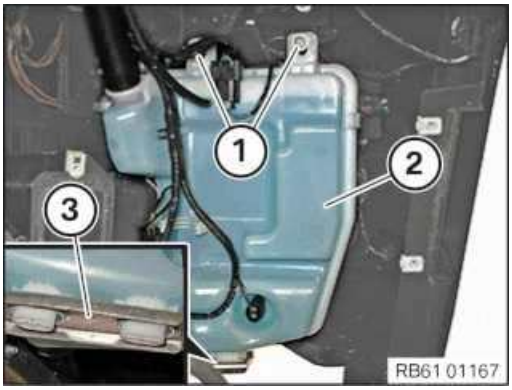
Description is for left component only. Procedure on the right side is identical.



- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (2) out.

4 – Removing the front underbody protection

cardiagn.com



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

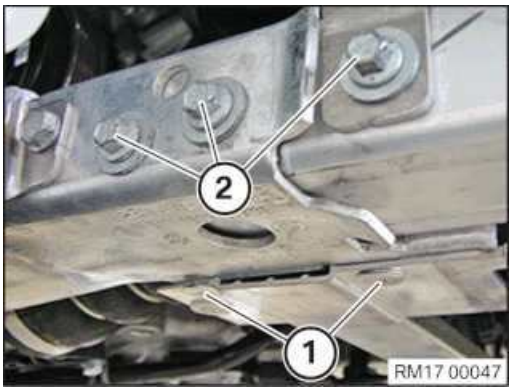
- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

5 – Remove the washer fluid reservoir from the fixture

- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

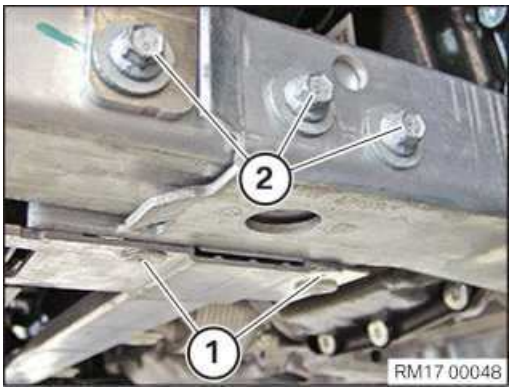
MAIN WORK

6 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



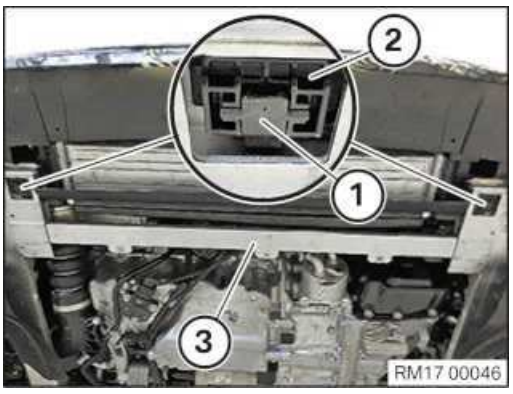
WARNING

Hot surfaces.

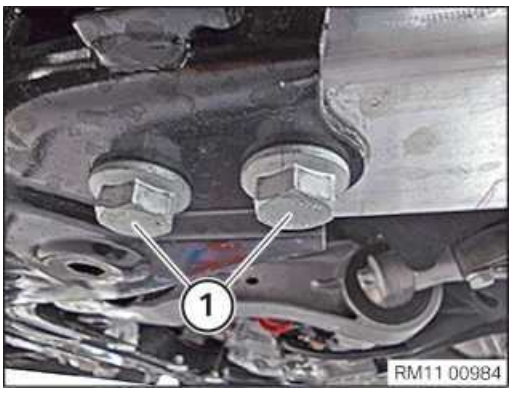


Risk of burning!

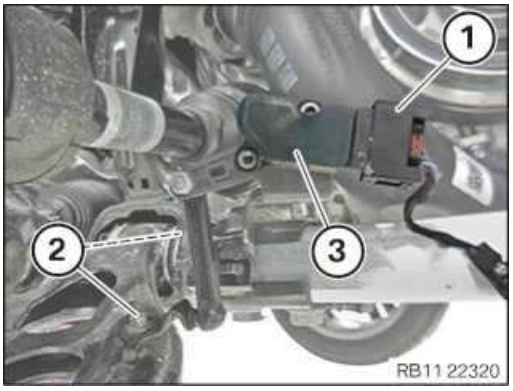
- Perform all work only on components that have cooled down.



cardiagn.com

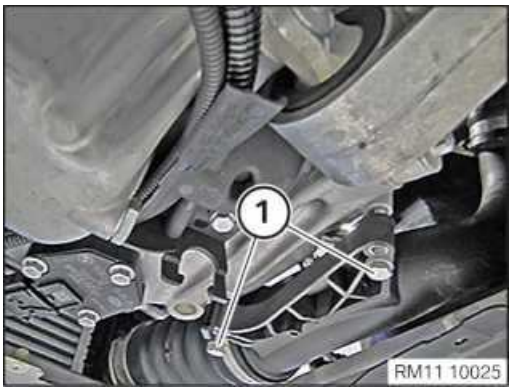


- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

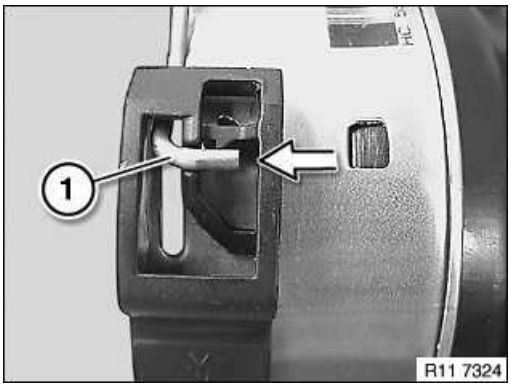


- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

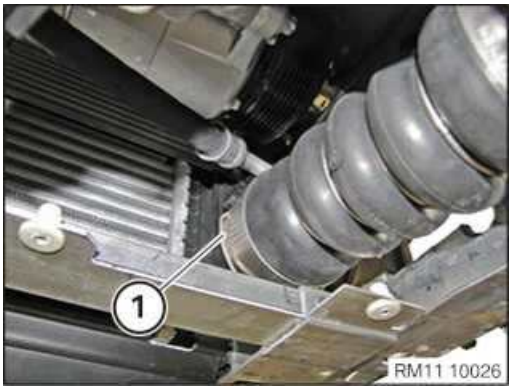


- Release the screws (1) on the right front axle support.

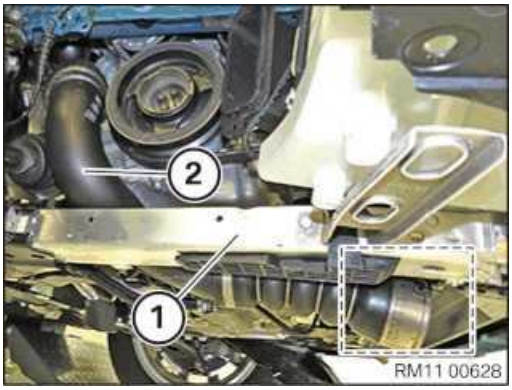


- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

cardiagn.com



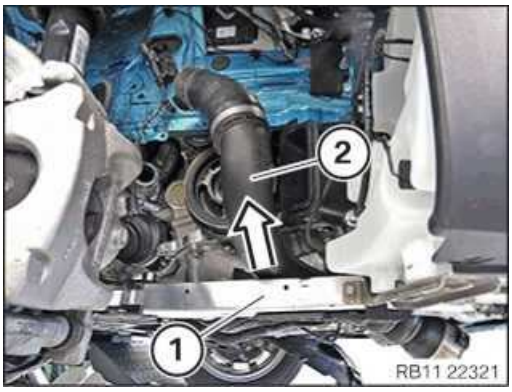
- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

- Unlock and release the charge air duct (1) on the charge air cooler.

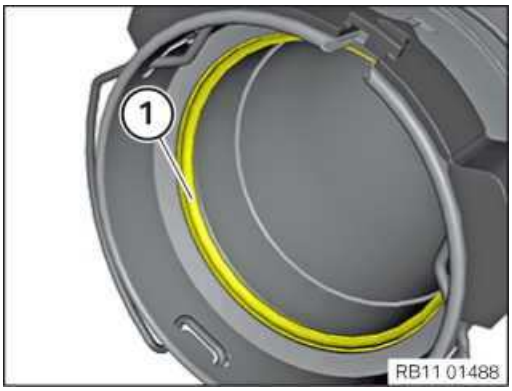


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

cardiagn.com

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



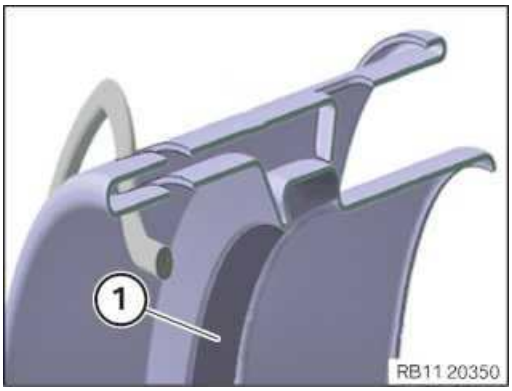
7 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

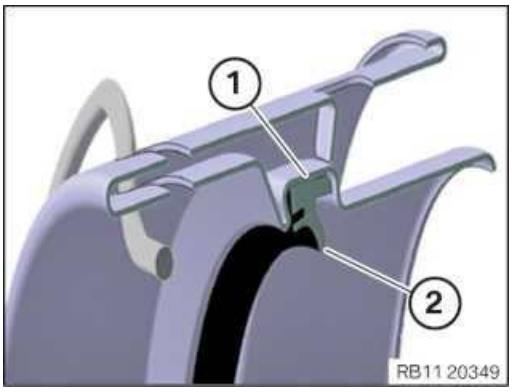


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

TECHNICAL INFORMATION

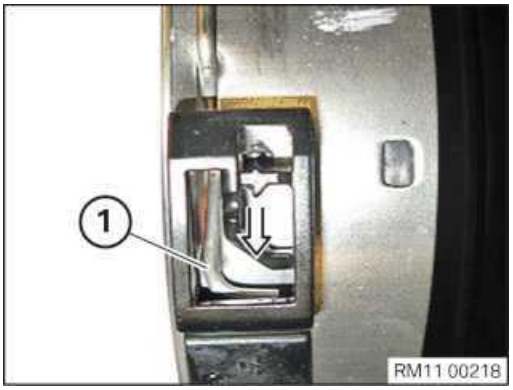


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

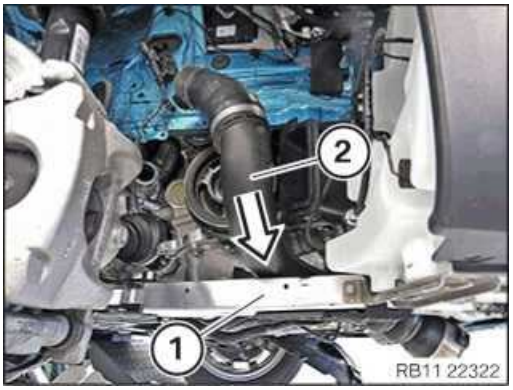
  The gasket groove (1) must be clean.

cardiagn.com



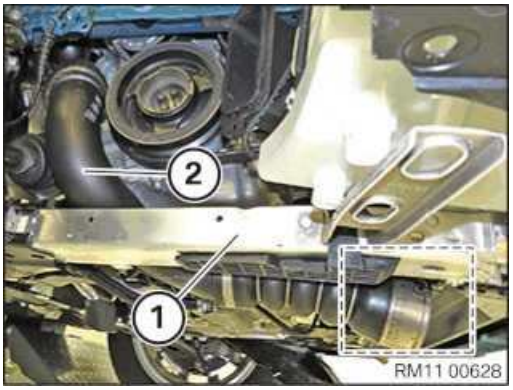
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

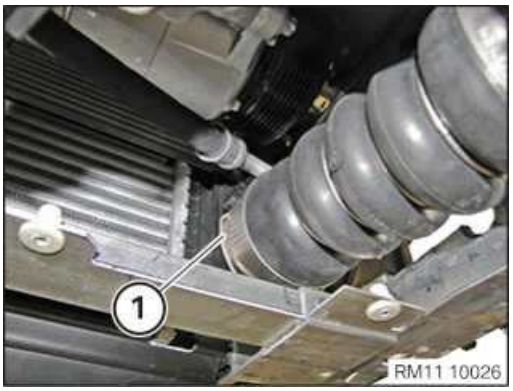


TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

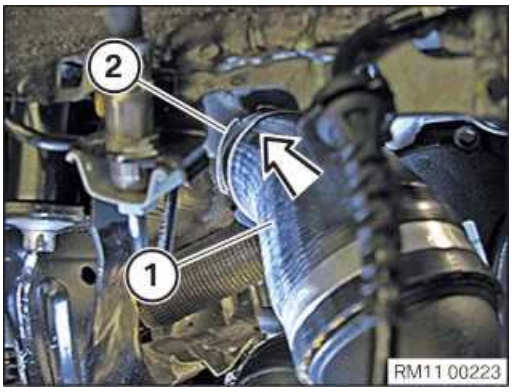


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

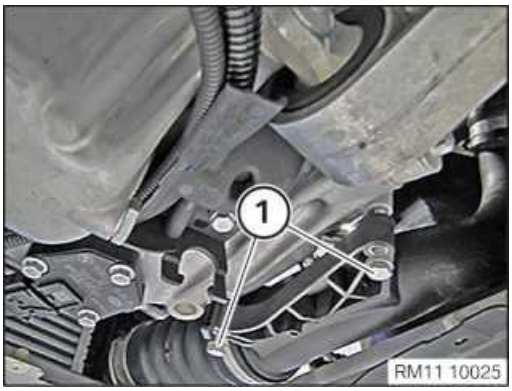


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

cardiagn.com

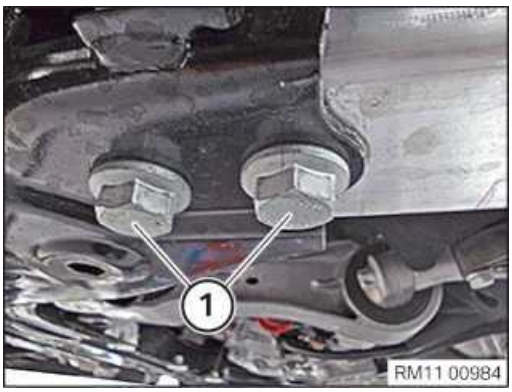
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

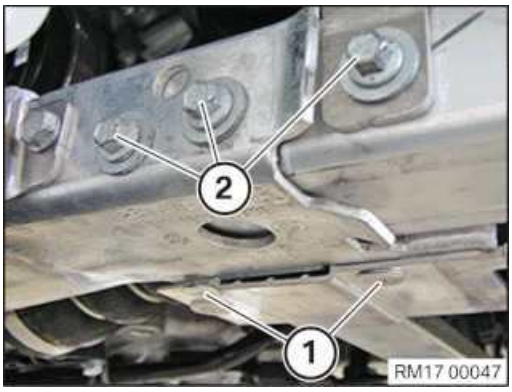
Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Tighten the screws (1) on the adapter of the front axle support.



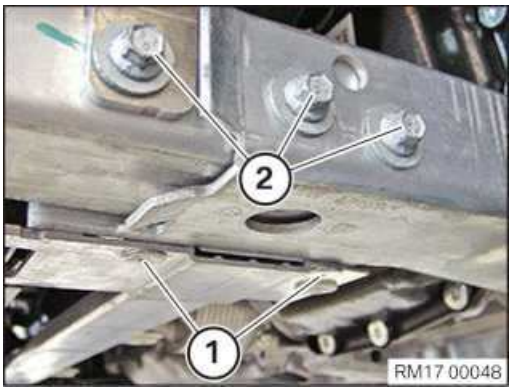
Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

cardiagn.com

- Tighten the bolts (2) at the front left.



Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

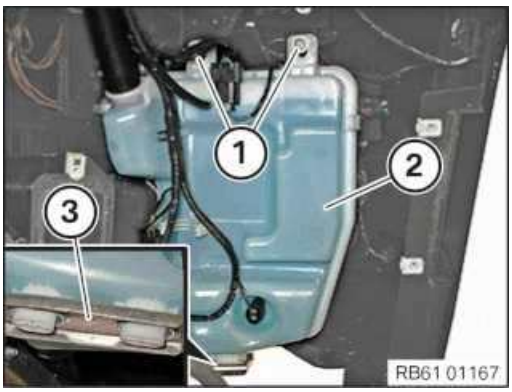
  Parts: Blind rivet

- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.

Cross connection to front axle support

M6		Tightening torque	12 Nm



- Renew the blind rivet (1).

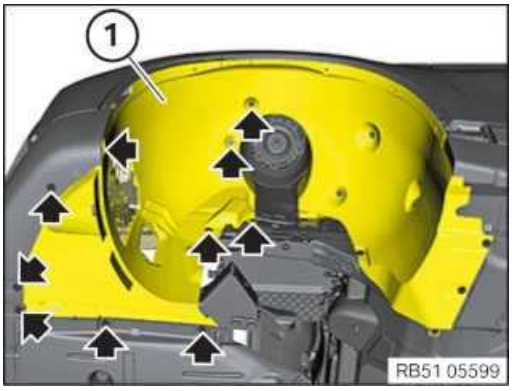
  Parts: Blind rivet

- Mount the blind rivets (1) at the front right.

POSTPROCESSES

8 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).



Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

9 – Partially install the front wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

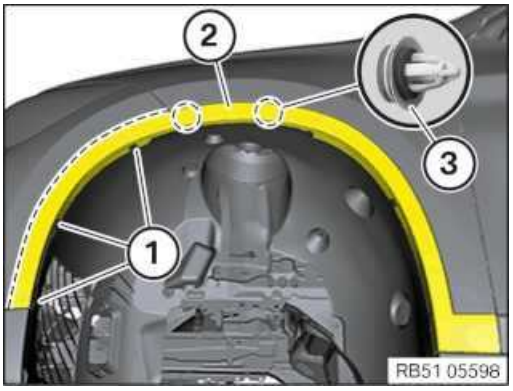
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Partly install the front wheel arch trim**



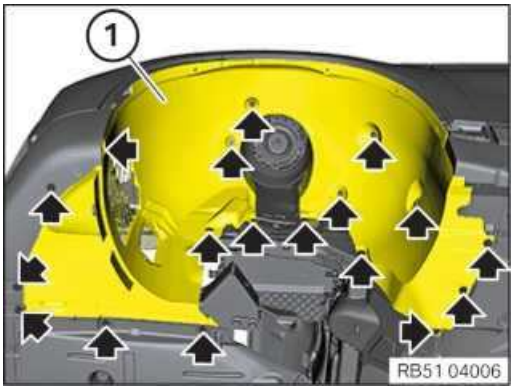
cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.



- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

10 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

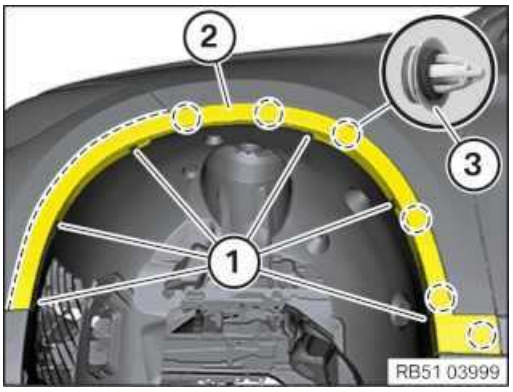
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

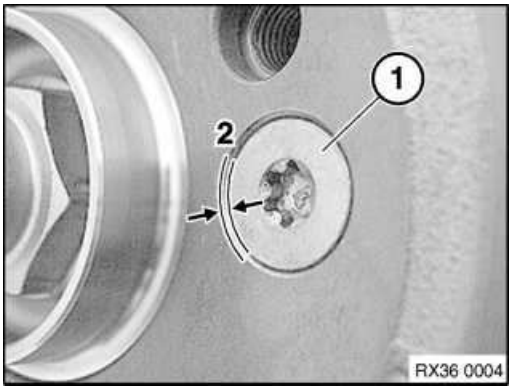
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

11 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

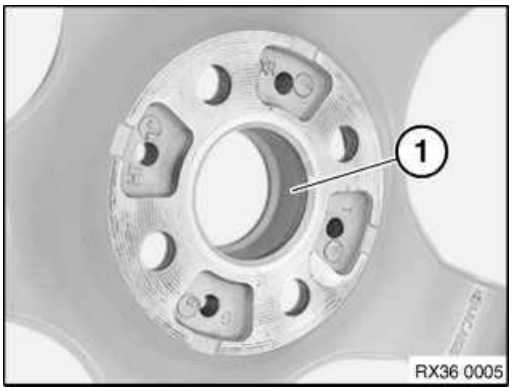


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

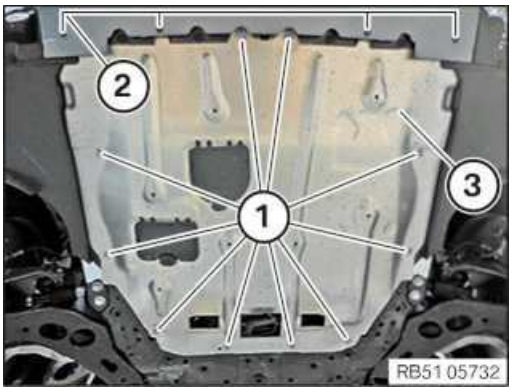
  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

12 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm

11 61 085 Removing and installing/replacing the swirl-flap controller

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

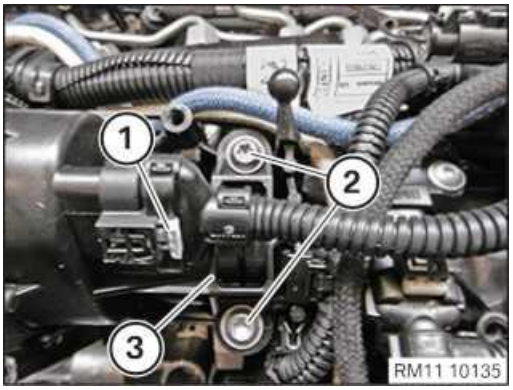
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



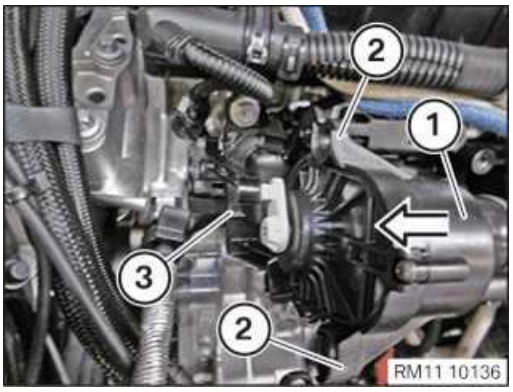
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

MAIN WORK

2 – Remove the swirl-flap controller



- Unlock and disconnect connector (1).
- Place wiring harness to one side.
- Loosen screws (2).
- Remove holder (3).

- Release the screws (1) with a suitable tool.

cardiagn.com

- Slightly lift the rear swirl-flap controller (1) and feed it out of the guides (2) forwards in direction of arrow.
- Slightly tilt the swirl-flap controller.
- Carefully release the drive arm from the adjustment lever (3).
- Remove the swirl-flap controller .

3 – When replacing the swirl-flap controller: Delete adaptations

- Replace swirl-flap actuator.

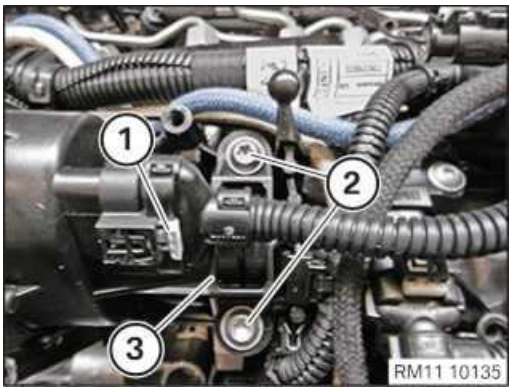
  Parts: Swirl-flap controller

▶ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

4 – Install the swirl-flap controller

- Feed in the swirl-flap controller (1) in direction of arrow at a slight angle.
- Carefully engage the drive arm in the adjustment lever (3).
- Insert and install the swirl-flap controller (1) in the guides (2).



- Tighten the screws (1).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm

cardiagn.com

- Position holder (3).
- Tighten down screws (2).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.

POSTPROCESSES

5 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

Additional Information

Overview of Tightening Torques

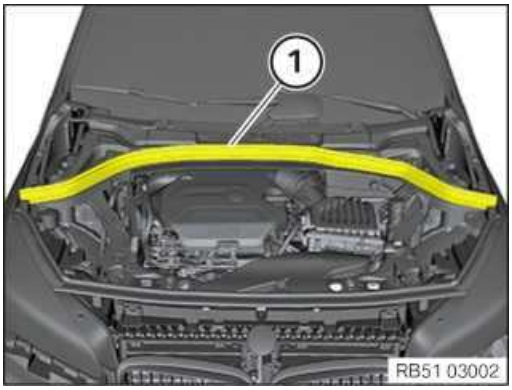
11 61 051 Replace intake plenum

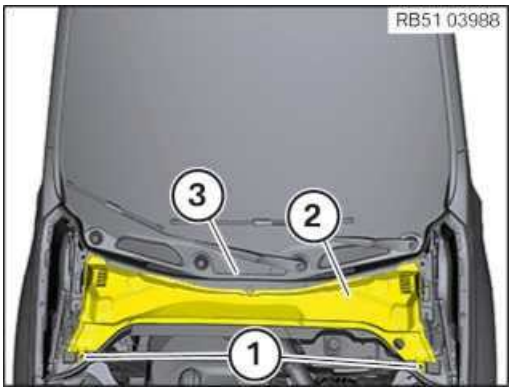
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

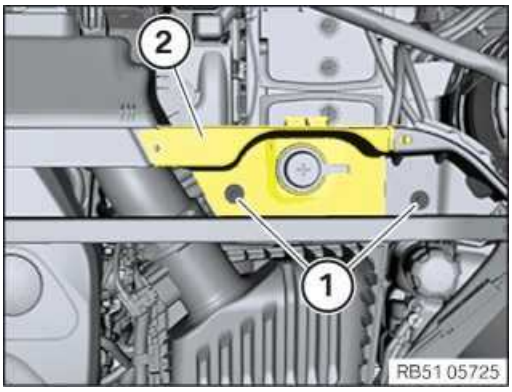
2 – Remove the seal for the rear bonnet



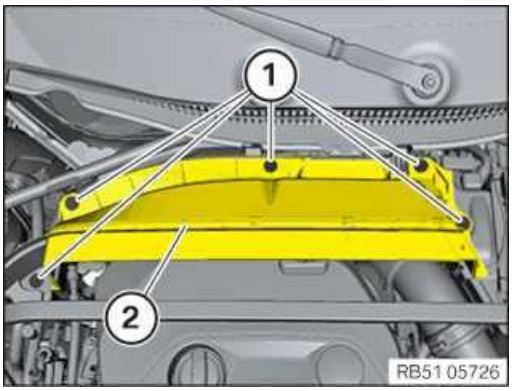
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.



3 – Removing front cowl panel cover

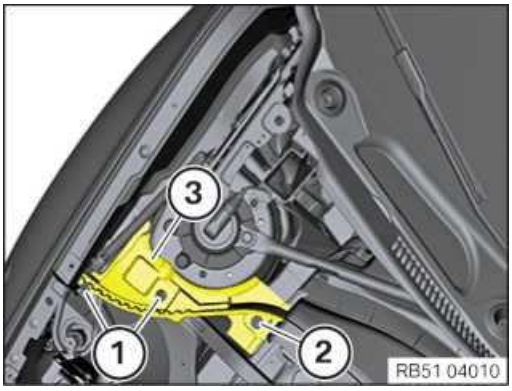


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Removing the upper bulkhead cover

cardiagn.com

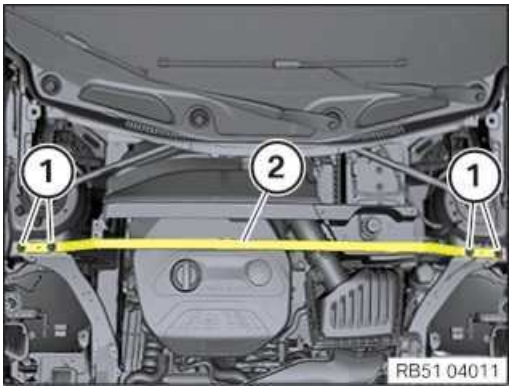
- Loosen screws (1).
- Guide out and remove the cover (2).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove suspension cross-brace

TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).

6 – Removing the acoustic cover

cardiagn.com

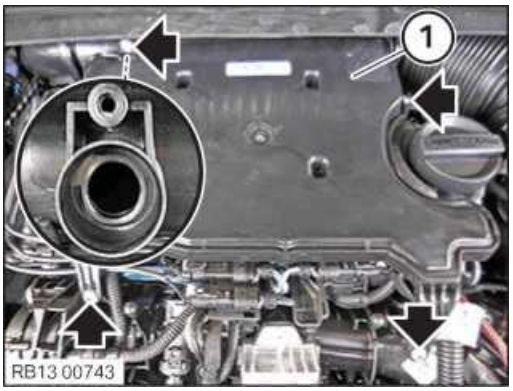
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

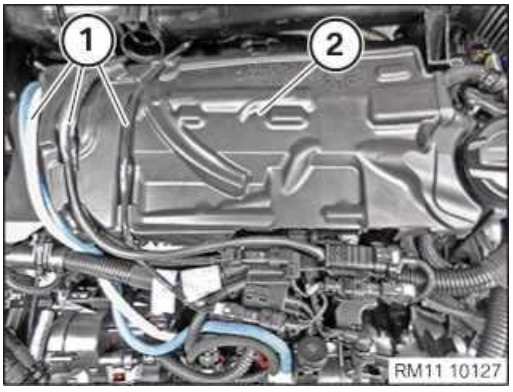
RISK OF DAMAGE



Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

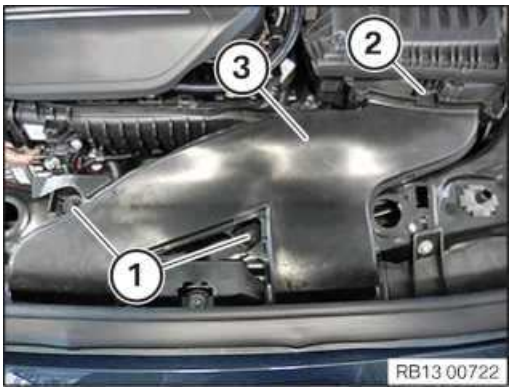
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.



- Unclip the acoustic cover from the marked areas towards the top.

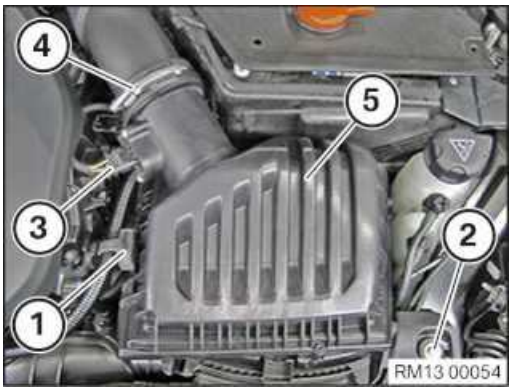
7 – Remove resonator

- Remove screws (arrows).
- Guide out and remove the resonator (1).



8 – Remove the acoustic cover for the injectors

- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

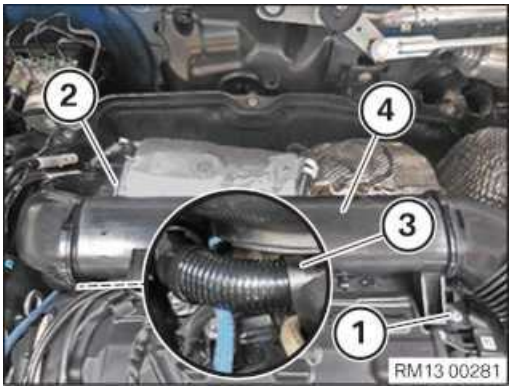


9 – Remove the intake neck for intake silencer housing

cardiagn.com

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

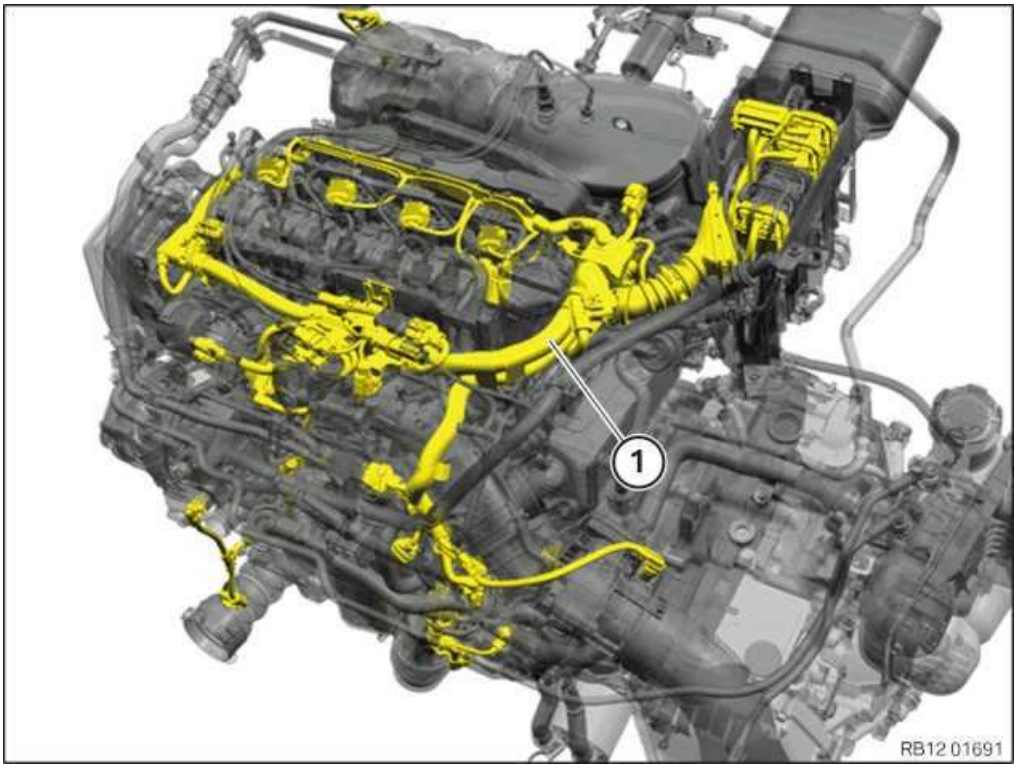
10 – Removing intake silencer housing



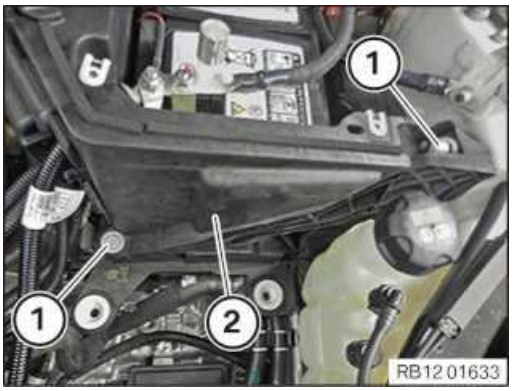
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.



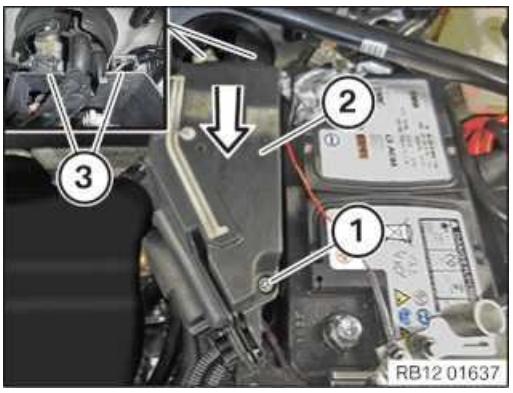
- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.



12 – Releasing the wiring harness section for the intake plenum

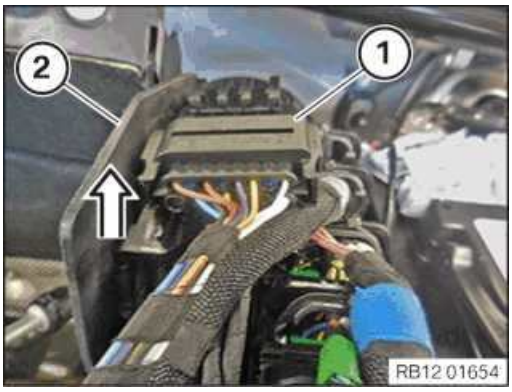
cardiagn.com

Overview: Wiring harness section for the engine

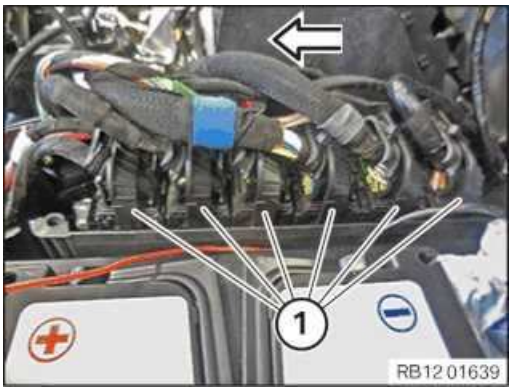


1 Wiring harness section for the engine

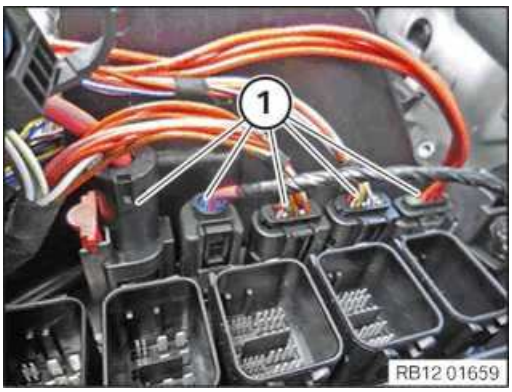
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



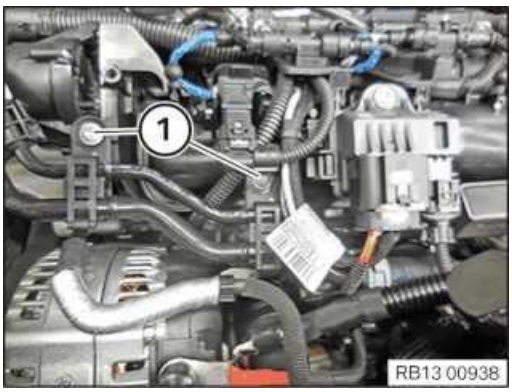
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



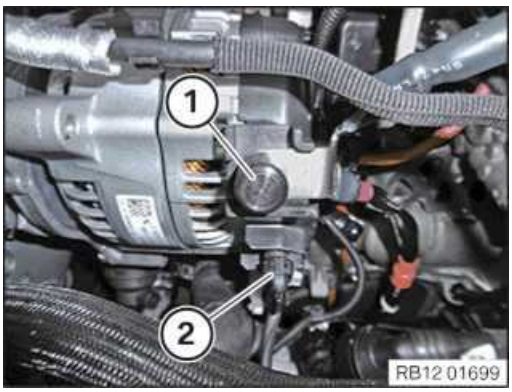
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



cardiagn.com

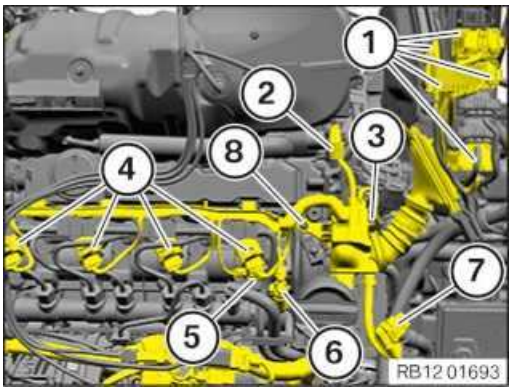


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

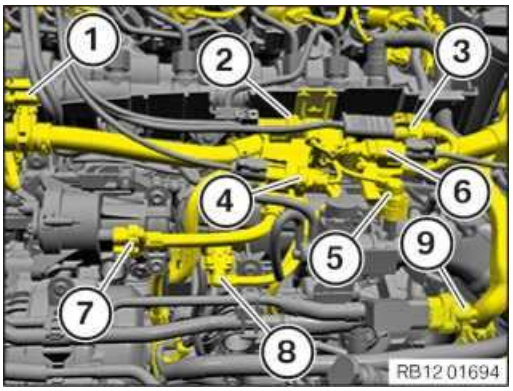


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

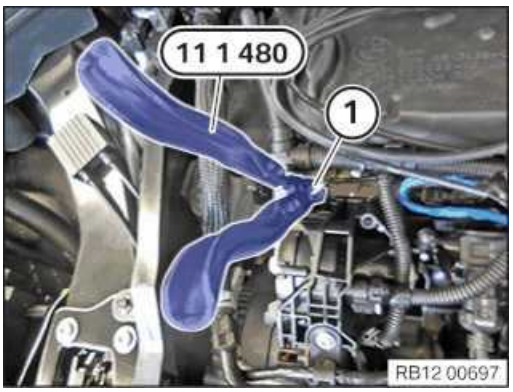
- Unlock and loosen connector (1).



- Loosen screws (1).

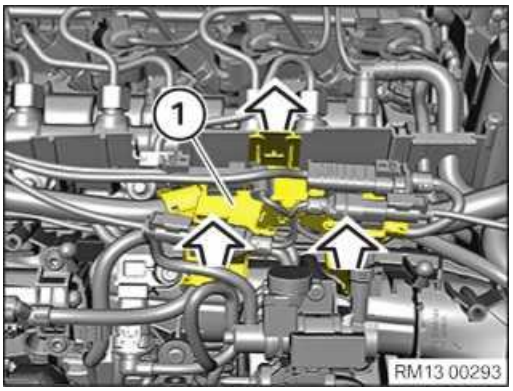


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



cardiagn.com

- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock the connector (2) and disconnect it from the differential pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust-gas recirculation valve.
- Unlock the connector (4) and pull off from the injectors.
- Unlock the connector (5) and disconnect it from the camshaft sensor.
- Unlock the connector (6) and disconnect it from the fuel pressure regulator.
- Unlock connector (7) and pull off from hot film air mass meter.
- Loosen screw (8).



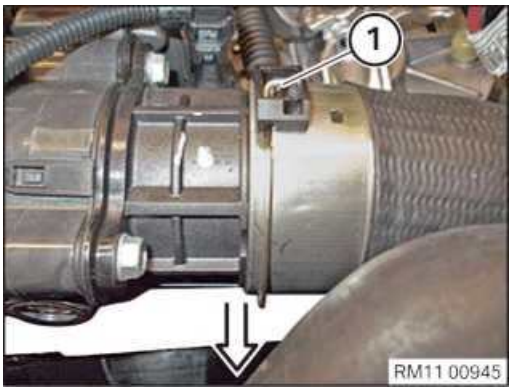
- Unlock connector (1) and pull off from the rail pressure sensor.
- Unlock the connector (2) and disconnect it from the exhaust temperature sensor before the diesel particulate filter.
- Unlock and disconnect the connector (3) from the front oxygen sensor.
- Unlock the connector (4) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock and disconnect the connector (5) from the electric changeover valve.
- Unlock the connector (6) and disconnect it from the exhaust temperature sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (7) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (8) and pull it off the charging pressure sensor.
- Unlock the connector (9) and disconnect from the fuel pressure and temperature sensor.

- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

▶ **Removing the cable clips from the intake plenum**

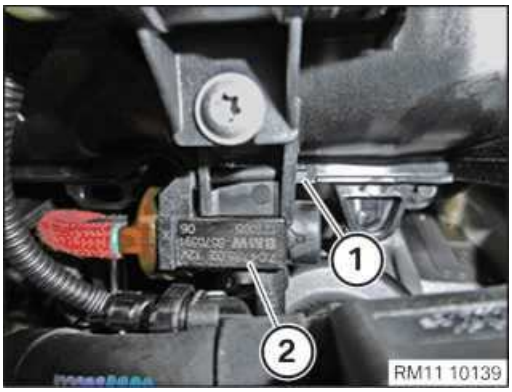
- Detach the cable clip (1) in the direction of the arrow.
- Guide out the cable clip (1) in direction of arrow and set it aside.

13 – Removing the intake plenum

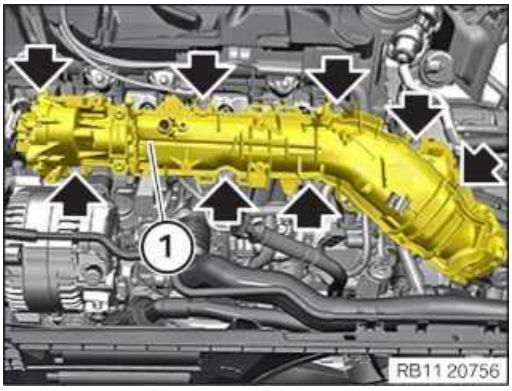


cardiagn.com

TECHNICAL INFORMATION

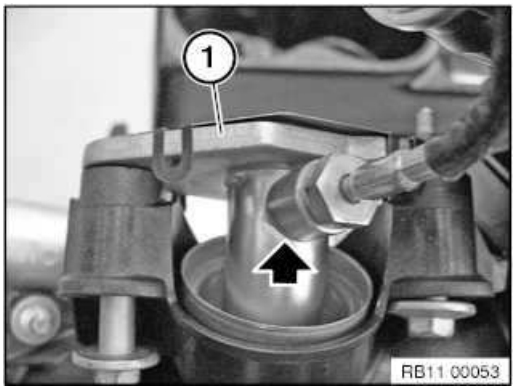


Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1).

- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

- Release the screws (arrows) from the intake plenum (1).
- Guide the intake plenum (1) out forwards and remove it.

cardiagn.com

- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

MAIN WORK

14 – Replacement: Checking part number of the intake plenum

NOTICE

For vehicles with Real Driving Emissions (RDE) with a production date from 03/2019:

The intake plenum and the exhaust-gas recirculation cooler vary.

When replacing the intake plenum or the exhaust-gas recirculation cooler: Make sure the part number is correct. Note the part number of the removed component and assign the corresponding, suitable part number.

In the electronic Parts Catalogue (EPC), components with the auxiliary "RDE" and components without the auxiliary "RDE" will be provided. Only the following combinations are permitted:

Intake plenum **with** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **with** the auxiliary **"RDE"**.

Intake plenum **without** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **without** the auxiliary **"RDE"**.

Components without the auxiliary "RDE" must not be installed with components with auxiliary "RDE".

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Note down part number (1).
- Select new part using the part number from the Electronic Parts Catalogue (EPC).

15 – When replacing the intake plenum: Remount components

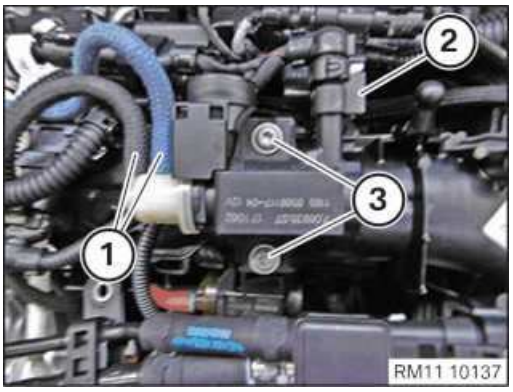
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

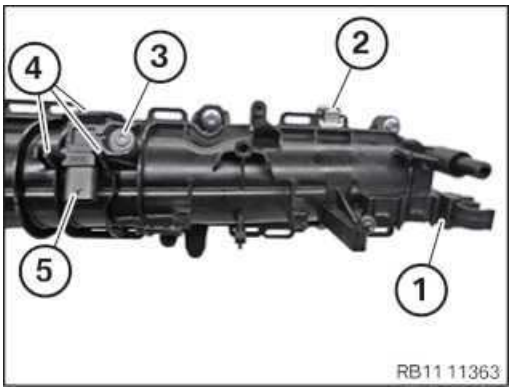
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

▸ Remove the electric changeover valve of the low-pressure stage turbocharger



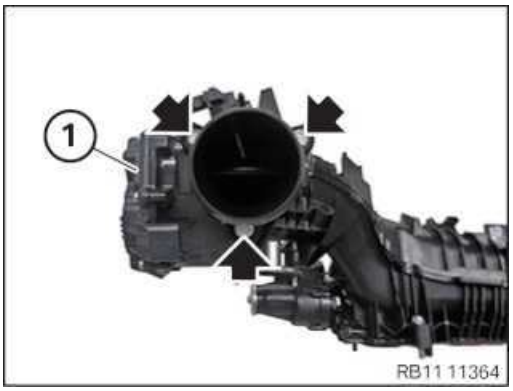
cardiagn.com

RISK OF DAMAGE

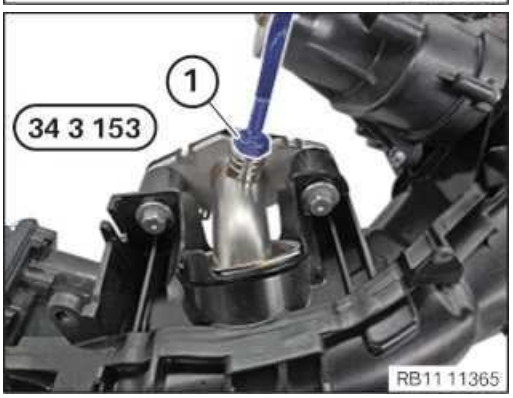


Electrostatic discharge.

Damage to or destruction of electrical components.



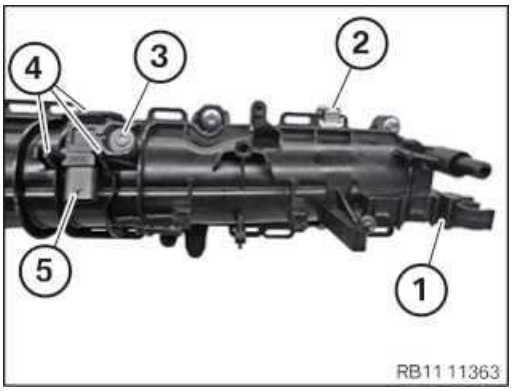
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Pull off the vacuum hoses (1).
- Make sure that the green O-ring is **not** lost between the blue vacuum hose and the electric changeover valve.
- Unlock connector (2) and pull off.
- Loosen screws (3).
- Remove electric changeover valve.

- Guide out and remove holder (1).
- Feed out and remove the clamp (2).
- Loosen screw (3).
- Unlock the locks (4).
- Remove the charging pressure sensor (5).

- Remove screws (arrows).
- Remove the throttle bodies (1).

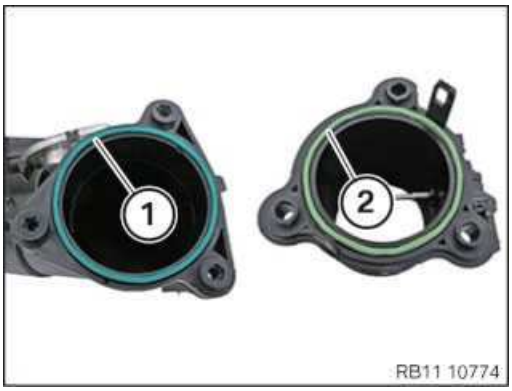


- Release exhaust temperature sensor (1) using special tool .
- Feed out and remove exhaust temperature sensor (1).
- Replace intake plenum.

  Parts: Plenum

cardiagn.com

- Check the sealing ring (1) for damage and renew where required.
- Lightly coat the sealing ring (1) on the charging pressure sensor with lubricant for the installation.

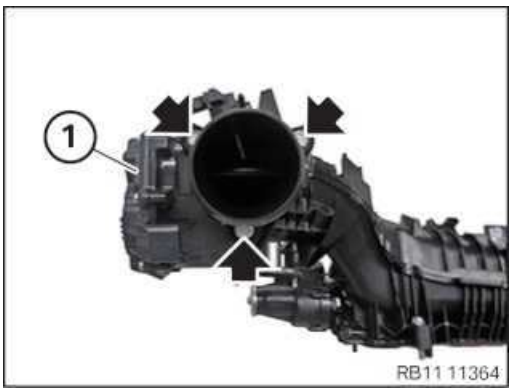


- Insert and install the charging pressure sensor (5).
- Lock the locks (4).

  The locks (4) must engage audibly.
- Tighten down screw (3).

Charging pressure sensor to intake plenum

TS6X20		Tightening torque	4 Nm



- Feed in and install the clamp (2).
- Insert and install the holder (1).

- Renew the gasket (1) between the intake system and the throttle body.

  Parts: Gasket.
- Renew gasket (2) between throttle body and charge air pipe.

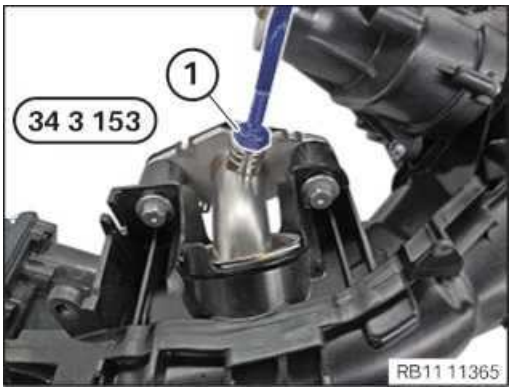
  Parts: Gasket.

- Feed in and install the throttle body (1).
- Tighten screws (arrows).

Throttle body to intake plenum

6x50		Tightening torque	7 Nm

RISK OF DAMAGE



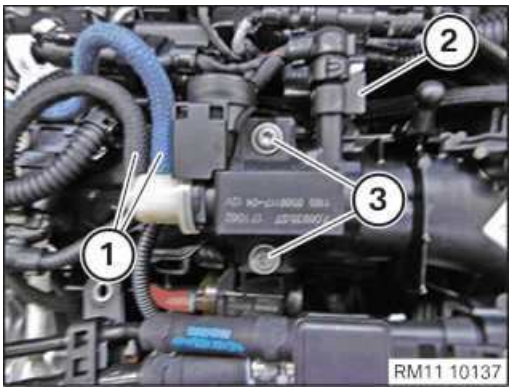
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and the exhaust temperature sensor as needed.

cardiagn.com



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1) with the special tool .

Exhaust temperature sensor for EGR

Sensor		Tightening torque	21,7 Nm

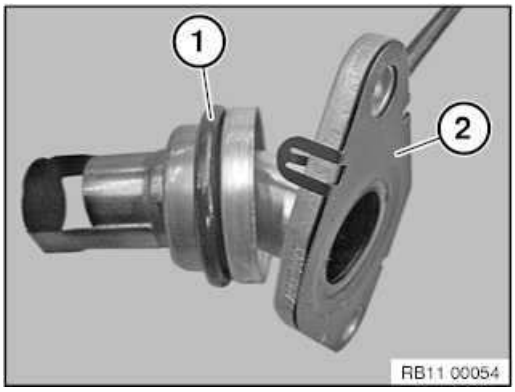
▸ Installing the electric changeover valve of the low-pressure stage turbocharger

- Position the electric changeover valve.
- Tighten down screws (3).

Electric changeover valve to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect the blue vacuum hose (1) to the electric changeover valve.

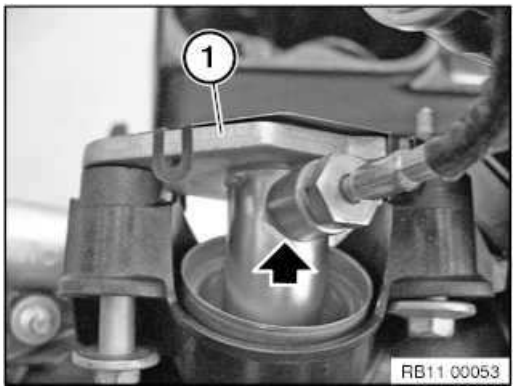


Note: The connection for the blue vacuum hose has a green rubber ring.

- Connect black vacuum hose (1) to the electric changeover valve.
- Connect and lock the connector (2).

  Lock must audibly engage.

POSTPROCESSES

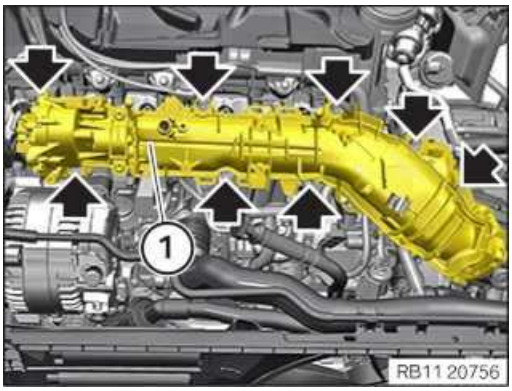


16 – Installing the intake plenum

- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position the seal (2) and clip it in.

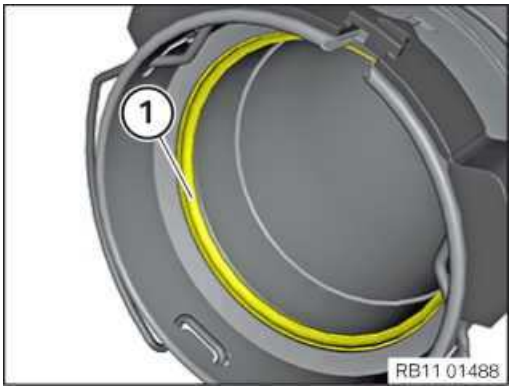


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com

- Renew gaskets (1).

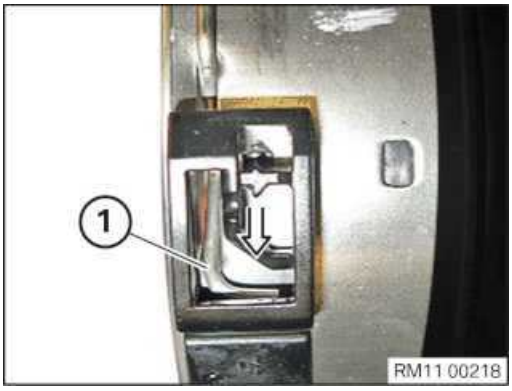
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



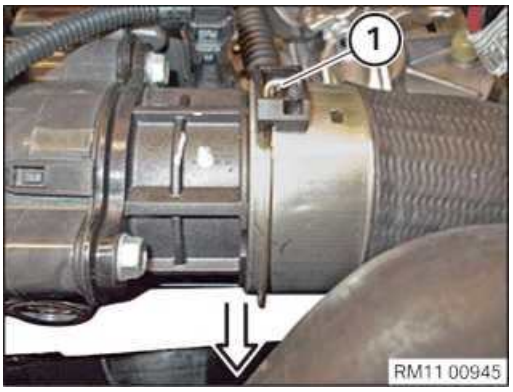
- Guide in and install intake (1) plenum.
- Tighten screws (arrows).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



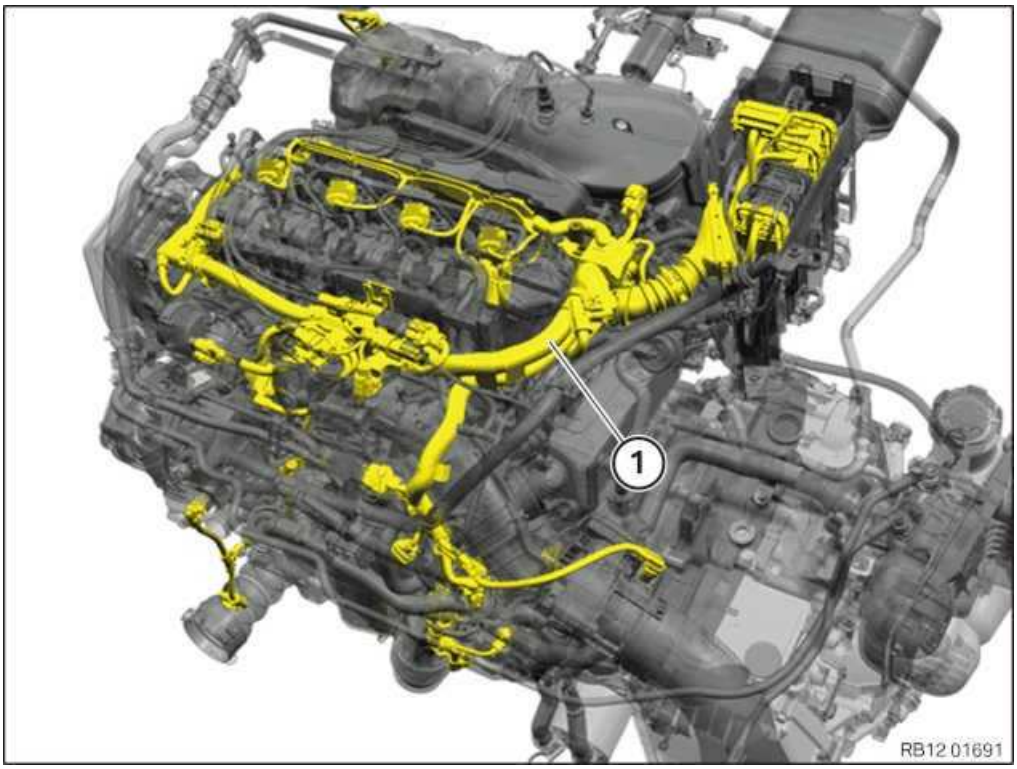
- Install the electric changeover valve (2) in the holder on the plenum from left to right.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

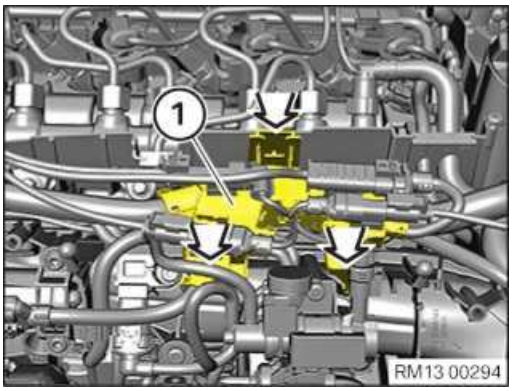
  Parts: Sealing ring

- Engage the lock (1) on the bracket (arrow).



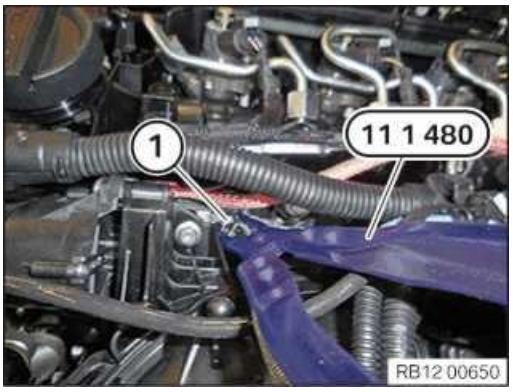
cardiagn.com

- Connect the charge air line to the throttle valve.
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.



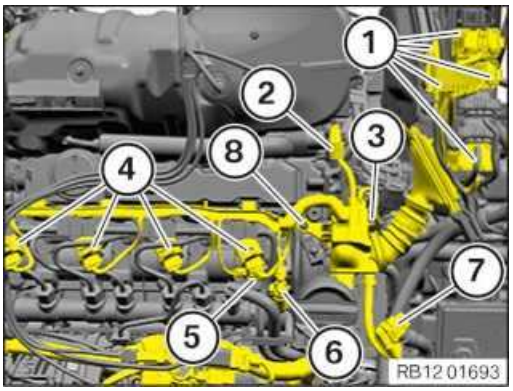
17 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

▸ **Installing the cable clip for the intake plenum**

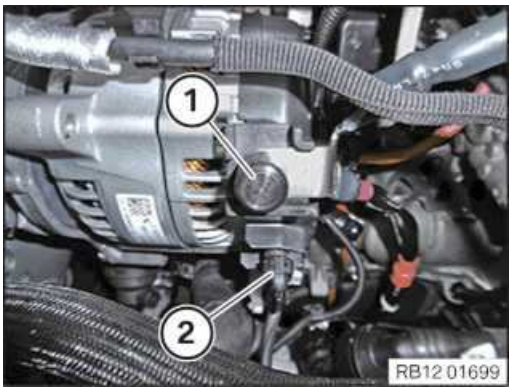


- Insert and install the cable clip (1) in the direction of the arrow.
- Make sure the cable clip (1) is fitted correctly.

cardiagn.com

- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

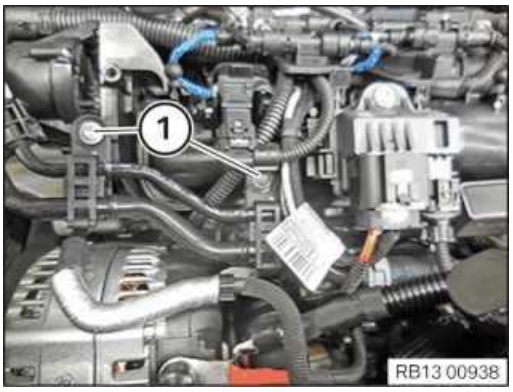


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Attach connector (2) to the differential pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust-gas recirculation valve and lock audibly.
- Attach connector (4) to the injectors and lock it audibly.
- Attach connector (5) to the camshaft sensor and lock it audibly.
- Attach connector (6) to the fuel pressure regulator and lock it audibly.
- Connect and audibly lock the connector (7) to the hot film air mass meter.
- Tighten down screw (8).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Connect the connector (1) to the rail pressure sensor and lock it audibly.
- Attach connector (2) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (3) to the front oxygen sensor and lock audibly.
- Attach connector (4) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Connect the connector (5) to the electric changeover valve and lock audibly.
- Attach connector (6) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (7) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (8) to the charging pressure sensor and lock it audibly.
- Attach connector (9) to the fuel pressure and temperature sensor and lock it audibly.

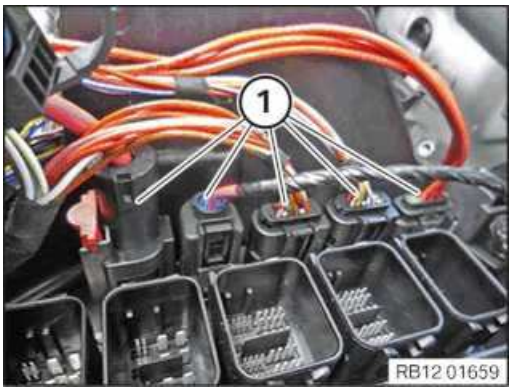


- Connect and lock the connector (2).

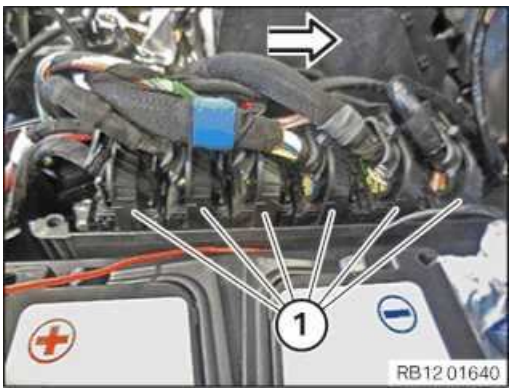
  Lock must snap audibly into place.
- Connect the positive battery cable (1) and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

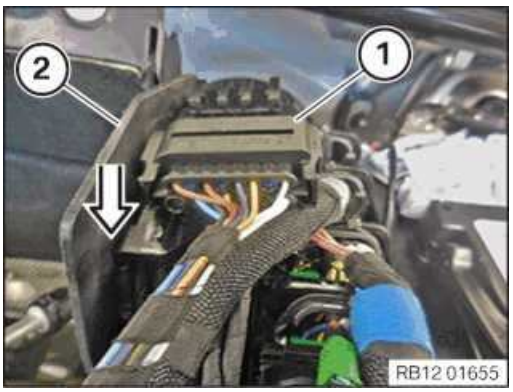


cardiagn.com

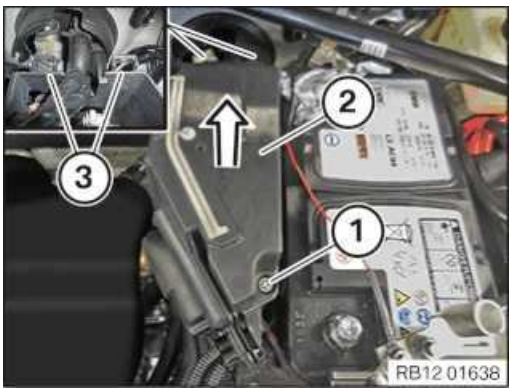


- Position the fuel line.
- Tighten the screws (1).

Fuel line to intake plenum



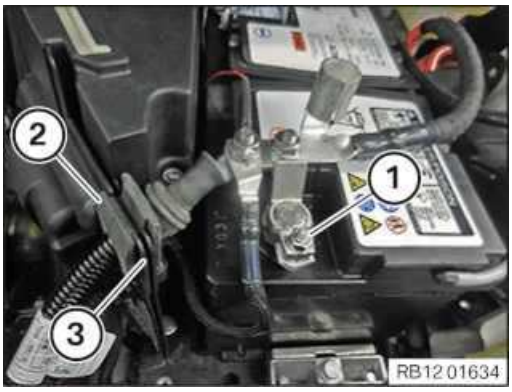
TS6x20		Tightening torque	5 Nm



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

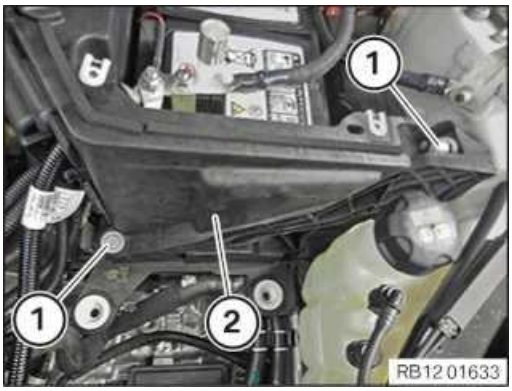
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

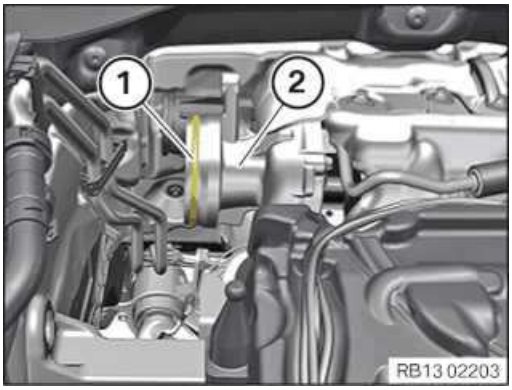


cardiagn.com

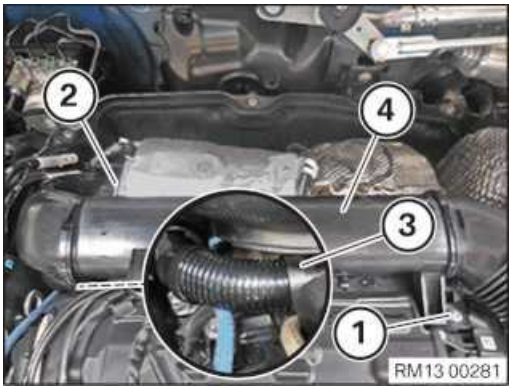
- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).



Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

18 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

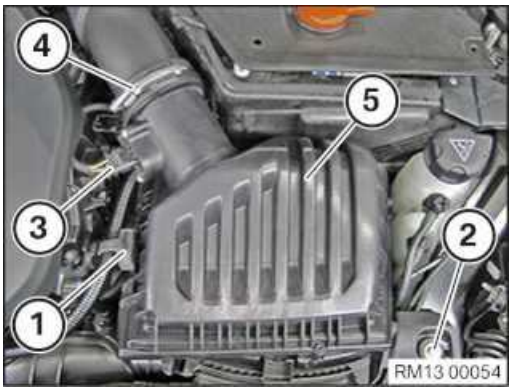
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

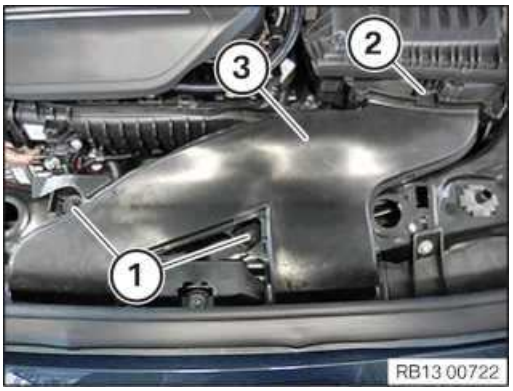
cardiagn.com

19 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



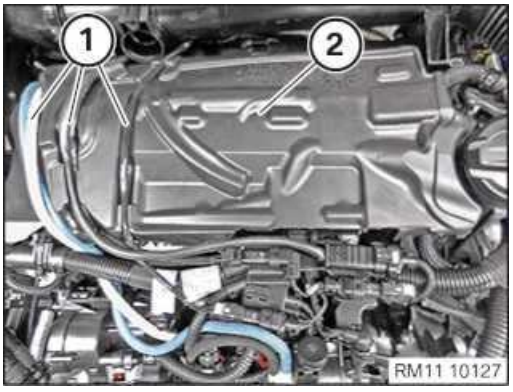
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

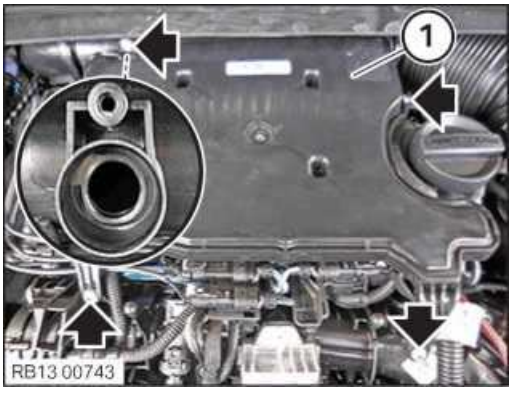
- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

20 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

21 – Install the acoustic cover for the injectors

- Feed the acoustic cover (2) in and install.
- Fasten the vehicle wiring harness (1) in the brackets.

22 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).
  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

23 – Install acoustic cover

cardiagn.com

23 – Install acoustic cover

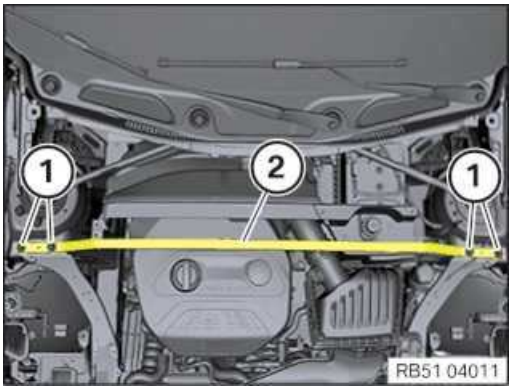
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

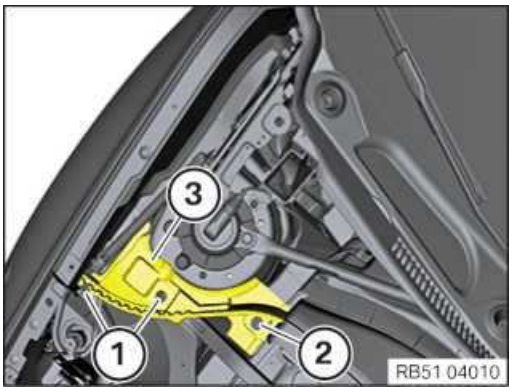


- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

24 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

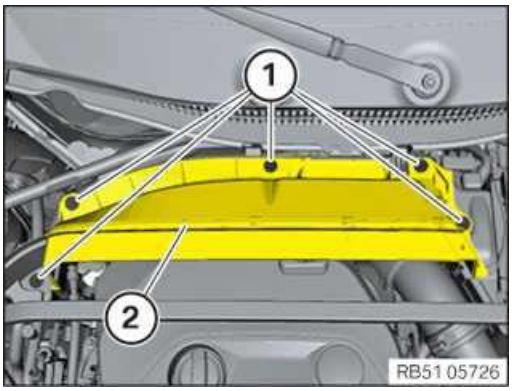
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

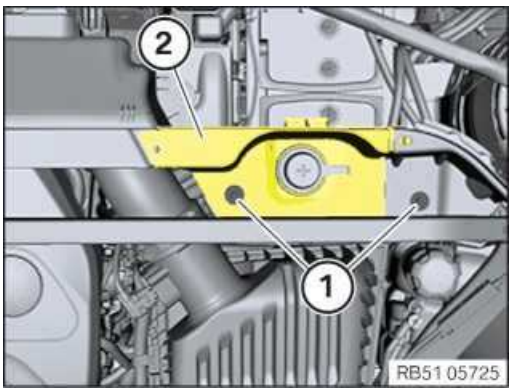


- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

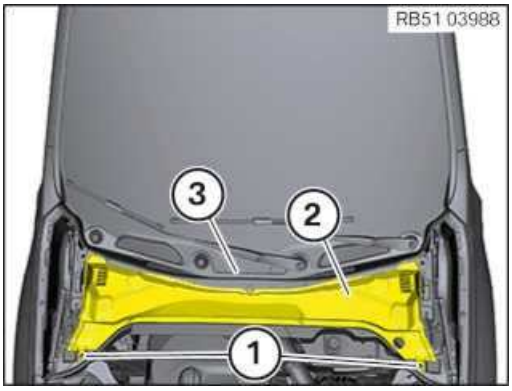


25 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm

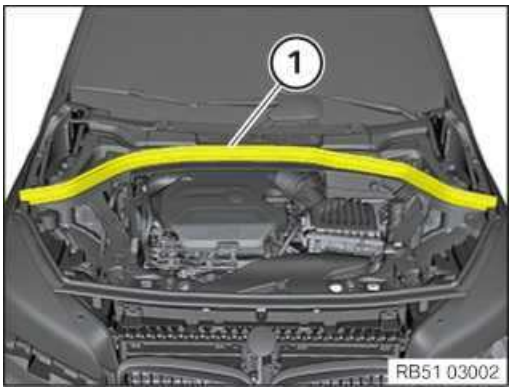


- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

26 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

27 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

28 – Disconnecting all battery earth leads

- See additional information.

29 – Reset the adaptations for the swirl-flap controller

- Connect the diagnosis system and reset the adaptations:
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

cardiagn.com

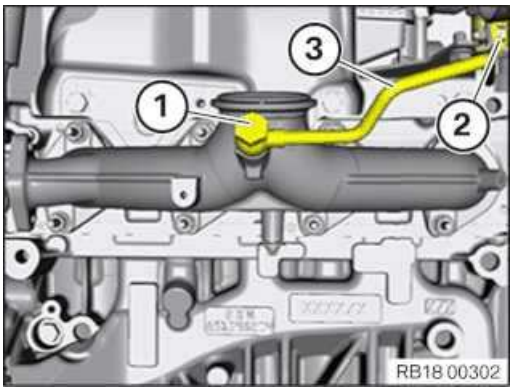
18 40 040 Removing and installing, sealing/replacing exhaust manifold (B47)

Warning!

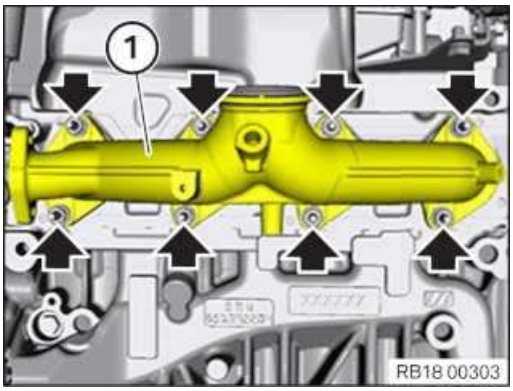


Risk of burning!

Only perform this repair work on an engine that has cooled down.

Necessary preliminary tasks:

- Remove diesel particulate filter.
- Remove exhaust turbocharger.



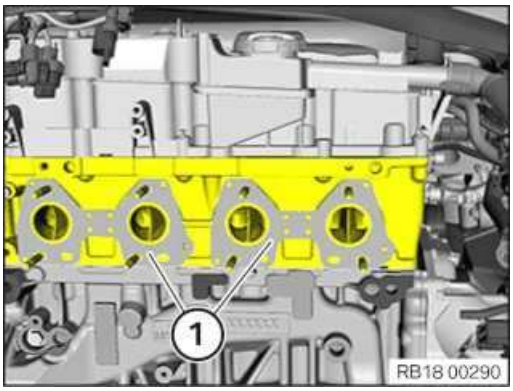
Removal:

Release banjo bolt (1).

Release screw (2).

Set exhaust gas pressure pipe (3) to one side.

Loosen nut along arrows.



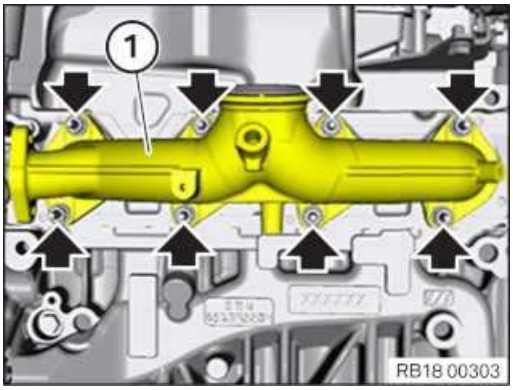
Release exhaust manifold (1) from cylinder head.

Preparation for installation:

Clean connection points.

cardiagn.com

Installation:

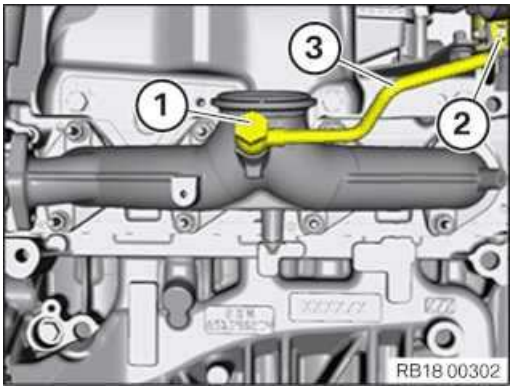


Replace gasket (1).

Part: Gasket

Attention!

The coated side must be fitted facing the manifold side.



Install exhaust manifold (1).

Position nuts and tighten in sequence.

Observe tightening specification!

Tightening torque 18 30 9AZ.

Install exhaust gas pressure pipe (3) and tighten screw (2).

Tightening torque 18 30 7AZ.

Tighten banjo bolt (1).

Tightening torque 18 30 8AZ.

Required follow-up work:

- Install exhaust turbocharger.
- Install diesel particulate filter.

cardiagn.com

11 65 020 Damage on the exhaust turbocharger due to obstructed oil supply lines

Caution!

If there is damage on the exhaust turbocharger:

- **Complaint:**

  Power loss, malfunction indicator lamp on

  Damage to the exhaust turbocharger.

  After damage to the exhaust turbochargers, the oil supply lines are often not replaced and the oil is not changed, this can lead to damage to the exhaust turbocharger again.

  Further, fault code entries in the preheating system or to the charging pressure controller (variable turbine geometry) are not considered.

  For N57X, additionally the following faults can be stored: 292200 Charging pressure controller (variable turbine geometry): Position sensor in charging pressure controller faulty or undervoltage 48F6 in charging pressure controller (variable turbine geometry)

  Attention: Subsequent damage is not covered by the warranty!

- **Cause**

  The oil supply lines for the exhaust turbocharger are clogged or blocked by oil sludge/coking. Due to that, oil supply to the exhaust turbocharger may be inadequate and can cause damage to the exhaust turbocharger again.

  Malfunctions in the preheating system can lead to clogging of the diesel particulate filter and thus to problems with the charging pressure control or the charging pressure build-up. Consequence: Problems at cold start or the engine does not start due to a faulty preheating system. Power loss or overheating of the exhaust branch.

  If the new exhaust turbocharger is not filled with enough oil prior to installation, the shaft bearings can be damaged at the first starting operation itself.

- **Solution**

  Proceed as follows in response to a customer complaint:

  If fault code entries are available for the preheating system, the preheating system must be repaired. Then delete the fault memory.

  Caution!

  If the engine does not heat up or only heats up very slowly because of a defective thermostat, this can result in premature or repeated damage to the exhaust turbocharger. **Always** check the coolant thermostat and thermostat for the EGR cooling if there is a complaint, and repair if applicable.

  Engine oil and filter exchange must be carried out on the engine absolutely, so as to guarantee operation of the changed exhaust turbocharger with fresh oil!

  Since the oil feed line as well as the oil return line may coke with increased mileage especially in the cable connection area of the exhaust turbocharger, the followings rules are applicable:

  Engines with one exhaust turbocharger:

cardiagn.com

- Exhaust turbocharger exchange due to electrical fault on the exhaust turbocharger (vehicle mileage/km up to 100,000 km):
  - Check the oil feed line, oil return line and the associated banjo bolts for coking, **replace if applicable**.
  - If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!
  - If a replacement is not necessary: If the exhaust turbocharger is offered only along with the oil return line and oil feed line in the Electronic Parts Catalogue (EPC), it can be removed from the order list again.
- Exhaust turbocharger exchange due to electrical fault on the exhaust turbocharger (vehicle mileage/km starting at 100,000 km):
  - Replace the oil feed line, oil return line and the associated banjo bolts.
  - If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!
- Exchanging the exhaust turbocharger if there is mechanical damage on the exhaust turbocharger:
  - Always replace the oil feed line, oil return line and the associated banjo bolts.
  - If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!

Engines with several exhaust turbochargers:

- Exchanging one or several exhaust turbochargers due to electrical faults on the exhaust turbocharger (vehicle mileage/km up to 100,000 km):
  - Check the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger) for coking, **replace if applicable**.
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!
  - If a replacement is not necessary: If the exhaust turbocharger is offered only along with the oil return line and oil feed line in the Electronic Parts Catalogue (EPC), it can be removed from the order list again.
- Exchanging one or several exhaust turbochargers due to electrical faults on the exhaust turbocharger (vehicle mileage/km starting at 100,000 km):
  - Replace the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger).
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!
- Exchanging one or several exhaust turbochargers if there is mechanical damage on the exhaust turbocharger:
  - Always replace the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger).
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!

cardiagn.com

In case the diesel particulate filter is foul with oil, clean or replace it, if necessary.

In order to exclude that the oil supply to the exhaust turbocharger is not impaired due to faulty crankcase ventilation, carry out a function check of the crankcase ventilation in this regard. The corresponding test module can be found in ISTA at:

- Power train
- Digital Diesel Electronics
- Engine ventilation
- Internal engine pressure

When installing the exhaust turbocharger, the exhaust turbocharger itself needs to be filled to capacity with fresh engine oil through the oil intake hole before the oil feed line is mounted. Important: Never use liquid sealing compounds when connecting the engine oil pipe as they can block the oil ducts.

After installing the exhaust turbocharger, start the engine and let it run at idle for 2 to 3 minutes before increasing the speed.

If required, initiate a regeneration of the diesel particulate filter

Important: For vehicles with N57x engines that have fault memory entries that are at the top, a successful diesel particulate filter regeneration must be carried out.

Then delete the fault memory.

cardiagn.com

11 65 020 Removing and installing or replacing exhaust turbocharger (B47)

Warning!

Risk of burning!

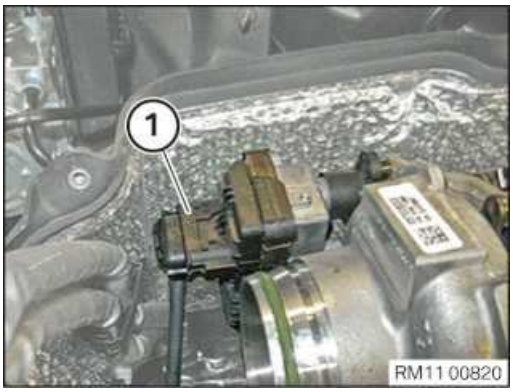
Only perform this repair work on an engine that has cooled down.

Note:

Troubleshooting on exhaust turbocharger.

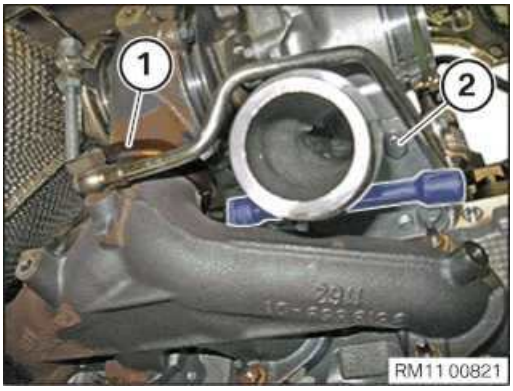
Caution!

For exhaust turbocharger damage:



In order to avoid subsequent damage, the following notes and test steps must be followed absolutely.

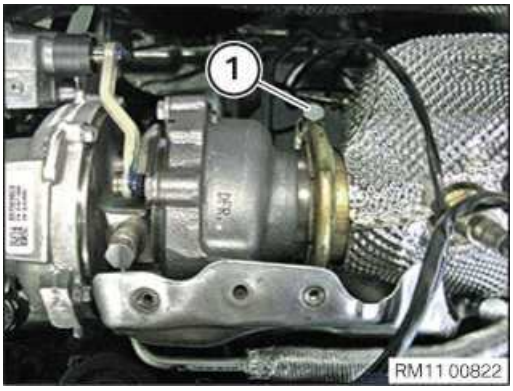
Necessary preliminary work:



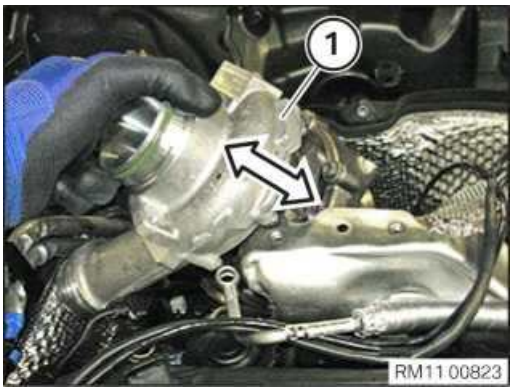
- Remove upper bulkhead cover
- Remove right charge air duct
- Remove clean air pipe
- Remove oil return line

Removal:

Disconnect plug connection (1).

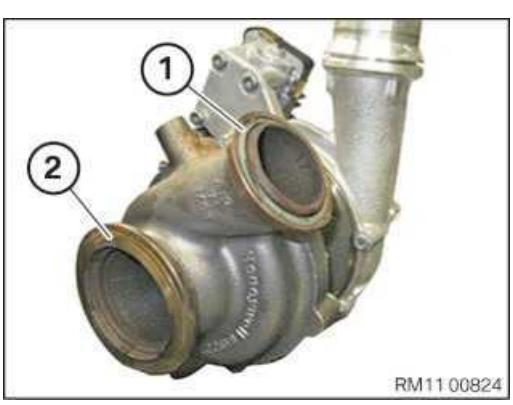


cardiagn.com



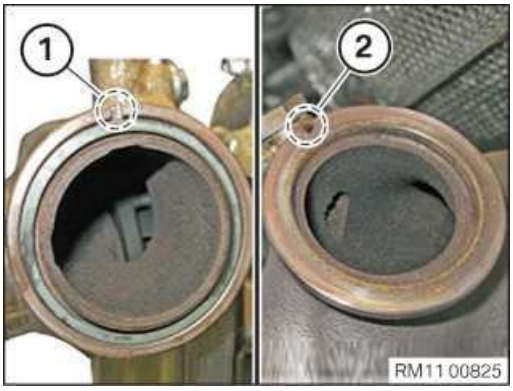
Release V-band clamp (1) between exhaust turbocharger and exhaust manifold.

Loosen screw (2) from the holder of the exhaust turbocharger.



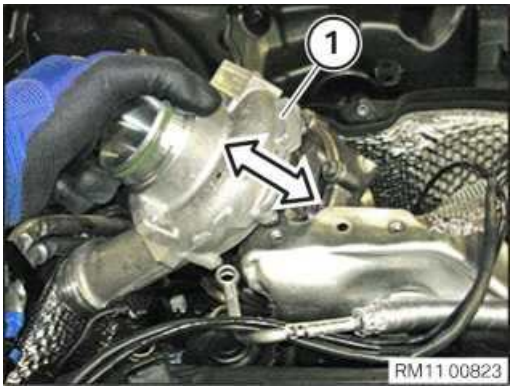
Loosen oil feed line on exhaust turbocharger.

Release V-band clamp (1) between exhaust turbocharger and diesel particulate filter.

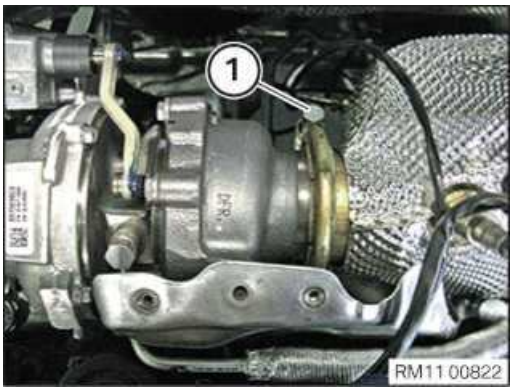


Remove exhaust turbocharger (1) towards the top.

Installation:



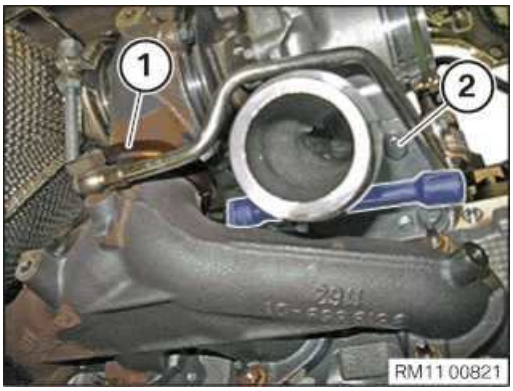
Parts: Replace seals (1 and 2).



cardiagn.com

Note:
Recess (1) on exhaust turbocharger must be correctly positioned on the guide (2) on the exhaust manifold.

Install exhaust turbocharger (1) from above.



Parts: Renew V-band clamp (1).

Position exhaust turbocharger correctly.

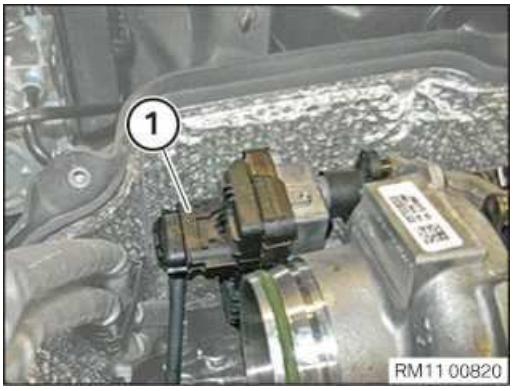
Mount V-band clamp (1) between exhaust turbocharger and diesel particulate filter.

Tightening torque 11 65 4AZ .

Parts: Renew V-band clamp (1).

Mount V-band clamp (1) between exhaust turbocharger and exhaust manifold.

Tighten both V-band clamps.



Tightening torque 11 65 1AZ.

Tighten screw (2) on exhaust turbocharger holder on crankcase.

Tightening torque 11 65 2AZ.

Tighten oil feed line on exhaust turbocharger.

cardiagn.com

Connect the connector (1).

Required follow-up work:

- Install oil return line
- Install right charge air line
- Install clean air pipe
- Install upper bulkhead cover
- Check engine for tightness

cardiagn.com

11 65 040 Removing and installing/replacing high-pressure stage exhaust turbocharger

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

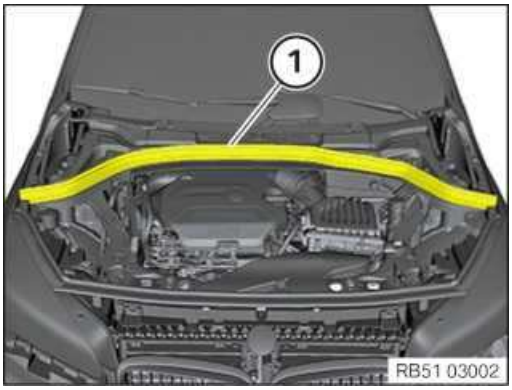
Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

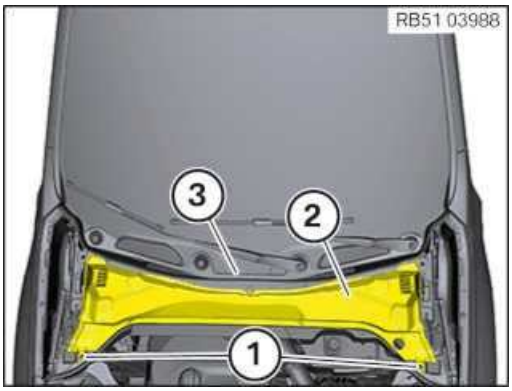
TECHNICAL INFORMATION



Maintain conditions of absolute cleanliness.

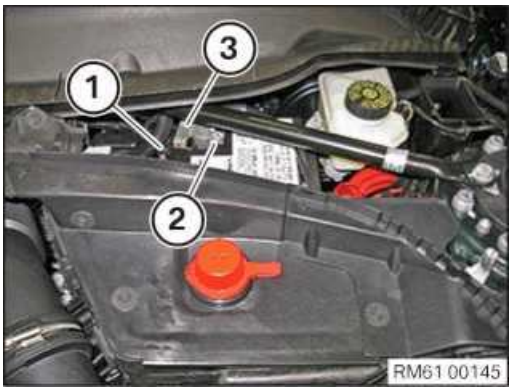
cardiagn.com

1 – Remove the seal for the rear bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

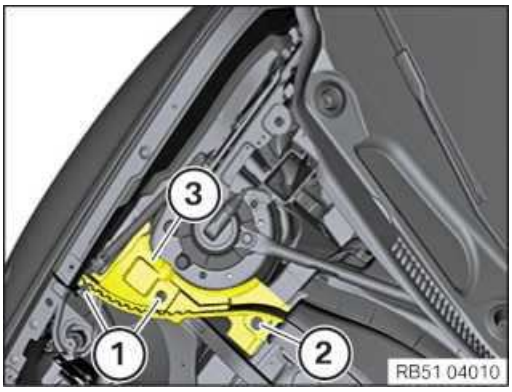


- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

3 – Disconnecting the battery earth lead

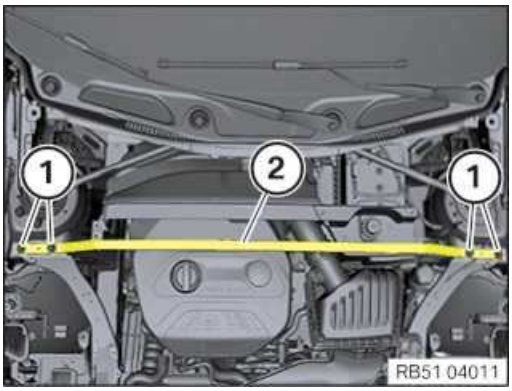


- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

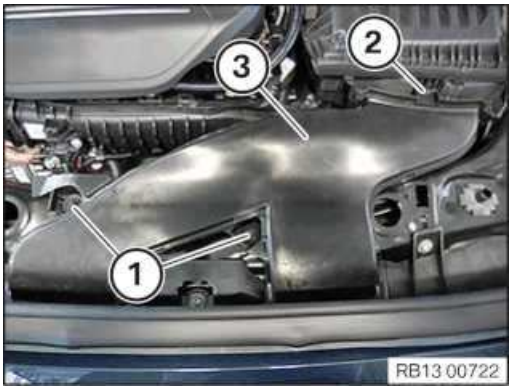
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



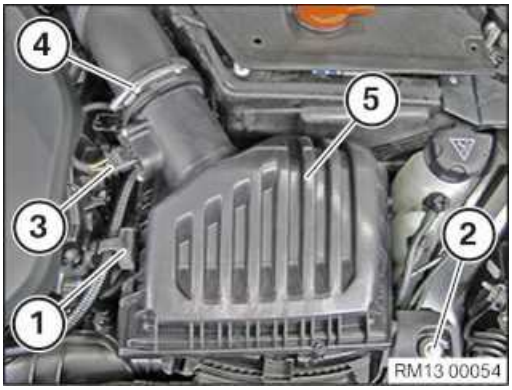
cardiagn.com

NOTICE



Description is for right component only. The procedure on the left side is identical.

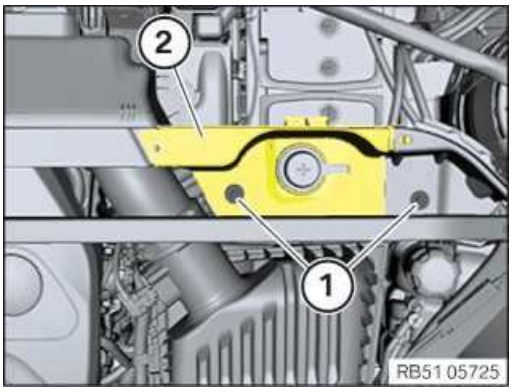
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



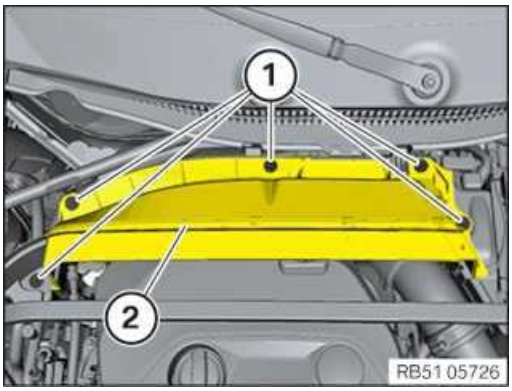
- Loosen screws (1).
- Remove strut brace (2).

5 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.



6 – Removing intake silencer housing



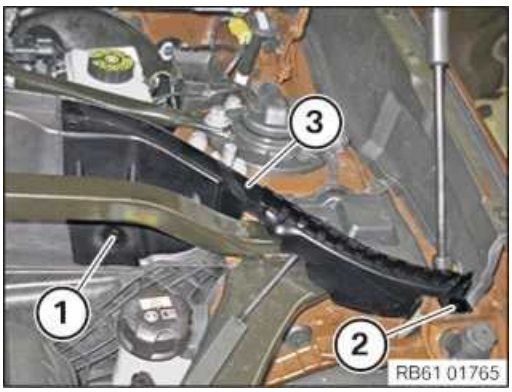
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

cardiagn.com

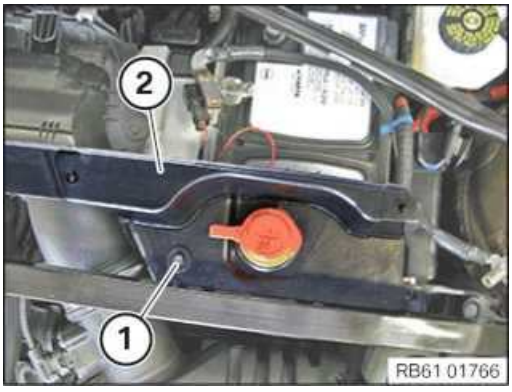
- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).



8 – Remove vehicle battery

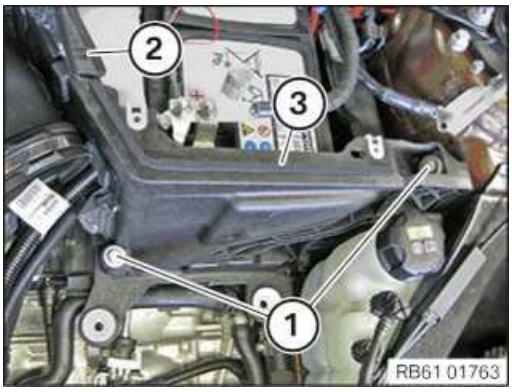
WARNING



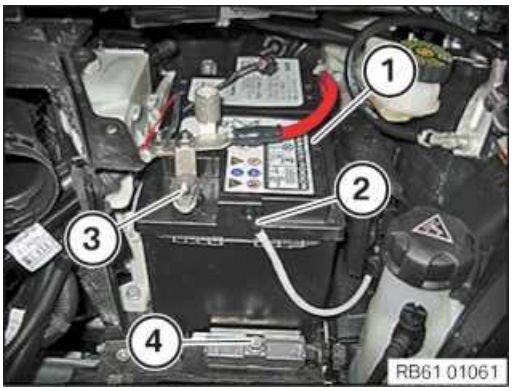
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Remove the cover (2).

cardiagn.com

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

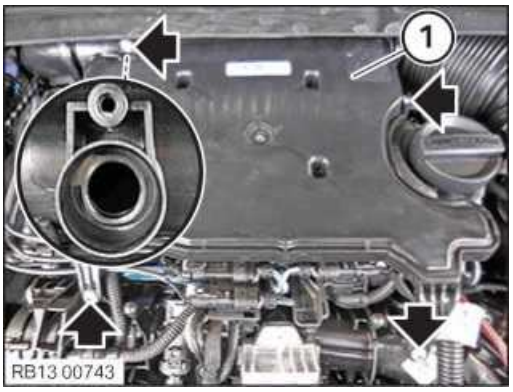
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



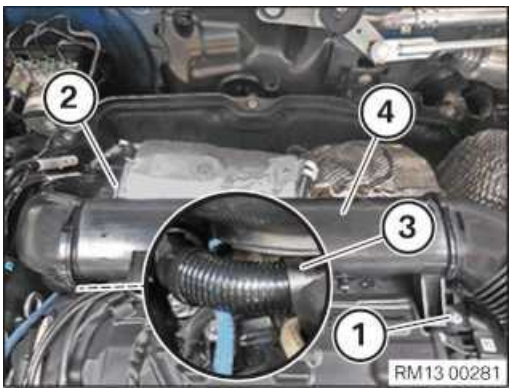
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator

cardiagn.com



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

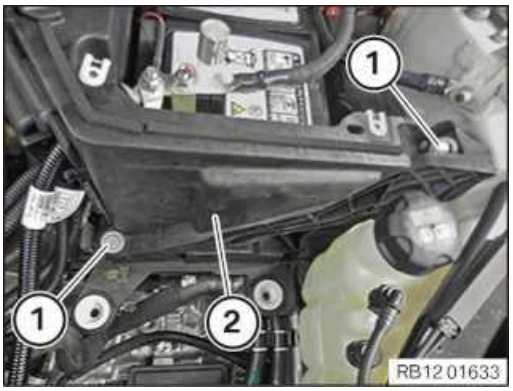
cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

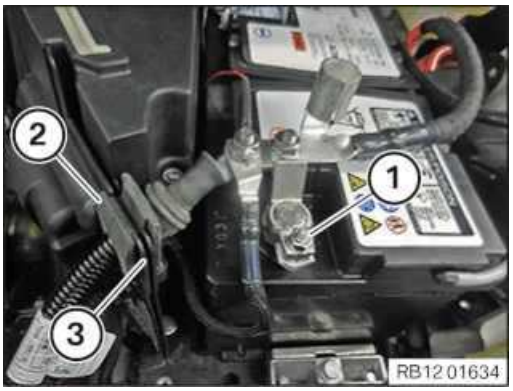
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



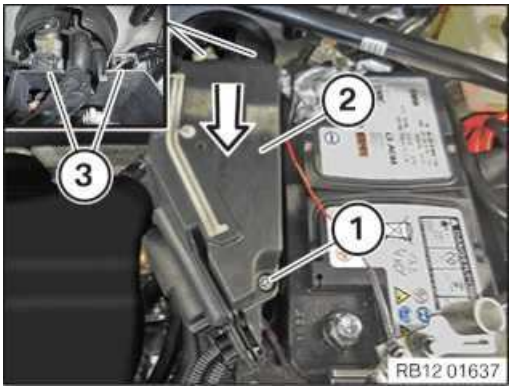
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.



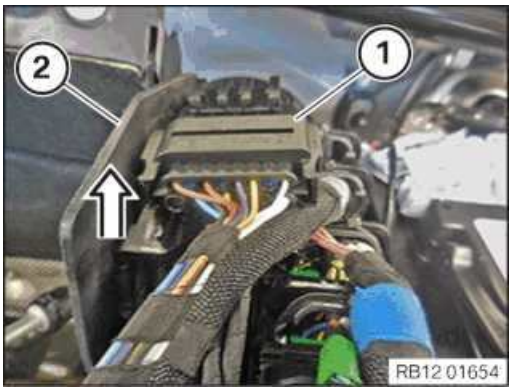
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

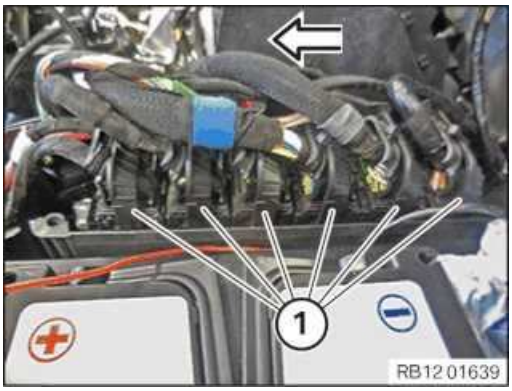


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

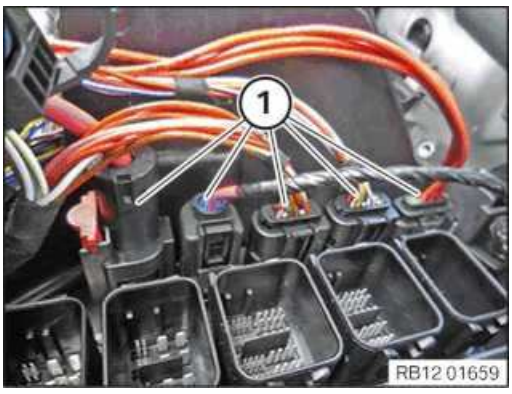
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



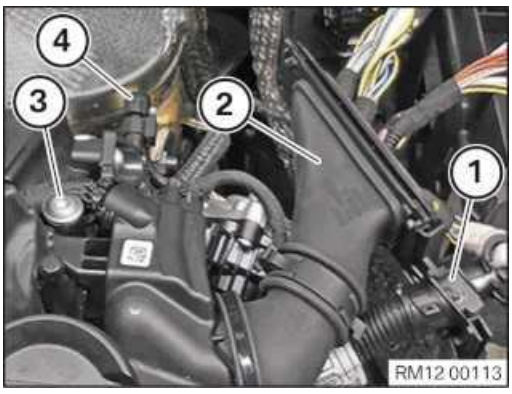
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



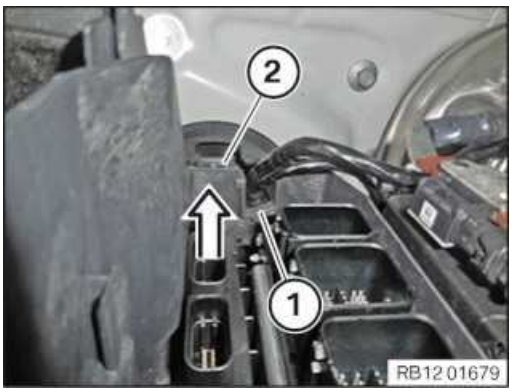
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



cardiagn.com

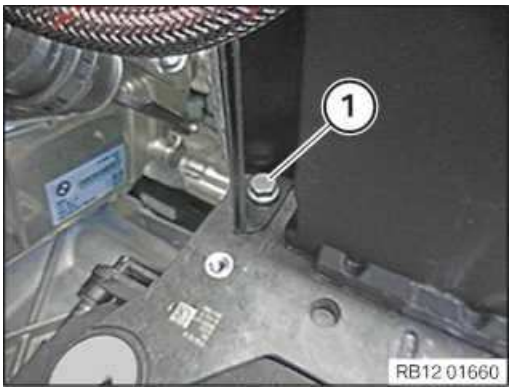


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

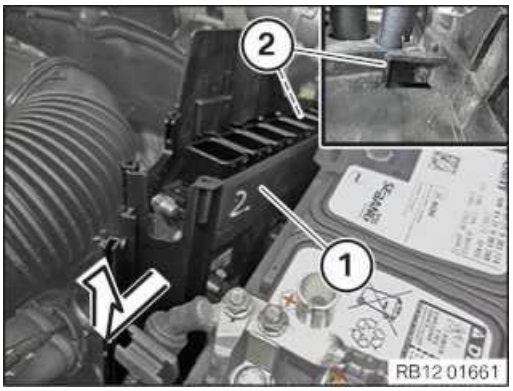


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

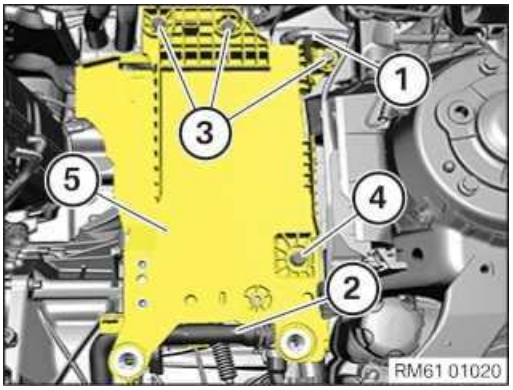


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

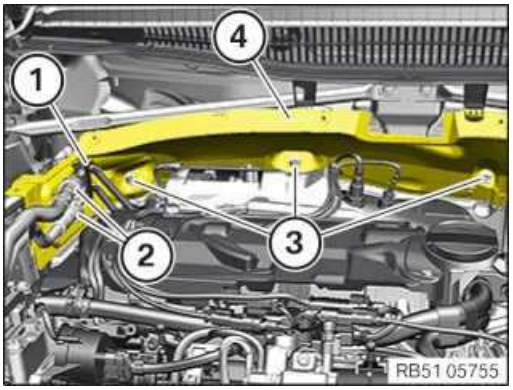


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com



- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

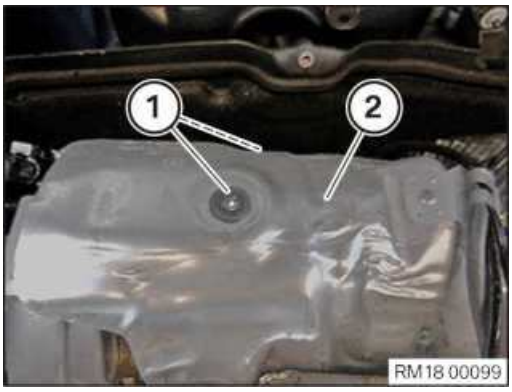
13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

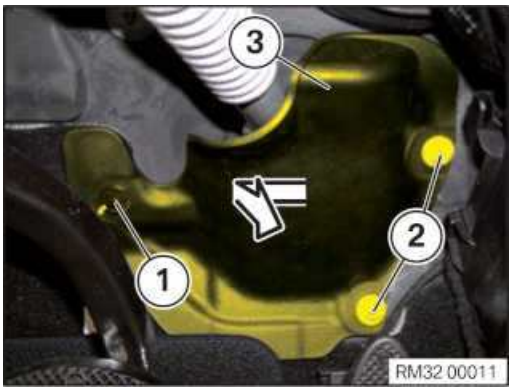
15 – Removing heat shield from top exhaust turbocharger



WARNING

Hot surfaces.

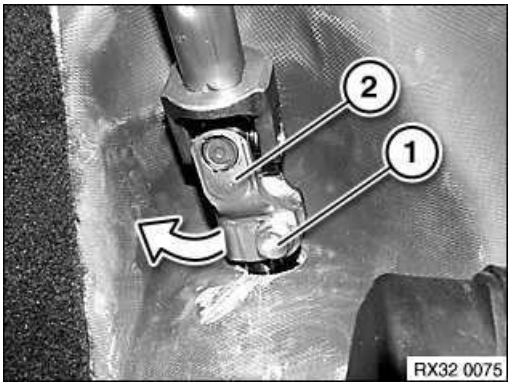
Risk of burning!



- Perform all work only on components that have cooled down.

cardiagn.com

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



16 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

17 – Securing radiator on left and right

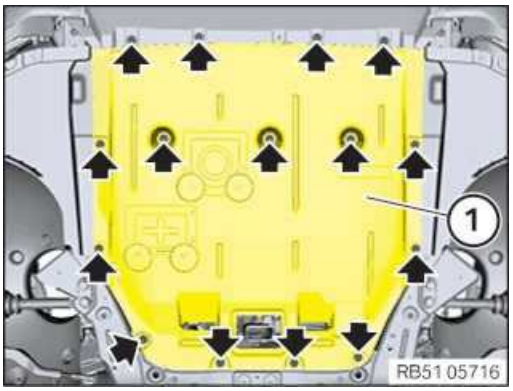
NOTICE

Perform the operations on the left and right side.

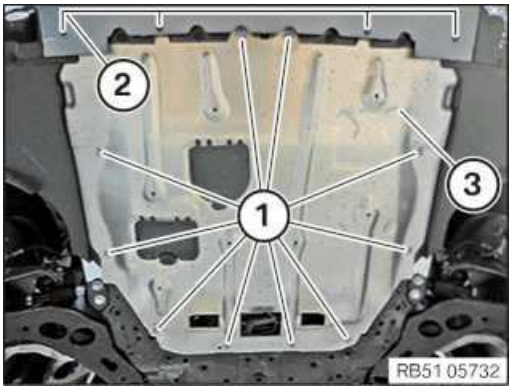
- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

▸ **Removing the wheel**



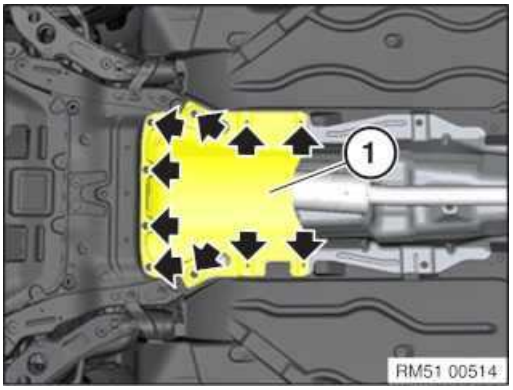
cardiagn.com



- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

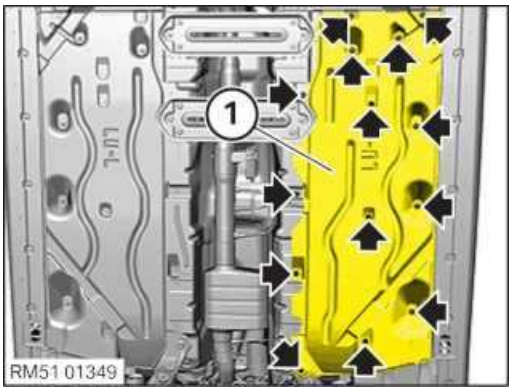
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

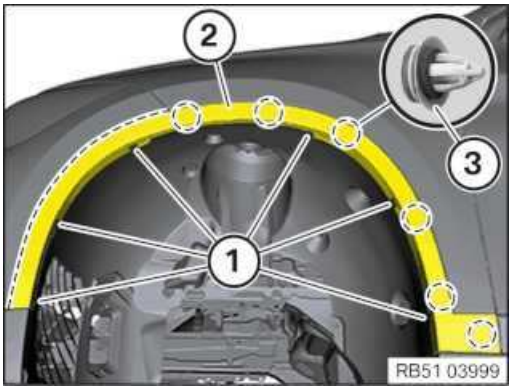
cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

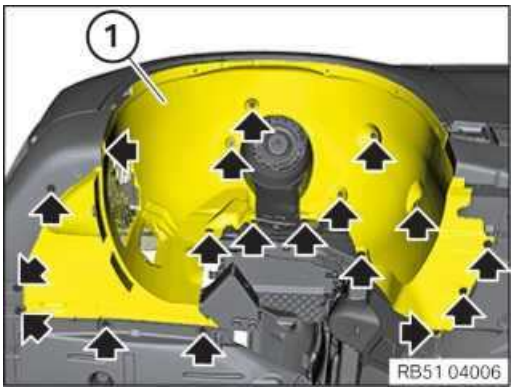
Perform the operations on the left and right side.



▸ **Remove the front wheel arch trim**

NOTICE

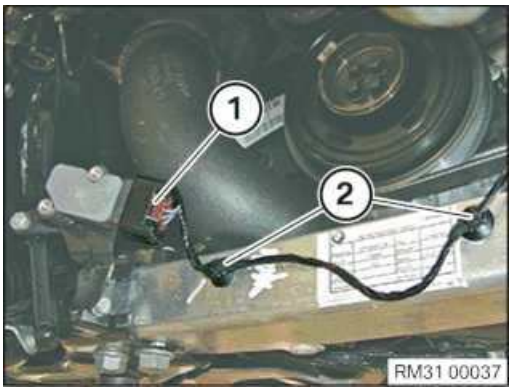
To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

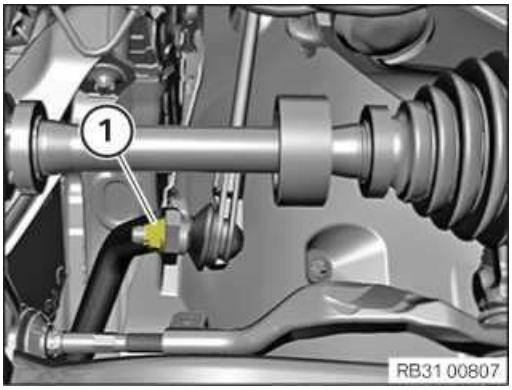


▸ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable

cardiagn.com



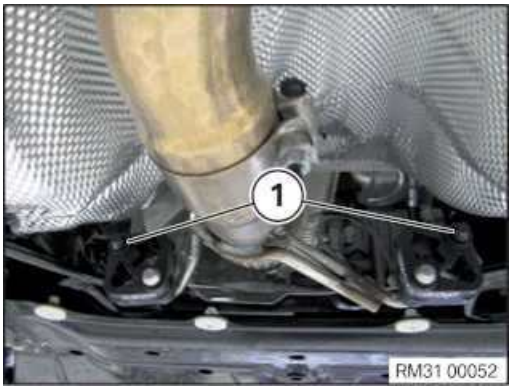
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

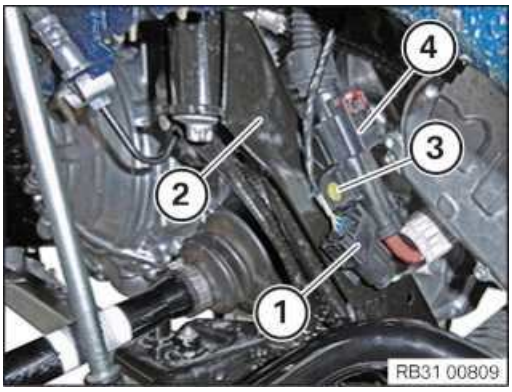


- Unfasten nut (1).

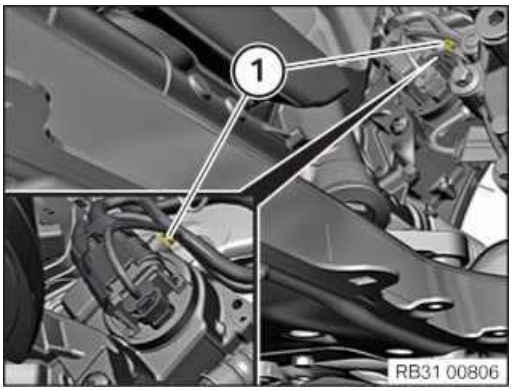
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

25 – Detaching rubber mount from front axle support

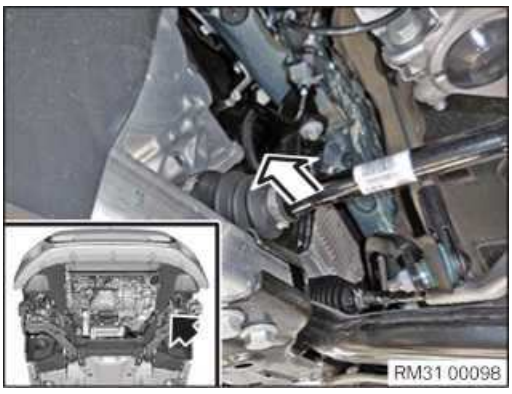


- Spray rubber mount (1) with lubricant and release from holder on front axle support.



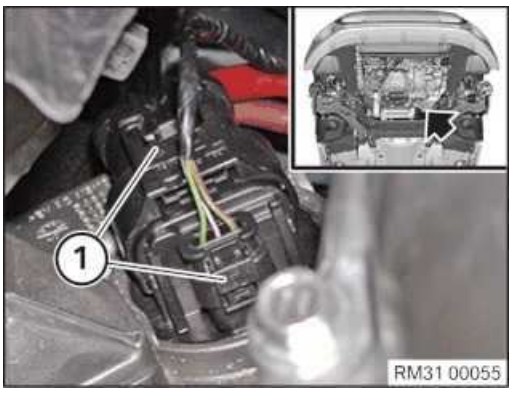
26 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

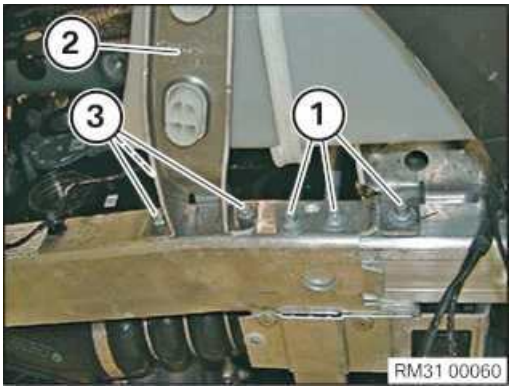


cardiagn.com

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

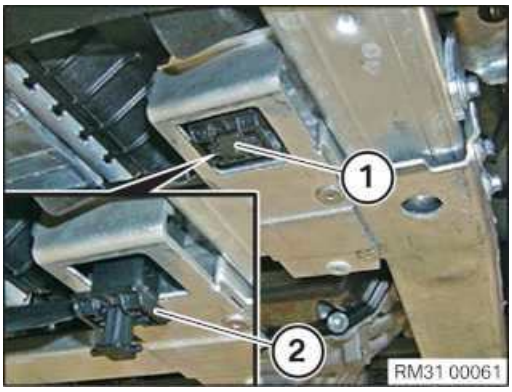


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

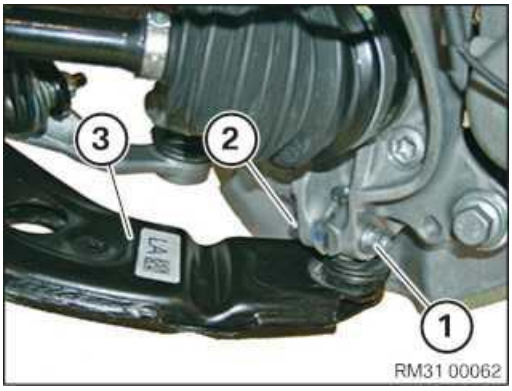
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

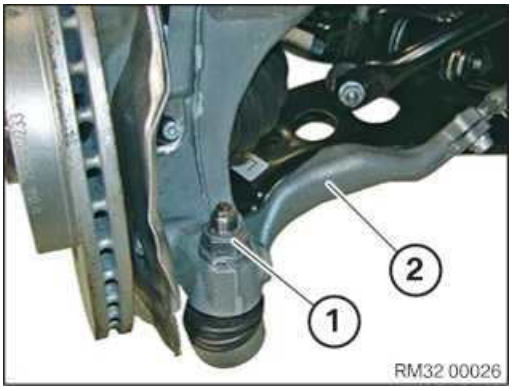
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

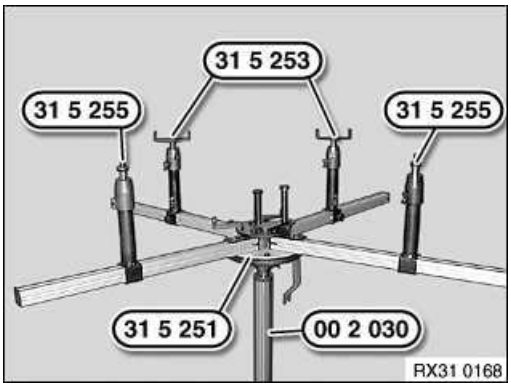


28 – Detaching and removing front axle completely

NOTICE

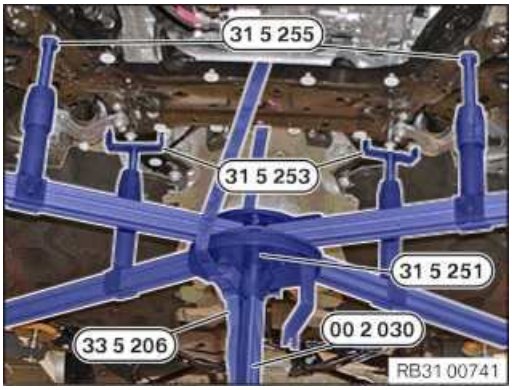
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

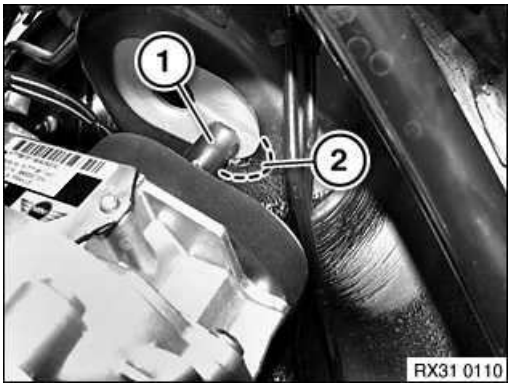
Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

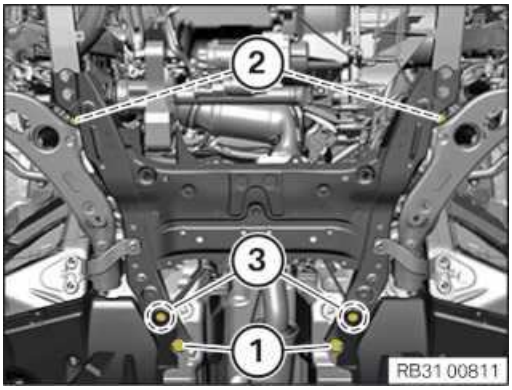


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



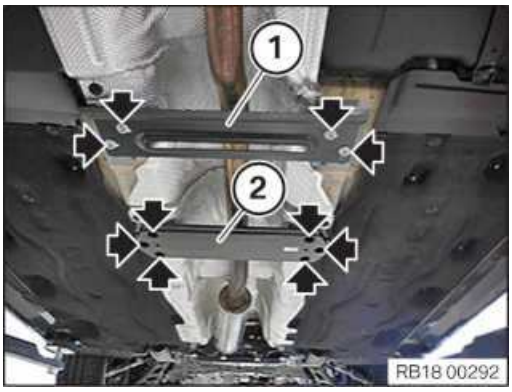
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.



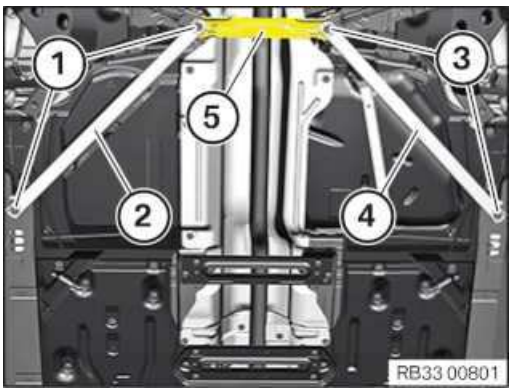
TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back

cardiagn.com



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

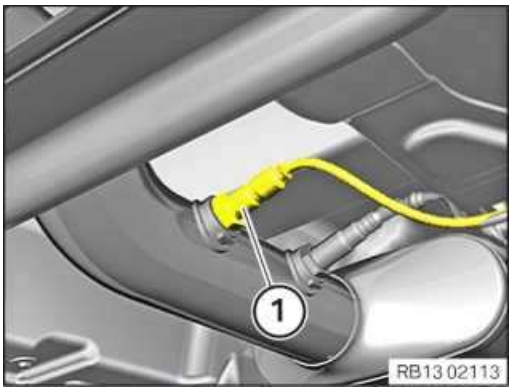
31 – Remove exhaust system

WARNING

Hot surfaces.

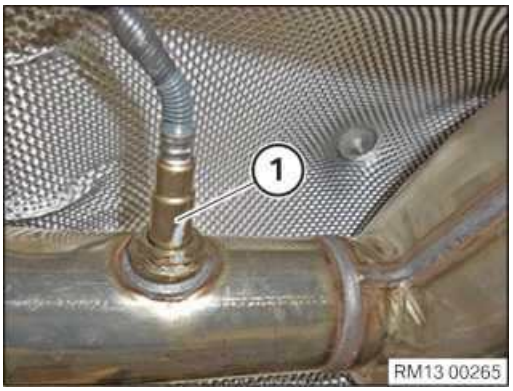
Risk of burning!

- Perform all work only on components that have cooled down.



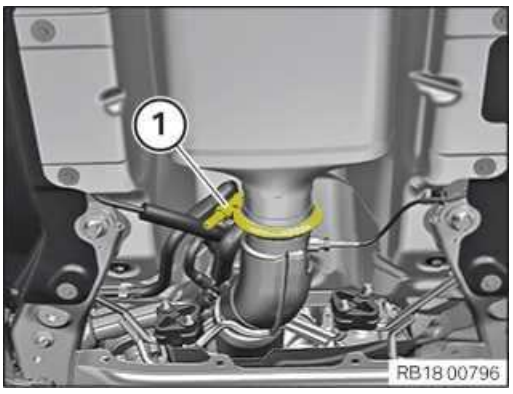
CAUTION

Heavy component.

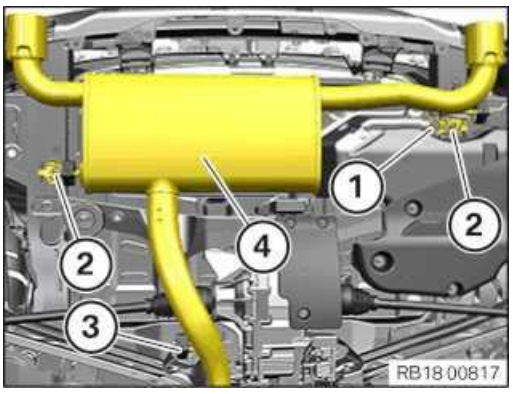


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

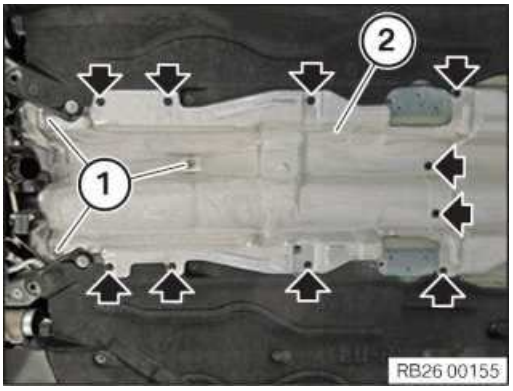


cardiagn.com



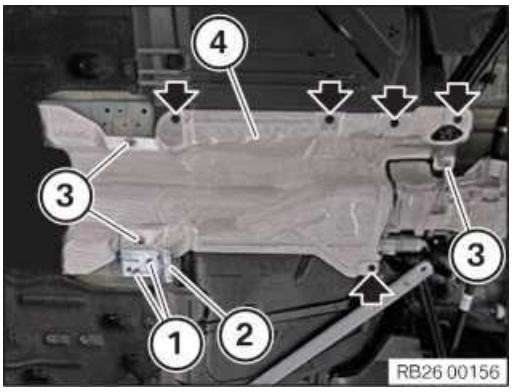
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

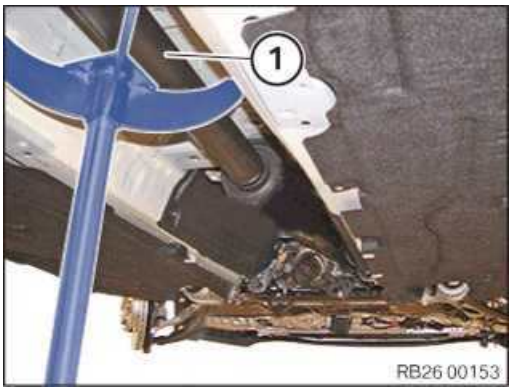
Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

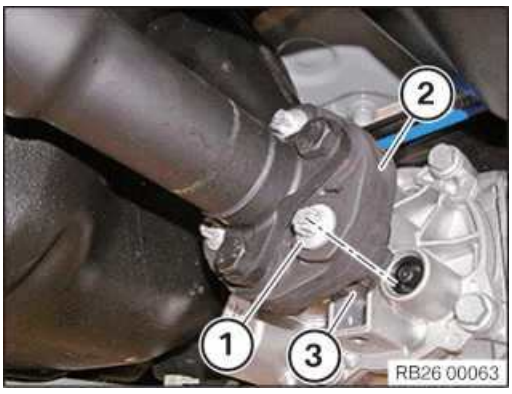
Damage to propeller shaft during removal.



Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

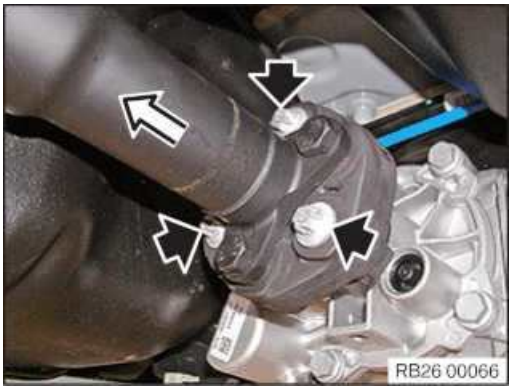
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



cardiagn.com

- Always support the propeller shaft (1) with a conventional jack.

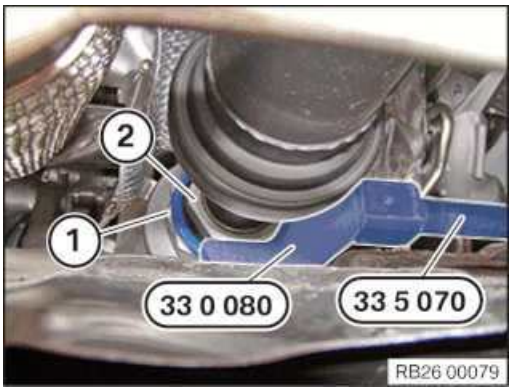
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

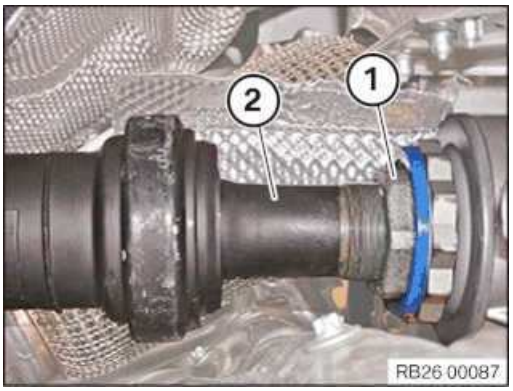
cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

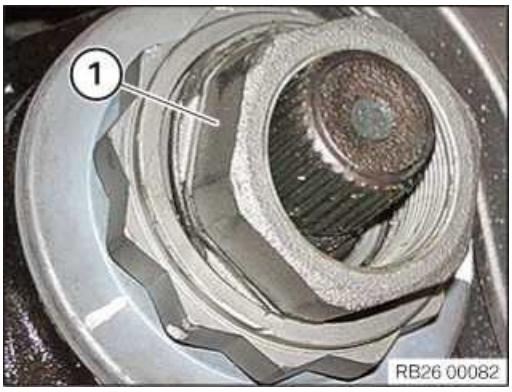


- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

cardiagn.com

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

RISK OF DAMAGE

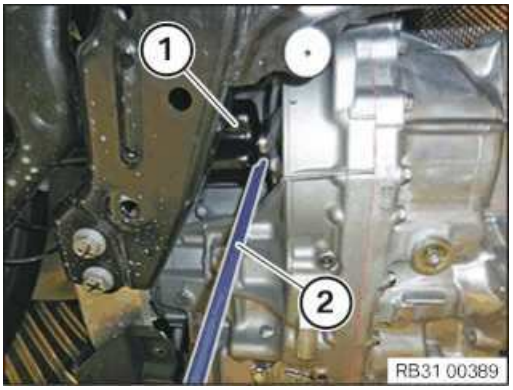
Electrostatic discharge.

Damage to or destruction of electrical components.

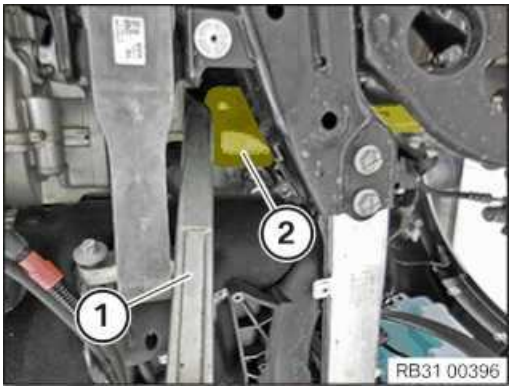
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

cardiagn.com



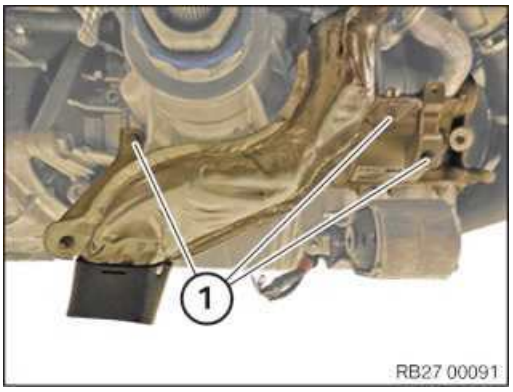
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



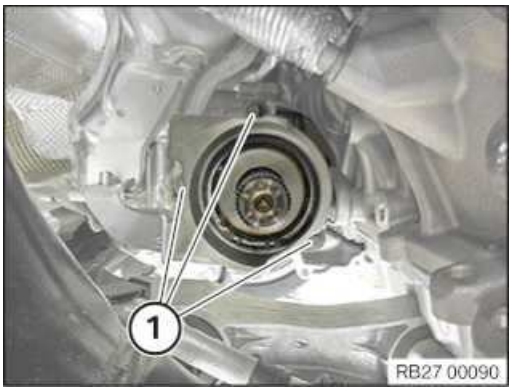
- Loosen screws (1).
- Feed out starter motor and remove.

36 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

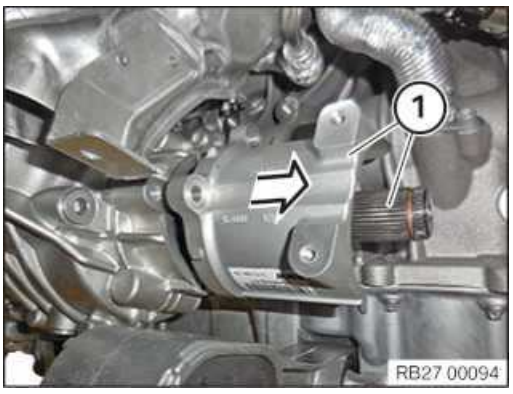


37 – Partially removing right output shaft



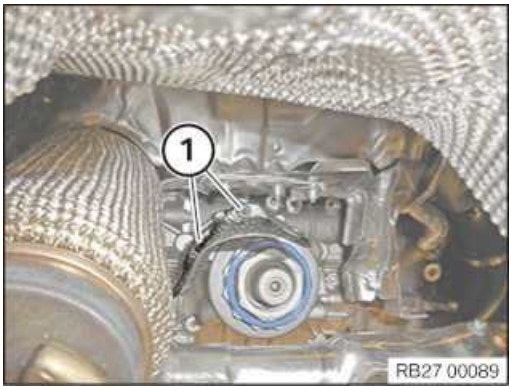
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

38 – Remove the intermediate shaft with the support tube

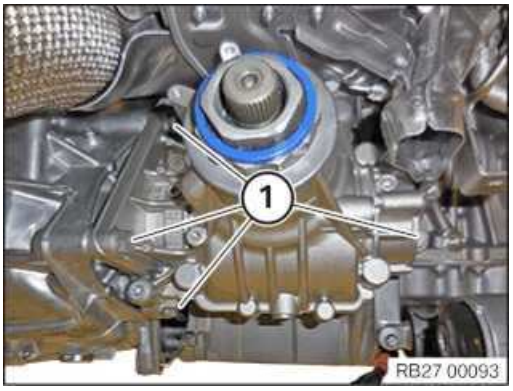


cardiagn.com

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

40 – Remove the monitoring oxygen sensor

cardiagn.com

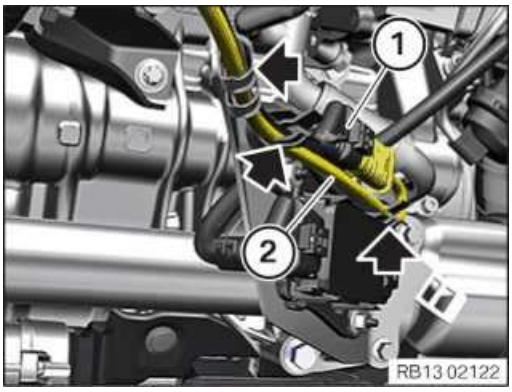
WARNING

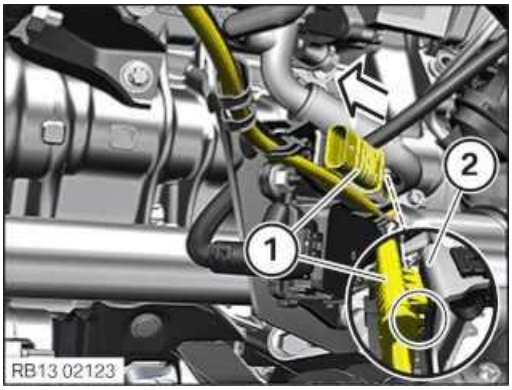
Hot surfaces.

Risk of burning!



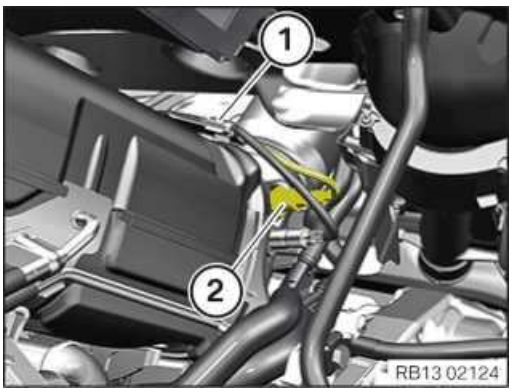
- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

cardiagn.com

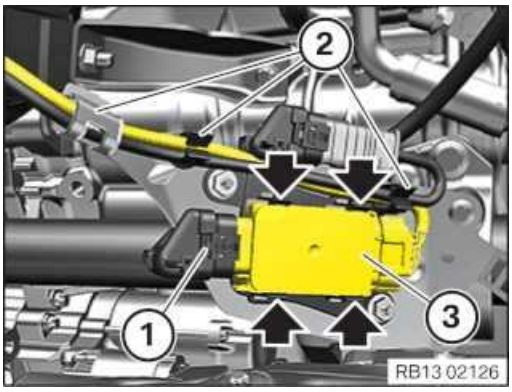
WARNING

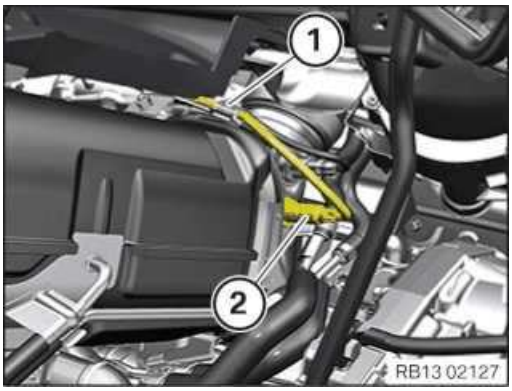
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

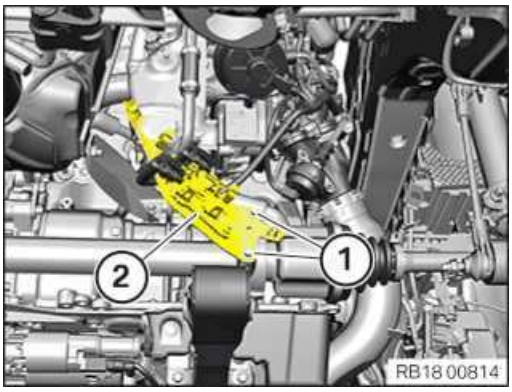
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

cardiagn.com

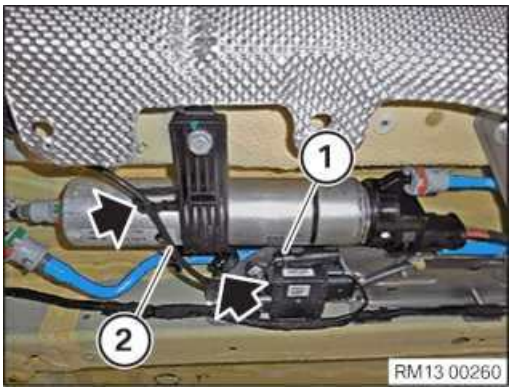
- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!



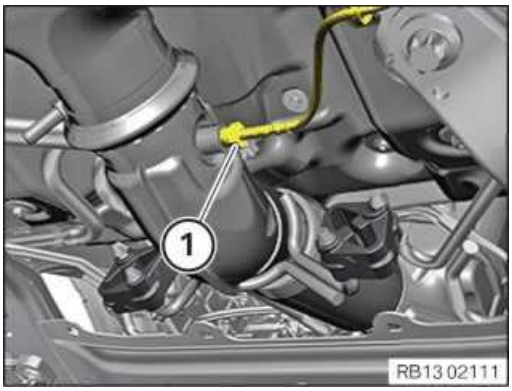
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

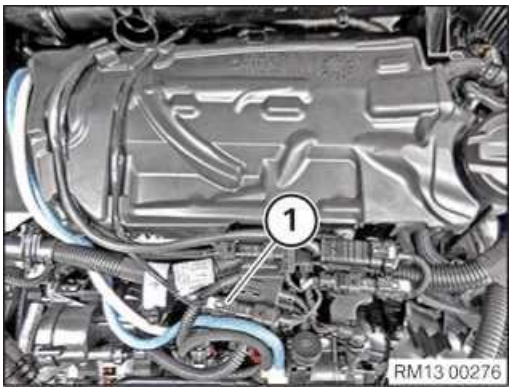
44 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

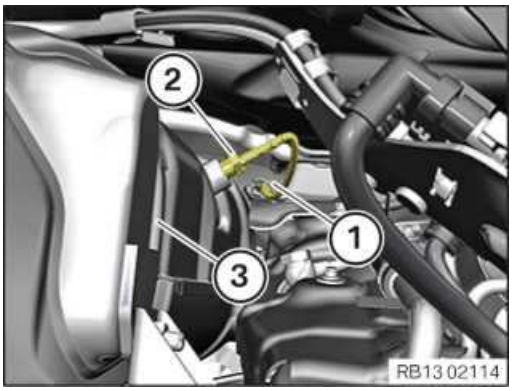
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

45 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

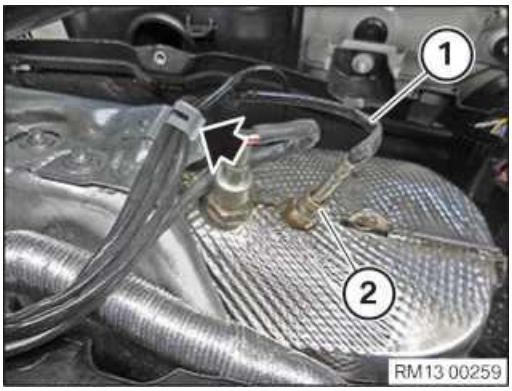
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

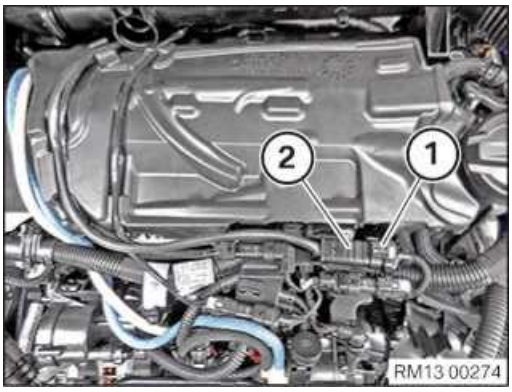
46 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

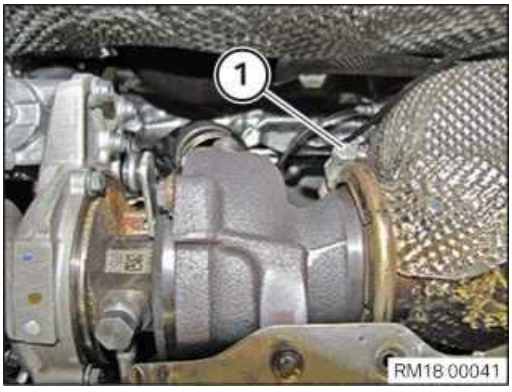
- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

47 – Removing the diesel particulate filter

WARNING

Hot surfaces.

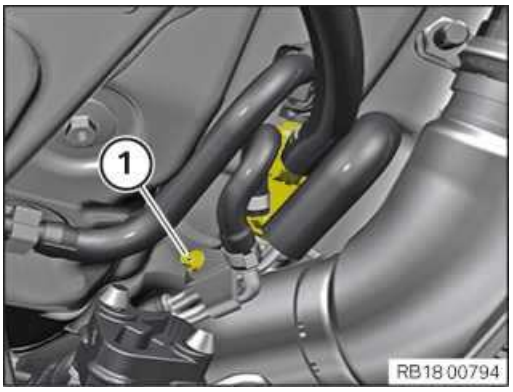
Risk of burning!



- Perform all work only on components that have cooled down.

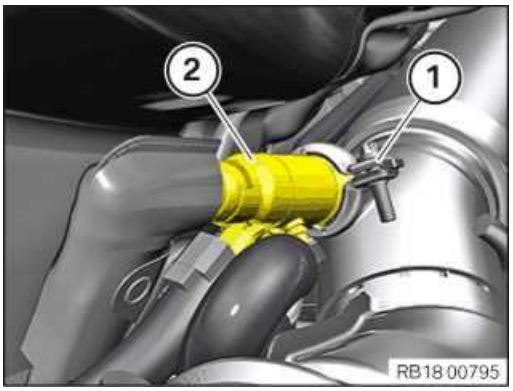
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com

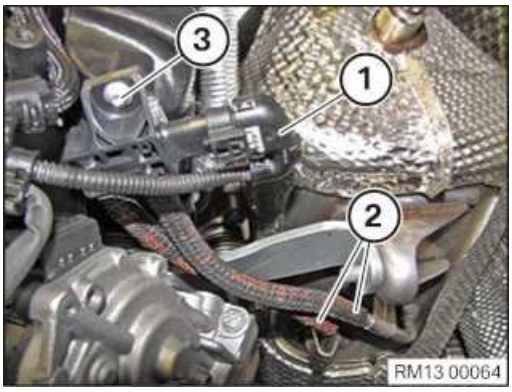
- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▸ **Remove differential pressure sensor**



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

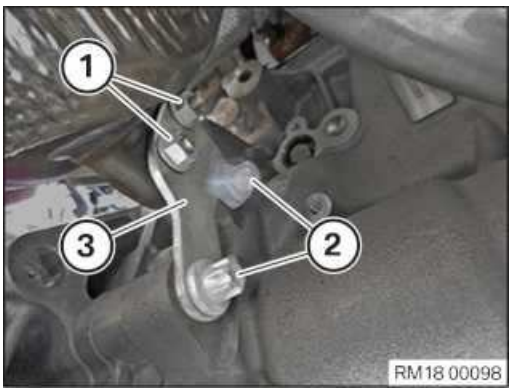
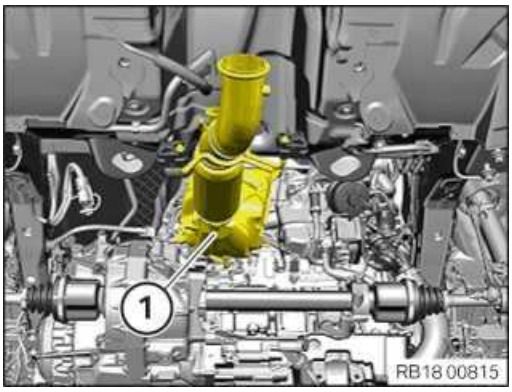
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

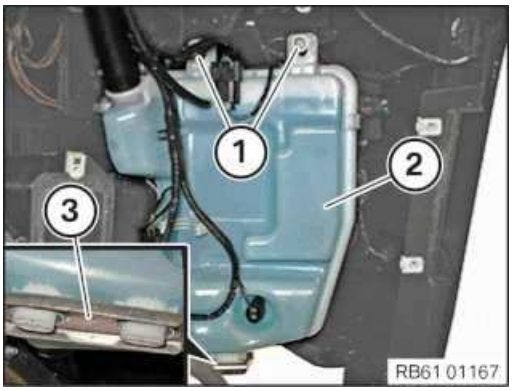


- Loosen nuts (1).

- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).



- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

cardiagn.com

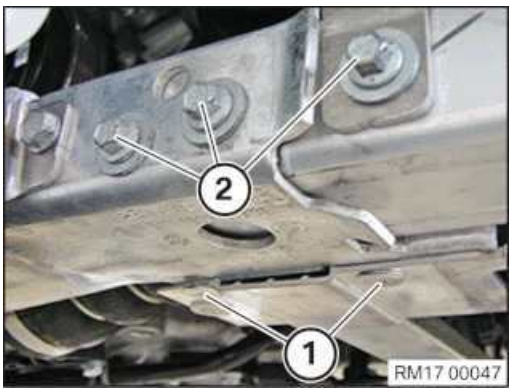
- Feed out diesel particulate filter (1) toward the bottom and remove.

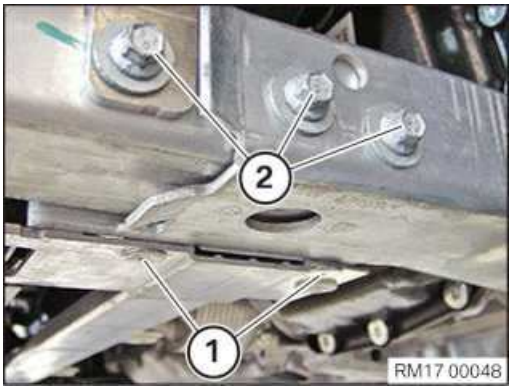
48 – Remove the washer fluid reservoir from the fixture

- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



49 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

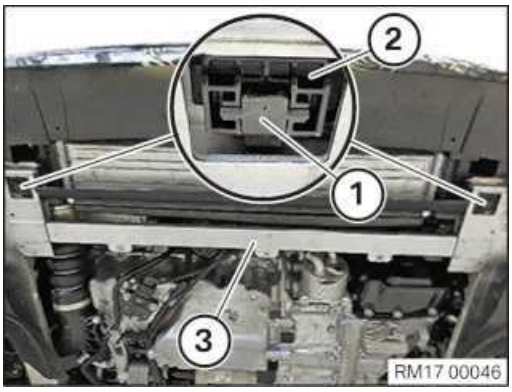
WARNING



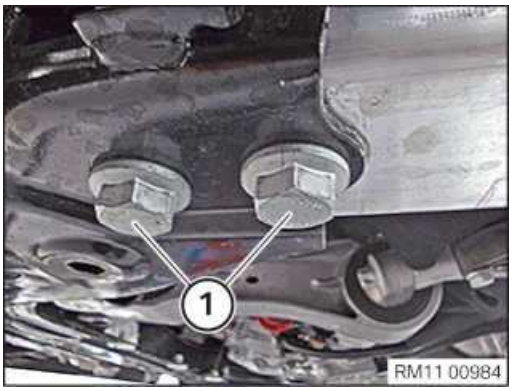
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.



- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

cardiagn.com

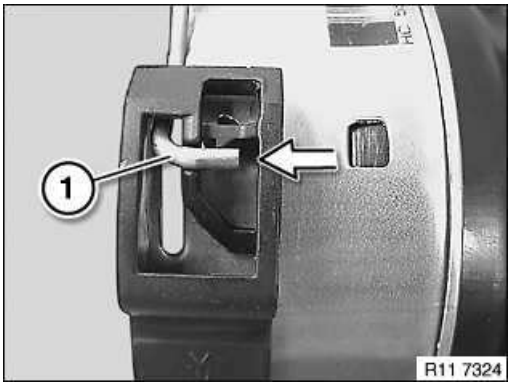
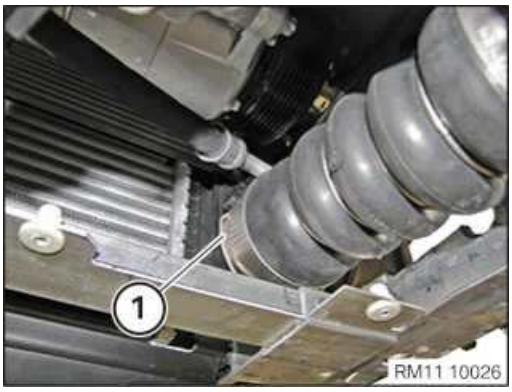
- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

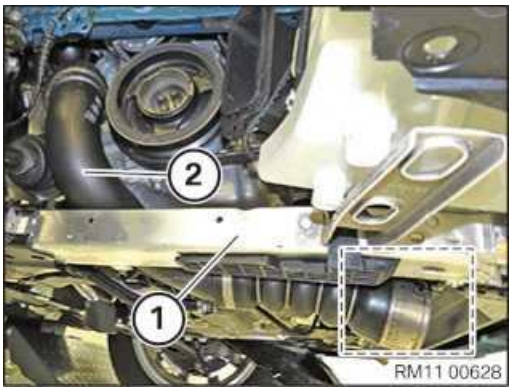


- Release the screws (1) on the right front axle support.

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



- Release screws (1) of charge air duct on right oil sump.



- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).

cardiagn.com

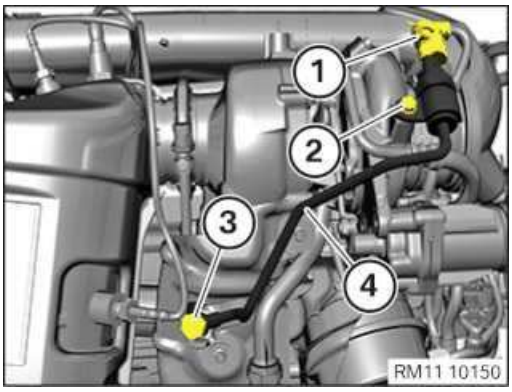
- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

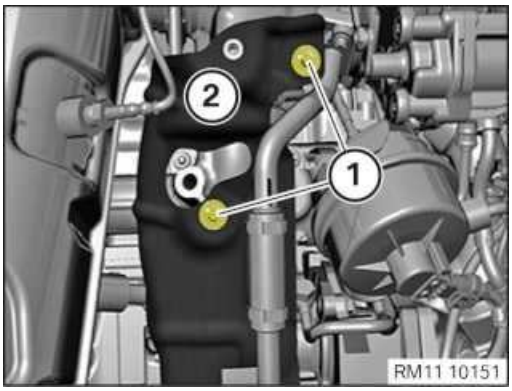
- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.

50 – Remove the heat shield from the exhaust turbocharger at the bottom



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

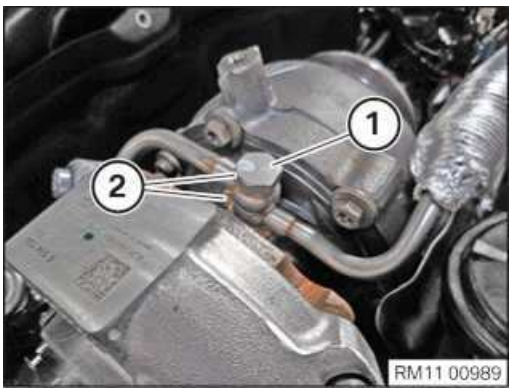
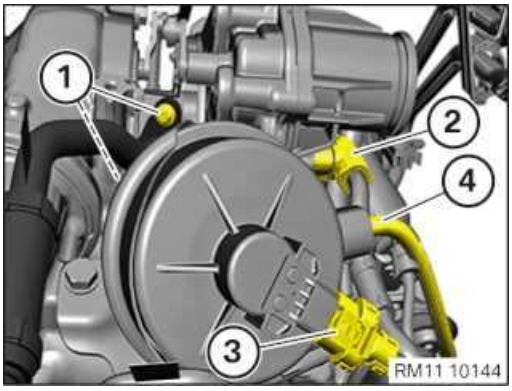
- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



51 – Removing the low-pressure stage turbocharger

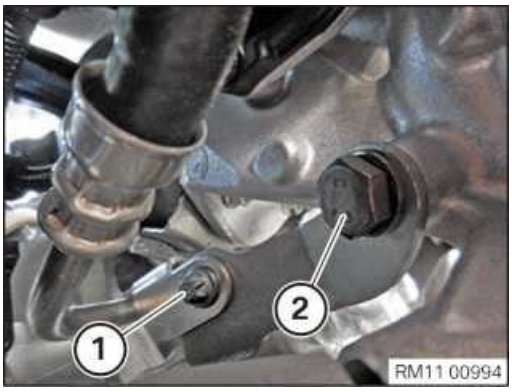
WARNING



Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

cardiagn.com

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

MAIN WORK

52 – Removing the high-pressure stage exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

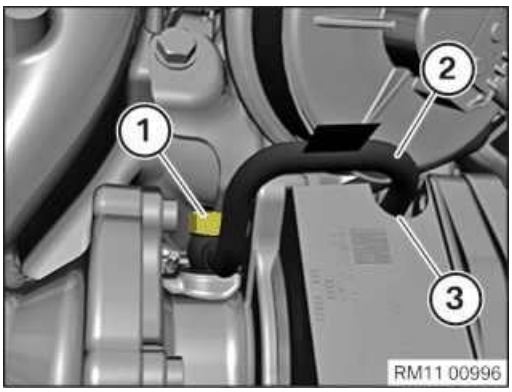
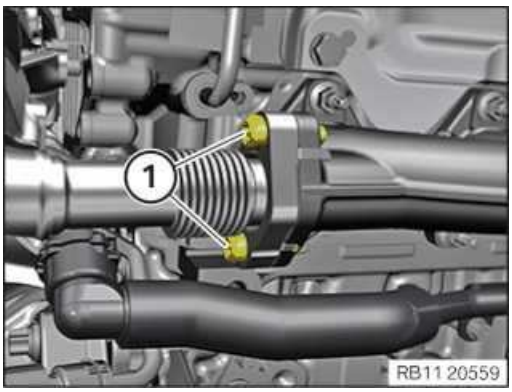
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

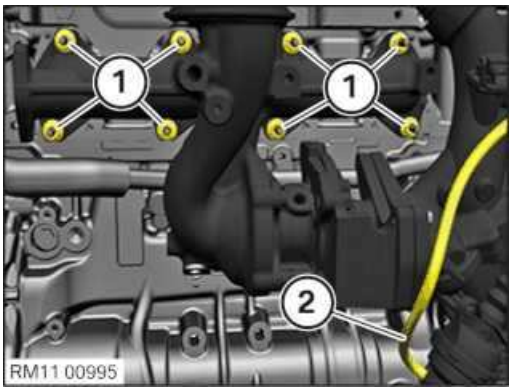


- Remove and install heavy components with the aid of another person/other persons.



- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).

- Release screw (1) from the right wheel arch.



- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

- Loosen screws (1).

cardiagn.com

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

53 – When replacing the exhaust turbocharger

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

54 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

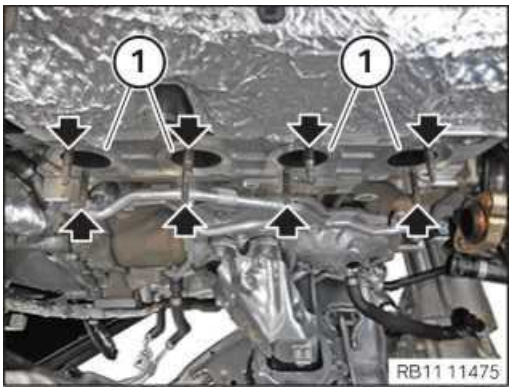
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the surface.

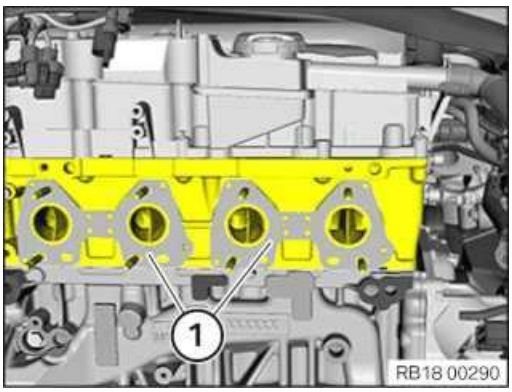


The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

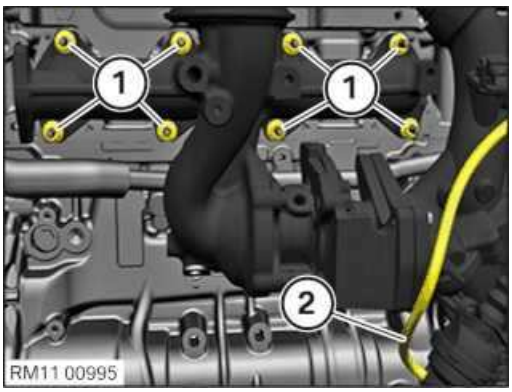
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

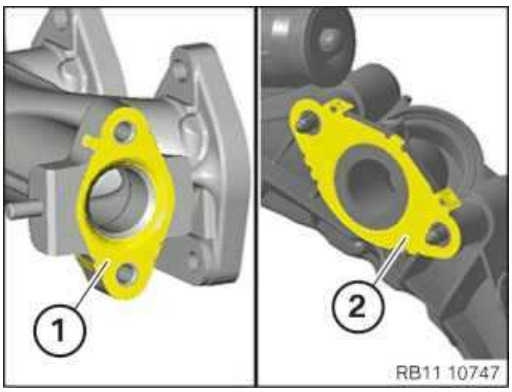


cardiagn.com

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

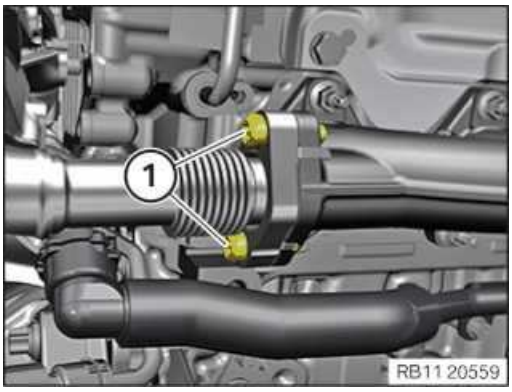


- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

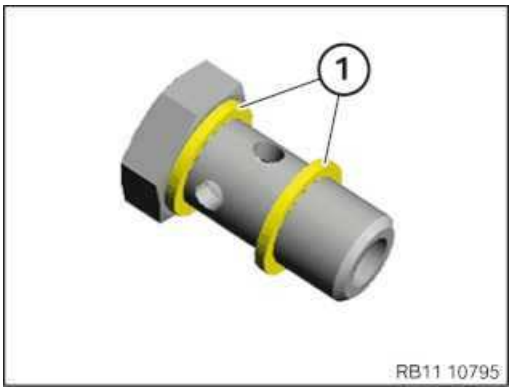
  Parts: Nuts
- Connect vacuum hose(2).



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

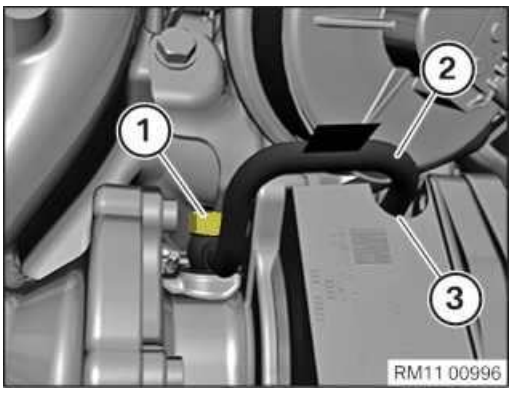
  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



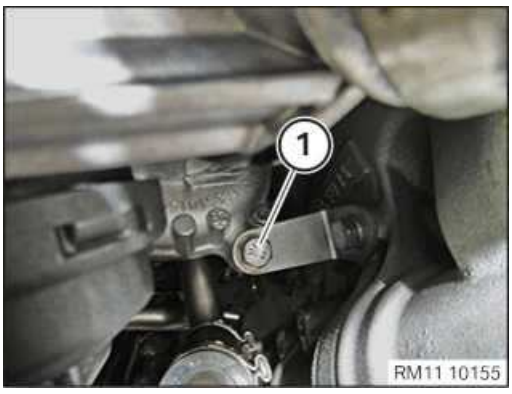
cardiagn.com

- Tighten the screws (1).



Exhaust-gas recirculation cooler to exhaust manifold

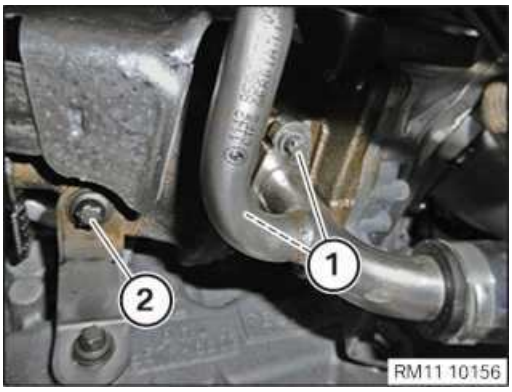
M8x28	Replace screws	Tightening torque	32 Nm



- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring

- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

cardiagn.com

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

POSTPROCESSES

55 – Prepare for the installation of the exhaust turbocharger

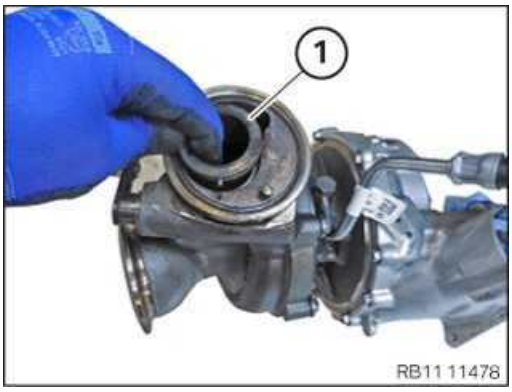
- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

56 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

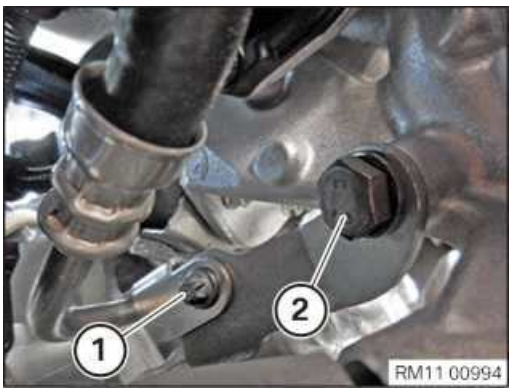
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

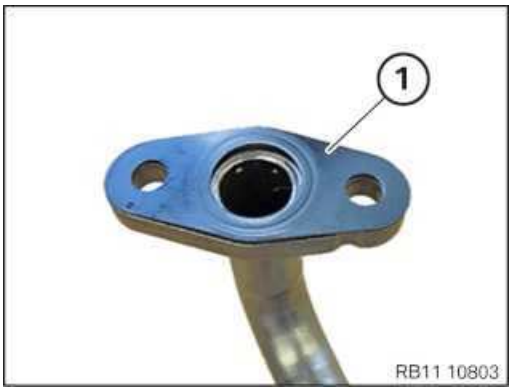
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

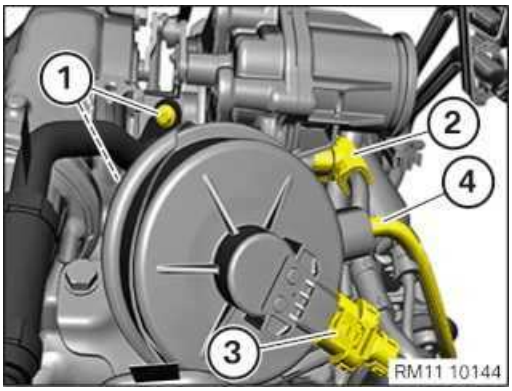
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

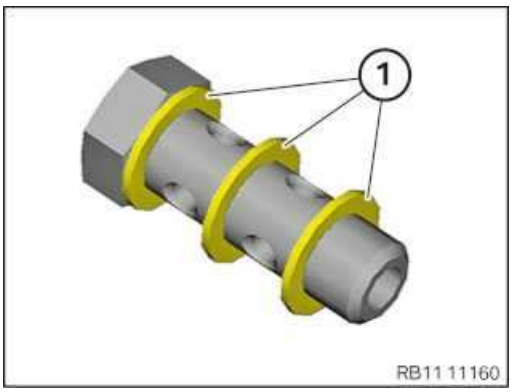


M8x16		Tightening torque	22 Nm

cardiagn.com

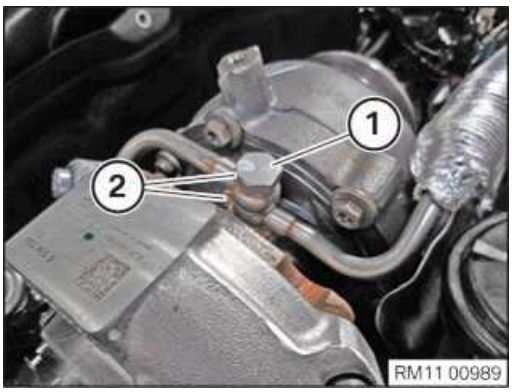
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

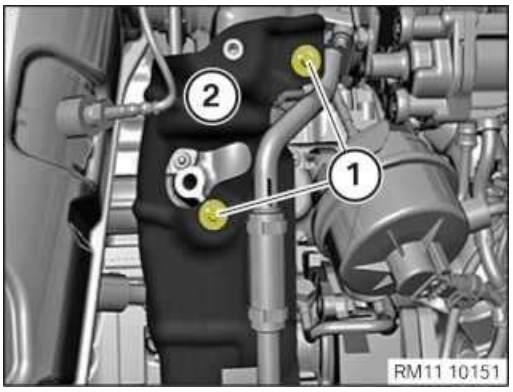
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

57 – Installing heat shield on exhaust turbocharger at bottom

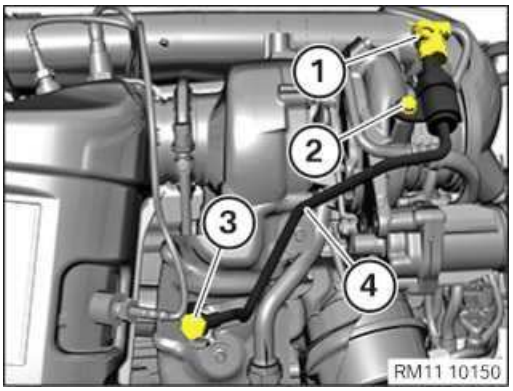


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

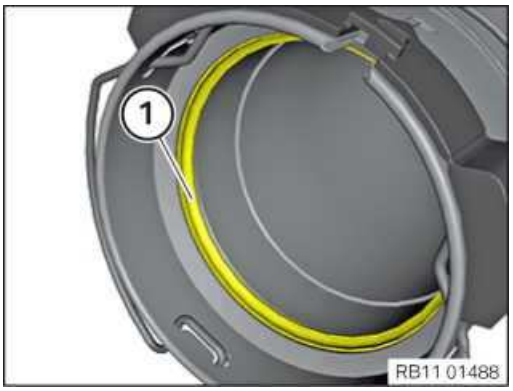
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



58 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

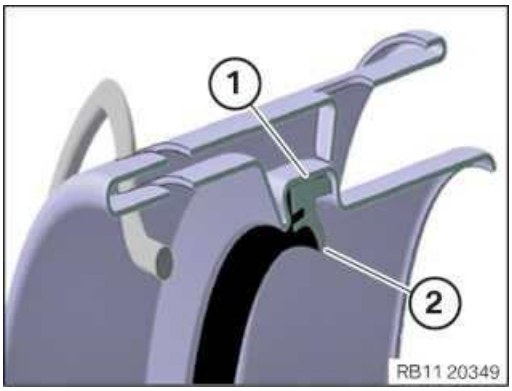
- Replace the gaskets and pressure pipe if necessary.

- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

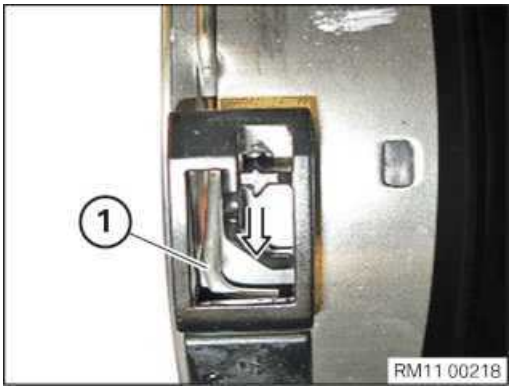


Do not use pointed or sharp-edged tools for the installation and/or removal.

cardiagn.com

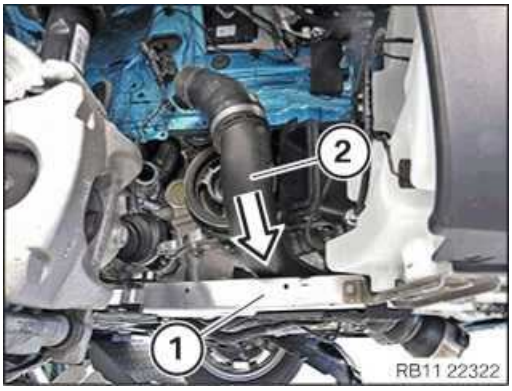
- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



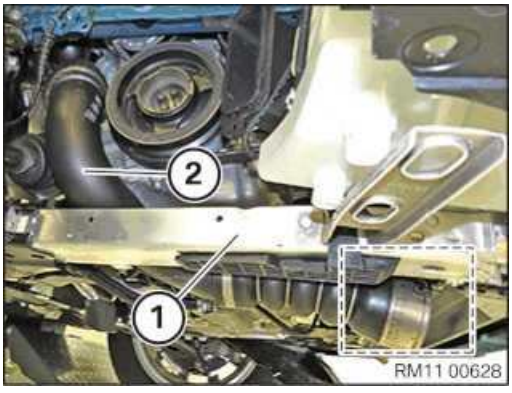
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.



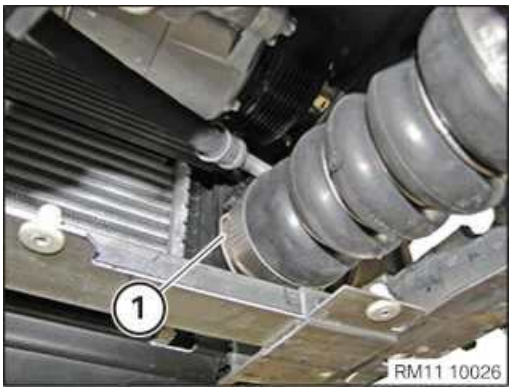
TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

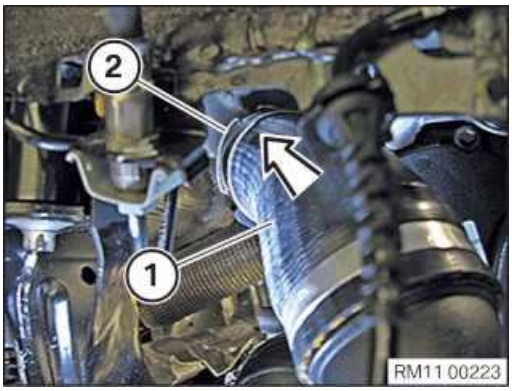


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

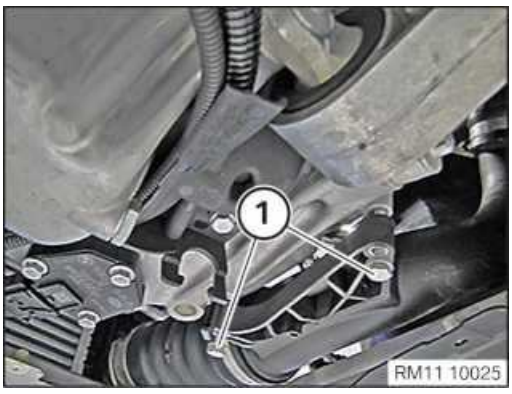


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.

cardiagn.com



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

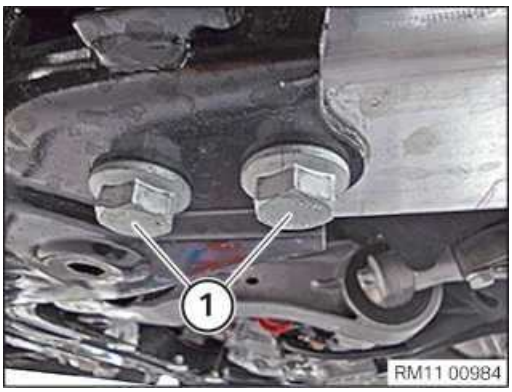
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



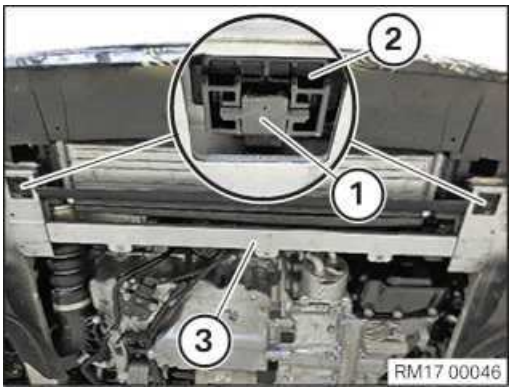
- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

Ride height sensor holder to front axle support

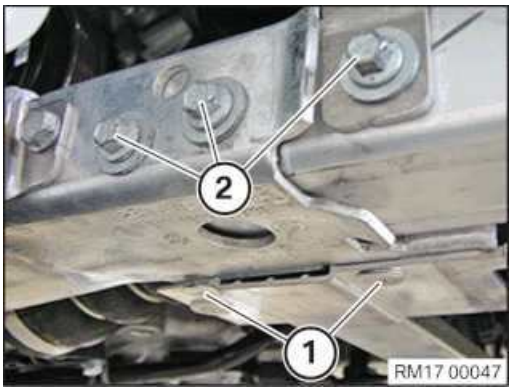
M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.



- Tighten the screws (1) on the adapter of the front axle support.

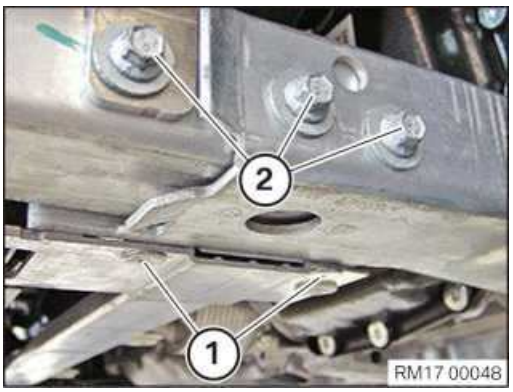


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

cardiagn.com

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.



- Tighten the bolts (2) at the front left.

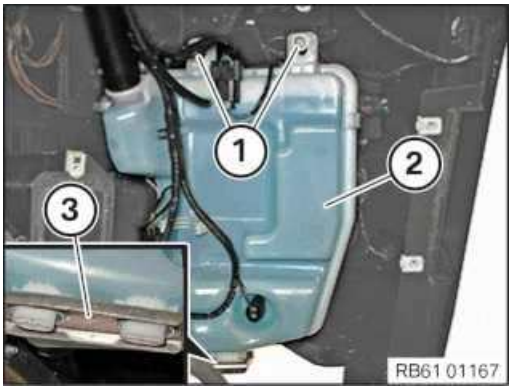
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

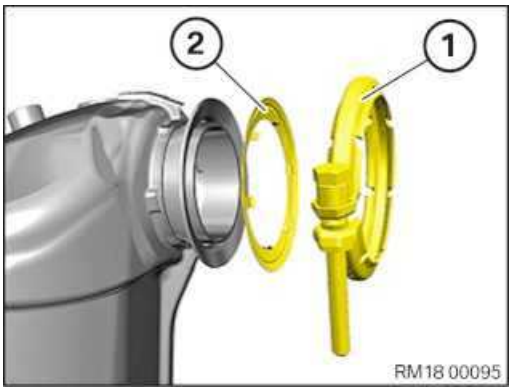
59 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

60 – Installing the diesel particulate filter



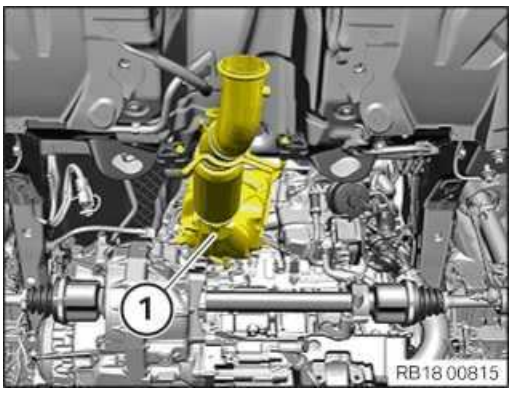
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

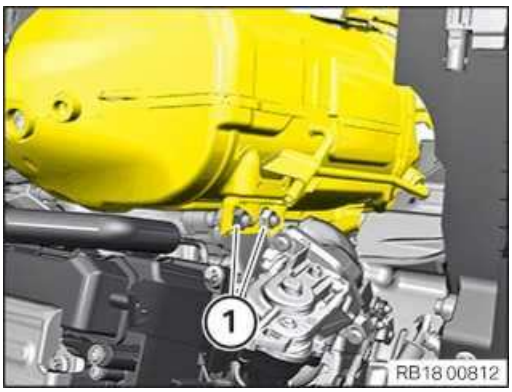
cardiagn.com



- Renew the V-clip (1).

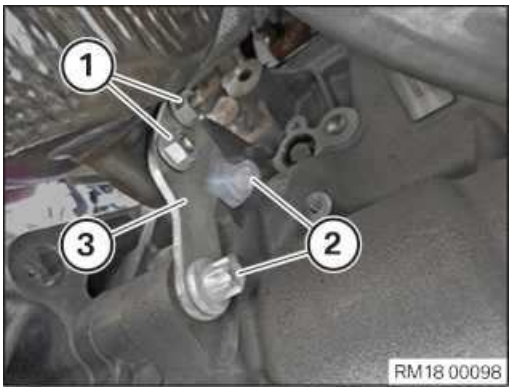
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

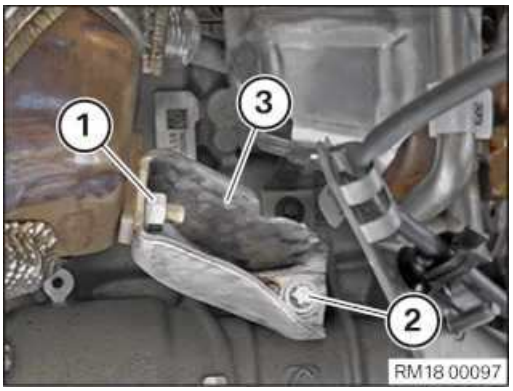


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

- Carefully insert and install the diesel particulate filter (1).



- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

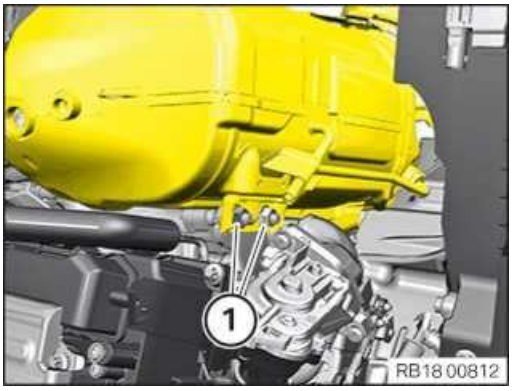


- Tighten nuts (1) by hand.

cardiagn.com

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).

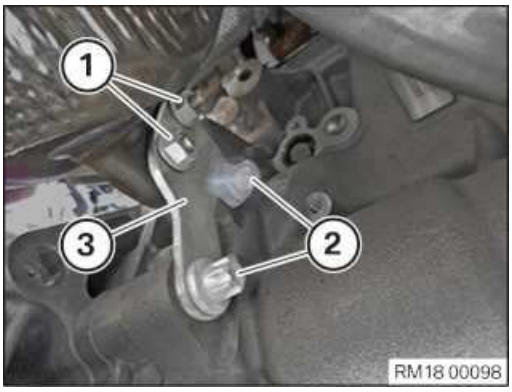


- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



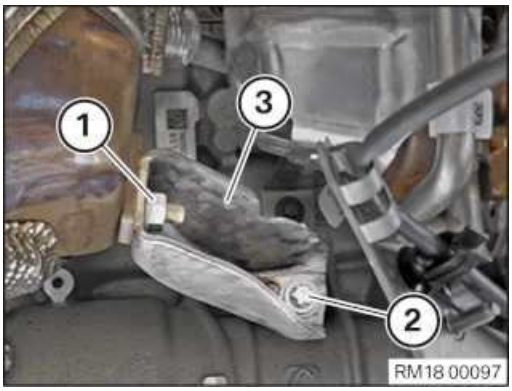
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com

- Tighten down screws (2).



Diesel particulate filter holder to gearbox

M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

Diesel particle filter to holder

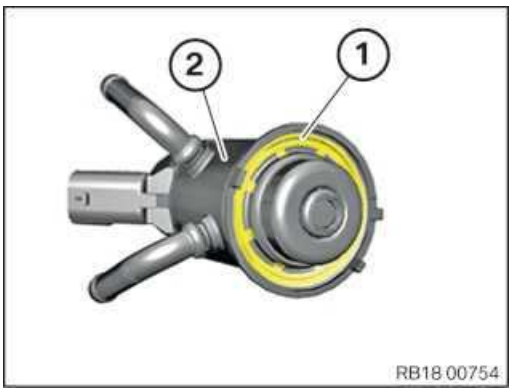
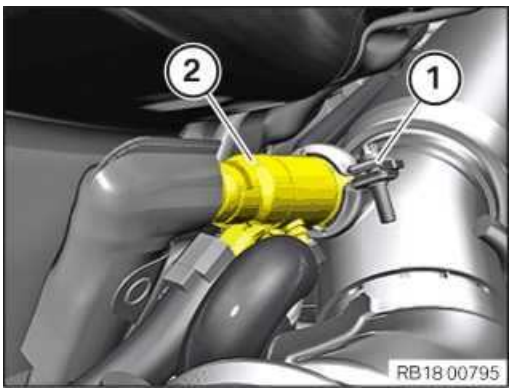
- Tighten down screw (2).



Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

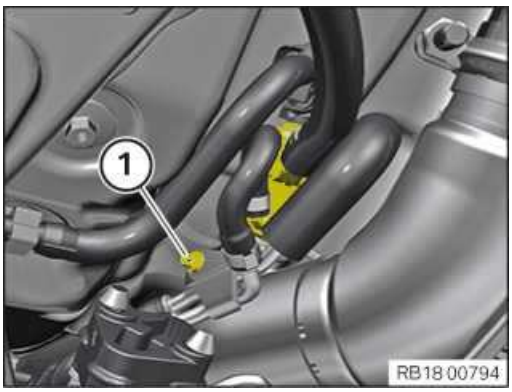


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

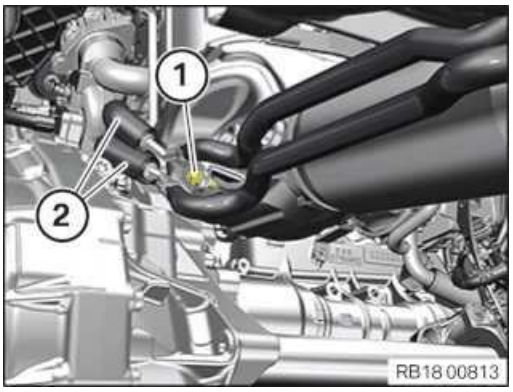


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

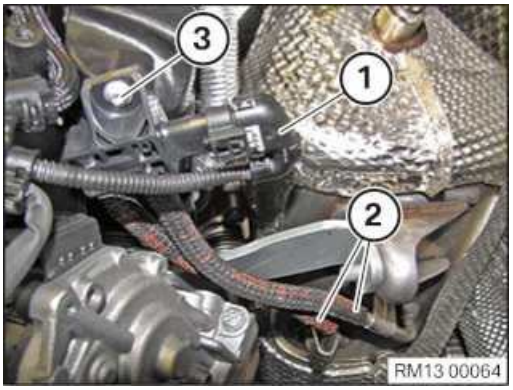


- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▸ **Installing differential pressure sensor**

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

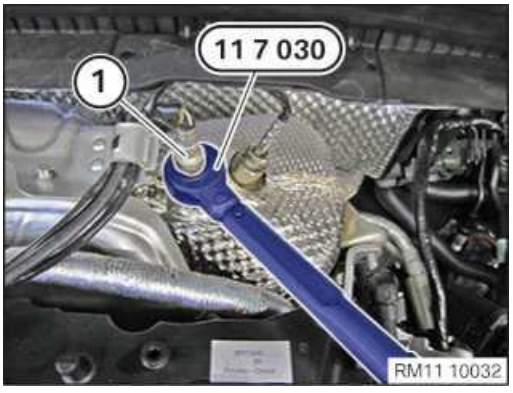
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

61 – Install the control sensor



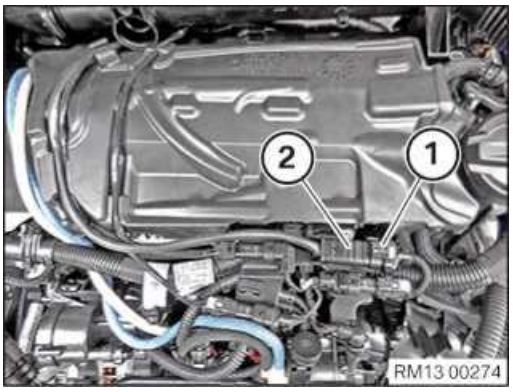
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

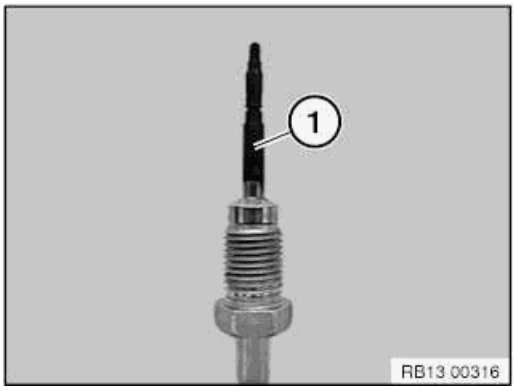
For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

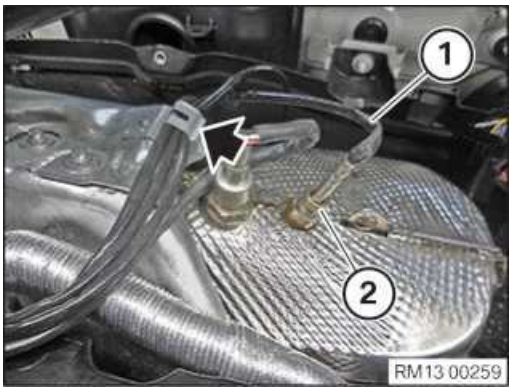


cardiagn.com

- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

62 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

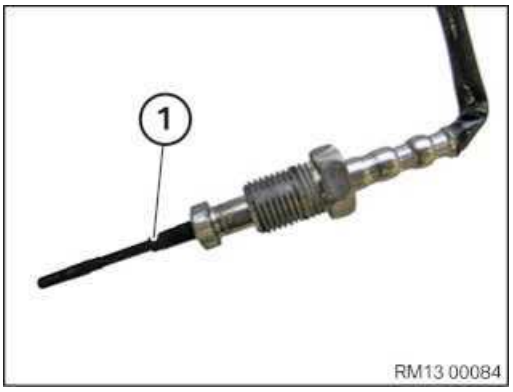
Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

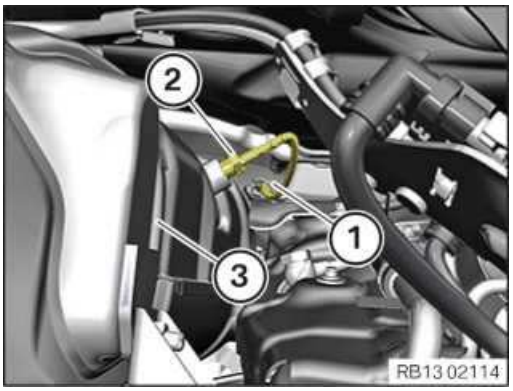
  The connector (1) must engage audibly.

63 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

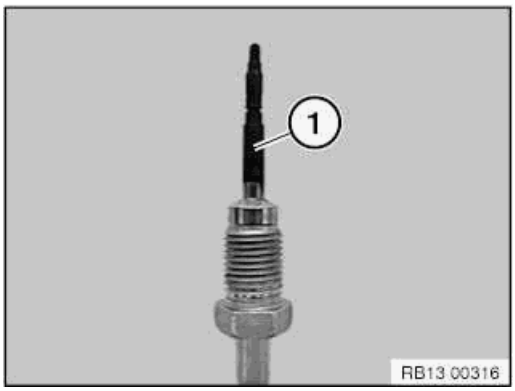
- Make sure that the gauge tip is not damaged.

cardiagn.com

- Make sure the gauge tip (1) is not damaged during installation.

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

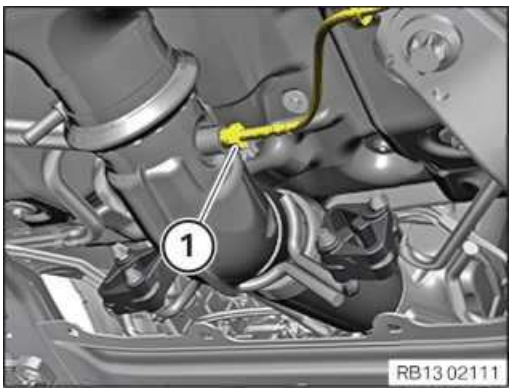


Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

64 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

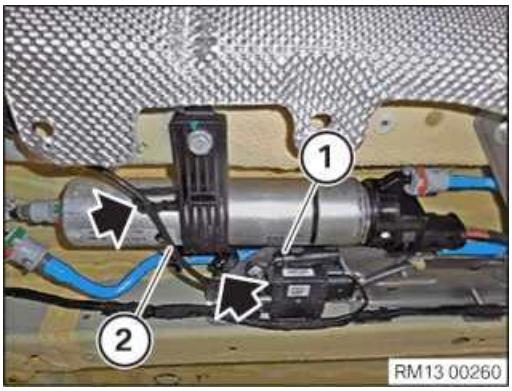
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

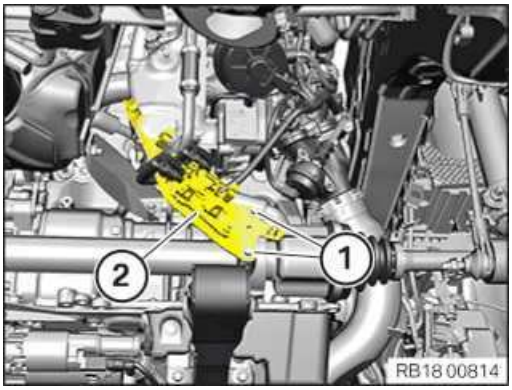
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com

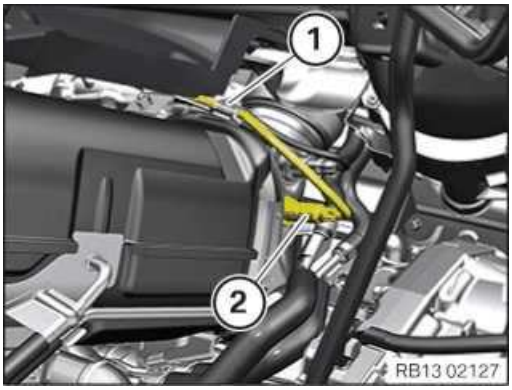


- Secure the cable clips (1).

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

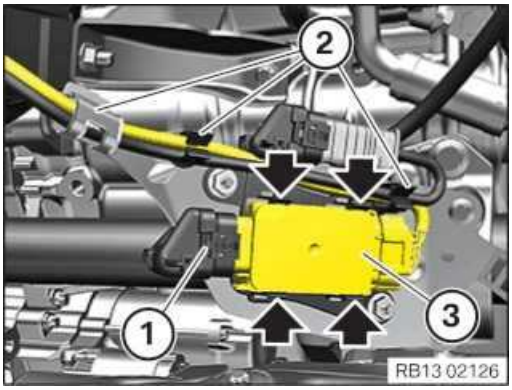
65 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



66 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

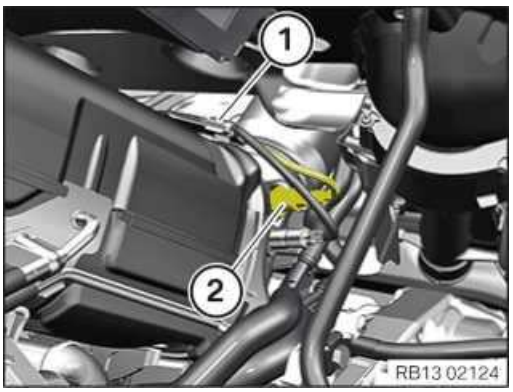
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

cardiagn.com

67 – Install the monitoring sensor



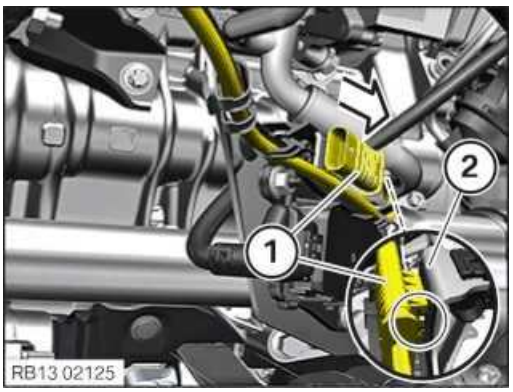
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

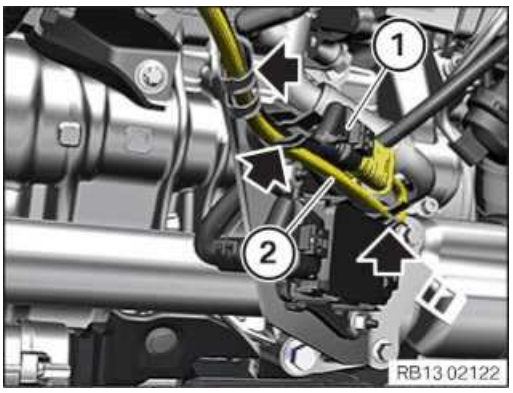
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

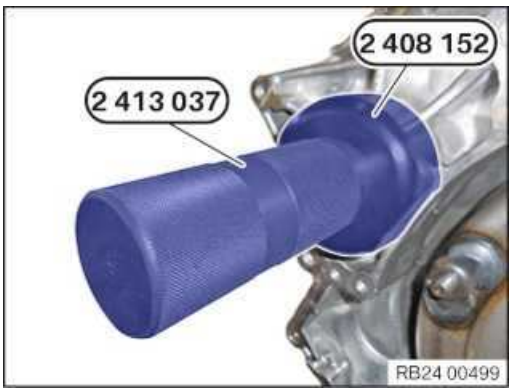
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

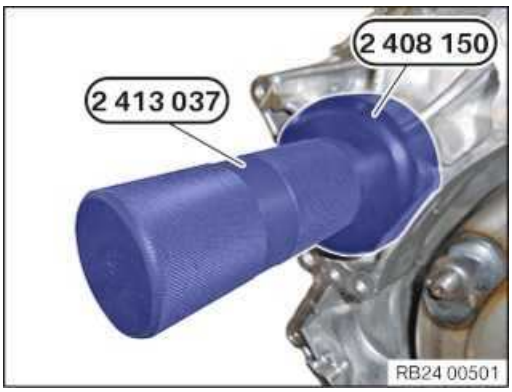
68 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

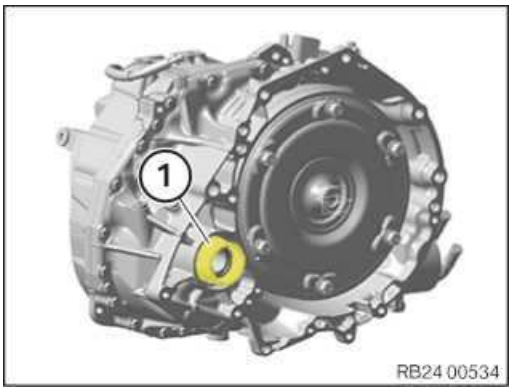


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

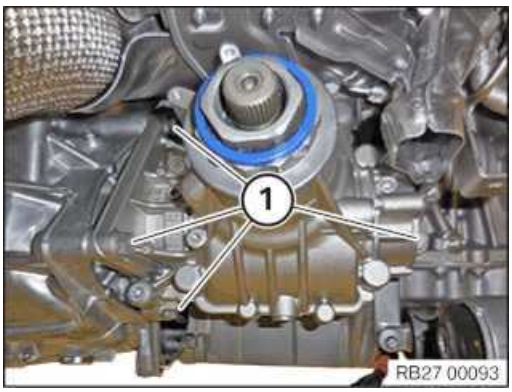
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

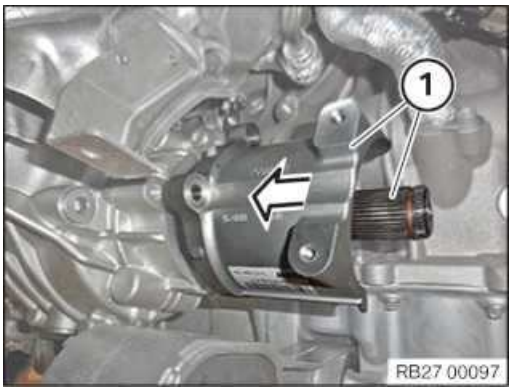
Technically suitable transfer box and electrical transmission oils	

Main group 27

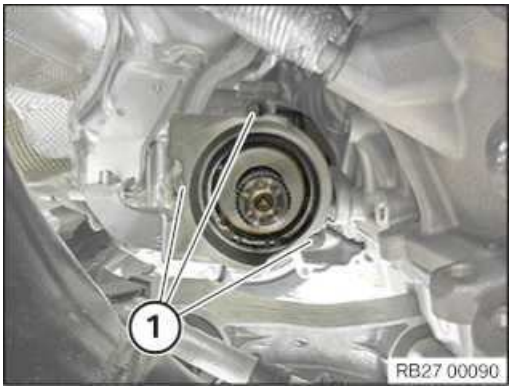
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



69 – Install the intermediate shaft with the support tube



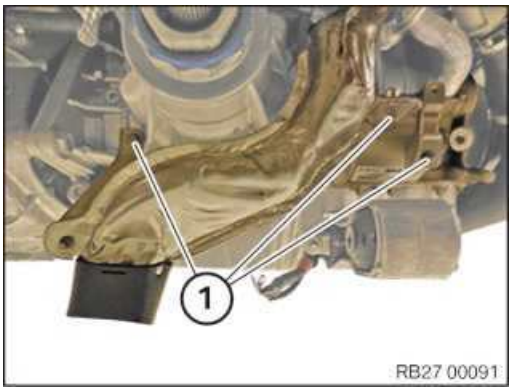
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

70 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

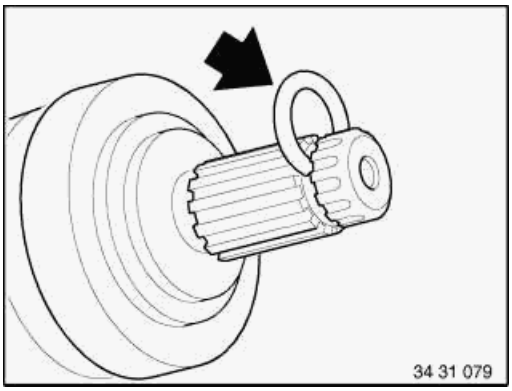
71 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

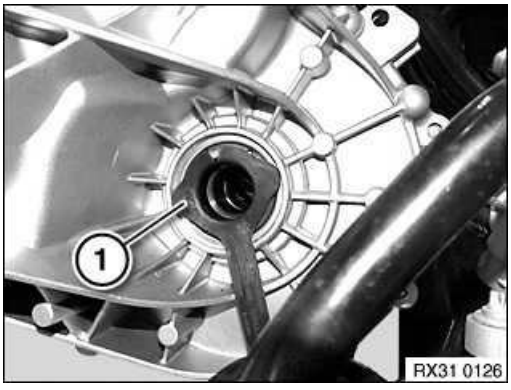
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

72 – Partially installing the left output shaft



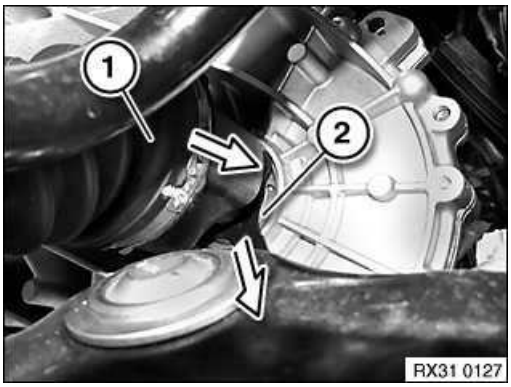
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

73 – Install propeller shaft.

CAUTION

Component with heavy weight.

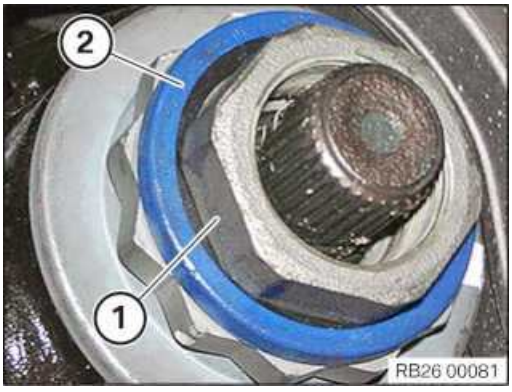
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

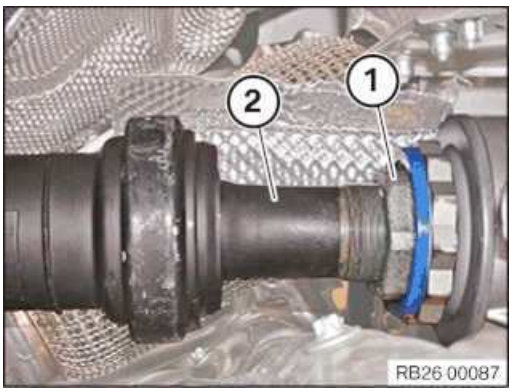
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

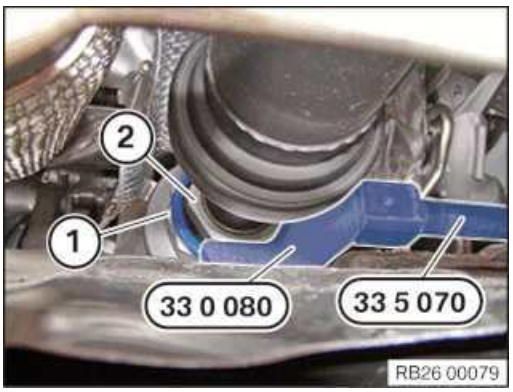
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

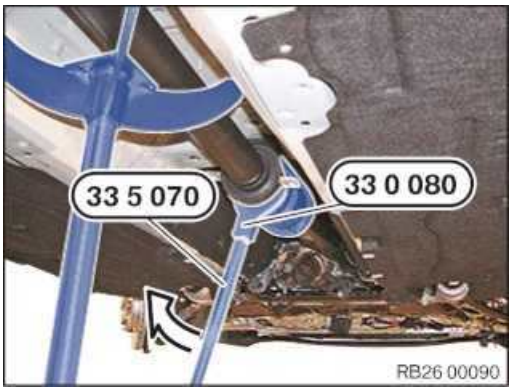
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.



- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

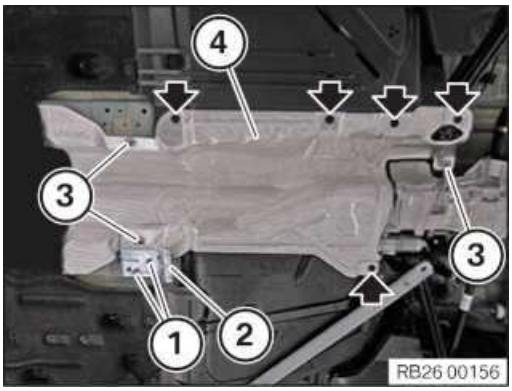
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

cardiagn.com

- Guide the special too l out between the front and rear propeller shaft and remove.

74 – Installing the rear heat shield

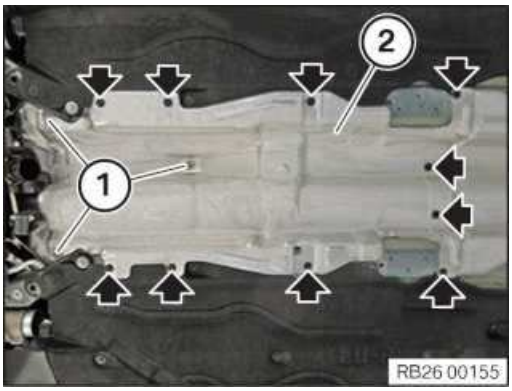
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

75 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

76 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

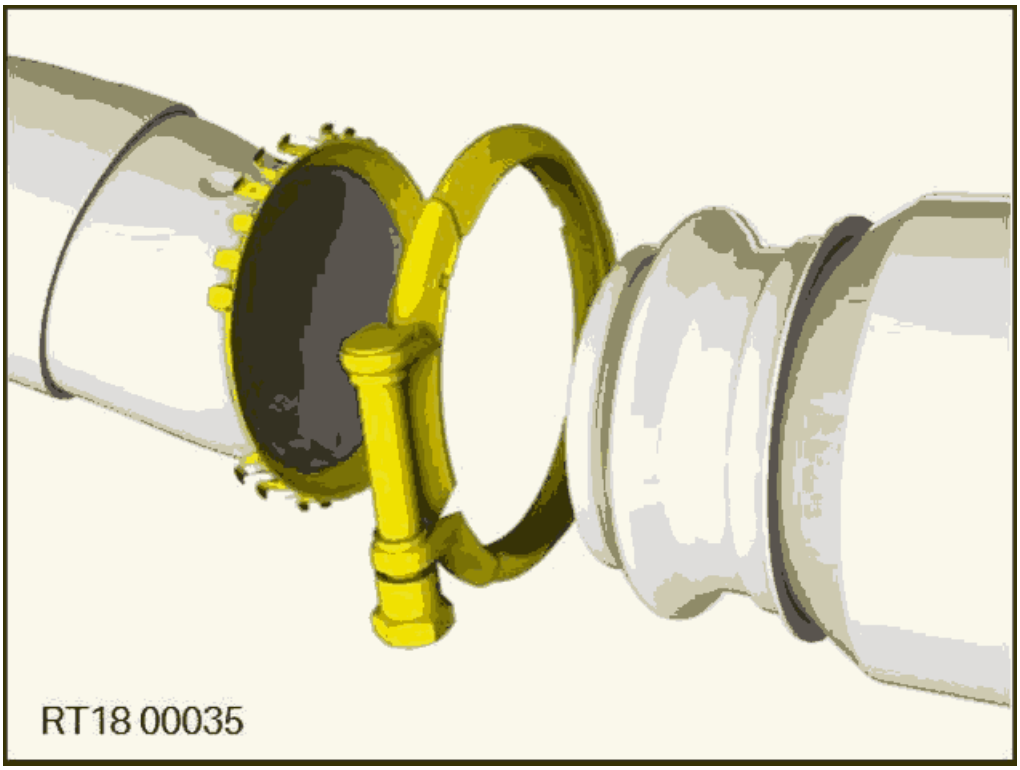
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

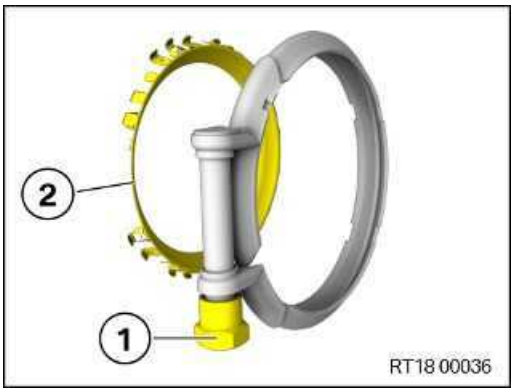
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



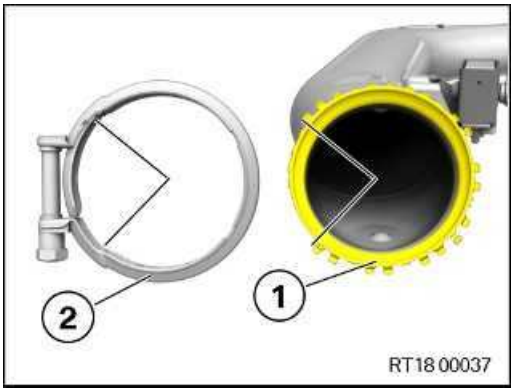
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**



V-band clamp

cardiagn.com

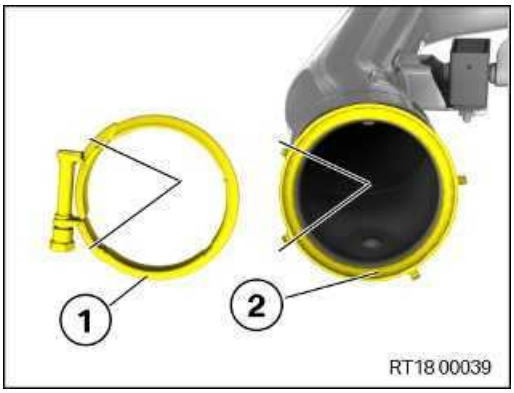
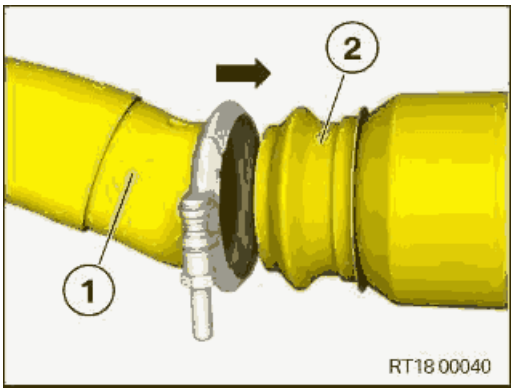
- Unscrew the nut (1) and remove the sealing ring (2).



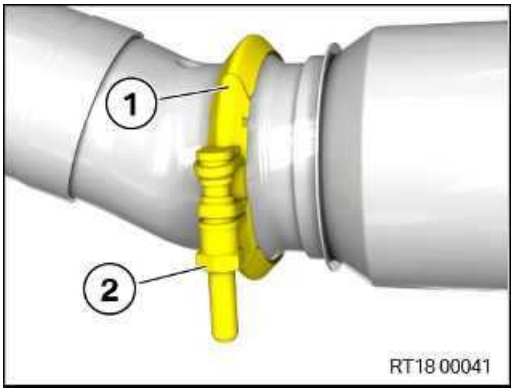
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

cardiagn.com

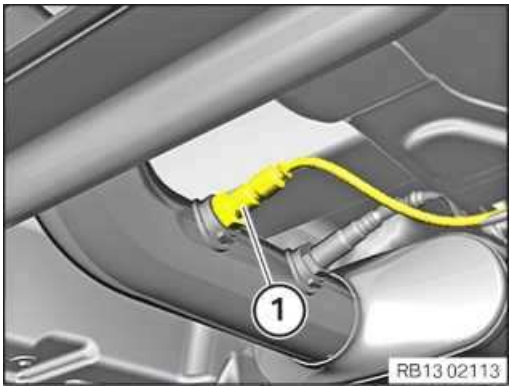
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

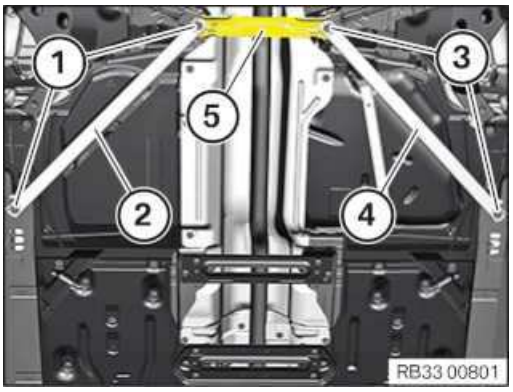


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

77 – Install the cross-member with torsion struts

cardiagn.com

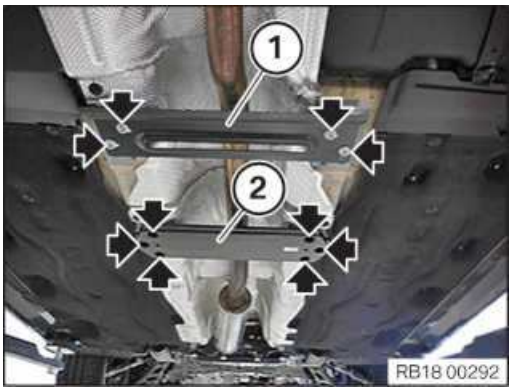
- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

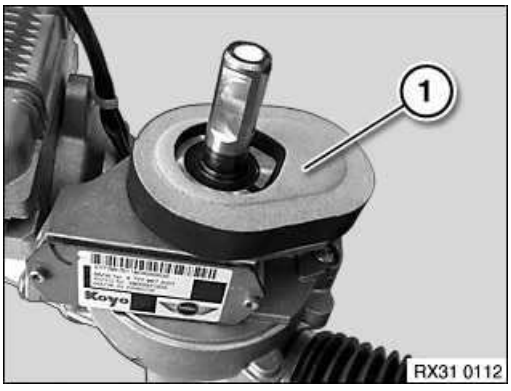
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

78 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

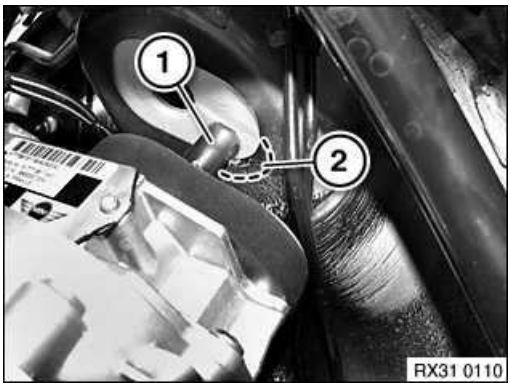


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm



79 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

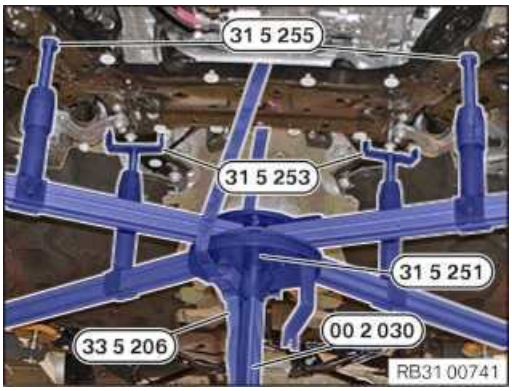
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

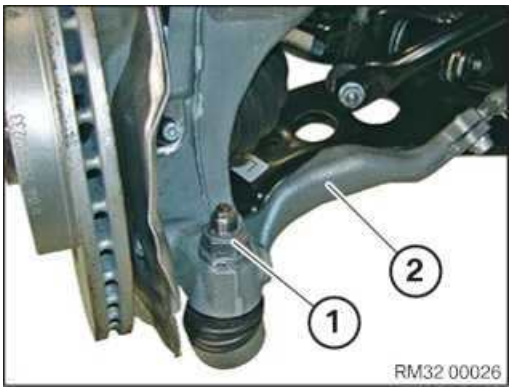
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

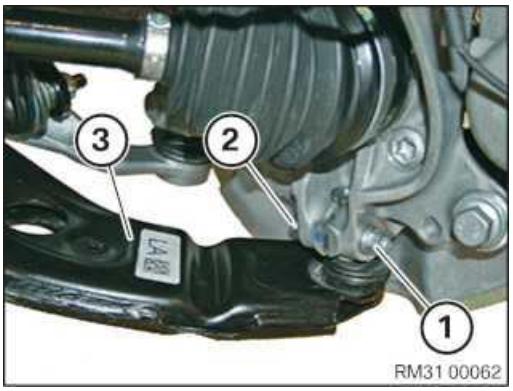
NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

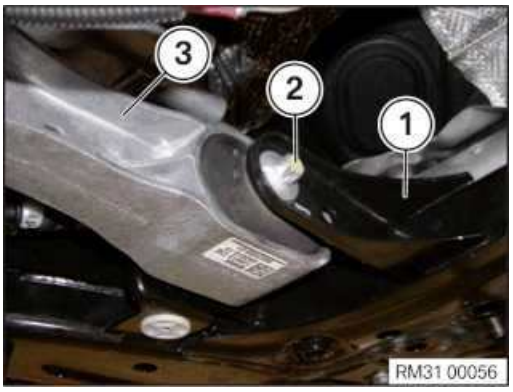
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

80 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

cardiagn.com

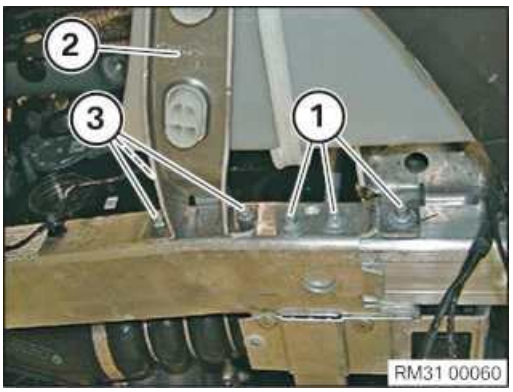
- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

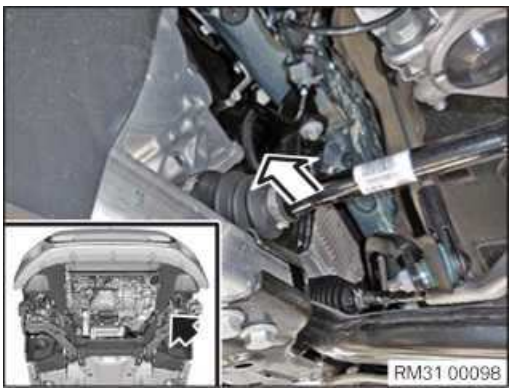
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

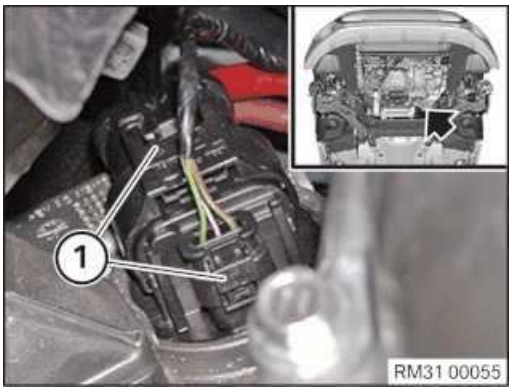


Perform the operations on the left and right side.

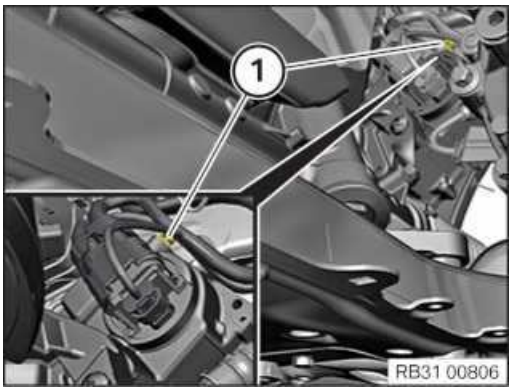
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



81 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

cardiagn.com

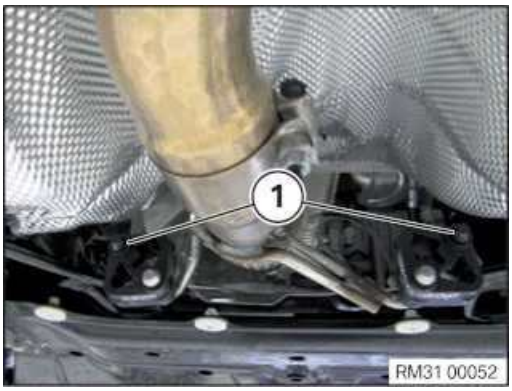
- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

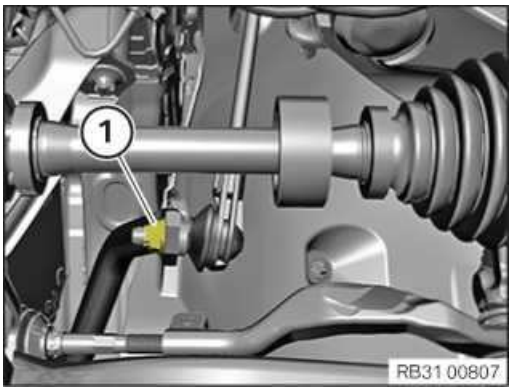
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

82 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



83 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

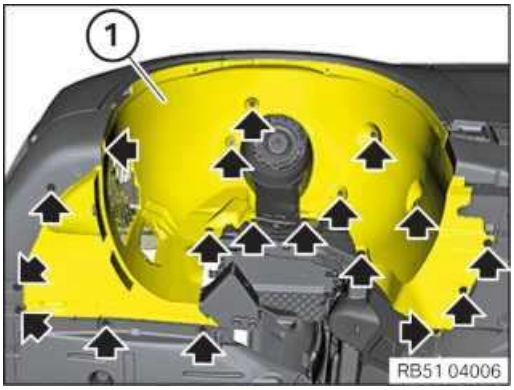
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

84 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

85 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

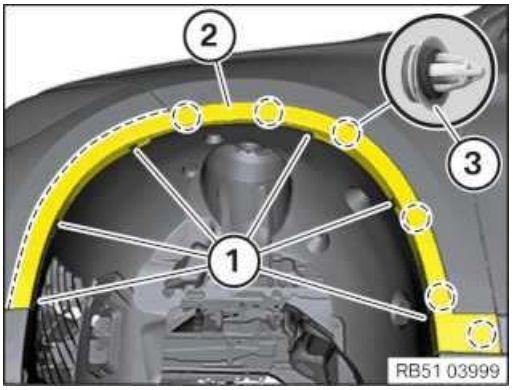
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

86 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

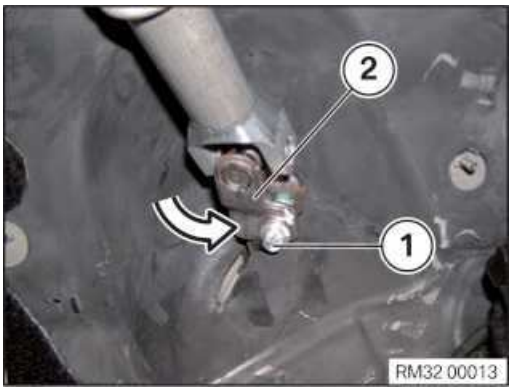
87 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

88 – Secure the steering shaft at the bottom on the steering gear

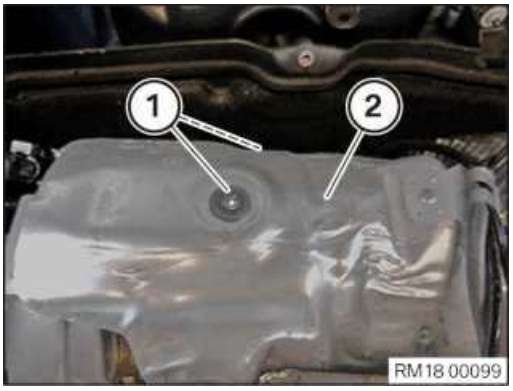
88 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

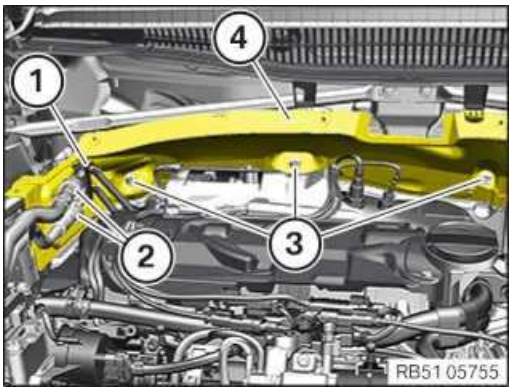


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

89 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

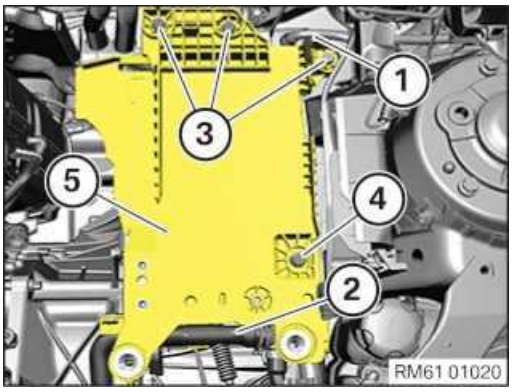
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

90 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

91 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

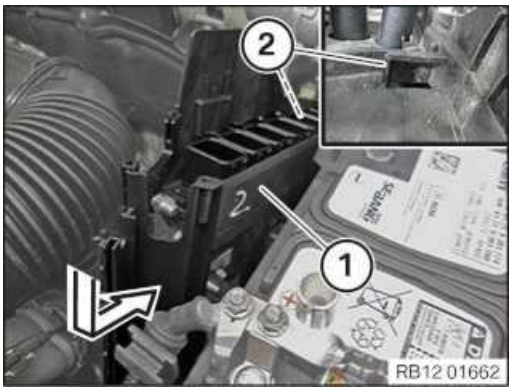
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

92 – Install electronics box

Prerequisite



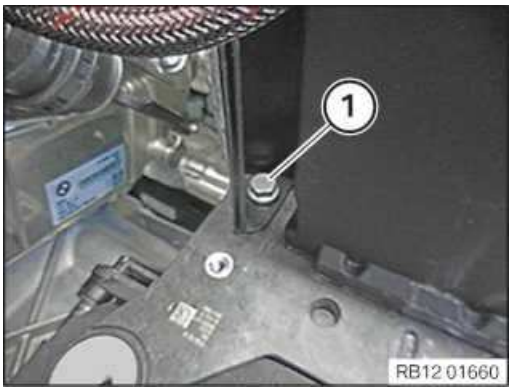
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

cardiagn.com

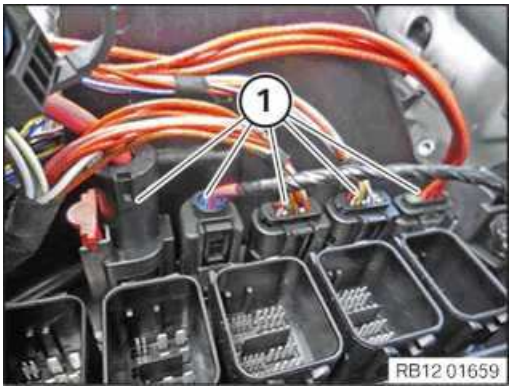
- Tighten down screw (1).

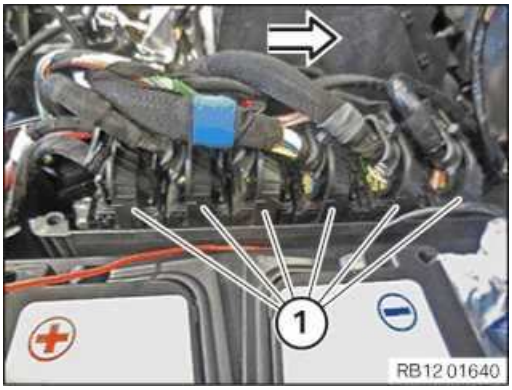
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



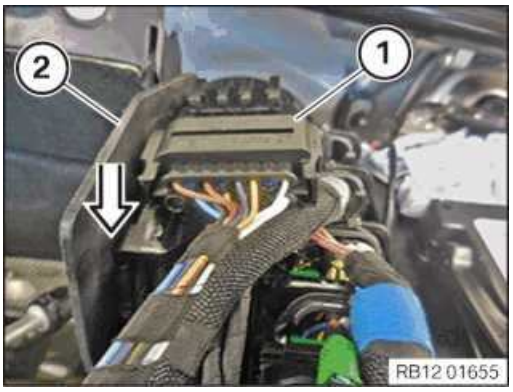
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



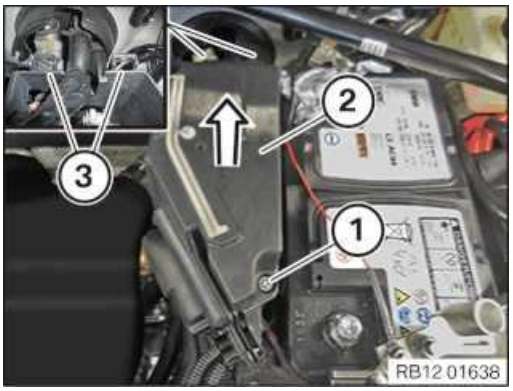
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com

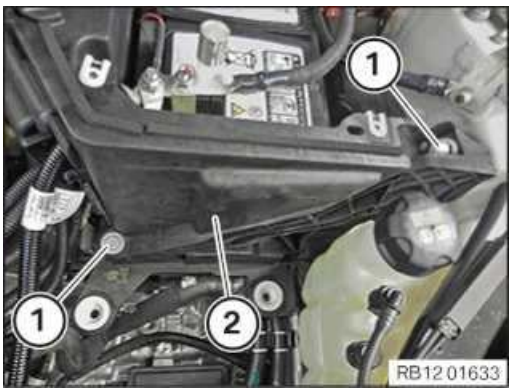
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

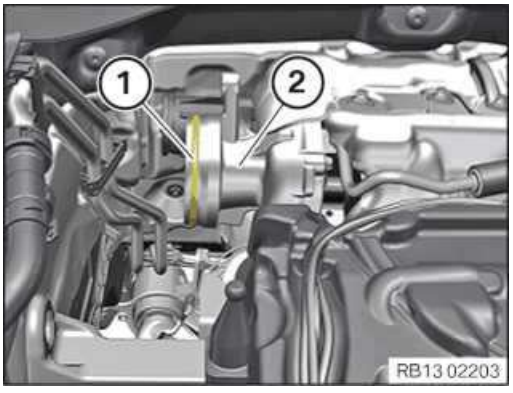


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

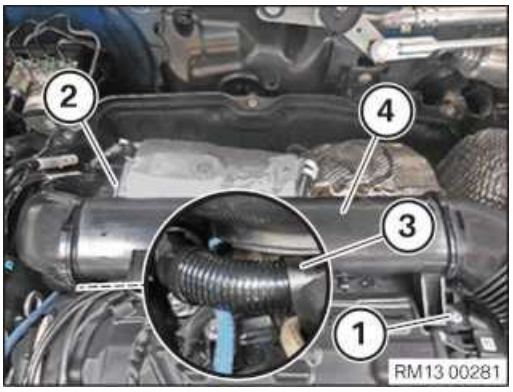
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

93 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

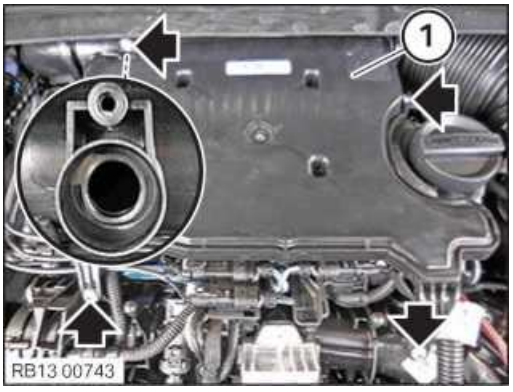
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

94 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

95 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

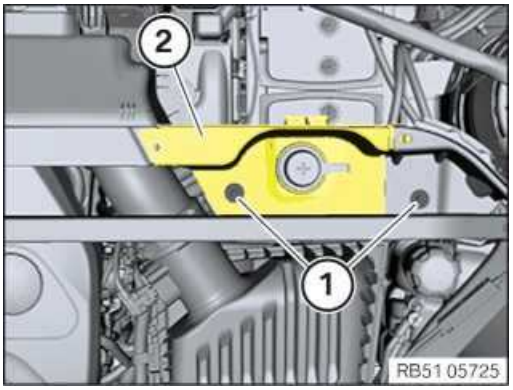
- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

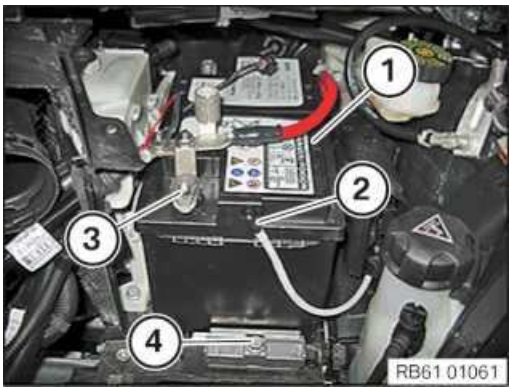


96 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

97 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

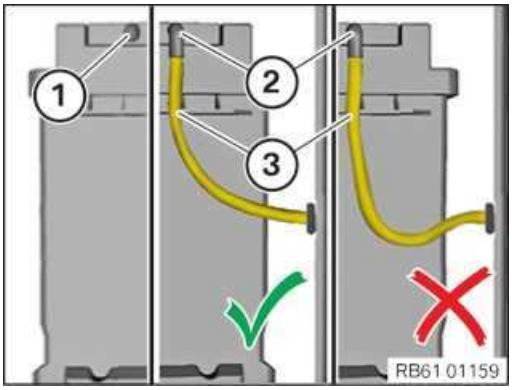
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

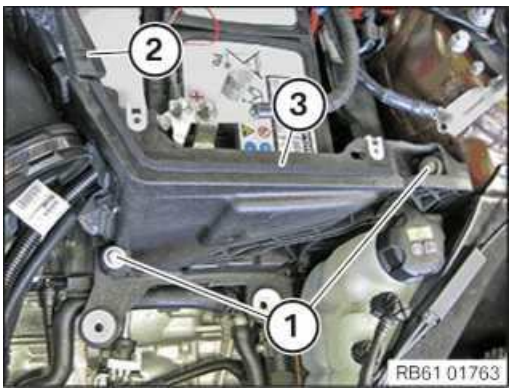
Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

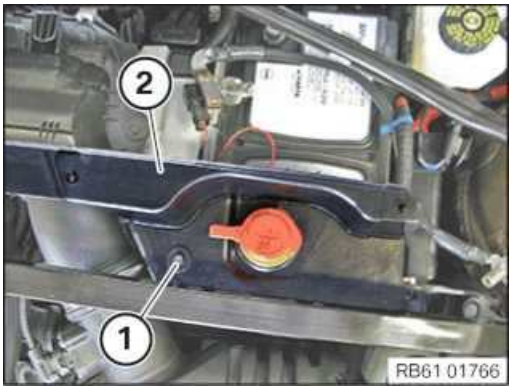
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

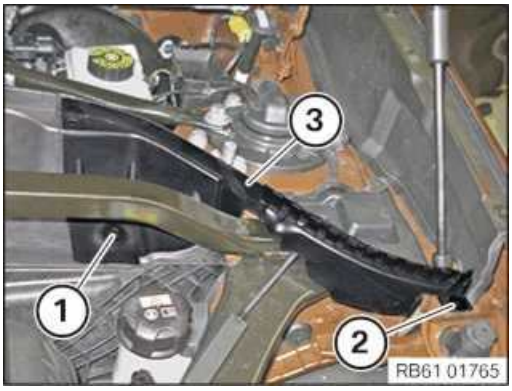


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

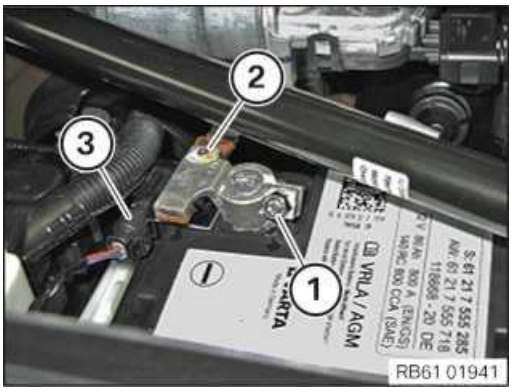
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

98 – Connecting the battery earth lead

TECHNICAL INFORMATION



For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

99 – Installing intake silencer housing

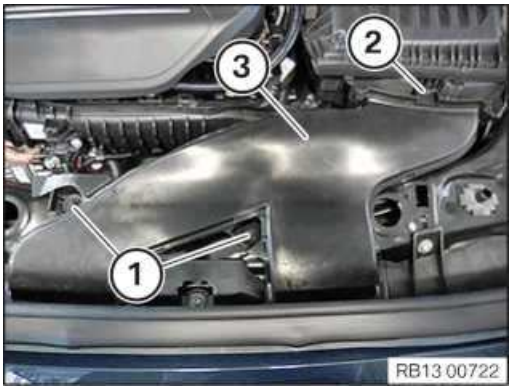
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

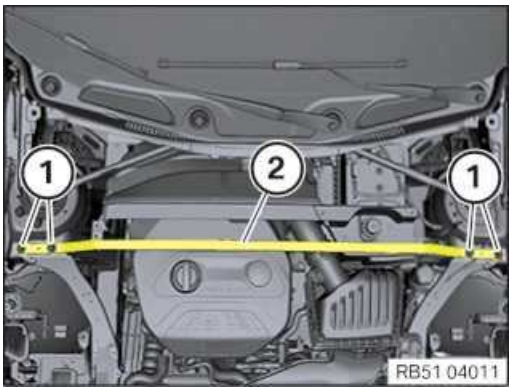
  The connector (3) must engage audibly.
- Insert and install the holder (1).

100 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

101 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com

- Install the strut brace (2).
- Renew screws (1).

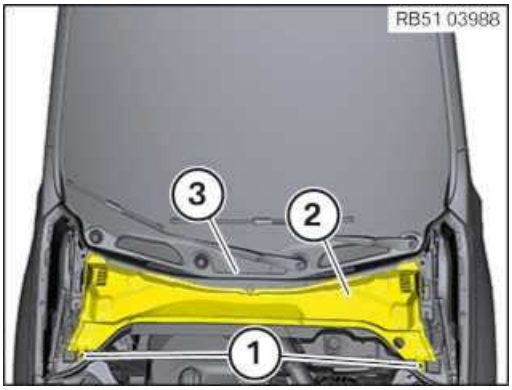
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



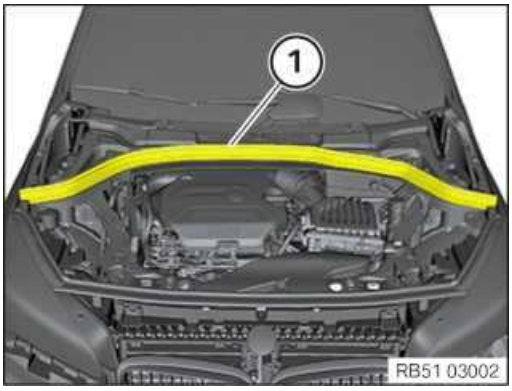
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

102 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

103 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

104 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

cardiagn.com

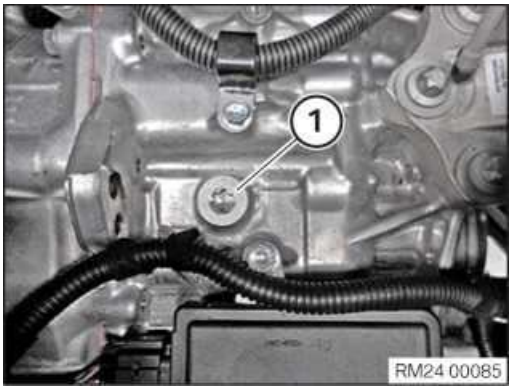
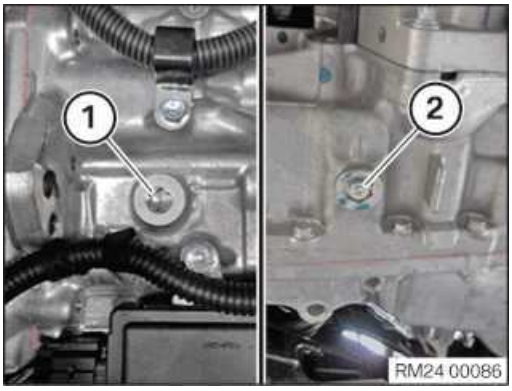
Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

105 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

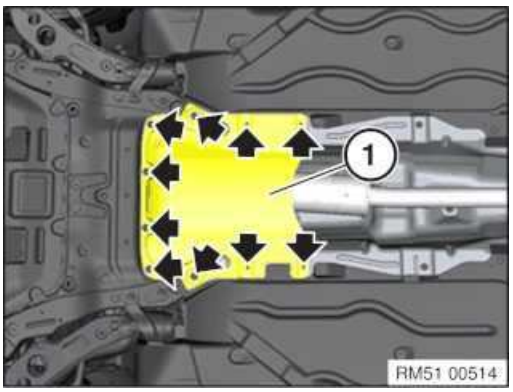
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



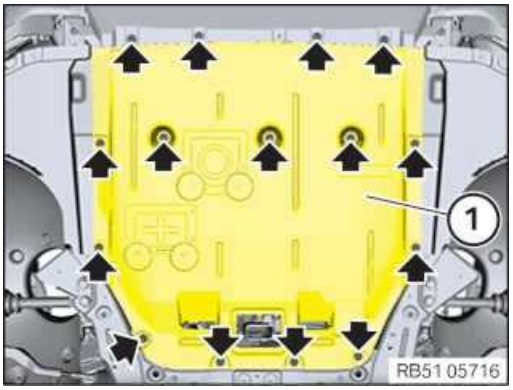
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

106 – If installed: Installing underbody protection at rear

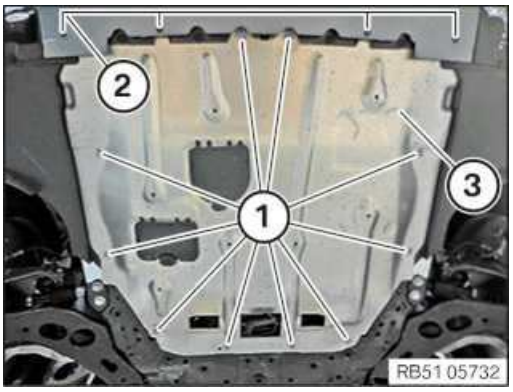


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

107 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Used in step 80

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 81

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 83

M10	Renew nut.	Tightening torque	56 Nm

cardiagn.com

Wheel arch cover to body

Used in step 85

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 85

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 85

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 86

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 86

M8	Renew screw.	Tightening torque	16 Nm

Wheel bolts

Used in step 86

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 88

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 88

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 89

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 90

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 91

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 92

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 92

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 92

RF5x26.5		Tightening torque	2,5 Nm

cardiagn.com

Positive battery terminal to battery

Used in step 92

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 92

M8		Tightening torque	19 Nm

Clean air pipe to cylinder head cover

Used in step 93

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 93 99

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 94

Screw TS6	Renew screw.	Tightening torque	5 Nm

Cover of top bulkhead

Used in step 96

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal

Used in step 96

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray

Used in step 97

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal

Used in step 97 98

NutM6			5 Nm

Trailing link

Used in step 97

M8		Tightening torque	19 Nm

Battery cover

Used in step 97

M8			2,8 Nm

Intake silencer housing to lock bridge

Used in step 99

M6X30		Tightening torque	8 Nm

Intake neck to cross connection

Used in step 100

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome

Used in step 101

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body

Used in step 101

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing

Used in step 104

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug

Used in step 104

M6	Renew the sealing ring.		8 Nm

cardiagn.com

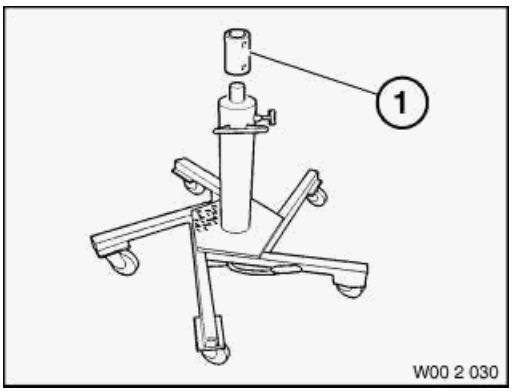
Oil drain plug / oil filler plug — Used in step 105

Hexagon socket		Tightening torque	43 Nm

Underbody protection front — Used in step 107

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side — Used in step 108



Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side — Used in step 108

Plastic nut		Tightening torque	2,6 Nm

Overview of Special Tools

0 490 133 (00 2 030) Device

Common — Used in step 28 79

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

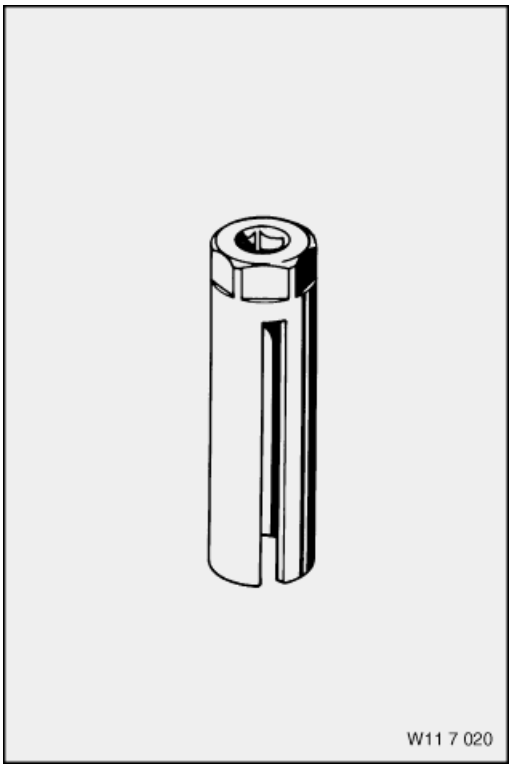
cardiagn.com

0 495 554 (33 5 070) Extension

Common

Used in step 34 73

Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)



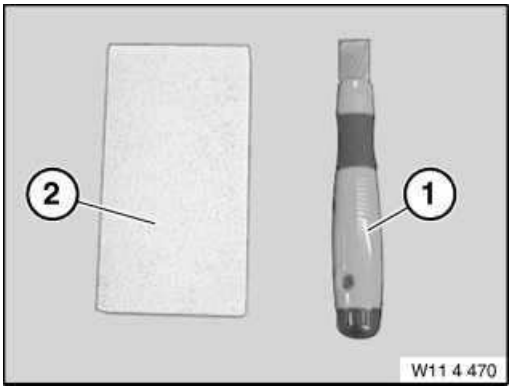
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

0 491 074 (11 7 020) Socket wrench insert

Used in step 40 41 67



Common

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool

Common

Used in step 54

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

2 409 025 Puller

Common

Used in step 68

Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

cardiagn.com

2 411 739 Puller

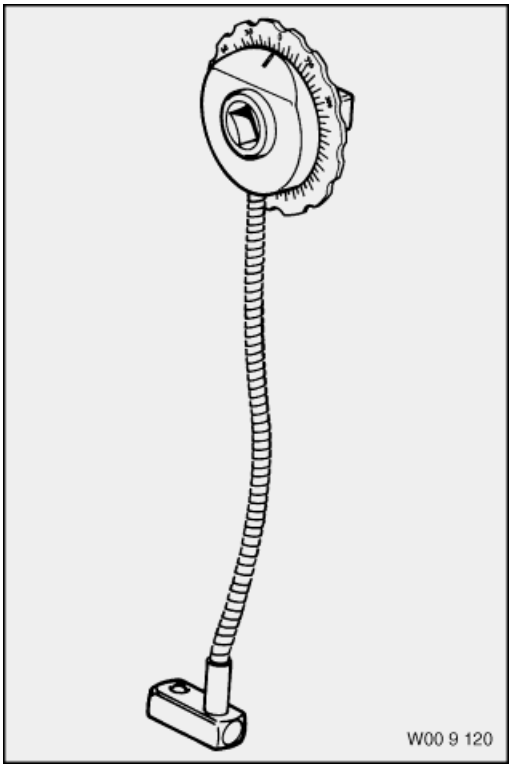
Common	Used in step 68
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 152 Striking element

Common	Used in step 68
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

2 413 037 Handle

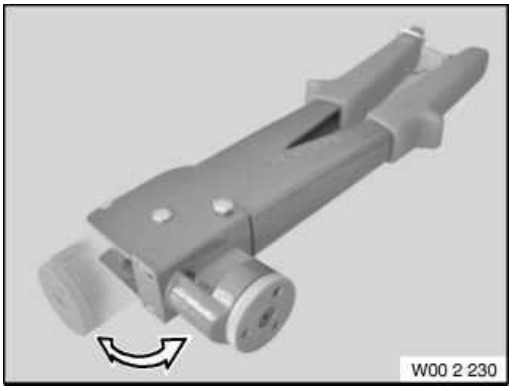
Common	Used in step 68
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)



cardiagn.com

2 408 150 Striking element

Common	Used in step 68
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



0 490 504 (00 9 120) Torque angle measuring dial

Common	Used in step 73
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

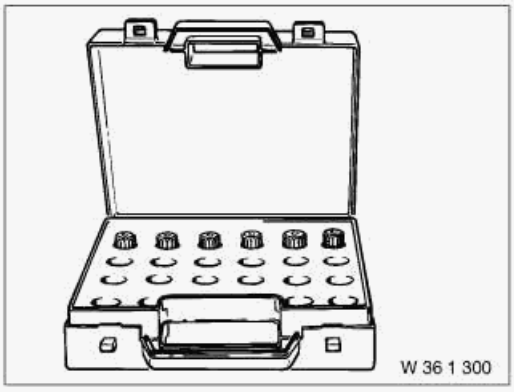
0 496 521 (00 2 230) Pliers

Common	Used in step 85
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 86
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 18
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

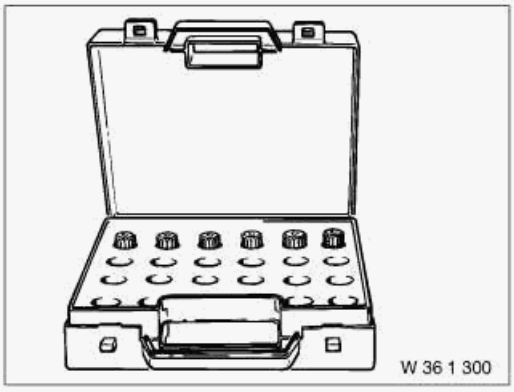
cardiagn.com

0 495 224 (36 1 326) Wheel stud

Common	Used in step 18
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 18
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	



0 495 226 (36 1 328) Wheel stud

Common	Used in step 18
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location

11 65 045 Removing and installing/replacing low-pressure stage turbocharger

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

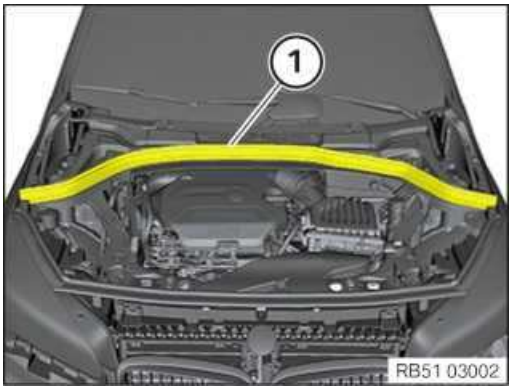
Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

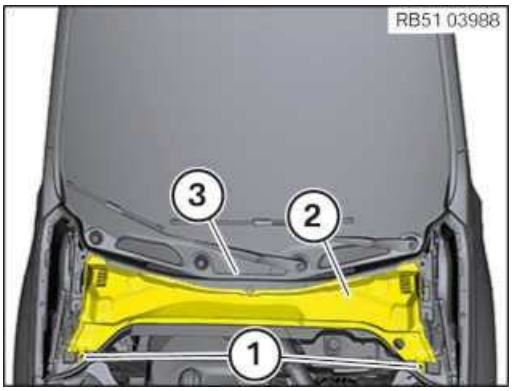
TECHNICAL INFORMATION



Maintain conditions of absolute cleanliness.

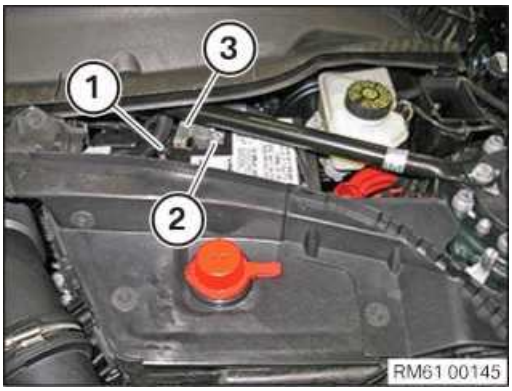
cardiagn.com

1 – Remove the seal for the rear bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

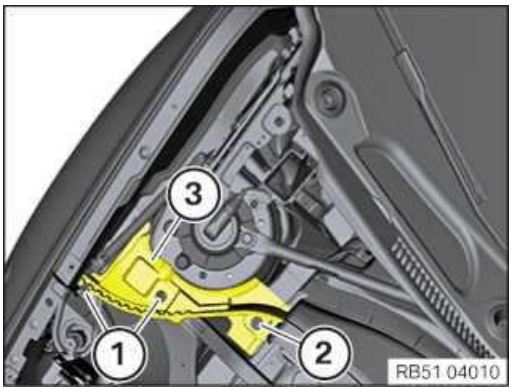


- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

3 – Disconnecting the battery earth lead

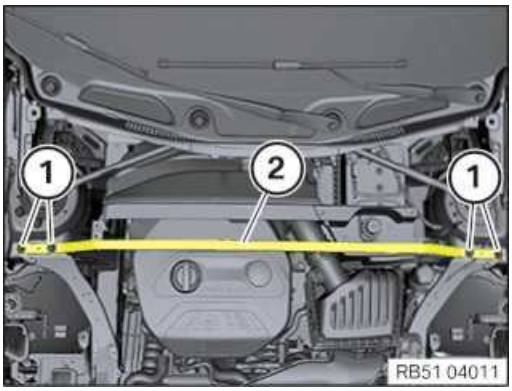


- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

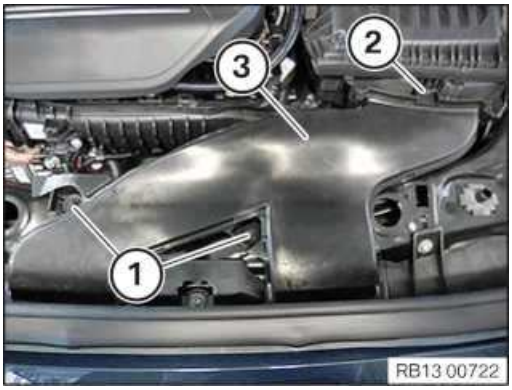
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



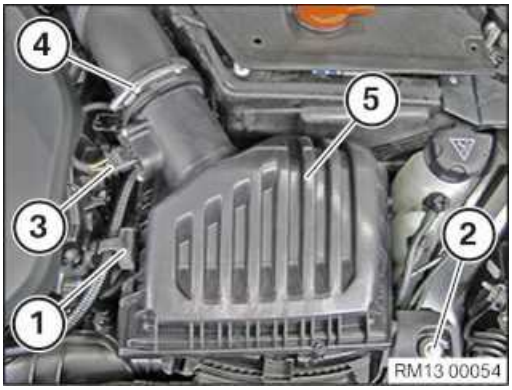
cardiagn.com

NOTICE



Description is for right component only. The procedure on the left side is identical.

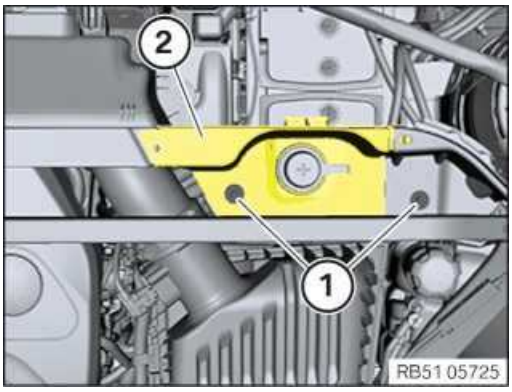
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



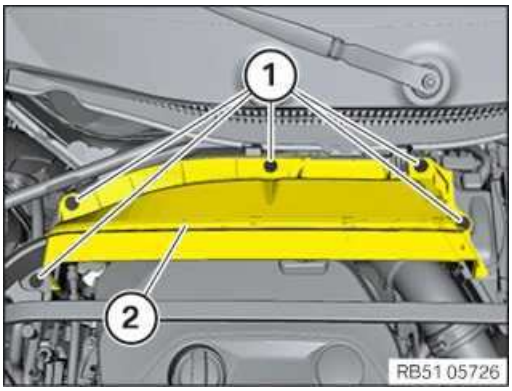
- Loosen screws (1).
- Remove strut brace (2).

5 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.



6 – Removing intake silencer housing



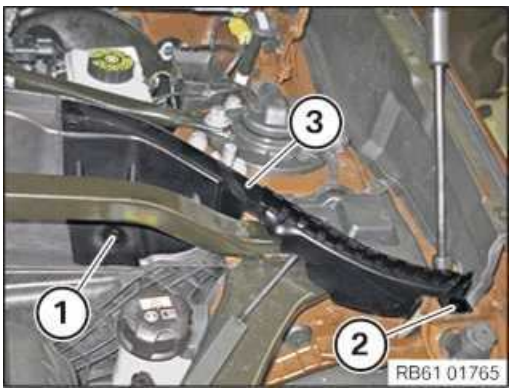
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

cardiagn.com

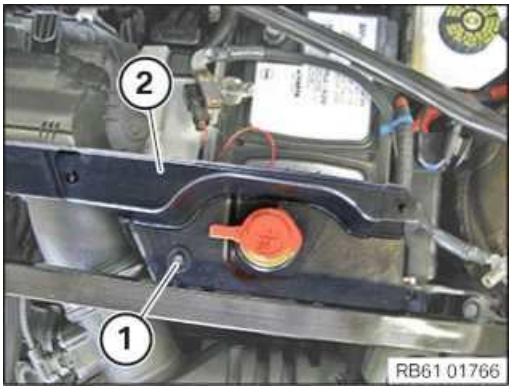
- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).



8 – Remove vehicle battery

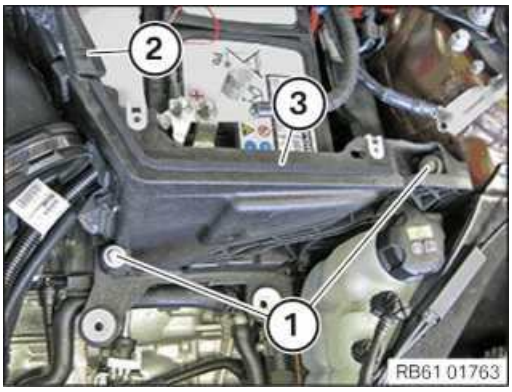
WARNING



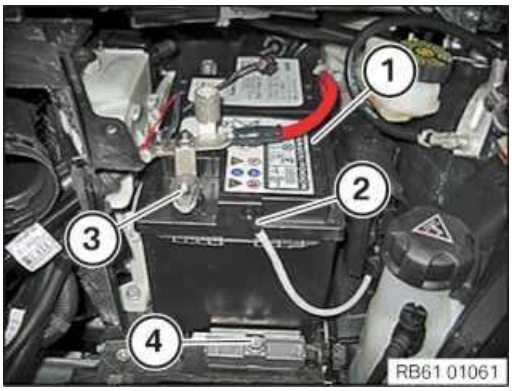
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Remove the cover (2).

cardiagn.com

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

9 – Removing the acoustic cover

WARNING

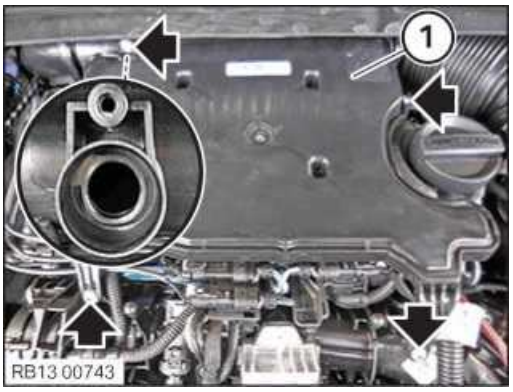
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.



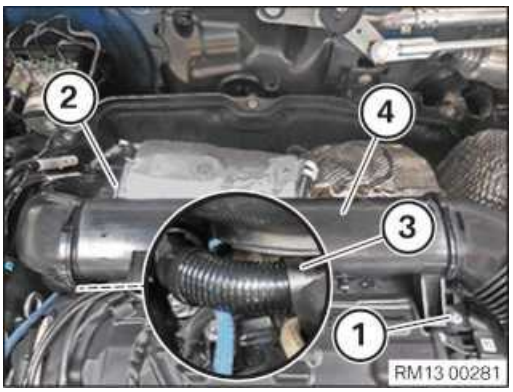
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator

cardiagn.com



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

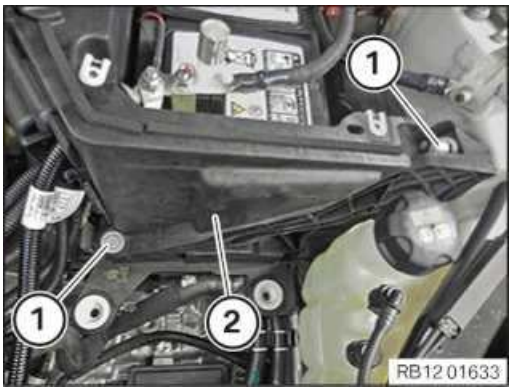
cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

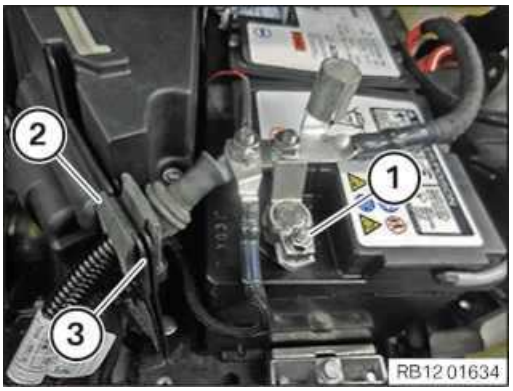
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



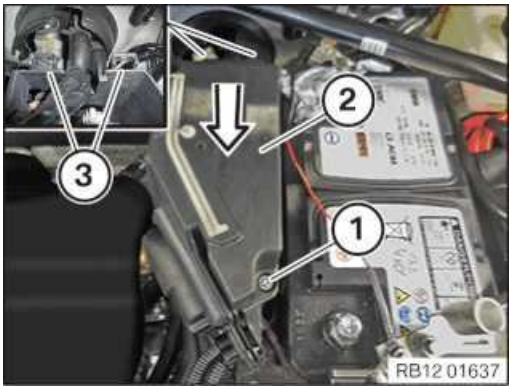
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.



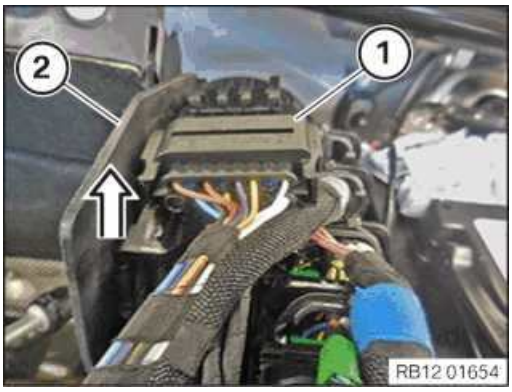
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

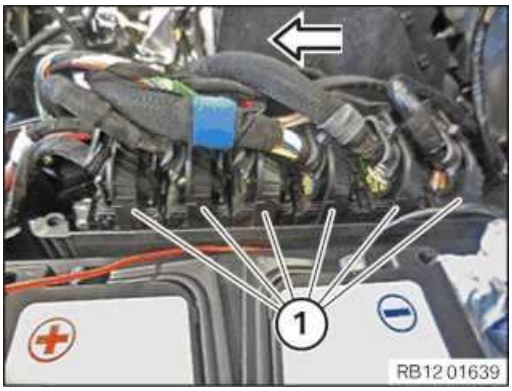


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

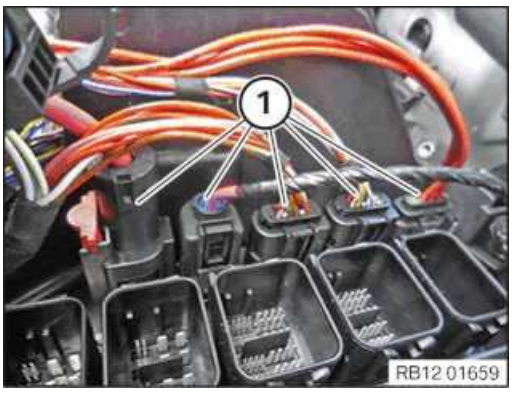
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



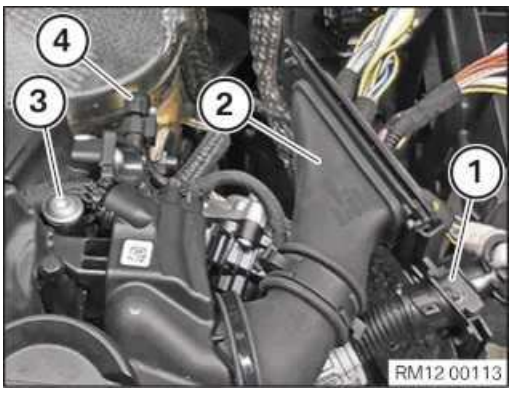
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



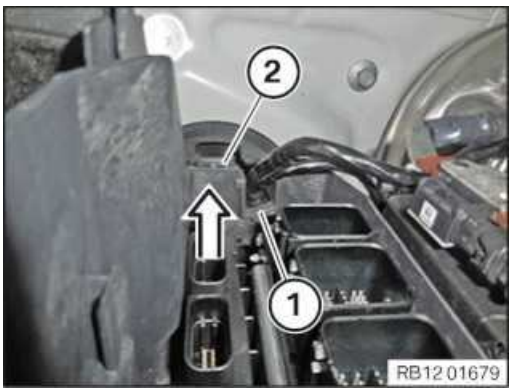
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



cardiagn.com

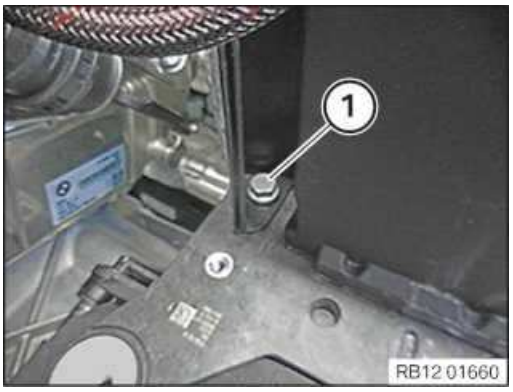


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

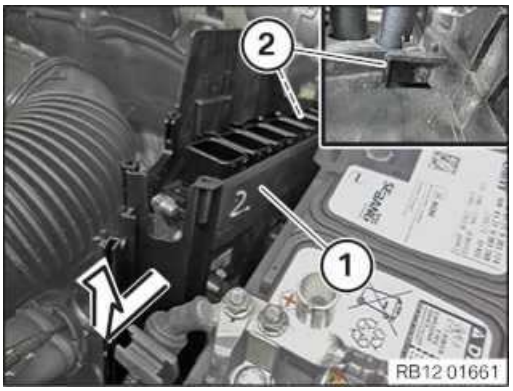


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

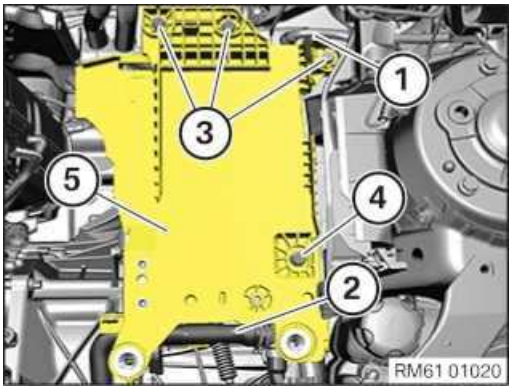


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

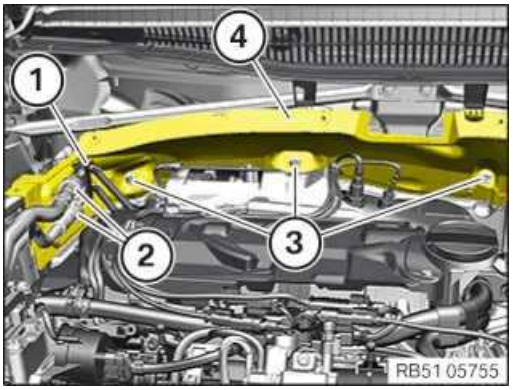


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com



- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

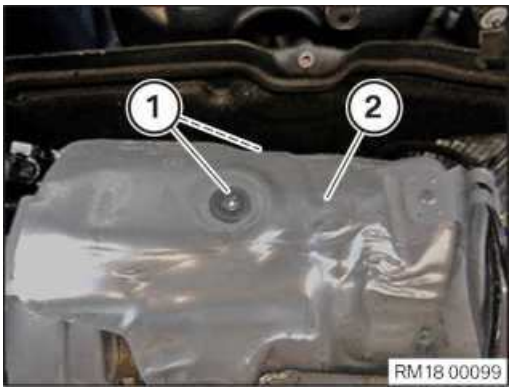
13 – Remove battery holder

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

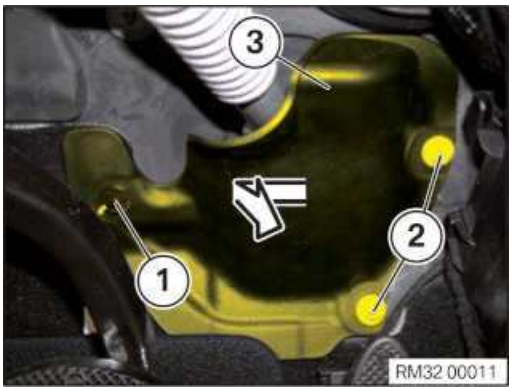
15 – Removing heat shield from top exhaust turbocharger



WARNING

Hot surfaces.

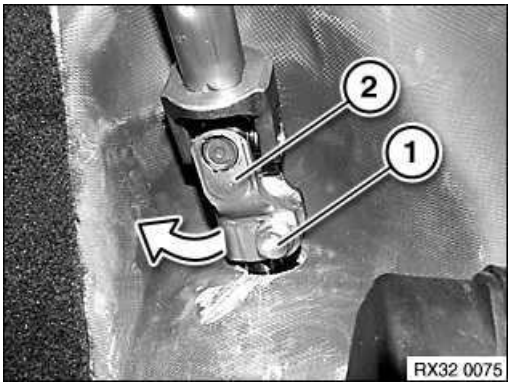
Risk of burning!



- Perform all work only on components that have cooled down.

cardiagn.com

- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).



16 – Releasing lower steering shaft from steering gear

- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

17 – Securing radiator on left and right

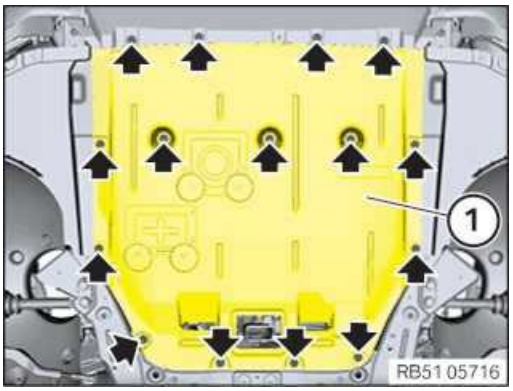
NOTICE

Perform the operations on the left and right side.

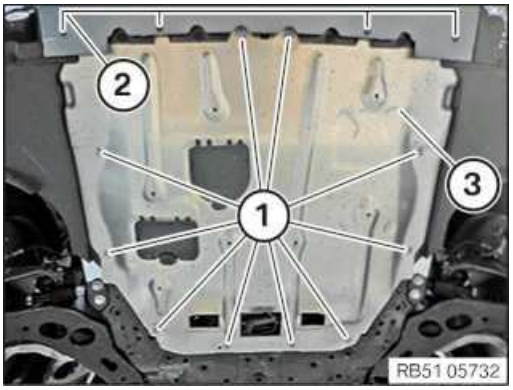
- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

▸ **Removing the wheel**



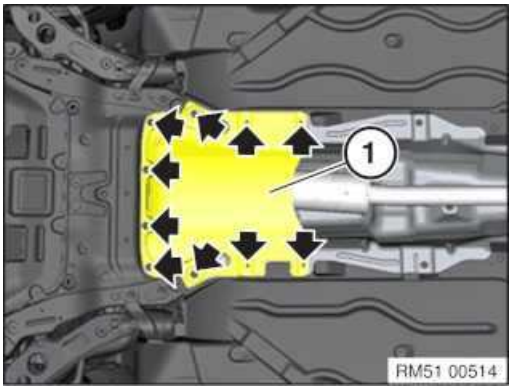
cardiagn.com



- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

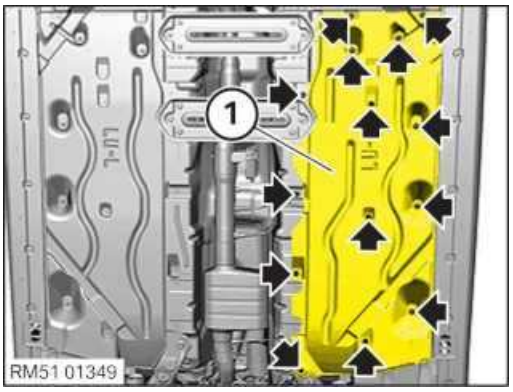
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).



20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

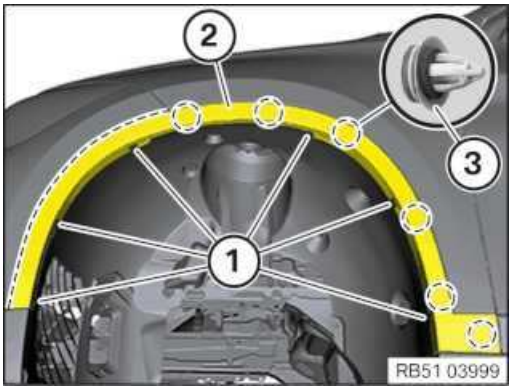
cardiagn.com

- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

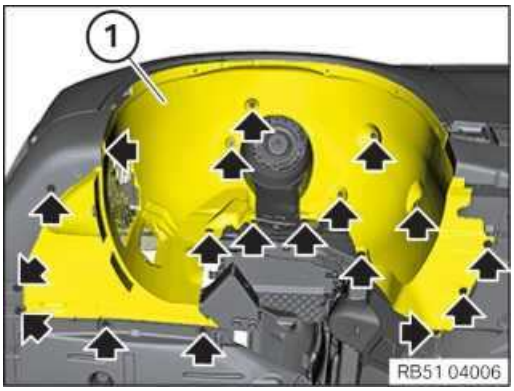
Perform the operations on the left and right side.



▸ **Remove the front wheel arch trim**

NOTICE

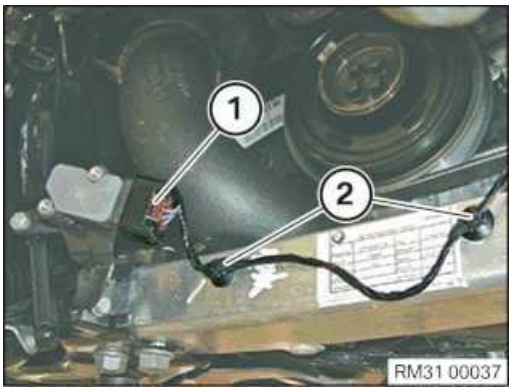
To provide a better overview: Schematic diagram with partially hidden components.



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

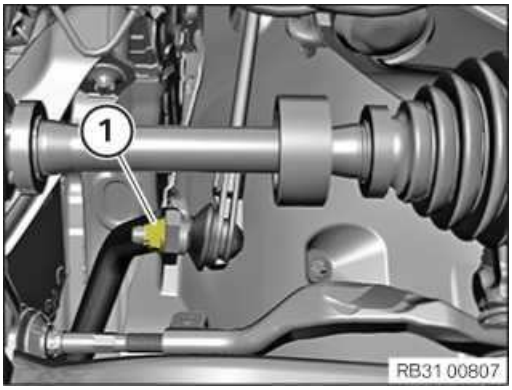


▸ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable

cardiagn.com



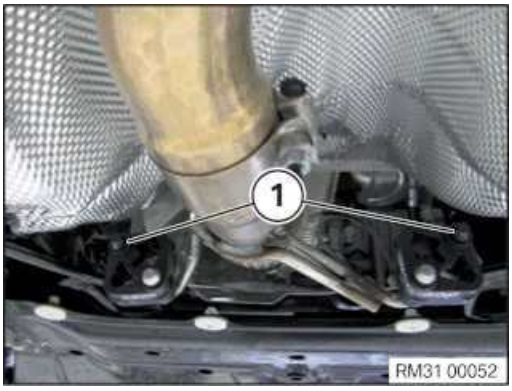
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

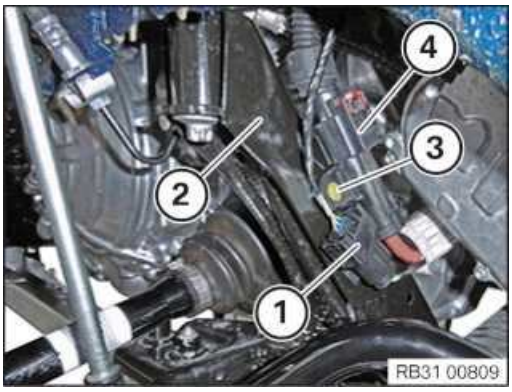


- Unfasten nut (1).

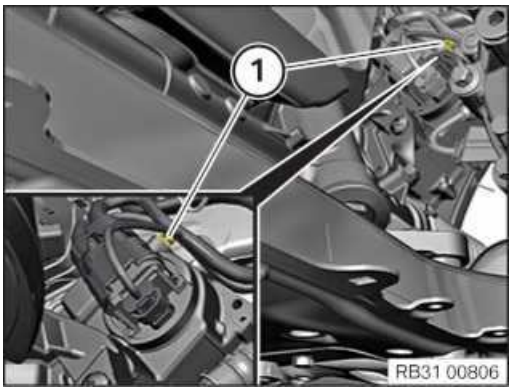
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

25 – Detaching rubber mount from front axle support

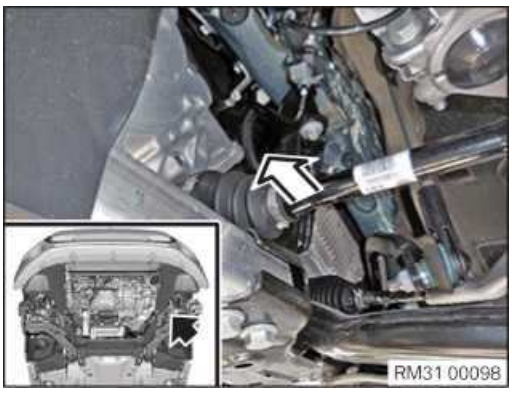


- Spray rubber mount (1) with lubricant and release from holder on front axle support.



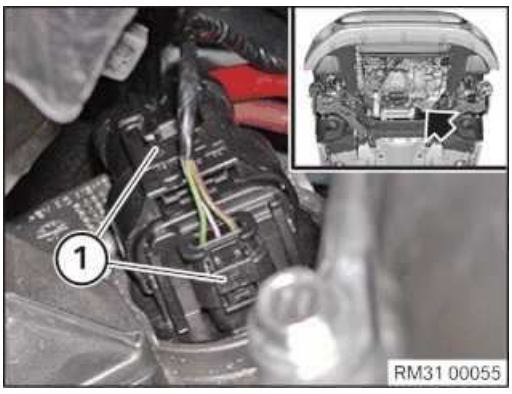
26 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

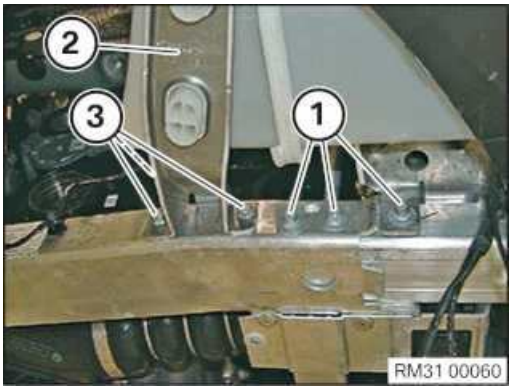


cardiagn.com

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

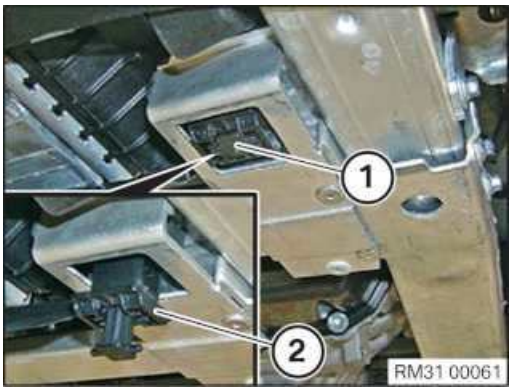


- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

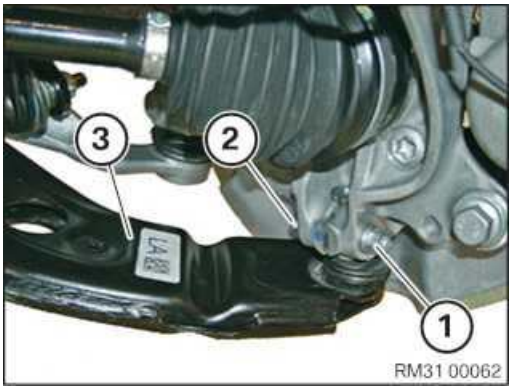
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

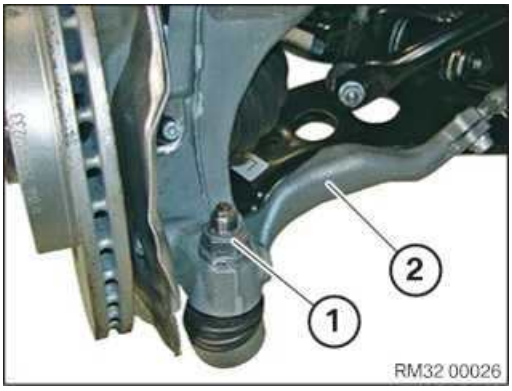
- Loosen screw (2) of the engine support (3) on the front axle (1).



NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

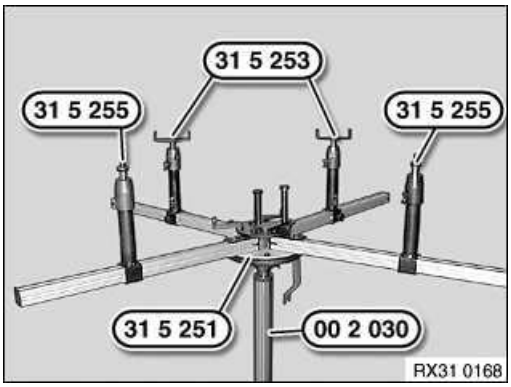


28 – Detaching and removing front axle completely

NOTICE

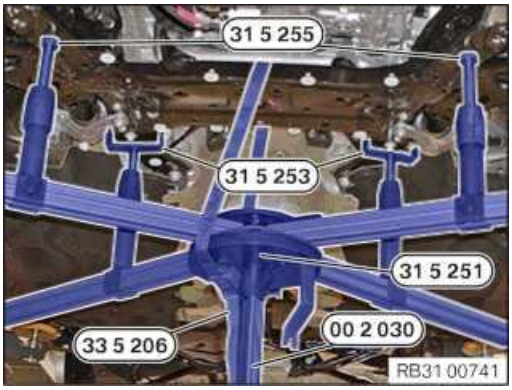
Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

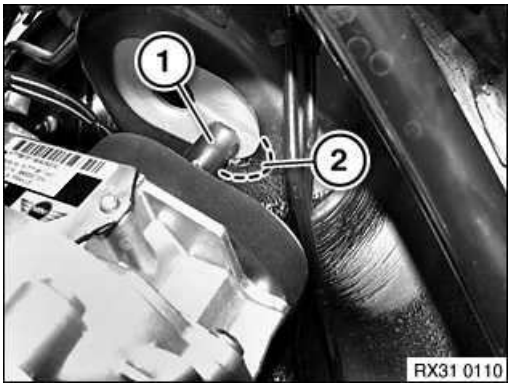
Perform the operations on the left and right side.



- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

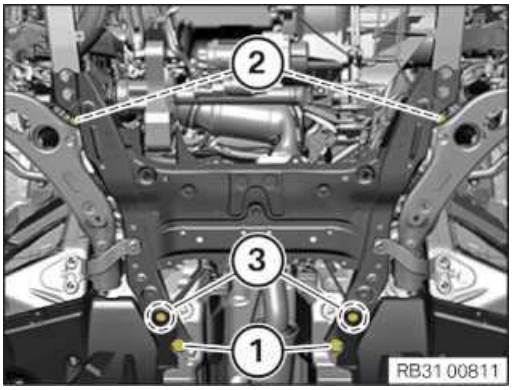


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



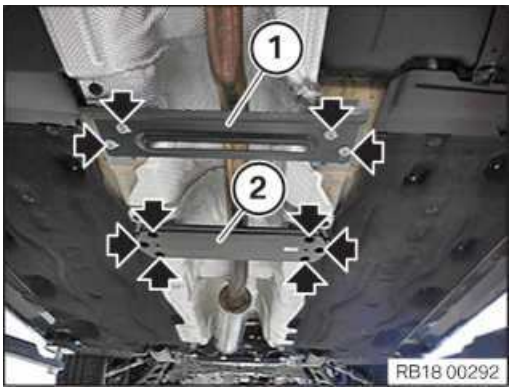
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.



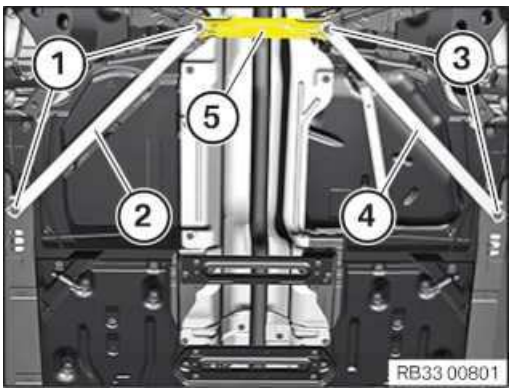
TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back

cardiagn.com



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

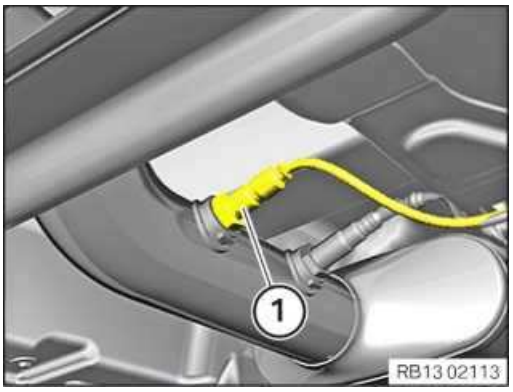
31 – Remove exhaust system

WARNING

Hot surfaces.

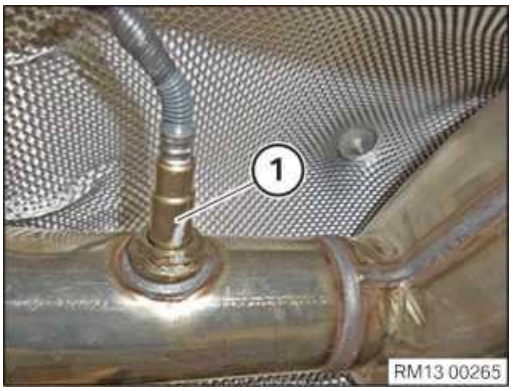
Risk of burning!

- Perform all work only on components that have cooled down.



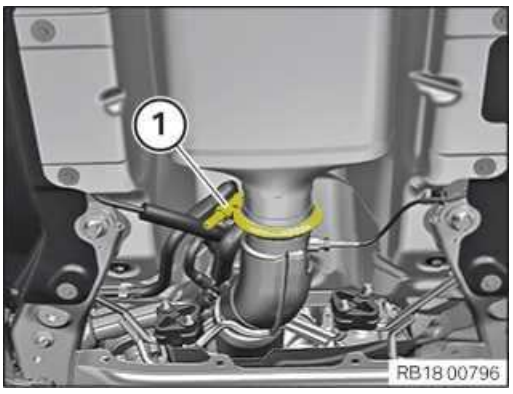
CAUTION

Heavy component.

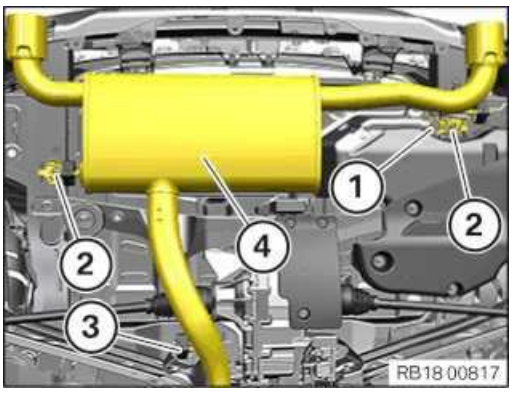


Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

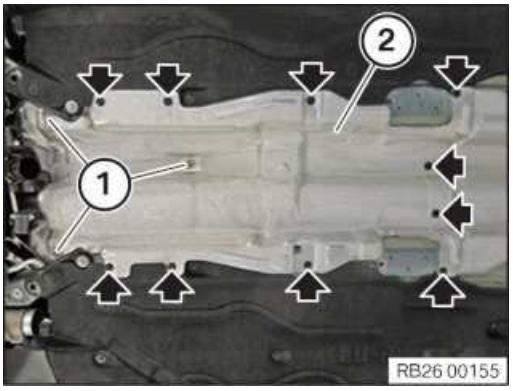


cardiagn.com



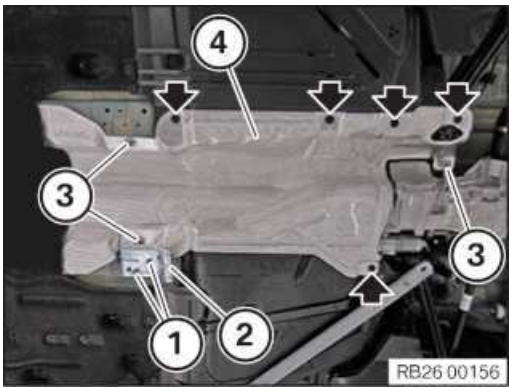
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.



32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

cardiagn.com

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

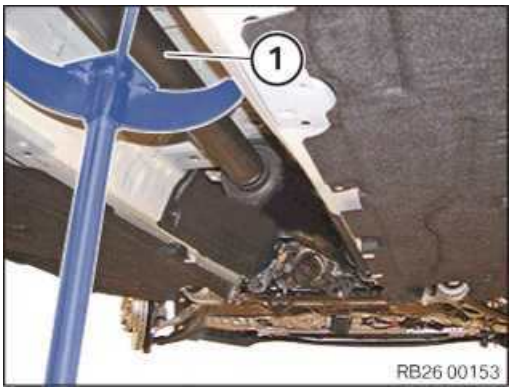
Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

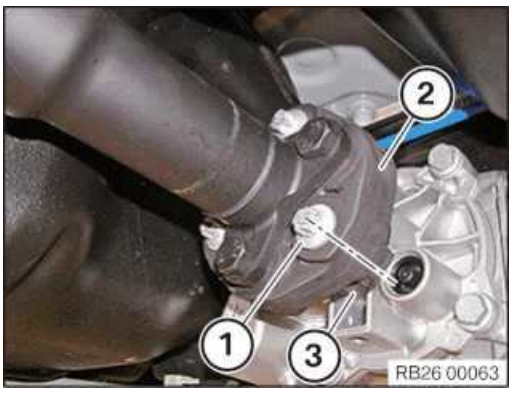
Damage to propeller shaft during removal.



Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.

- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

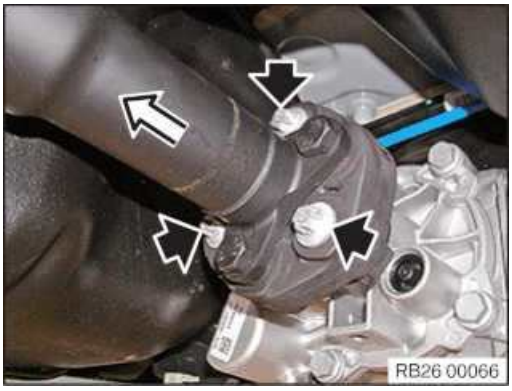
- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.



cardiagn.com

- Always support the propeller shaft (1) with a conventional jack.

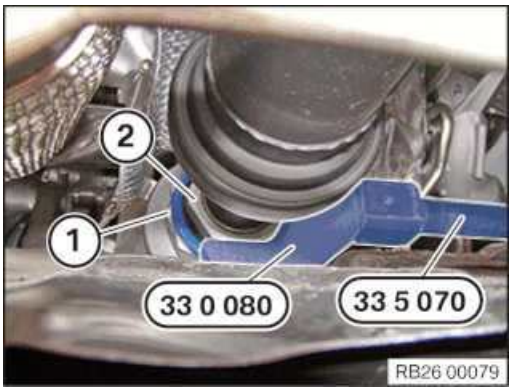
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.



TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

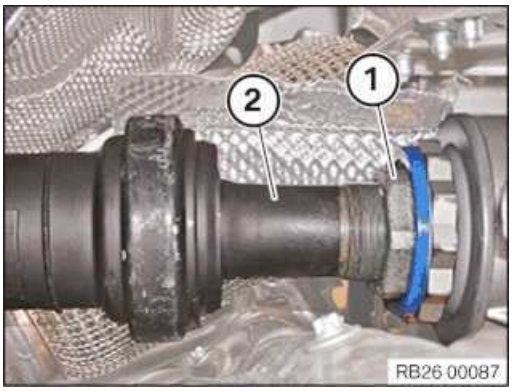
cardiagn.com

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

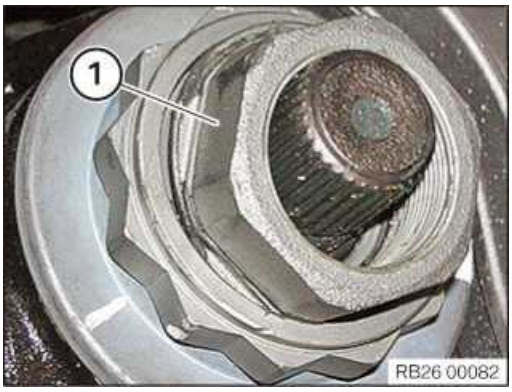


- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.

- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

cardiagn.com

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

RISK OF DAMAGE

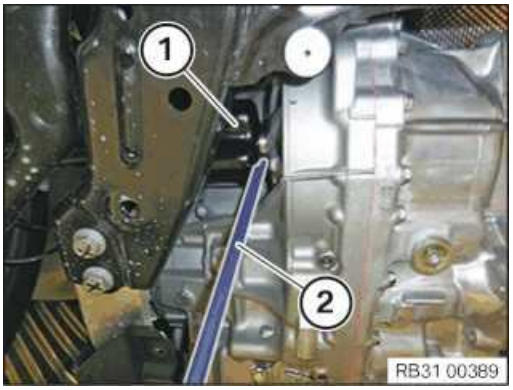
Electrostatic discharge.

Damage to or destruction of electrical components.

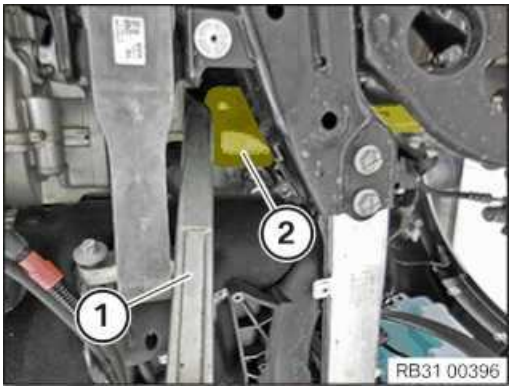
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

cardiagn.com



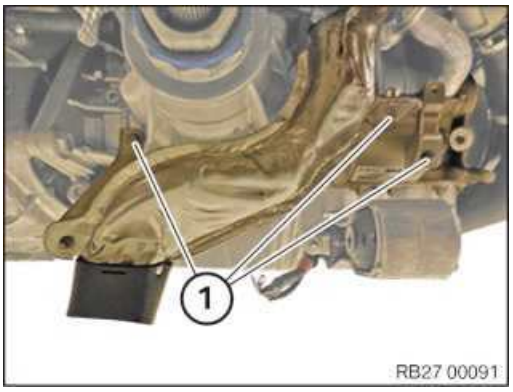
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



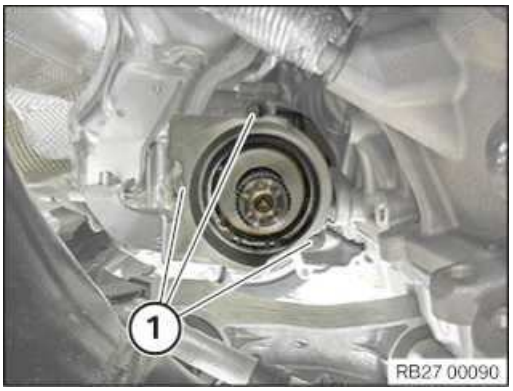
- Loosen screws (1).
- Feed out starter motor and remove.

36 – Partially removing the left output shaft

- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

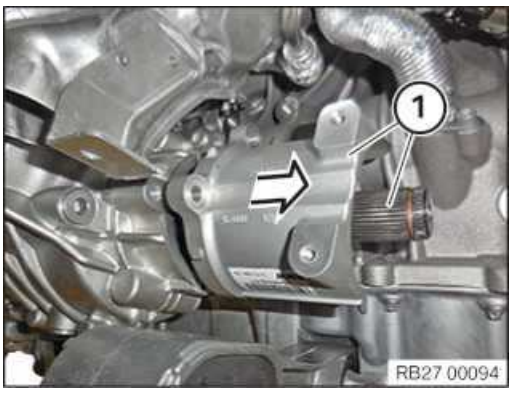


37 – Partially removing right output shaft



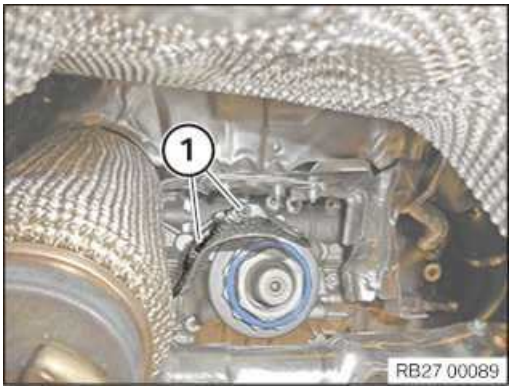
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).

38 – Remove the intermediate shaft with the support tube

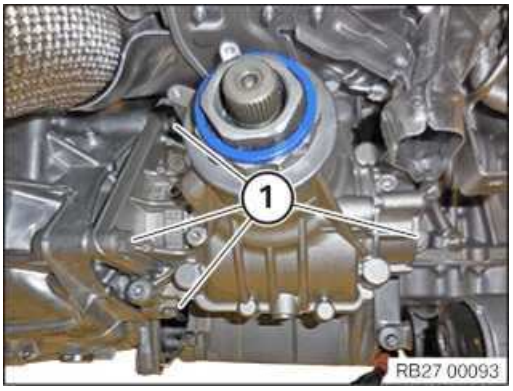


cardiagn.com

- With air duct installation: Loosen screws (1).
- Remove air duct



- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

40 – Remove the monitoring oxygen sensor

cardiagn.com

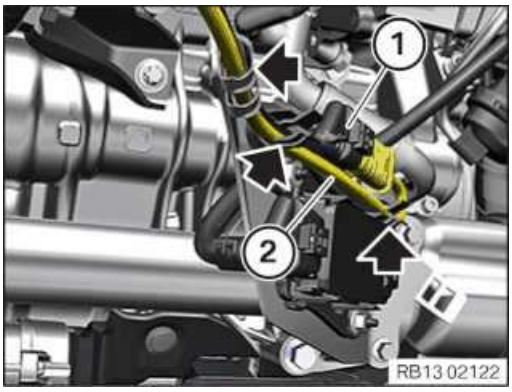
WARNING

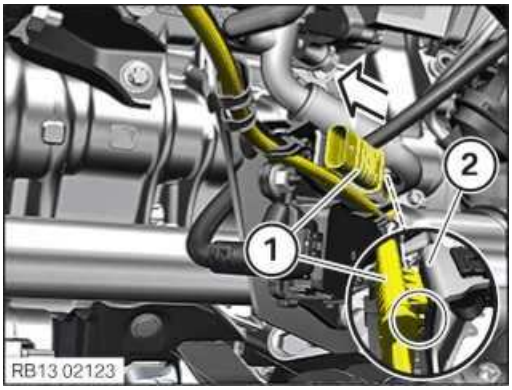
Hot surfaces.

Risk of burning!



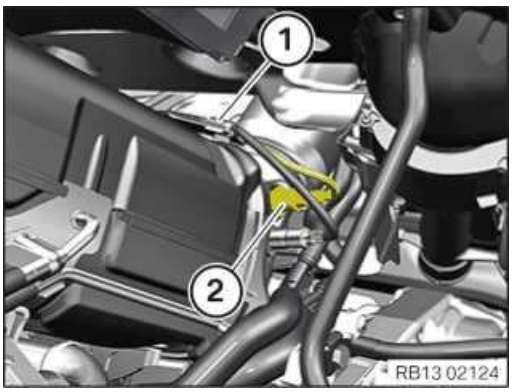
- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

cardiagn.com

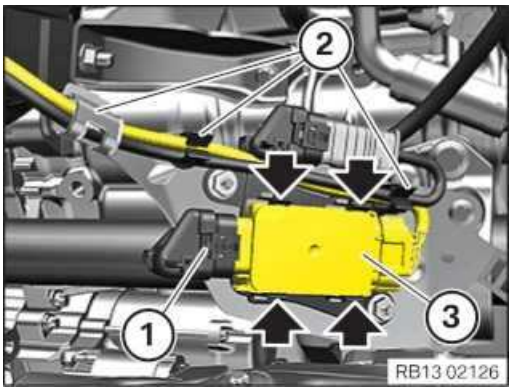
WARNING

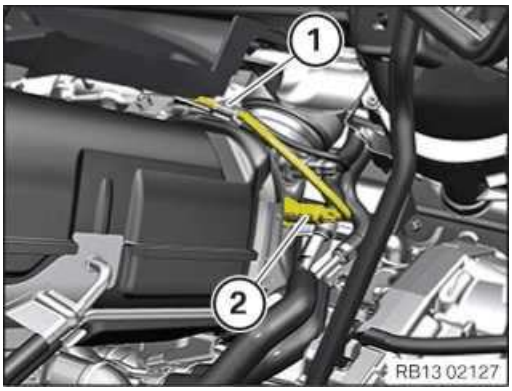
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

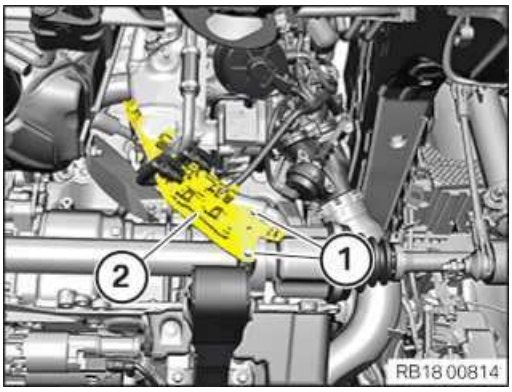
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

cardiagn.com

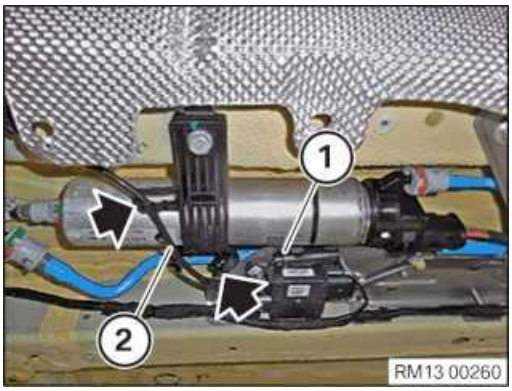
- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!



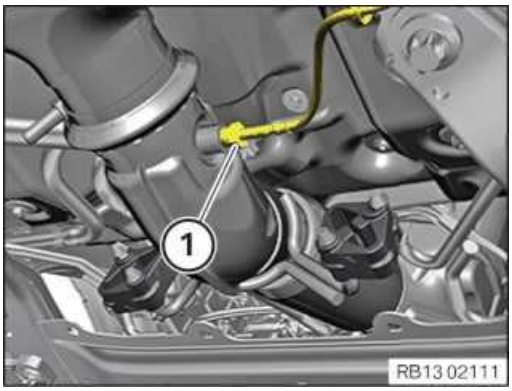
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

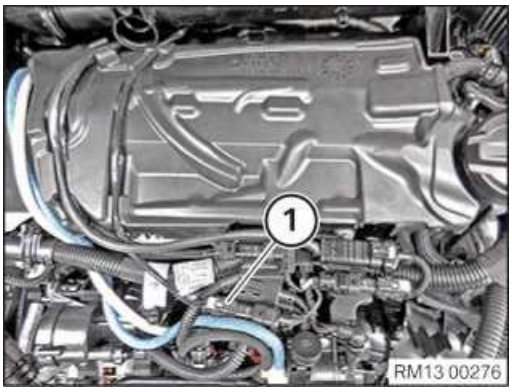
44 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

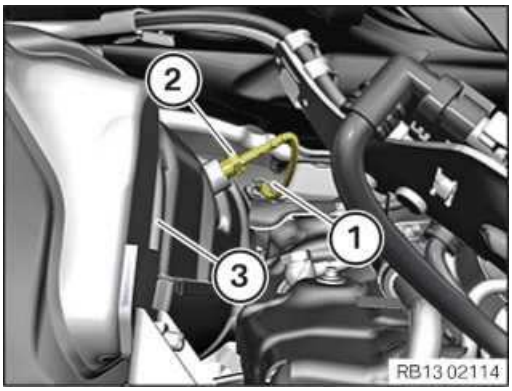
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

45 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

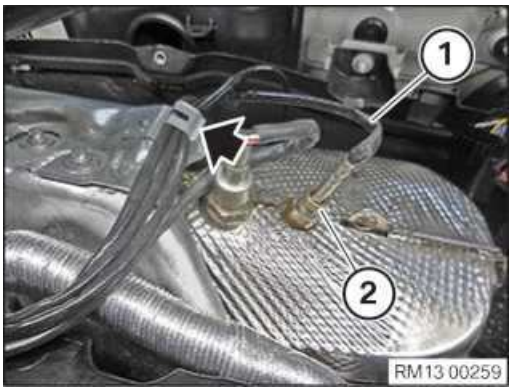
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

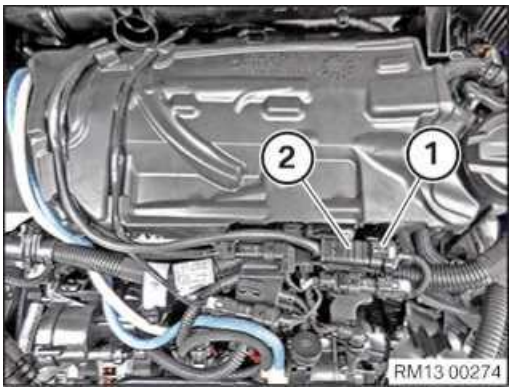
46 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

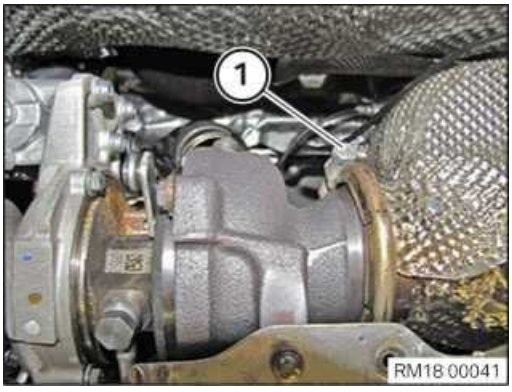
- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

47 – Removing the diesel particulate filter

WARNING

Hot surfaces.

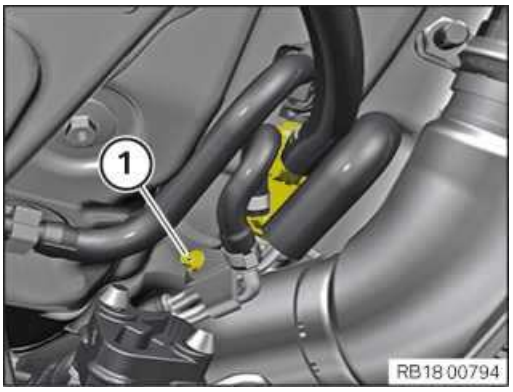
Risk of burning!



- Perform all work only on components that have cooled down.

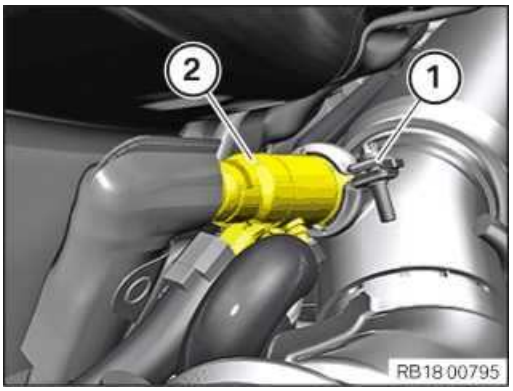
CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com

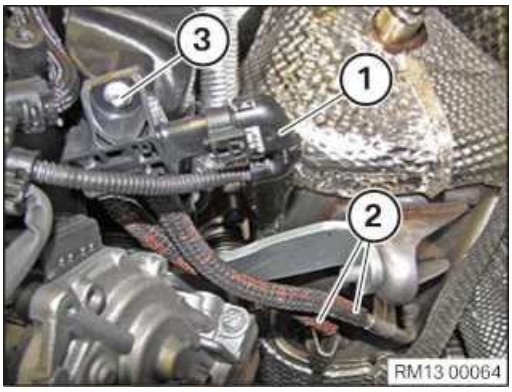
- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▸ **Remove differential pressure sensor**



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

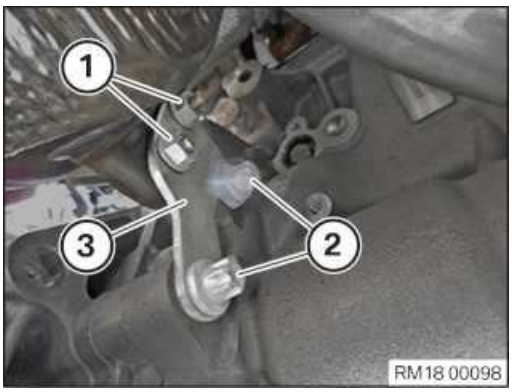
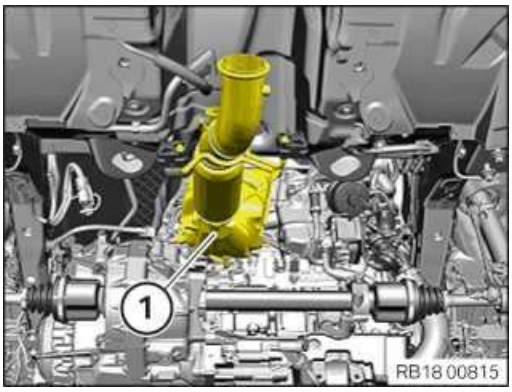
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.



- Loosen nuts (1).

- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

cardiagn.com

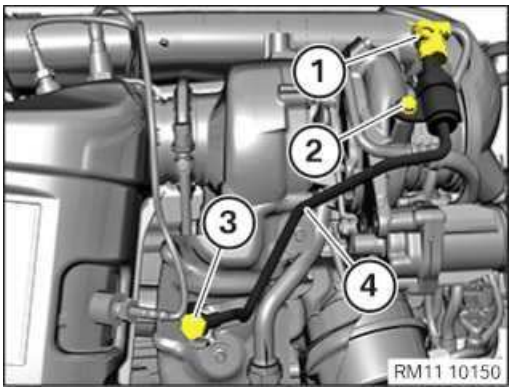
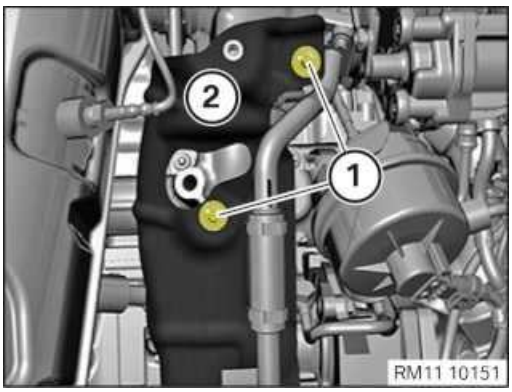
- Feed out diesel particulate filter (1) toward the bottom and remove.



48 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING



Hot surfaces.

Risk of burning!

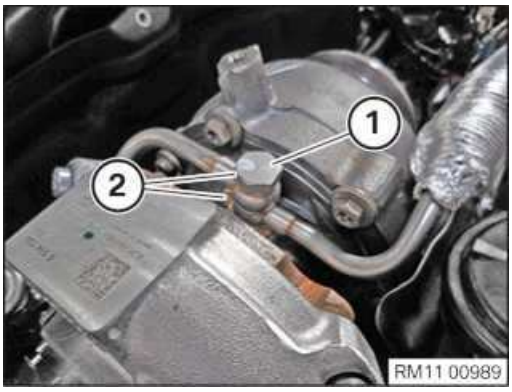
- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).

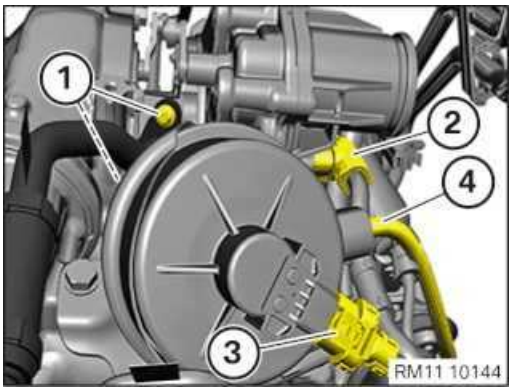
MAIN WORK

49 – Removing the low-pressure stage turbocharger



WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

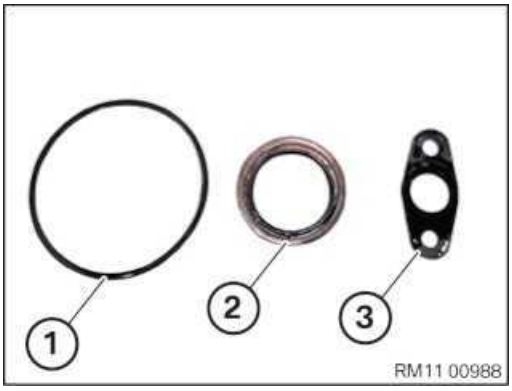
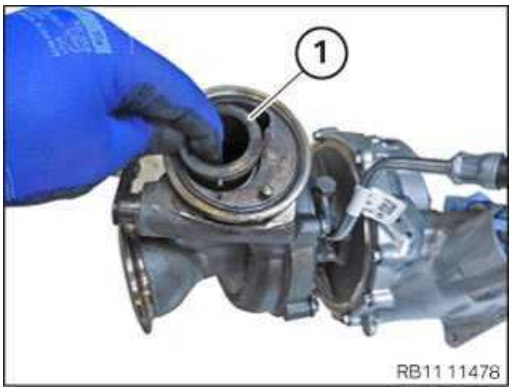
- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.



- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.

- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).



- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

cardiagn.com

- Remove the spacer ring (1).

50 – When replacing the exhaust turbocharger

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

51 – Prepare for the installation of the exhaust turbocharger

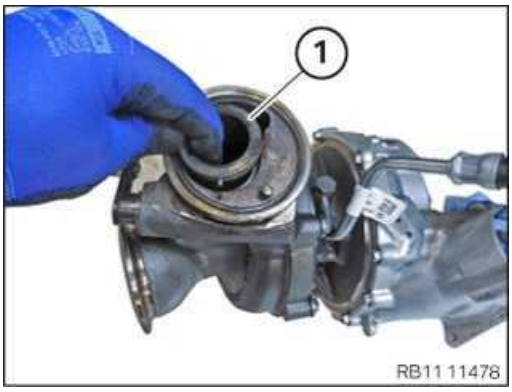
- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

52 – Installing the low-pressure stage turbocharger

RISK OF DAMAGE

Damage to the surface.



The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.

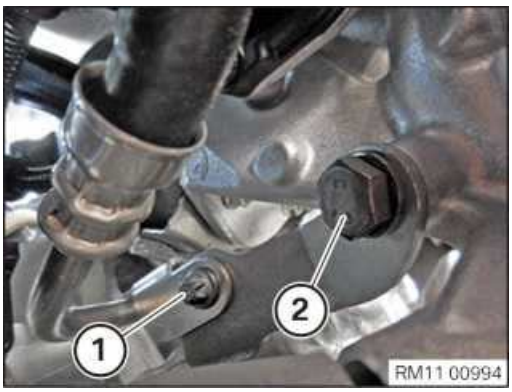
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

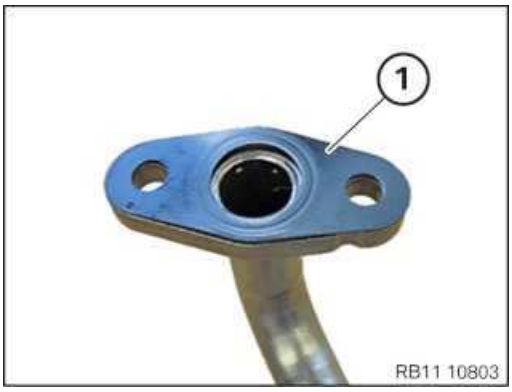
Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

- Tighten down screw (1).

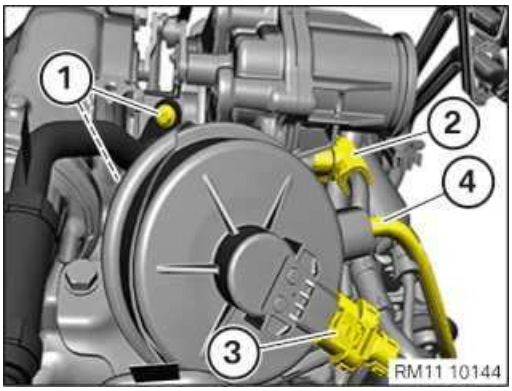
Oil feed line to bracket



Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

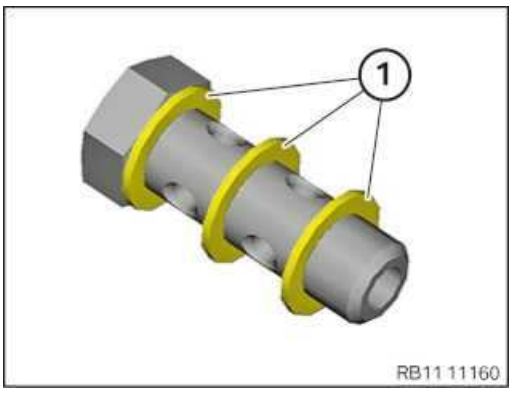


M8x16		Tightening torque	22 Nm

cardiagn.com

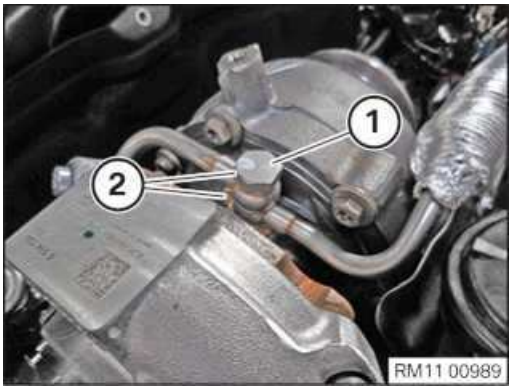
- Renew seal (1) on the oil return line.

  Parts: Gasket



- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger



M6x12		Tightening torque	8 Nm

- Connect and lock connectors (2) and (3).

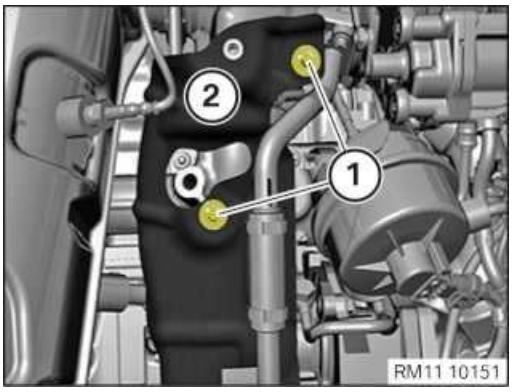
  The locks must engage audibly.
- Connect vacuum hose (4).

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.

POSTPROCESSES

53 – Installing heat shield on exhaust turbocharger at bottom

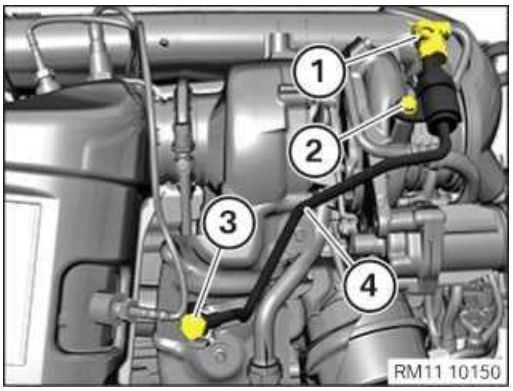


WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



cardiagn.com

- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

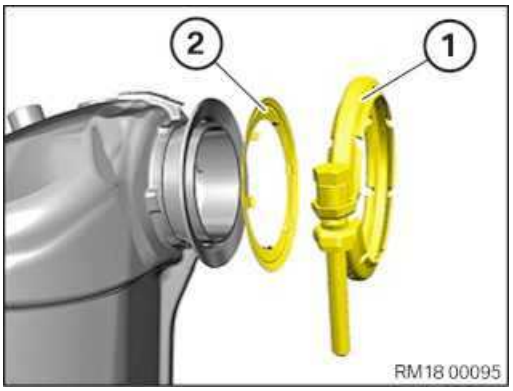
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



54 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

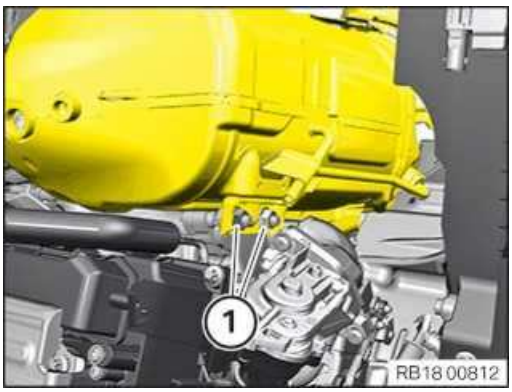
- Remove and install heavy components with the aid of another person/other persons.

- Renew the V-clip (1).

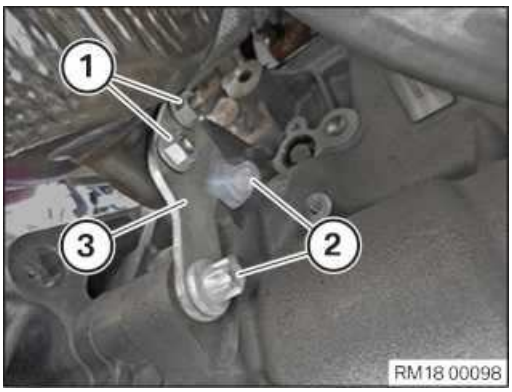
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

cardiagn.com

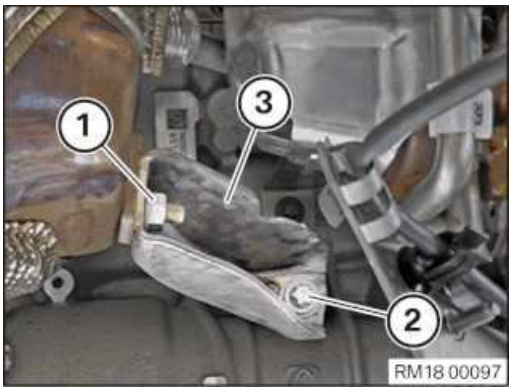


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

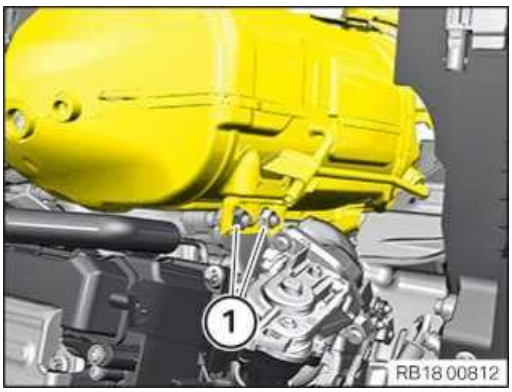


- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

cardiagn.com

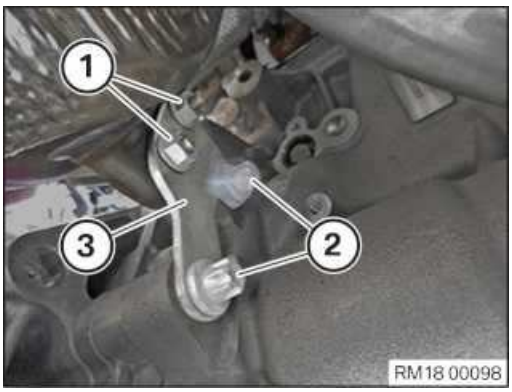
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).



- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

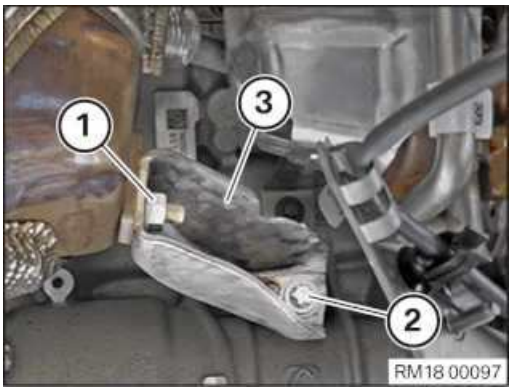
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).

Diesel particulate filter holder to gearbox



M12x75		Tightening torque	66 Nm

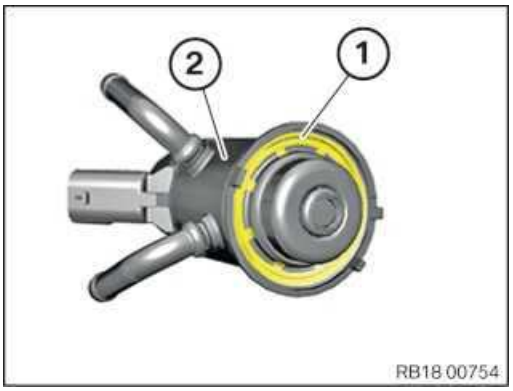
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com

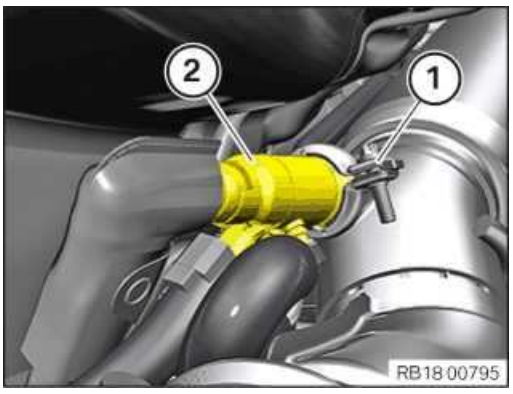
- Tighten down screw (2).



Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

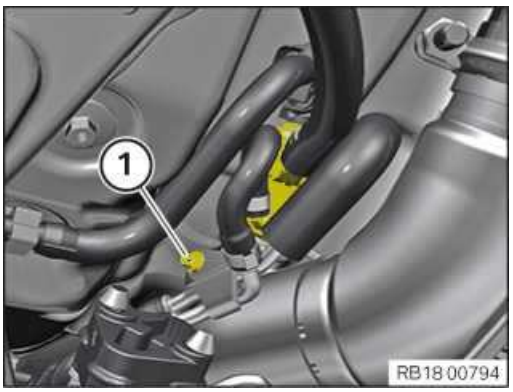


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

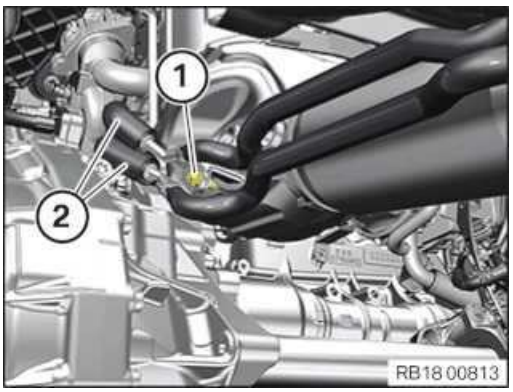
  Parts: Sealing ring



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

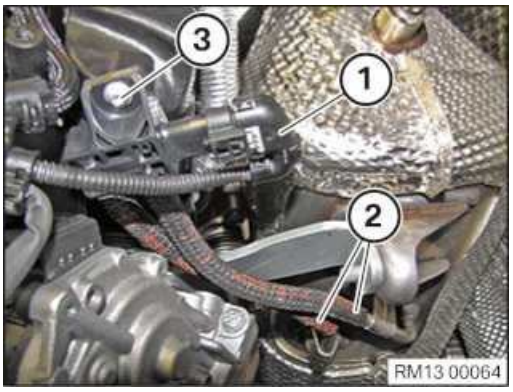


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▸ **Installing differential pressure sensor**

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

55 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

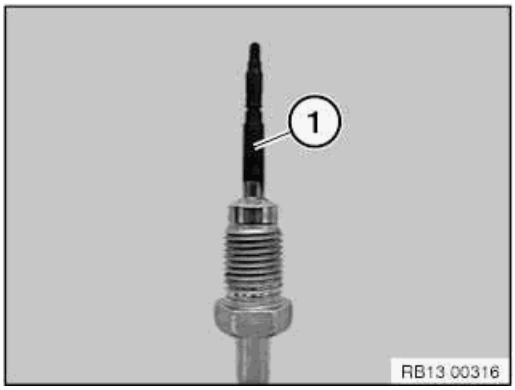
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

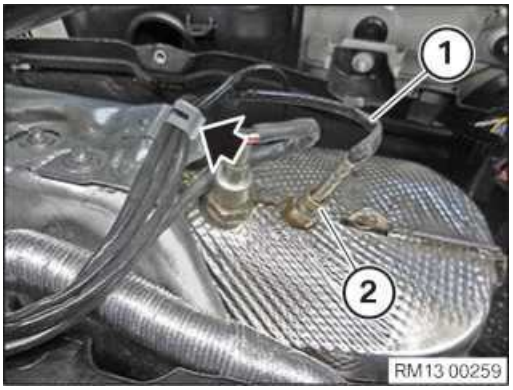


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

56 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

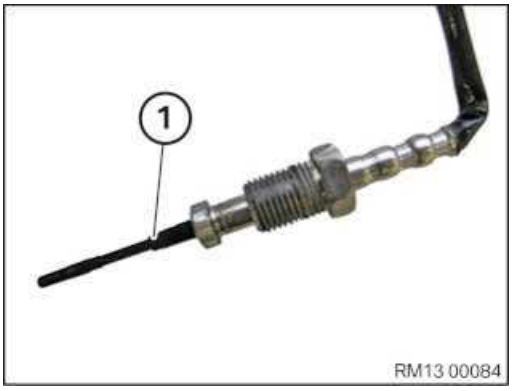
- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

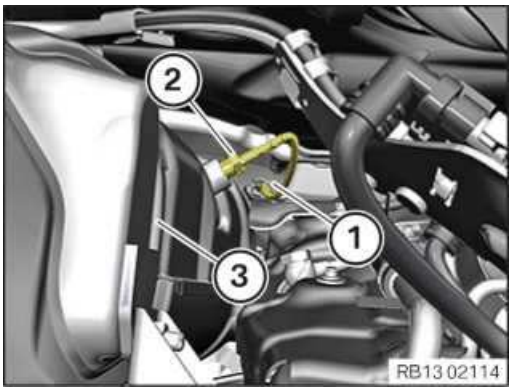
  The connector (1) must engage audibly.



57 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

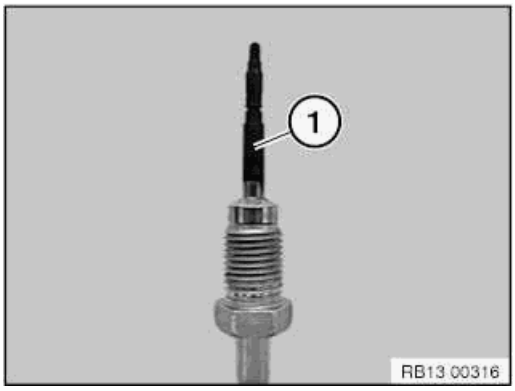
- Make sure the gauge tip (1) is not damaged during installation.

cardiagn.com

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

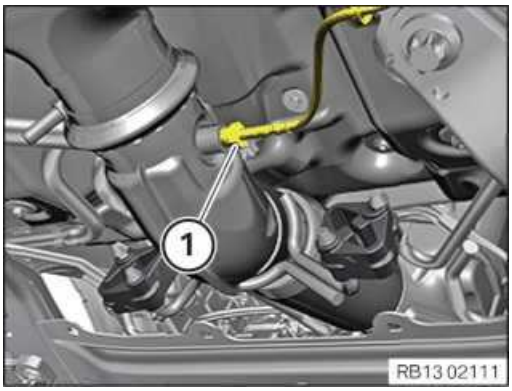


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

58 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

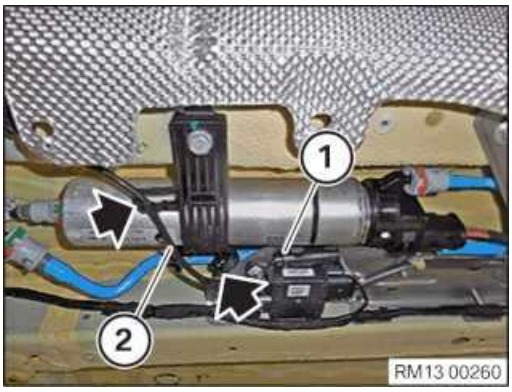
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

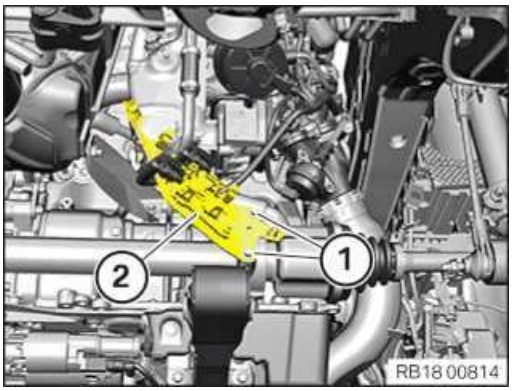
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

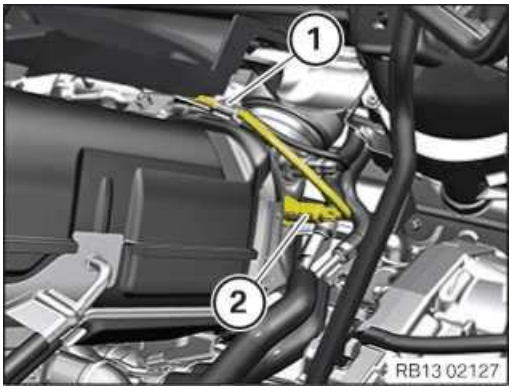


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

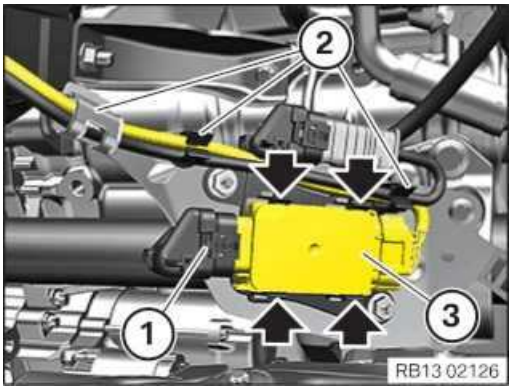
59 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



60 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

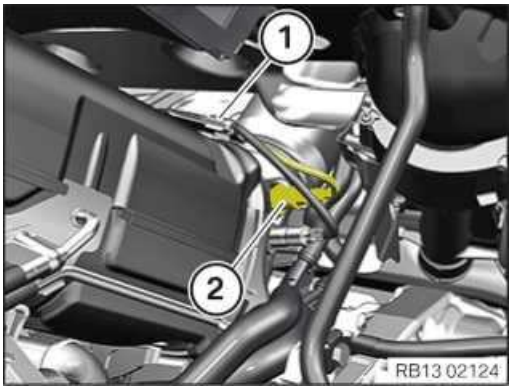
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

61 – Install the monitoring sensor

cardiagn.com



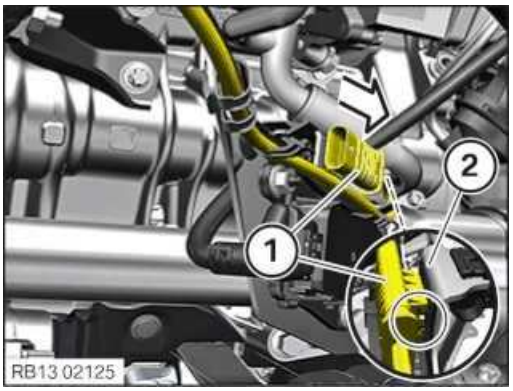
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

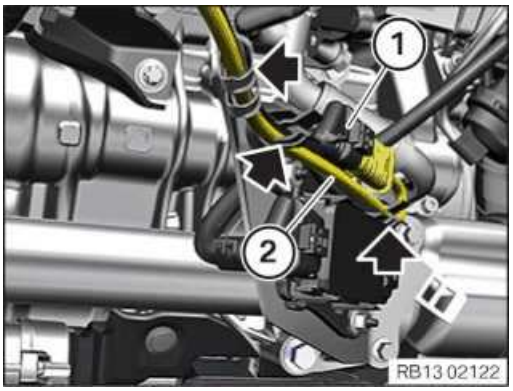
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

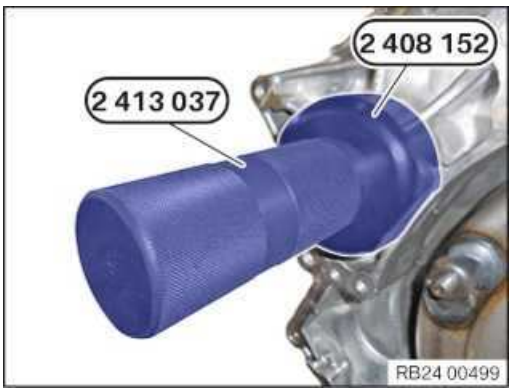
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

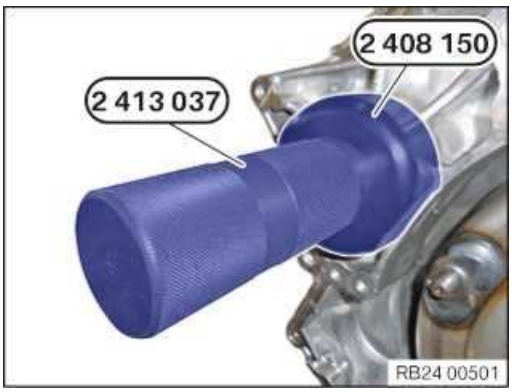
62 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

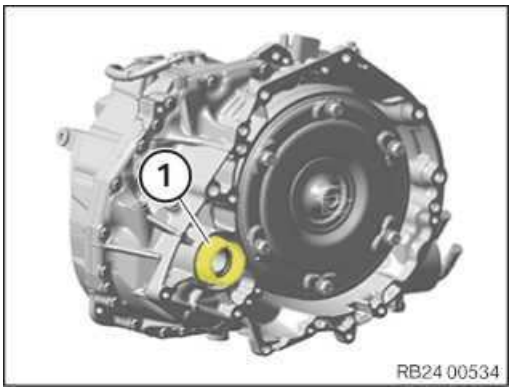


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

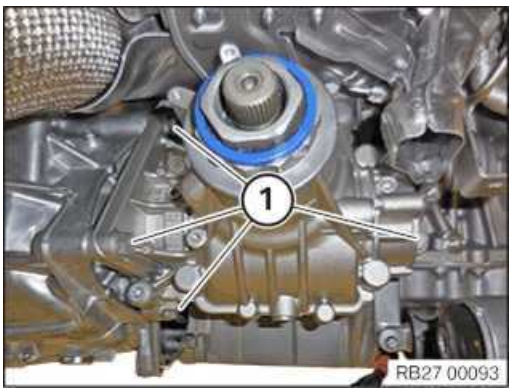
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

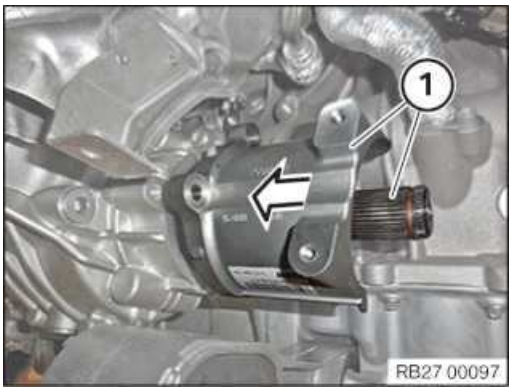
Technically suitable transfer box and electrical transmission oils	

Main group 27

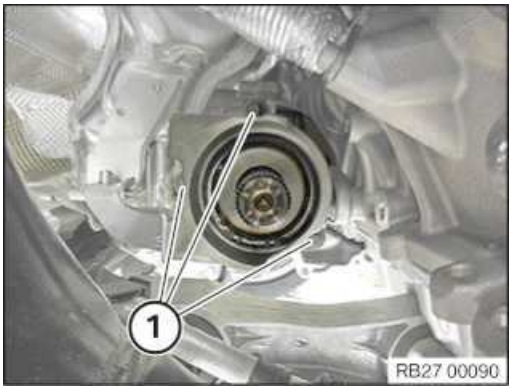
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



63 – Install the intermediate shaft with the support tube



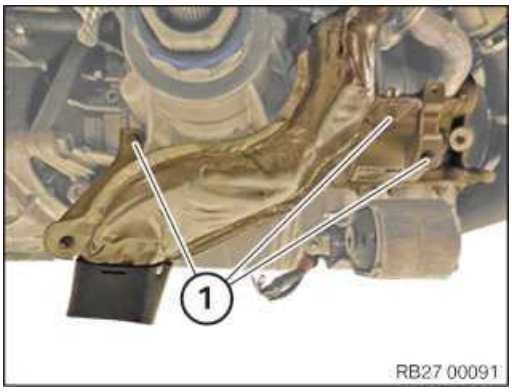
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

64 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

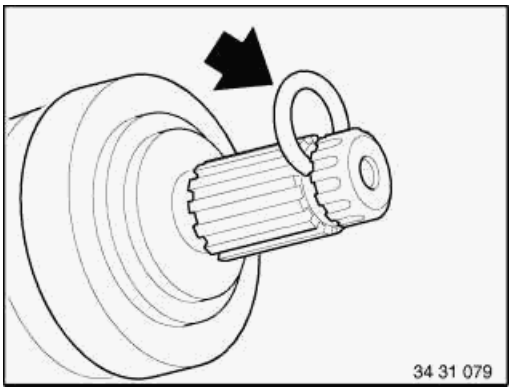
65 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

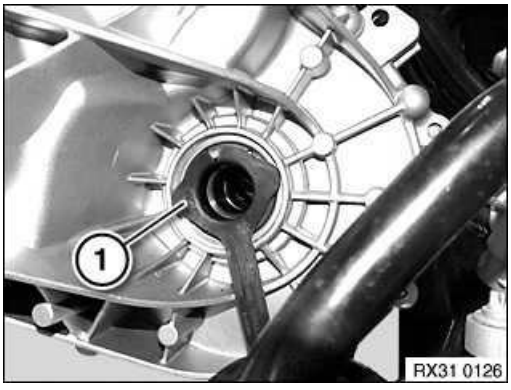
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

66 – Partially installing the left output shaft



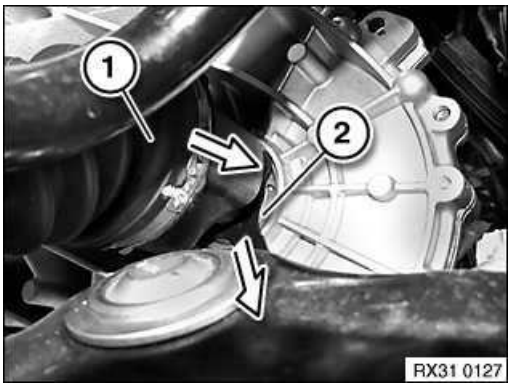
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

67 – Install propeller shaft.

CAUTION

Component with heavy weight.

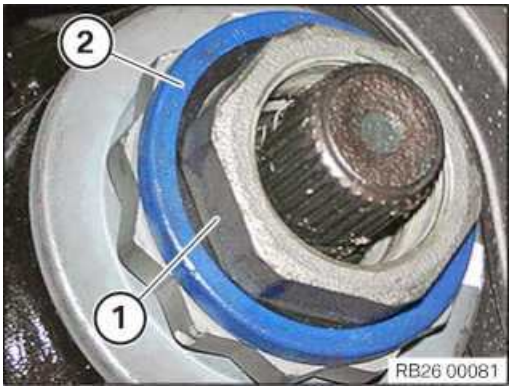
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

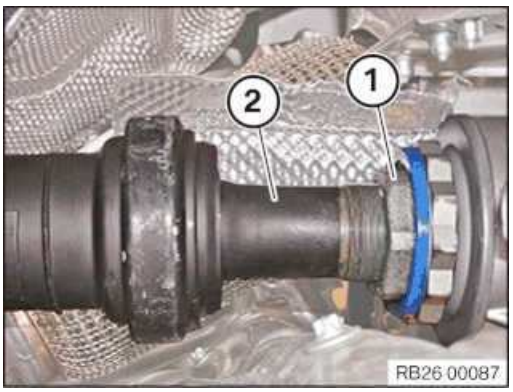
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

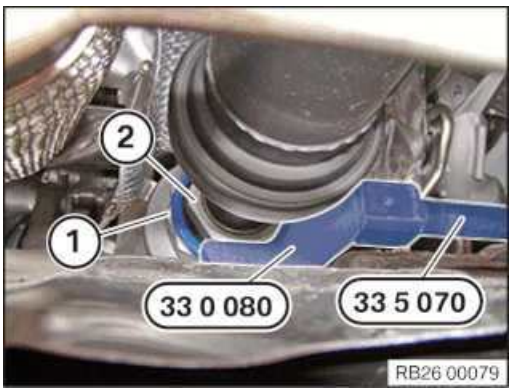
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

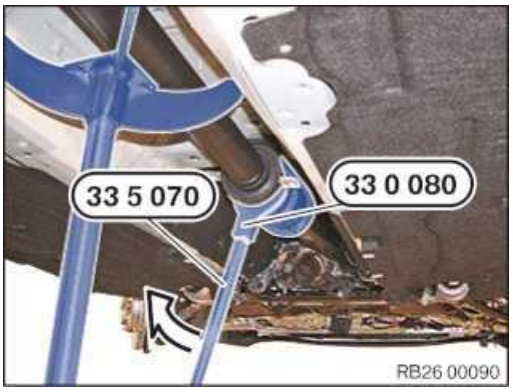
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

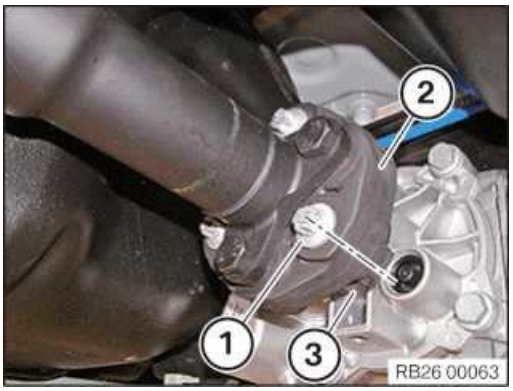


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

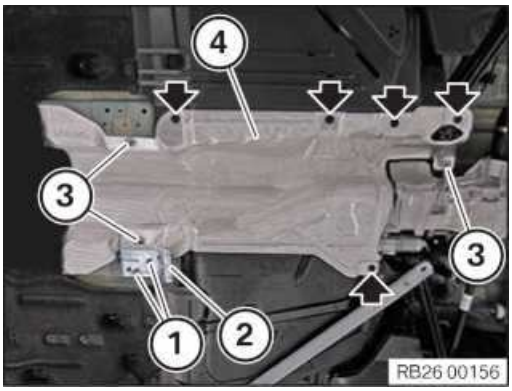
- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

- Tighten the screws (1).

Centre mount to body



M8		Tightening torque	19 Nm

cardiagn.com

- Guide the special too l out between the front and rear propeller shaft and remove.

68 – Installing the rear heat shield

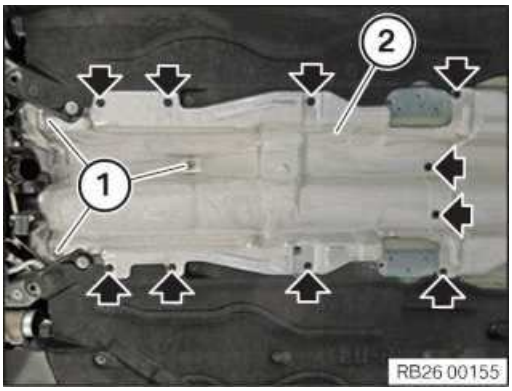
- Insert and install the heat shield (4).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (3).

Heat shield to body



Bolts/nut		Tightening torque	3 Nm

- Insert and install the holder (2).
- Tighten the screws (1).

Bracket to body

M8		Tightening torque	21 Nm

69 – Install the front heat shield

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

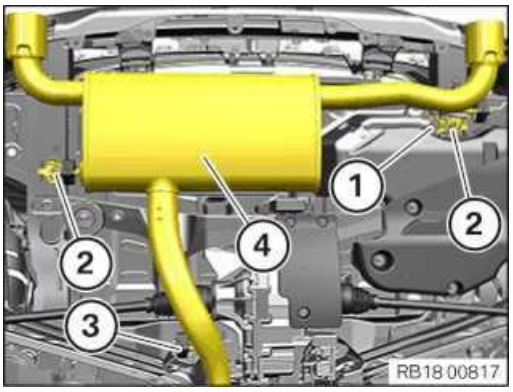
70 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.



cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

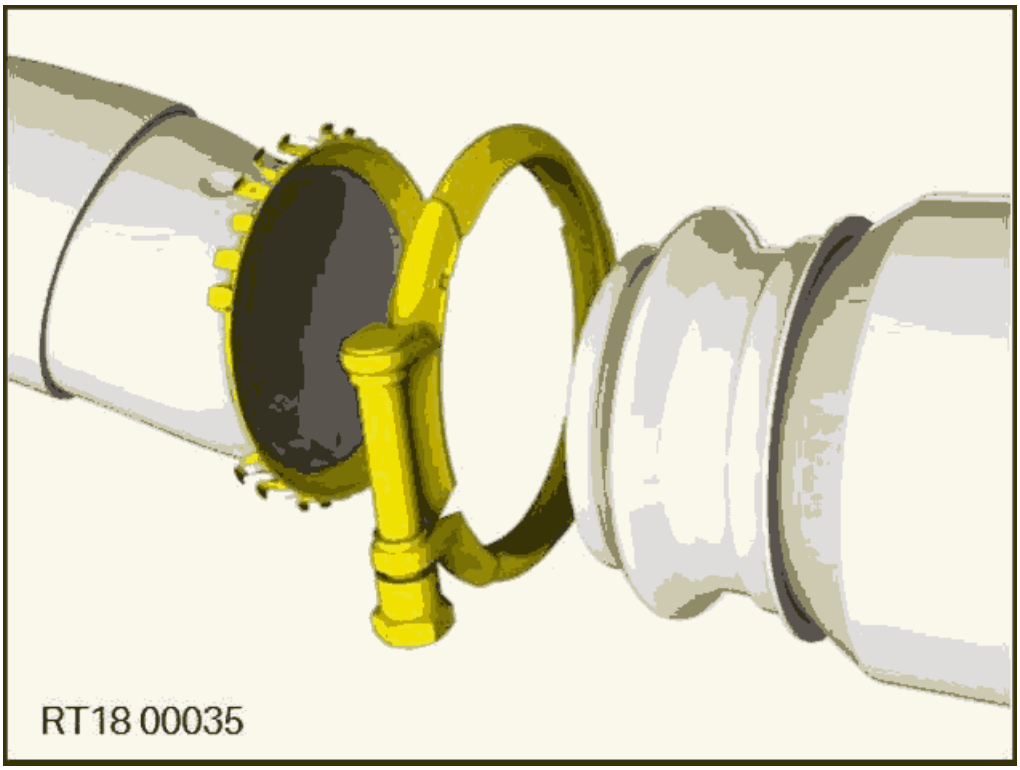
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

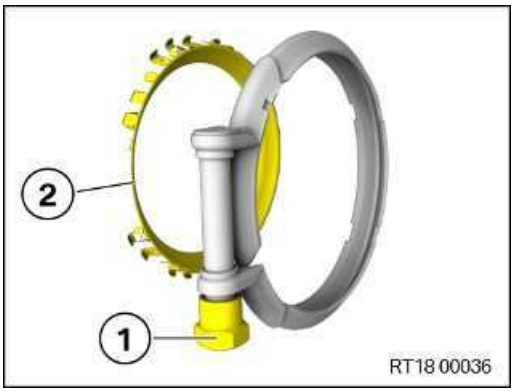
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



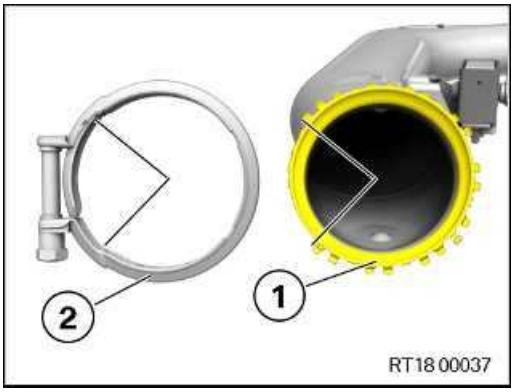
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



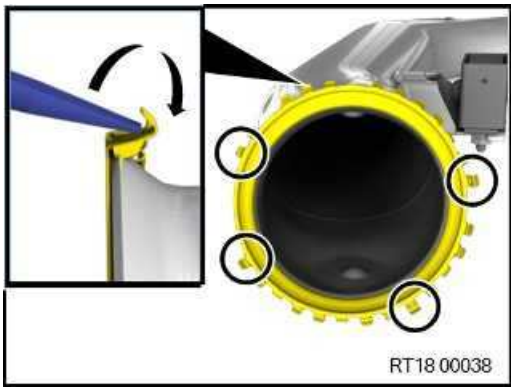
- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**

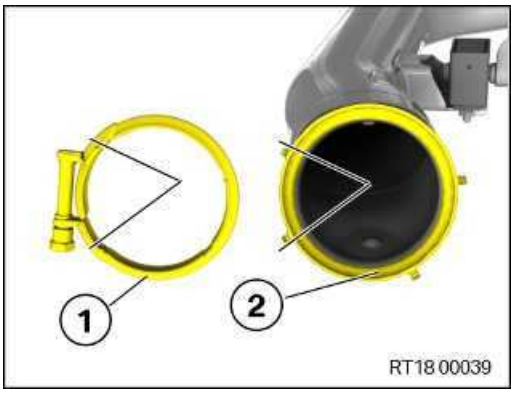


V-band clamp

cardiagn.com



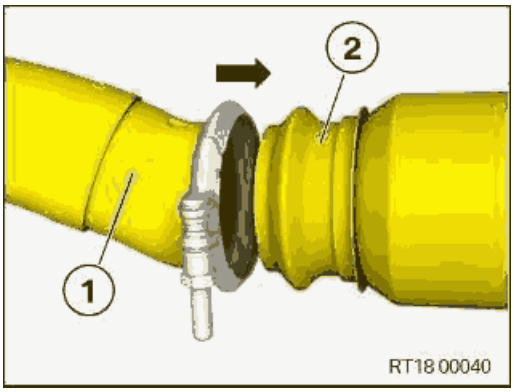
- Unscrew the nut (1) and remove the sealing ring (2).



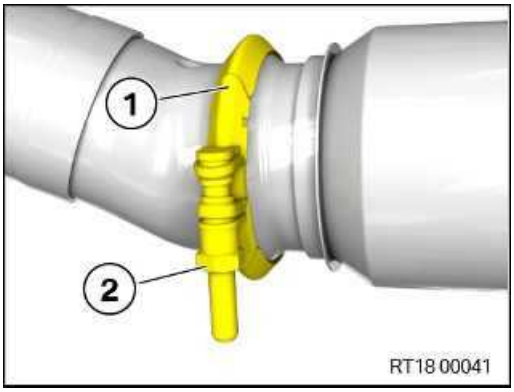
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

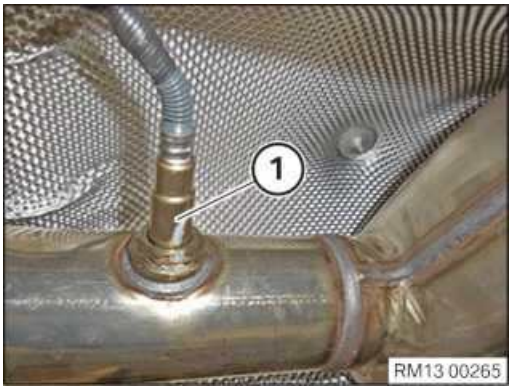


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

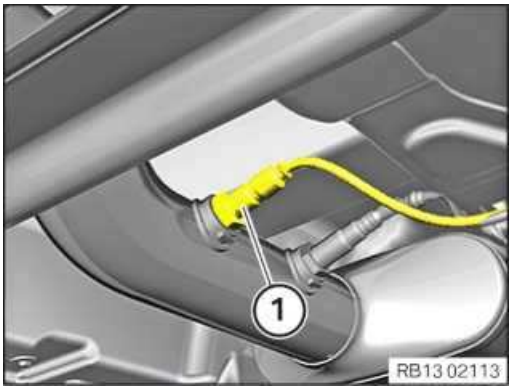
cardiagn.com



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

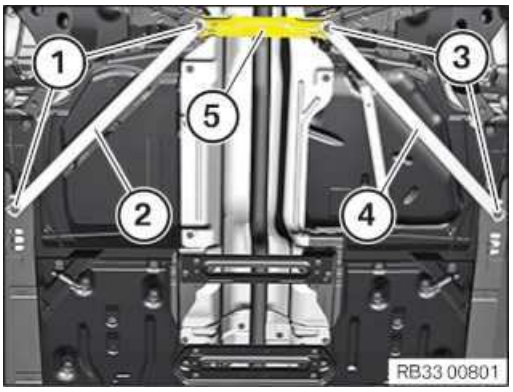


V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm



- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

71 – Install the cross-member with torsion struts

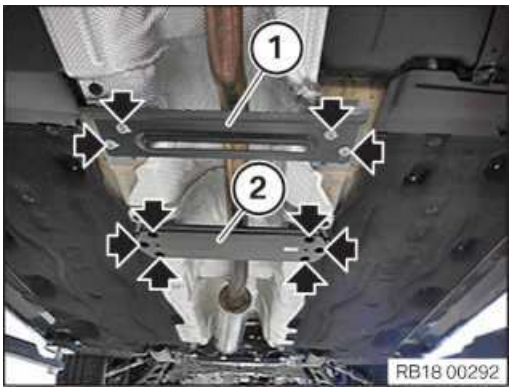
cardiagn.com

- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

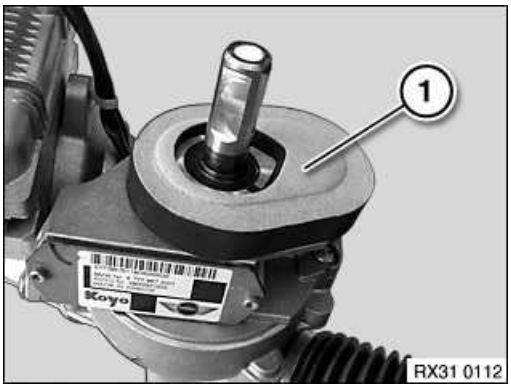
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

72 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

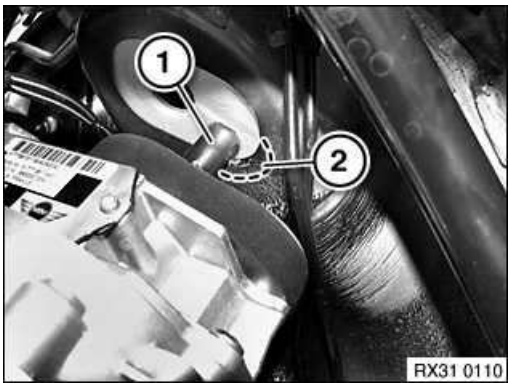


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

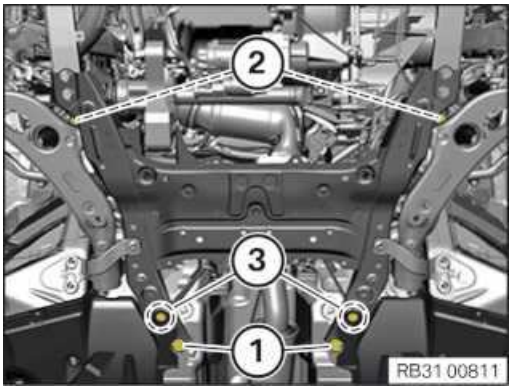


73 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

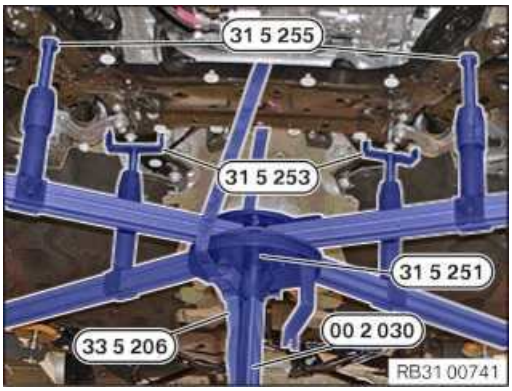
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

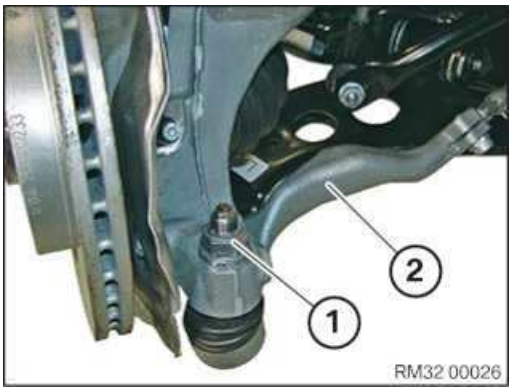
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



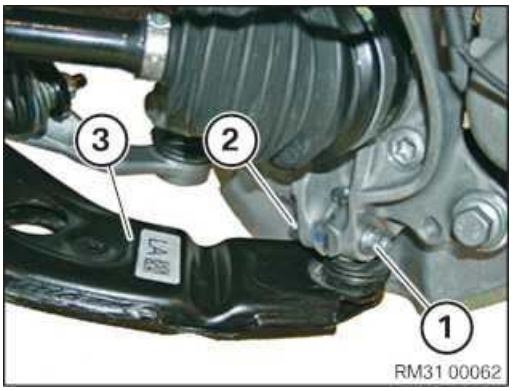
Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

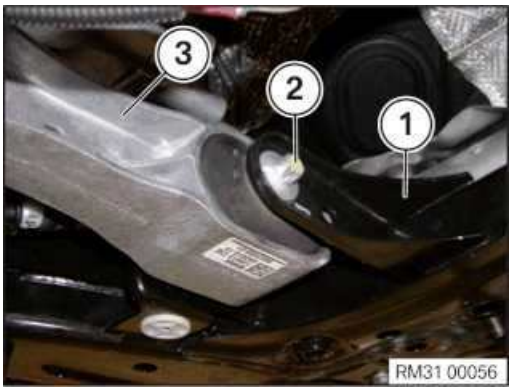
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

74 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

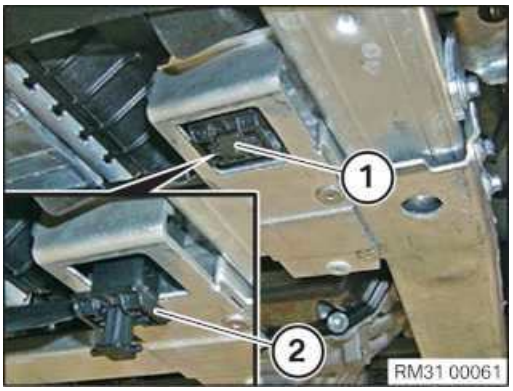


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

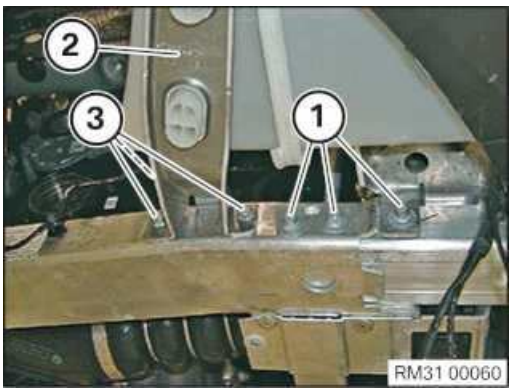
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



cardiagn.com

- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

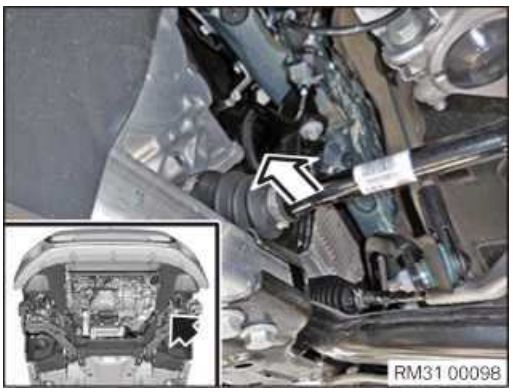
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

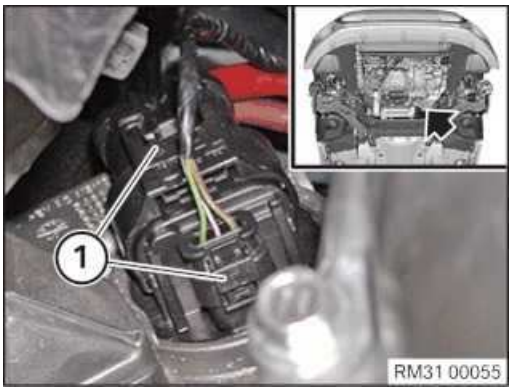


Perform the operations on the left and right side.

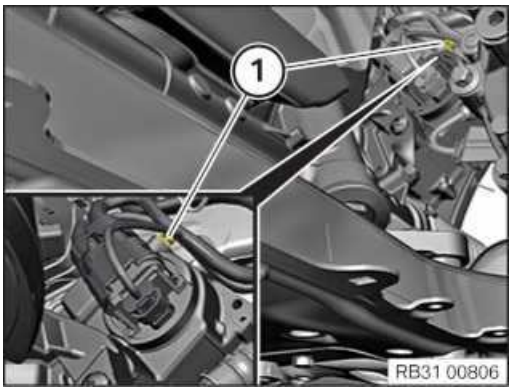
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



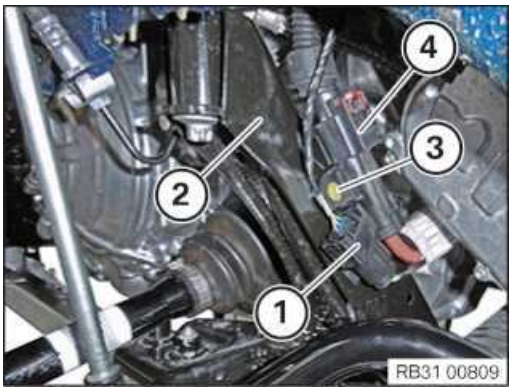
75 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

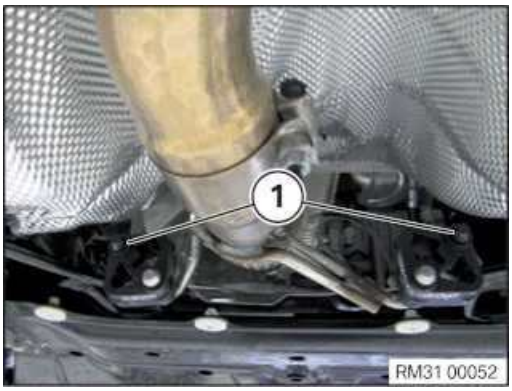
cardiagn.com



- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

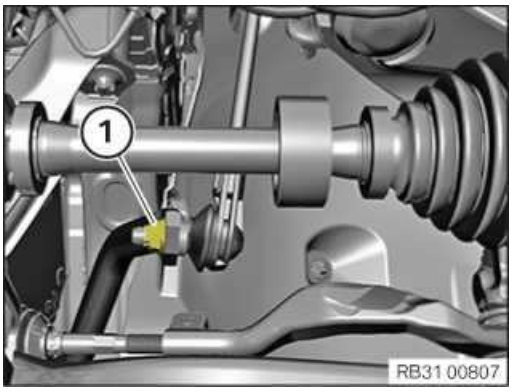
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

76 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



77 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

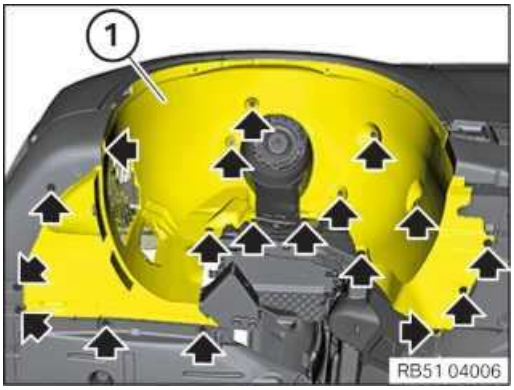
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

78 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

79 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

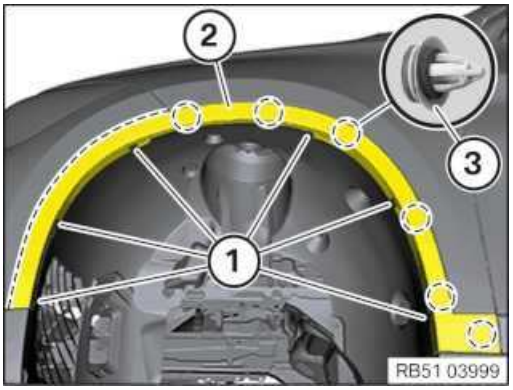
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

80 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

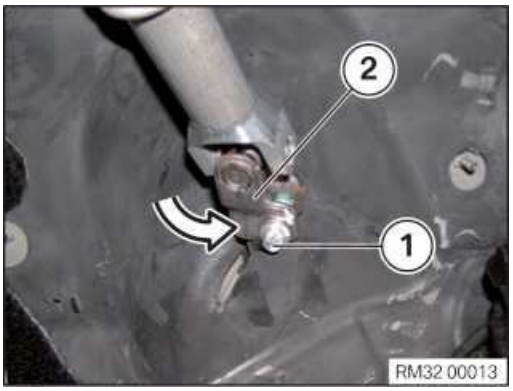
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

81 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

82 – Secure the steering shaft at the bottom on the steering gear

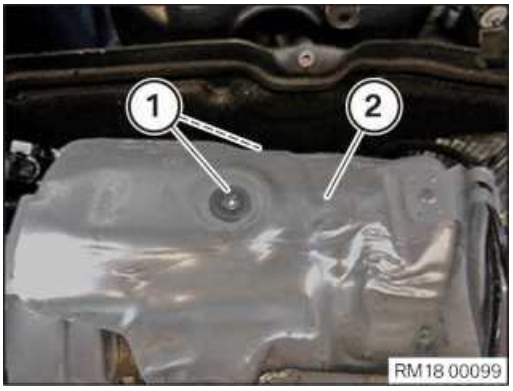
82 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

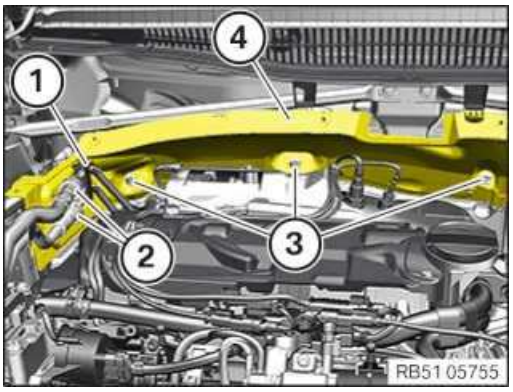


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

83 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

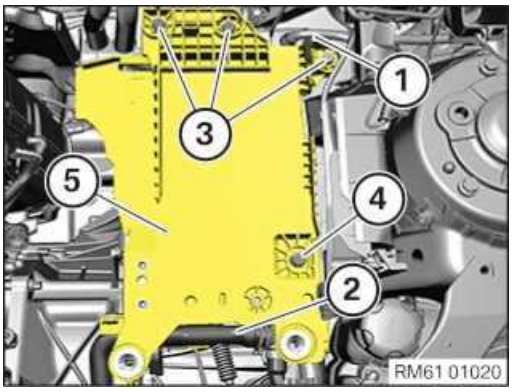
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

84 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

85 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

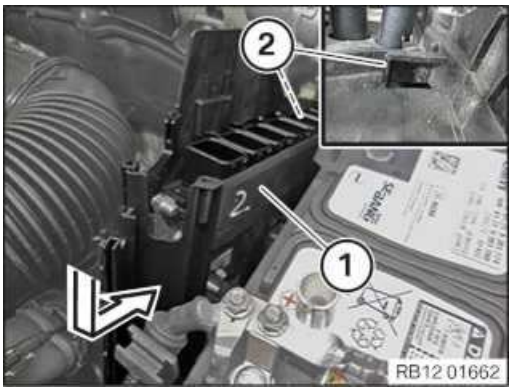
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

86 – Install electronics box

Prerequisite



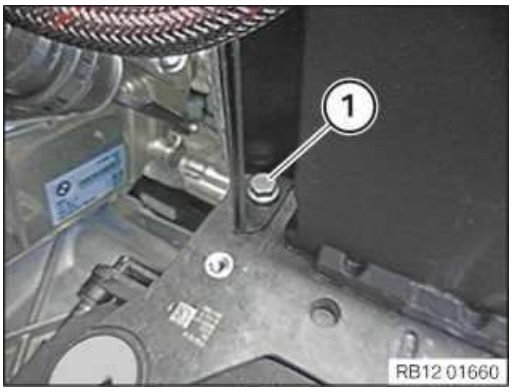
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

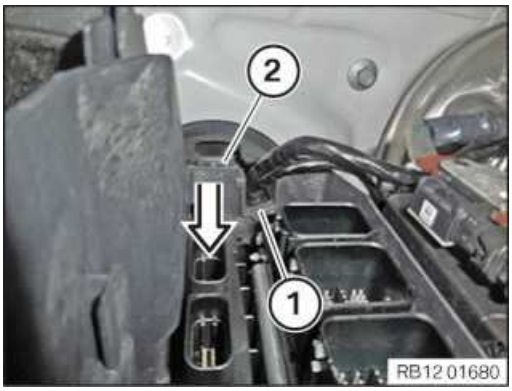
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

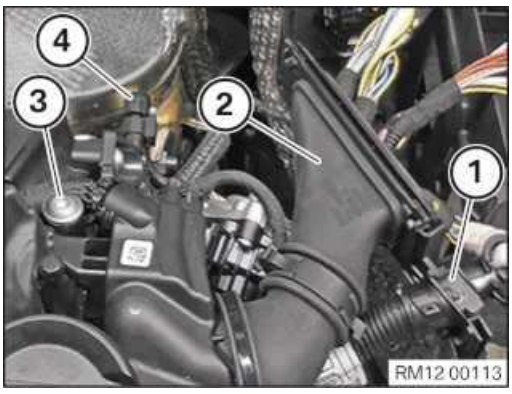


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



cardiagn.com

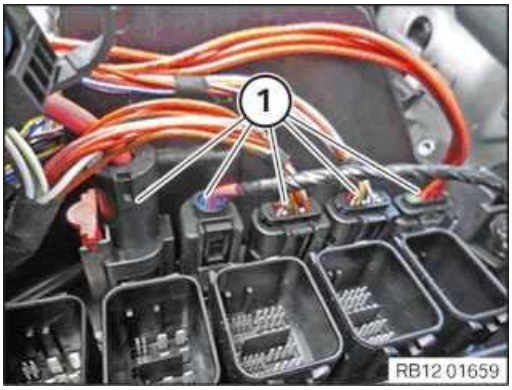


- Tighten down screw (1).

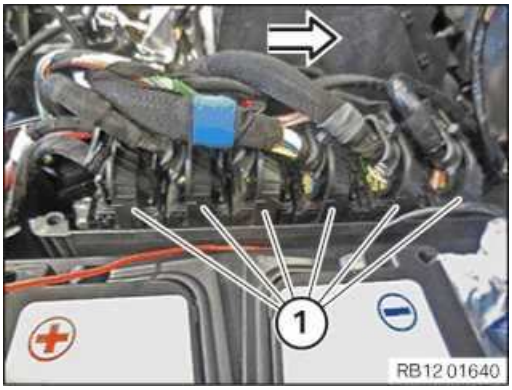
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



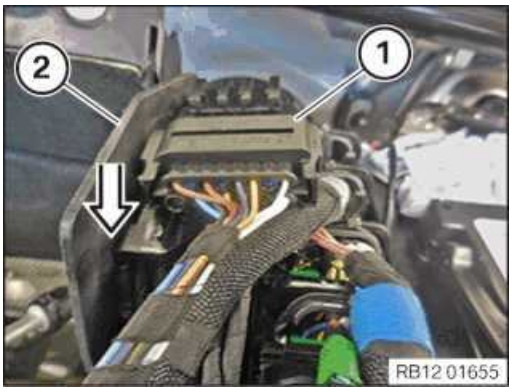
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



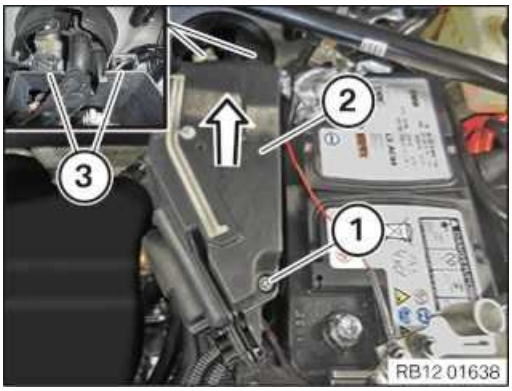
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

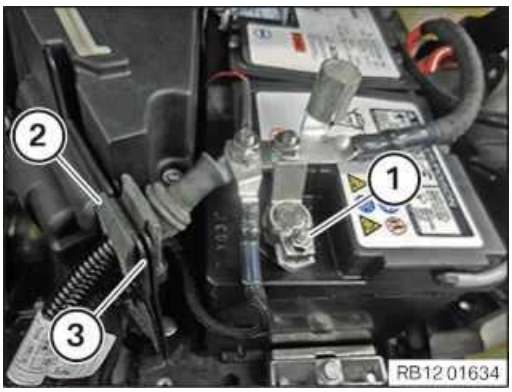


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

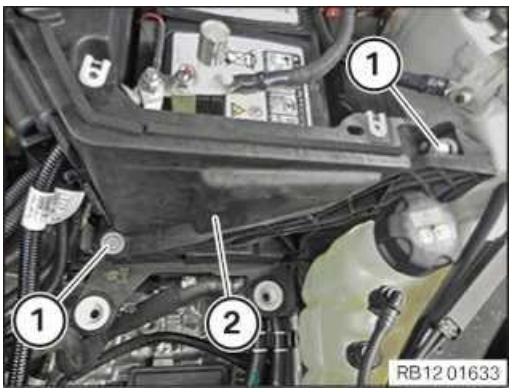
cardiagn.com



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

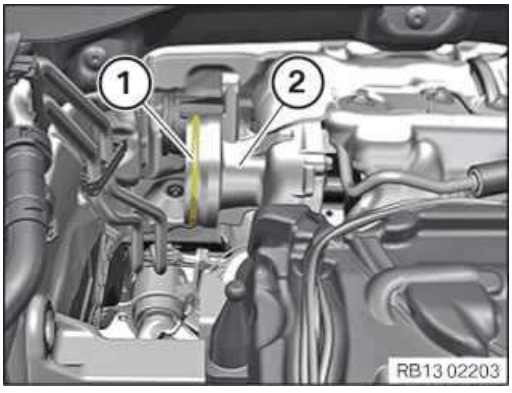


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

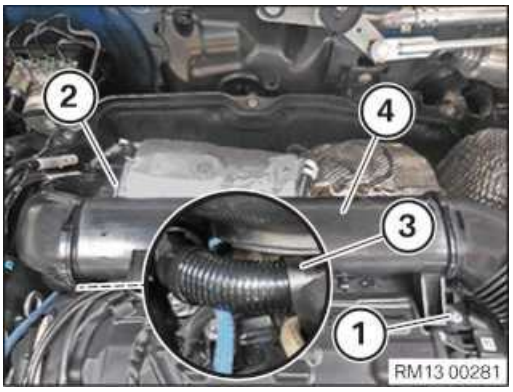
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

87 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

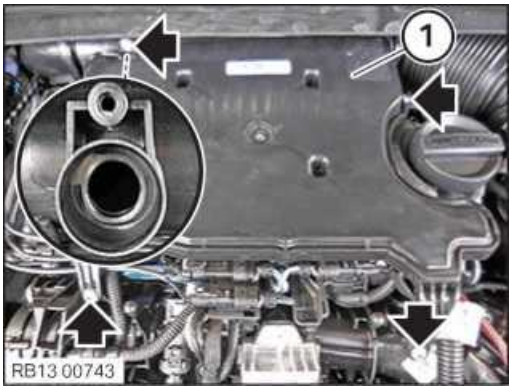
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

88 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

89 – Install acoustic cover

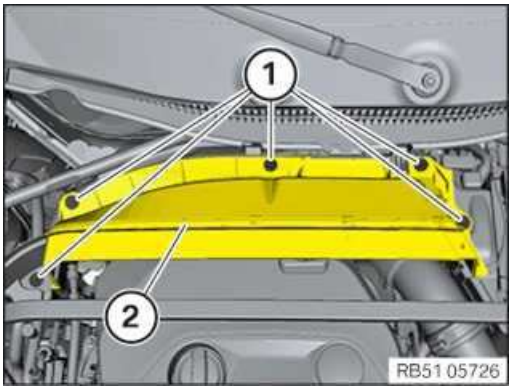
RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

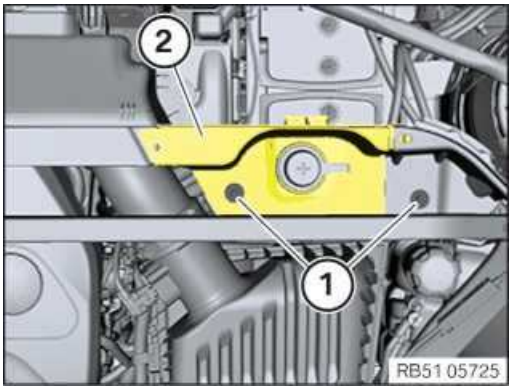
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com



- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

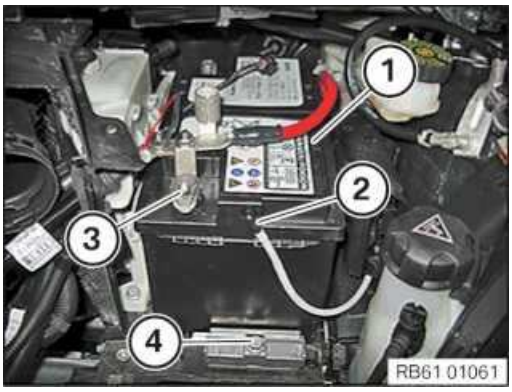


90 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

91 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

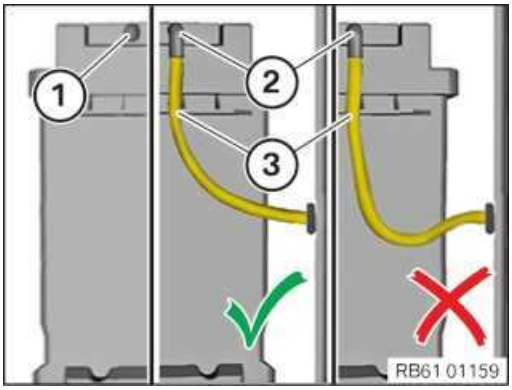
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

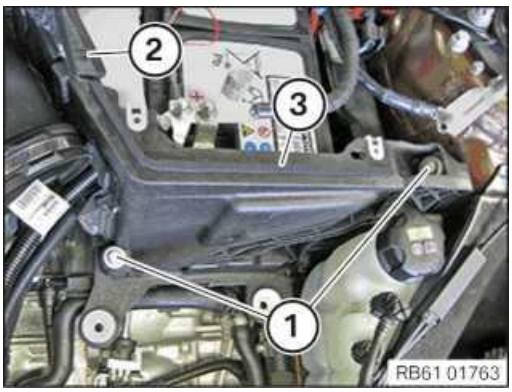
» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

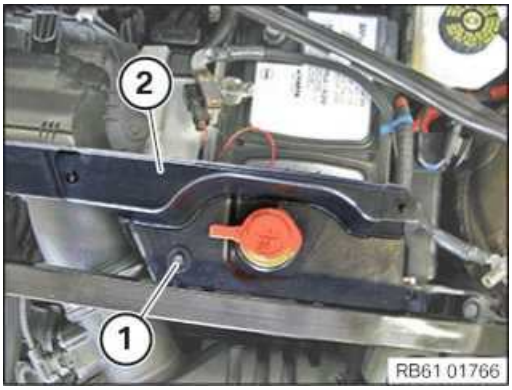
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).



Trailing link

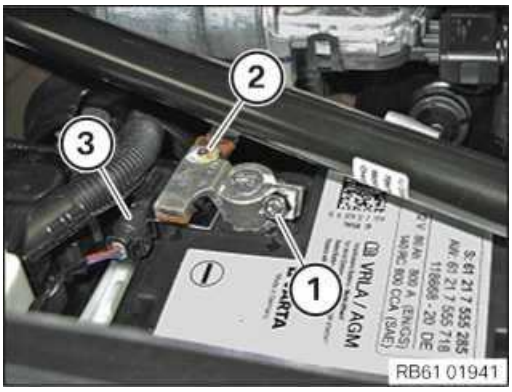
92 – Connecting the battery earth lead

TECHNICAL INFORMATION



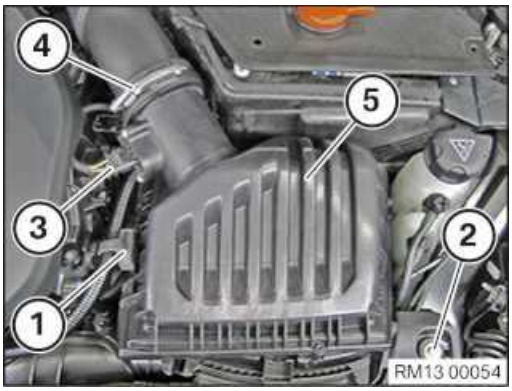
For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

93 – Installing intake silencer housing

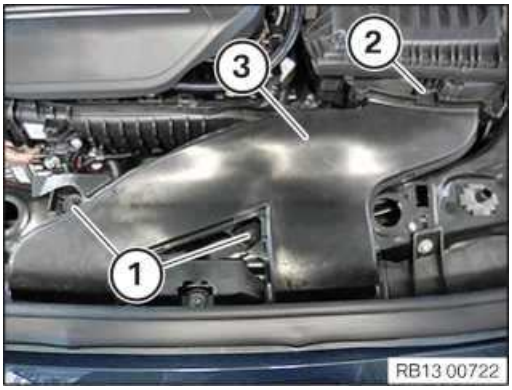
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

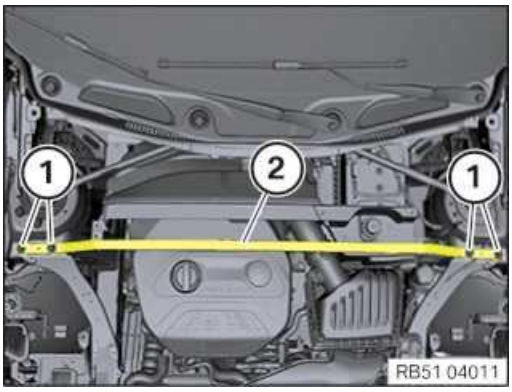
  The connector (3) must engage audibly.
- Insert and install the holder (1).

94 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



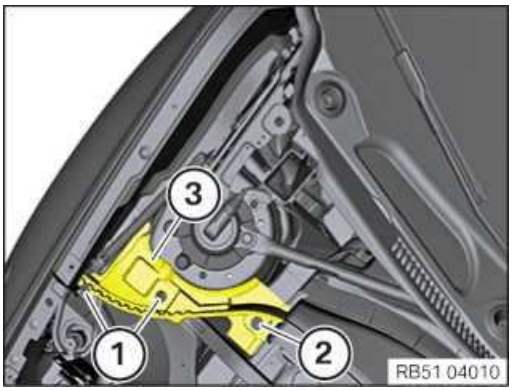
M6		Tightening torque	8 Nm

95 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com



- Install the strut brace (2).
- Renew screws (1).

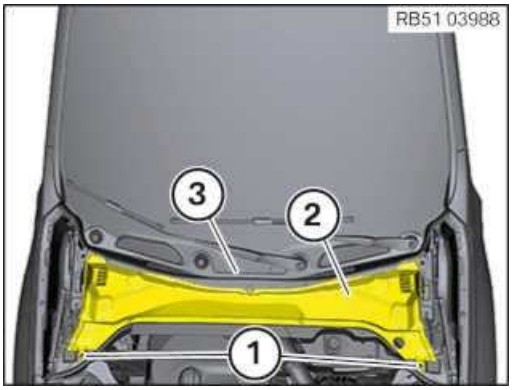
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



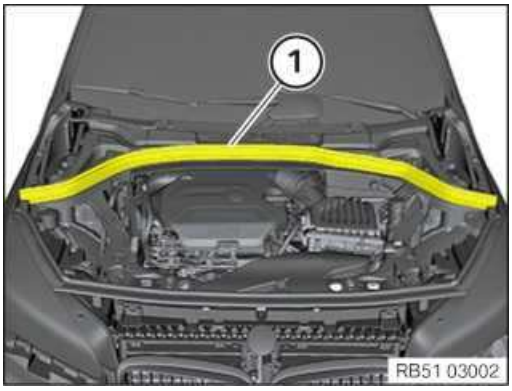
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

96 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

97 – Install the seal for the bonnet

NOTICE

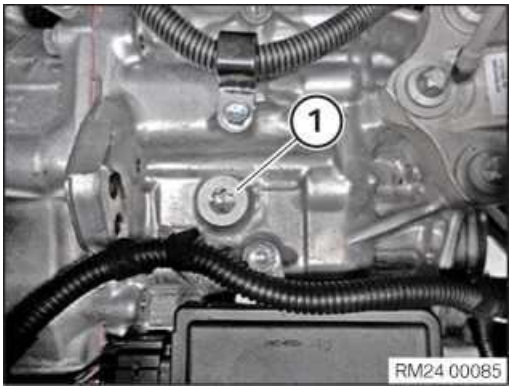
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

98 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

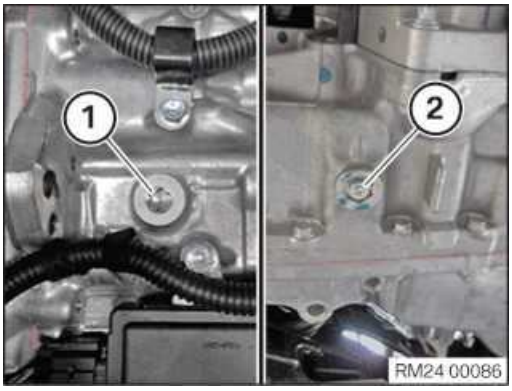
cardiagn.com

Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

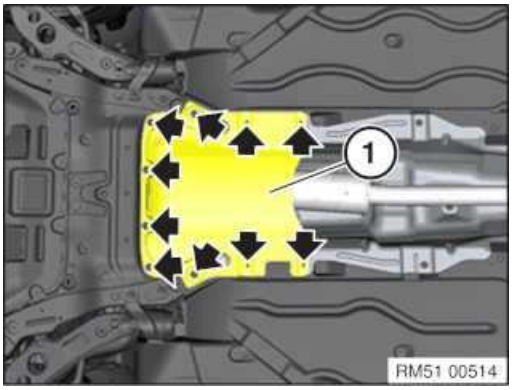
cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .



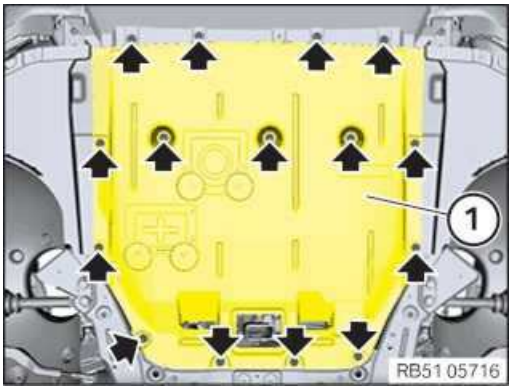
Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

99 – If installed: Installing underbody protection at rear

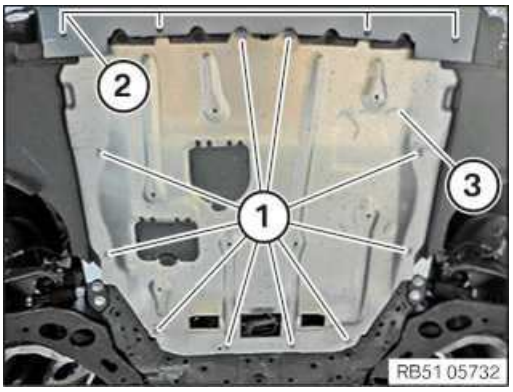


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

100 – Installing the front underbody protection

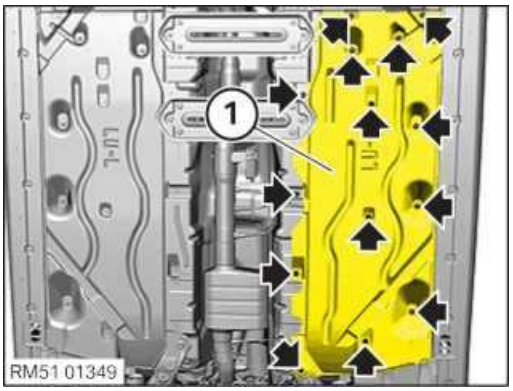


- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

101 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

Additional Information

Overview of Tightening Torques

Exhaust turbocharger to exhaust manifold Used in step 52

V-band clamp		Tightening torque	19 Nm

Oil feed line to bracket Used in step 52

Torx screw M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase Used in step 52

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger Used in step 52

M6x12		Tightening torque	8 Nm

Heat shield for exhaust turbocharger Used in step 53

Torx screw BM 6x12		Tightening torque	10 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold Used in step 53

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

Standard screw connection M6 Used in step 53

M6			8 Nm

Diesel particulate filter V-clip to exhaust turbocharger Used in step 54

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com

Diesel particle filter to holder — Used in step 54

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter holder to gearbox — Used in step 54

M12x75		Tightening torque	66 Nm

Diesel particulate filter bracket to crankcase — Used in step 54

M10x35		Tightening torque	38 Nm

SCR metering module V-clip to exhaust system — Used in step 54

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 54

Torx bolt BM6x16		Tightening torque	8 Nm

Differential pressure sensor to holder — Used in step 54

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 54

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor — Used in step 55

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 56 57

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 58

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 59

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter — Used in step 60

Sensor		Tightening torque	50 Nm

Monitoring sensor — Used in step 61

Sensor		Tightening torque	50 Nm

Transfer box to transmission — Used in step 62

M10		Tightening torque	56 Nm

Heat shield to transfer box — Used in step 62

M6	Renew screws.	Tightening torque	6 Nm

Oil filler plug on transfer box (VTG) — Used in step 62

M18x1.5		Tightening torque	35 Nm

Intermediate shaft to transfer box — Used in step 63

M8x35		Tightening torque	19 Nm

cardiagn.com

Starter motor to transmission

Used in step 64

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 64

M8		Tightening torque	13,5 Nm

Propeller shaft to transfer box

Used in step 67

		Tightening torque	80 Nm

Flexible disc to rear axle final drive

Used in step 67

M12x1.5	Renew screws.	Tightening torque	55 Nm 90 °

Centre mount to body

Used in step 67

M8		Tightening torque	19 Nm

Heat shield to body

Used in step 68 69

Bolts/nut		Tightening torque	3 Nm

Bracket to body

Used in step 68

M8		Tightening torque	21 Nm

Exhaust system to body

Used in step 70

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body

Used in step 70

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter

Used in step 70

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 70

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 70

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 71

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 72

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 72

M8x18		Tightening torque	28 Nm

Rear end of front axle support to body

Used in step 73

M14 screw	Renew screw.	Tightening torque	175 Nm

cardiagn.com

Front axle support, front to body

Used in step 73

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body

Used in step 73 99

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing

Used in step 73

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 73

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 74

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 74

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 74

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 74

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 75

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 77

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 79

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

Wheel arch cover to body

Used in step 79

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 79

Plastic nut		Tightening torque	3 Nm

Brake disc to rear wheel hub

Used in step 80

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

Used in step 80

M8	Renew screw.	Tightening torque	16 Nm

cardiagn.com

Wheel bolts

Used in step 80

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 82

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 82

Plastic nut		Tightening torque	3 Nm

Heat shield for exhaust turbocharger

Used in step 83

Torx screw BM 6x12		Tightening torque	10 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 84

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 85

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 86

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 86

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 86

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 86

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 86

M8		Tightening torque	19 Nm

Clean air pipe to cylinder head cover

Used in step 87

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 87 93

Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe

Used in step 88

Screw TS6	Renew screw.	Tightening torque	5 Nm

cardiagn.com

Cover of top bulkhead — Used in step 90

Screw		Tightening torque	2,6 Nm

Cover of remote positive terminal — Used in step 90

Screw		Tightening torque	2,6 Nm

Battery terminal rail to battery tray — Used in step 91

M8			19 Nm

Battery terminal with IBS positive battery terminal / negative battery terminal — Used in step 91 92

NutM6			5 Nm

Trailing link — Used in step 91

M8		Tightening torque	19 Nm

Battery cover — Used in step 91

M8			2,8 Nm

Intake silencer housing to lock bridge — Used in step 93

M6X30		Tightening torque	8 Nm

Intake neck to cross connection — Used in step 94

M6		Tightening torque	8 Nm

Cross-brace to spring strut dome — Used in step 95

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

Cover on body — Used in step 95

Hexagon screw		Tightening torque	3 Nm

Oil filler plug to transmission housing — Used in step 98

M14	Renew the sealing ring.	Tightening torque	45 Nm

Overflow screw in oil drain plug — Used in step 98

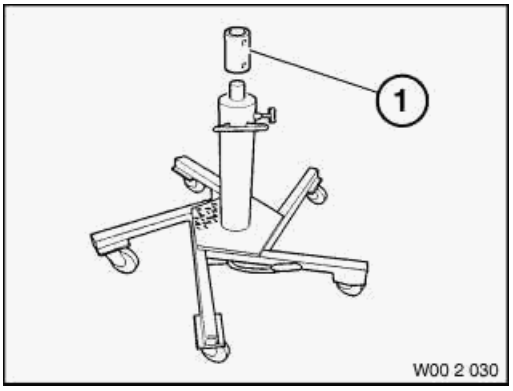
M6	Renew the sealing ring.		8 Nm

Underbody protection front — Used in step 100

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

Underbody panelling, side — Used in step 101

Hexagon screw		Tightening torque	2,6 Nm



Underbody panelling, side — Used in step 101

Plastic nut		Tightening torque	2,6 Nm

Overview of Special Tools

cardiagn.com

0 490 133 (00 2 030) Device

Common

Used in step 28 73

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

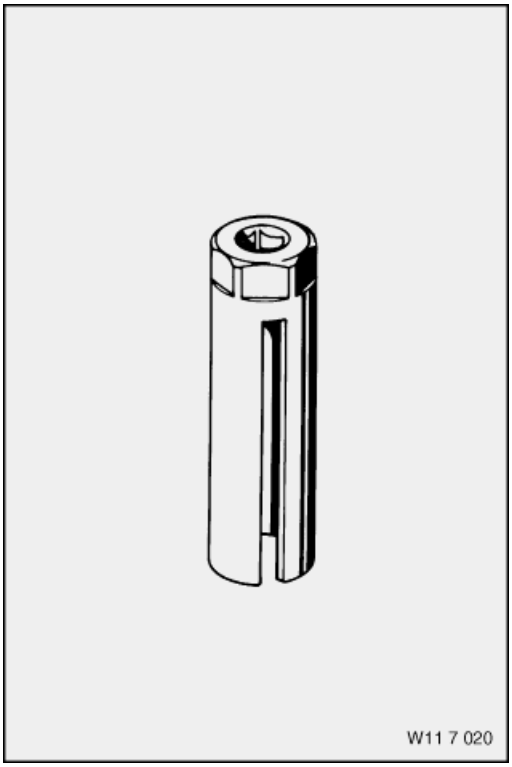
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 554 (33 5 070) Extension

Common

Used in step 34 67



Usage	Pull-out extension for 33 5 040, 33 5 050, 33 5 060.
Included in the tool or work	
Storage location	A18
Replaced by	
In connection with	
SI-Number	01 21 06 (300)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 592 (33 5 071)		**Extension** (Extension (1 item)) discontinued, can only be ordered using complete tool	

cardiagn.com

0 491 074 (11 7 020) Socket wrench insert

Common

Used in step 40 41 61

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

2 409 025 Puller

Common	Used in step 62
Usage	For disassembly of the outer radial shaft seal of the transmission output shaft, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A76
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 411 739 Puller

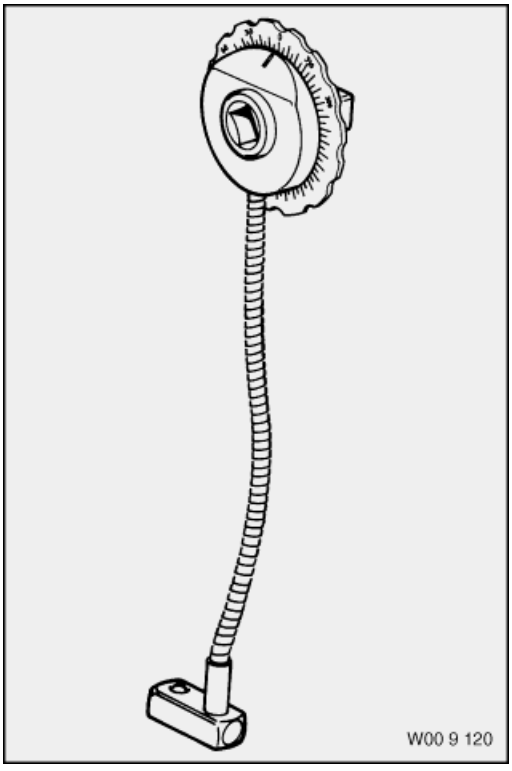
Common	Used in step 62
Usage	For disassembly of the inner radial shaft seal of the output, right. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C78
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 152 Striking element

Common	Used in step 62
Usage	For installation of the right radial shaft seal transmission output shaft (inner). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)

cardiagn.com

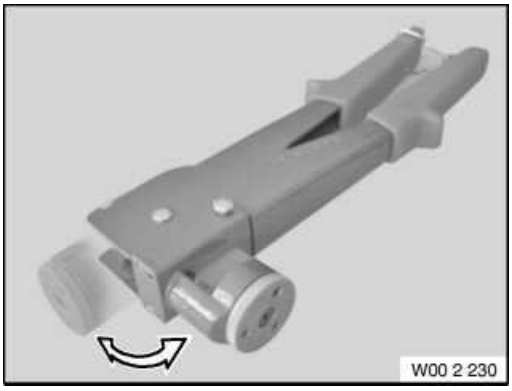
2 413 037 Handle



Common	Used in step 62
Usage	Universal drift handle. Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C77
Replaced by	
In connection with	
SI-Number	01 53 14 (211)

2 408 150 Striking element

Common	Used in step 62
Usage	For installing the right radial shaft seal transmission output shaft (outer). Contour-graphic silhouette foil is included in the delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	B78
Replaced by	
In connection with	2413037
SI-Number	01 53 14 (211)



0 490 504 (00 9 120) Torque angle measuring dial

Common	Used in step 67
Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

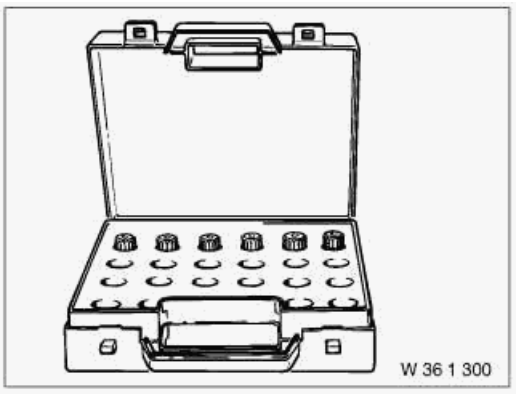
0 496 521 (00 2 230) Pliers

Common	Used in step 79
Usage	(Blind rivet pliers for plastic rivets) For shaft diameters of 3.5 mm, 3.9 mm and 4.5 mm
Included in the tool or work	
Storage location	C25
Replaced by	
In connection with	
SI-Number	01 17 08 (478)

2 344 011 Tool

Common	Used in step 80
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:



0 495 221 (36 1 323) Wheel stud

Common	Used in step 18
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 224 (36 1 326) Wheel stud

Common	Used in step 18
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 18
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location

11 65 002 Replacing the connecting pipe with bypass flap

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

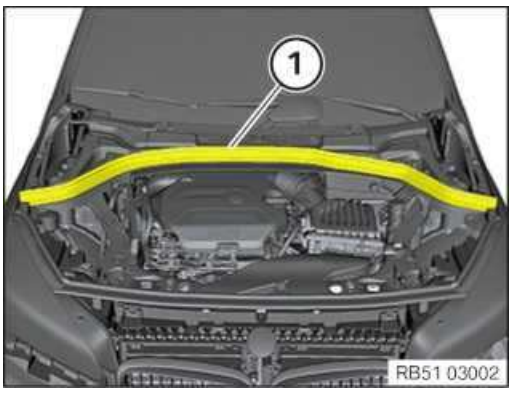
Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

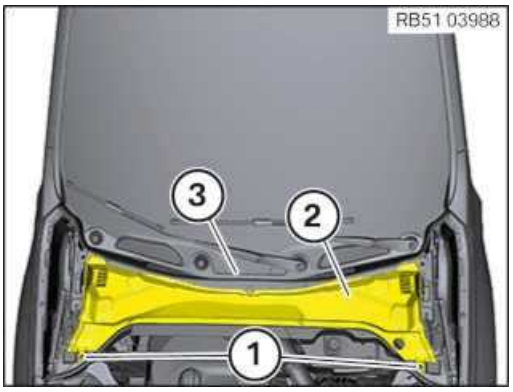


- Ensure there is a specific weight compensation on the motor vehicle.

PRELIMINARY WORK

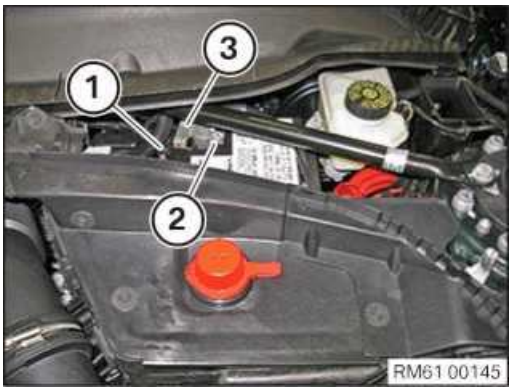
1 – Remove the seal for the rear bonnet

NOTICE



Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

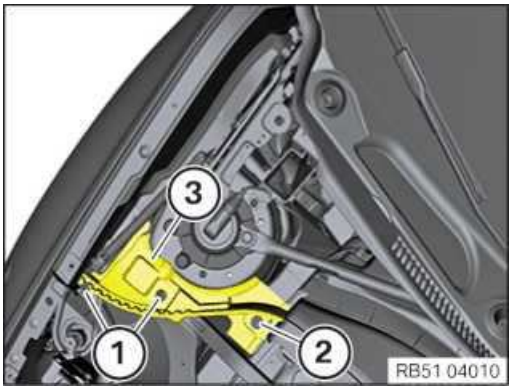


2 – Removing front cowl panel cover

cardiagn.com

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

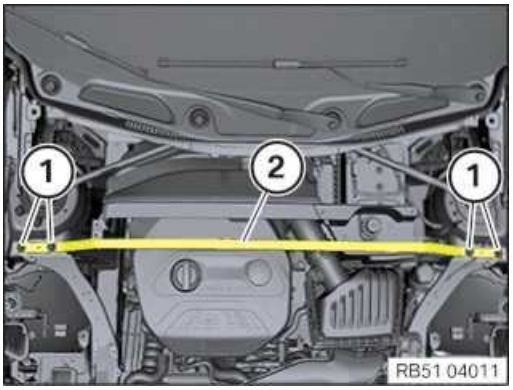
3 – Disconnecting the battery earth lead



- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

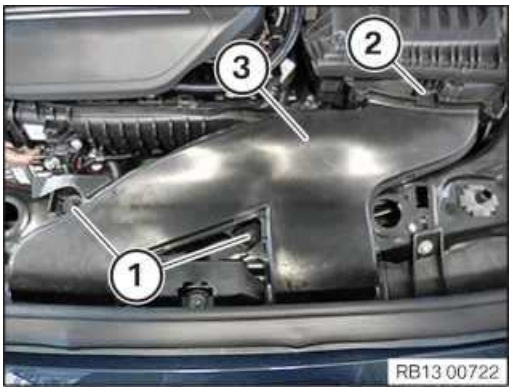
TECHNICAL INFORMATION



Driving without the strut brace/front end or tension strut is not permitted.

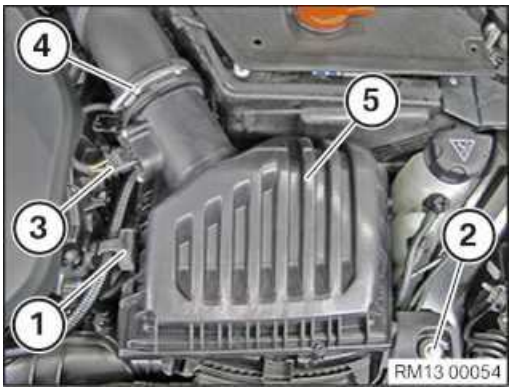
NOTICE

Description is for right component only. The procedure on the left side is identical.



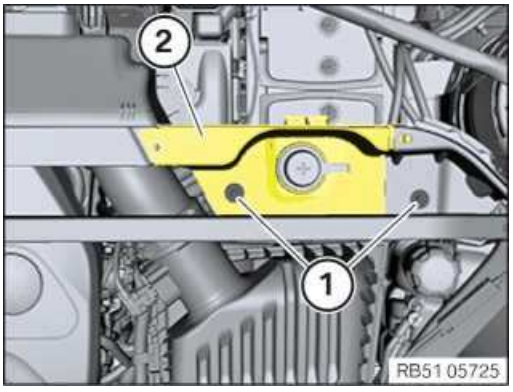
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).

- Loosen screws (1).
- Remove strut brace (2).



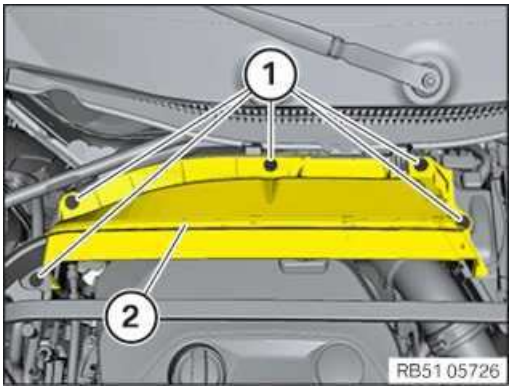
5 – Remove the intake neck for intake silencer housing

cardiagn.com



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



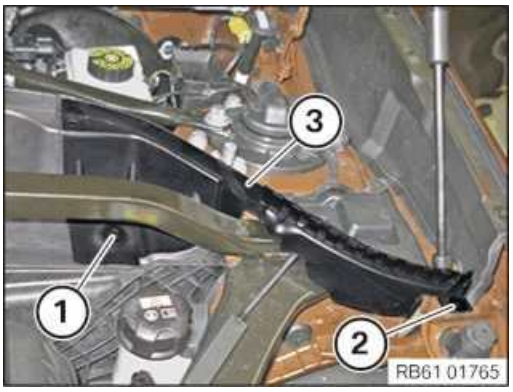
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).
- Guide out and remove the cover (2).

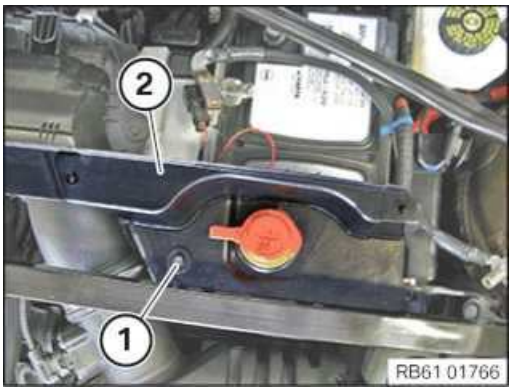
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove vehicle battery



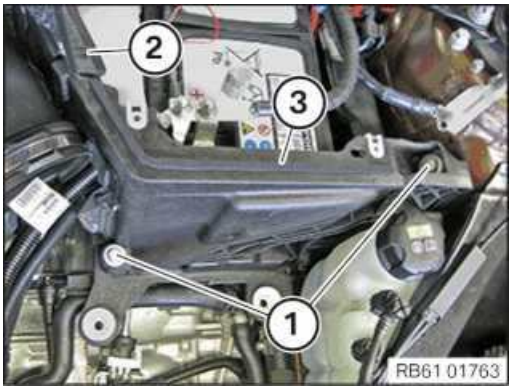
cardiagn.com

WARNING

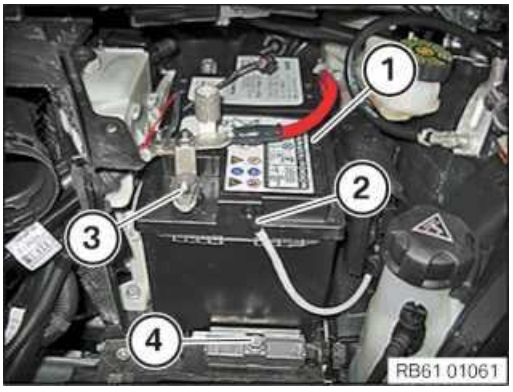


Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

cardiagn.com

9 – Removing the acoustic cover

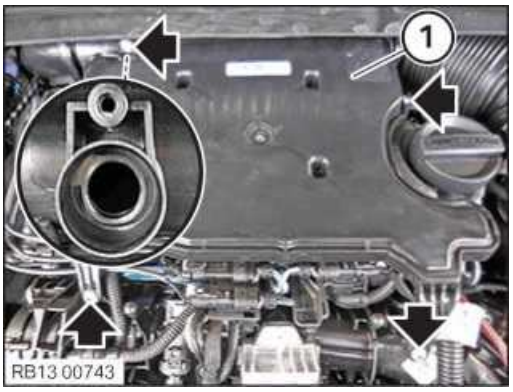
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE



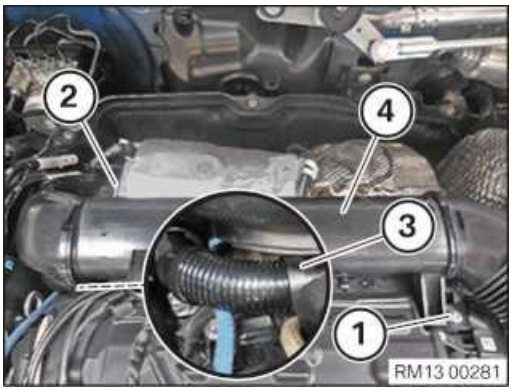
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

10 – Remove resonator



- Remove screws (arrows).
- Guide out and remove the resonator (1).

11 – Removing clean air pipe

- Detach clamp (1) on the clean air pipe.
- Pull off the clean air pipe from the intake silencer housing.

cardiagn.com

- Loosen screw (1).
- Loosen clamp (2).
- Unlock the ventilation line (3) and pull it off the cylinder head cover.
- Feed out clean air pipe and remove.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

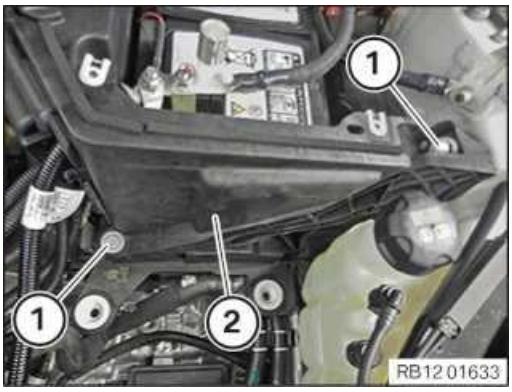
RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

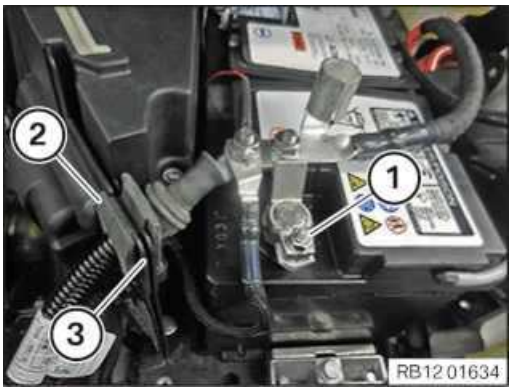
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION



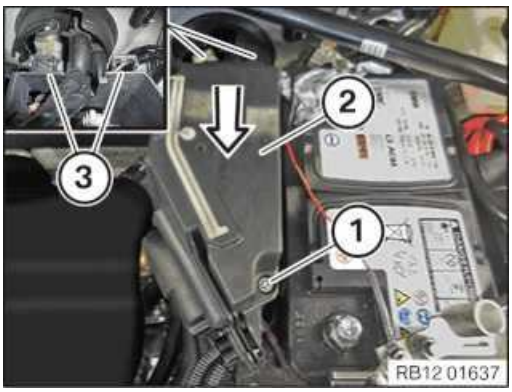
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

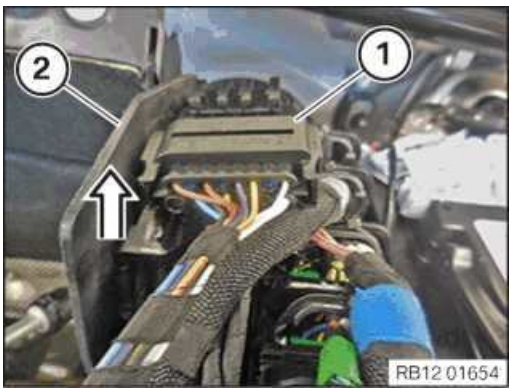


TECHNICAL INFORMATION

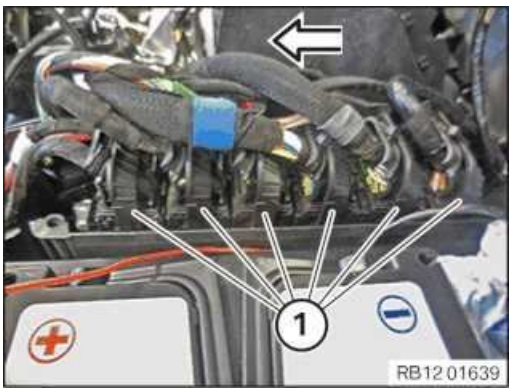
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



cardiagn.com



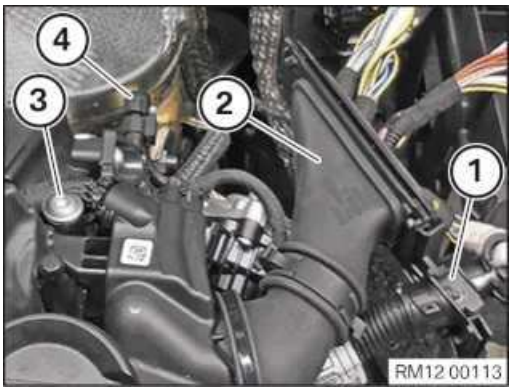
- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.



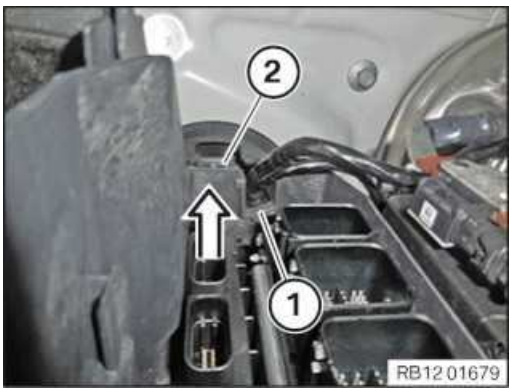
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

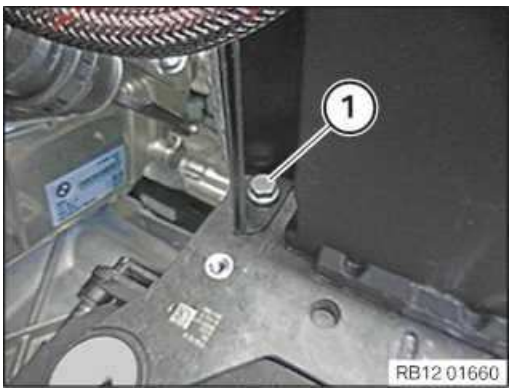
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



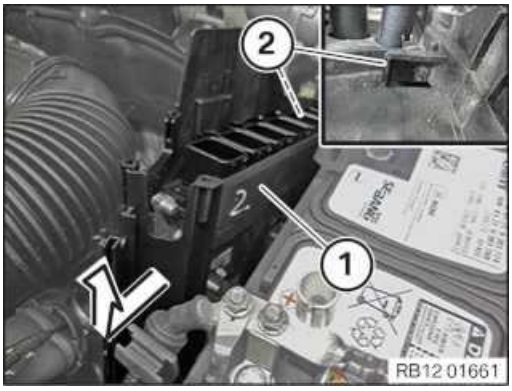
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



cardiagn.com

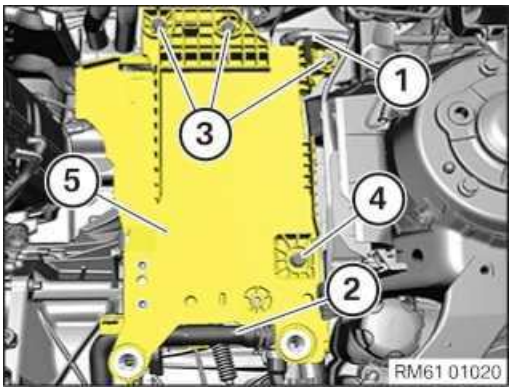


- Unlock and loosen connector (1).



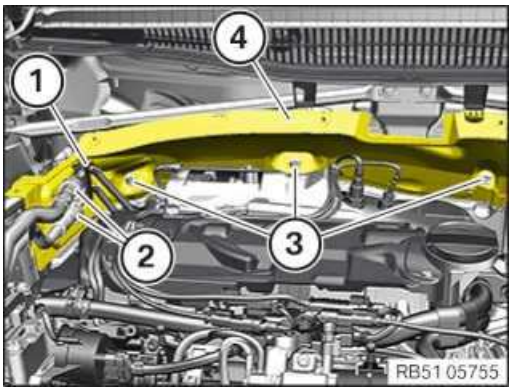
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



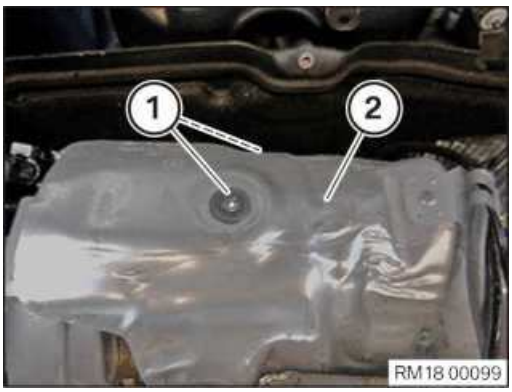
13 – Remove battery holder

cardiagn.com

- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part

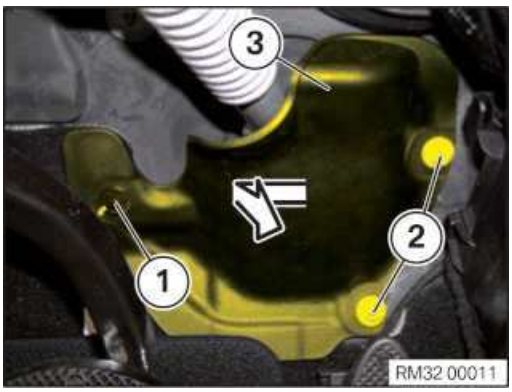
- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.



15 – Removing heat shield from top exhaust turbocharger

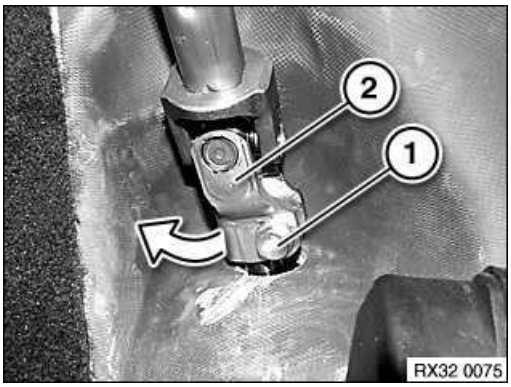
WARNING

Hot surfaces.



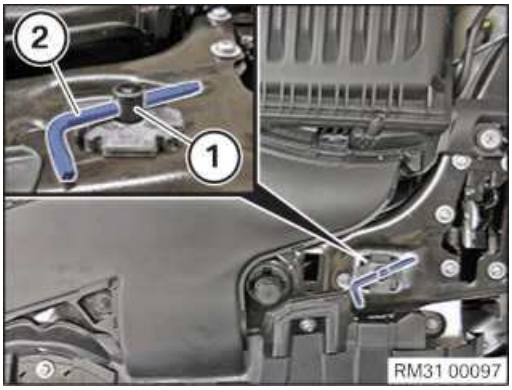
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from holders.
- Release the screws (1) at the top and bottom of the heat shield.
- Feed out and remove the heat shield (2).

16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.
  The side footwell trim must not be disassembled!

cardiagn.com

- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

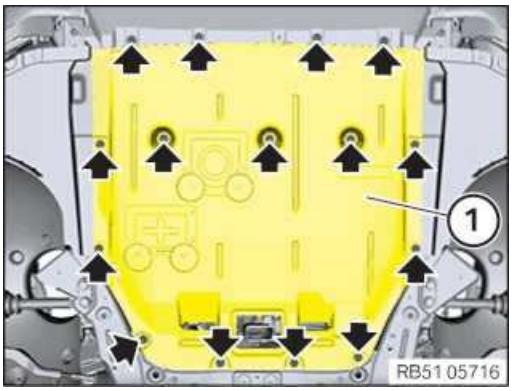
17 – Securing radiator on left and right

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Removing both front wheels

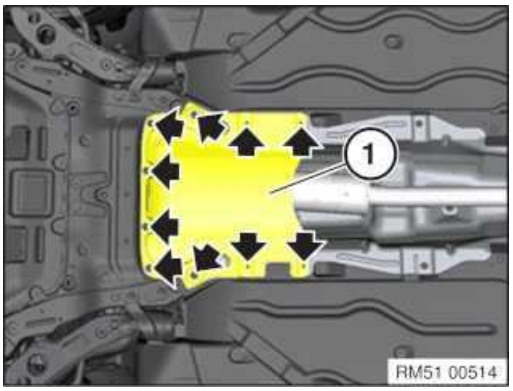


▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

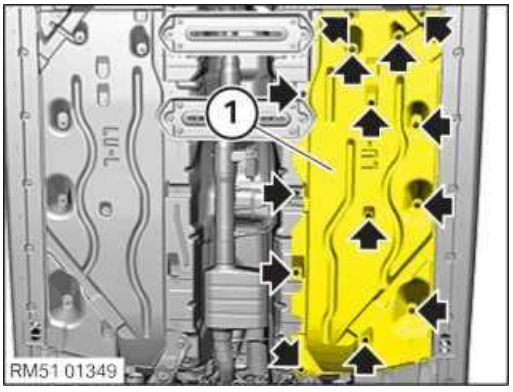
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing the front underbody protection



- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

cardiagn.com



- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

20 – If installed: Removing rear underbody protection

- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing right underbody panelling

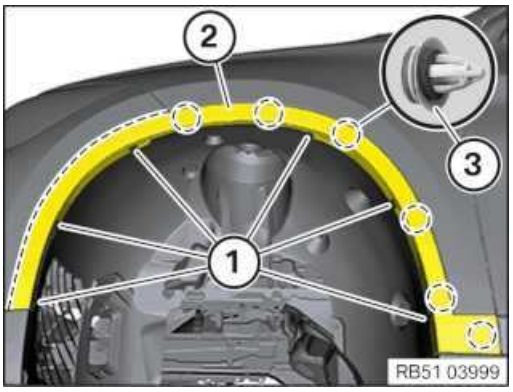
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

22 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

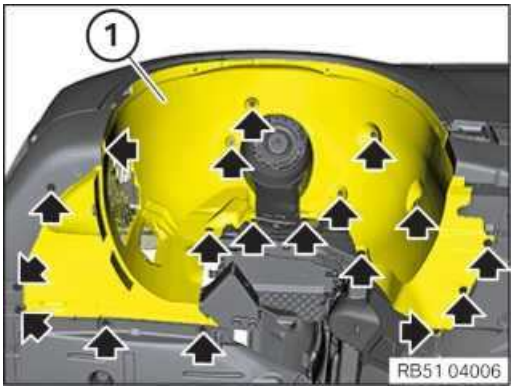
▸ **Remove the front wheel arch trim**



NOTICE

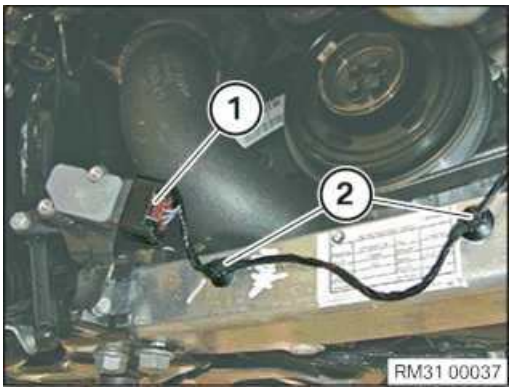
To provide a better overview: Schematic diagram with partially hidden components.

NOTICE



Description is for left component only. Procedure on the right side is identical.

cardiagn.com

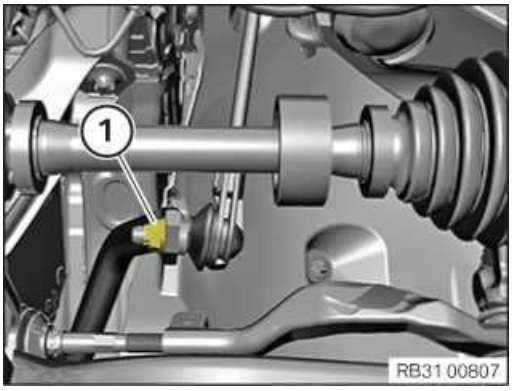


- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

▶ **Remove front wheel arch cover**

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

23 – With right installation: Detaching ride height sensor cable



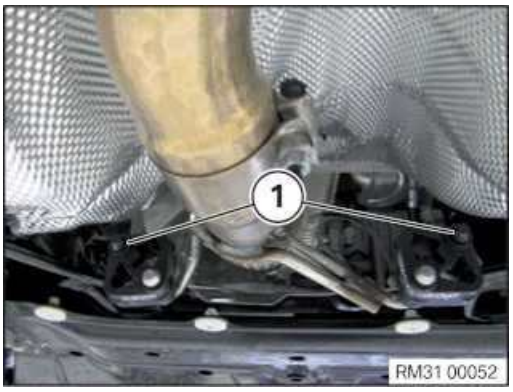
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

24 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

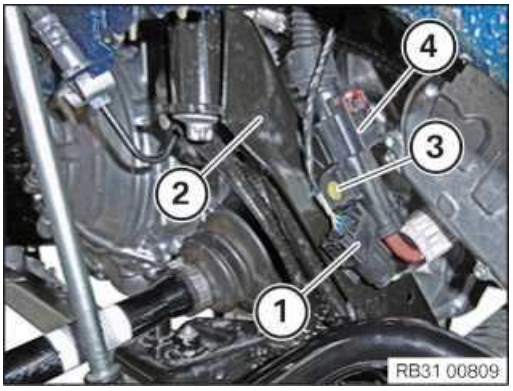


- Unfasten nut (1).

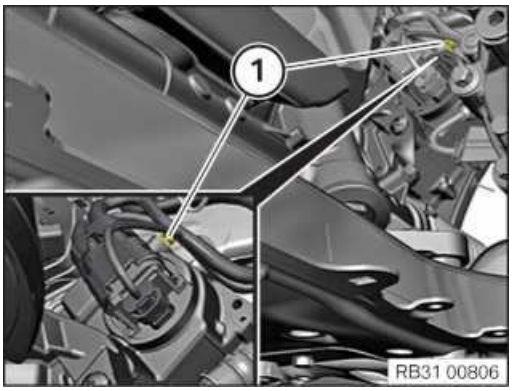
Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

cardiagn.com

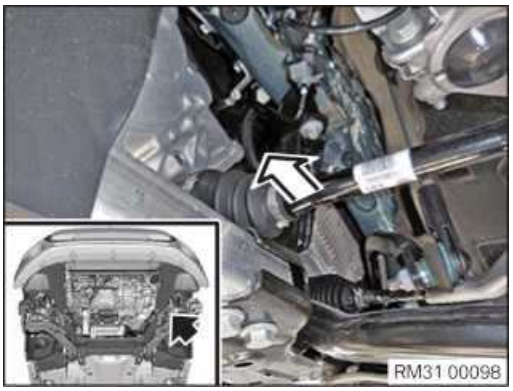


25 – Detaching rubber mount from front axle support



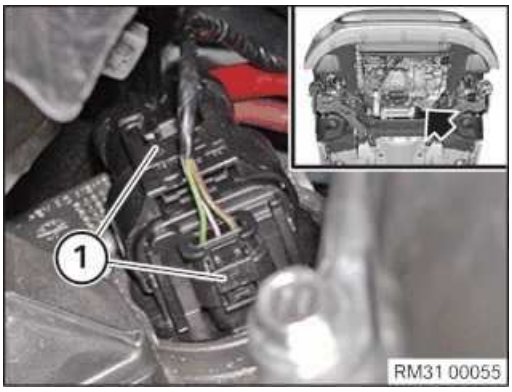
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

26 – Disconnecting plug connections from steering gear



▸ **If installed: Detach connectors from the front axle carrier**

- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

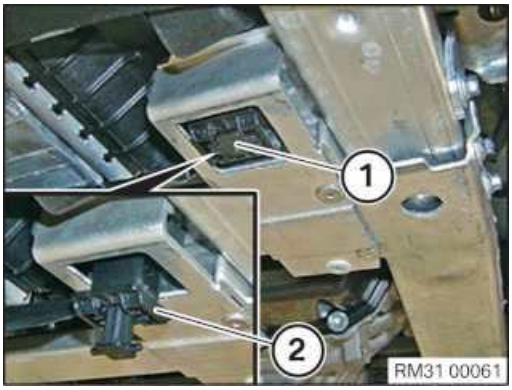
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.

cardiagn.com

- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

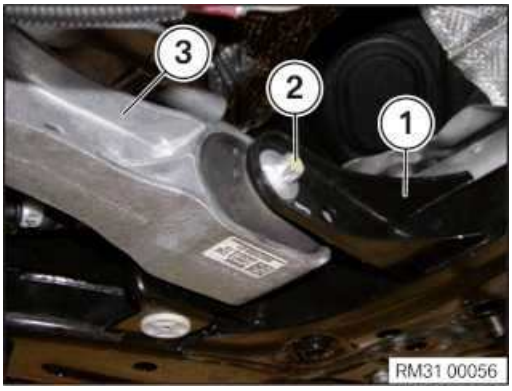
27 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.



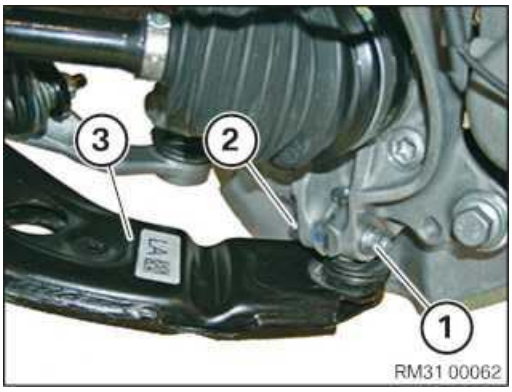
- Loosen screws (1).

NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

- Loosen screw (2) of the engine support (3) on the front axle (1).

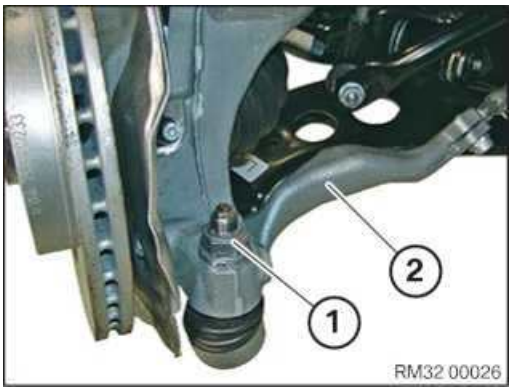


NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

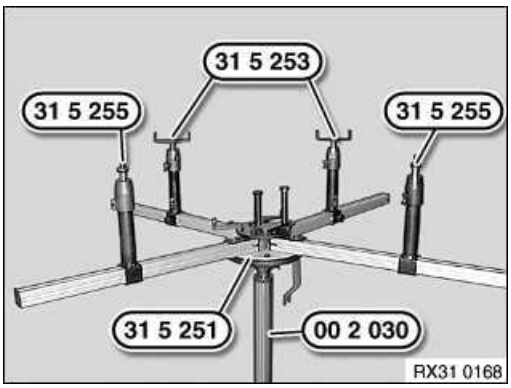
28 – Detaching and removing front axle completely



cardiagn.com

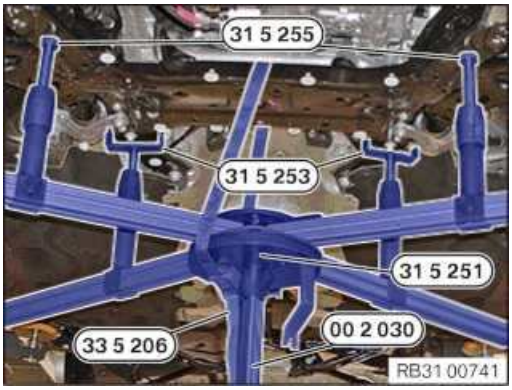
NOTICE

Perform the operations on the left and right side.



- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

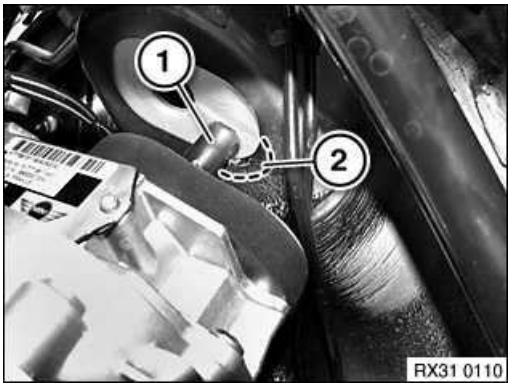
NOTICE



Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

- Fit the special tool completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools in telescopic supports of a profile rail pair.
- Insert special tools in telescopic supports of other profile rail pair.

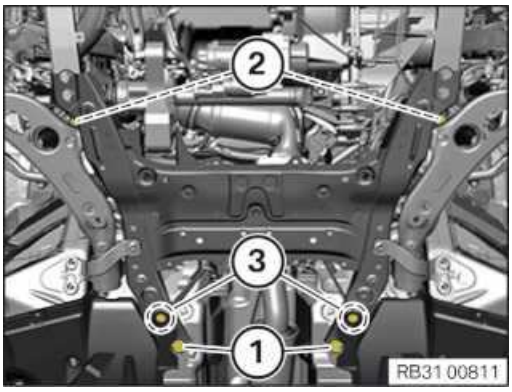


Note: In a profile rail pair, two profile rails are connected to one another by gearing.

- Align special tools and to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool to special tool .



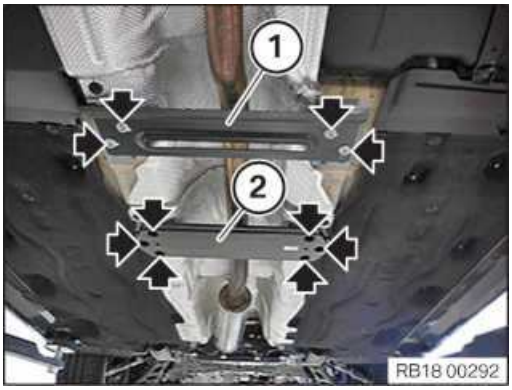
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



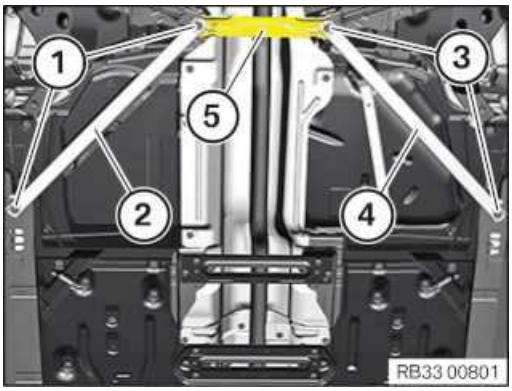
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

29 – Removing the connecting support from the tunnel in front and back



- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.

- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

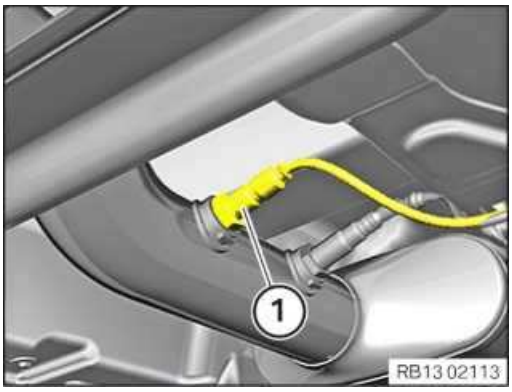
31 – Remove exhaust system

cardiagn.com

WARNING

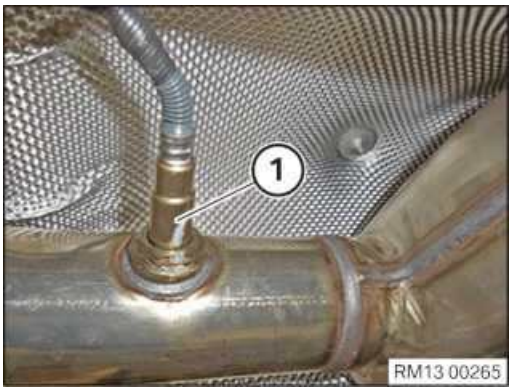
Hot surfaces.

Risk of burning!



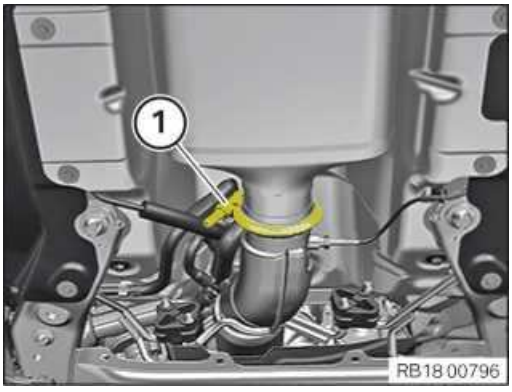
- Perform all work only on components that have cooled down.

CAUTION



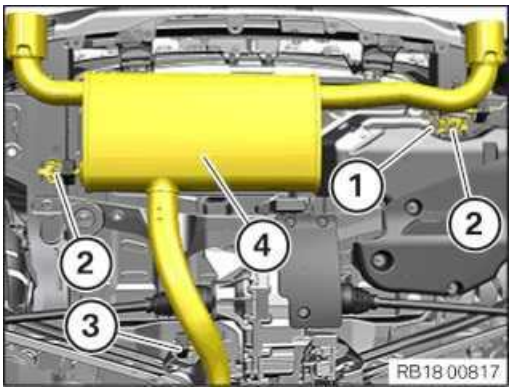
Heavy component.

Heavy components can lead to injury or damage.

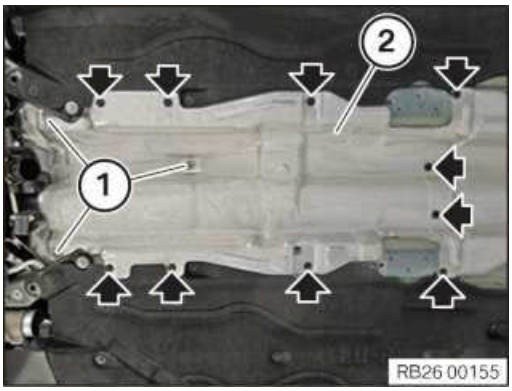


- Remove and install heavy components with the aid of another person/other persons.

- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.

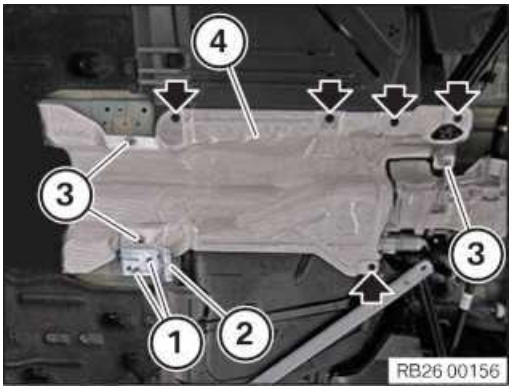


- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).

cardiagn.com



- Loosen screw (1).
- Loosen nuts (2).
- Release the rubber mount (3) of the exhaust system (4).
- Lower and guide out the exhaust system (4) with assistance of a second person and remove it.

32 – Remove front heat shield

- Remove screws (arrows).
- Loosen nuts (1).
- Guide the heat shield (2) out and remove it.

33 – Remove heat shield at rear.

- Loosen screws (1).
- Guide out and remove holder (2).
- Remove screws (arrows).
- Loosen nuts (3).
- Guide the heat shield (4) out and remove it.

34 – Remove propeller shaft

CAUTION

Component with heavy weight.

Danger of injury!

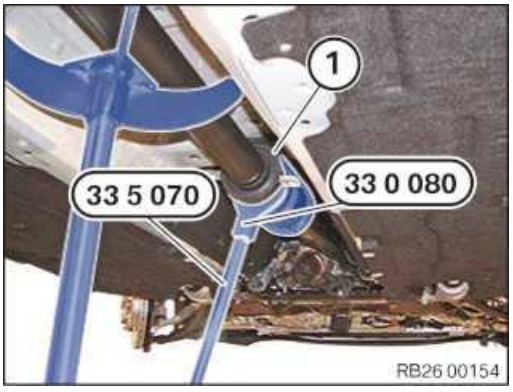
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

RISK OF DAMAGE

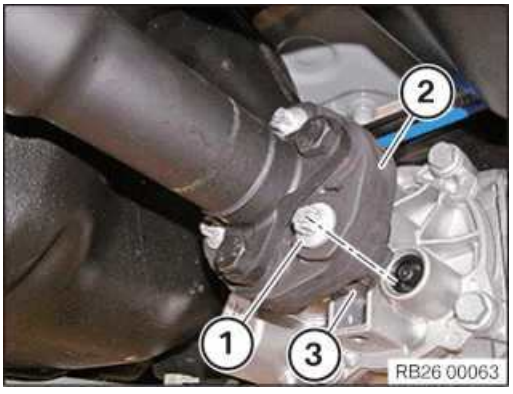
Damage to propeller shaft during removal.

Non-observance of the removal guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Do not disassemble the three-hole flange, flexible disc and propeller shaft. The three-hole flange to the rear axle differential is balanced with the flexible disc and propeller shaft.
- Loosen the recessed nut against the direction of travel in clockwise direction. The propeller shaft must be loosened on the recessed nut only and exclusively in the direction of rotation otherwise the anti-twist lock of the bi-hexagonal flange nut is damaged.
- In the event of a damaged anti-twist lock on the bi-hexagonal flange nut: Replace the rear axle differential.

- Install the special too l between the front and rear propeller shaft.
- Make sure that the arrows on the special tool point forward in the direction of travel.

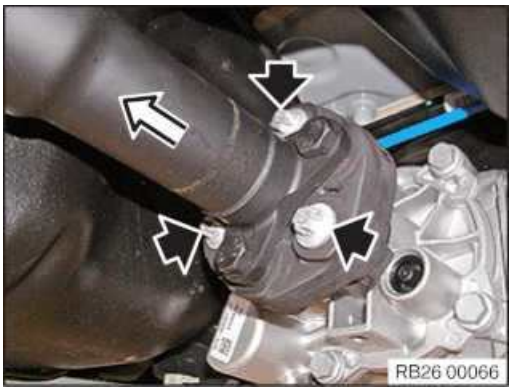


- Always support the propeller shaft (1) with a conventional jack.

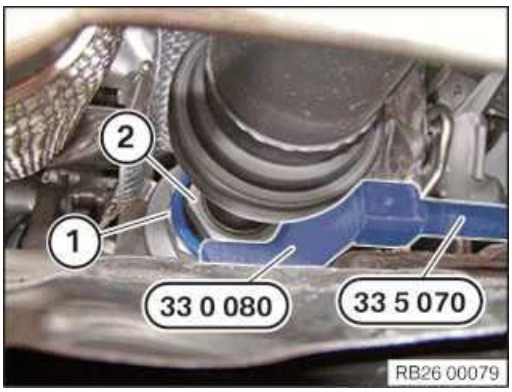
- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.



- Mark the installation position of the screw connection (1), the flexible disc (2) and the three-hole flange (3) on the same level.
- Loosen the screw connection (1).



cardiagn.com

- Loosen screws (1).

- Remove screws (arrows).
- Guide the propeller shaft out in the direction of the arrow and set it aside.

RISK OF DAMAGE

Damage to the transfer box.

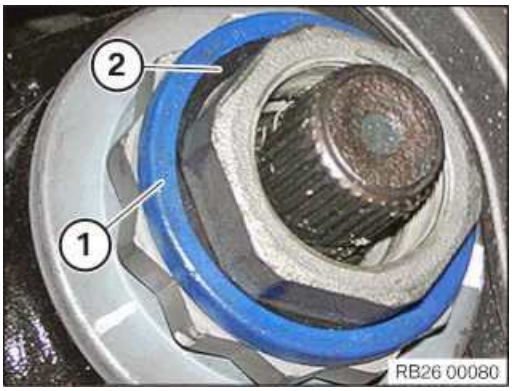
Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

- Do not use the double hexagon head flange nut as counter support.

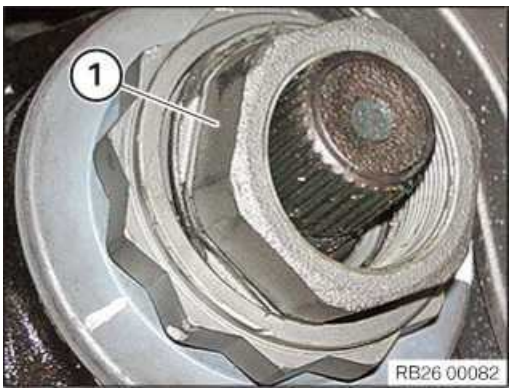
- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to detach the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



- Release the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.



cardiagn.com

- Thread the propeller shaft (2) out of the recessed nut (1) and remove.

- Thread the retaining clip (1) and the seal (2) out and remove.

- Thread out and remove the recessed nut (1).

35 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

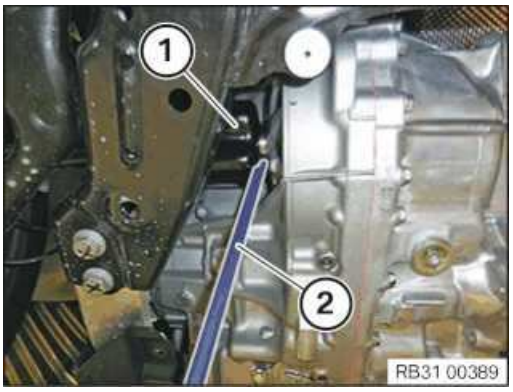
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

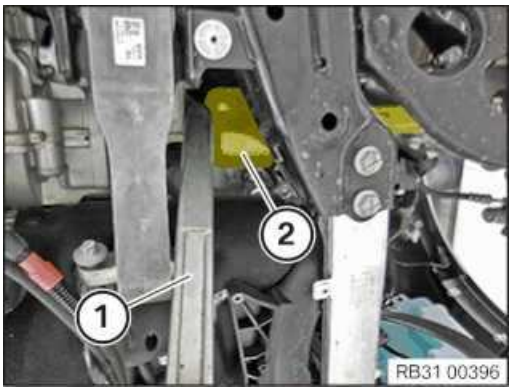
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



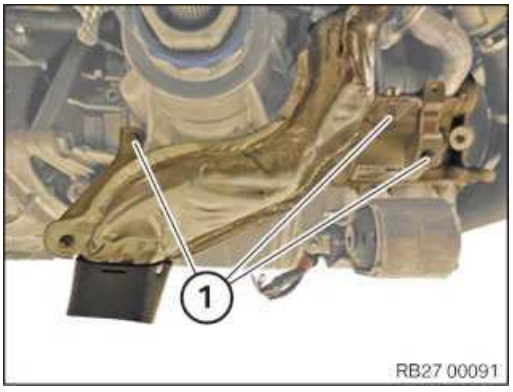
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.



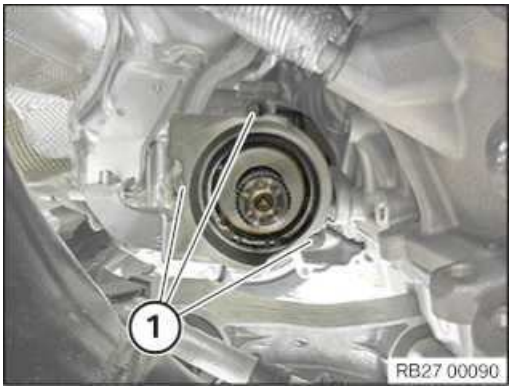
36 – Partially removing the left output shaft

cardiagn.com

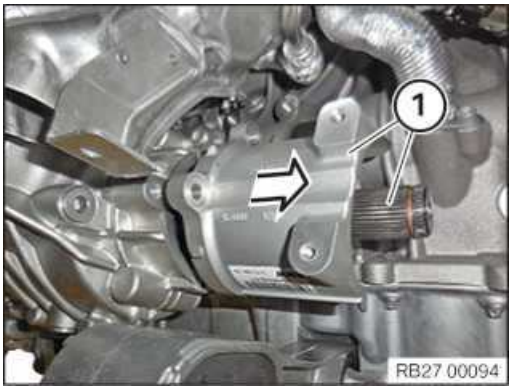


- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

37 – Partially removing right output shaft



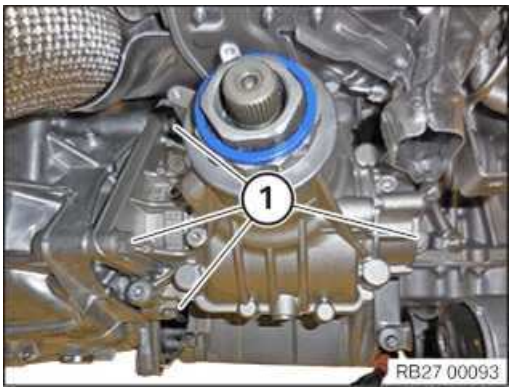
- Lever out the output shaft (2) with a mounting lever (1).
- Tie up output shaft (1).



38 – Remove the intermediate shaft with the support tube

- With air duct installation: Loosen screws (1).
- Remove air duct

- Loosen screws (1).



- Pull the intermediate shaft with the support tube (1) out of the transfer box.

cardiagn.com

39 – Remove transfer box (VTG)

- Loosen screws (1).
- Remove heat shield.

- Loosen screws (1).
- Remove the transfer box (VTG).

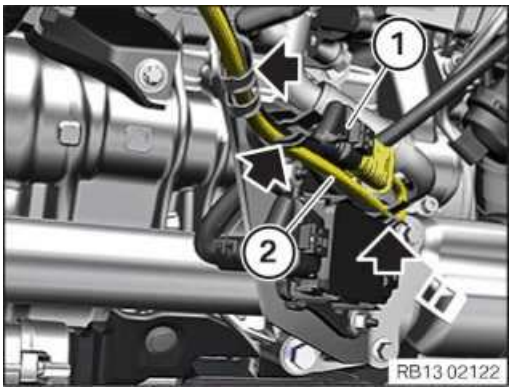
40 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

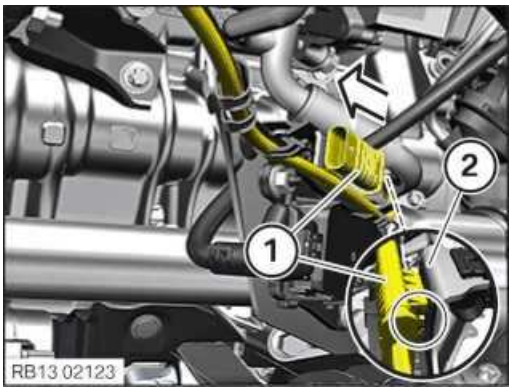
Risk of burning!

- Perform all work only on components that have cooled down.



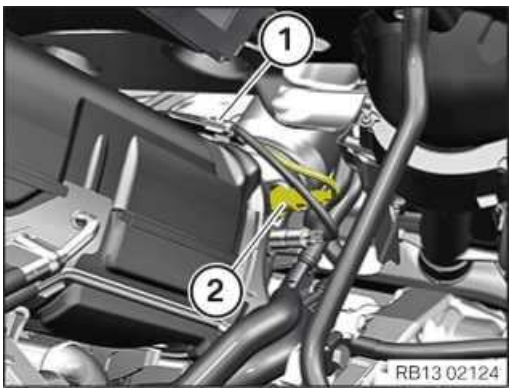
RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



cardiagn.com

- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

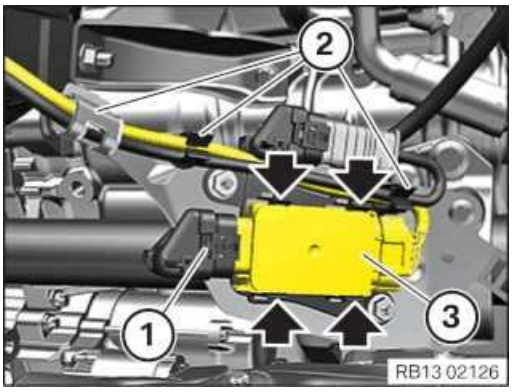
41 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

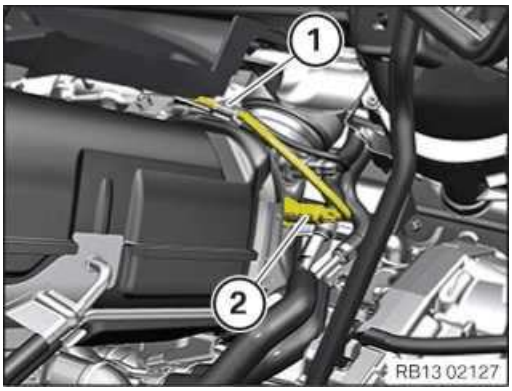
Risk of burning!

- Perform all work only on components that have cooled down.



RISK OF DAMAGE

Electrostatic discharge.



Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).

- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

42 – Remove holder for oxygen sensor

- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

43 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

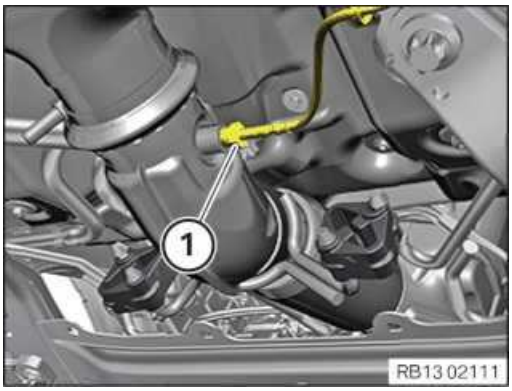
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.



- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).

- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

44 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

cardiagn.com

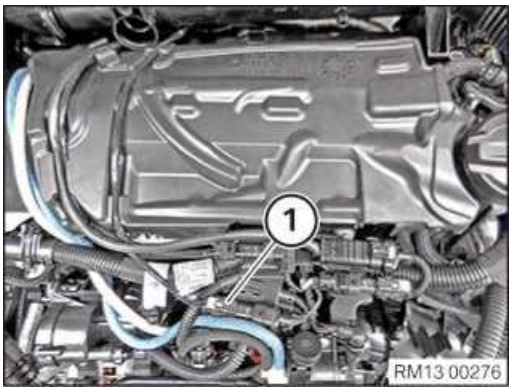
WARNING

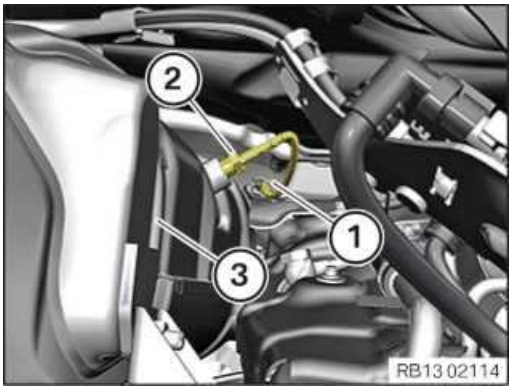
Hot surfaces.

Risk of burning!



- Perform all work only on components that have cooled down.

RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Uncover the exhaust temperature sensor cable.

- Guide the exhaust temperature sensor cable (2) out of the clamp (1) and place it to one side.
- Release the exhaust temperature sensor (2) with conventional tools .
- Feed out and remove the exhaust temperature sensor (2) from the diesel particulate filter (3).

45 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

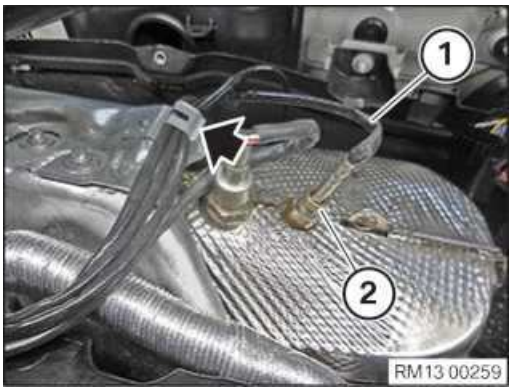
RISK OF DAMAGE



Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect connector (1).
- Put the cable of the exhaust temperature sensor to one side.

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

46 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock plug connection (1) and disconnect.
- Detach the connector (2) from the holder .
- Release the front oxygen sensor cable.

- Detach the control sensor (1) with the special tool .
- Feed out and remove the control sensor (1).

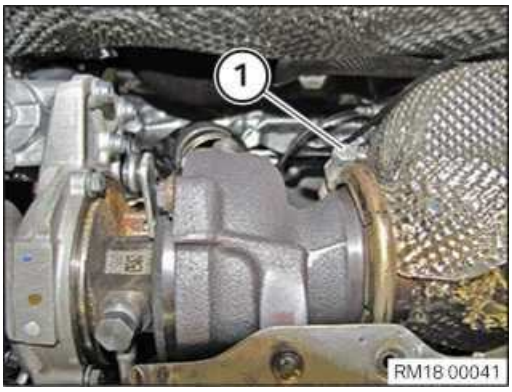
47 – Removing the diesel particulate filter

WARNING

Hot surfaces.

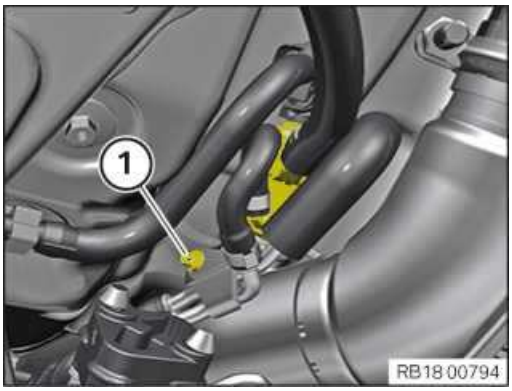
Risk of burning!

- Perform all work only on components that have cooled down.



CAUTION

Heavy component.



Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

- Loosen screw (1).

- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.

- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

▸ **Remove differential pressure sensor**

cardiagn.com

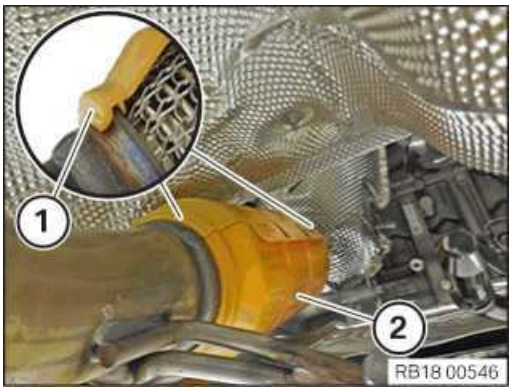
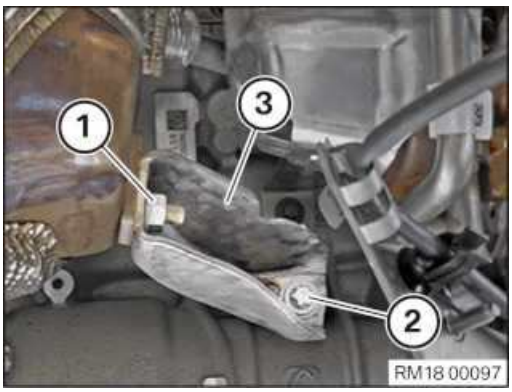
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

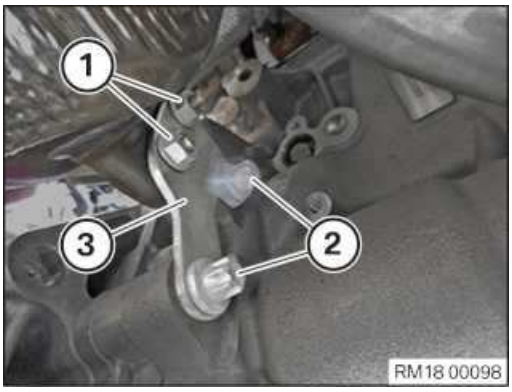


- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

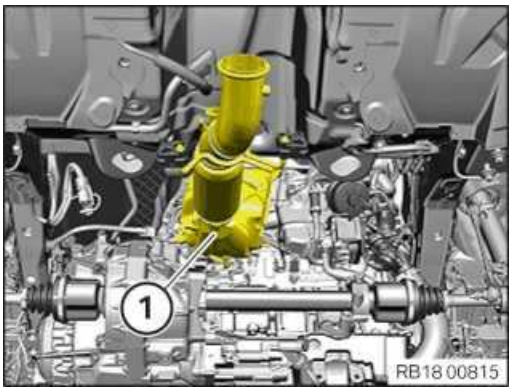


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

- Loosen nuts (1).



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Unfasten nut (1).
- Loosen screw (2).
- Remove holder (3).

cardiagn.com

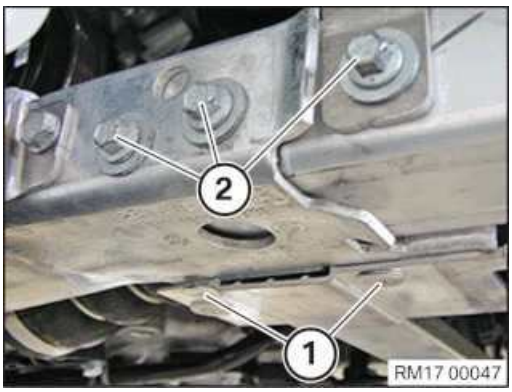
- Loosen nuts (1).
- Loosen screws (2).
- Remove holder (3).

- Feed out diesel particulate filter (1) toward the bottom and remove.

48 – Remove the washer fluid reservoir from the fixture

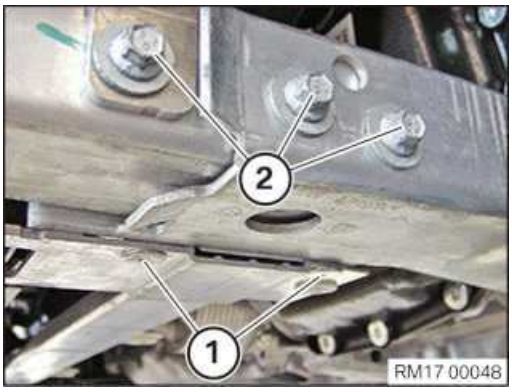
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.



49 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler

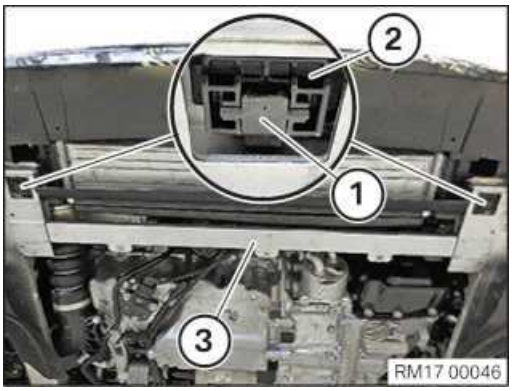
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

cardiagn.com

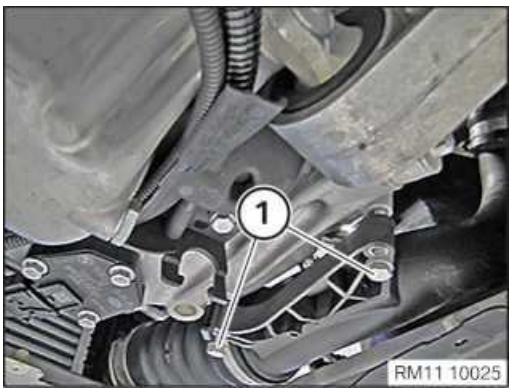
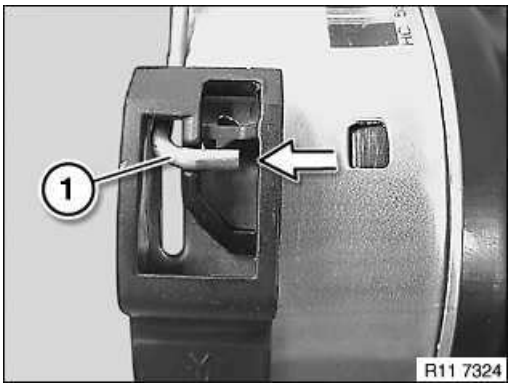
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.

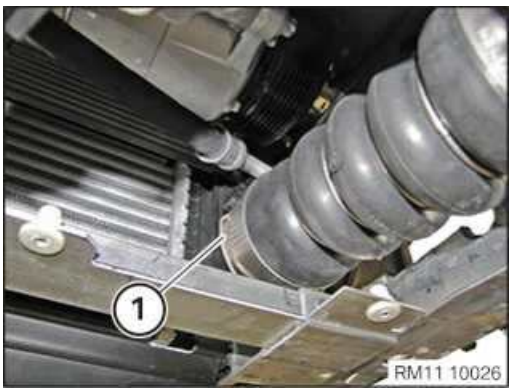


- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

- Release the screws (1) on the right front axle support.



- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.



- Release screws (1) of charge air duct on right oil sump.

cardiagn.com

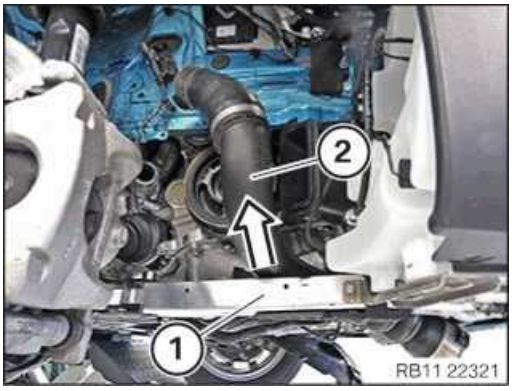
- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.

50 – Remove the heat shield from the exhaust turbocharger at the bottom

cardiagn.com

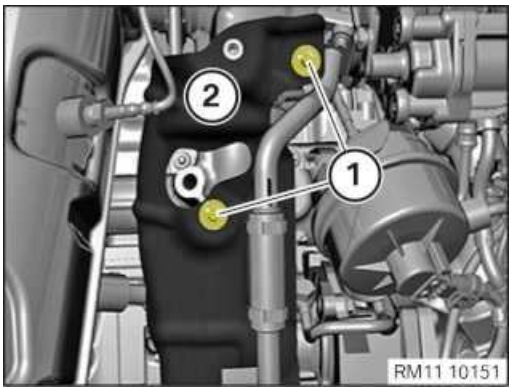
WARNING



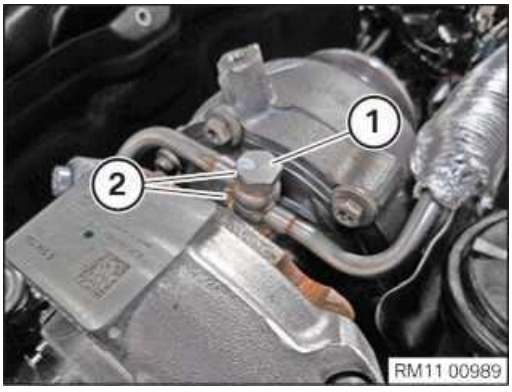
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Unlock and disconnect connector (1).
- Unscrew the banjo bolt (3).
- The seals of the banjo bolt (3) must be renewed.
- Loosen screw (2).
- Remove the exhaust gas pressure pipe (4).

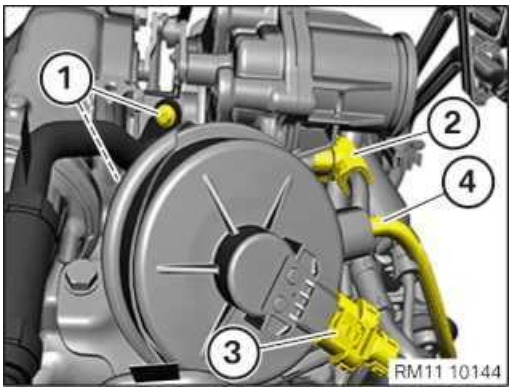
- Unscrew the bolts (1) on the heat shield .
- Feed out and remove the heat shield (2).



51 – Removing the low-pressure stage turbocharger

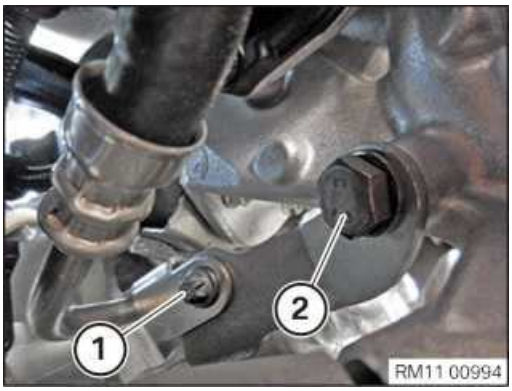
WARNING

Hot surfaces.



Risk of burning!

- Perform all work only on components that have cooled down.



- Release the banjo bolt (1) of the oil feed lines.
- Remove sealing rings (2).
- Place oil feed lines to one side.

cardiagn.com

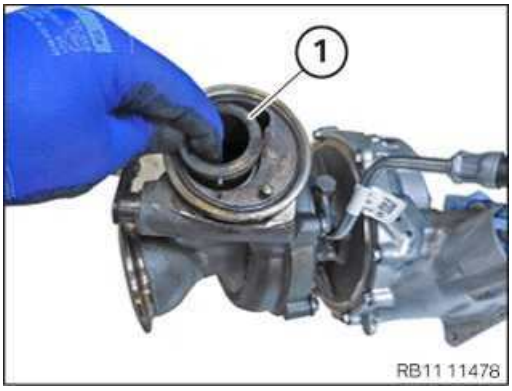
- Release the screws (1) of the oil return line.
- Unlock and disconnect the plug connections (2) and (3).
- Pull off the vacuum hose (4) carefully.



- Undo the bolt (1) of the oil feed line.
- Loosen screw (2).

- Loosen screw (1).
- Remove the V hose clamp.
- Guide the low-pressure stage turbocharger out towards the top and remove.

- Remove seals (1), (2) and (3).

- Remove the spacer ring (1).

52 – Removing the high-pressure stage exhaust turbocharger

cardiagn.com

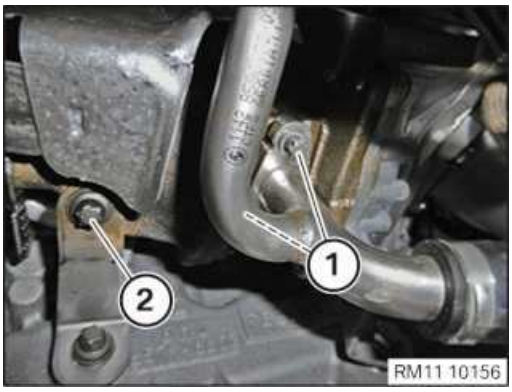
WARNING

Hot surfaces.

Risk of burning!

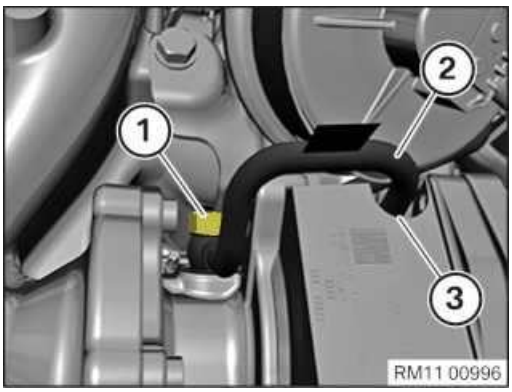


- Perform all work only on components that have cooled down.

CAUTION

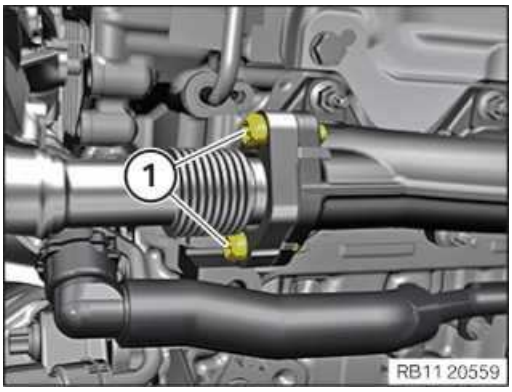
Heavy component.

Heavy components can lead to injury or damage.

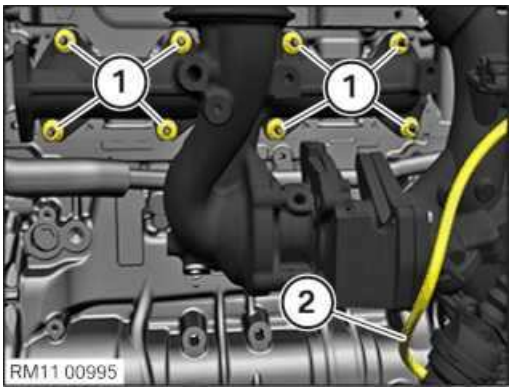


- Remove and install heavy components with the aid of another person/other persons.

- Unscrew the bolts (1) on the oil return line .
- Loosen screw (2).



- Release screw (1) from the right wheel arch.



- Unscrew the banjo bolt (1).
- Guide out oil feed line (2) from holder (3).

cardiagn.com

- Loosen screws (1).

- Pull off the vacuum hose (2).
- Loosen nuts (1).
- Guide out the exhaust manifold and the high-pressure stage exhaust turbocharger to the top and remove them.

MAIN WORK

POSTPROCESSES

53 – Installing the high-pressure stage exhaust turbocharger

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

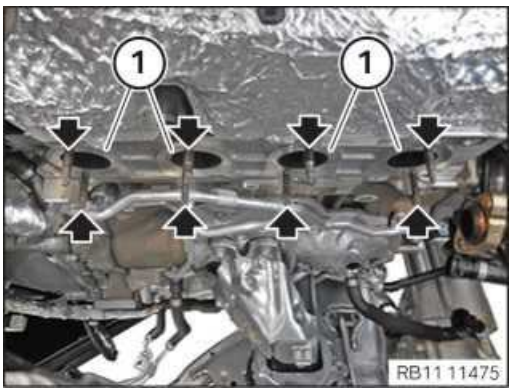
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

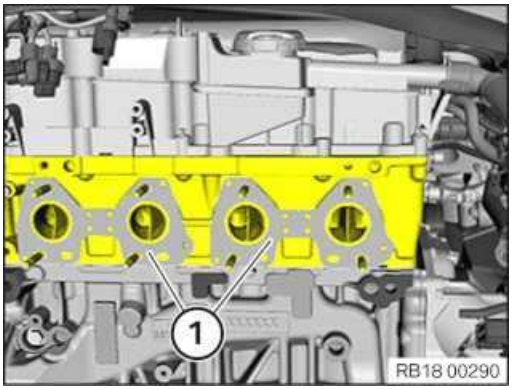


Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

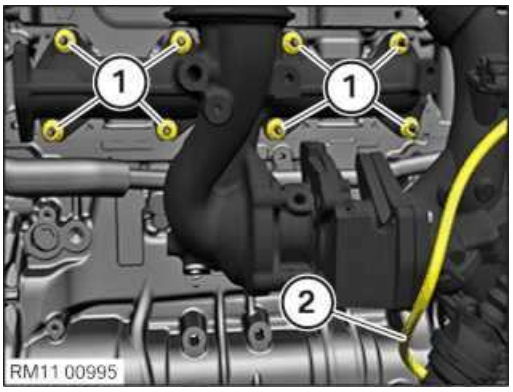
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION



The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing surfaces (1) on the cylinder head using special tool **0 495 102 (11 4 470)**.
- Check the stud bolts (arrows) on the cylinder head for correct fit.



- Clean the sealing surfaces on the exhaust manifold using special tool **0 495 102 (11 4 470)**.

- Renew gasket (1).

  Parts: Gasket
- Install new gasket (1).

cardiagn.com

- Feed in and install the exhaust manifold and the high-pressure stage exhaust turbocharger.
- Tighten nuts (1).

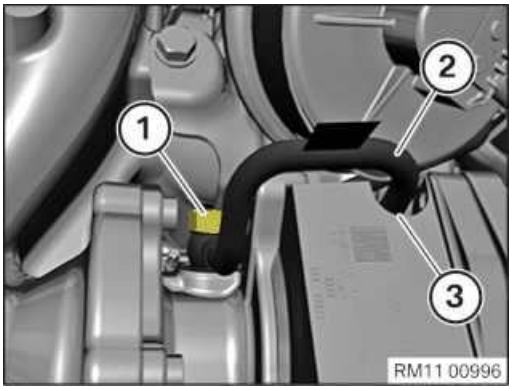
  Parts: Nuts
- Connect vacuum hose(2).

- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

- Tighten the screws (1).

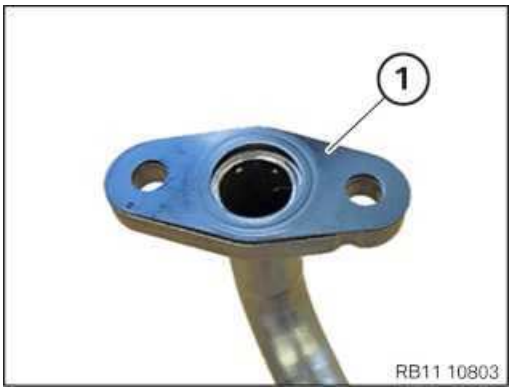


Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

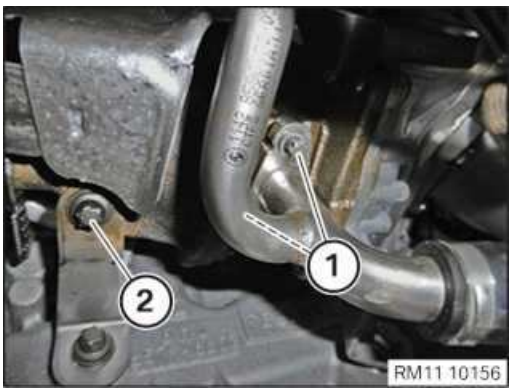
- Renew sealing rings (1) of banjo bolt.

  Parts: Sealing ring



- Guide the oil feed line into the holder (3) and install it.
- Tighten down screw (1).

cardiagn.com



- Tighten bolt (1) from the right wheel arch.

- Renew seal (1) of oil return line.

  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Tighten down screw (2).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

54 – When replacing the exhaust turbocharger

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

55 – Prepare for the installation of the exhaust turbocharger

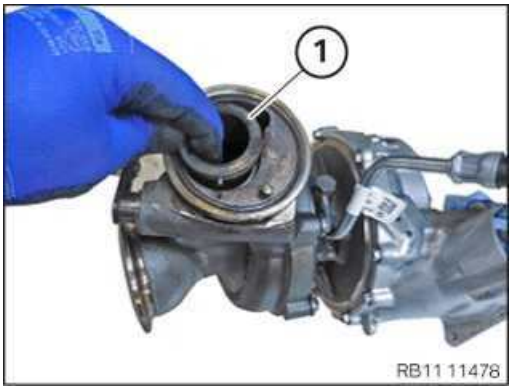
cardiagn.com

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

56 – Installing the low-pressure stage turbocharger

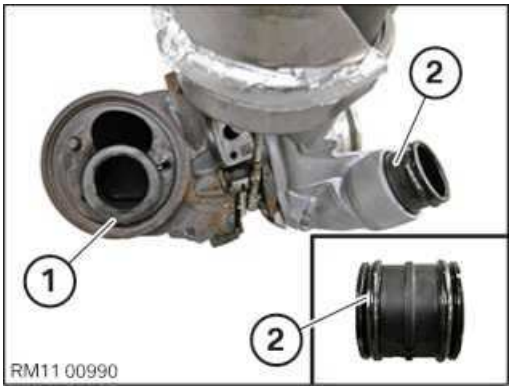
RISK OF DAMAGE



Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

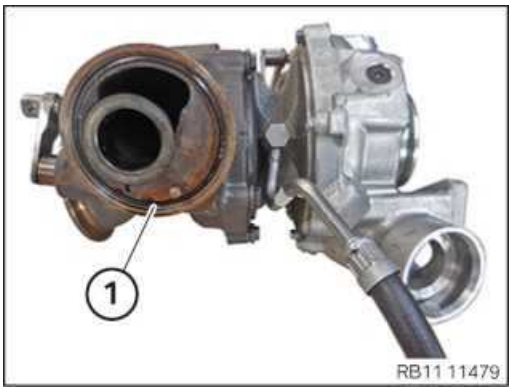


TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Check the spacer plug (1) for damage, renew if necessary.

  Parts: Spacer ring
- Insert and install the spacer ring (1).
- Position spacer ring (1) correctly.



- Renew gasket (1).

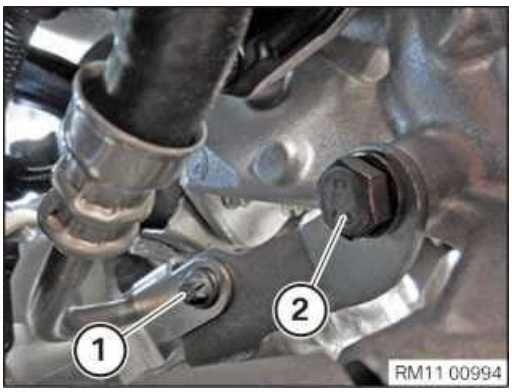
  Parts: Gasket
- Position the seal (1).
- Renew the sleeve(2).

  Parts: Holding sleeve

cardiagn.com

- Renew sealing ring (1).

  Parts: Sealing ring
- Affix the sealing rings on the exhaust turbocharger.



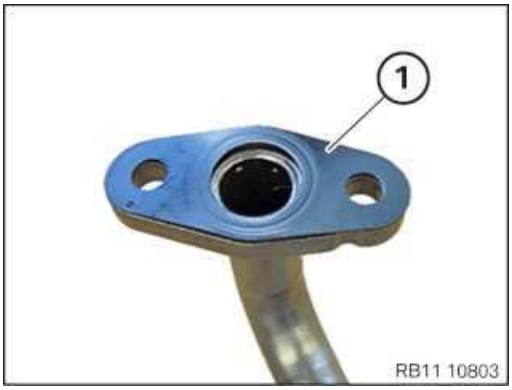
- Insert and install the low-pressure stage exhaust turbocharger on the exhaust manifold .
- Feed in and install V-band clamp .
- Tighten V-band clamp (2).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Screw in nut (1) with 2 **revolutions**.

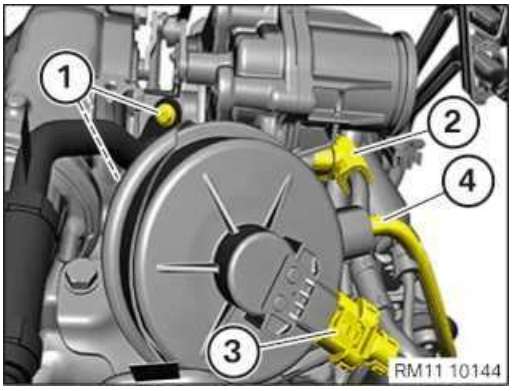
- Tighten down screw (1).



Oil feed line to bracket

Torx screw M6x12		Tightening torque	8 Nm

- Tighten down screw (2).



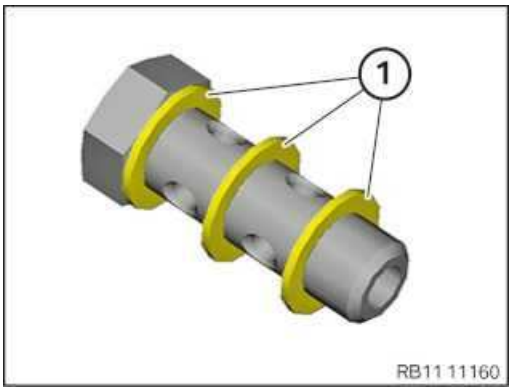
Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

- Renew seal (1) on the oil return line.

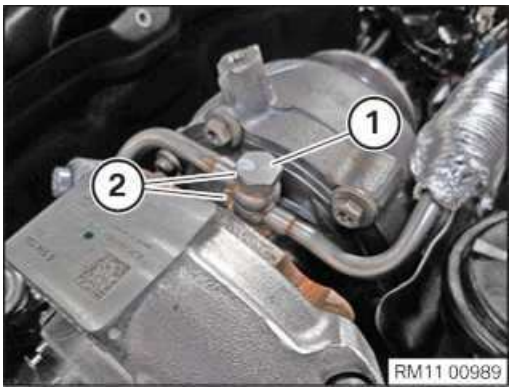
  Parts: Gasket

- Position the oil return line with the seal.
- Tighten the screws (1).



Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



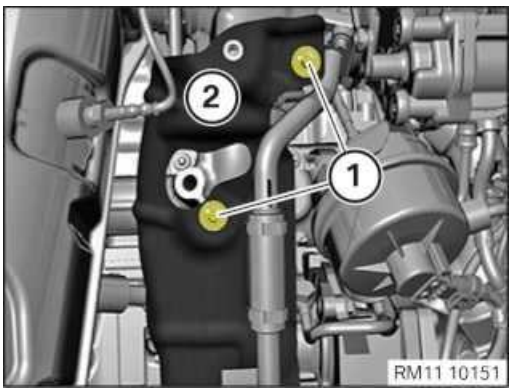
- Connect and lock connectors (2) and (3).

  The locks must engage audibly.
- Connect vacuum hose (4).

cardiagn.com

- Renew banjo bolt and sealing rings (1).
- **Parts:** Banjo bolt, sealing rings

- Install sealing rings (1).
- Tighten the banjo bolt (1).
- Ensure that the lines do not rest against the adjacent components.



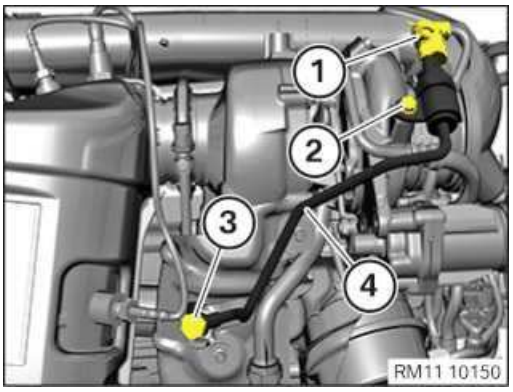
57 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the bolts (1) on the heat shield .

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

- Position the exhaust gas pressure pipe (4).
- Hand-tighten the bolt (2).
- Renew sealing rings on the banjo bolt (3).

  Parts: Sealing ring
- Tighten the banjo bolt (3).

Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt	Renew sealing rings.	Tightening torque	30 Nm

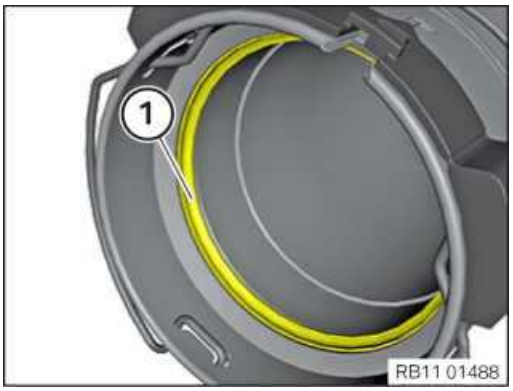
- Tighten down screw (2).

Standard screw connection M6

M6		8 Nm

- Connect connectors (1) and lock.

  Lock must audibly engage.



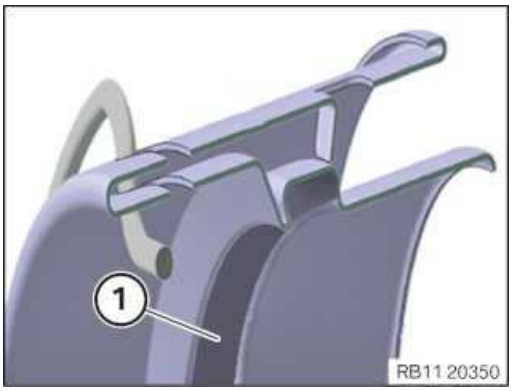
58 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

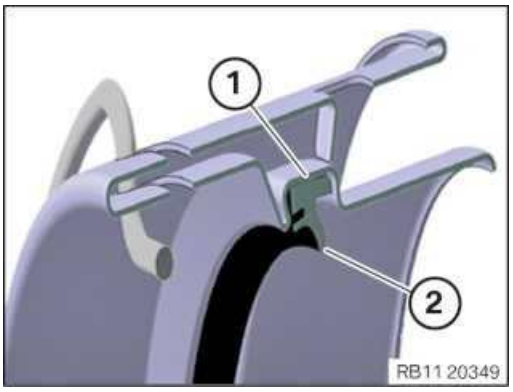


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▸ **Replace damaged gasket**

TECHNICAL INFORMATION

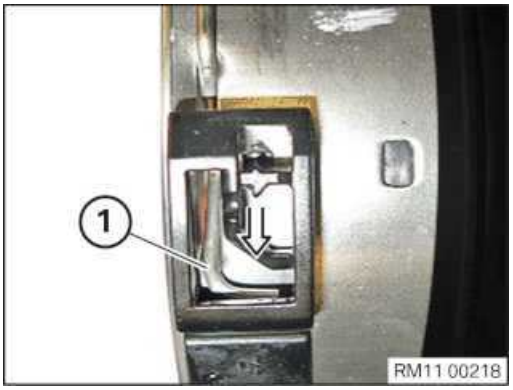


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

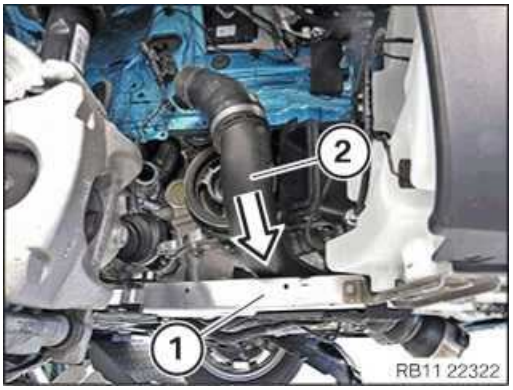
  The gasket groove (1) must be clean.

cardiagn.com



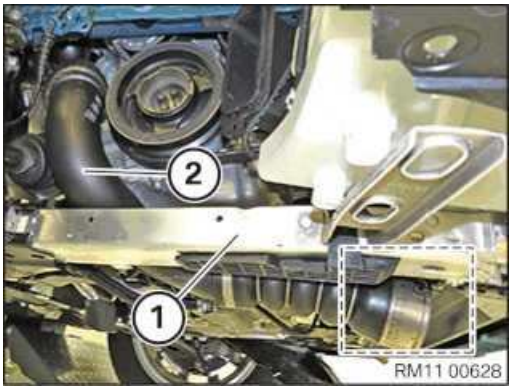
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

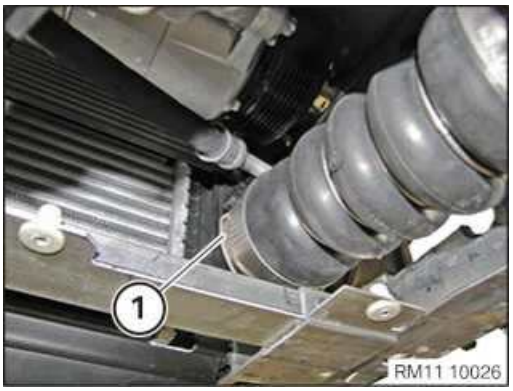


TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

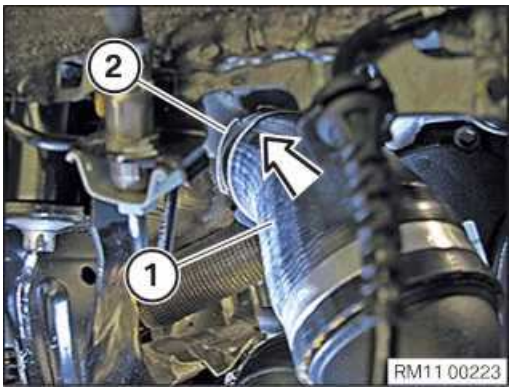


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

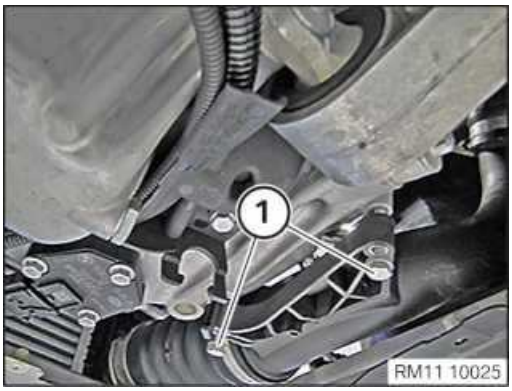


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

cardiagn.com

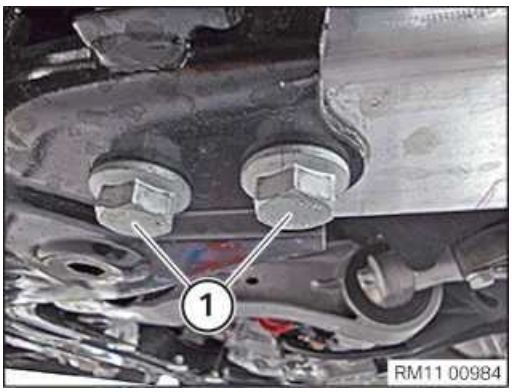
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

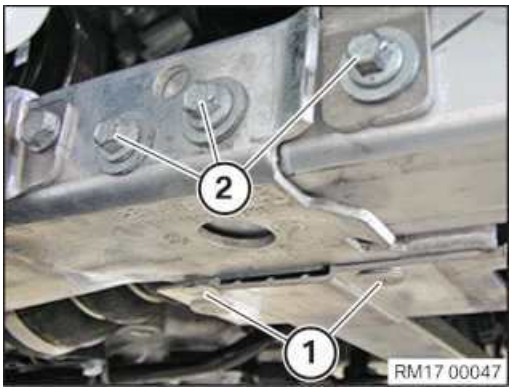
Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Tighten the screws (1) on the adapter of the front axle support.

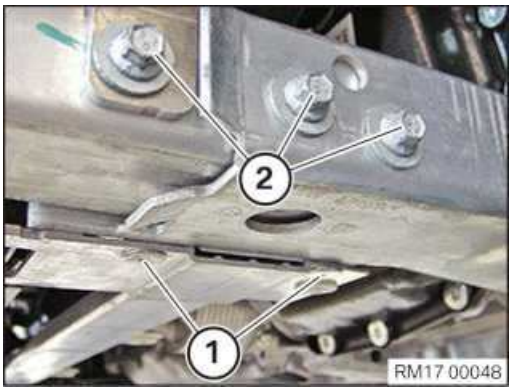


Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

cardiagn.com



- Tighten the bolts (2) at the front left.

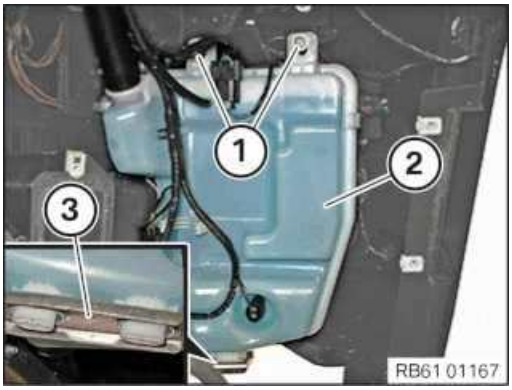
Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.



Cross connection to front axle support

M6		Tightening torque	12 Nm

- Renew the blind rivet (1).

  Parts: Blind rivet
- Mount the blind rivets (1) at the front right.

59 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).

Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

60 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

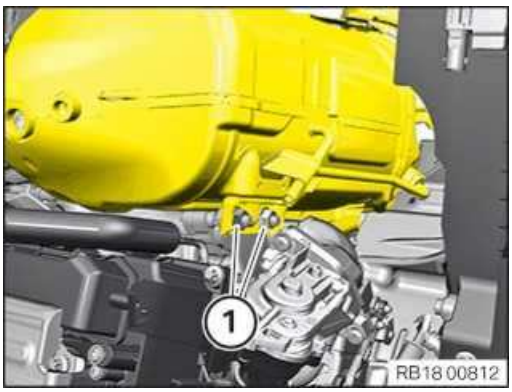
- Remove and install heavy components with the aid of another person/other persons.

- Renew the V-clip (1).

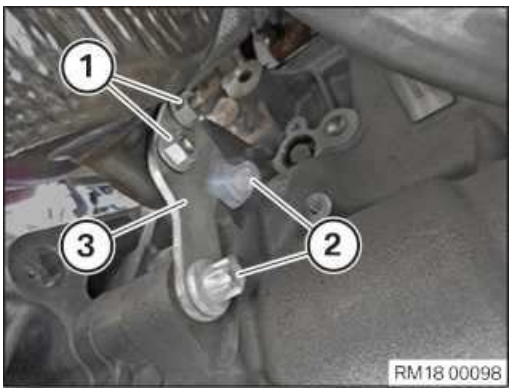
  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

cardiagn.com

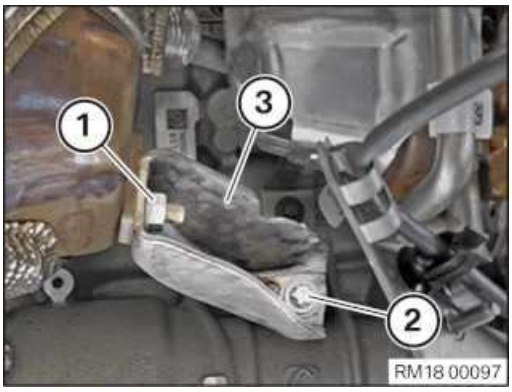


- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).

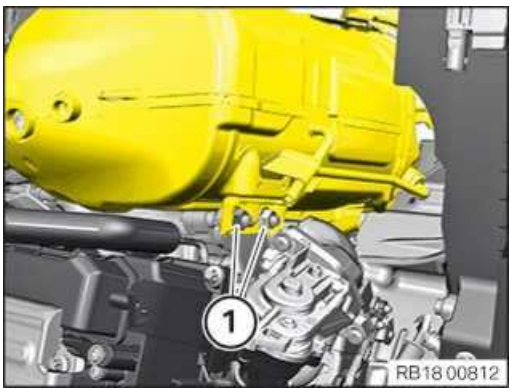


- Tighten nuts (1) by hand.

- Install holder (3).
- Hand-tighten the bolts (2).
- Tighten nuts (1) by hand.

cardiagn.com

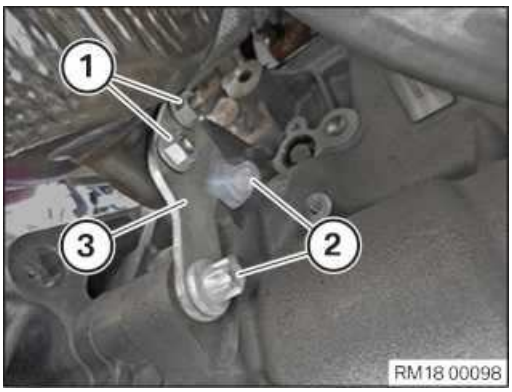
- Install holder (3).
- Tighten the nut (1) hand-tight.
- Hand-tighten the bolt (2).



- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger



V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

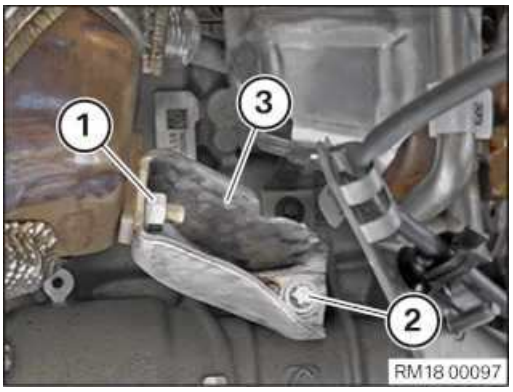
- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten down screws (2).

Diesel particulate filter holder to gearbox



M12x75		Tightening torque	66 Nm

- Tighten nuts (1).

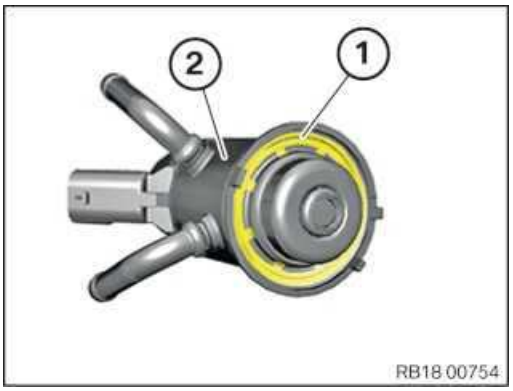
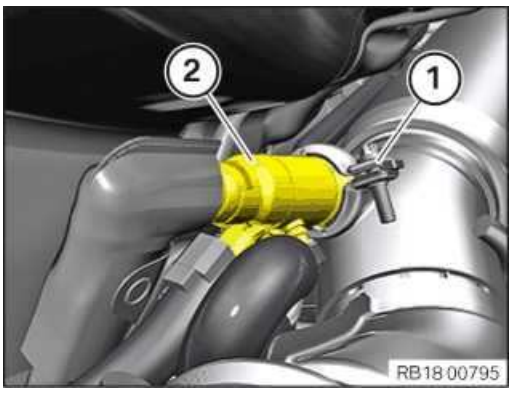
- Tighten down screw (2).



Diesel particulate filter bracket to crankcase

M10x35		Tightening torque	38 Nm

- Tighten nut (1).

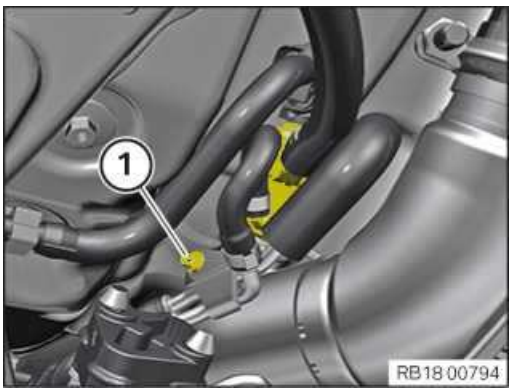


Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Renew sealing ring (1) of the SCR metering module (2).

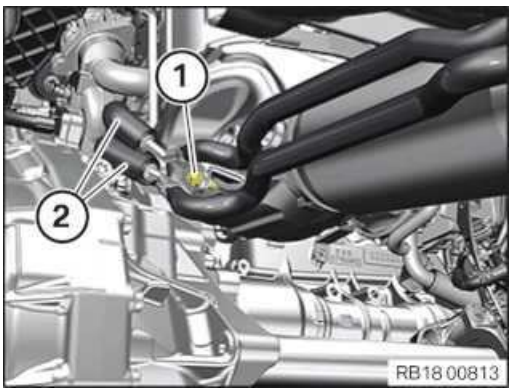
  Parts: Sealing ring



- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

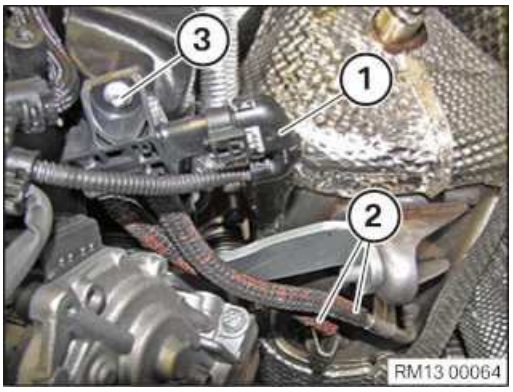


V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

▸ **Installing differential pressure sensor**

cardiagn.com

- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

61 – Install the control sensor

TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

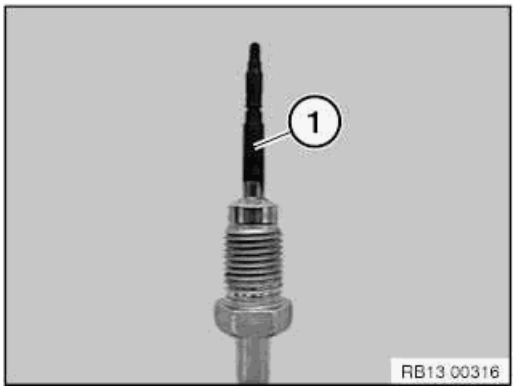
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Feed in front oxygen sensor (1) and install.
- Tighten front oxygen sensor (1) using special tool .

Control sensor

Control sensor		Tightening torque	50 Nm

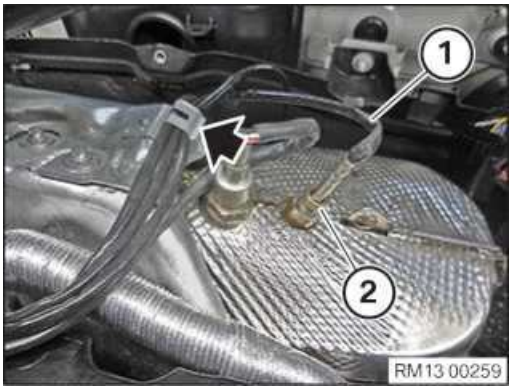


- Lay and secure cable of oxygen control sensor.
- Secure the connector (2) to the holder.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

62 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

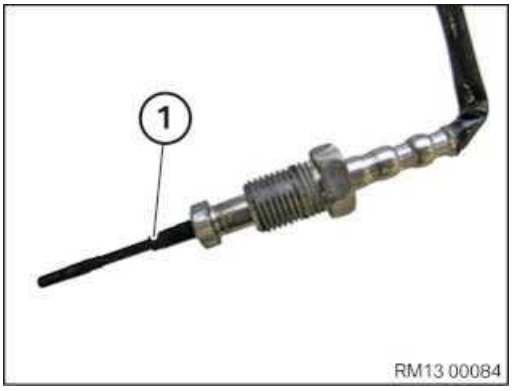
Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

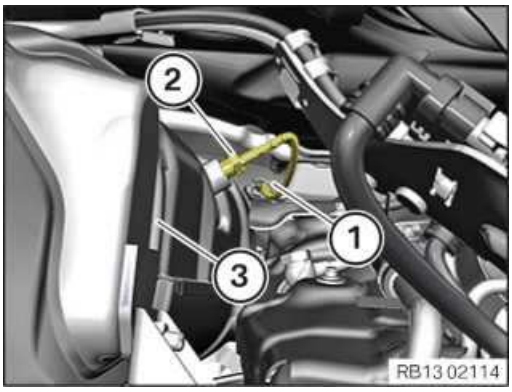
  The connector (1) must engage audibly.



63 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.



Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

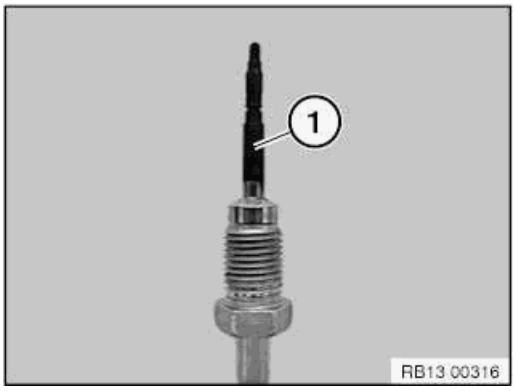
- Make sure the gauge tip (1) is not damaged during installation.

cardiagn.com

- Guide the exhaust temperature sensor (2) into diesel particulate filter (3) and install.
- Tighten the exhaust temperature sensor (2) with conventional tools .

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

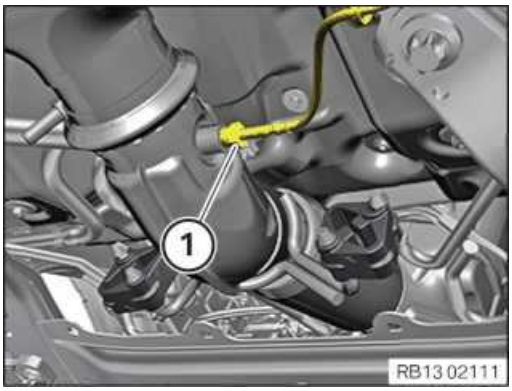


- Insert and install the cable of the exhaust temperature sensor (2) in the clamps (1).

- Lay and fasten the cable of the exhaust gas temperature sensor.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

64 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

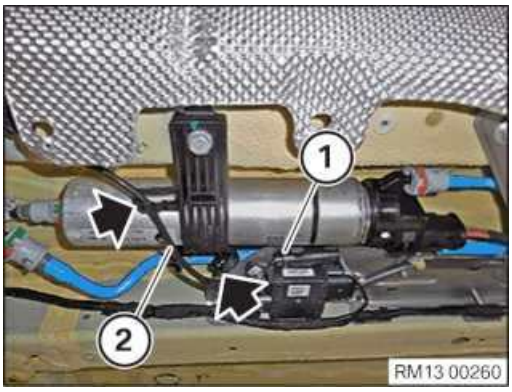
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

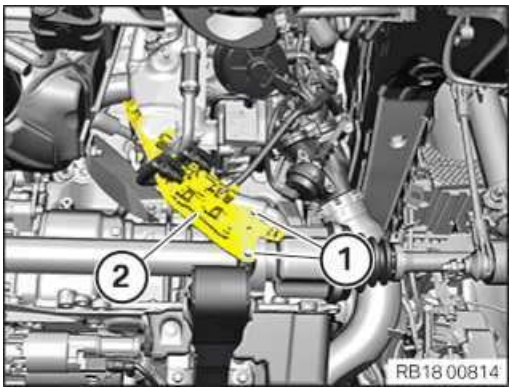
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).



Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

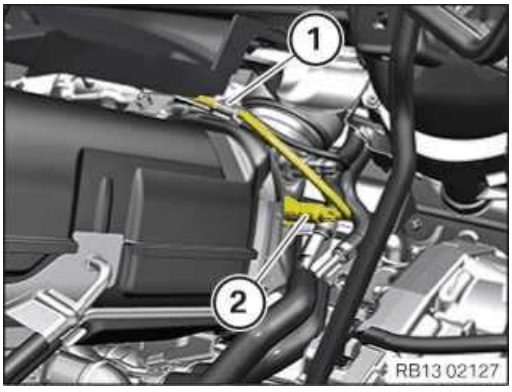


cardiagn.com

- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

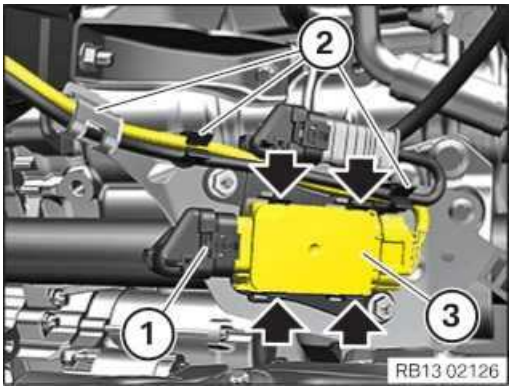
65 – Install holder for oxygen sensor



- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm



66 – Installing the nitrogen oxide sensor before SCR catalytic converter

- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

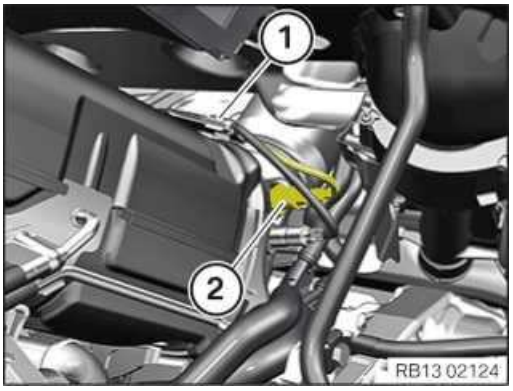
Sensor		Tightening torque	50 Nm

- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

67 – Install the monitoring sensor

cardiagn.com



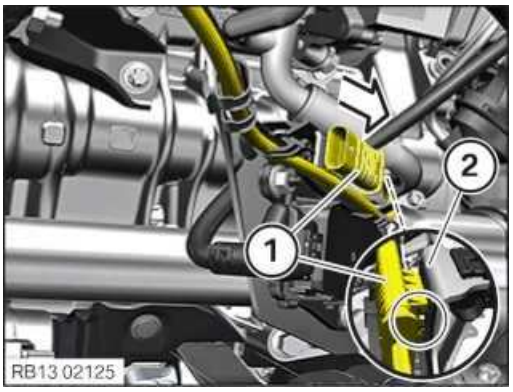
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

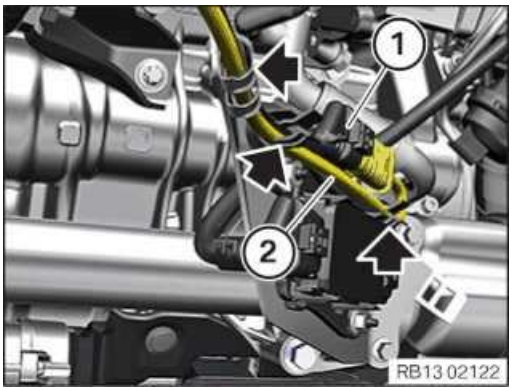
Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor



Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.

- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.

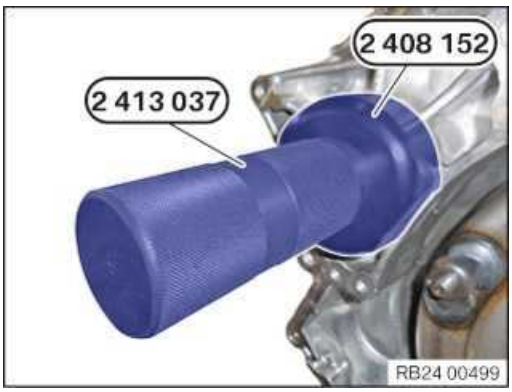
- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

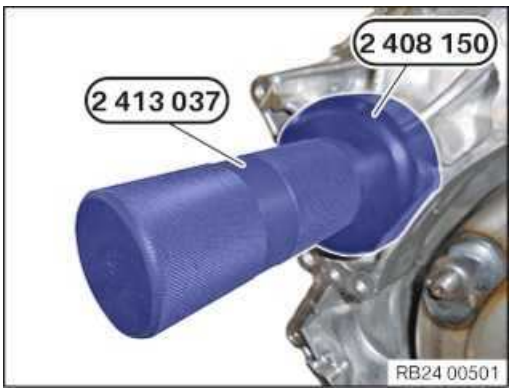
68 – Install the transfer box (VTG)

- If intermediate shaft (1) gets caught on transfer box (VTG) (2), renew intermediate shaft (1) and the radial shaft seals in the automatic or manual transmission.

cardiagn.com

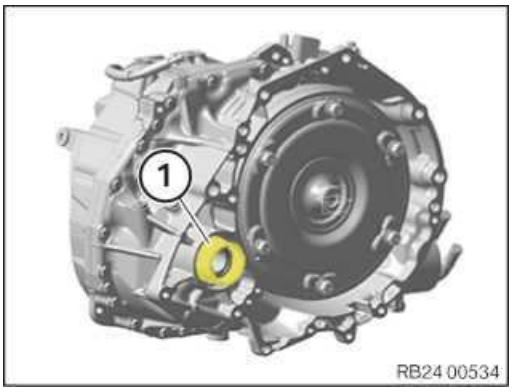


- Screw special tool **2 409 025** into the outer radial shaft seal.
- Turn the screw on the special tool **2 409 025** until the outer radial shaft seal has been pulled out.



- Insert special tool **2 411 739** into the inner radial shaft seal.

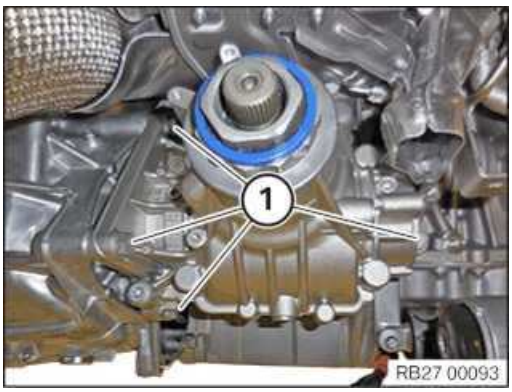
- Screw special tool **2 411 739** into the inner radial shaft seal.
- Turn the screw on the special tool **2 411 739** until the inner radial shaft seal has been pulled out.



- Drive in the inner radial shaft seal using special tools **2 408 152** and **2 413 037** up to the limit position.

- Drive in the outer radial shaft seal using special tools **2 413 037** and **2 408 150** up to the limit position.

cardiagn.com



- If necessary, connect the new intermediate shaft (1) to the output flange of the automatic transmission or manual transmission.

- Coat the inside of the output flange (arrows) evenly with approx. 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the transfer box (VTG).
- Tighten the screws (1).

Transfer box to transmission

M10		Tightening torque	56 Nm

- Install heat shield.
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Heat shield to transfer box

M6	Renew screws.	Tightening torque	6 Nm

▸ **Check the transfer box oil level**

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

- Check transfer case oil level, correct:
- Open the oil filler plug (1).
- Check transfer box oil level.
- If necessary, top up transmission oil up to the lower edge of the oil filler plug opening (1).

Transmission oil

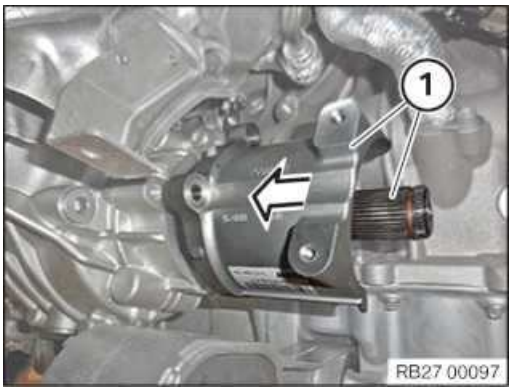
Technically suitable transfer box and electrical transmission oils	

Main group 27

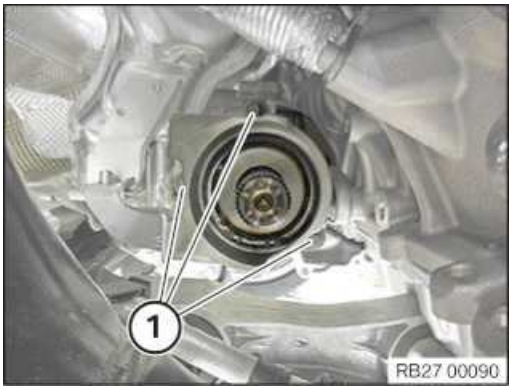
- Tighten the oil filler plug (1).

Oil filler plug on transfer box (VTG)

M18x1.5		Tightening torque	35 Nm



69 – Install the intermediate shaft with the support tube



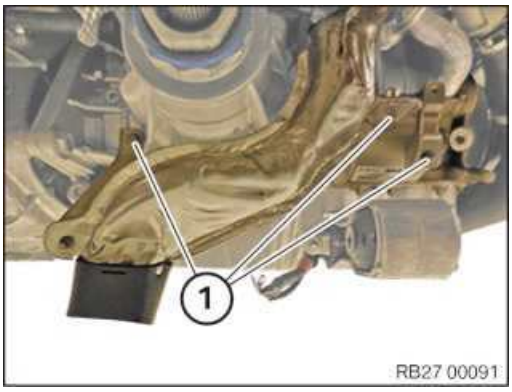
- Coat gearing of the intermediate shaft uniformly with 5 g of grease.

Expendable materials

Lubricating grease Optitemp HT 1 LF	50 g, Tube	83230417754

- Install the intermediate shaft with support tube (1) in the transfer box.

- Position screws (1).



Note: Check for correct screw length! Bolt M8x35 8.8

- Tighten the screws (1).

Intermediate shaft to transfer box

M8x35		Tightening torque	19 Nm

cardiagn.com

- If installed: Install air duct.
- Tighten the screws (1).

70 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

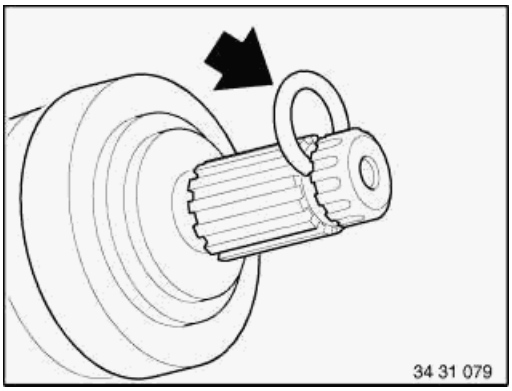
71 – Installing right output shaft partially

cardiagn.com

- Renew the circlip (1).

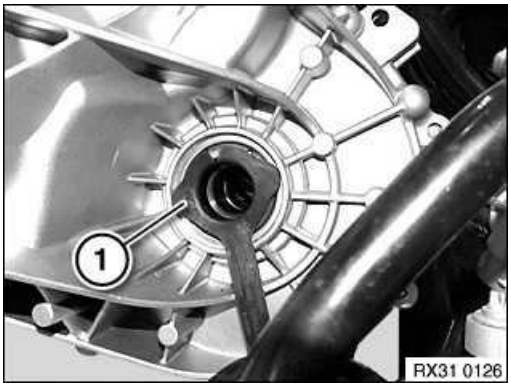
  Parts: Circlip
- Slide output shaft into the transmission as far as the limit position.
- Check for secure seat by levering.

72 – Partially installing the left output shaft



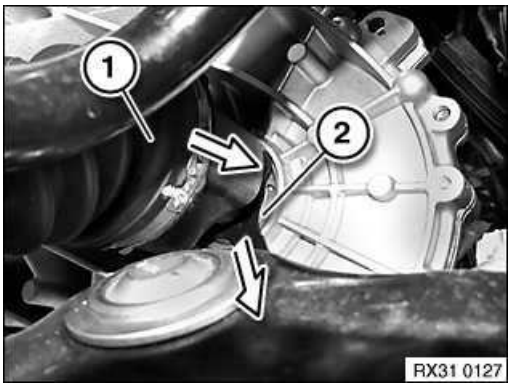
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).

- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

73 – Install propeller shaft.

CAUTION

Component with heavy weight.

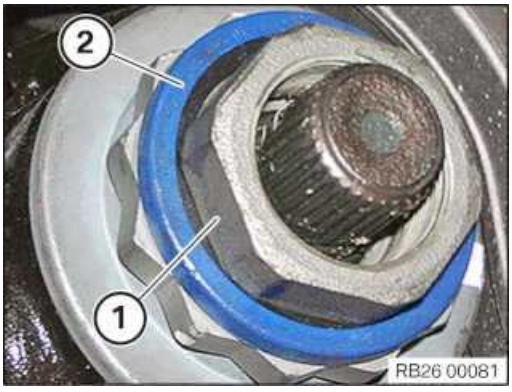
Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

RISK OF DAMAGE

Damage to the propeller shaft during installation.

Non-observance of the installation guidelines for the propeller shaft on the rear axle differential may cause severe damage.



- Always renew the recessed nut on the rear axle differential. Screw locking must be available.
- Strictly observe a minimum hardening time of two hours after having screwed in the recessed nut. The hardening time may be longer at lower temperatures.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

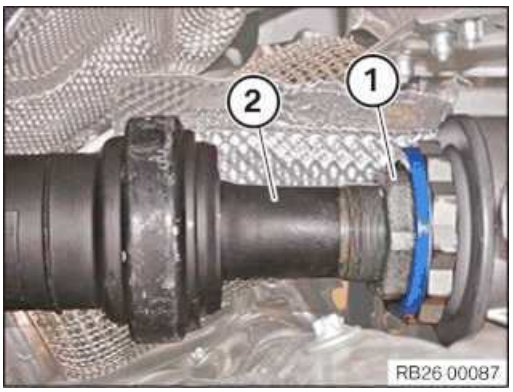
- Do not use the double hexagon head flange nut as counter support.

- Renew recessed nut (1).

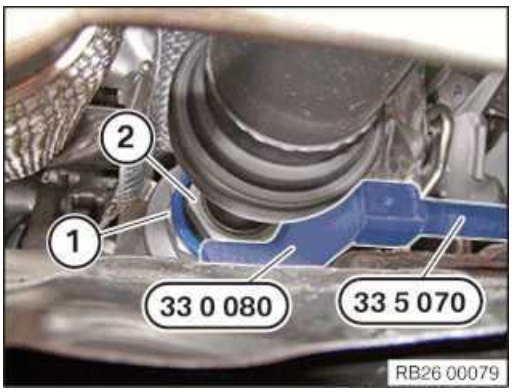
  Parts: Insert nut
- Renew the retaining clip (2) and the seal.

  Parts: Retaining clip, seal
- Insert the seal with the recessed nut (1) and install.
- Insert the retaining clip (2) and install.
- Make sure that recessed nut (1) is screwed in within 5 min.
- Make sure that the hardening time of **minimum** 2 h for the recessed nut is observed.

  The hardening time must be extended at lower temperatures.



cardiagn.com



- Insert the propeller shaft (1) and install.
- Always support the propeller shaft (1) with a conventional jack.

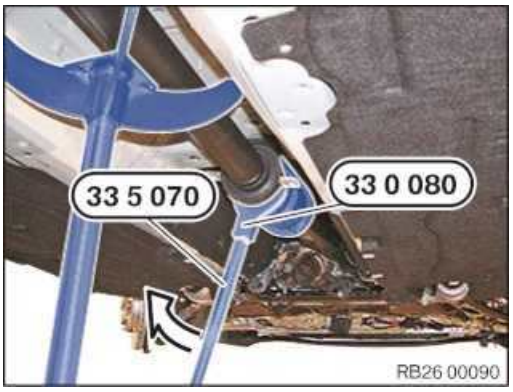
- Hand-tighten the bolts (1).

- Push the propeller shaft (2) against the recessed nut (1) up to the limit position.
- Screw the propeller shaft (2) at least 2 thread starts onto the recessed nut (1) by hand.

RISK OF DAMAGE

Damage to the transfer box.

Non-observance of the removal and installation guidelines may cause severe damage to the transfer box.

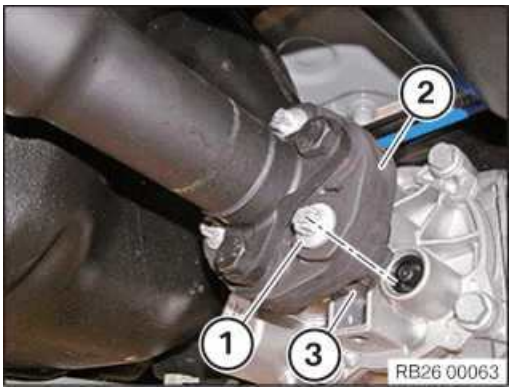


- Do not use the double hexagon head flange nut as counter support.

- Protect the recessed nut (2) on the transfer box from twisting with the special tools **0 495 554 (33 5 070)** and .

  The recessed nut (2) on the transfer box must **not** be used to tighten the propeller shaft.

  The double hexagon flange nut (1) must **not** be used for counter support.



cardiagn.com

- Tighten the front propeller shaft with the special tools **0 495 554 (33 5 070)** and in the direction of the arrow.

Propeller shaft to transfer box

		Tightening torque	80 Nm

TECHNICAL INFORMATION

Compliance with the following instructions is required to avoid a humming noise from the propeller shaft after refitting the propeller shaft.

- Assemble the screw connection (1) of the flexible disc (2) and the three-hole flange (3) according to the mark.
- Renew screws (1).

  Parts: Bolts
- Hand-tighten the bolts (1).

- Protect the propeller shaft (1) with the special tools **0 495 554 (33 5 070)** and from twisting.

- Tighten the bolts with the special tools **0 490 504 (00 9 120)** and .

Flexible disc to rear axle final drive

- Insert and install the heat shield (2).
- Tighten screws (arrows).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

- Tighten nuts (1).

Heat shield to body

Bolts/nut		Tightening torque	3 Nm

76 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

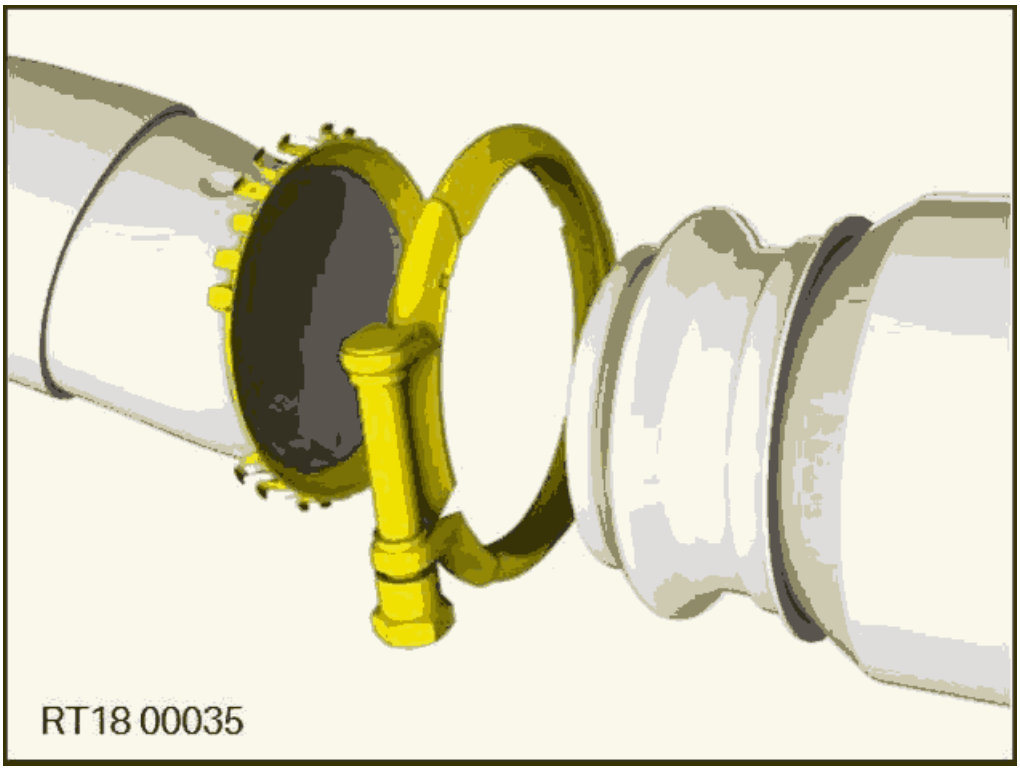
- Feed in and install the exhaust system (4) with a second person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

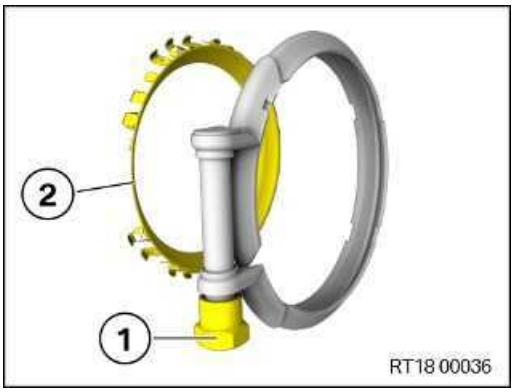
M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).



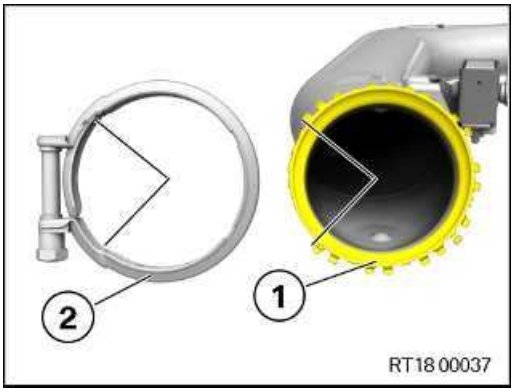
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm



- Check the rubber mount (3) for damage and renew as needed.
- Mount rubber mount (3) on the exhaust system (4).

▸ **Install the V-clip**



V-band clamp

cardiagn.com

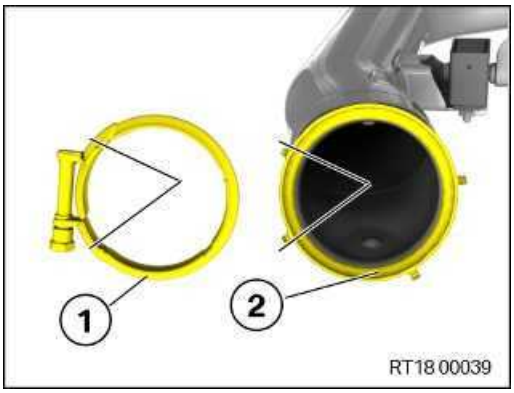
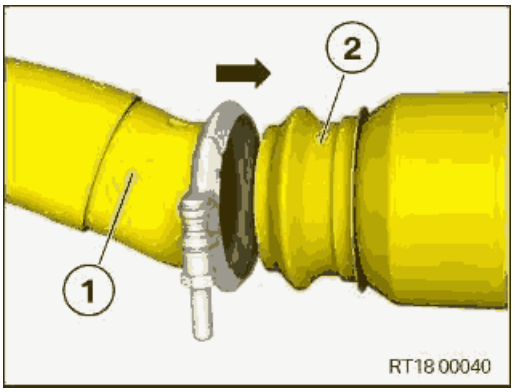
- Unscrew the nut (1) and remove the sealing ring (2).



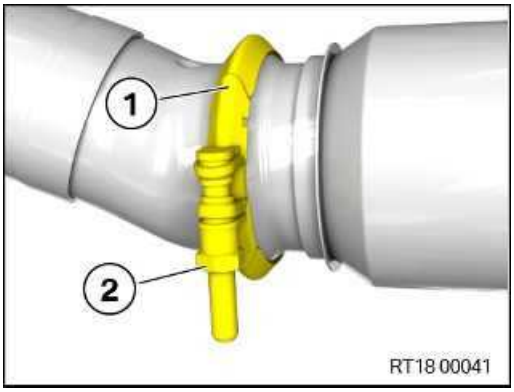
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).



- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

cardiagn.com

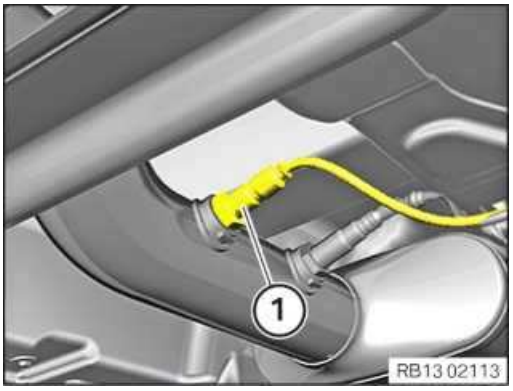
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter



V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

- Feed in, install and tighten diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

- Feed in, install and tighten nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

77 – Install the cross-member with torsion struts

cardiagn.com

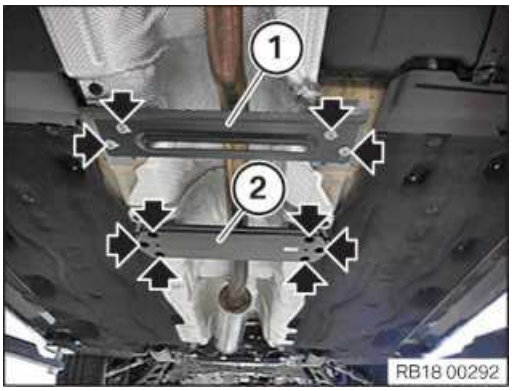
- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °



- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

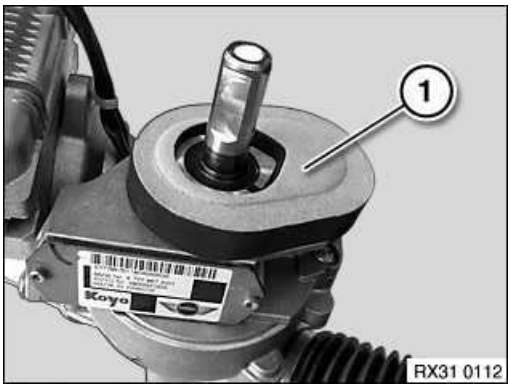
Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

78 – Install the connecting support on the tunnel in front and back

- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

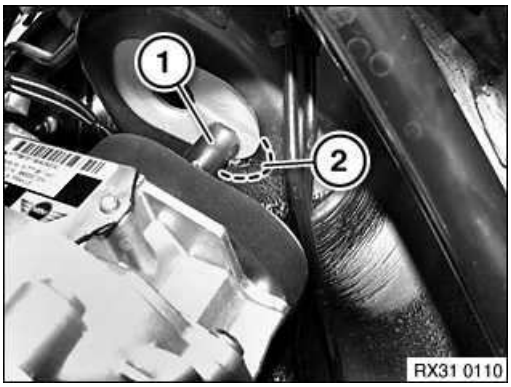


M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm



79 – Mount and secure the complete front axle

- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

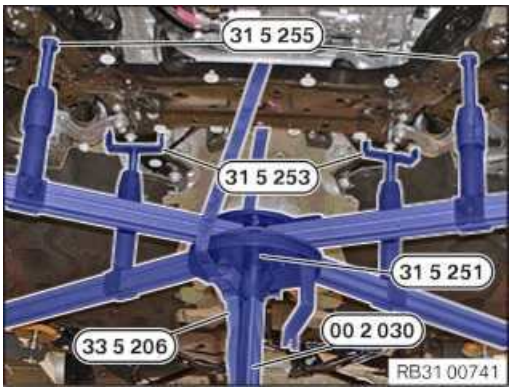
- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

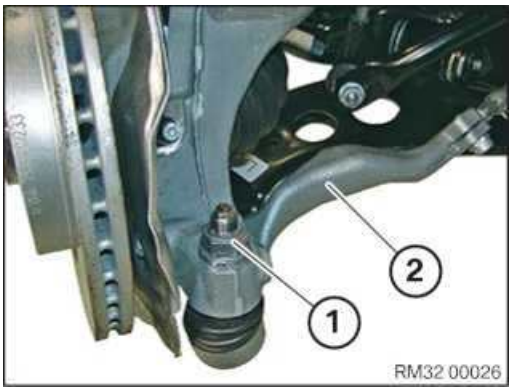
- Tighten down screws (2).



Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).



Underbody protection to body

Screw		Tightening torque	3 Nm

- Remove special tool from special tool .
- Lower universal jack **0 490 133 (00 2 030)** with the special tool and place it to the side.

cardiagn.com

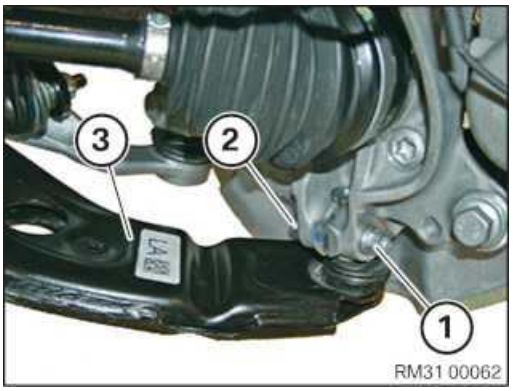
NOTICE



Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

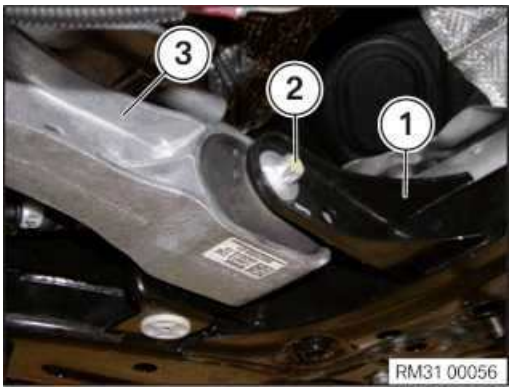
Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

80 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

cardiagn.com

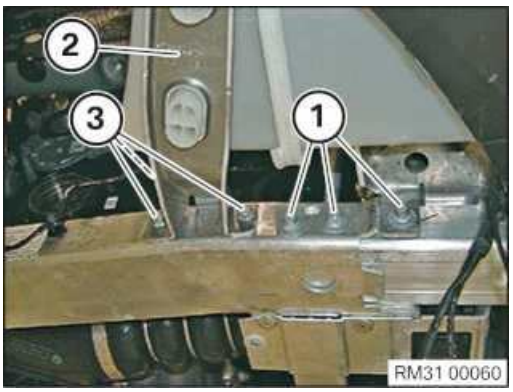
- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support



M12 screw		100 Nm

NOTICE

Perform the operations on the left and right side.

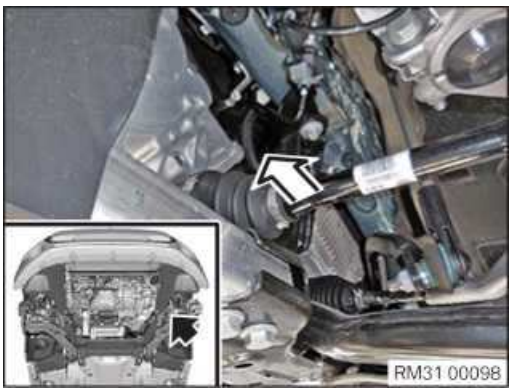
- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

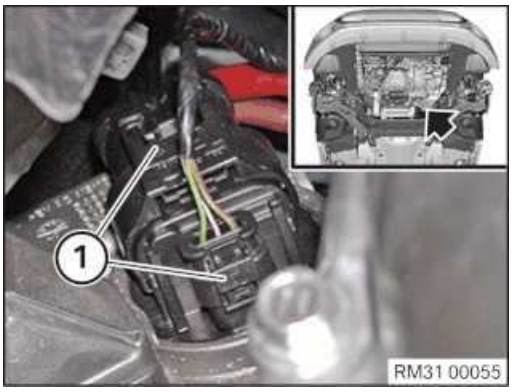


Perform the operations on the left and right side.

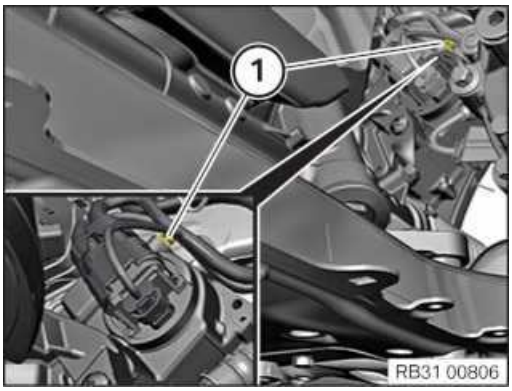
- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm



81 – Attaching connector at steering gear



- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

cardiagn.com

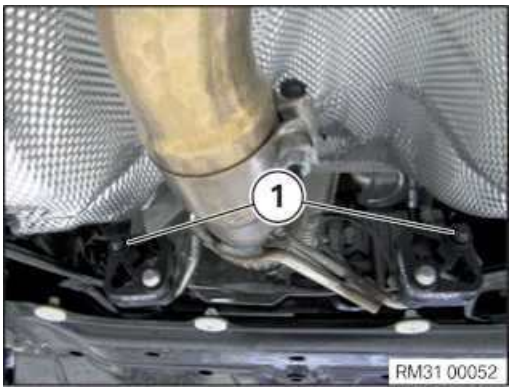
- Connect and lock connector (arrow) (1) with the steering gear.

- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

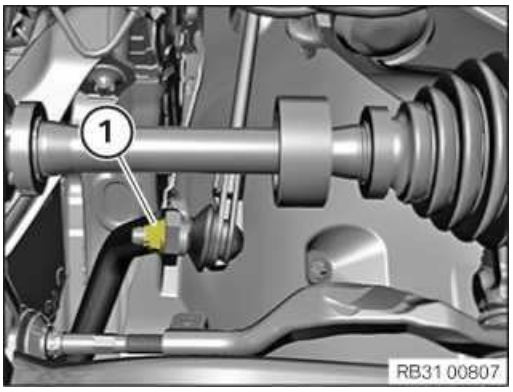
Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

82 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.



83 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

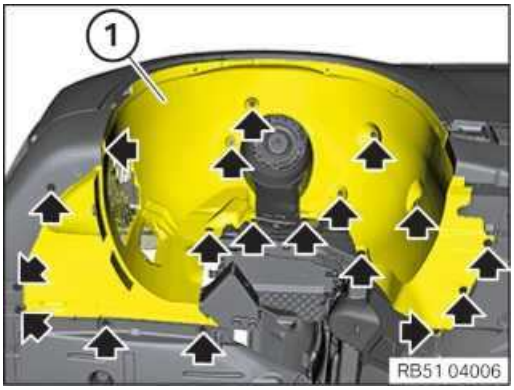
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

84 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

85 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Plastic nut		Tightening torque	2,6 Nm
Screw		Tightening torque	2,6 Nm

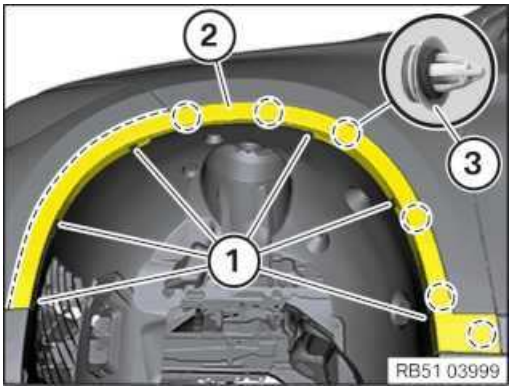
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Check the clips (3) for damage and renew where required.

  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

86 – Installing both front wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue in the area of the wheel bolt holes, remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

- Renew mounting bolt (1).

  Parts: Mounting bolt

- Check that the mounting bolt (1) for the brake disc is securely seated.

  The mounting bolt (1) for the brake disc may not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to rear wheel hub

M8	Renew screw.	Tightening torque	16 Nm

Brake disc to front wheel hub

M8	Renew screw.	Tightening torque	16 Nm

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring (1).

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check the wheel bolts and threads for damage, renew the wheel bolts if necessary.
- Join and tighten the wheel bolts (arrows).

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

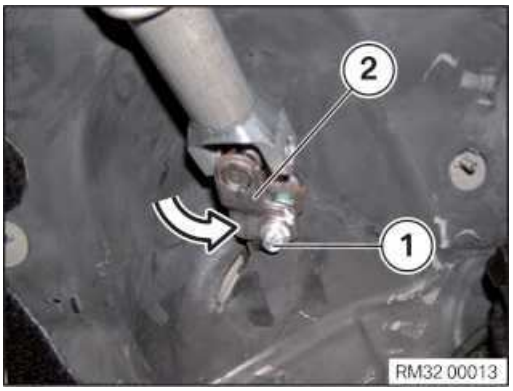
87 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

88 – Secure the steering shaft at the bottom on the steering gear

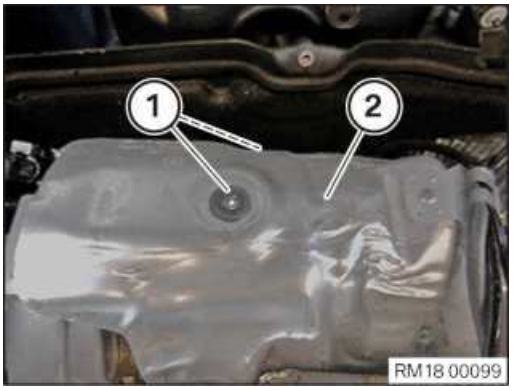
88 – Secure the steering shaft at the bottom on the steering gear

- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

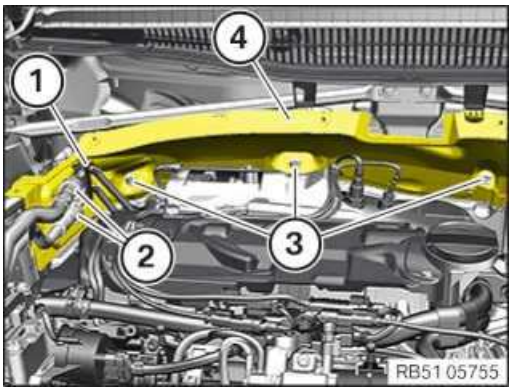


- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

89 – Install the heat shield on the exhaust turbocharger



- Feed in and install the heat shield (2).
- Tighten the screws (1) at the top and bottom of the heat shield.

Heat shield for exhaust turbocharger

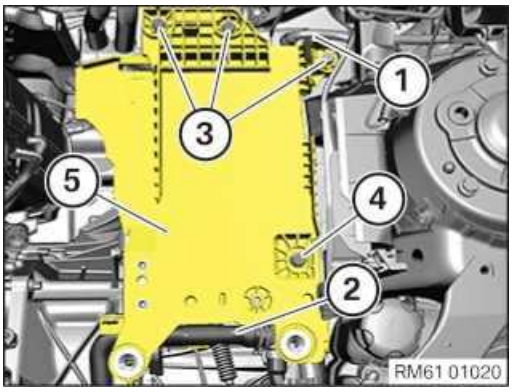
Torx screw BM 6x12		Tightening torque	10 Nm

- Fasten the cable at the clips .

90 – Installing rear bulkhead upper part

- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead



Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

91 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

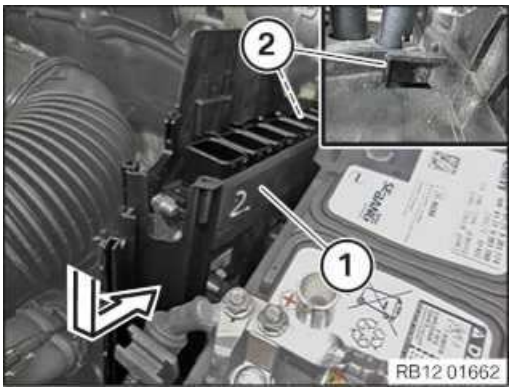
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

92 – Install electronics box

Prerequisite



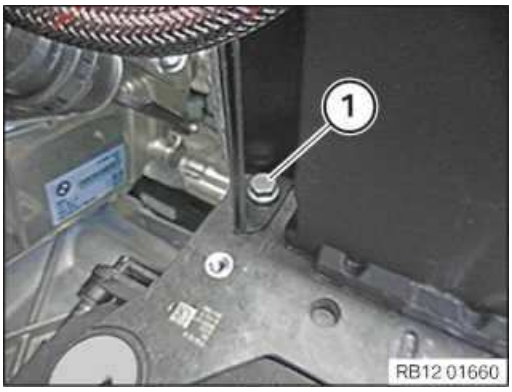
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

cardiagn.com

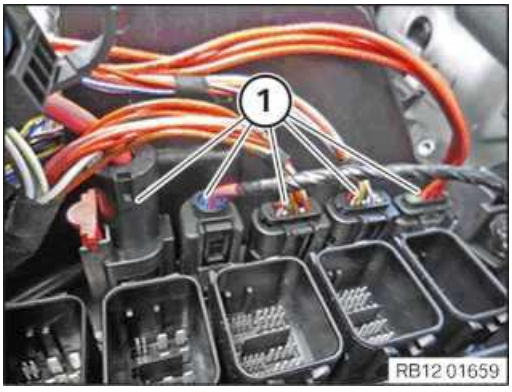
- Tighten down screw (1).

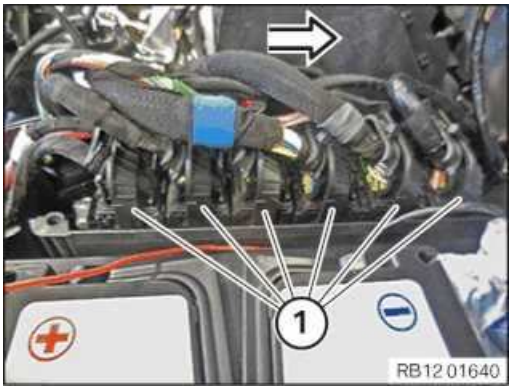
Electronics box to battery tray

M8X16		Tightening torque	15 Nm

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



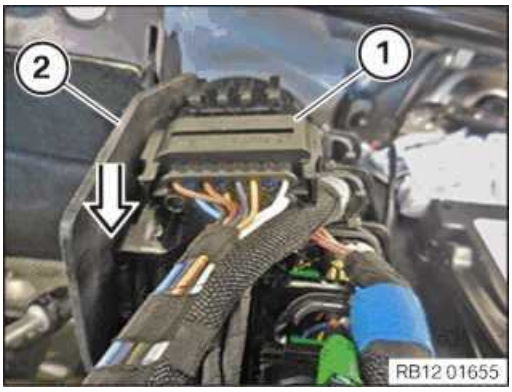
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



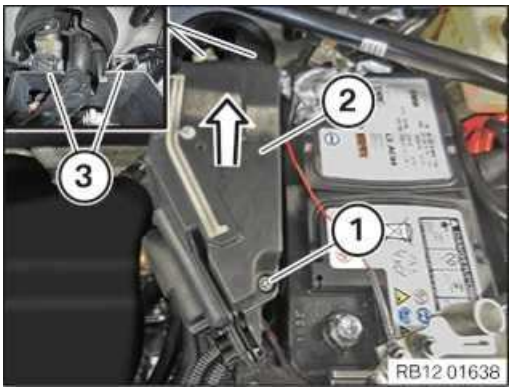
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.



- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com

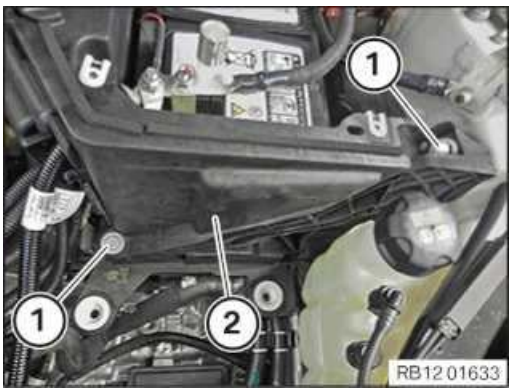
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

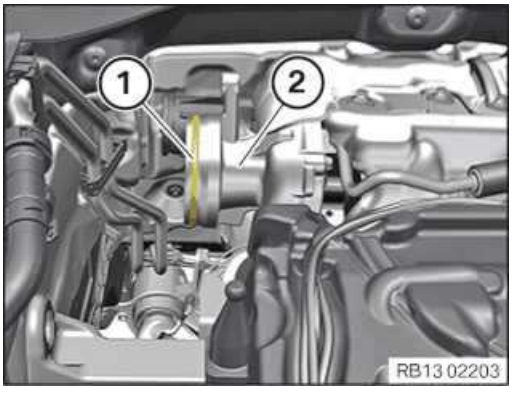


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

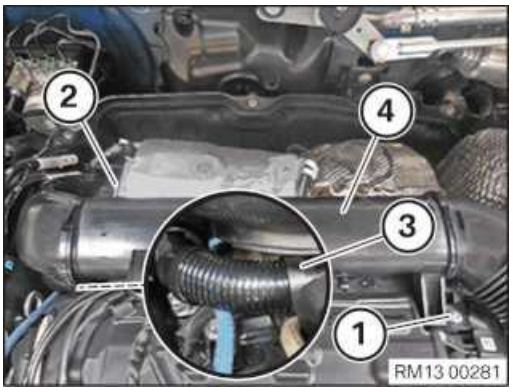
Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray



M8		Tightening torque	19 Nm

93 – Installing clean air pipe

- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

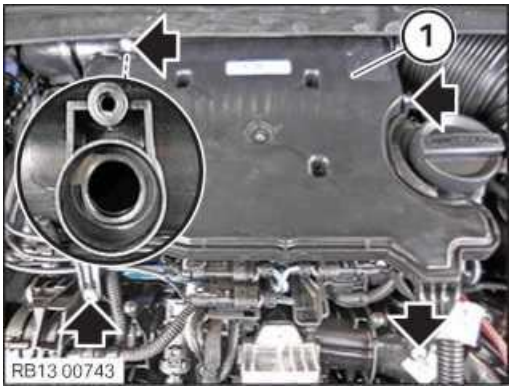
- Feed in clean air pipe and install.
- Connect clean air pipe to the exhaust turbocharger and lock audibly in the clamps (2).
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Connect ventilation line (3) to the cylinder head cover and lock audibly.



- Mount clean air pipe onto the intake filter housing.
- Tighten clamp (1) on the clean air pipe.

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

94 – Install resonator

- Insert and install the resonator (1).
- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

95 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

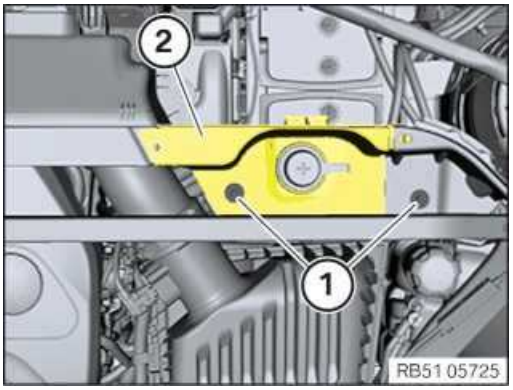
- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

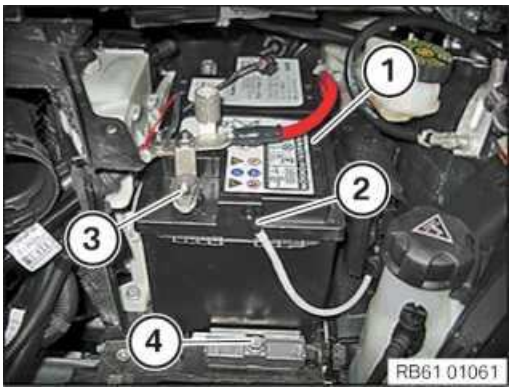


96 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

97 – Install vehicle battery

cardiagn.com

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

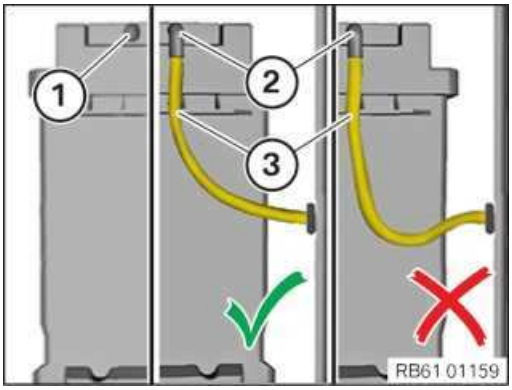
- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING



Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

Result

» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

cardiagn.com

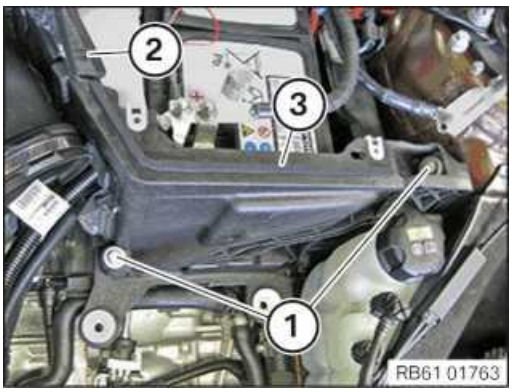
Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

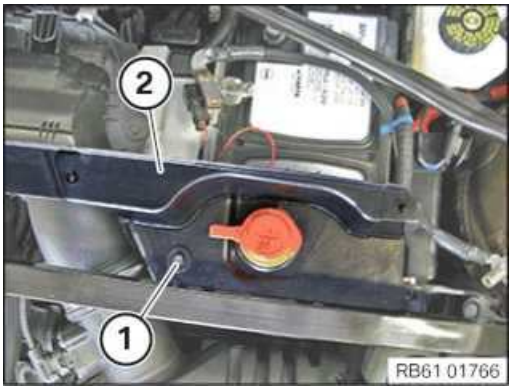
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).

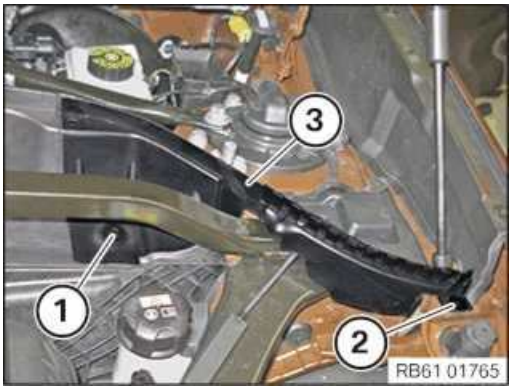


Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover



M8		2,8 Nm

- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

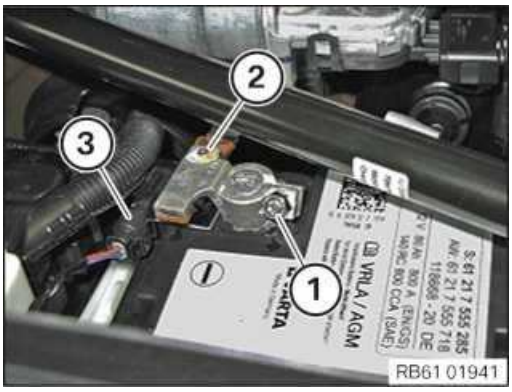
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

98 – Connecting the battery earth lead

TECHNICAL INFORMATION



For additional information see:

61 00 ... Safety information on handling the vehicle battery

61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6			5 Nm

- If required, connect the connector (3).

99 – Installing intake silencer housing

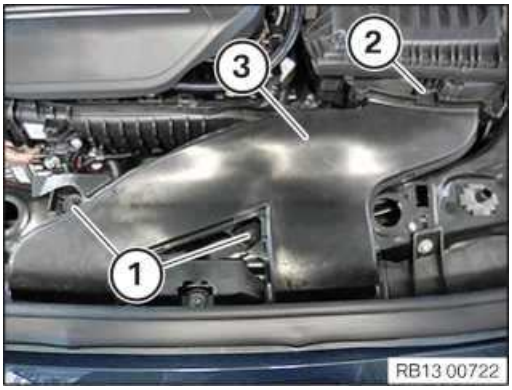
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

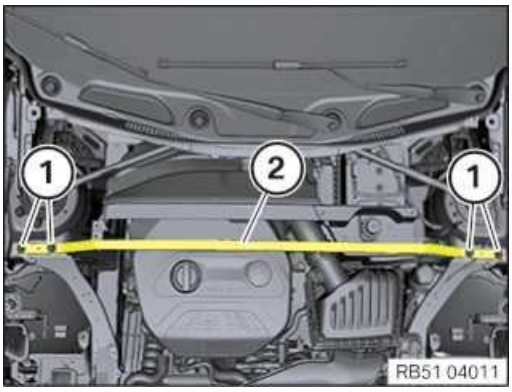
  The connector (3) must engage audibly.
- Insert and install the holder (1).

100 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection



M6		Tightening torque	8 Nm

101 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.

cardiagn.com

- Install the strut brace (2).
- Renew screws (1).

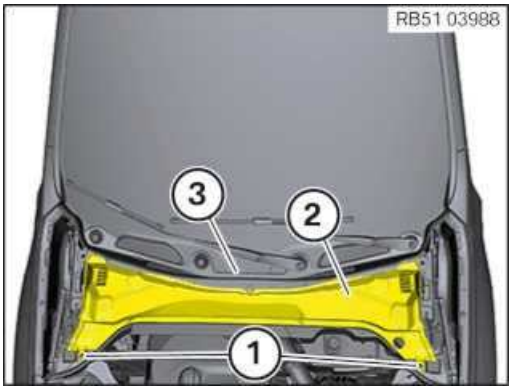
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

NOTICE

Description is for right component only. The procedure on the left side is identical.



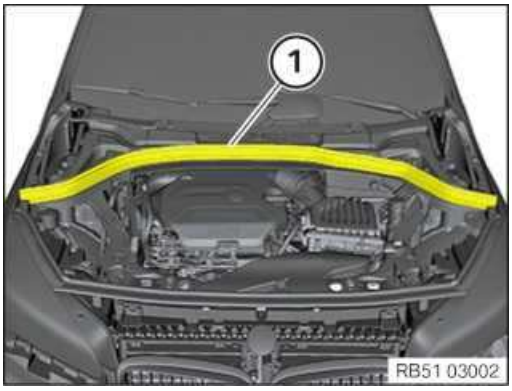
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

102 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

103 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

104 – Checking/topping up oil level in automatic gearbox (AISIN GA8G45)

cardiagn.com

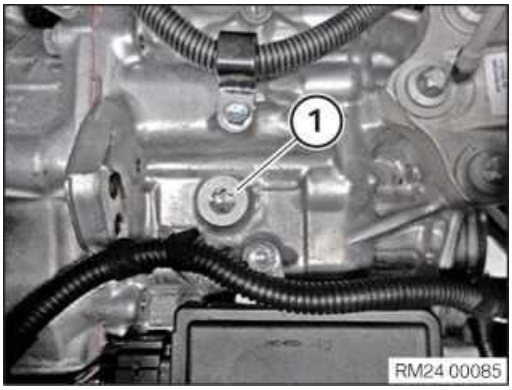
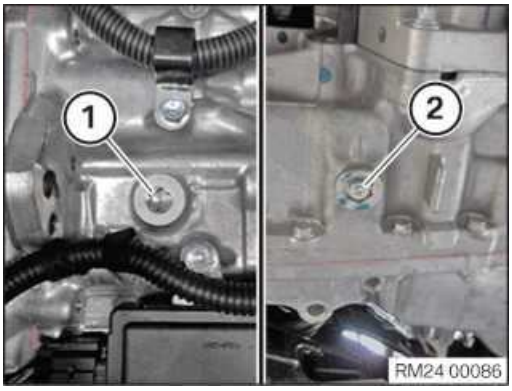
Prerequisite



Vehicle in horizontal position.

CAUTION



Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

- Move the selector lever to the "P" position.
- Secure vehicle to prevent it rolling.
- Connect diagnosis system.
- Release the oil filler plug (1) using the Torx T55 .

- **Topping up the automatic transmission fluid (the automatic transmission fluid was drained):**
- Release oil filler plug (1) from engine compartment.
- Loosen the overflow plug (2) below at the transmission.
- Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).
- Start engine and run at idle speed.
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check again whether the automatic transmission fluid is leaking at the overflow plug(2) .
- Read the temperature of the automatic transmission fluid with the diagnosis system.
- Increase temperature of automatic transmission fluid to 35 °C to 45 °C.
- Top up automatic transmission fluid until it flows over.
- Renew sealing rings.

  Parts: Sealing ring
- Screw in and fasten oil filler plug (1) and overflow plug (2).

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

cardiagn.com

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

- **Check oil level (transmission oil temperature must be between** 35 °C **and** 45 °C **):**
- Open the oil filler plug (1).
- Slacken overflow plug (2).
- Start engine and run at idle speed.
- Unscrew and remove overflow plug (2).
- Check whether the automatic transmission fluid is leaking at the overflow plug (2) .
- If there is no automatic transmission fluid leaking at the overflow plug (2) , fill in the automatic transmission fluid to the oil filler plug (1) .
- Top up the automatic transmission fluid until it overflows at the overflow plug (2) .
- Press the footbrake and, when idle, shift through all the gears from "P" to "D" 2 times for more than 2 seconds .
- Move the selector lever to the "P" position.
- Check the oil level again.
- Renew sealing rings.

  Parts: Sealing ring
- If the oil escapes slightly from the overflow plug (2) , tighten the overflow plug (2) and the oil filler plug (1) .

Overflow screw in oil drain plug

M6	Renew the sealing ring.		8 Nm

Oil filler plug to transmission housing

M14	Renew the sealing ring.	Tightening torque	45 Nm

105 – Topping up oil level in the manual gearbox (GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to observe will result in a leak on the transmission.

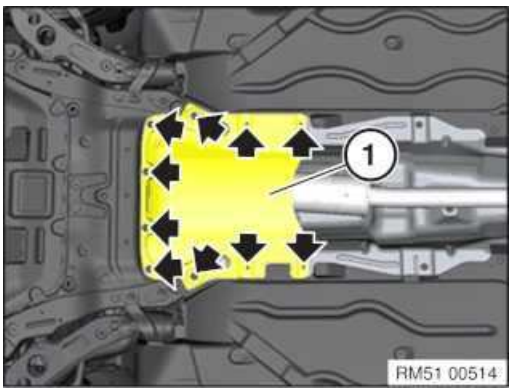
- Variant 1 **until** production date 08/2015.
- Variant 2 **from** production date 08/2015.

- Unscrew filling/level control screw (1) and fill the transmission until the oil overflows.

Transmission oil capacity

Transmission oil GS6-60DA, GS6X60DA/Owner's Handbook	2,2 l

Transmission oil: Technically suitable manual gearbox oil



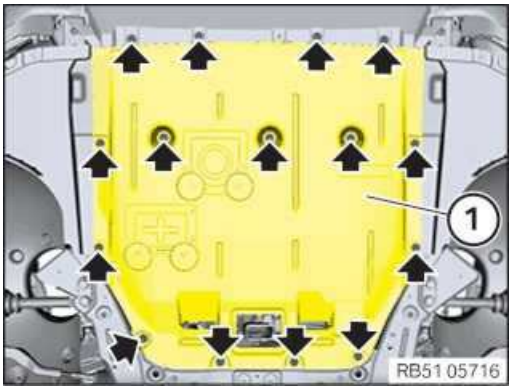
- Allow surplus oil to drain off.
- Renew the filling/level control screw (1).

  Parts: Filling/level control screw
- Tighten filling/level control screw (1).

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

106 – If installed: Installing underbody protection at rear

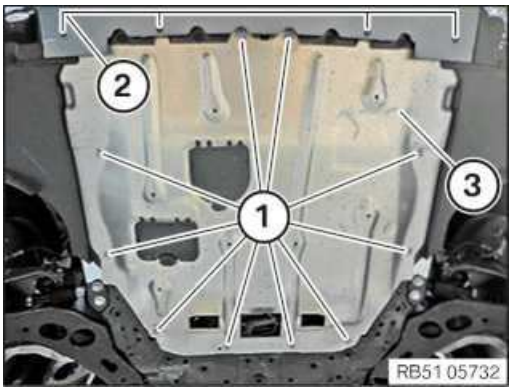


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

107 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

108 – Installing underbody panelling , right

- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

cardiagn.com

11 65 ... Test steps in the event of turbocharger damage

Attention!

The following components must always be checked for foreign bodies, damage and function before installing the new turbocharger.

- Pressure pipe and hoses
- Charge air cooler
- Intake plenum
- If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as this can even coke!

cardiagn.com

11 66 006 Removing and installing / replacing non-return valve

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Removing the acoustic cover

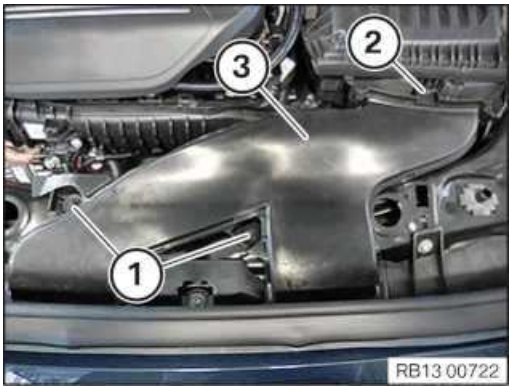
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

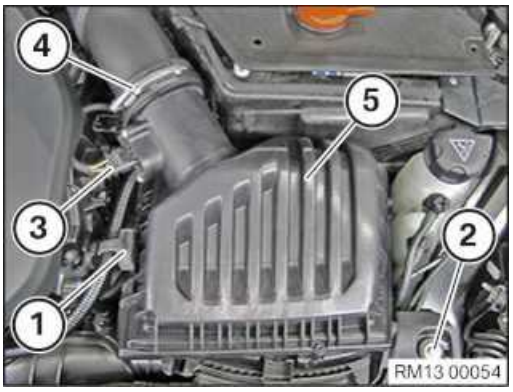


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

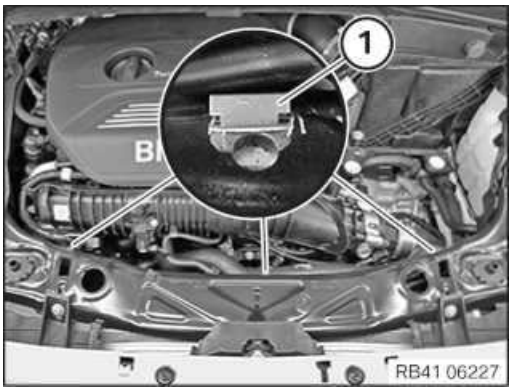
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



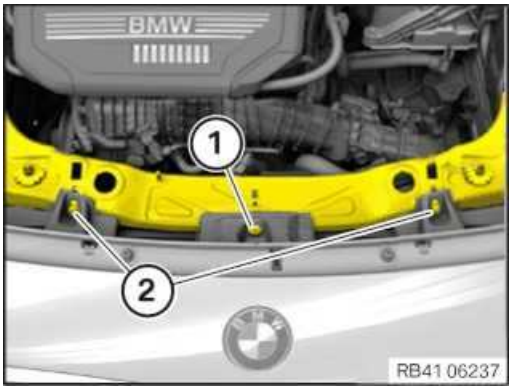
2 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

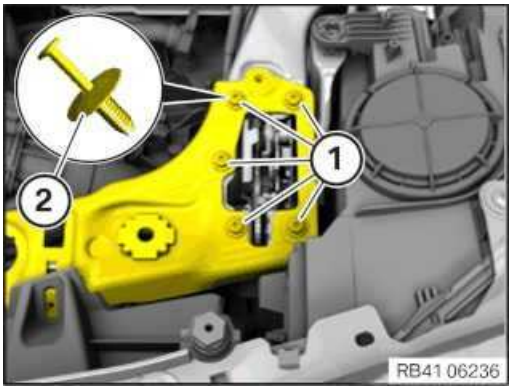


3 – Removing intake silencer housing

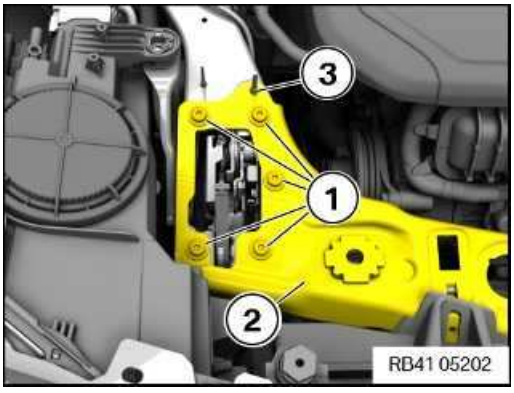
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



4 – Remove front cross connection



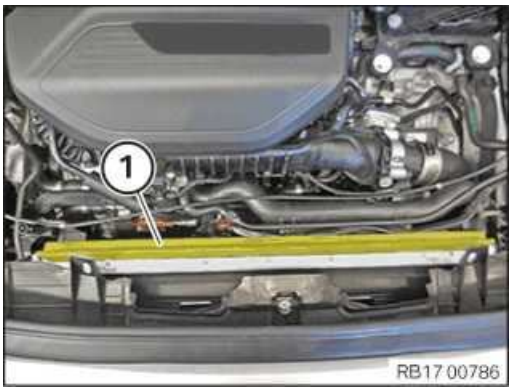
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

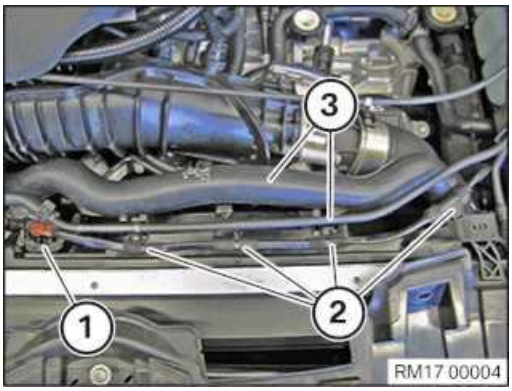
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

5 – Removing the fan cowl with electric fan



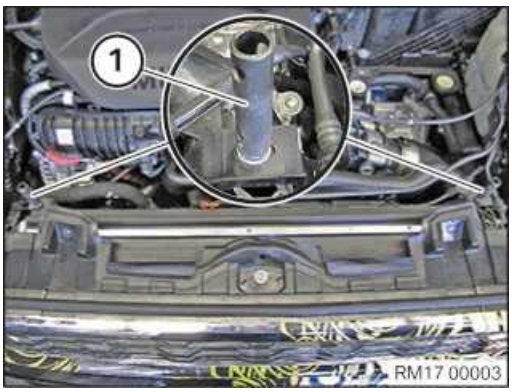
cardiagn.com

WARNING

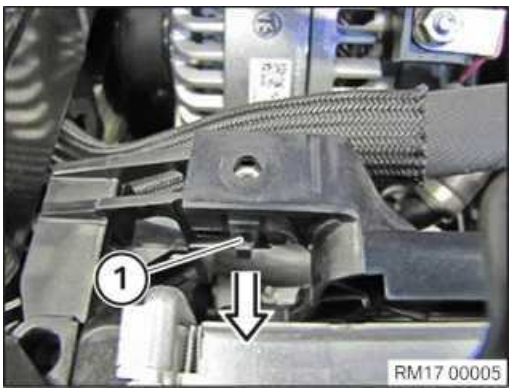


Hot surfaces.

Risk of burning!

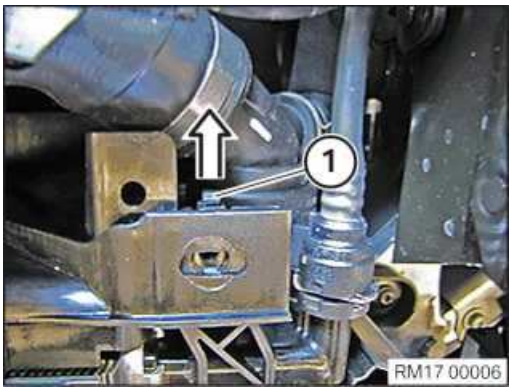


- Perform all work only on components that have cooled down.

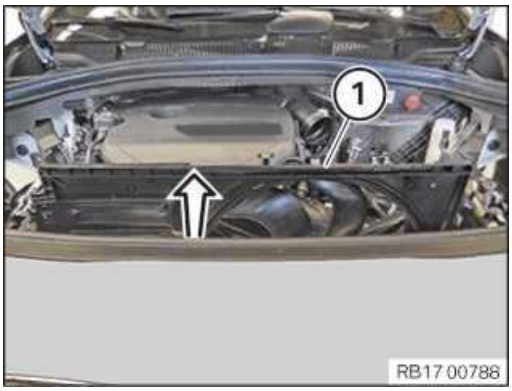


- Feed out and remove the sealing (1) from the radiator.

- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

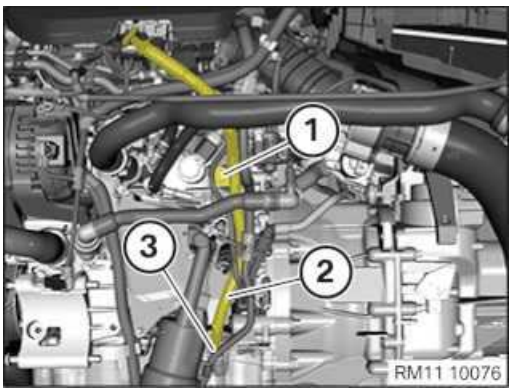


- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

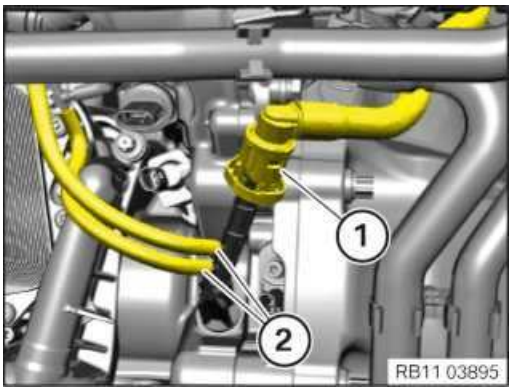
- Guide out fan cowl (1) in direction of arrow and remove.

6 – Removing the guide tube for the oil dipstick

- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

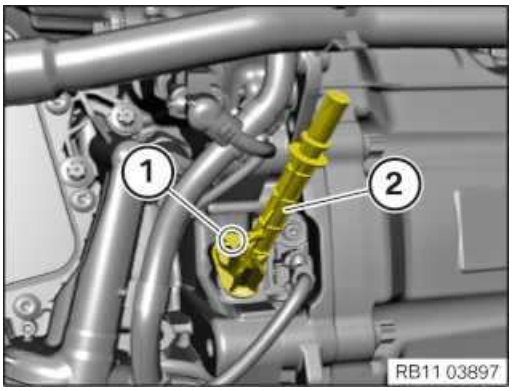
MAIN WORK

7 – Remove non-return valve



RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

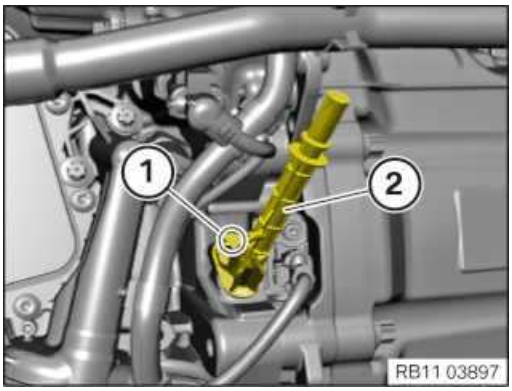
- Unlock and pull off the vacuum line (1).
- Pull off the vacuum hoses (2).

- Loosen screw (1).
- Feed out the non-return valve (2) and remove.

8 – Installing the non-return valve

- Renew gasket (1) using special tool **0 496 714 (00 9 030)**.

  Parts: Gasket

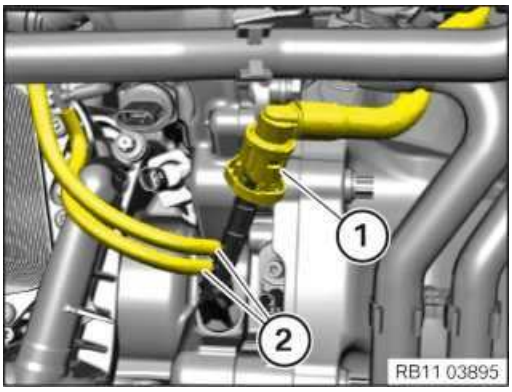


RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.
- Clean sealing surface.



- Feed in and install the non-return valve (2).
- Tighten down screw (1).

Vacuum line for oil vacuum pump to crankcase

M6x22		Tightening torque	8 Nm

cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

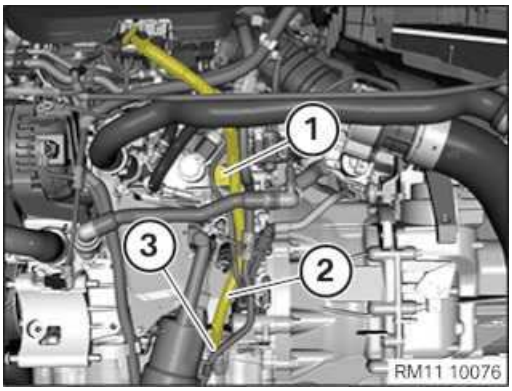
- Connect the vacuum line (1) and lock it audibly.
- Connect vacuum hoses (2).

POSTPROCESSES

9 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

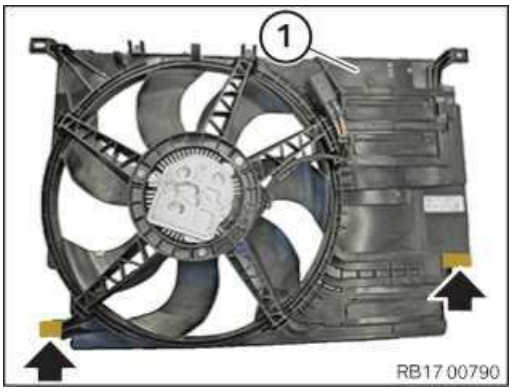
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew O-ring (1).

  Parts: O-ring

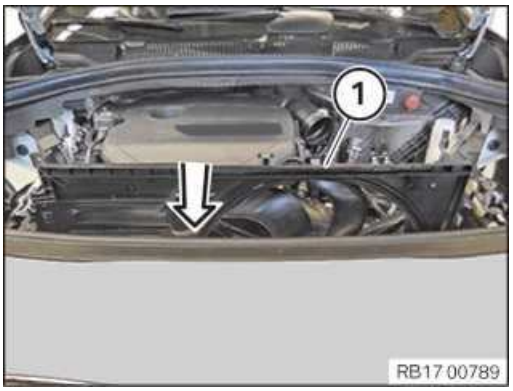
- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine



M8x16		Tightening torque	19 Nm

10 – Installing fan cowl with electric fan



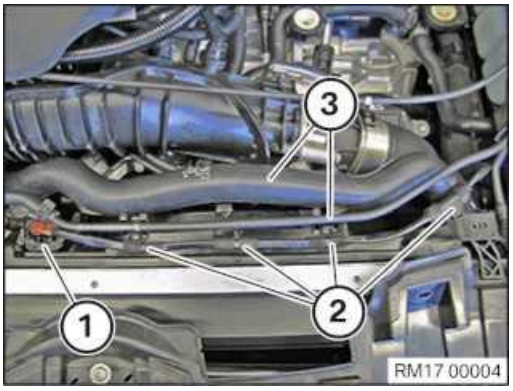
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com

- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

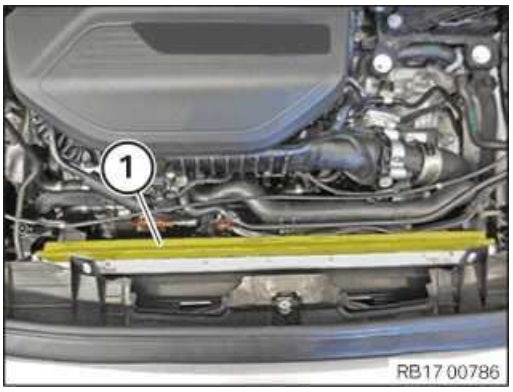
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

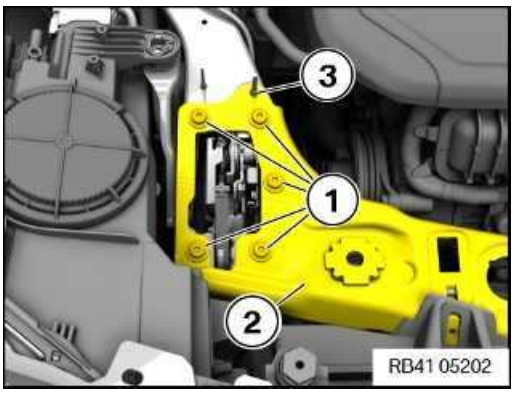


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

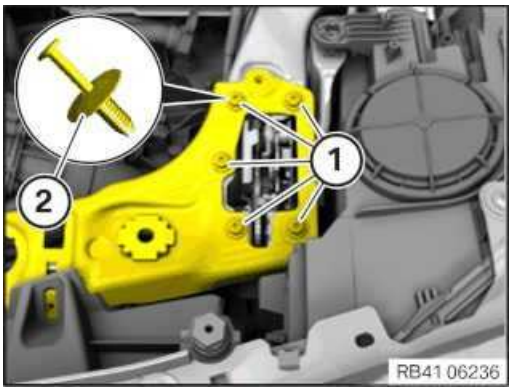
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

11 – Install front cross connection

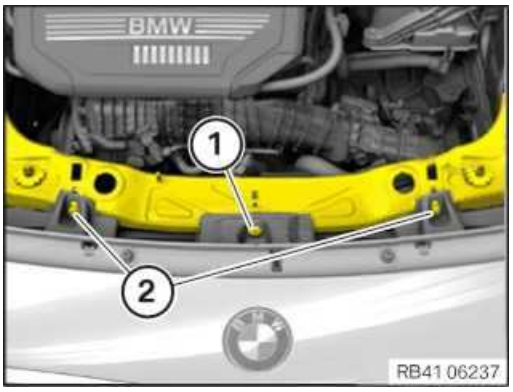


- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm



- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

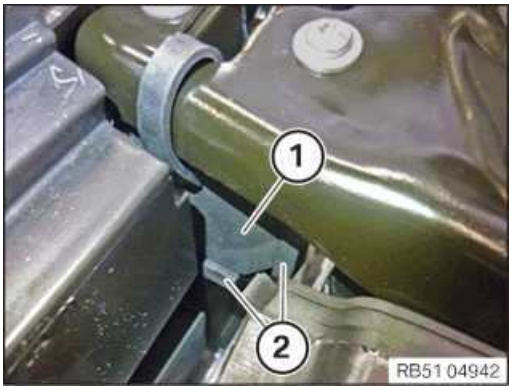
cardiagn.com

- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

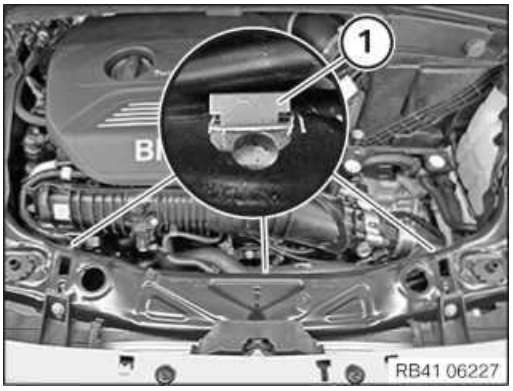
Bolt to rubber mount		Tightening torque	8 Nm

- Tighten down screws (2).



Air duct to upper connection

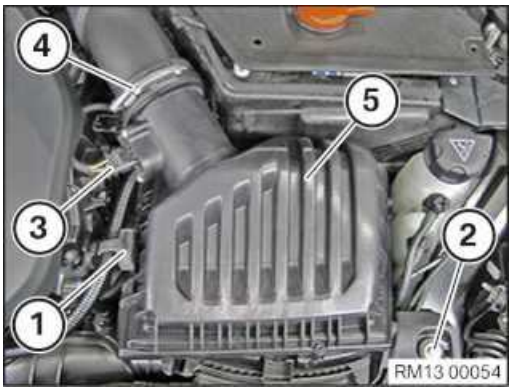
M6x20 screw		Tightening torque	11,8 Nm



- Tighten down screw (1).

Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

12 – Installing intake silencer housing

- Insert the intake silencer housing (5) into the rubber mounts and install it.

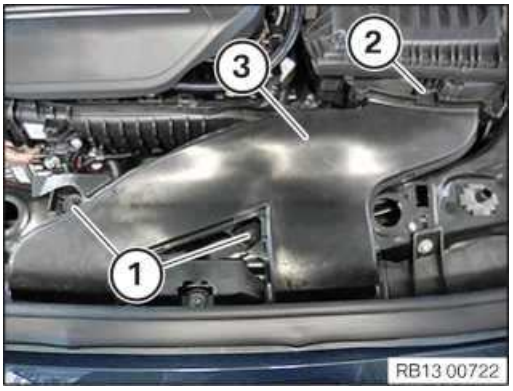
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing



Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

13 – Install the intake neck for the intake filter housing

cardiagn.com

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

14 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

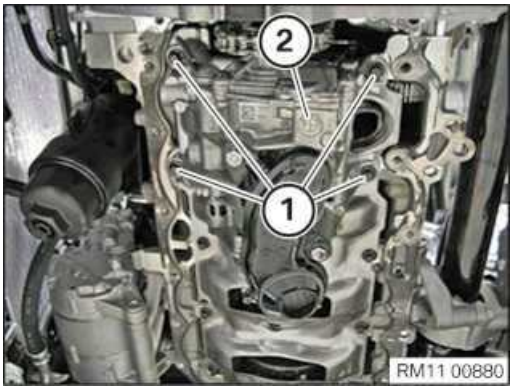
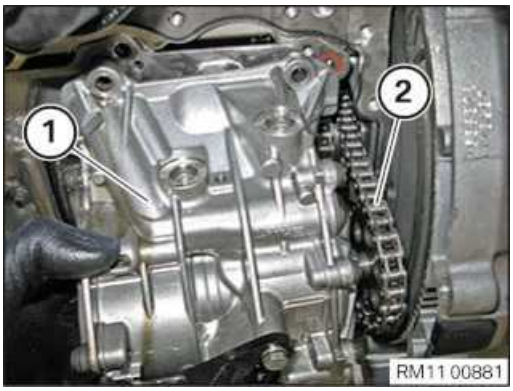
11 41 000 Removing and installing or replacing oil/vacuum pump (B47)



Important!

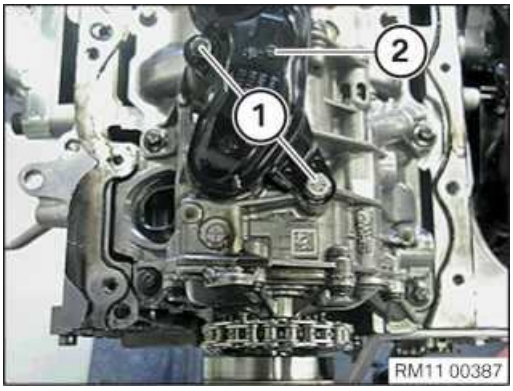
It is possible to remove and install the oil/vacuum pump **without** removing the gearbox.



Necessary preliminary tasks:

- Remove oil sump

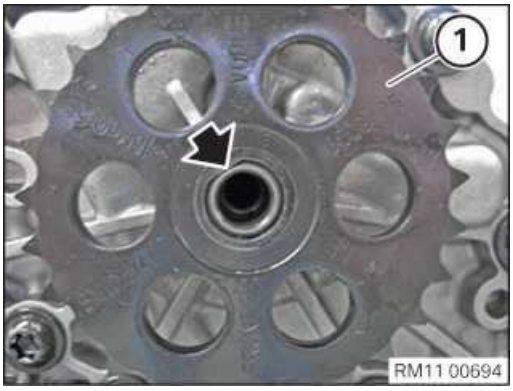
REMOVAL:



Release screws (1) of oil/vacuum pump (2).

Remove oil/vacuum pump (1) and feed out of drive chain (2).

cardiagn.com



Replacement:

Release screws (1). Remount intake pipe (2).

Tighten down screws (1).

Tightening torque: 11 41 1AZ.

Replacement: Important!

Pay attention to mounting flats on oil pump (see arrow).

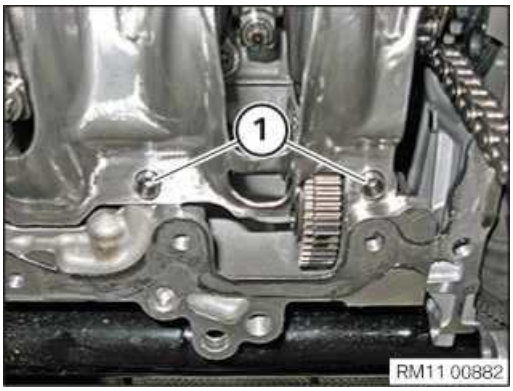
Labelling "Front" on the camshaft sprocket (1) needs to be visible.

Replacement:

Important!

Screw (1) has left-hand thread.

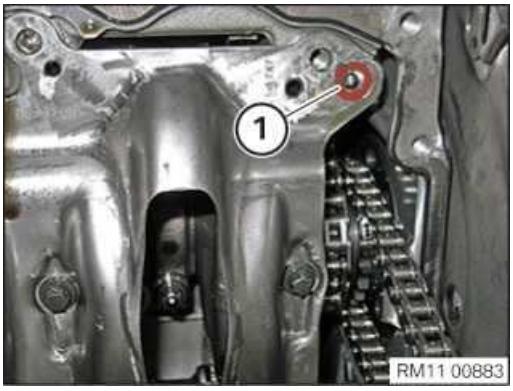
"Front" needs to be legible on the camshaft sprocket.



Hold down camshaft sprocket (2) with a suitable tool. Release screw (1). Remount camshaft sprocket.

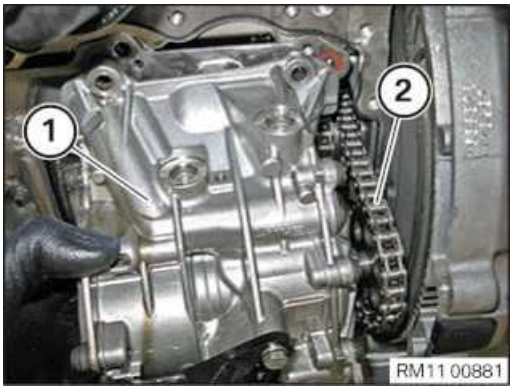
Parts: Replace screw (1).

Mount camshaft sprocket (2) and hold down with a suitable tool. Tighten screw (1).

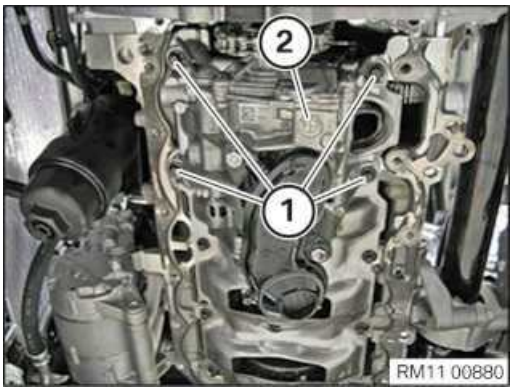


Tightening torque: 11 41 5AZ.

INSTALLATION:



Check centring bushes (1) for damage, replace if necessary.



cardiagn.com

Note:
Sealing ring (1) must not be damaged or missing.

Feed oil/vacuum pump (1) into drive chain (2).

Tighten down screws (1) of oil/vacuum pump (2).
Tightening torque: 11 41 2AZ.

Required follow-up work:

- Install oil sump
- Check engine for tightness

cardiagn.com

11 66 000 Removing and installing/replacing vacuum pump

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

2 – Removing the acoustic cover

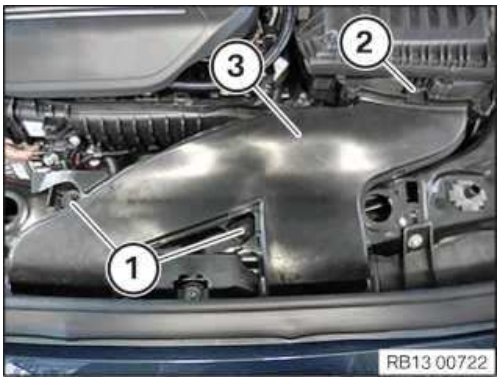
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

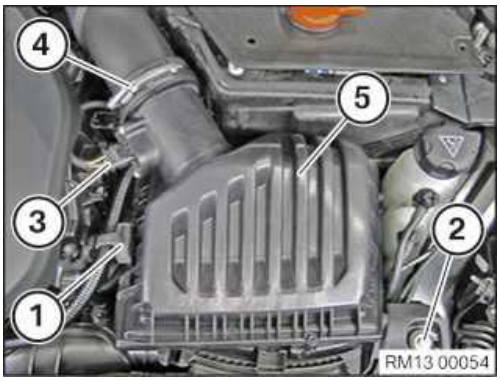


Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

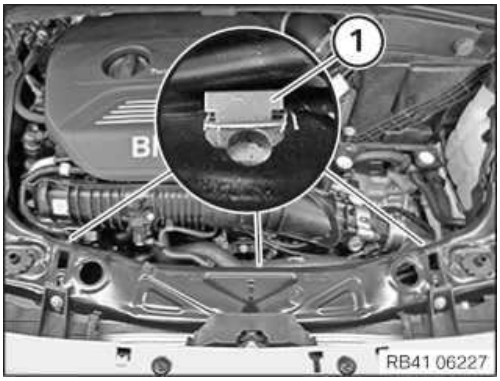
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.



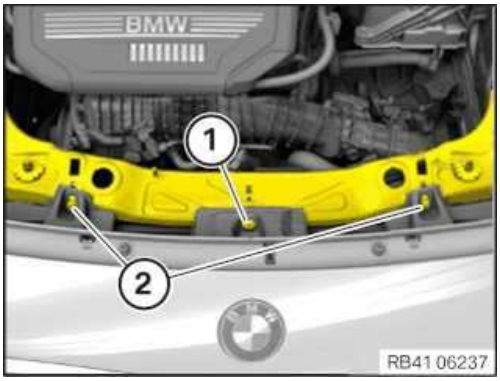
3 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

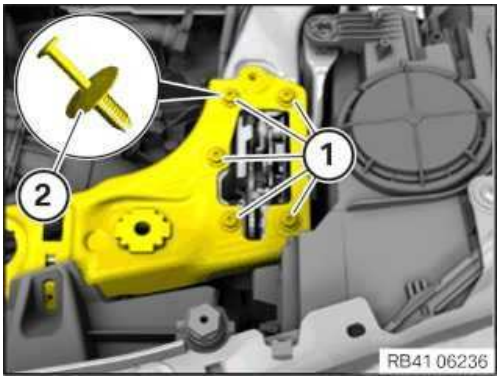


4 – Removing intake silencer housing

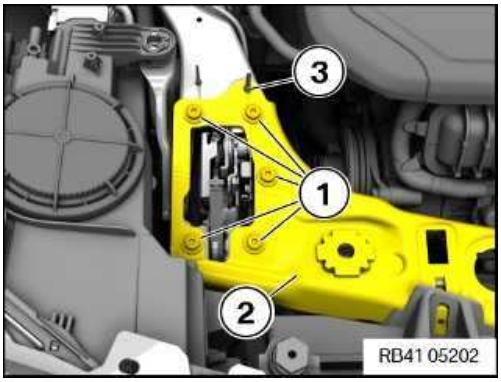
cardiagn.com



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.



5 – Remove front cross connection



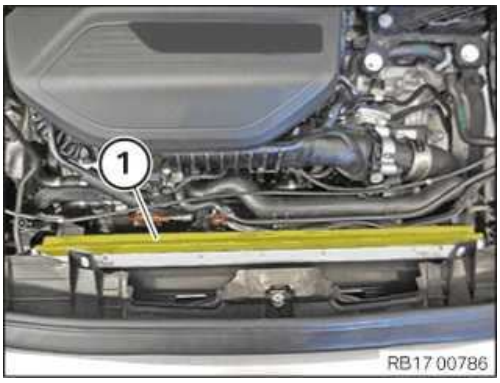
- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

- Loosen screw (1).
- Loosen screws (2).

- Loosen screws (1).
- Lever out expanding rivet (2).

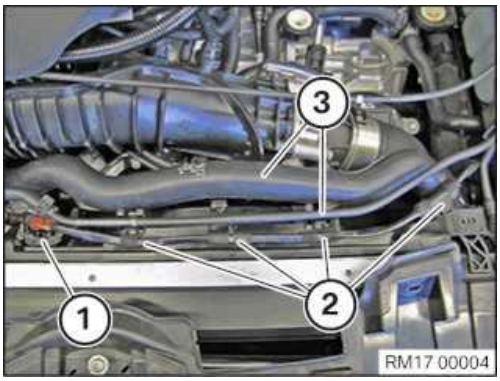
- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

6 – Removing the fan cowl with electric fan



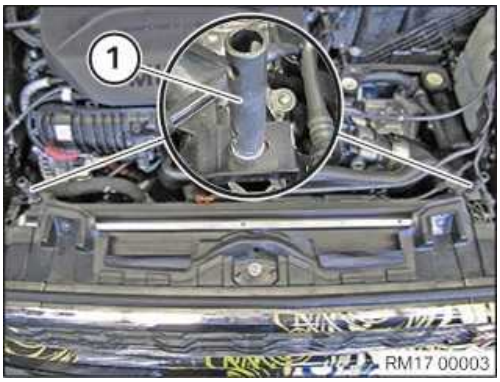
cardiagn.com

WARNING

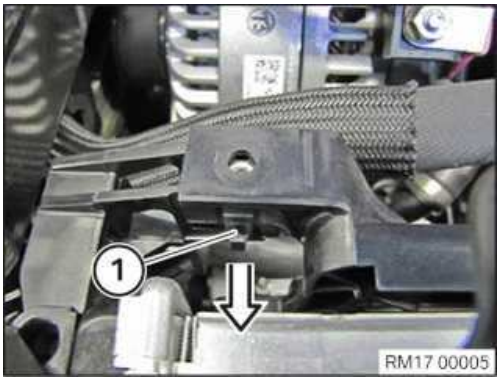


Hot surfaces.

Risk of burning!

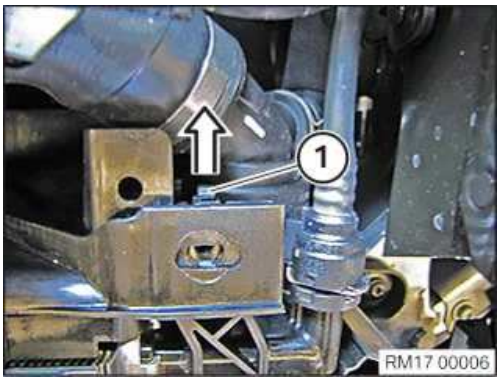


- Perform all work only on components that have cooled down.

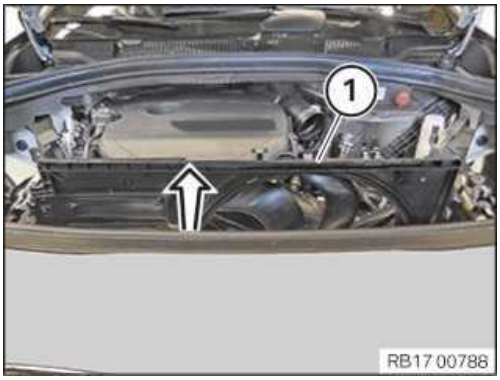


- Feed out and remove the sealing (1) from the radiator.

- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.

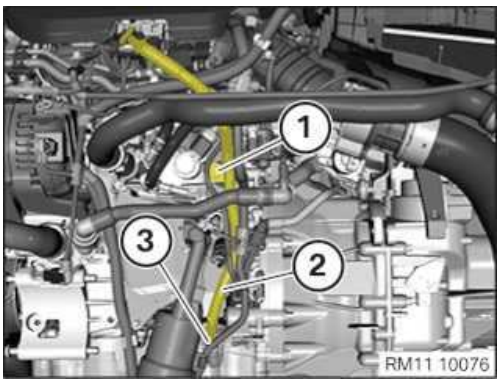


- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the guide tube for the oil dipstick

- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

8 – Removing the oil filler cap

- Open oil filler cap (1).

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

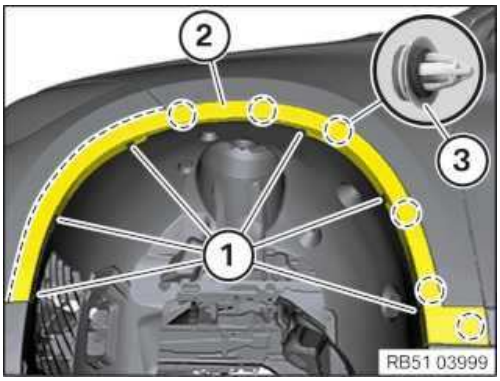
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

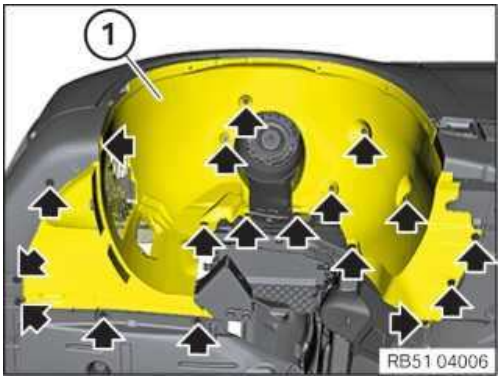
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

10 – Removing the front right wheel arch cover



▶ **Remove the front wheel arch trim**

NOTICE



To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.

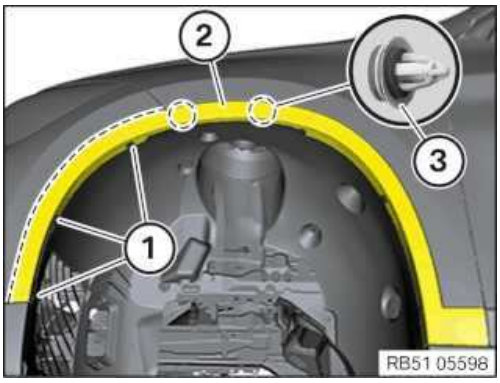
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (1) out.

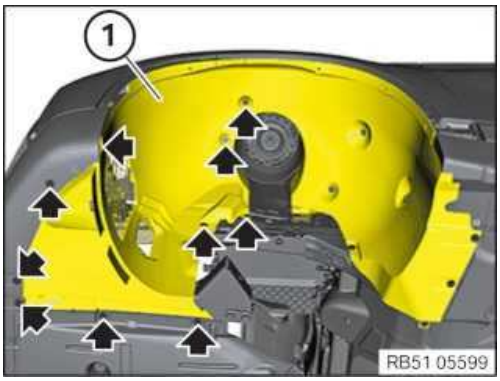
11 – Partially remove the front wheel arch cover

▶ **Partially removing the front wheel arch trim**



cardiagn.com

NOTICE

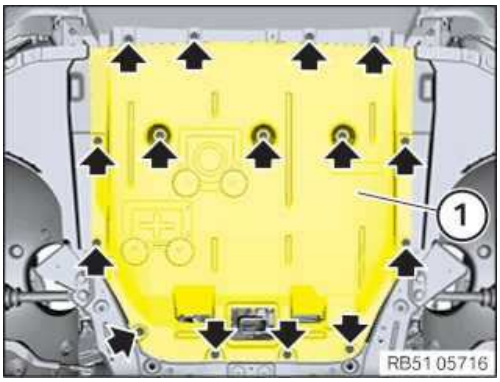


To provide a better overview: Schematic diagram with partially hidden components.

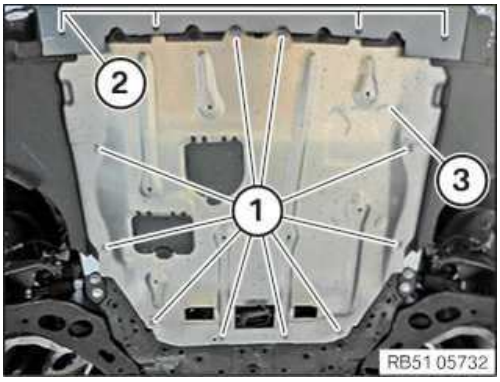
NOTICE

Description is for left component only. Procedure on the right side is identical.

- Remove the blind rivets (1).
- Release the wheel arch trim (2) in the area of the side panel from the clips (3).
- Release the wheel arch trim (2) from the latch mechanisms on the bumper and remove.



NOTICE



Description is for left component only. Procedure on the right side is identical.

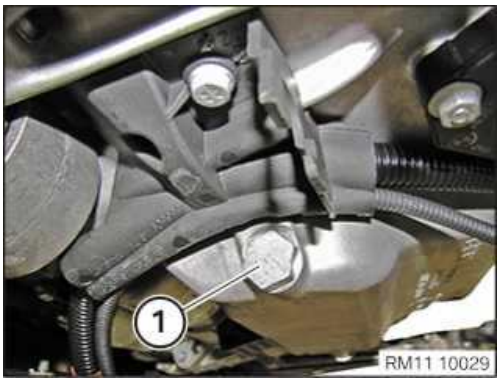
- Unscrew all bolts and nuts (arrows).
- Guide the wheel arch cover (2) out.

12 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

13 – Releasing the oil drain plug



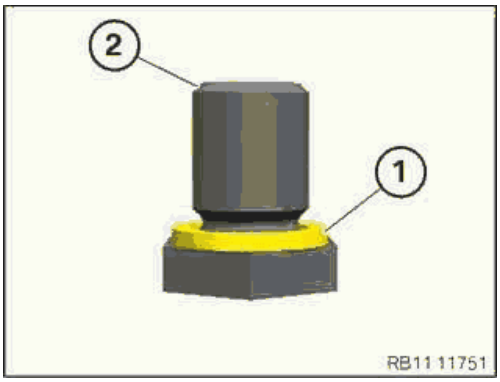
cardiagn.com

WARNING

Hot fluids.

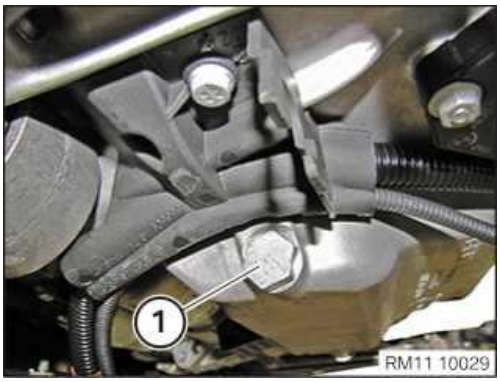
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel. Observe country-specific waste disposal regulations.

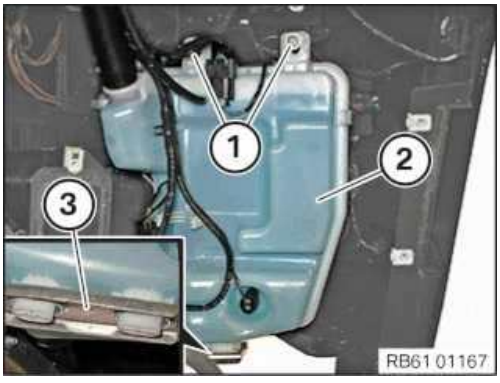


- Release oil drain plug (1).
- Drain engine oil.

14 – Tightening the oil drain plug

- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring
- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring
- Position oil drain plug (1) on the oil sump and tighten.

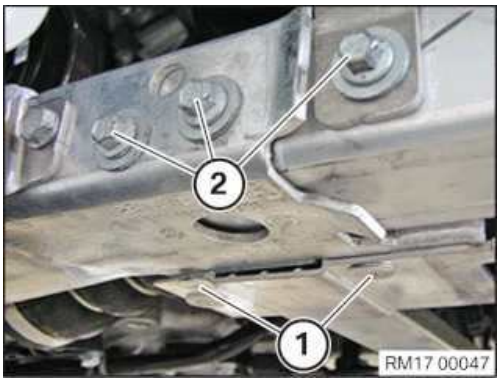
Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

15 – Remove the washer fluid reservoir from the fixture

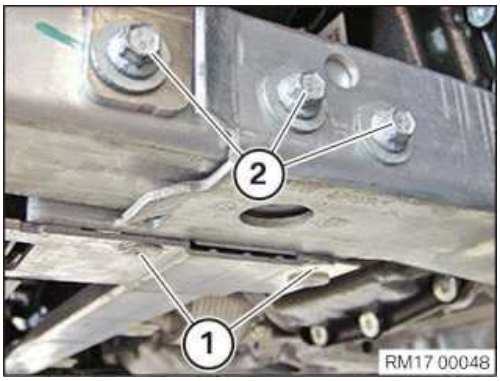
- Loosen screws (1).
- Guide the washer fluid reservoir (2) up and out of the fixture (3) and set it aside.

16 – Removing the right charge air duct between the exhaust turbocharger and the charge air cooler



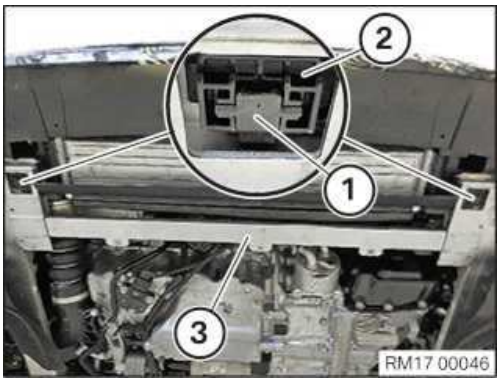
cardiagn.com

WARNING

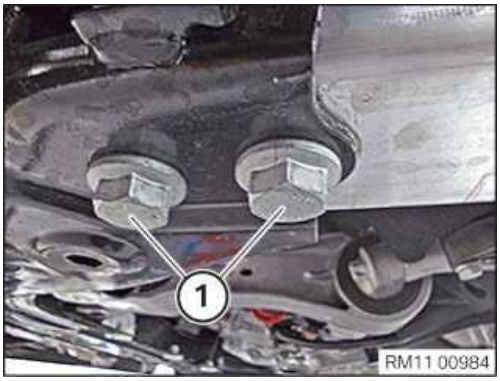


Hot surfaces.

Risk of burning!

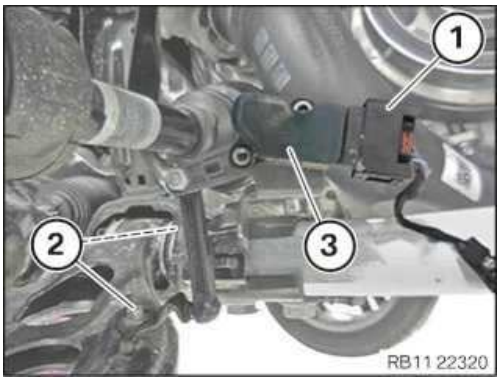


- Perform all work only on components that have cooled down.

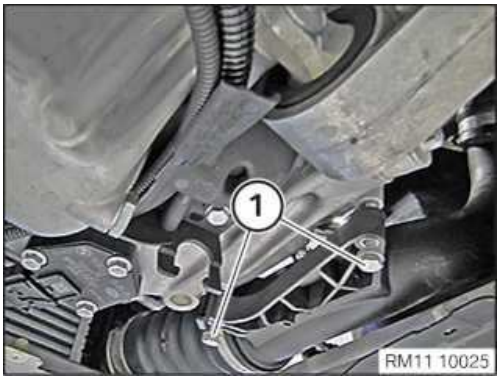


- Undo screws (2) at front left.
- Drill out blind rivets (1) at front left.

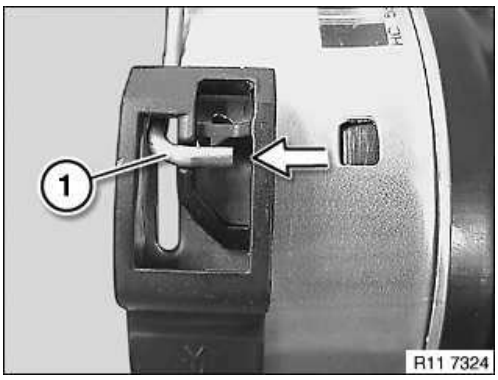
- Undo screws (2) at front right.
- Drill out blind rivets (1) at front right.



- Unlock locking pins (1).
- Thread out and remove locks (2).
- Thread out and remove cross connection (3).

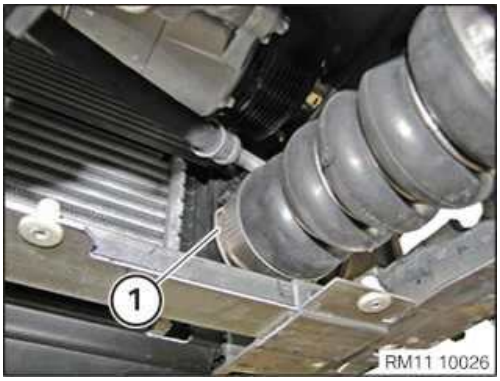


- Release the screws (1) on the right front axle support.

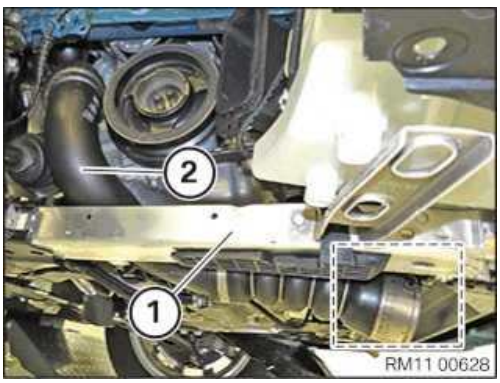


cardiagn.com

- **If installed:**
- Unlock and release plug connection (1).
- Loosen screws (2).
- Feed out the ride height sensor (3) and remove.

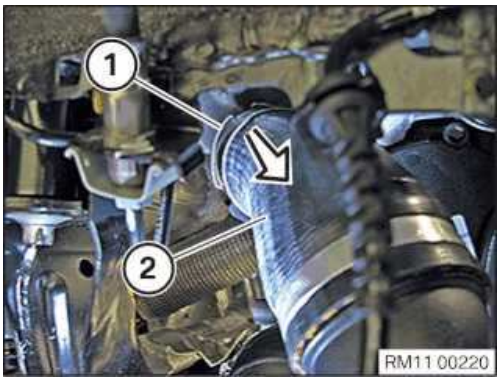


- Release screws (1) of charge air duct on right oil sump.

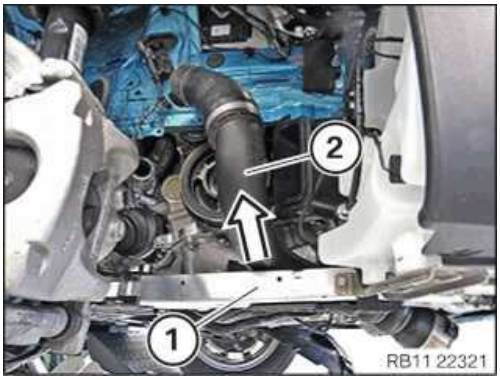


- Unlock lock (1).

  The lock (1) must engage in the bracket during unlocking (arrow).



- Unlock and release the charge air duct (1) on the charge air cooler.

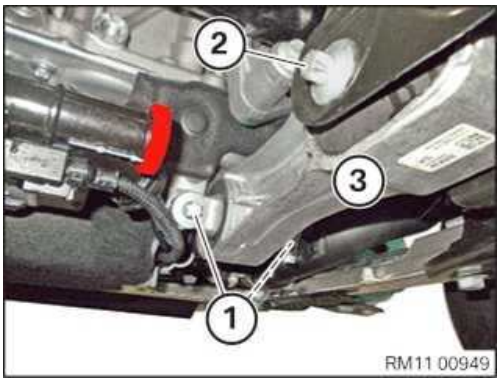


- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (2) in the **marked** area towards the bottom and set it aside.

cardiagn.com

- Unlock and detach the locks (1) on both sides.
- Feed out the charge air duct (2) on the exhaust turbocharger in the direction of the arrow and set it aside.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed out the charge air duct (1) in the direction of arrow between the side member and the deformation element and remove.



17 – Remove bracket with rubber mount

WARNING

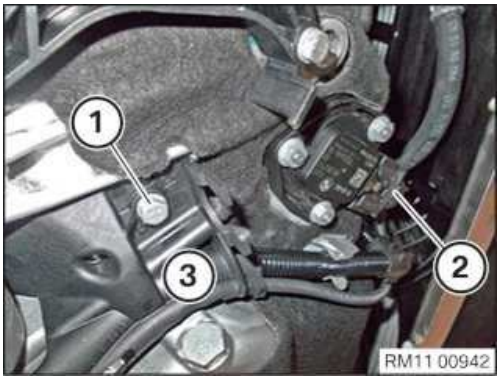
Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

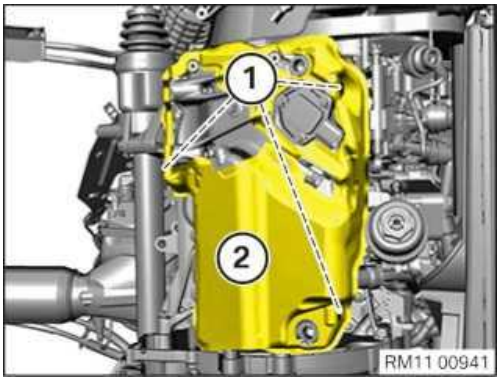
- Secure the vehicle hoist against lowering and lifting.

- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

18 – Removing the acoustic cover of the oil sump



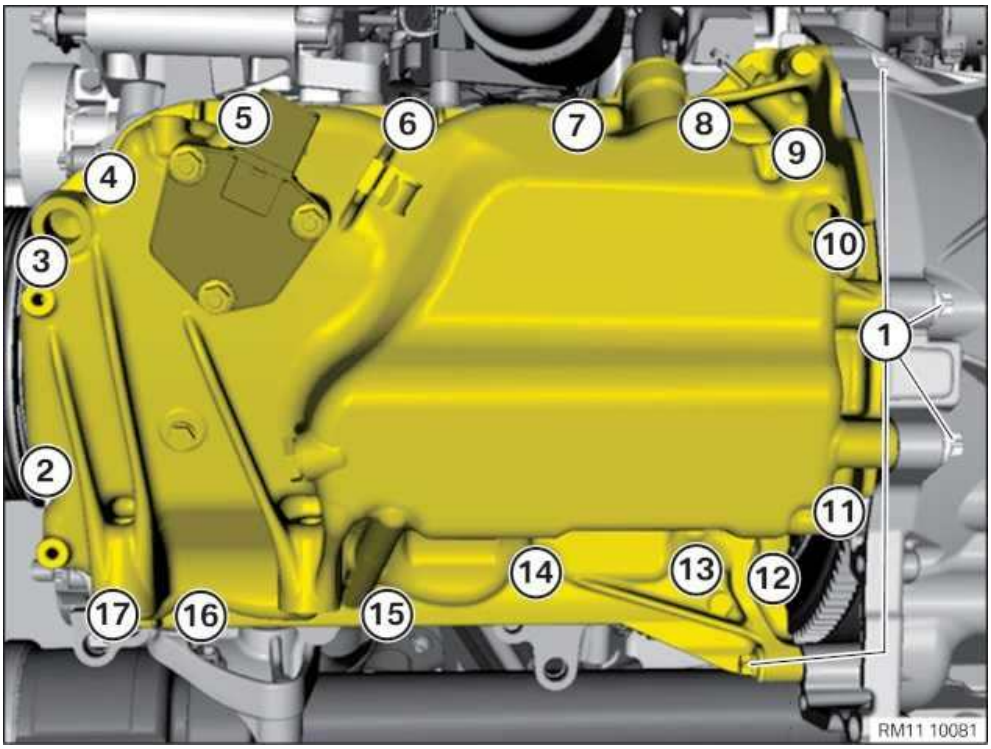
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



cardiagn.com

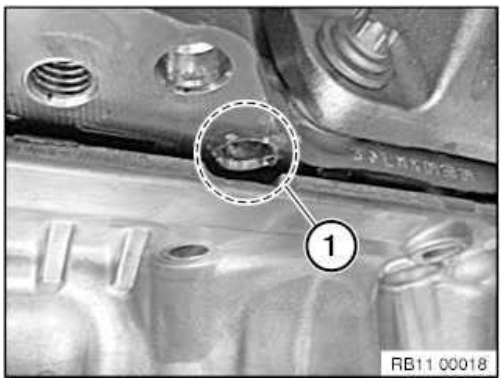
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.

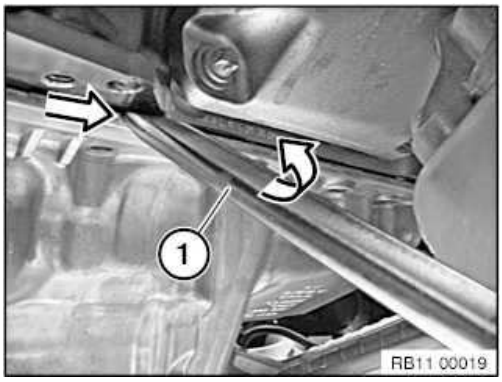


- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

19 – Remove oil sump



- Loosen screws (1).
- Feed out starter motor and remove.

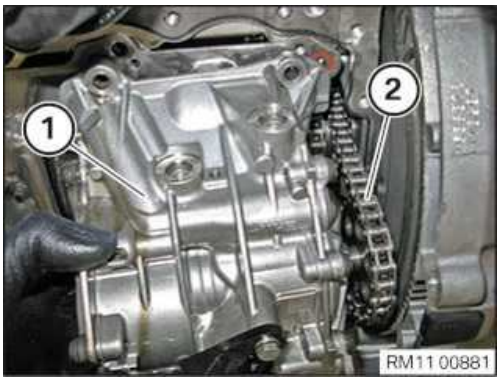


cardiagn.com

- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

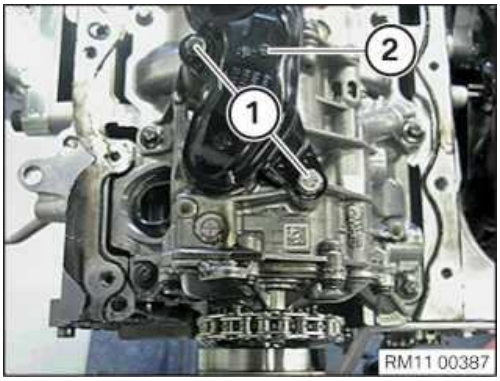
- Release the oil sump only in area (1).

- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.



MAIN WORK

20 – Remove the oil vacuum pump

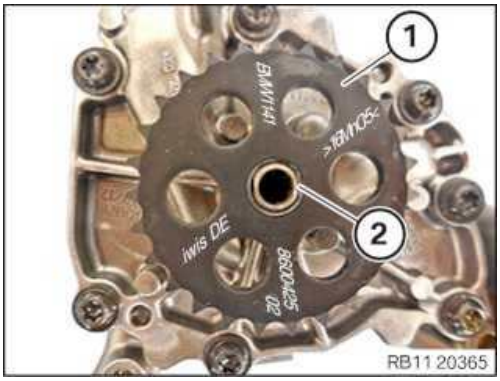


- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com

- Remove oil vacuum pump (1) and remove from the drive chain (2).

21 – Replacing the oil vacuum pump: Remount components

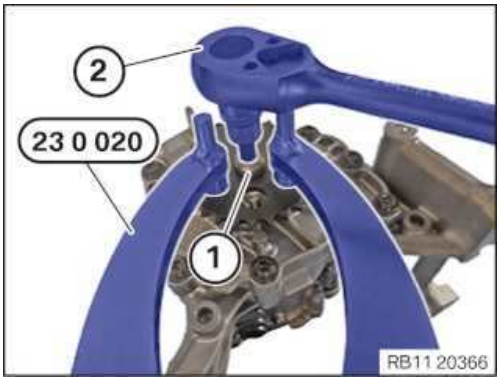


- Loosen screws (1).
- Renew the oil vacuum pump.

  Parts: Oil vacuum pump
- Remount the intake pipe (2).
- Tighten the screws (1).

Intake pipe to oil vacuum pump

M6x25		Tightening torque	8 Nm



- Counterhold the camshaft sprocket with the special tool **(23 0 020)**.

TECHNICAL INFORMATION

The thread is a left-hand thread.

- Release the screw on the camshaft sprocket (1) and remove the camshaft sprocket.
- Position the camshaft sprocket on the new oil vacuum pump.

  The Front labelling on the camshaft sprocket must be legible.

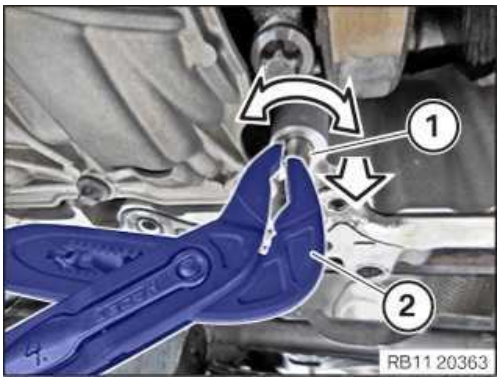
- Counterhold the camshaft sprocket with the special tool **(23 0 020)**.
- Renew screw.

  Parts: Screw
- Tighten the screw (1) using a commercially available tool (2).

Camshaft sprocket to oil vacuum pump

M8x35 Left-hand thread	*Renew screws.*	Jointing torque	5 Nm
		Angle of rotation	90 °

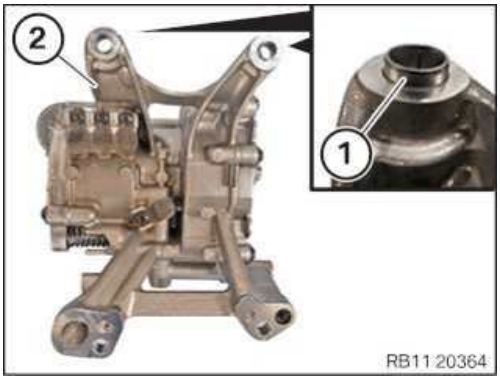
22 – Install the oil vacuum pump



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.



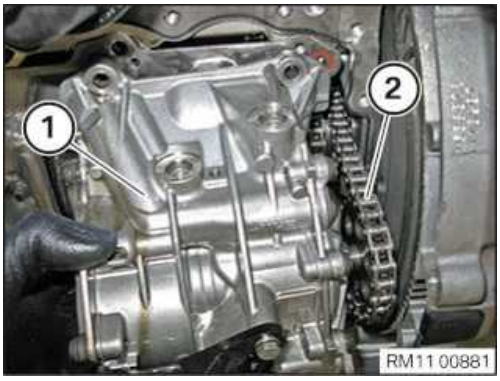
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

  Parts: Centring sleeves

- Install centering sleeves (1) in the oil vacuum pump (2).



- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.

- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB47

M8x35		Tightening torque	19 Nm

POSTPROCESSES

23 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

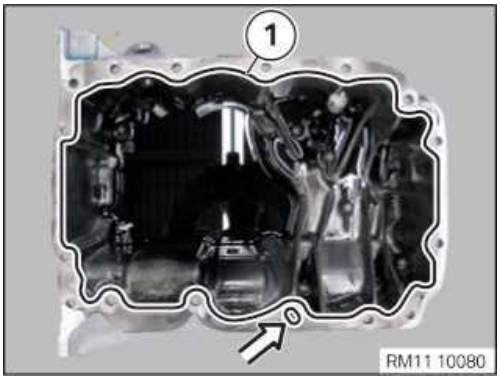
Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue



- Position the sealing compound (1) on special tool as shown.

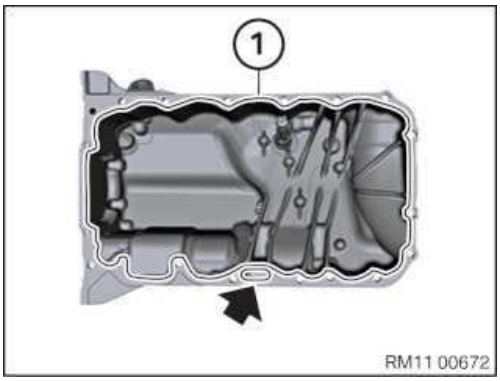
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

TECHNICAL INFORMATION



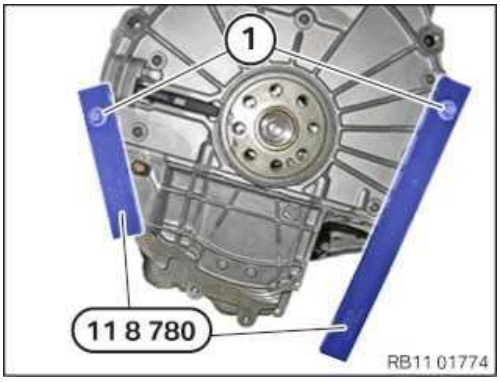
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

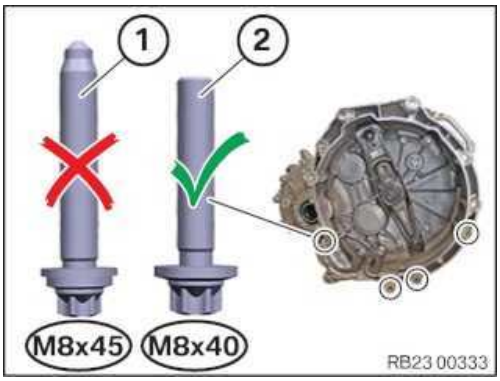


TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.



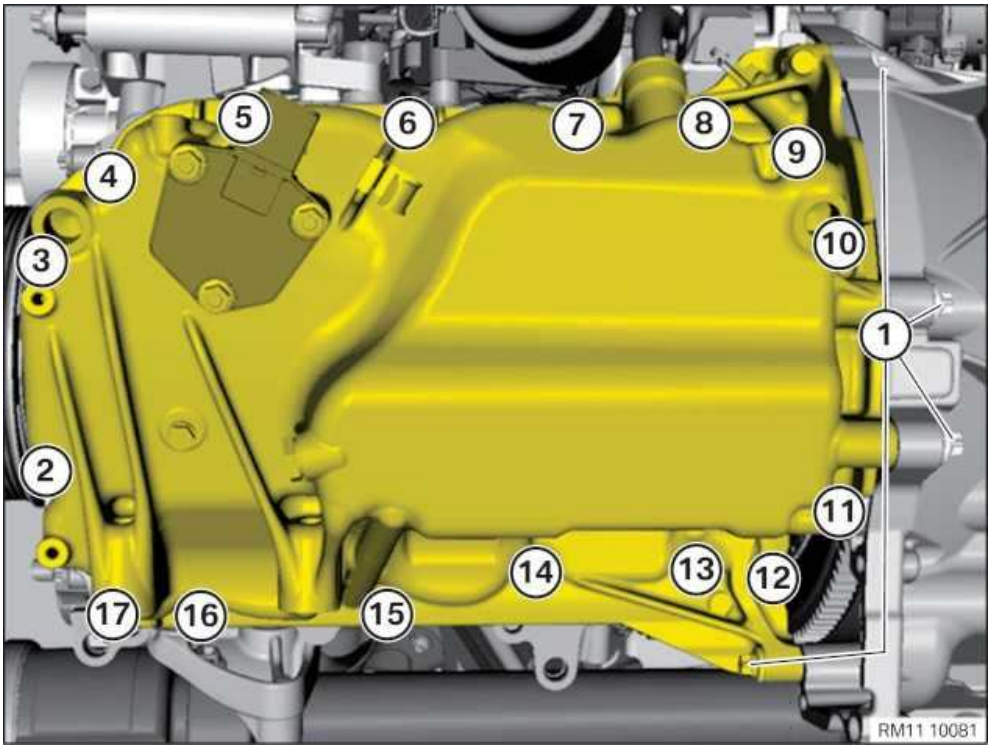
TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

cardiagn.com

RISK OF DAMAGE



Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.

- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

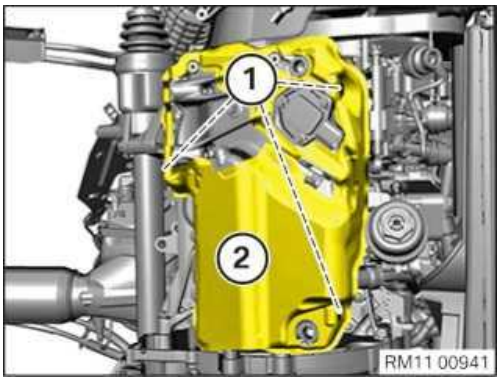
Oil sump to crankcase

M8x30		Tightening torque	2 Nr
M8x110		Tightening torque	2 Nr

- Tighten the transmission bolts (1) on the oil sump.

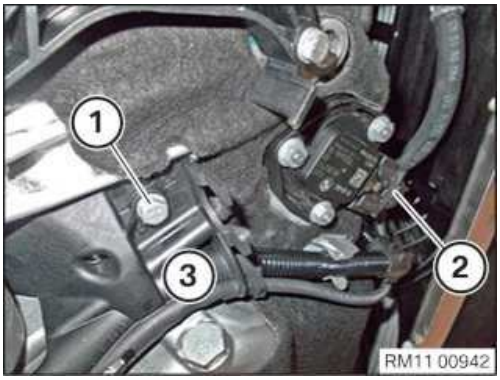
Transmission to oil sump

M8		Tightening torque	1 Nr



- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission



M8x45		Tightening torque	19 Nm

24 – Installing the acoustic cover for the oil sump

cardiagn.com

- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.

CAUTION

Improper routing of the positive battery cable.

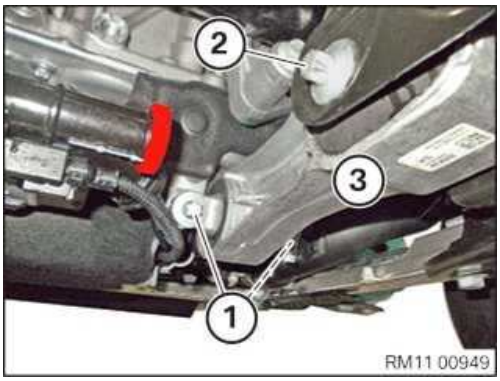
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm



- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

25 – Install the holder with the rubber mount

cardiagn.com

- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

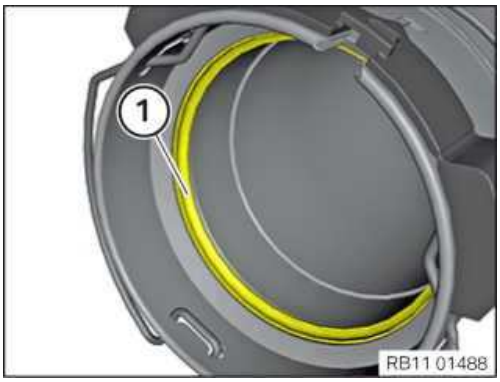
Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm



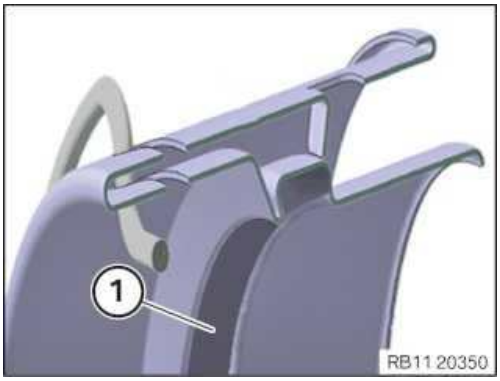
26 – Installing the right charge air duct between the exhaust turbocharger and the charge air cooler

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

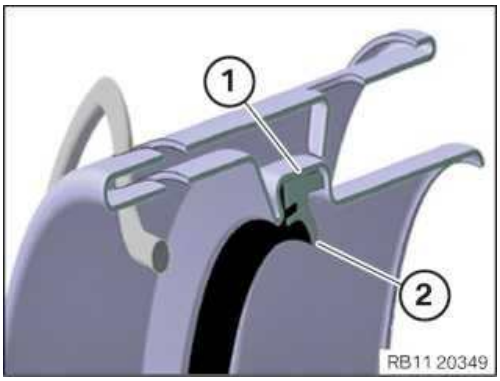


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

TECHNICAL INFORMATION

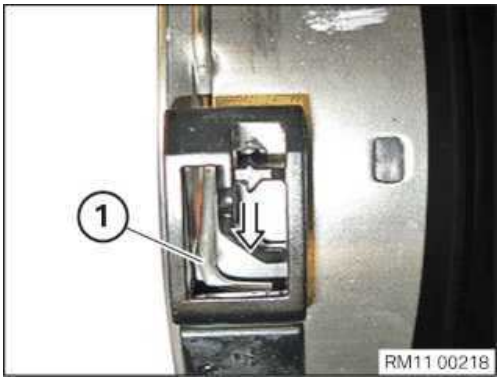


Do not use pointed or sharp-edged tools for the installation and/or removal.

- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

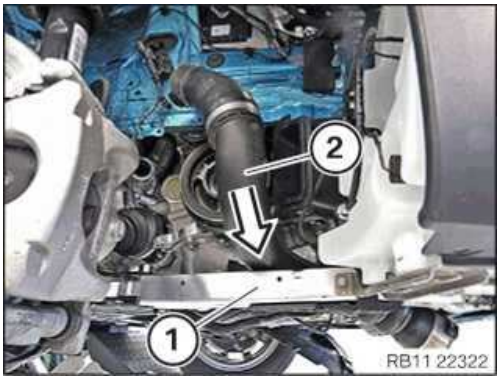
  The gasket groove (1) must be clean.

cardiagn.com



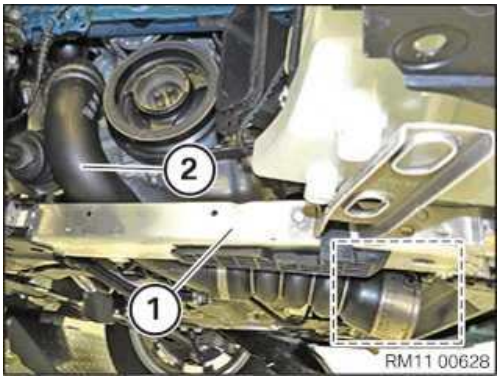
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

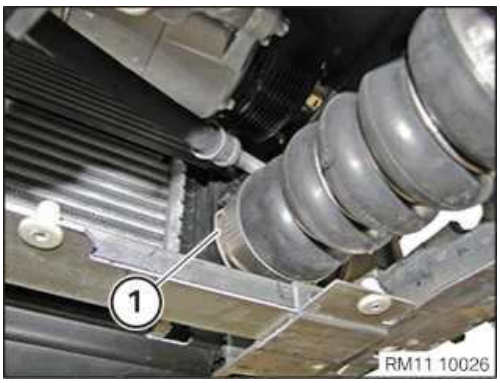


TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

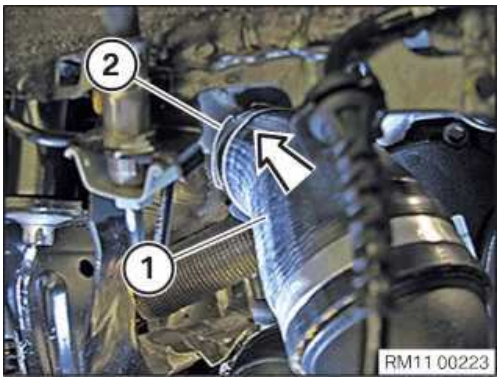


- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

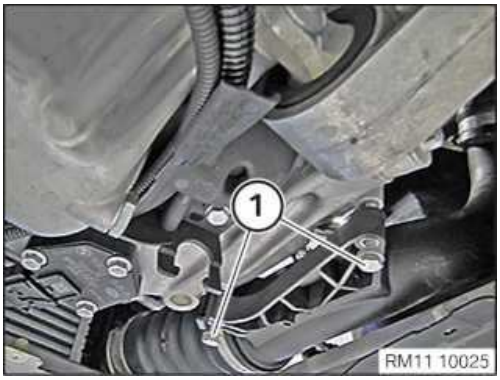


- Detach the locks (1) in the direction of the arrow from the brackets.
- Ensure that the locks (1) engage audibly.

- Pull the adapter of the front axle support (1) downwards to the front right.
- Feed in the charge air duct (1) in the **direction** of arrow between the side member and the deformation element and position.



- Pull the adapter of the front axle support (1) downwards to the front right.
- Position the charge air duct (2) in **marked** area on the charge air cooler.



- Feed in and install the charge air duct (1) on the charge air cooler .
- Make sure the charge air duct (1) engages audibly on the charge air cooler.

cardiagn.com

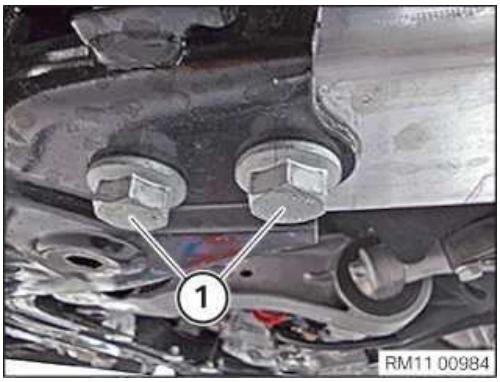
- Feed in and install charge air duct (1) in the **direction** of the arrow on exhaust turbocharger.

  The locks (2) must engage audibly.

- Tighten the screws (1).

Charge air duct to oil sump

M6		Tightening torque	8 Nm



- **If installed:**
- Feed in and install the ride height sensor (3).
- Tighten the screws (2).

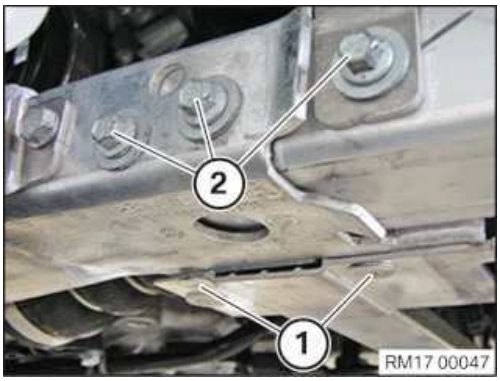
Ride height sensor holder to front axle support

M6		Tightening torque	8 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Tighten the screws (1) on the adapter of the front axle support.



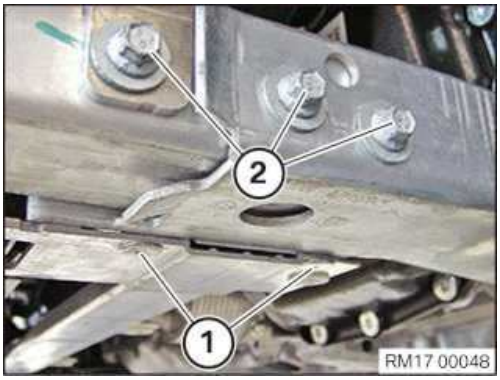
Adapter, front axle support to front axle support

		Tightening torque	100 Nm

- Guide in cross connection (3) and install.
- Guide in locks (2) and install.
- Lock the locking pins (1).
- Ensure that the locking pins (1) audibly engage.

cardiagn.com

- Tighten the bolts (2) at the front left.



Cross connection to front axle support

M6		Tightening torque	12 Nm

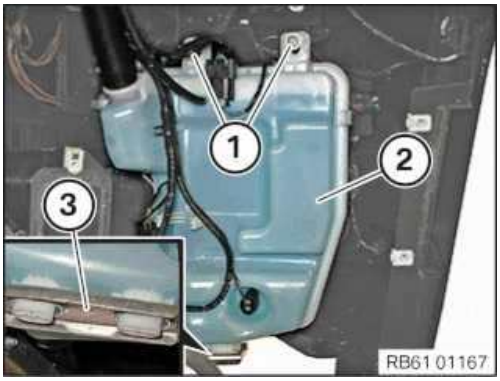
- Renew the blind rivet (1).

  Parts: Blind rivet

- Mount the blind rivets (1) at the front left.

- Tighten the bolts (2) at the front right.

Cross connection to front axle support



M6		Tightening torque	12 Nm

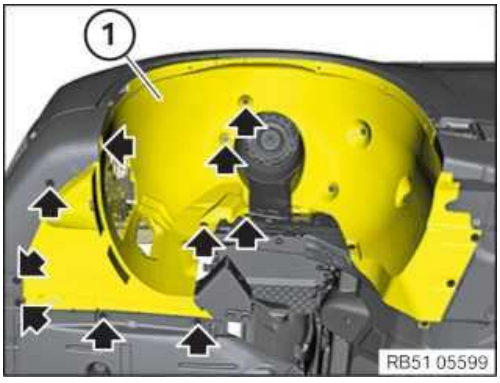
- Renew the blind rivet (1).

  Parts: Blind rivet

- Mount the blind rivets (1) at the front right.

27 – Install the washer fluid reservoir in the fixture

- Feed washer fluid reservoir (2) into the mounting (3) and install.
- Tighten the screws (1).



Washer fluid reservoir to body

M6x20		Tightening torque	8 Nm

28 – Partially install the front wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

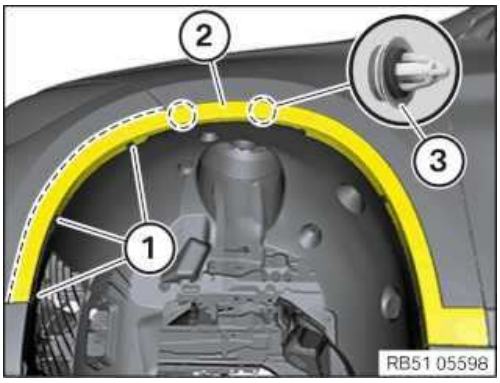
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Partly install the front wheel arch trim**



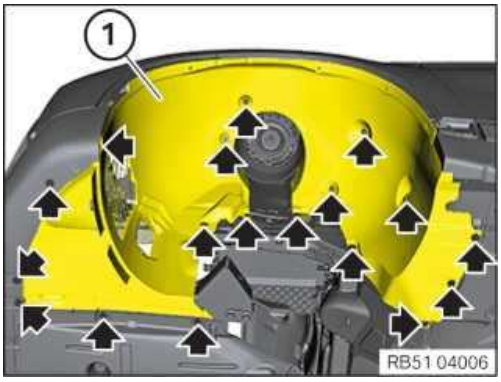
cardiagn.com

NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.



- Check the clips (3) for damage and renew where required.
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

29 – Installing the front right wheel arch cover

NOTICE

Description is for left component only. Procedure on the right side is identical.

- Guide the wheel arch cover (1) in.
- Tighten all bolts and nuts (arrows).

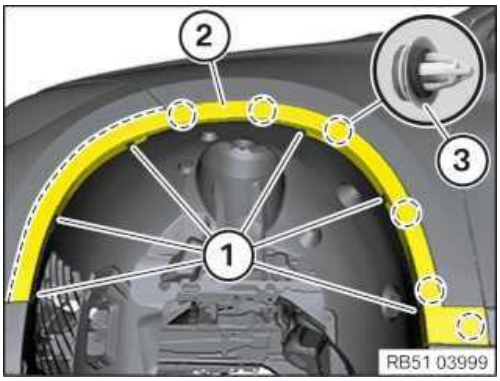
Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

▸ **Installing front wheel arch trim**



NOTICE

To provide a better overview: Schematic diagram with partially hidden components.

NOTICE

Description is for left component only. Procedure on the right side is identical.

cardiagn.com

- Check the clips (3) for damage and renew where required.

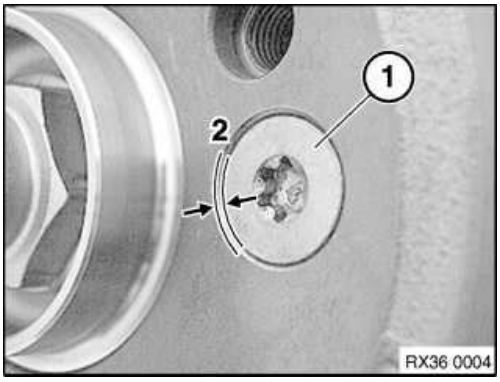
  The clips (3) must not be damaged or missing.
- Feed in wheel arch trim (2) and engage on the clips (3).
- Engage wheel arch trim (2) into the latch mechanisms on the bumper panel.
- Mount blind rivet (1) using the special tool **0 496 521 (00 2 230)**.

30 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

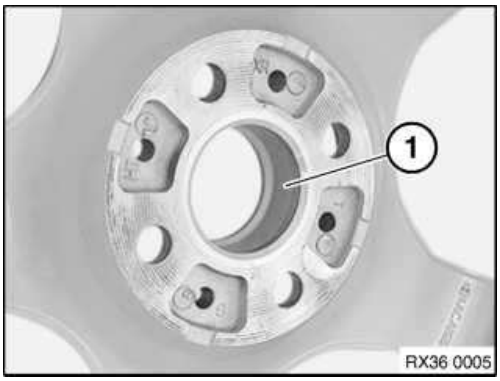


- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com

- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

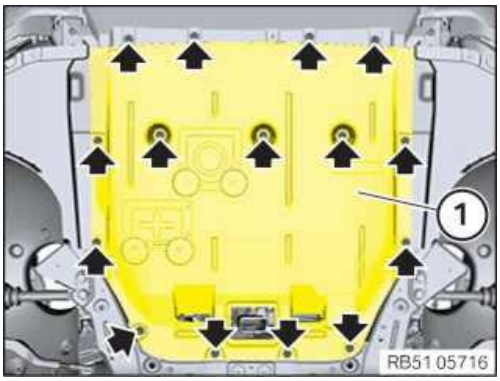
TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.



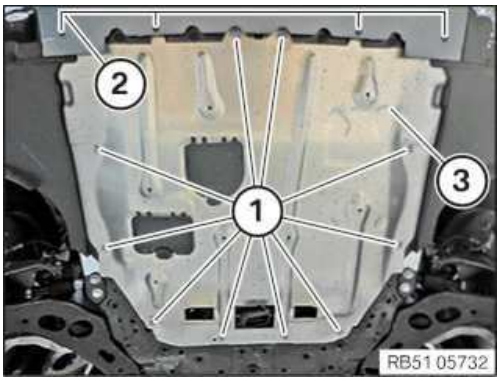
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

31 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

cardiagn.com

- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

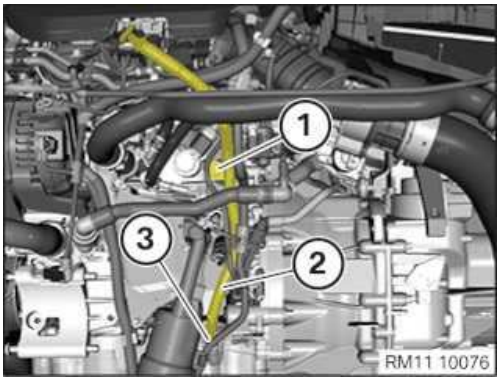
Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

32 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.



Contamination can result in malfunctions, operating failure or leaks.

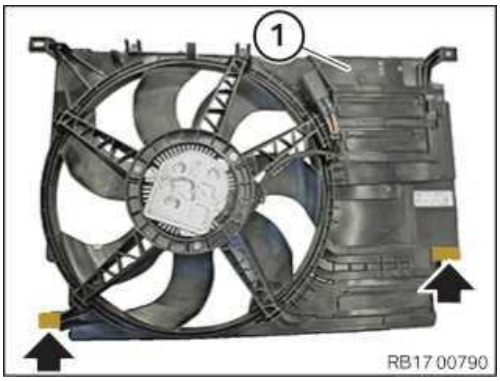
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew O-ring (1).

  Parts: O-ring

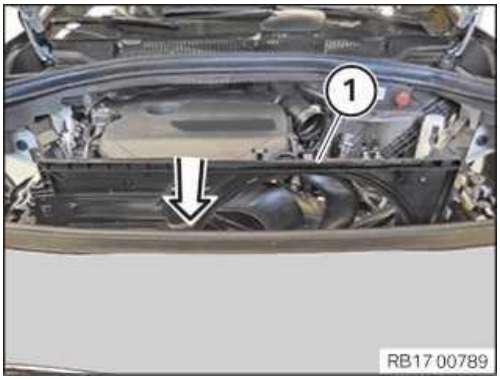
- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine



M8x16		Tightening torque	19 Nm

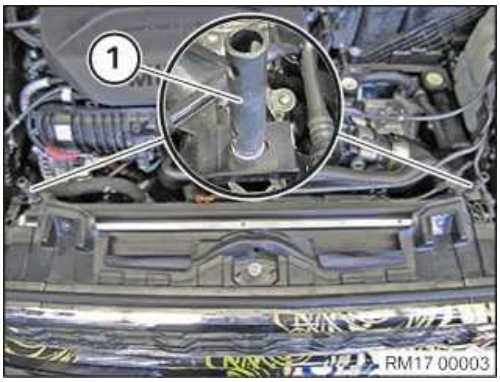
33 – Installing fan cowl with electric fan



TECHNICAL INFORMATION

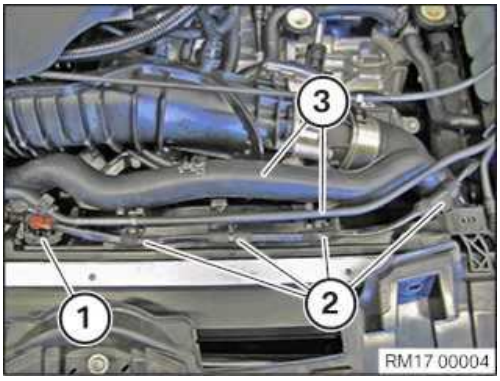
Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

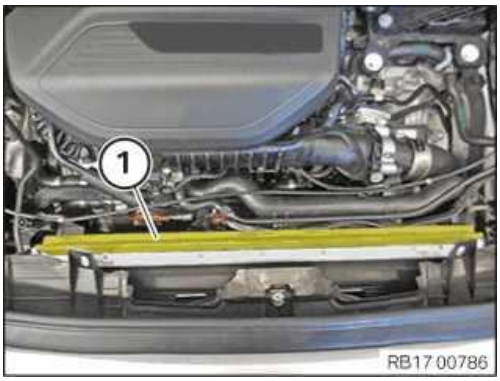
- Feed in and install the fan cowl (1) in the direction of the arrow.



- Lock the left and right locks (arrows).

- Tighten the screws (1).

Fan cowl on radiator

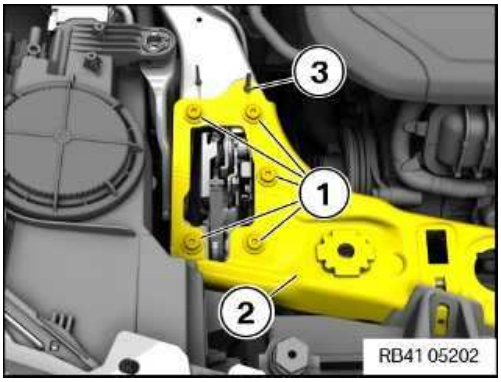


M6X12		Tightening torque	6 Nm

- Connect connectors (1) and lock.

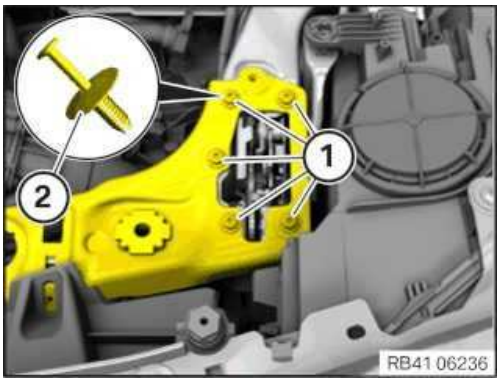
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).

cardiagn.com



- Guide the sealing (1) on the radiator in and install it.

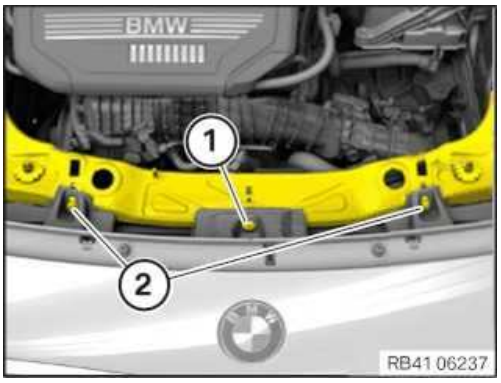
34 – Install front cross connection



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

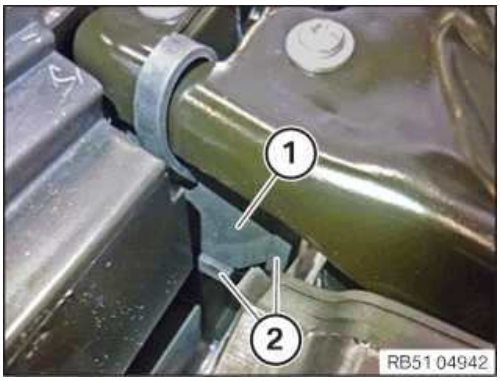
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

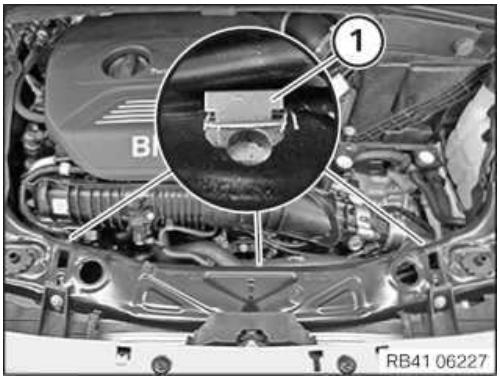
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

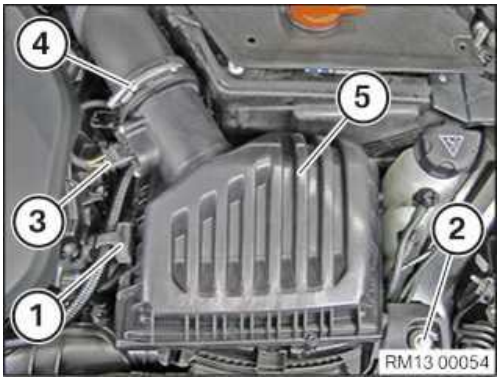
- Tighten down screw (1).



Bracing strut to upper connection

M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

35 – Installing intake silencer housing

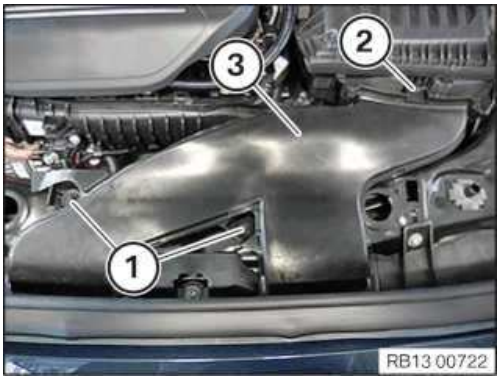
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

36 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

37 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

38 – Topping up the engine oil

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB47TÜ1

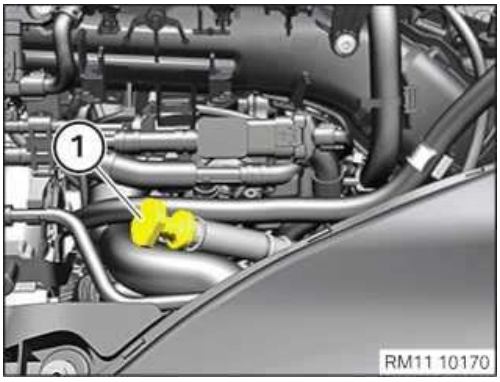
Capacity of engine oil	5,5 l

Engine oil: Technically suitable engine oils for BMW Group engines

39 – Installing the oil filler cap

- Close oil filler cap (1).

40 – Check engine oil level



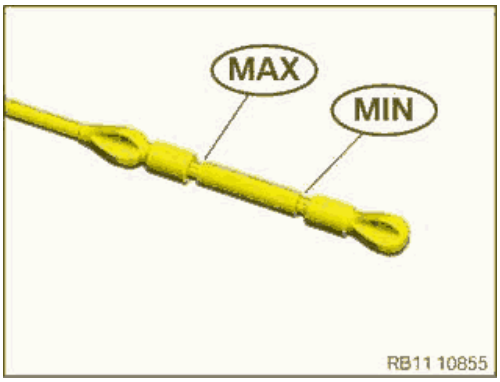
cardiagn.com

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

41 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

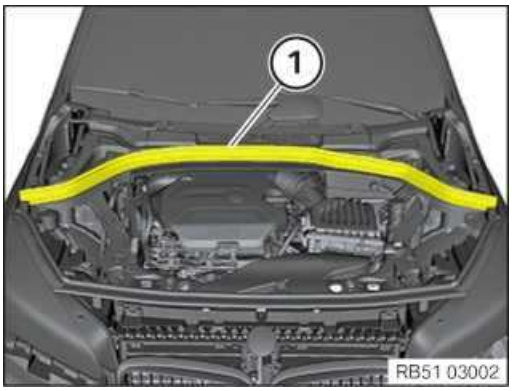
Seal, guide tube for oil dipstick on oil sump	32

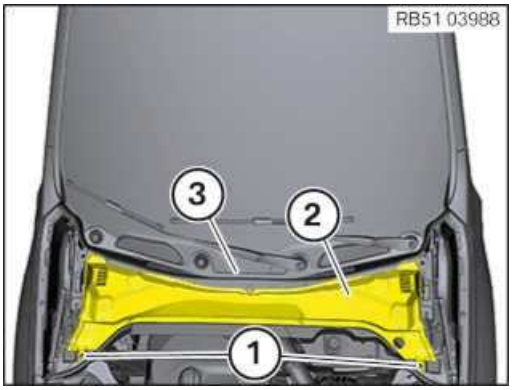
cardiagn.com



11 71 100 Remove and install/replace the exhaust-gas recirculation cooler

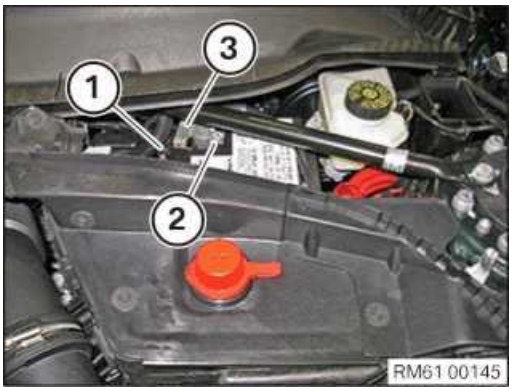
PRELIMINARY WORK

1 – Remove the seal for the rear bonnet



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

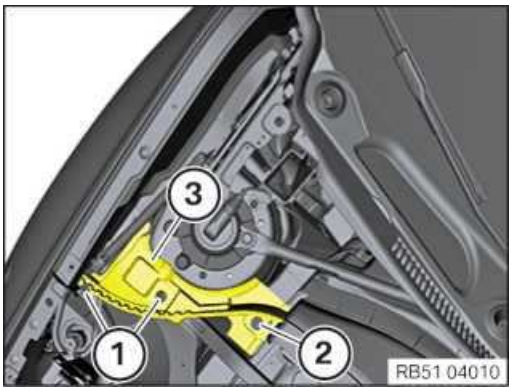


- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover

- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

3 – Disconnecting the battery earth lead

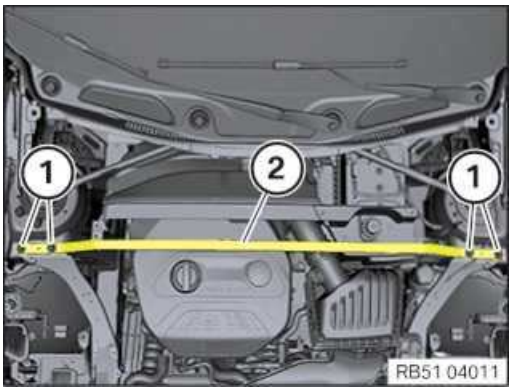


- Unlock plug connection (1) and disconnect.
- Unfasten nut (2).
- Remove the battery earth lead (3) and secure to one side.

4 – Remove suspension cross-brace

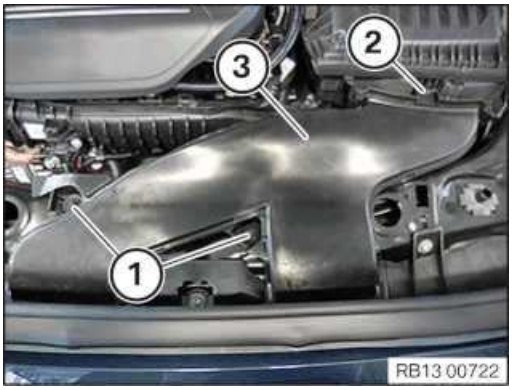
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



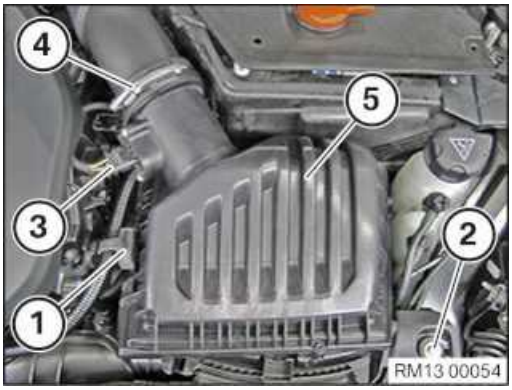
cardiagn.com

NOTICE



Description is for right component only. The procedure on the left side is identical.

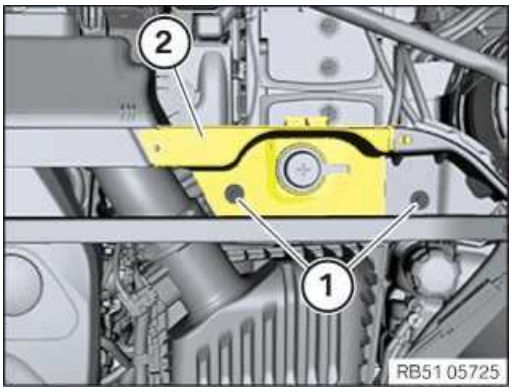
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



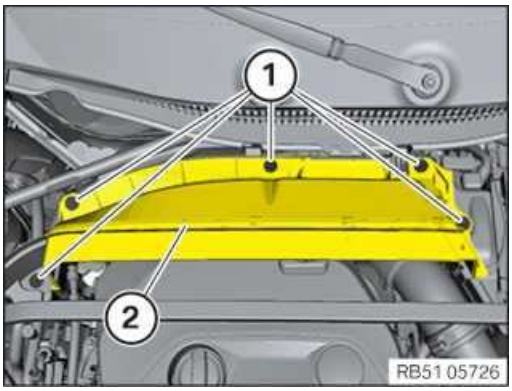
- Loosen screws (1).
- Remove strut brace (2).

5 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.



6 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

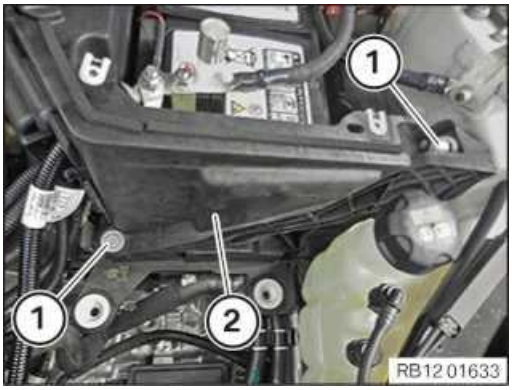
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

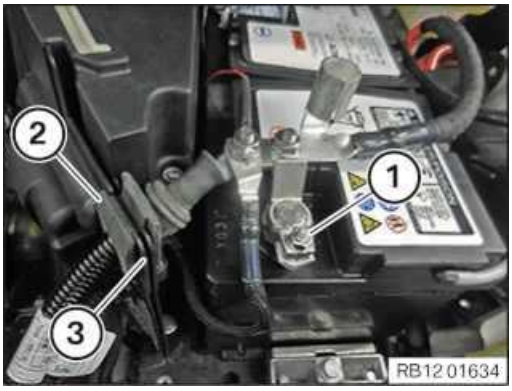
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



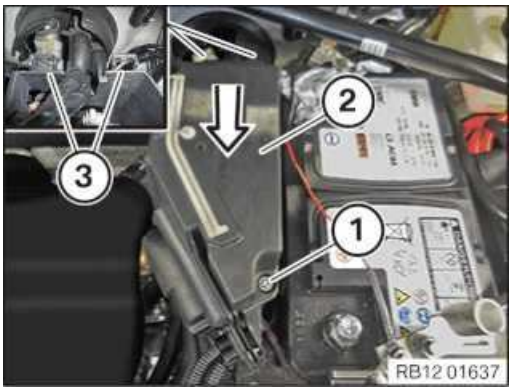
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

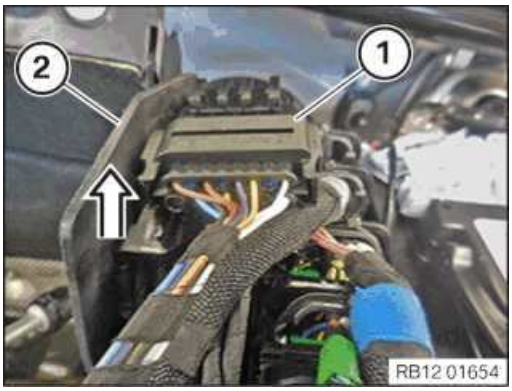


cardiagn.com

TECHNICAL INFORMATION

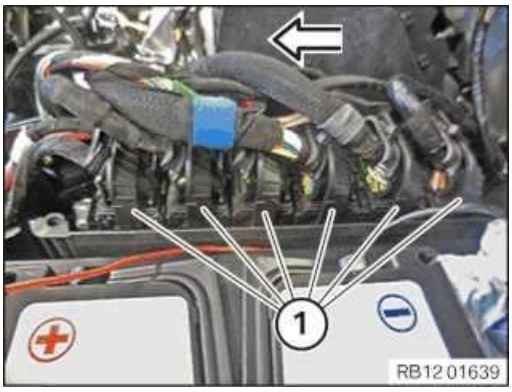


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

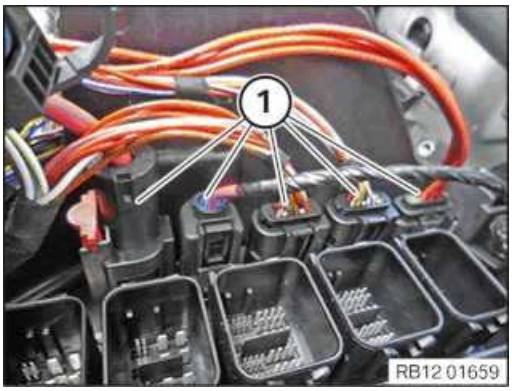


- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

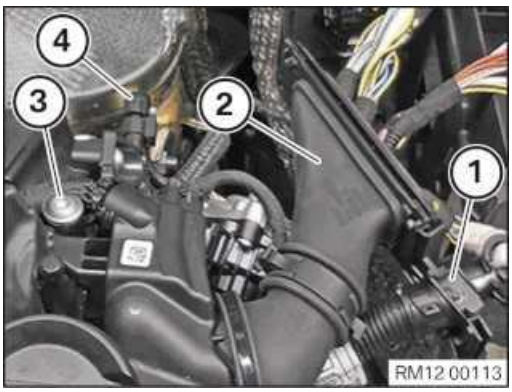
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



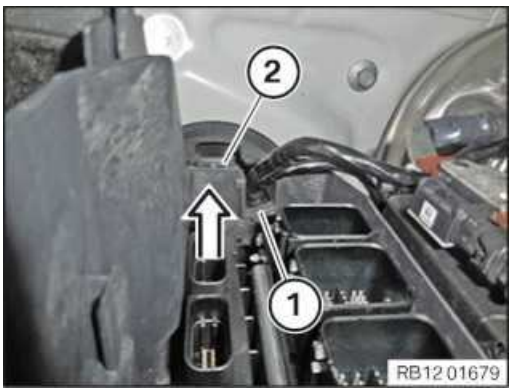
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



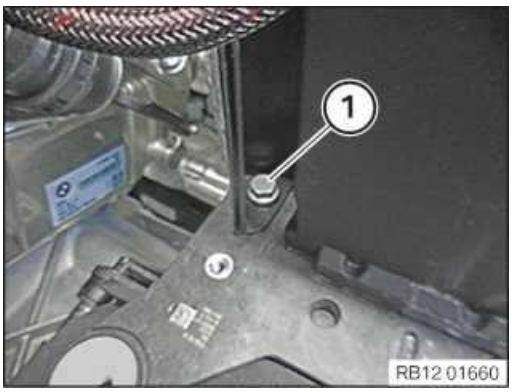
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



cardiagn.com

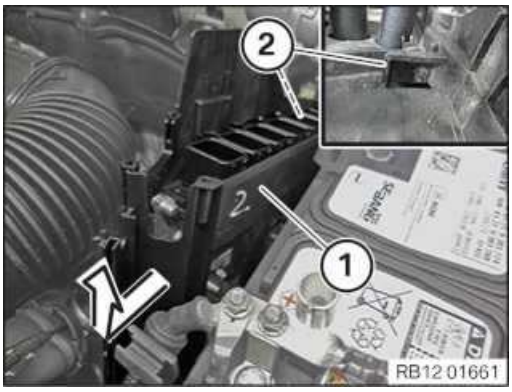


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

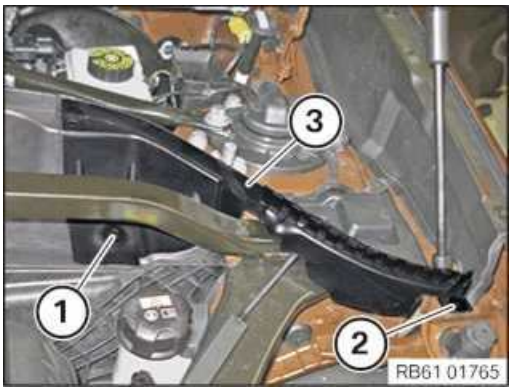


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

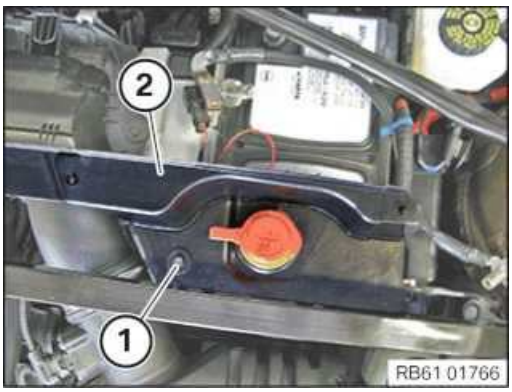
cardiagn.com

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.



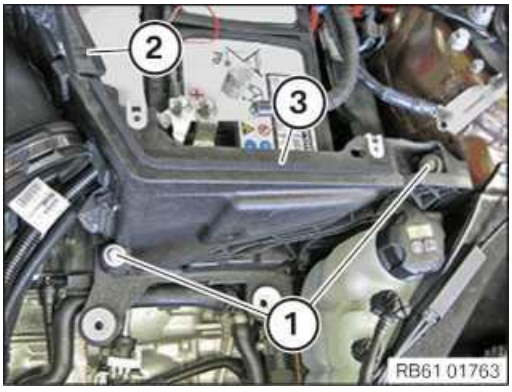
9 – Remove vehicle battery

WARNING



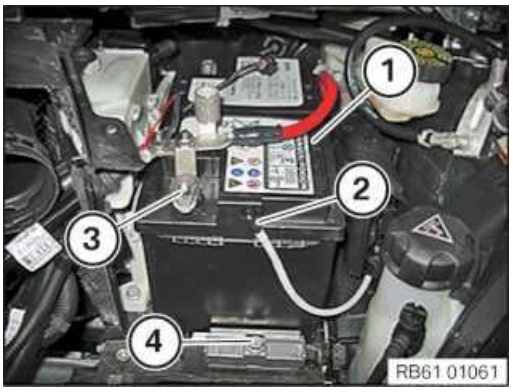
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!



- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



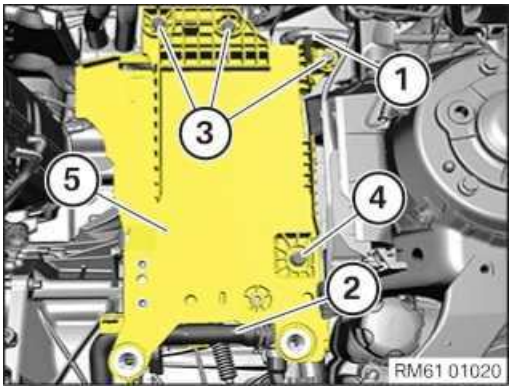
- Loosen screw (1).
- Remove the cover (2).

- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com

- Pull off the vent hose (2).
- Slacken the nut (3) on the positive battery terminal and remove the positive battery terminal.

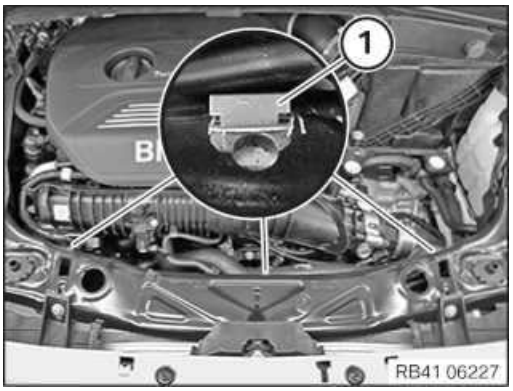
WARNING



Unprotected battery terminals.

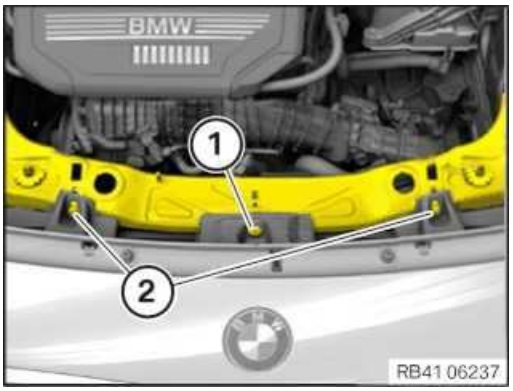
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.



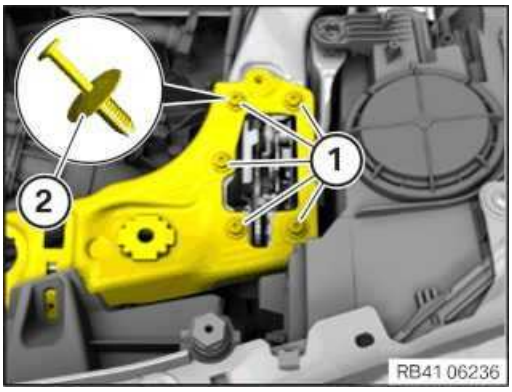
- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

10 – Remove battery holder

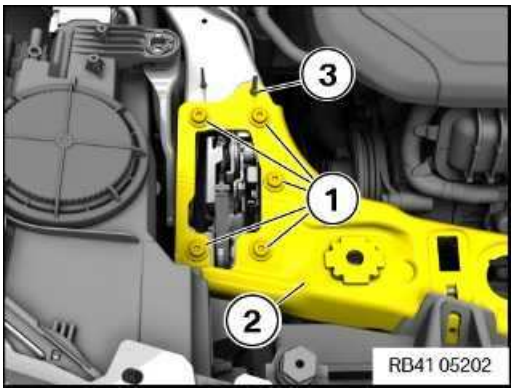


- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

11 – Remove front cross connection

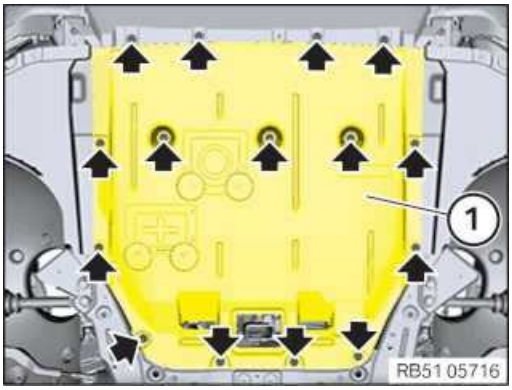


- Detach the clamps (1) for the Bowden cable of the bonnet locks from the cross connection.

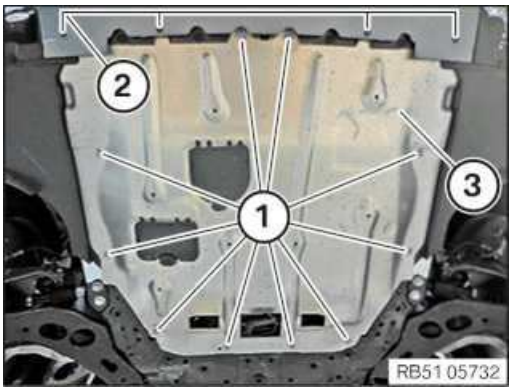


- Loosen screw (1).
- Loosen screws (2).

cardiagn.com



- Loosen screws (1).
- Lever out expanding rivet (2).



- Loosen screws (1).
- Unclip the front cross connection (2) from the rubber retainer (3) and remove it upward.

12 – Removing the front underbody protection

- Remove screws (arrows).
- Thread out and remove the front underbody protection (1) from the bumper panel.

- **Equipment specification with metal underride protection:**
- Loosen screws (1) and (2).
- Thread out and remove the underride protection (3).

13 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

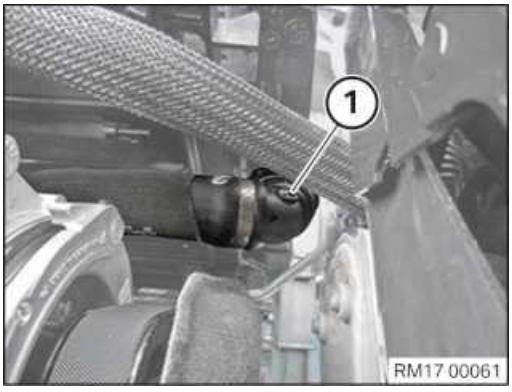
cardiagn.com

TECHNICAL INFORMATION

Life-long fill of coolant!

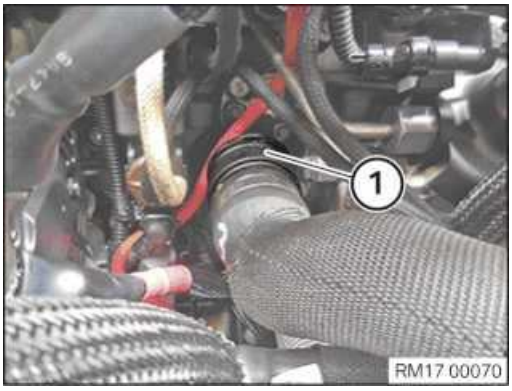
Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.



In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION



Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

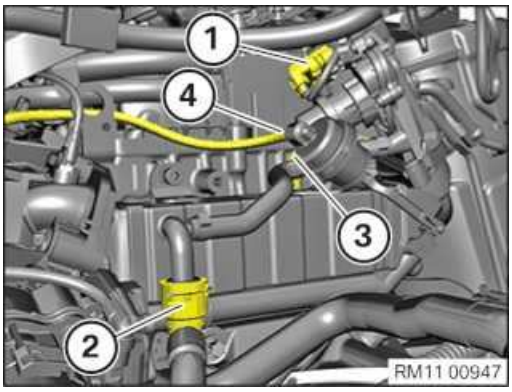
- Loosen sealing cap (1).

- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

- Unlock the coolant line (1) and pull it off the connecting branch.
- Catch and dispose of escaping coolant.

MAIN WORK

14 – Removing the exhaust-gas recirculation cooler

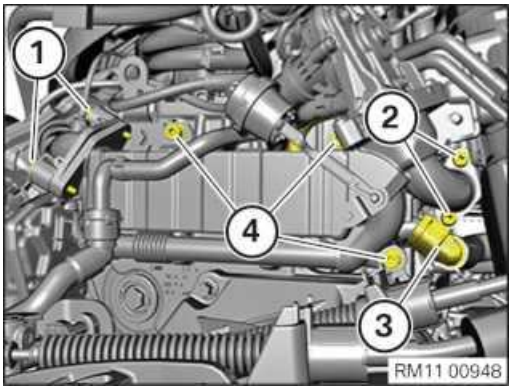


cardiagn.com

WARNING

Hot surfaces.

Risk of burning!



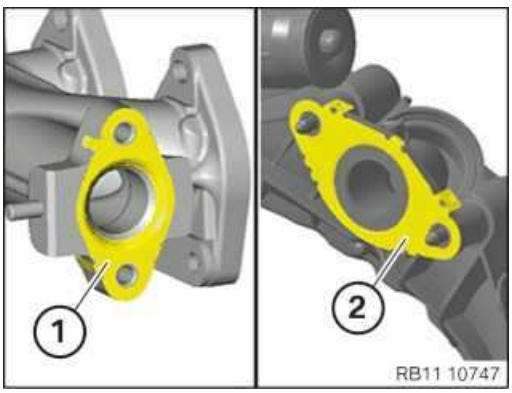
- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



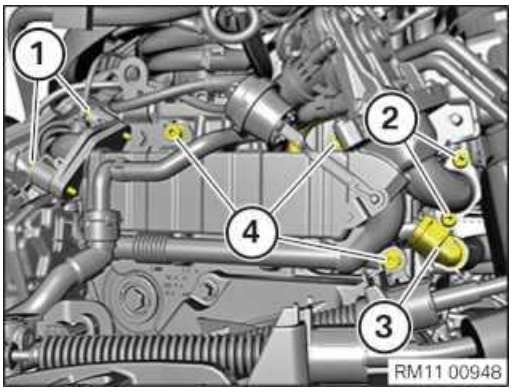
15 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com

- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

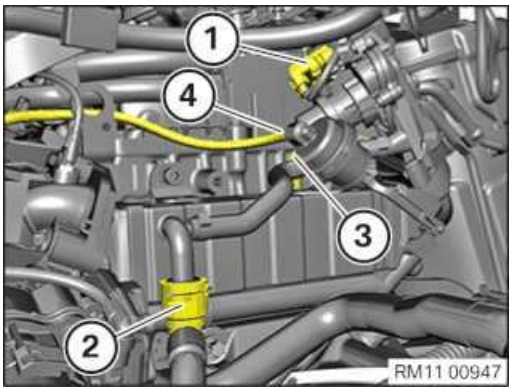
M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm



- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

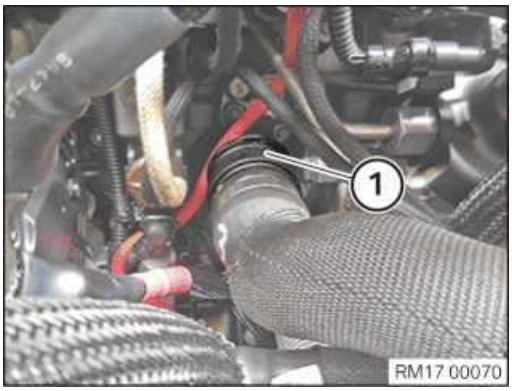
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

POSTPROCESSES

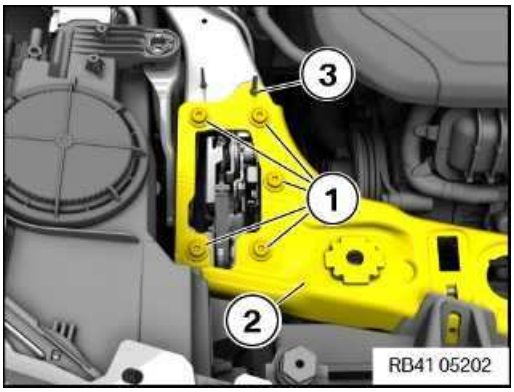


16 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

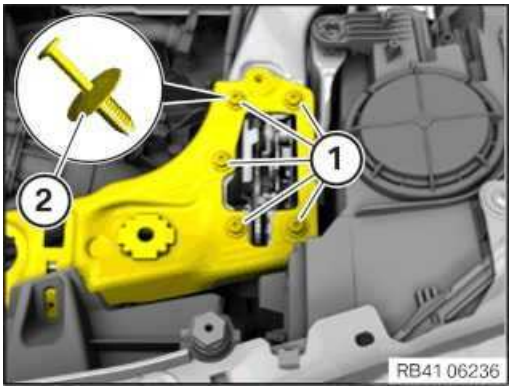
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the connecting branch and lock audibly.

17 – Install front cross connection

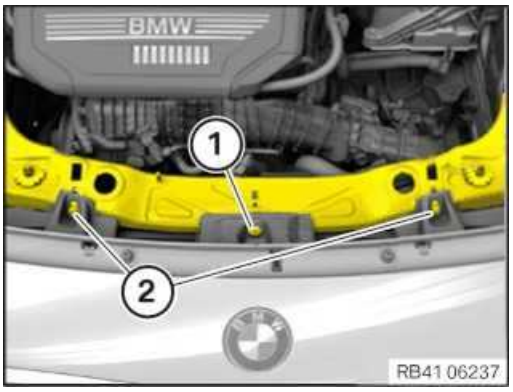
cardiagn.com



- Right side of vehicle only: Secure spray guard (1) on the cross connection (2) as pictured.

- Position front cross connection (2) and clip front cross connection (2) into the rubber retainer (3) at the same time.
- Tighten the screws (1).

Cross connection to carrier support



Screws M6x20		Tightening torque	11,8 Nm

- Tighten the screws (1).

Cross connection to carrier support

Screws M6x20		Tightening torque	11,8 Nm

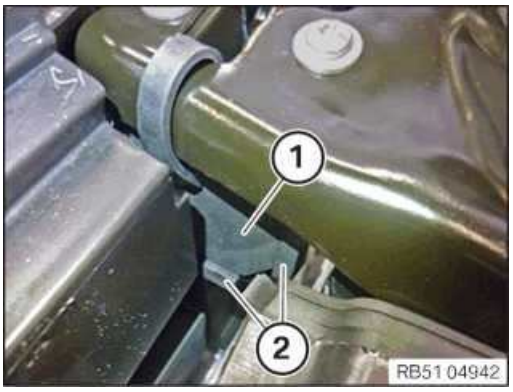
- Position screws (3) on the rubber mounts for the radiator and tighten.

Screw connection for rubber mount of coolant radiator to coolant radiator

Bolt to rubber mount		Tightening torque	8 Nm

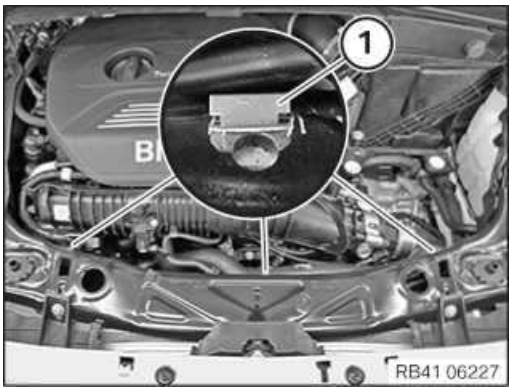
- Tighten down screws (2).

Air duct to upper connection



M6x20 screw		Tightening torque	11,8 Nm

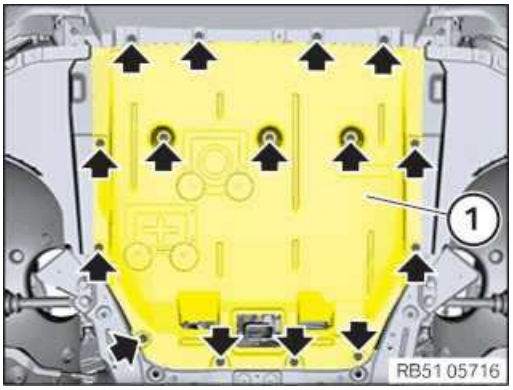
- Tighten down screw (1).



Bracing strut to upper connection

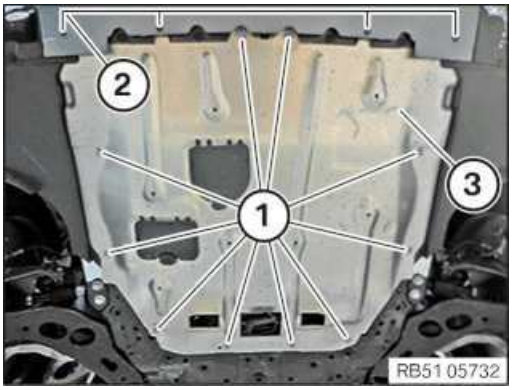
M8x20 screw		Tightening torque	28 Nm

cardiagn.com



- Right side of vehicle only: Properly mount spray guard (1) to prevent corrosion.
- Secure spray guard (1) to the bridge with retaining tabs (2).

- Fasten the clamps (1) from the Bowden cable of the bonnet lock on the cross connection.

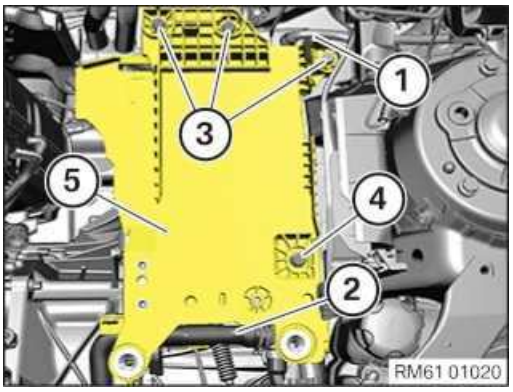


18 – Installing the front underbody protection

- Guide the front underbody protection (1) in under the bumper panel and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm



- **Equipment specification with metal underride guard:**
- Guide in and attach the underride guard (3).
- Tighten down screws (1) and (2).

Underbody protection front

Screw for thermoplastic plastic		Tightening torque	2,6 Nm
Hexagon screw M6x20		Tightening torque	8 Nm

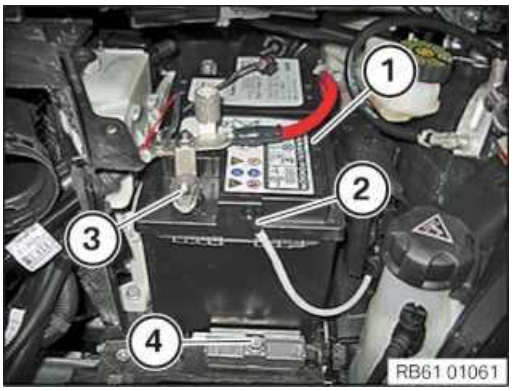
19 – Install the battery holder

cardiagn.com

- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm



- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

20 – Install vehicle battery

- Install vehicle battery (1).
- Position the bracket and tighten with the screw (4) .

Battery terminal rail to battery tray

M8		19 Nm

- Position the vent hose (2) and clip it in.
- Position the positive battery terminal and tighten with the nut (3) .

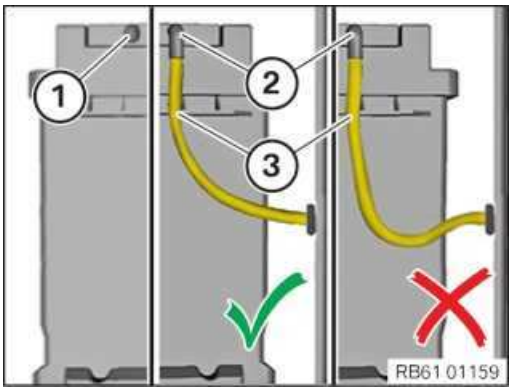
Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

▸ **Check the vent holes of the battery**

WARNING

Gas emission.



Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).

cardiagn.com

Check

- Check if the vent hole (1) is correctly closed with a dummy plug.

Result

» No dummy plug.

Measure

- Close the vent hole (1) correctly with a dummy plug.

Check

- Check if the vent hole (2) has a correctly connected vent hose (3).

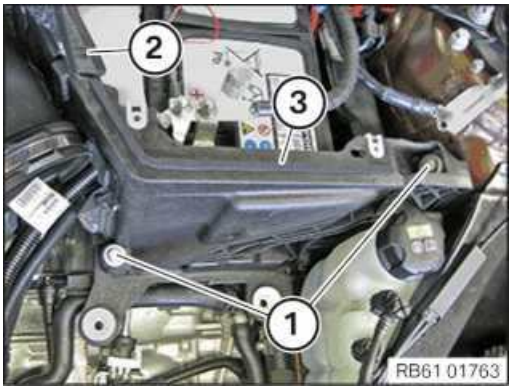
Result

» The vent hose (3) is not correctly connected.

Measure

- At the vent hole (2), connect the vent hose (3) correctly.

Check



- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

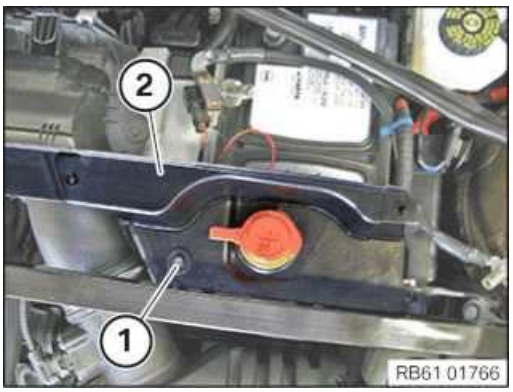
Result

» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure

- Route the vent hose (3) correctly as shown in the centre image.

- Insert tension strut (3) and tighten with screws (1).



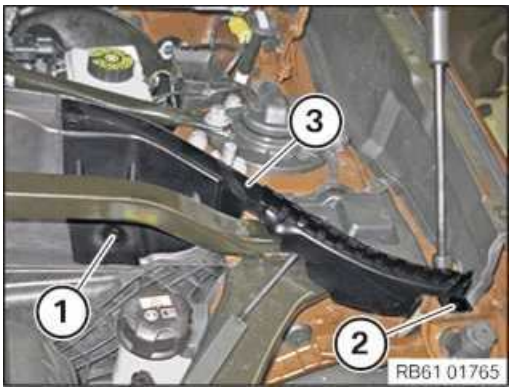
Trailing link

M8		Tightening torque	19 Nm

- Tighten down screw (2).

Battery cover

M8		2,8 Nm



- Position the cover (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

cardiagn.com

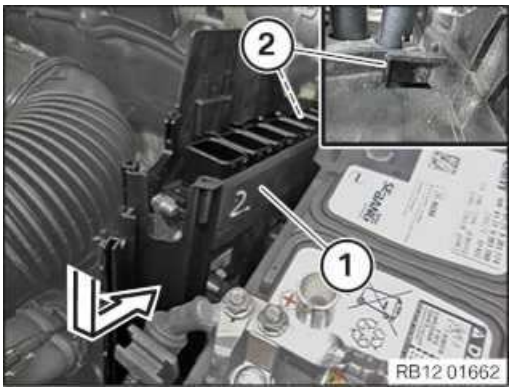
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

M8		2,8 Nm

21 – Install electronics box

Prerequisite

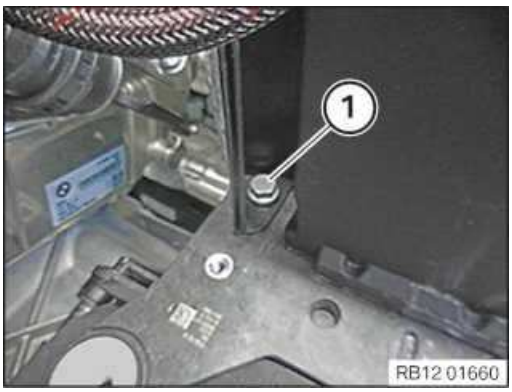


Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

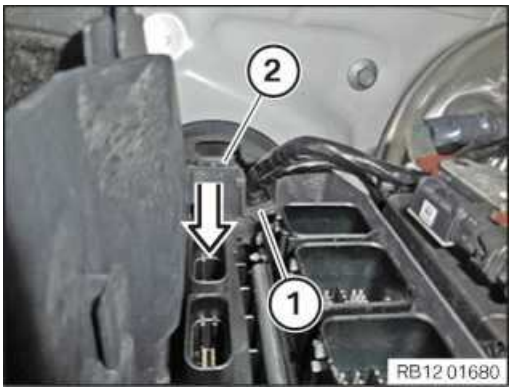
Trapped, crushed or damaged cables may cause short circuits and malfunctions.



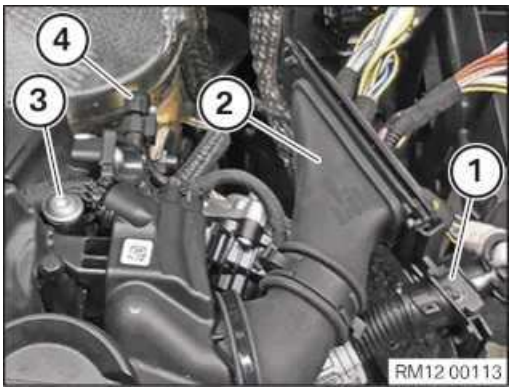
- Route all cables without abrasions, do not trap and crush.

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



- Tighten down screw (1).

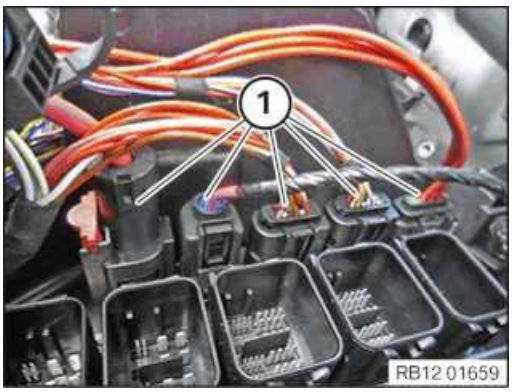


Electronics box to battery tray

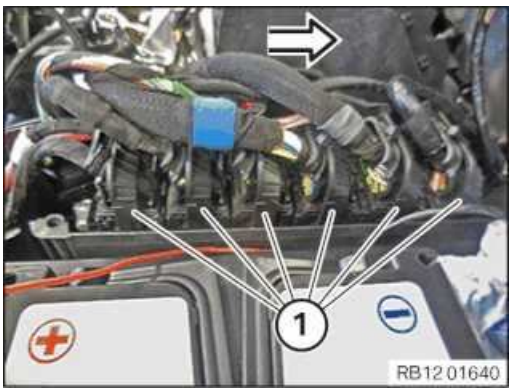
M8X16		Tightening torque	15 Nm

cardiagn.com

- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

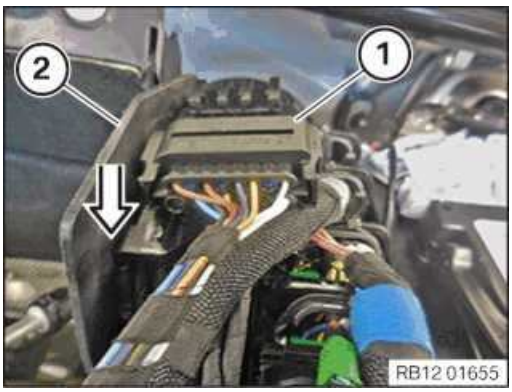


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



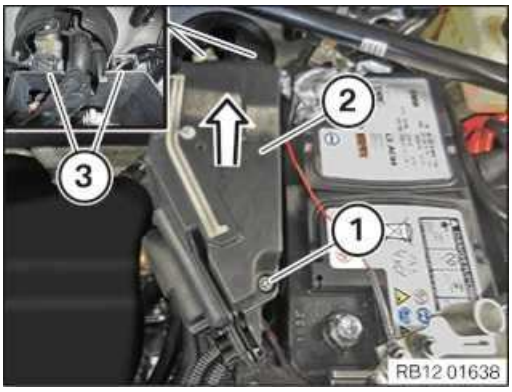
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm



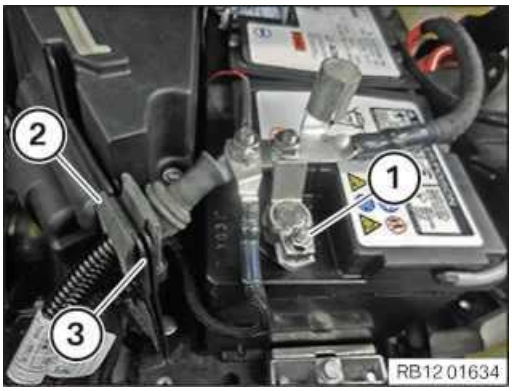
- Attach connector (4) to the differential pressure sensor and lock it audibly.

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

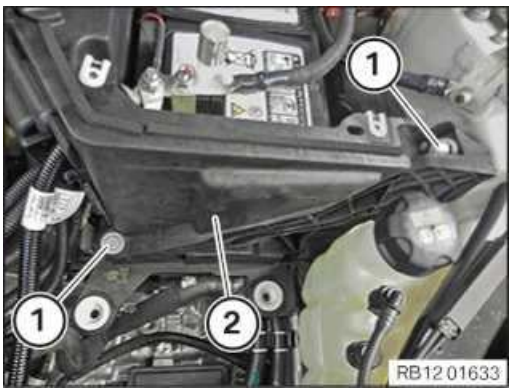
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



cardiagn.com

- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

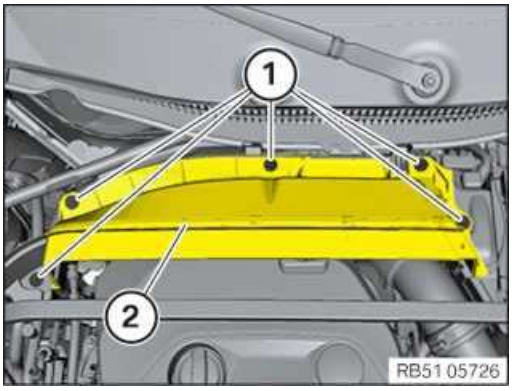


RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

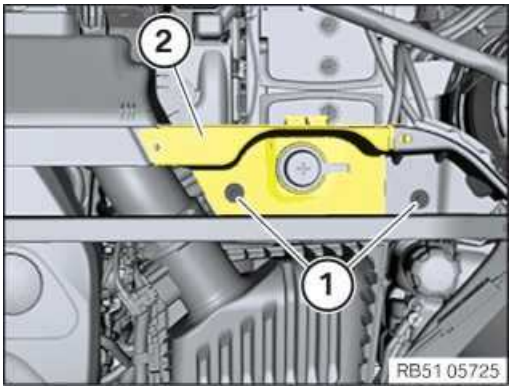
NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (2).
- Tighten the screws (1).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

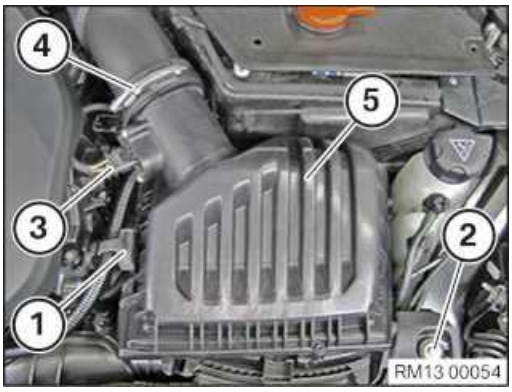


22 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

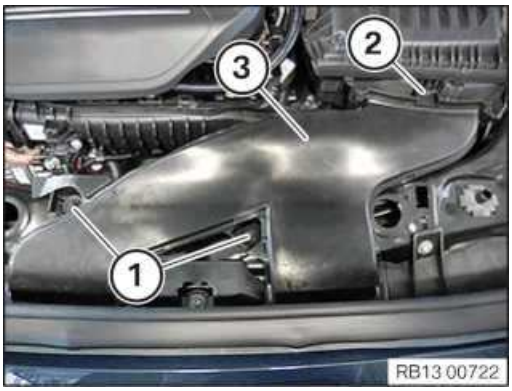
23 – Installing intake silencer housing

cardiagn.com

- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm



- Tighten clamp (4).

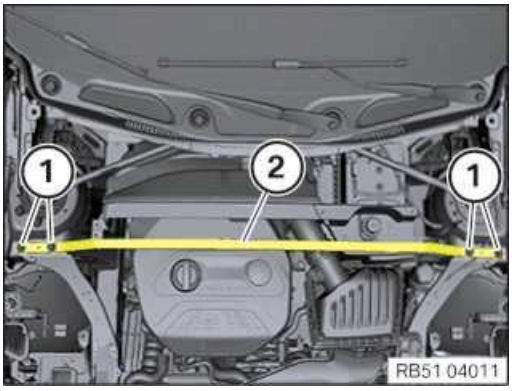
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

24 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).



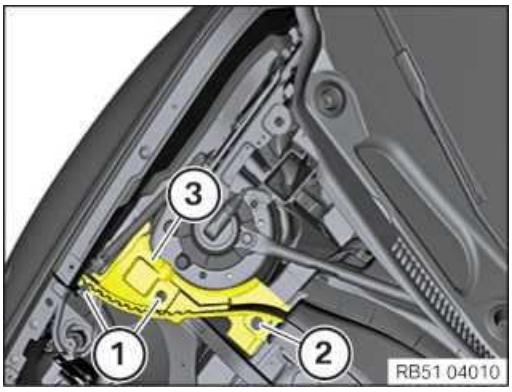
Intake neck to cross connection

M6		Tightening torque	8 Nm

25 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).
  Parts: Bolts
- Tighten the screws (1).

Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

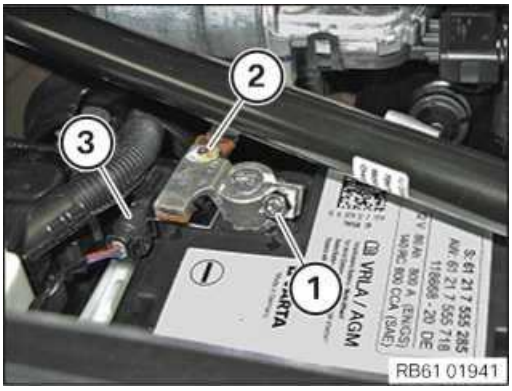
cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.

- Install the cover (3).
- Tighten down screw (2).

Cover on body



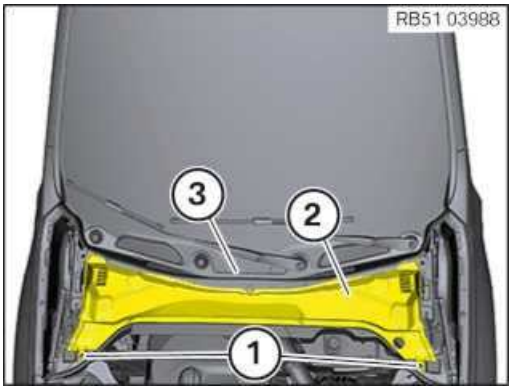
Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

26 – Connecting the battery earth lead

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



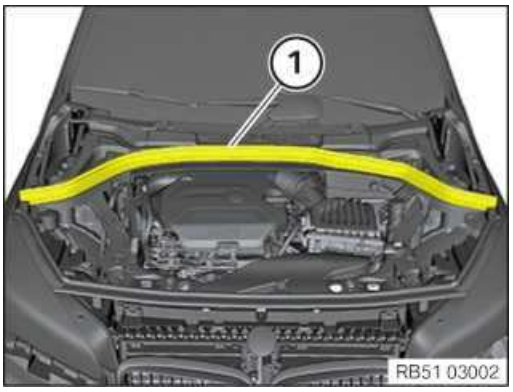
- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6			5 Nm

- If required, connect the connector (3).

27 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

28 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

29 – Filling and bleed the high-temperature coolant circuit

- See additional information.

30 – If a new exhaust-gas recirculation valve is installed: Delete adaptations

Check

- Check if a new exhaust-gas recirculation valve is already installed on the new exhaust-gas recirculation cooler.

Result

» A new exhaust-gas recirculation valve is installed.

Measure

- Delete adaptations.

▶ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital diesel electronics (DDE)
  - Reset adaptations
  - Delete adaptations

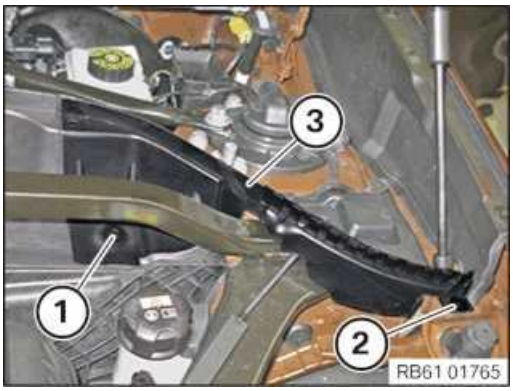
Parts

Parts required

Designation	Used in step
Exhaust-gas recirculation cooler seal on exhaust manifold	15
Exhaust-gas recirculation cooler seal on intake plenum	15

cardiagn.com

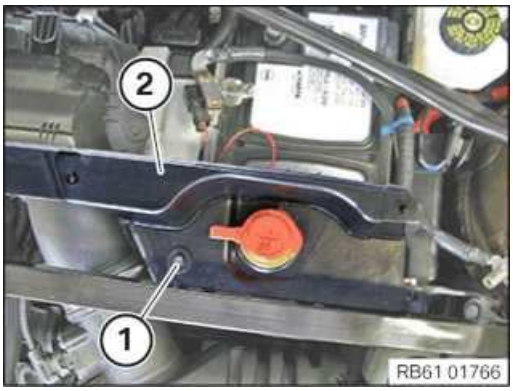
11 71 501 Removing and installing/replacing exhaust-gas recirculation valve (B47)



Attention!

Read and comply with notes on protection against electrostatic damage (ESD protection).

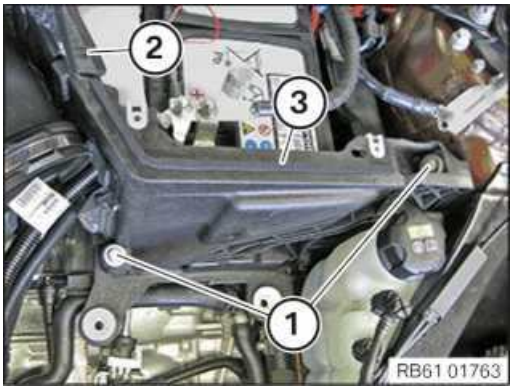
Necessary preliminary work:



- Remove intake silencer housing
- Remove clean air pipe
- Remove resonator
- Disconnect battery negative cable

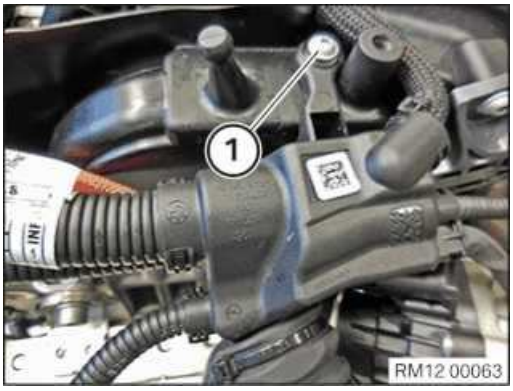
Removal:

Release screw (1) and expanding rivet (2).



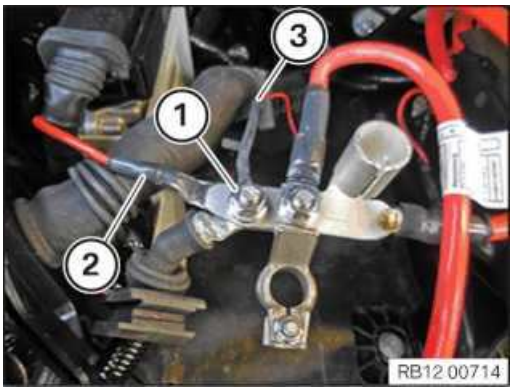
Remove the mounting for the gasket (3).

Release screw (1).



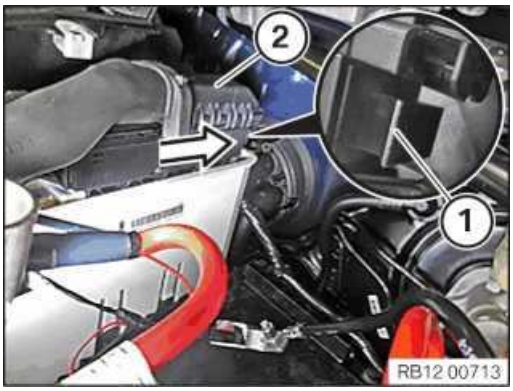
Remove cover (2).

cardiagn.com



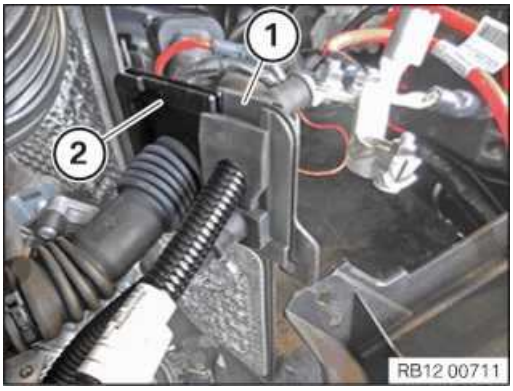
Release screws (1).

Lift cover (2) slightly and feed out tension strut (3).

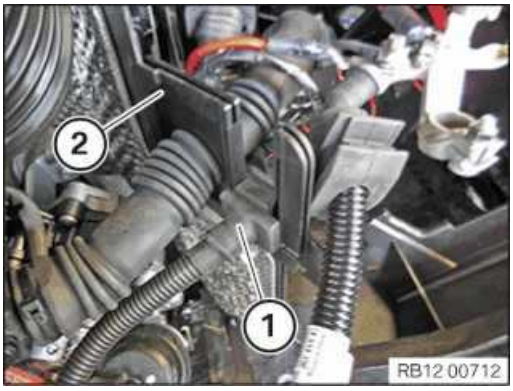


Release screw (1). Remove the wiring harness from the cylinder head cover.

Slacken nut (1).

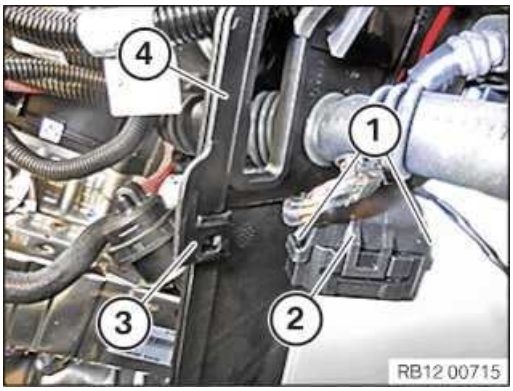


Feed out cables (2) and (3) and lay to one side.

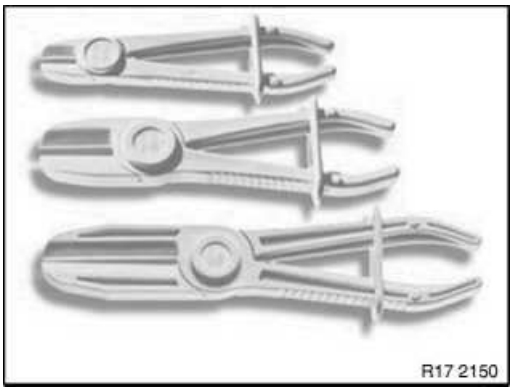


Undo lock (1) as shown by arrow.

Remove connector (2).

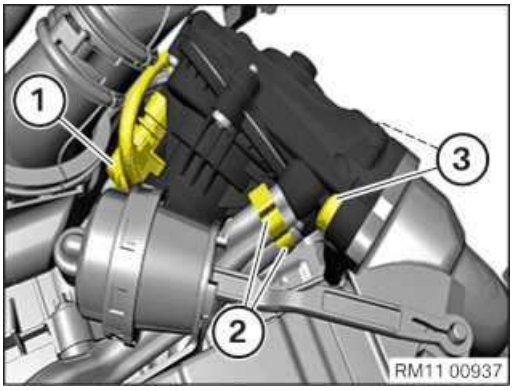


cardiagn.com



Remove cable (1) from cable clip (2).

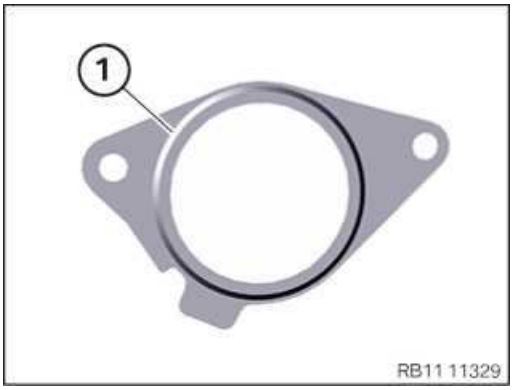
Remove cable (1) from cable clip (2).



Release lock (1).
Remove connector (2).
Release lock (3).
Remove cable clip (4) with connector.

Use commercially available pinch-off tools to pinch off the coolant hoses.

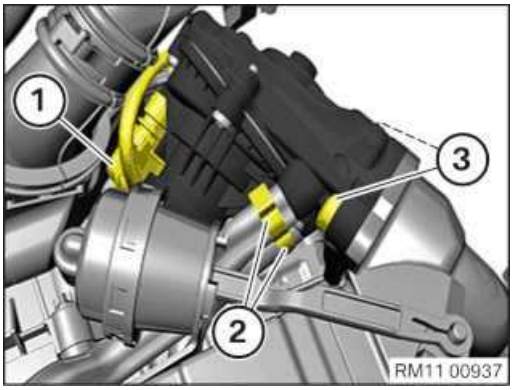
cardiagn.com



Unlock connector (1) and pull off.

Loosen screws (3).

Loosen hose clamps (2) and pull off coolant lines.



Remove the exhaust-gas recirculation valve .

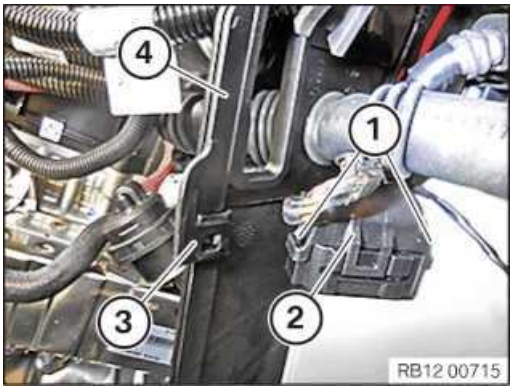
Installation:

Replace gasket (1).

Parts: Gasket

Renew the hose clamps of the coolant lines (2).

Parts: Hose clamps.



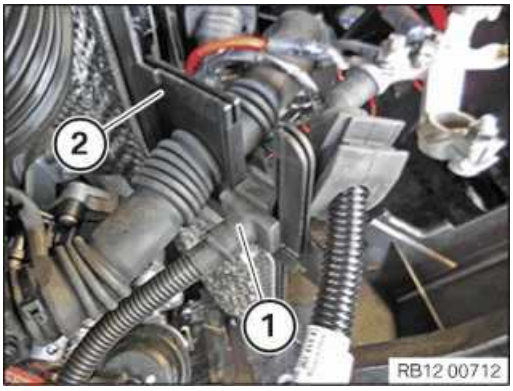
Slide coolant lines with hose clamps (2) onto the exhaust-gas recirculation valve.

Make sure the coolant lines are not mounted twisted.

Mount hose clamps (2).

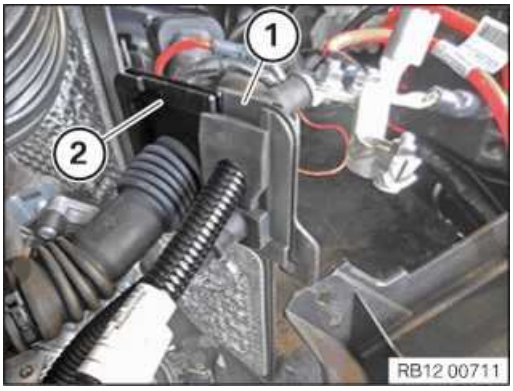
Position exhaust-gas recirculation valve with new seal.

Screw-in screws (3) by **one turn**.



Connect connector (2) and lock.

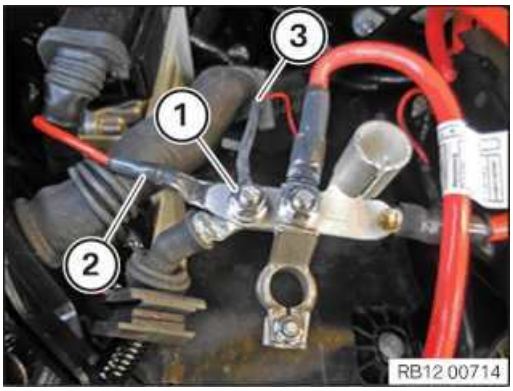
Lock (1) must snap audibly into place.



Install cable clip (4) with connector.

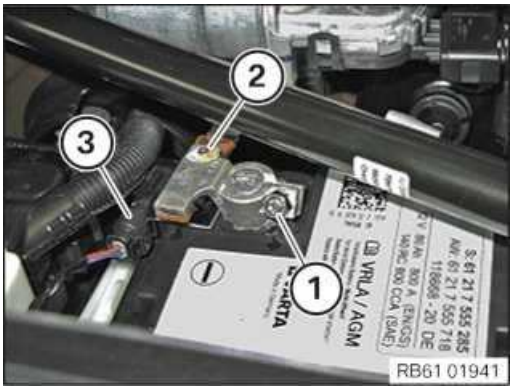
Lock (3) must snap audibly into place.

cardiagn.com



Feed in and install cable (1) into the cable clip (2).

Feed cable (1) into the cable clip (2) and install.

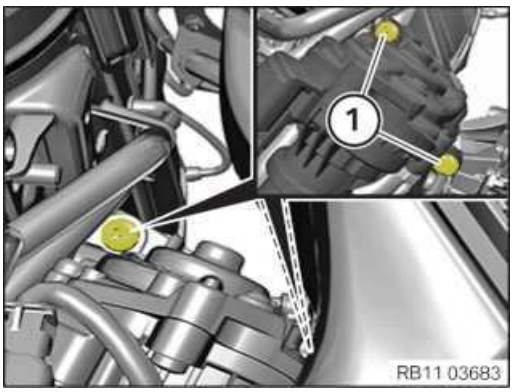


Fit connector (2).
Engage the lock (1) as shown by arrow.
Lock (1) must snap audibly into place.

Feed in and install cables (2) and (3).
Tighten nut (1).
Tightening torque 12 52 6AZ

cardiagn.com

Connect negative battery cable (2).



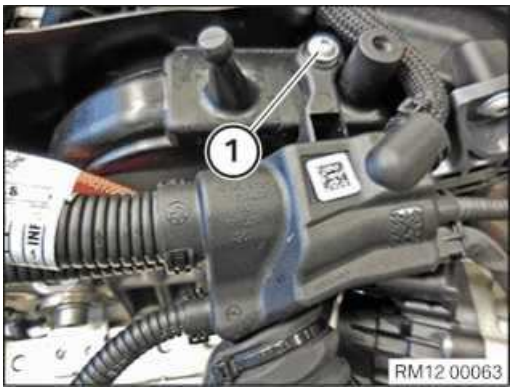
Tighten nut (1).

Tightening torque 61 21 2AZ.

Connect the connector (3) and audibly lock it.

Connect diagnosis system, Service function: Carry out "Setting the exhaust-gas recirculation valve installation position".

Diagnosis path: 01 Drive - Digital diesel electronics - Exchanging the exhaust-gas recirculation valve - Exhaust-gas recirculation valve installation position

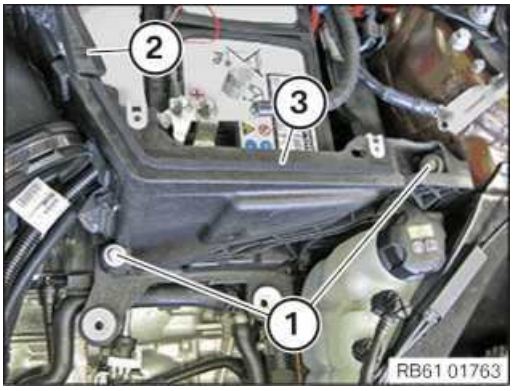


Tighten down screws (1).

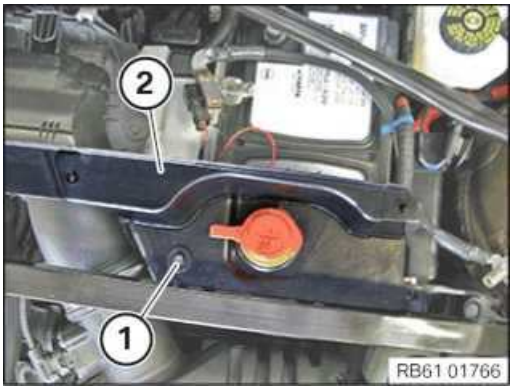
Tightening torque: 11 71 3 AZ .

Replacement.

Resetting adaptations.

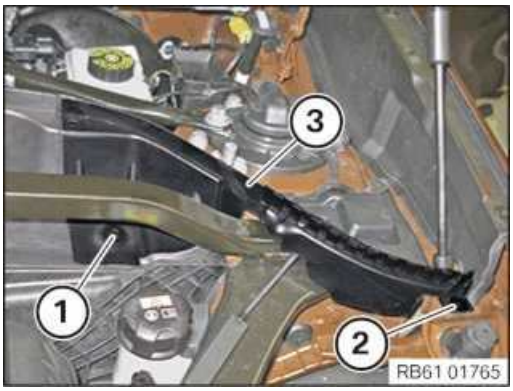


Diagnosis path: 01 Drive - DDE - Reset adaptation - Delete adaptations.



Install wiring harness on cylinder head cover.

Tighten screw (1).



cardiagn.com

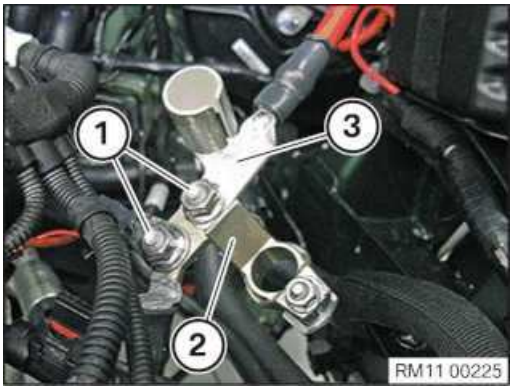
Lift cover (2) slightly and install the tension strut (3).
Tighten screws (1).
Tightening torque 61 21 2AZ.

Install cover (2).
Tighten screw (1).

Install the mounting for the seal (3).
Tighten screw (1).
Install expanding rivet (2).

Required follow-up work:

- Install intake silencer housing
- Install clean air pipe
- Install resonator
- Add coolant
- Delete fault memory



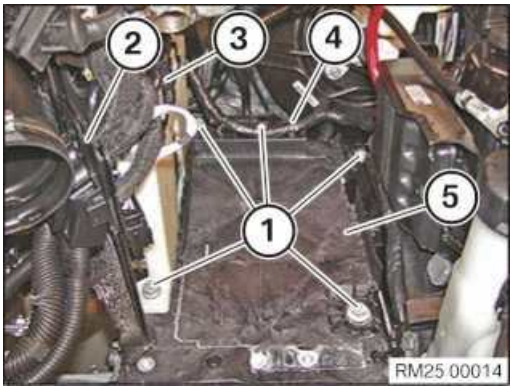
cardiagn.com

11 71 100 Removing and installing/replacing exhaust-gas recirculation cooler (B47)

Necessary preliminary work:

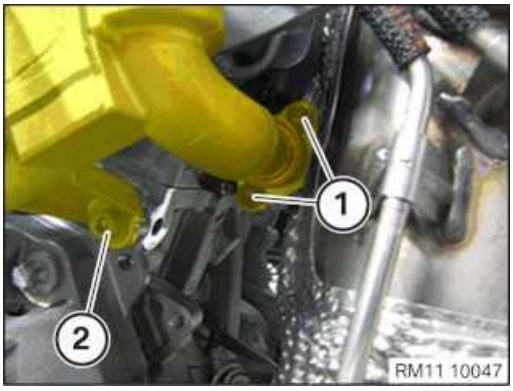
- Remove acoustic cover
- Remove battery
- Remove cowl panel
- Remove suspension cross-brace
- Drain coolant
- When replacing the exhaust-gas recirculation cooler, check the part number and clear adaptations
- Remove DDE control unit

Removal:

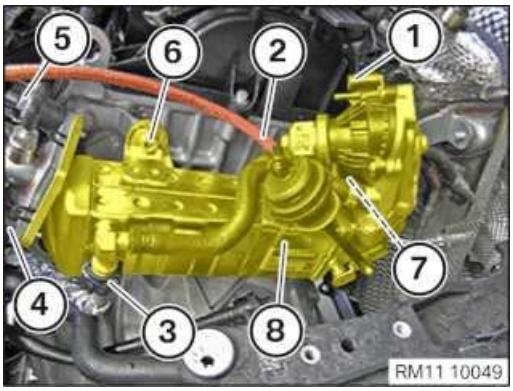


Unscrew nuts (1).

Disconnect positive battery terminal (2) and positive battery connection point (3).



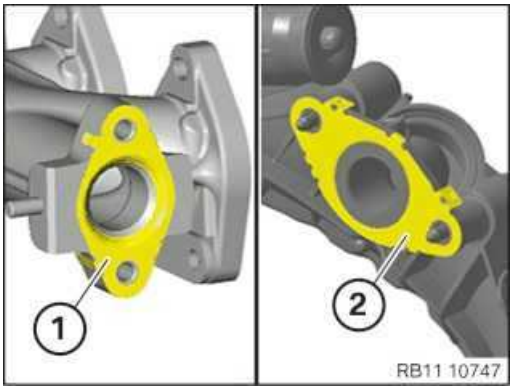
Disengage wiring harness from holder (1).



cardiagn.com

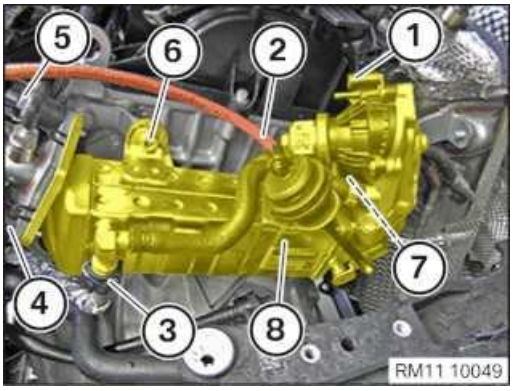
Release screws (1).
Release bulkhead (2) from bracket and remove.
Release control unit (3) from bracket.
Detach wiring harness (4) from battery tray (5).
Remove battery tray (5).

Loosen screws (1) on exhaust manifold.
Release screw (2).



Unlock plug connection (1) and disconnect.
Pull off vacuum line (2).
Unlock coolant line (3) and pull off.
Release screws (4 and 5).
Release screws (6 and 7).
Remove exhaust-gas recirculation cooler (8) upwards.

Installation:



Install pipe neck (1).
Part: Replace pipe neck.

cardiagn.com

Renew the beaded metal gaskets (1) and (2).

Parts: Beaded metal gasket.

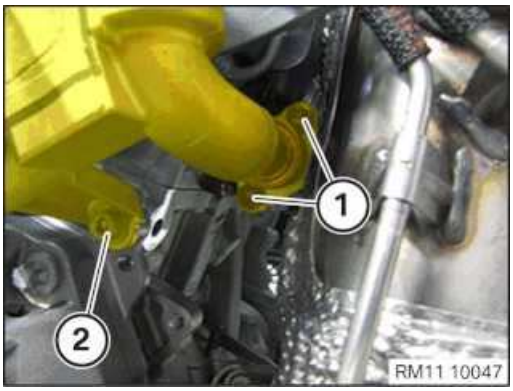
Installation note:
Make sure that the pipe neck (8) is correctly fitted in the cylinder head.

Tighten all screw connection.

Join screws (7 and 6).

Join screws (4 and 5).

Tighten screws (7 and 6).



Tightening torque: 11 71 2AZ.

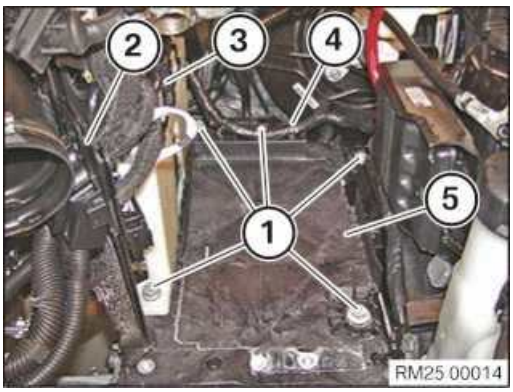
Tighten screws (4 and 5).

Tightening torque: 11 61 2AZ.

Connect vacuum line (2).

Connect and lock coolant line (3).

Installation note:
Renew screws (1) and seal.



Grease screw thread (1) with assembly paste 4.2.

Tighten screws (1) on exhaust manifold.

Tightening torque: 11 71 1AZ.

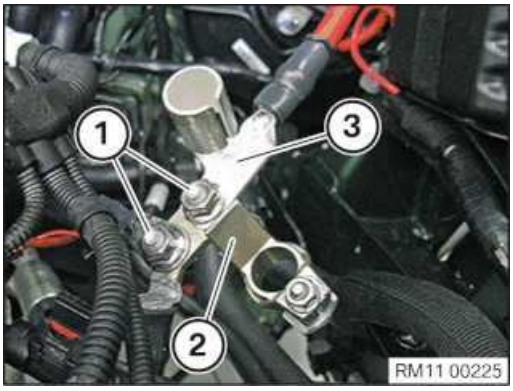
Tighten screw (2).

Tightening torque: 11 71 2AZ.

Install battery tray (5).

Insert bulkhead (2) into bracket.

Tighten screws (1).



Install wiring harness (4) on battery tray (5).

Insert control unit (3) in bracket.

cardiagn.com

Install the engine wiring harness in the bulkhead (1).

Connect positive battery terminal (2) and positive battery connection point (3).

Tighten down nuts (1).

Required reworking.

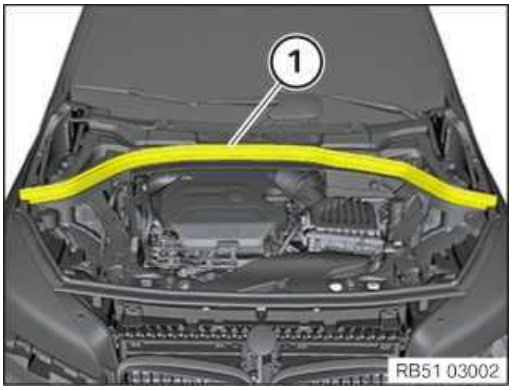
- Install cowl panel
- Install the strut brace
- Add coolant
- Install DDE control unit
- Install battery
- Install acoustic cover
- Read fault memory of DDE control unit
- Delete fault memory

cardiagn.com

11 71 501 Replacing the exhaust-gas recirculation valve

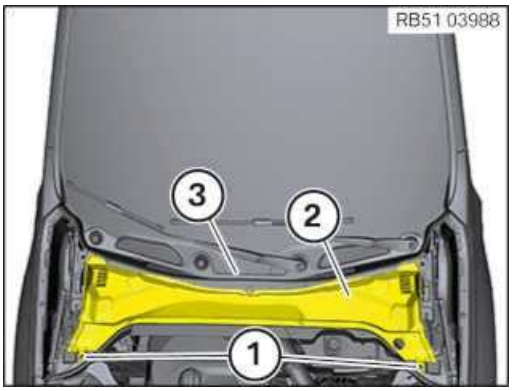
PRELIMINARY WORK

1 – Disconnecting all battery earth leads



- See additional information.

2 – Remove the seal for the rear bonnet

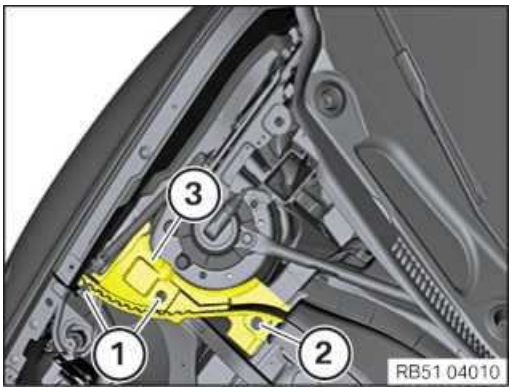


NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover

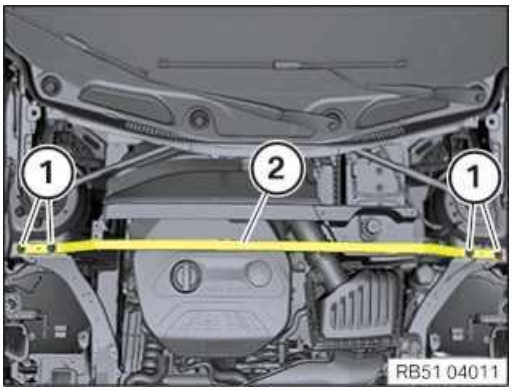


- Loosen the expanding rivet (1).
- Feed out and remove front cowl panel cover (2) from the rear cowl panel cover(3).

4 – Remove suspension cross-brace

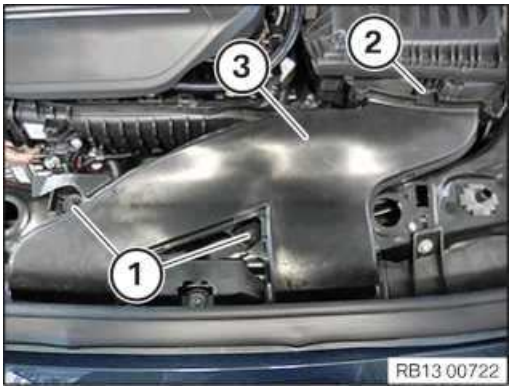
TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



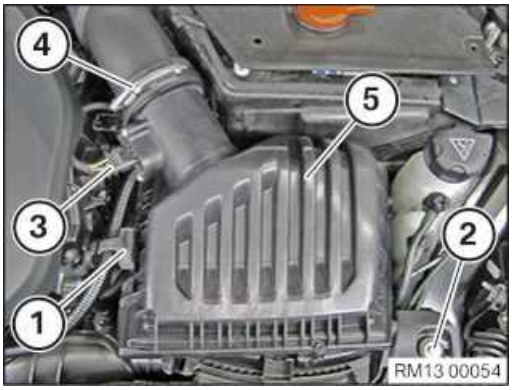
cardiagn.com

NOTICE



Description is for right component only. The procedure on the left side is identical.

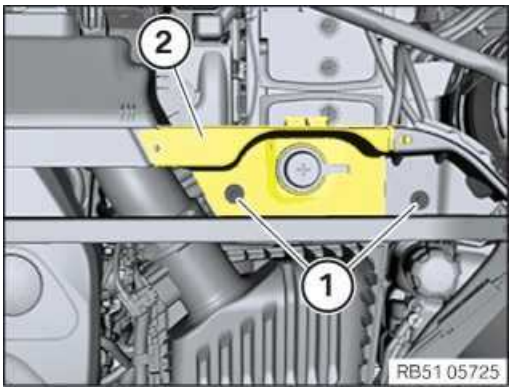
- Loosen expanding rivet (1).
- Loosen screw (2).
- Remove the cover (3).



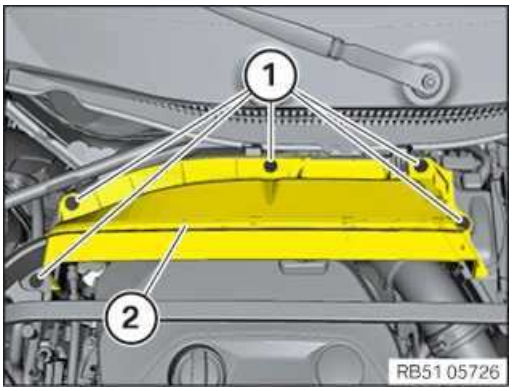
- Loosen screws (1).
- Remove strut brace (2).

5 – Remove the intake neck for intake silencer housing

- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.



6 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).
- Guide out and remove the cover (2).

- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

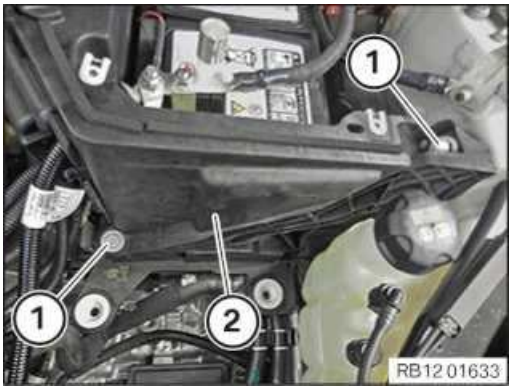
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

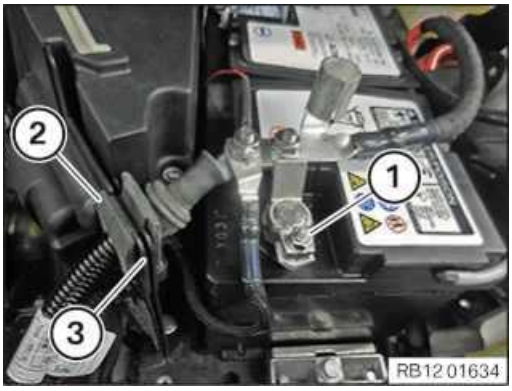
Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.



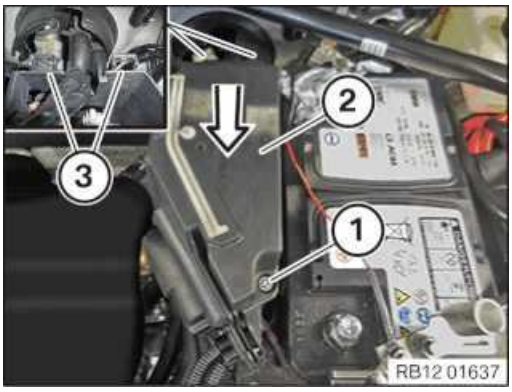
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

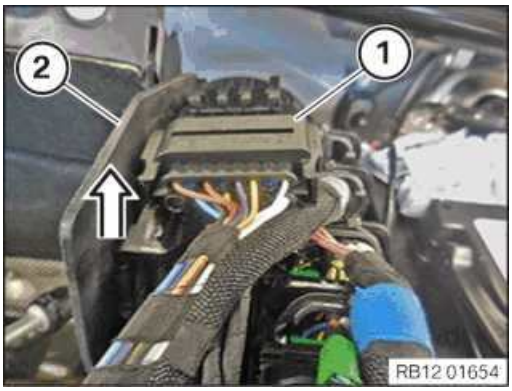


cardiagn.com

TECHNICAL INFORMATION

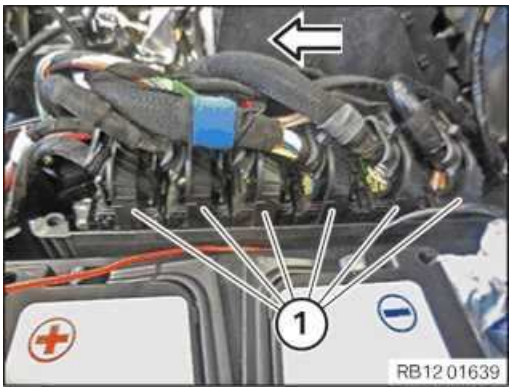


Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

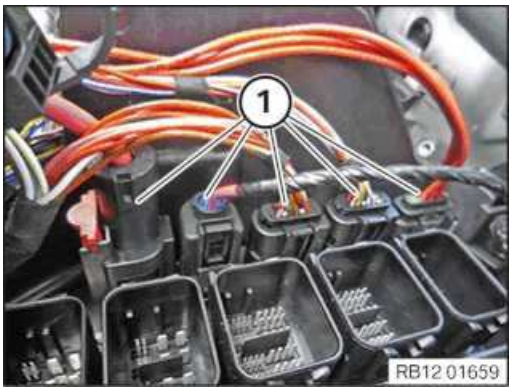


- Loosen screws (1).
- Guide out the tension strut (2) toward the top and remove it.

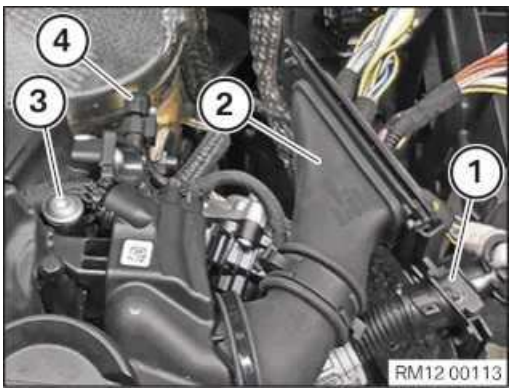
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



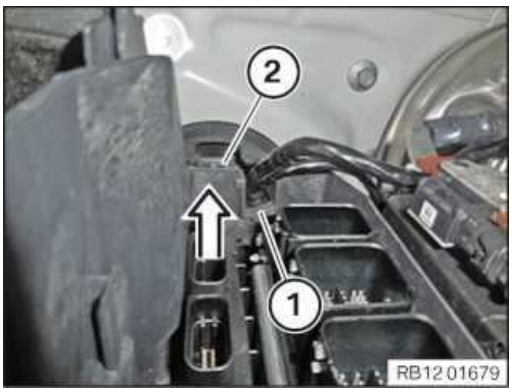
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



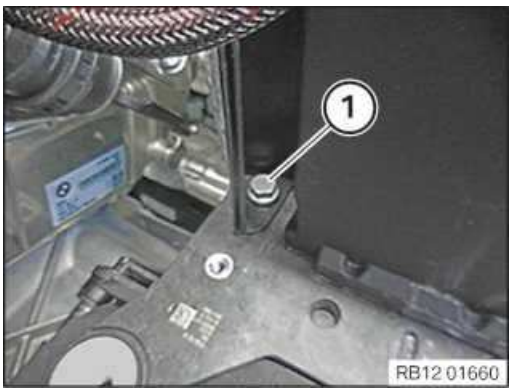
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



cardiagn.com

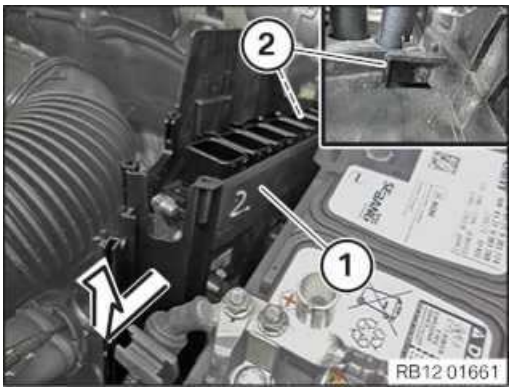


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

- Loosen screw (1).

cardiagn.com

- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

MAIN WORK

9 – Removing the exhaust-gas recirculation valve

WARNING

Hot surfaces.

Risk of burning!

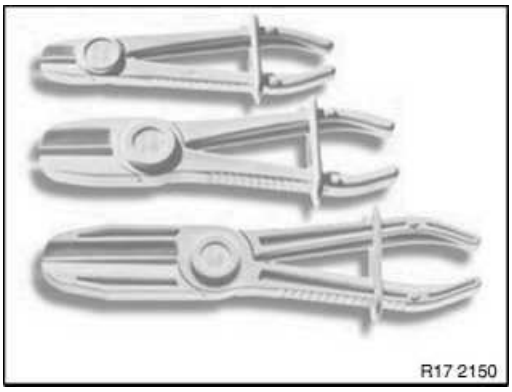
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

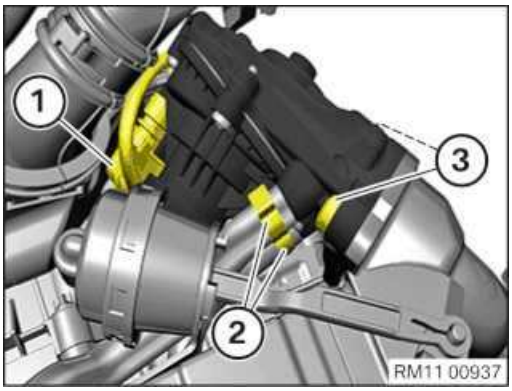
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



TECHNICAL INFORMATION

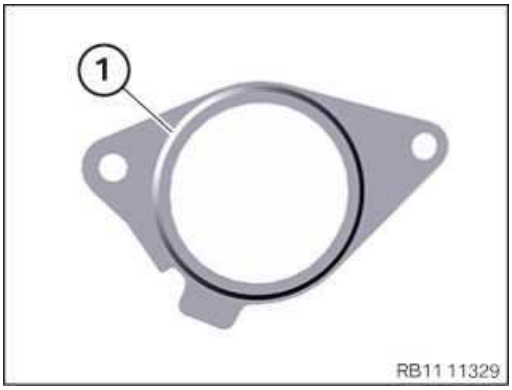
Use commercially available pinch-off tools to pinch off the coolant hoses.



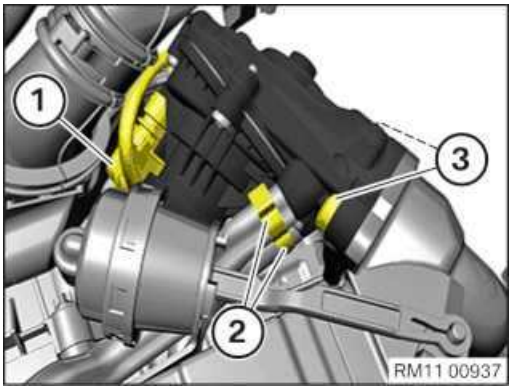
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com



- Use commercially available disconnection tools to pinch off the coolant lines.

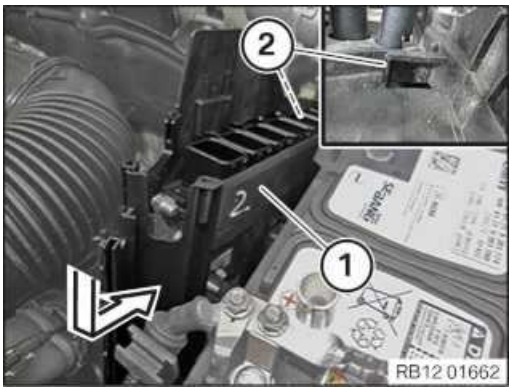


- Unlock and disconnect the plug connection (1).
- Loosen screws (3).
- Unfasten hose clamps (2).
- Detach coolant hoses.
- Remove the exhaust-gas recirculation valve .

10 – Installing the exhaust-gas recirculation valve

- Renew the gasket (1).

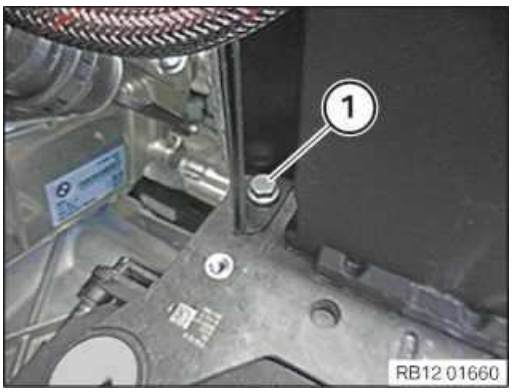
  Parts: Gasket
- Insert seal (1) on exhaust-gas recirculation cooler and install.



- Replace hose clamps.

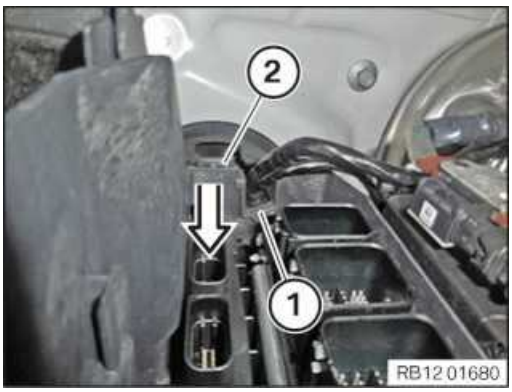
  Parts: Hose clamps
- Slide coolant hoses (2) with hose clamps onto the exhaust-gas recirculation valve.
- Make sure that the coolant hoses (2) are not mounted twisted.
- Secure hose clamps.
- Ensure correct fitting of the seal on the exhaust-gas recirculation valve and on the exhaust-gas recirculation cooler.
- Install the exhaust-gas recirculation valve .
- Insert screws (3) by one turn.
- Connect and lock the connector (1).

  The connector must lock audibly.

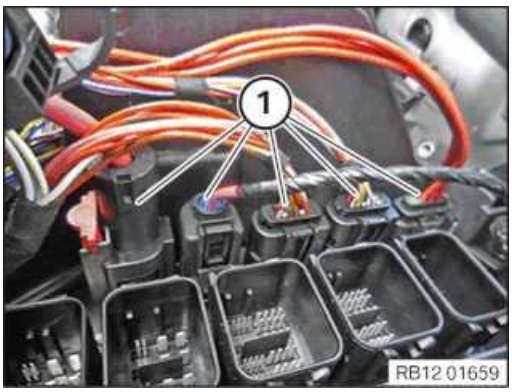


cardiagn.com

- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.



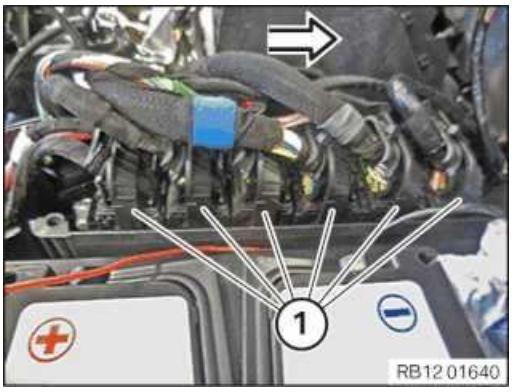
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



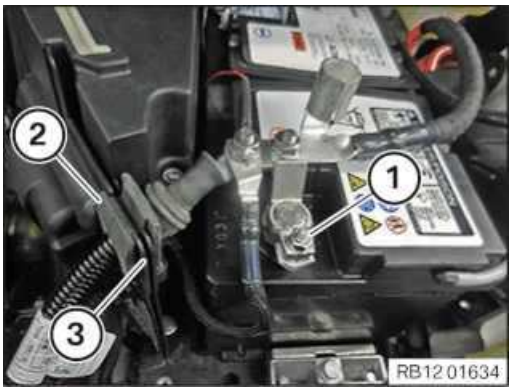
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

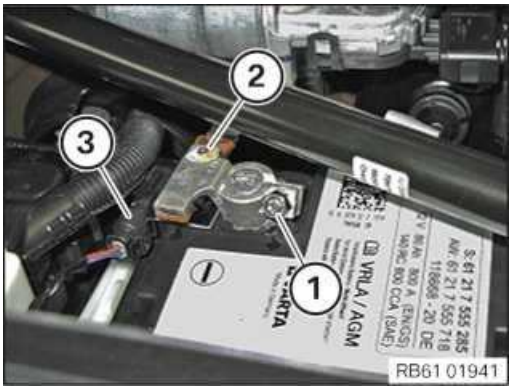


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

cardiagn.com

- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).



Positive battery terminal to battery

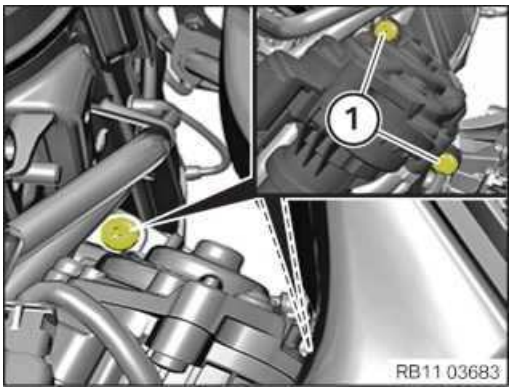
NutM6		Tightening torque	5 Nm

▸ **Connecting the battery earth lead**

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

- Remove the protective cover of the positive battery terminal.
- Position the battery earth lead (2).
- Tighten nut (1).

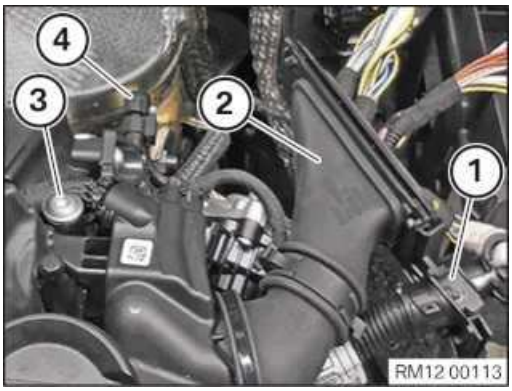


Battery terminal with IBS positive battery terminal / negative battery terminal

NutM6		5 Nm

- If required, connect the connector (3).

- Connect diagnosis system.
- Carry out the service function "Setting the exhaust-gas recirculation valve installation position":
  - Power train
  - Digital Diesel Electronics
  - Exchange the exhaust-gas recirculation valve
  - Exhaust-gas recirculation valve installation position

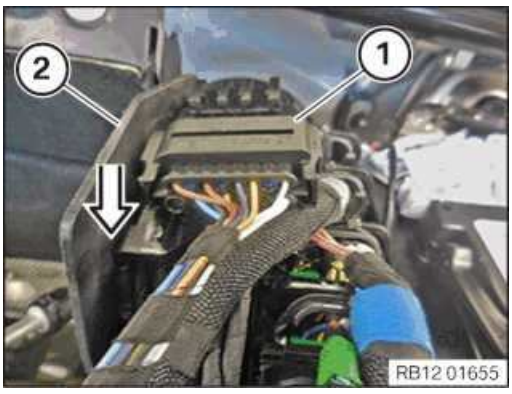


cardiagn.com

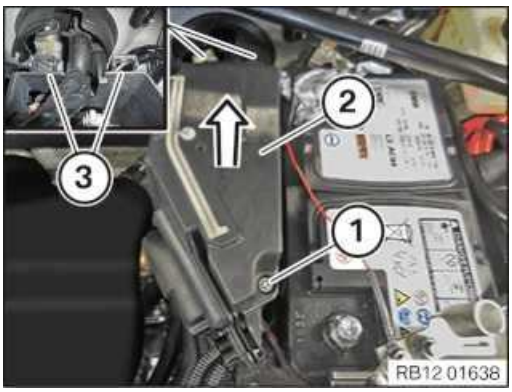
- Tighten the bolts (1) with conventional tools.
-

Exhaust-gas recirculation valve to exhaust-gas recirculation cooler

M6			10 Nm



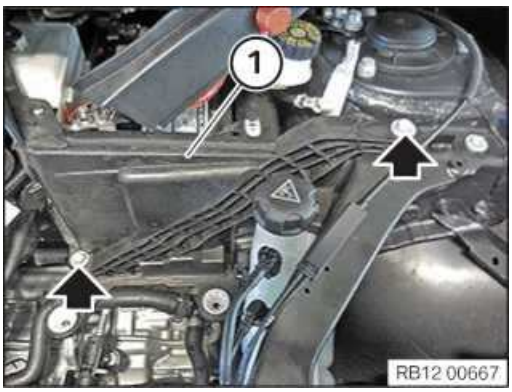
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).



Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

- Insert the cover (2) into the guides in the direction of arrow (3) and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

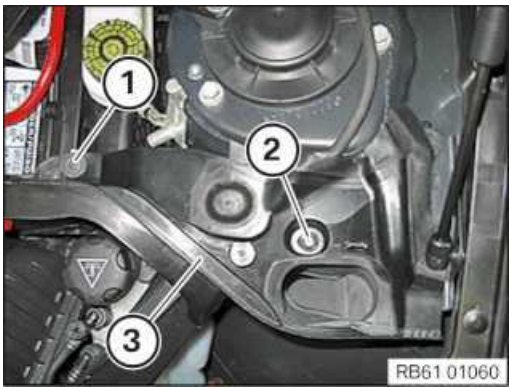
Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm



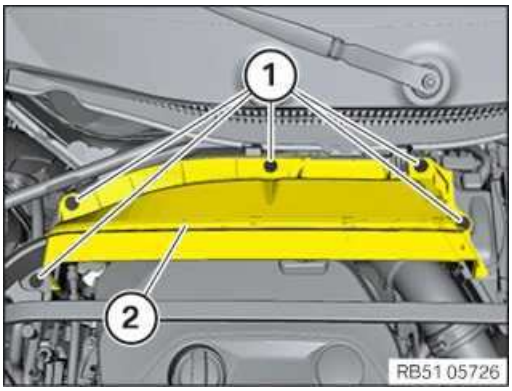
cardiagn.com

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

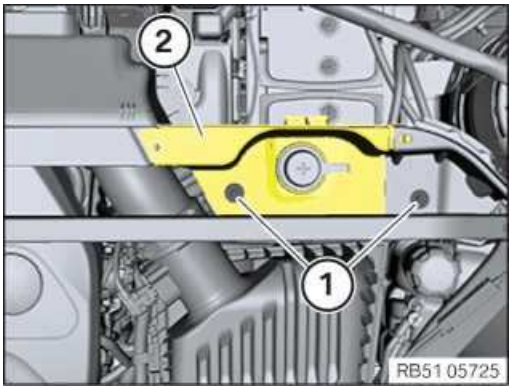
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).



▸ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

POSTPROCESSES

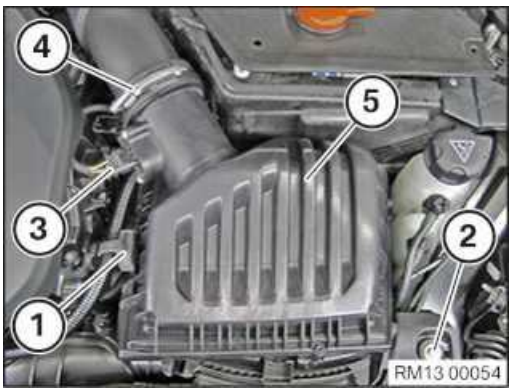


11 – Installing the upper bulkhead cover

- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Cover of top bulkhead

Screw		Tightening torque	2,6 Nm



- Guide in and install cover (2).
- Tighten down screw (1).

Cover of remote positive terminal

Screw		Tightening torque	2,6 Nm

12 – Installing intake silencer housing

cardiagn.com

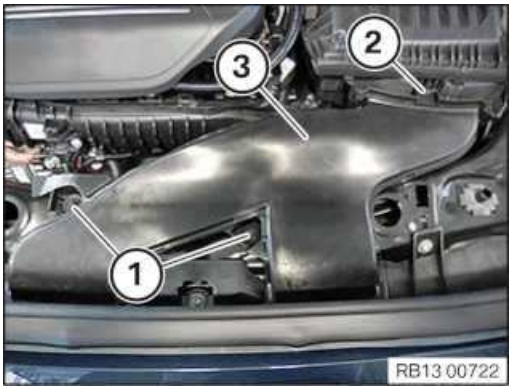
- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).



Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

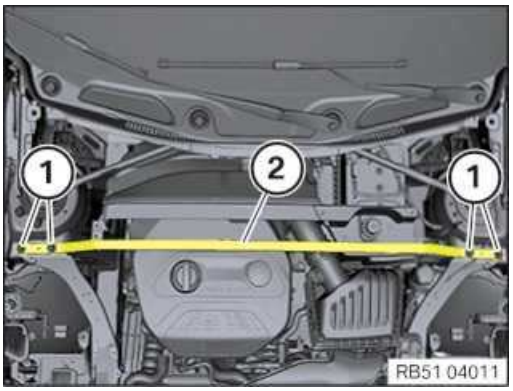
- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

13 – Install the intake neck for the intake filter housing

- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).



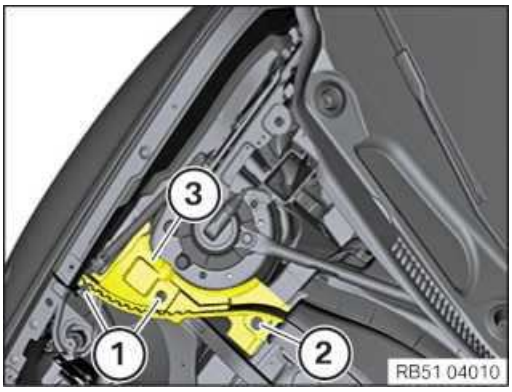
Intake neck to cross connection

M6		Tightening torque	8 Nm

14 – Install strut brace

TECHNICAL INFORMATION

Driving without the strut brace/front end or tension strut is not permitted.



- Install the strut brace (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

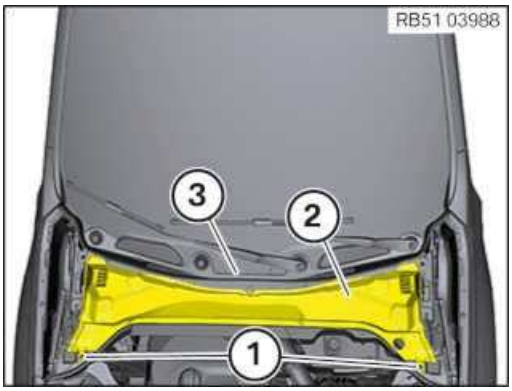
Cross-brace to spring strut dome

	Renew screw.	Jointing torque	28 Nm
		Angle of rotation	180 °

cardiagn.com

NOTICE

Description is for right component only. The procedure on the left side is identical.



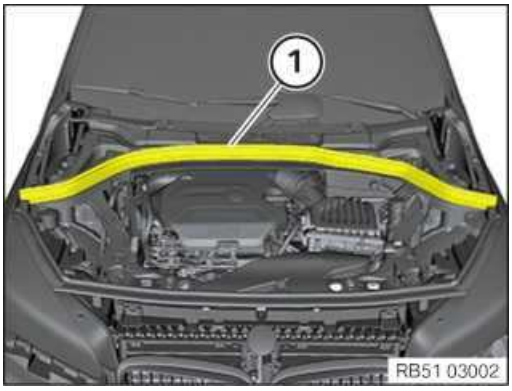
- Install the cover (3).
- Tighten down screw (2).

Cover on body

Hexagon screw		Tightening torque	3 Nm

- Install the expanding rivet (1).

15 – Installing front cowl panel cover



- Insert and install cowl panel cover at front (2) into cowl panel cover at rear (3).
- Check cowl panel cover at front is correctly seated (2).
- Secure expanding rivet (1).

16 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

17 – Checking coolant level and topping up if needed

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Check coolant level in coolant expansion tank (1) and adjust to the maximum if needed.

18 – Delete fault memory

- Connect diagnosis system:
  - Reading out the fault memory
  - Delete fault memory

00 11 229 Oil change in manual gearbox GS6-60DA, GS6X60BA/DA

Recycling:

Catch and dispose of escaping transmission oil.

Observe country-specific waste disposal regulations

Note:

Gearbox is at normal operation temperature.

Attention!
Use only the approved transmission oil.

Failure to comply with this instruction will result in serious damage to the transmission.

Capacity, see BMW operating fluid.

The vehicle must be parked on a level surface in the workshop during transmission oil filling.

Unscrew oil drain plug (1) and allow oil to flow out completely.

Clean oil drain plug and reinstall.

Tightening torque 23 00 2AZ.

Attention!

Make sure during removal of the filling/level control screw to note the installed filling/level control screw variant.

It is **mandatory** to use variant 1 in transmissions up to production date 08/2015.

It is **mandatory** to use variant 2 in transmissions from production date 08/2015.

Failure to comply with this instruction will result in leaks on the transmission.

Variant 1 **until** production date 08/2015.

Variant 2 **from** production date 08/2015.

cardiagn.com

Unscrew filler/fluid level monitoring connector (1) and fill the transmission until the oil overflows.

Allow surplus oil to drain off.

Screw in the filling/level control screw (1).

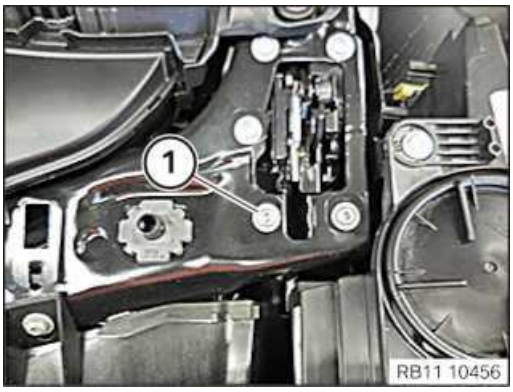
Parts: Renew the filling/level control screw (1).

Tightening torque 23 00 2AZ.

cardiagn.com

11 00 670 Secure engine in installation position

Special tools required:



- 00 6 100
